Survey of Current Business

August 2010 Bureau of Economic Analysis Volume 90 Number 8

iii. **Director's Message**

iv. **Taking Account**

Articles

1. **GDP and the Economy: Advance Estimates for the Second Quarter of 2010**

Real GDP increased 2.4 percent after increasing 3.7 percent in the first quarter. Imports picked up. Inventory investment and consumer spending slowed.

6. **Annual Revision of the National Income and Product Accounts: Annual Estimates for 2007–2009 and Quarterly Estimates for the First Quarter of 2007 to the First Quarter of 2010**

Annual revisions update the accounts by incorporating new data and methodology improvements. This annual revision did not alter the direction of real GDP growth for any quarter. From 2006 to 2009, real GDP decreased at an average annual rate of 0.2 percent.

28. **National Income and Product Accounts Tables**

Annual, quarterly, and monthly statistics from the annual NIPA revision, including advance estimates for the second quarter of 2010 and for June 2010.

173. **GDP and Other Major NIPA Series for 1929–the Second Quarter of 2010**

Historical statistics of GDP and its components in current dollars, chained dollars, and chain-type quantity and price indexes, including statistics on national income and personal income.

199. **Returns for Domestic Nonfinancial Business**

Aggregate rates of return for nonfinancial corporations, industries, and selected industry groups and various Q ratios. Domestic nonfinancial corporate returns fell in 2009 for the third consecutive year.

205. **U.S. Multinational Companies: Operations in the United States and Abroad in 2008**

The value added of U.S. multinational companies decreased 1.8 percent. The value added of U.S. parents decreased 6.5 percent, and the value added of their foreign affiliates increased 9.1 percent. Worldwide employment of U.S. multinational companies decreased 0.5 percent.

Upcoming in the Survey...

Alternative Measures of Personal Saving. A look at various measures of personal saving, including the NIPA measure.

Metropolitan Area Personal Income. Advance estimates for 2009, including per capita personal income.

Director's Message

The 2010 annual revision of the national income and product accounts was released in July. Annual revisions, as most users of our data know, incorporate more complete, previously unavailable information. As is customary, account improvements in methodology and presentation were also adopted as part of the revision, including the following: changing the deflator used to calculate command-basis gross national product; showing more detail for saving and investment; incorporating newly available source data to estimate consumer spending for health care, transportation, recreation, and other services; using scanner data to estimate consumer spending for software; reclassifying some foreign transactions; and using new price indexes to deflate communication equipment.

This annual revision did not alter the direction of change in real GDP for any quarter. The revised estimates continue to show a peak in the fourth quarter of 2007 and a trough in the second quarter of 2009. From 2006 to 2009, real GDP decreased at an average annual rate of 0.2 percent; in the previously published estimates, the rate of change was zero percent.

Elsewhere in this issue, we provide our once-a-year calculation of rates of return for domestic nonfinancial corporations, nonfinancial industries, and a few major industry groups.

In addition, we present our annual article on the operations of U.S. multinational companies, looking at value added, employment, and research and development for 2008.

I'd also like to note this issue's *Taking Account*, which looks at BEA research into the relative strengths of various sets of health care data. This is one of many steps on our path toward constructing a health care satellite account, which will provide indepth information about this important sector of the economy.

J. Steven Landefeld
Director, Bureau of Economic Analysis

Taking Account...

BEA paper compares health care data sets

To better analyze the role of health care in the economy, the Bureau of Economic Analysis (BEA) aims to develop better measures of health care spending and price changes. In particular, BEA aims to develop measures organized by disease. This stands in contrast to the conventional approach, which details spending by treatments, such as a doctor's office visit or a particular drug.

One key issue for BEA is the appropriateness of the data used to calculate by-disease measures. Data are available from several sources. The Centers for Medicare and Medicaid Services, for example, provides data about the patients it covers. However, for data about the largest segment of U.S. health care consumers—commercially insured patients and their families—there are some challenges.

While several large medical databases cover this segment, economists need a better understanding of the databases' relative strengths. To this end, a recent BEA paper compared two well-known data sets—the 2005 Medical Expenditure Panel Survey (MEPS) and 2005 data from the MarketScan® Research Databases from Thomson Reuters. The paper, available on the BEA Web site, was authored by BEA economists Ana Aizcorbe, Eli Liebman, and Sarah Pack with David M. Cutler of Harvard University and the National Bureau of Economic Research (NBER), Michael E. Chernew of Harvard Medical School, and Allison B. Rosen of the University of Michigan and the NBER.

The paper found the two data sources yielded differing estimates of both total spending and the distribution of annual per person spending; the MEPS estimates were 10 percent lower on average than the MarketScan estimates. These differences appeared to be a function of both underrepresentation of high expenditure cases and underestimation across the remaining distribution of spending.

The MEPS survey is conducted by the Department of Health and Human Services' Agency for Healthcare Research and Quality. The MEPS data have several components. Data used for BEA's estimates of employer contributions for privately administered health funds, a component of employee compensation in BEA's national income, are based on the insurance/employer component of MEPS (MEPS-IC), a survey of private and nonfederal public sector employers.

BEA's measures of consumer spending for health insurance are also based on MEPS-IC. BEA's estimates of spending on health care services in gross domestic product are largely based on Census Bureau surveys of services industries. Data used in this article are from the household component (MEPS-HC), a nationally representative survey of health care utilization and expenditures. It is regarded as a high-quality source of data on high-prevalence diseases and links expenditures from all services (across all types of providers) to patient care events.

The MarketScan Research Databases provide the results of a nationwide convenience sample of patients from all providers. This database collects information from employers, health plans, and state-level Medicaid agencies, and all claims have been paid and adjudicated. This paper used the MarketScan Commercial Claims and Encounters portion of the databases.

The analysis raises the issue of how best to utilize the large sample size of the MarketScan claims databases with the representativeness of the MEPS surveys. If the differences were uniform across the distribution of spending, adjustments could readily be made to correct the expenditures in both.

However, the differences between the two data sets are substantially greater at the high end of the spending distribution, requiring more research to assess consistency across the remaining distribution. The large sample size of the MarketScan data will allow for more detailed expenditure estimates; however, the differences between this proprietary claims database and the comparable population in MEPS suggest the need for additional research.

GDP and the Economy

Advance Estimates for the Second Quarter of 2010

REAL GROSS domestic product (GDP) increased 2.4 percent in the second quarter of 2010, according to the "advance" estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).[1] In the first quarter, real GDP increased 3.7 percent (revised).

The NIPA estimates for the first quarter of 2010 and for 2007–2009 have been revised as part of the regular annual NIPA revision. See "Annual Revision of the National Income and Product Accounts" in this issue.

The deceleration in real GDP in the second quarter primarily reflected an acceleration in imports and a deceleration in inventory investment that were partly offset by an upturn in residential fixed investment, an acceleration in nonresidential fixed investment, an upturn in state and local government spending, and an acceleration in federal government spending.[2]

- Prices of goods and services purchased by U.S. residents increased 0.1 percent in the second quarter after increasing 2.1 percent in the first quarter (see page 3). Energy prices turned down in the second quarter, and food prices decelerated slightly. Excluding food and energy, gross domestic purchases prices increased 0.9 percent after increasing 1.6 percent. The federal pay raise for civilian and military personnel added 0.2 percentage point to the first-quarter increase in the gross domestic purchases price index.
- Real disposable personal income (DPI) increased 4.4 percent after increasing 1.7 percent. The acceleration resulted from a very slight acceleration in current-dollar personal income and a deceleration in personal current taxes.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 6.2 percent in the second quarter; in the first quarter, it was 5.5 percent.

1. "Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data. More information can be found at www.bea.gov/about/infoqual.htm and www.bea.gov/faq/national/gdp_accuracy.htm. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures (PCE)," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

Christopher Swann prepared this article.

Nondefense	2.7	–0.9	5.6	5.0	13.0		–0.03	0.14	0.13	0.33
State and local	12.2	–1.0	–2.3	–3.8	1.3		–0.12	–0.29	–0.48	0.16

1. The estimates under the contribution columns are percent changes.

NOTE. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

Consumer spending in the second quarter slowed, reflecting decelerations in both nondurable goods and durable goods. The largest contributor to the deceleration in nondurable goods was a downturn in food and beverages purchased for off-premises consumption. Spending for services picked up slightly, led by an upturn in financial services and insurance.

Nonresidential fixed investment accelerated. It was the largest quarterly percentage change since the first quarter of 2006, reflecting an upturn in structures and an acceleration in equipment and software. The upturn in structures was led by an upturn in power and communication structures. The largest contributor to the acceleration in equipment and software was an acceleration in industrial equipment.

Residential fixed investment turned up, mainly reflecting an upturn in "other" structures, especially brokers' commissions on the sale of residential structures.

Inventory investment slowed, contributing 1.05 percentage points to real GDP growth after contributing 2.64 percentage points.

Exports slowed somewhat. Goods exports increased about the same as in the first quarter, but services exports decelerated, mainly reflecting a slowdown in travel services.

Imports accelerated sharply, reflecting an acceleration in goods imports. The largest contributor to the acceleration in goods imports was an upturn in petroleum imports, but accelerations in nonautomotive capital goods, in automotive vehicles, engines, and parts, and in nonautomotive consumer goods also contributed. Imports of services slowed.

Federal government spending accelerated, reflecting pickups in national defense and nondefense spending.

State and local government spending turned up, mainly reflecting an upturn in investment in structures.

Table 2. Real Gross Domestic Product (GDP) by Type of Product

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)					Contribution to percent change in real GDP (percentage points)			
	2010	2009		2010			2009		2010	
	II	III	IV	I	II		III	IV	I	II
Gross domestic product [1]	**100.0**	**1.6**	**5.0**	**3.7**	**2.4**		**1.6**	**5.0**	**3.7**	**2.4**
Final sales of domestic product	99.4	0.4	2.1	1.1	1.3		0.50	2.19	1.09	1.33
Change in private inventories	0.6	.....	.....	.....	.....		1.10	2.83	2.64	1.05
Goods	27.5	6.8	23.9	19.5	2.0		1.67	5.74	4.90	0.57
Services	65.3	–0.2	0.8	0.0	1.3		–0.10	0.57	0.02	0.86
Structures	7.2	–0.1	–15.9	–15.2	14.4		0.02	–1.30	–1.18	0.95
Addenda:										
Motor vehicle output	2.2	145.5	13.7	42.3	–0.5		1.56	0.25	0.74	–0.01
GDP excluding motor vehicle output	97.8	0.0	4.8	3.0	2.4		0.03	4.76	2.99	2.40
Final sales of computers	0.6	–4.0	17.3	19.2	7.6		–0.02	0.09	0.10	0.04
GDP excluding final sales of computers	99.5	1.6	5.0	3.7	2.4		1.61	4.92	3.63	2.35

1. The estimates under the contribution columns are percent changes.

NOTE. Percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5.

Real final sales of domestic product, real GDP less inventory investment, increased 1.3 percent after increasing 1.1 percent.

Motor vehicle output turned down, decreasing 0.5 percent after increasing 42.3 percent.

Final sales of computers decelerated, increasing 7.6 percent after increasing 19.2 percent.

Prices

Table 3. Prices for Gross Domestic Purchases

[Percent change at annual rates; based on seasonally adjusted index numbers (2005=100)]

	Change from preceding period (percent)				Contribution to percent change in gross domestic purchases prices (percentage points)			
	2009		2010		2009		2010	
	III	IV	I	II	III	IV	I	II
Gross domestic purchases [1]	**1.4**	**2.1**	**2.1**	**0.1**	**1.4**	**2.1**	**2.1**	**0.1**
Personal consumption expenditures	**2.9**	**2.7**	**2.1**	**0.1**	**1.92**	**1.82**	**1.43**	**0.04**
Goods	5.7	2.8	2.6	–3.6	1.19	0.61	0.57	–0.83
Durable goods	–2.5	0.7	–2.0	–1.6	–0.19	0.04	–0.15	–0.11
Nondurable goods	9.7	3.8	4.7	–4.6	1.38	0.56	0.72	–0.72
Services	1.7	2.7	1.8	1.9	0.73	1.21	0.85	0.86
Gross private domestic investment	**–6.0**	**–0.7**	**–2.0**	**–0.9**	**–0.61**	**–0.05**	**–0.22**	**–0.11**

Federal	–0.1	1.5	4.5	0.8	0.00	0.13	0.35	0.06
National defense	0.3	1.6	5.3	1.1	0.02	0.09	0.28	0.06
Nondefense	–1.0	1.5	2.8	0.1	–0.02	0.04	0.07	0.00
State and local	0.8	1.5	4.6	0.8	0.08	0.18	0.54	0.10
Addenda:								
Gross domestic purchases:								
Food	–2.5	0.0	1.3	1.2	–0.13	0.00	0.07	0.07
Energy goods and services	39.7	20.2	15.2	–18.0	1.24	0.74	0.58	–0.76
Excluding food and energy	0.4	1.5	1.6	0.9	0.28	1.32	1.45	0.78
Personal consumption expenditures (PCE):								
Food	–2.4	–0.1	1.8	1.6	.....	.....	.....	.....
Energy goods and services	41.5	18.0	16.4	–17.5	.....	.....	.....	.....
Excluding food and energy	1.5	2.1	1.2	1.1	.....	.....	.....	.....
"Market-based" PCE	3.0	2.2	1.7	–0.2	.....	.....	.....	.....
Excluding food and energy	1.3	1.4	0.7	1.0	.....	.....	.....	.....
Gross domestic product	0.7	–0.2	1.0	1.8	.....	.....	.....	.....

1. The estimates under the contribution columns are percent changes

NOTE. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions are from NIPA table 1.6.8.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, slowed in the second quarter. Excluding food and energy, prices also slowed. About 0.2 percentage point of the first-quarter increase in the gross domestic purchases price index reflected the pay raise for civilian and military personnel, which is treated as an increase in the price of employee services purchased by government.

Consumer prices decelerated, reflecting a downturn in prices paid for goods. The largest contributor to the downturn was a downturn in prices paid for gasoline and other energy goods. Services prices picked up slightly.

Prices paid for nonresidential fixed investment turned up, reflecting a smaller decrease in prices paid for equipment and software and an acceleration in prices paid for structures.

Prices paid for residential fixed investment turned down, decreasing 3.6 percent after increasing 0.6 percent.

Prices paid by government decelerated. Prices paid by state and local governments decelerated, largely reflecting a downturn in petroleum prices. A slowdown in federal government prices followed the first-quarter pay raise.

The "market-based" PCE price index turned down mainly because of a downturn in energy prices. Excluding food and energy, the index picked up somewhat.

The GDP price index increased 1.8 percent, 1.7 percentage points more than the increase in the price index for gross domestic purchases, reflecting a downturn in import prices relative to a slight slowdown in export prices.

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services. It is derived from the prices of personal consumption expenditures (PCE), private investment, and government consumption expenditures and investment.

BEA also produces price indexes for all components of GDP. The PCE price index is a measure of the total cost of consumer goods and services, including durable goods, nondurable goods, and services. PCE prices for food, energy goods and services, and for all items except food and energy are also estimated and reported. Because prices for food and energy can be volatile, the price measure that excludes food and energy is often used as a measure of underlying, or "core," inflation. (The core PCE price index includes purchased meals and beverages, such as restaurant meals, and pet food. See FAQ 518 on BEA's Web site.)

BEA also prepares a supplemental PCE price index, the "market-based" PCE price index, that is based on market transactions for which there are corresponding price measures. This index excludes many imputed expenditures, such as financial services furnished without payment, that are included in PCE and the PCE price index. BEA also prepares a market-based measure that excludes food and energy.

Personal Income

Table 4. Personal Income and Its Disposition

[Billions of dollars; quarterly estimates are seasonally adjusted at annual rates]

	Level	Change from preceding period			
	2010	2009		2010	
	II	III	IV	I	II

NOTE. Dollar levels are from NIPA tables 2.1 and 2.2B. CCAdj Capital consumption adjustment
IVA Inventory valuation adjustment

Personal income, which is measured in current dollars, accelerated slightly in the second quarter, increasing $123.9 billion after increasing $122.8 billion. The slight acceleration primarily reflected an acceleration in wage and salary disbursements that was largely offset by decelerations in personal current transfer receipts, in personal dividend income, and in supplements to wages and salaries.

Wage and salary disbursements accelerated. The acceleration primarily reflected monthly employment, hours, and earnings data.

Supplements to wages and salaries slowed. The slowdown primarily reflected a deceleration in employer contributions for government social insurance for regular state unemployment programs; first-quarter contributions had reflected increases in tax rates and wage caps for these programs.

Personal dividend income increased $6.9 billion after increasing $19.0 billion.

Personal current transfer receipts decelerated, primarily reflecting a deceleration in government social benefits to persons. A slowdown in federal benefits was partly offset by a pickup in state and local government benefits, reflecting Medicaid payments. The slowdown in federal benefits mainly reflected a deceleration in "other" government social benefits and a downturn in government unemployment benefits.

Personal current taxes decelerated, reflecting a larger decrease in state and local income taxes and a deceleration in federal income taxes.

Personal saving increased $86.0 billion after increasing $5.1 billion, reflecting a pickup in disposable personal income and a slowdown in personal outlays.

Saving

The personal saving rate was 6.2 percent in the second quarter. Beginning with the first quarter of 2008, the first quarter of a recession as defined by the National Bureau of Economic Research, the saving rate has averaged 5.2 percent on a quarterly basis, the highest rate since the third quarter of 1998.

1. Assumption.
2. Nonmonetary gold is included in balance-of-payments exports and imports, but it is not used directly in estimating exports and imports in the national income and product accounts.

Source Data and Key Assumptions for the Advance Estimates of GDP

While the advance estimates of many components of GDP are based on 3 months of source data, some estimates are based on only 2 months of data. For the following items, the number of months for which data are available is shown in parentheses.

Personal consumption expenditures: sales of retail stores (3), unit auto and truck sales (3), and consumers' shares of auto and truck sales (2);

Nonresidential fixed investment: unit auto and truck sales (3), construction spending (value put in place) (2), manufacturers' shipments of machinery and equipment excluding aircraft (3), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);

Residential investment: construction spending (value put in place) (2), single-family housing starts (3), sales of new homes (3), and sales of existing houses (3);

Change in private inventories: trade and nondurable-goods manufacturing inventories (2), durable-goods manufacturing inventories (3), and unit auto and truck inventories (3);

Net exports of goods and services: exports and imports of goods (2);

Government consumption expenditures and gross investment: federal outlays (3), state and local government construction spending (value put in place) (2), and state and local government employment (3);

Compensation: employment, average hourly earnings, and average weekly hours (3); and

GDP prices: consumer price indexes (3), producer price indexes (3), and values and quantities of petroleum imports (2).

Unavailable source data

When source data were unavailable, BEA made various assumptions for June, including the following (table 5):

- A small increase in nonresidential structures,
- An increase in aircraft shipments,
- Decreases in single-family and in multifamily residential structures,
- Increases in inventories of nondurable-goods manufacturing industries and of nonmotor vehicle merchant wholesale and retail trade industries,
- A decrease in exports of goods (excluding gold) and an increase in imports of goods (excluding gold), and
- A decrease in state and local government structures.

A more comprehensive list is available on BEA's Web site.

Annual Revision of the National Income and Product Accounts

Annual Estimates for 2007–2009

Quarterly Estimates for 2007:I–2010:I

By Eugene P. Seskin and Shelly Smith

THE BUREAU of Economic Analysis (BEA) released revised estimates of the national income and product accounts (NIPAs) for 2007–2009 and for the first quarter of 2010 on July 30, 2010.[1] As is usual in annual NIPA revisions, these estimates incorporated newly available source data that are more complete, more detailed, and otherwise more reliable than those that were previously incorporated.

These estimates also reflect a number of improvements in methodology and presentation that are discussed on pages 21–24; these improvements include the following.

- Changing the deflator in calculating command-basis gross national product to better reflect the effects of changes in the value of the dollar on the purchasing power of income generated by the sales of goods and services.[2]
- Expanding the presentation of saving and investment to show sector detail on saving, investment, capital account transactions (net), and net lending or borrowing.
- Incorporating newly available source data from the Census Bureau quarterly services survey (QSS) for estimating consumer spending for health care, transportation, recreation, and other services, replacing less reliable proxy data, and bringing the share of QSS-based consumer spending on services to 39 percent.
- Using scanner data to estimate consumer spending for software to better capture the variation in the composition of goods sold by radio, television, and electronics stores and by computer and software stores.
- Reclassifying certain foreign transactions in goods and in services to better align them with recently updated international guidelines.
- Incorporating new quality-adjusted price indexes for deflating communication equipment in private fixed investment, in exports, and in imports to better account for quality change.

The revised estimates did not alter the direction of change in real gross domestic product (GDP) for any quarter. They continue to show a peak in real GDP in the fourth quarter of 2007 and a trough in the second quarter of 2009. They also show that for the period of contraction, real GDP decreased at an average annual rate of 2.8 percent; in the previously published estimates, it had decreased 2.5 percent. From the second quarter of 2009 to the second quarter of 2010, real GDP increased at an average annual rate of 3.2 percent.

GDP highlights

By historical standards, the revisions to year-to-year growth rates of real GDP are typical. In the annual NIPA revisions since 1982, the revisions (without regard to sign) to the annual estimates have averaged 0.3 percentage point. The following are highlights of this annual revision.

- From 2006 to 2009, real GDP decreased at an average annual rate of 0.2 percent; in the previously published estimates, the rate of change in real GDP was zero percent.[3] From the fourth quarter of 2006 to the first quarter of 2010, real GDP grew at an average annual rate of 0.2 percent; in the previously published esti-

1. Information about the structure, definitions, presentation, and methodologies that underlie the NIPAs is available on BEA's Web site; go to www.bea.gov, and click on "Methodology Papers."

2. The improvements, such as changing the deflator for command-basis GNP and publishing saving and investment by sector, mark the first "flexible" annual revision in which the improvements are carried back beyond the usual 3-year period of revisions to earlier periods. See "Improving BEA's Accounts Through Flexible Annual Revisions," Survey of Current Business 88 (June 2008): 29–32.

3. The annual revisions to real GDP reflect revised current-dollar estimates, revised prices used for deflation, and revised quantities used to estimate components of real GDP by extrapolation or direct valuation. For estimates prepared by extrapolation or direct valuation, the current-dollar and chained-dollar estimates are based on independent source data; consequently, the corresponding revisions are unrelated. For a list of these components, see table 2 in "Updated Summary of NIPA Methodologies," Survey of Current Business 89 (November 2009): 25–29.

Alyssa E. Holdren contributed to this article.

mates, real GDP had increased at an average annual rate of 0.4 percent (table 1).

- For 2007, 2008, and 2009, the percent change in real GDP from the preceding year was revised down: from 2.1 percent to 1.9 percent for 2007, from 0.4 percent to zero percent for 2008, and from –2.4 percent to –2.6 percent for 2009 (see chart 1 and pages 9 and 10).
- From fourth quarter to fourth quarter, the percent change in real GDP was revised down from 2.5 percent to 2.3 percent for 2007, was revised down from –1.9 percent to –2.8 percent for 2008, and was revised up from 0.1 percent to 0.2 percent for 2009.
- The downward revisions to fourth-quarter-to-fourth-quarter rates of change in real GDP for 2007 and 2009 partly reflect offsetting revisions for the quarters within a year. For 2007, the annual rate of change in real GDP for the third quarter was revised down 1.3 percentage points, while the rate of change for the fourth quarter was revised up 0.8 percentage point (the rate for the first quarter was revised down 0.3 percentage point, and the rate for the second quarter was unrevised). For 2009, the annual rate of change in real GDP for the first quarter was revised up 1.5 percentage points, while the rates of change for the third and fourth quarters were each revised down 0.6 percentage point (the rate for the second quarter was unrevised) (see page 11). For 2008, the downward revision to the fourth-quarter-to-fourth-quarter rate of change in real GDP reflects downward revisions for the second, third, and fourth quarters (the rate for the first quarter was unrevised).

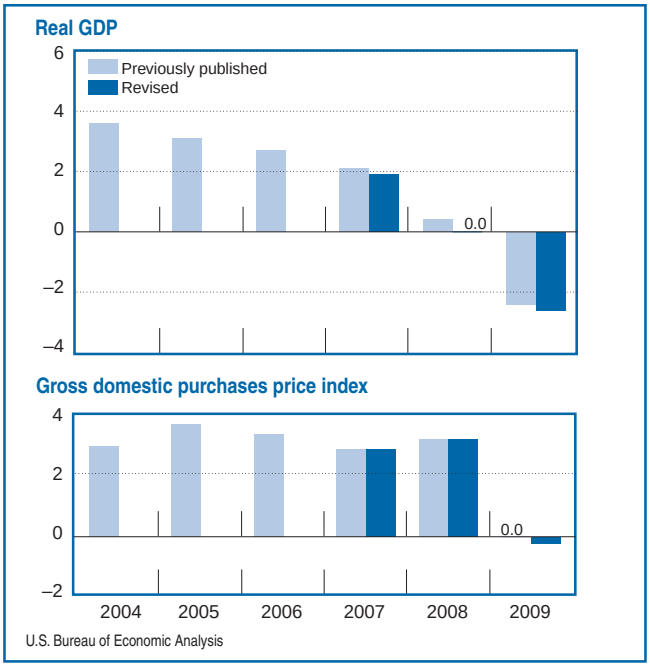
Gross national product	0.5	0.4	–0.1
Gross domestic income	–0.6	–0.7	–0.1

Price highlights

The revised estimates of prices show similar rates of change to the previously published estimates.

- The percent change from the preceding year in the price index for gross domestic purchases was unrevised at 2.9 percent for 2007, was unrevised at 3.2 percent for 2008, and was revised down 0.2 percentage point to –0.2 percent for 2009 (see chart 1 and page 12).
- From the fourth quarter of 2006 to the first quarter of 2010, the average annual rate of increase in the price index for gross domestic purchases was revised down from 2.0 percent to 1.9 percent, and the average annual rate of increase in the GDP price index was unrevised at 1.7 percent. The average annual rate of increase in the price index for personal consumption expenditures (PCE) was revised up from 2.1 percent to 2.2 percent, and the rate of increase in the "core" PCE price index (which excludes food and energy)

Chart 1. Revisions to Annual Percent Changes in Real GDP and Gross Domestic Purchases Price Index



was revised up from 1.9 percent to 2.0 percent (table 2).

Income highlights

- From 2006 to 2009, real disposable personal income (DPI) grew at an average annual rate of 1.5 percent; in the previously published estimates, real DPI grew at an average annual rate of 1.2 percent.
- For 2006 to 2009, national income was revised down for all 3 years: $51.8 billion, or 0.4 percent, for 2007; $77.4 billion, or 0.6 percent, for 2008; and $55.0 billion, or 0.4 percent, for 2009.
- For 2006 to 2009, corporate profits was also revised down for all 3 years: $31.1 billion, or 2.0 percent, for 2007; $97.6 billion, or 7.2 percent, for 2008; and $50.9 billion, or 3.9 percent, for 2009.

This article discusses the impact of the revisions on key NIPA measures, summarizes the revisions to the major aggregates, lists the major source data, and describes the changes in methodology and presentation. Appendix A presents the revised annual estimates and the revisions for the seven summary accounts of the NIPAs (see pages 26 and 27). In addition, tables presenting revised monthly, quarterly, and annual NIPA estimates and the "advance" estimates for the second quarter of 2010 are available on page 28.

Data Availability

An extensive set of estimates is presented in "National Income and Product Accounts" in this issue. These estimates and annual estimates for 1929 forward and quarterly estimates for 1947 forward are available on BEA's Web site at www.bea.gov.

Selected revised NIPA estimates and related estimates will be published in upcoming issues of the SURVEY. The September SURVEY will present the following NIPA tables: tables 3.15–3.17 (government spending by function) and table 7.15 (which shows the relationship between net farm income in the NIPAs and net farm income from the USDA). It will also present new estimates of fixed assets and consumer durable goods, beginning with 2000.[1]

The October SURVEY will present the following NIPA tables: tables 3.18 and 3.19 (government-sector reconciliation tables), tables 3.20 and 3.21 (state government and local government current receipts and expenditures), and tables 3.22 and 3.23 (federal government and state and local government current receipts and expenditures seasonally unadjusted estimates). It will also present revised real inventories, sales, and inventory-sales ratios for manufacturing and trade for the first quarter of 2007 through the first quarter of 2010. In addition, revised estimates of state personal income that incorporate the results of this annual revision of the NIPAs will be presented.

The November SURVEY will feature the "Updated Summary of NIPA Methodologies," which lists the principal source data and estimating methods that are used in preparing the current-dollar and real estimates of GDP. In addition, NIPA table 2.9 (personal income by households and by nonprofit institutions serving households) and table 7.20 (nonprofits reconciliation table) will be presented.

1. BEA's Web site will present revisions to the Fixed Assets Accounts, beginning with 1901 for investment and 1925 for stocks and depreciation.

1. Percent change from the preceding period.

The annual percent change in real GDP was revised down for all 3 years: from 2.1 percent to 1.9 percent for 2007, from 0.4 percent to zero percent for 2008, and from –2.4 percent to –2.6 percent for 2009.

For 2007, the largest contributors to the downward revision to real GDP growth were an upward revision to imports and downward revisions to PCE for services, to PCE for goods, and to state and local government spending.

The contributions of these components were partly offset by upward revisions to fixed investment in equipment and software, to private inventory investment (mainly in nonfarm inventories), and to exports.

For 2008, the largest contributors to the downward revision to real GDP growth were downward revisions to nonresidential structures, to private inventory investment (more than accounted for by investment in nonfarm inventories), and to PCE for goods and an upward revision to imports.

The contributions of these components were partly offset by upward revisions to PCE for services and to exports.

For 2009, the largest contributors to the downward revision were downward revisions to PCE for services, to state and local government spending, and to residential fixed investment.

The contributions of these components were partly offset by upward revisions to private inventory investment (more than accounted for by investment in nonfarm inventories) and to fixed investment in equipment and software and a downward revision to imports.

1. Percentage points.

For 2007, the downward revision to PCE for goods was mostly to nondurable goods (mainly gasoline and other energy goods).

The downward revision to PCE for services was fairly widespread.

The upward revision to fixed investment in equipment and software was mainly to transportation equipment (mainly aircraft and trucks, buses, and truck trailers).

The upward revision to exports reflected an upward revision to goods exports that was partly offset by a downward revision to services exports.

The downward revision to state and local government spending reflected downward revisions to both gross investment and consumption expenditures.

For 2008, the downward revision to PCE for goods was to both durable goods (mainly recreational goods and vehicles) and nondurable goods (mainly food and beverages purchased for off-premises consumption).

The upward revision to PCE for services was more than accounted for by financial services and insurance.

The downward revision to nonresidential structures was mainly to mining exploration, shafts, and wells.

The upward revision to exports was to both goods exports and services exports.

The upward revision to imports was to both goods imports and services imports.

For 2009, the downward revision to PCE for services was mainly to financial services and insurance (widespread), "other" services (widespread), and transportation services (specifically motor vehicle maintenance and repair).

The upward revision to fixed investment in equipment and software was more than accounted for by software.

The downward revision to residential fixed investment primarily reflected downward revisions to both single-family and multifamily structures and to improvements.

The downward revision to state and local government spending reflected downward revisions to both consumption expenditures and gross investment.

Quarterly Estimates

Revisions to the quarterly (and monthly) NIPA estimates reflect (1) revisions to the annual estimates that in turn reflect the incorporation of newly available annual source data, (2) the incorporation of new and revised monthly and quarterly source data (including updated seasonal factors that are used to indicate quarterly patterns), and (3) methodology improvements (see "Changes in Methodology and Presentation").

Real GDP. For real GDP, the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.7 percentage point (without regard to sign). (In the annual NIPA revisions since 1979, the revisions to the quarterly estimates have also averaged 0.7 percentage point.)

The quarterly revisions did not change the direction of change (increase or decrease) in real GDP for any quarter. The quarterly real GDP growth rate was revised down for 7 of the 13 quarters, was revised up for 3 of the 13 quarters, and was unrevised for 3 quarters. The largest downward revision to the percent change in real GDP was 1.4 percentage points, to –6.8 percent, for the fourth quarter of 2008. The largest contributors to the revision were downward revisions to private inventory investment, to residential fixed investment, to exports (both services and goods), and to fixed investment in equipment and software; these revisions were partly offset by a downward revision to goods imports. The largest upward revision was 1.5 percentage points, to –4.9 percent, for the first quarter of 2009. The largest contributors to the revision were upward revisions to private inventory investment, to investment in equipment and software, to exports (both goods and services), and to nonresidential structures; these revisions were partly offset by a downward revision to PCE for services (mainly financial services and insurance) and an upward revision to goods imports.

Prices. In general, the percent changes for the gross domestic purchases prices were similar to the previously published estimates; the revisions to the 13 quarterly percent changes (at annual rates) averaged 0.4 percentage point (without regard to sign). The percent change in the price index was revised up for eight quarters and was revised down for five quarters. The largest upward revision was 0.6 percentage point to both the first and the second quarters of 2008. For the first quarter, the percent change in the index was revised from 3.4 percent to 4.0 percent; the largest contributors to the revision were prices of state and local government spending (mainly for petroleum and for compensation), prices of nonresidential structures (mainly petroleum and natural gas drilling), and prices of financial services and insurance (mainly "services furnished without payment by financial intermediaries except life insurance carriers"). For the second quarter, the percent change in the index was revised from 3.9 percent to 4.5 percent; the largest contributors to the revision were prices of PCE for nondurable goods (mainly gasoline and other energy goods) and prices of PCE for services (mainly "services furnished without payment by financial intermediaries except life insurance carriers" and "bank service charges, trust services, and safe deposit box rental"). The largest downward revision was 0.8 percentage point, from 4.6 percent to 3.8 percent, for the fourth quarter of 2007; the largest contributors to the revision were prices of PCE for nondurable goods (mainly gasoline and other energy goods), prices of equipment and software (mainly communication equipment), prices of financial services and insurance (mainly "services furnished without payment by financial intermediaries except life insurance carriers"), and prices of state and local government spending (mainly for compensation and for petroleum).

1. Percent change from the preceding period.

Annual Price Estimates

Revisions to the chain-type price indexes result from the incorporation of newly available and revised source data and from the regularly scheduled incorporation of annual weights for the most recent year (2009). In this annual revision, the source data for price indexes that are used for deflation and the source data that affect implicit prices were revised.[1] The prices used for deflation also reflect updated seasonal factors. In addition, the price indexes used to deflate business purchases of three types of communication equipment have been changed and, for consistency, the newly incorporated indexes are also being used to deflate exports and imports of communication equipment (see "Changes in Methodology and Presentation").

The percent change from the preceding year in the price index for gross domestic purchases was unrevised at 2.9 percent for 2007, was unrevised at 3.2 percent for 2008, and was revised down 0.2 percentage point to –0.2 percent for 2009 (see chart 1 and table 6). The annual percent change in the price index for GDP was unrevised at 2.9 percent for 2007, was revised up 0.1 percentage point to 2.2 percent for 2008, and was revised down 0.3 percentage point to 0.9 percent for 2009 (see the addendum to table 6).

For 2007, the price index for gross domestic purchases was unrevised. Upward revisions to the price index for state and local government spending and to the price index for PCE for nondurable goods were offset by downward revisions to the price index for nonresidential structures and to the price index for fixed investment in equipment and software. The revision to the price index for state and local government spending reflects an upward revision to the implicit price for compensation—specifically, an upward revision to current-dollar compensation and a downward revision to chained-dollar compensation. The largest contributor to the revision to the price index for PCE for nondurable goods was an upward revision to the prices for gasoline and other energy goods. The revision to the price index for nonresidential structures reflects a downward revision to prices of petroleum and natural gas drilling structures. The revision to the price index for fixed investment in equipment and software primarily reflects a downward revision to communication equipment prices based on the newly incorporated price indexes mentioned above.

For 2008, the price index for gross domestic purchases was also unrevised. The most notable revisions were a downward revision to the price index for fixed investment in equipment and software and a largely offsetting upward revision to the price index for nonresidential structures. The revision to the price index for fixed investment in equipment and software again reflects the newly incorporated price indexes for communication equipment. The revision to the price index for nonresidential structures reflects an upward revision to the prices of petroleum and natural gas drilling structures.

For 2009, the largest contributors to the downward revision to the price index for gross domestic purchases were the price index for private inventory investment and the price index for fixed investment in equipment and software. The revision to the price index for private inventory investment reflects a downward revision to the prices of nondurable-goods manufacturing (mainly petroleum and coal). The revision to the price index for fixed investment in equipment and software again reflects the newly incorporated price indexes for communication equipment.

1. The implicit prices are computed by dividing the current-dollar estimates by the chained-dollar estimates that are derived from the quantity data used in quantity extrapolation and direct valuation. Thus, differences between the current-dollar revisions and the chained-dollar revisions to these components are reflected as revisions to their implicit prices.

Current-Dollar NIPA Measures

This table shows NIPA components with revisions of $5.0 billion or more (in absolute value) for 2007–2009. The table also lists the major source data that were incorporated as part of this annual revision. Note that the incorporation of new and revised source data for a year usually results in a revision to the level of an estimate both for that year and for subsequent years.

1. In these descriptions, "new" indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and "revised" indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.

2. The statistical discrepancy is gross domestic product (GDP) less gross domestic income (GDI); it is also the difference between gross national product (GNP) and gross national income (GNI), which is GDI plus net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GDP and GNP are estimated independently from the income-side measures of GDI and GNI.

CCAdj Capital consumption adjustment

IVA Inventory valuation adjustment

For 2007–2009, two broad income measures, gross domestic income (GDI) and national income, were revised down.

For 2007, the revision to national income reflects downward revisions to corporate profits with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj) and to supplements to wages and salaries.

The downward revisions were partly offset by an upward revision to wage and salary accruals.

The statistical discrepancy, the difference between GDP and GDI, was revised from –0.1 percent of GDP to 0.2 percent of GDP for 2007.

For 2008, the revision to national income reflects a large downward revision to corporate profits with IVA and CCAdj and a downward revision to the current surplus of government enterprises.

The downward revisions were partly offset by upward revisions to wage and salary accruals, to rental income of persons, and to supplements to wages and salaries.

The statistical discrepancy was revised from 0.7 percent of GDP to 1.0 percent of GDP for 2008.

For 2009, the revision to national income reflects downward revisions to corporate profits with IVA and CCAdj and to nonfarm proprietors' income with IVA and CCAdj.

The downward revisions were partly offset by an upward revision to supplements to wages and salaries.

The statistical discrepancy was revised from 1.5 percent of GDP to 1.3 percent of GDP for 2009.

Source Data and Discontinuities in NIPA Foreign Transactions

Source Data Incorporated in the 2010 Annual Revision

The annual revision incorporated data from a variety of sources: Census Bureau new and revised economic census data for manufacturing for 2007; Census Bureau annual survey of manufactures for 2008; Census Bureau annual surveys of merchant wholesale trade and of retail trade for 2007 (revised) and for 2008; Census Bureau revised monthly indicators of manufactures, of merchant wholesale trade, and of retail trade for 2007–2009; Census Bureau services annual surveys for 2007 (revised), 2008 (revised), and 2009 (preliminary), and annual surveys of government finances for fiscal years 2006 (revised), 2007 (revised), and 2008 (preliminary); Census Bureau monthly survey of construction spending (value put in place) for 2007–2009 (revised); Census Bureau quarterly services survey for 2007–2009 (revised); Census Bureau current population survey/housing vacancy survey for 2009; federal government budget data for fiscal years 2009 and 2010; Internal Revenue Service tabulations of tax returns for corporations for 2007 (revised) and 2008 (preliminary) and for sole proprietorships and partnerships for 2008; Bureau of Labor Statistics (BLS) quarterly census of employment and wages for 2007–2009 (revised); BLS occupational employment survey data for 2009; Department of Agriculture farm statistics for 2007–2009 (revised); and BEA's international transactions accounts for 2007–2009 (revised).

Discontinuities in NIPA Foreign Transactions

The revisions to net exports of goods and services reflect the annual revision of BEA's international transactions accounts (ITAs), which incorporated new and updated source data.[1]

For most components, the revisions to the ITAs for 2007–2009 were incorporated into the NIPAs at their "best level." As a result, there are small discontinuities between the NIPA estimates for total exports and imports for 2006 and those for 2007 (table A), and somewhat larger discontinuities within these categories for the estimates of goods and services due to reclassifications (see "Reclassification of foreign transactions" on page 23).

For current-dollar net exports of goods and services (and for current-dollar GDP), the change from 2006 to 2007 was overstated by $1.1 billion. (The revisions to the ITAs for years before 2007 will be incorporated in the next comprehensive NIPA revision.)

1. See Helen Y. Bai and Mai-Chi Hoang, "Annual Revision of the U.S. International Transactions Accounts," Survey 90 (July 2010): 36–50.

1. Equals the revisions to the U.S. international transactions accounts that have not been carried back in the NIPAs at this time.

Changes in Methodology and Presentation

As part of the annual revision to the NIPAs, a number of changes in methodology and presentation have been incorporated.[1]

Command-basis real gross national product (GNP). While current-dollar GNP measures the market value of goods and services produced by labor and capital supplied by U.S. residents and while real GNP measures the changes in the quantity of these goods and services, command-basis real GNP measures the purchasing power of the income generated by the sale of these goods and services. In the calculation of command-basis real GNP, the deflators for exports and income receipts from the rest of the world and for imports and income payments to the rest of the world have been changed. Beginning with this annual revision, the price index for gross domestic purchases is used to deflate the current account balance in calculating command-basis GNP and to deflate the trade balance in calculating command-basis GDP. Previously, the price index for imports and income payments to the rest of the world was used to deflate exports and income receipts from the rest of the world in calculating command-basis GNP; command-basis GDP was not published.

Because command-basis GNP is intended to measure the purchasing power of income, its deflator should reflect the uses, not the sources, of income.[2] Using the price index for gross domestic purchases to deflate all of GNP is consistent with this principle; in contrast, the deflator previously used depended on whether the source of income was domestic sales (deflated by the gross domestic purchases index) or foreign sales (deflated by the price index for imports and income payments). Furthermore, in time periods when the U.S. current account is in deficit, the new procedure will more accurately reflect the effect of changes in import prices on the purchasing power of gross national income (as measured by GNP) because the import price changes (which include the volatile petroleum price) will no longer be used to deflate exports.

NIPA tables 1.8.3 and 1.8.6 have been revised and expanded to reflect the improved deflation of the command-basis measures, including the addition of the new series command-basis real GDP.[3] The addenda to table 1.8.3 have also been expanded to include percent changes from the preceding period for all the major aggregates shown in the table. The addenda to table 1.8.6 also include several additional new series: trading gains, terms of trade for goods, and terms of trade for nonpetroleum goods. Most of these changes are carried back to 1929 for annual estimates and to 1947 for quarterly estimates.

Saving and investment by sector. NIPA table 5.1 now shows saving, investment, capital account transactions (net), and net lending or net borrowing by sector, beginning with 1960. This expanded presentation provides useful information on how investment is financed across the economy and further aligns the NIPAs with the accounting guidelines in the *System of National Accounts 2008*. The additional sector detail is largely derived from existing data, but in some cases, new series were estimated.

Net private saving is now shown separately for domestic business (undistributed corporate profits plus the corporate inventory valuation adjustment plus the corporate capital consumption adjustment) and for households and institutions (personal saving plus wage accruals less disbursements). Gross private domestic investment (GPDI) is now shown for domestic business and for households and institutions (investment in owner-occupied housing plus investment by nonprofit institutions serving households). Gross government investment is now shown separately for the federal government and for state and local government. The annual investment estimates for households and institutions are from BEA's fixed assets accounts (FAAs), and the quarterly estimates are interpolated and extrapolated from the annual estimates using unpublished quarterly detail from the FAAs. GPDI by domestic business is calculated as the difference between total GPDI and GPDI by households and institutions.[4]

Capital account transactions (net) are now shown separately for domestic business, households and institutions, and government. Previously, only the annual and quarterly estimates of aggregate capital account transactions (net) were published and equaled the rest of world (ROW) capital account transactions (net) in NIPA table 4.1. Capital account transactions between domestic business, households and institutions, and government offset one another so that total capital account transactions (net) presented in table 5.1 continues to equal ROW capital account transactions. However, for each

1. These changes update the information in the two tables that were published in "Updated Summary of NIPA Methodologies" in the November 2009 SURVEY; these tables will be updated in the November 2010 SURVEY.

2. See Marshall B. Reinsdorf, "Terms of Trade Effects: Theory and Measurement," *Review of Income and Wealth* 56 (June 2010): S177–S205.

3. The new presentation reflects the relationships discussed in the most recent edition of the *System of National Accounts;* see Commission of the European Communities, International Monetary Fund, Organisation for Economic Cooperation and Development, United Nations, and the World Bank, *System of National Accounts 2008:* 15: 185–197 at unstats.un.org/unsd/nationalaccount/SNA2008.pdf.

4. Private fixed investment in the NIPAs differs from private fixed investment in the FAAs, primarily for the business sector. The main difference is that the NIPAs include dealers' margins on used equipment, but the FAAs do not. A full reconciliation of NIPA private fixed investment with the corresponding measure in the FAAs is available on BEA's Web site at www.bea.gov/national/FA2004/index.asp.

Changes in Methodology and Presentation

sector, capital account transactions (net) consists of capital transfers and net purchases of nonproduced nonfinancial assets. Estimates of capital transfers are from NIPA tables 5.10 and 5.10u.[5] The vast majority of net purchases of nonproduced nonfinancial assets pertain to land sales (purchases less sales), payments for natural resource rights, and more recently, Federal Communication Commission (FCC) proceeds from the auctions of the radio spectrum. Net purchases of nonproduced assets for federal and state and local governments are from NIPA tables 3.2 and 3.3, respectively. For many of these transactions, such as the FCC auction proceeds or payments for drilling rights, the government is assumed to transact solely with the business sector. However, for net land sales, the government transacts with both the business sector and the households and institutions sector, requiring separate estimates, which are derived judgmentally.

Net lending or net borrowing is now shown by sector and derived for each sector as gross saving minus capital account transactions (net) minus gross investment. The domestic business sector includes the statistical discrepancy, which is the standard practice in the NIPAs.

Quarterly estimates of net investment. Net investment is an important indicator that gauges the degree to which businesses replace their fixed assets. With the recent decline in GPDI, there has been increased interest in timelier and higher frequency estimates. In response to this need, as part of the annual revision, quarterly estimates of consumption of fixed capital (CFC) by major type of asset and of corresponding net investment are introduced in the underlying detail tables of gross and net investment, beginning with the estimates for the first quarter of 2000.[6] The newly available quarterly CFC estimates are calculated using the perpetual inventory method that was introduced in the 2008 annual revision.[7] Previously, estimates of CFC by major type of asset and of corresponding net investment were only available annually in NIPA tables 5.2.3, 5.2.5, and 5.2.6.

Newly available quarterly data for services. As part of the 2005 annual revision, BEA began incorporating data from the Census Bureau's quarterly services survey (QSS) into its estimates. Since then, the Census Bureau has expanded the coverage of the survey. Beginning with estimates for the first quarter of 2010, BEA is now incorporating newly available data from the expanded QSS into the quarterly estimates for a number of personal consumption expenditures (PCE) categories in health care, transportation, recreation, "other" services, and gross output of nonprofit institutions. The percentage of quarterly PCE services that is based on the QSS has increased from 16 percent to 39 percent.[8] Previously, many of the monthly and quarterly PCE estimates covered by the newly available data from the QSS were extrapolated using proxy data, such as BLS employment, hours, and earnings, or judgmental trends. As the Census Bureau's QSS expands to cover even more industries, BEA will continue to incorporate the newly available quarterly data in order to improve the estimates of PCE for services.

Scanner data for software. Beginning with this annual revision, within PCE for goods, the annual estimates for software are based on point-of-sale retail scanner data from a trade source that captures the variation in the composition of goods sold by radio, television, and electronic stores and by computer and software stores.[9] Previously, sales of software at these types of stores were based on retail sales by kind of business and on commodity sales data from the most recent quinquennial economic census from the Census Bureau, resulting in a fixed allocation of software sales by these stores between economic census years. The value of *total* sales of these stores will continue to be based on the Census Bureau's monthly and annual surveys of retail trade, and the current-dollar value of total PCE goods based on retail sales will not be affected by the expanded use of scanner data.

Own-account software. Beginning with this annual revision, the indicator that is used to estimate the quarterly change in own-account software has been changed to an index of employment in four industries for which computer-related occupations account for a relatively high percentage of total employment according to the BLS occupational employment survey. The four

5. There are offsetting revisions beginning with 1989 to capital transfers received by noncorporate business and by persons (table 5.10, lines 32 and 43, respectively) to reflect a reclassification of disaster-related insurance benefits for owner-occupied housing. Previously, these benefits were incorrectly included with noncorporate business.

6. Underlying detail tables provide estimates of underlying NIPA series that are used to calculate published series. These detailed estimates are not included in the published tables, because their quality is significantly less than that of higher level aggregates in which they are included, and they are more likely to be either based on trends or on less reliable source data than the published estimates. See tables 5.2.3u, 5.2.5u, and 5.2.6u; see www.bea.gov/national/nipaweb/nipa_underlying/SelectTable.asp.

7. See Eugene P. Seskin and Shelly Smith, "Annual Revision of the National Income and Product Accounts," Survey 88 (August 2008): 18.

8. For a detailed list of the PCE components that are estimated using the QSS, see www.bea.gov/faq/national/QSSnewFAQ_rev.xls.

9. Point-of-sale scanner data were previously adopted to adjust the composition of other goods sold by radio, television, and electronics stores; computer and software stores; and camera and photographic supplies stores. The allocation of sales at these stores is applied to televisions, "other" video equipment, audio equipment, computers and peripherals, telephones and facsimile equipment, "other" information processing equipment, and cameras and "other" photographic equipment. See Clinton P. McCully and Steven Payson, "Preview of the 2009 Comprehensive Revision of the NIPAs: Statistical Changes," Survey 89 (May 2009): 9.

Changes in Methodology and Presentation

industries are computer systems design and related services; software publishers; data processing, hosting, and related services; and computer and peripheral equipment manufacturing. Previously, the indicator was based on a moving average of the percent change in private fixed investment in computers and peripheral equipment.

Residential improvements. Beginning with this annual revision, the indicator that is used to estimate the quarterly change in residential improvements has been changed. The quarterly estimates are now interpolated and extrapolated from the annual estimates using an indicator based on a weighted average of the percent change in retail sales of building material and garden supply dealers from the Census Bureau retail trade report (50 percent) and of the percent change in aggregate weekly payroll of production workers for residential remodelers from the BLS current employment survey after seasonal adjustment by BEA (50 percent). Previously, the quarterly estimates of residential improvements were interpolated from the annual estimates without an indicator, and the current quarterly estimates were extrapolated using an indicator based on a regression model relating four variables: mortgage interest rates, construction spending on single-family homes, prior-period new home sales, and prior-period residential improvements.

Reclassification of foreign transactions. The international transactions accounts (ITAs) are the primary source data for foreign transactions in the NIPAs. In this year's annual revision of the ITAs, several important changes in classifications were made as part of a multiyear effort to modernize and enhance the accounts and to align them with recently updated guidelines for international economic accounts.[10] These changes include several that impact the NIPAs and are incorporated in this year's annual revision:

- Reclassification of certain exports and imports of military-related items from services to goods, beginning with estimates for 2007,
- Reclassification of exports and imports of air and ocean carriers' expenditures on fuel in foreign ports from services to goods, beginning with estimates for 2007, and
- Exclusion of migrants' transfers, a measure of the net worth of individuals who immigrate or emigrate during the period, from NIPA capital account transactions, beginning with estimates for 1982, which is the first year that these transactions were recognized in the ITAs.

For years before 2007, the NIPA estimates will continue to include military-related items and fuel port expenditures transactions in services until the next comprehensive revision.

State and local government wages. Beginning with this annual revision, quarterly estimates of wages for state and local government employees are estimated using seasonally adjusted quarterly data from the BLS Quarterly Census of Employment and Wages (QCEW), and monthly estimates are interpolated from the quarters using an indicator derived from the product of the monthly BLS current employment statistics (CES) and of monthly interpolations of the employment cost index (ECI) for state and local government employees. Previously, the quarterly estimates during an annual revision were based on annual data from the QCEW, which were then interpolated into quarters (and months) using indicators based on the movements of the CES and ECI. The new method is an improvement because it is based on direct wage data rather than indirect employment and cost data. The current quarterly (and monthly) estimates will continue to be extrapolated using indicators based on the movements of the CES and ECI.

Communication equipment prices. Beginning with the estimates for the first quarter of 2007, BEA is using three quality-adjusted price indexes from the Federal Reserve Board's (FRB) industrial production index program to deflate business purchases of three types of communication equipment: telephone switching equipment, carrier line equipment, and wireless networking equipment. (A fourth FRB price index is already being used to deflate data networking equipment.) The FRB matched-model indexes better account for product quality change than the previously used price indexes, which were based on producer price indexes (PPIs) and international price indexes (IPIs) from BLS. For the current quarterly estimates, the PPI for host computers is used as an indicator to extrapolate the price indexes for the four types of equipment because the FRB indexes are not available.

Similarly, for consistency, BEA is changing the deflation of exports and imports of communication equipment—the lowest deflation-level detail and a component of "other" capital goods. Specifically, BEA is now using a Fisher chain-type price index comprised of the four FRB communication equipment price indexes noted above and IPIs for exported and imported telecommunications equipment to deflate exports and imports of communication equipment. Previously, only the IPIs were used for this deflation. For the current quarterly estimates, the PPI for host computers is again used as an indicator to extrapolate the relevant price indexes.

10. See Bai and Hoang, 36–50. For additional information, see Kristy L. Howell and Robert E. Yuskavage, "Modernizing and Enhancing BEA's International Economic Accounts: Recent Progress and Future Directions," SURVEY 90 (May 2010): 6–20.

Changes in Methodology and Presentation

Changes in presentation. In addition to the changes affecting NIPA tables 1.8.3, 1.8.6, and 5.1 described above, a number of other tables have been modified slightly. Table 9 provides details of these changes.

Table 9. Changes to the NIPA Tables

	Table title	Changes
	Section 1. Domestic Product and Income	
1.1.1	Percent Change From Preceding Period in Real Gross Domestic Product	Added current-dollar gross domestic product (GDP) to a new addendum.
1.1.7	Percent Change From Preceding Period in Prices for Gross Domestic Product	Added implicit price deflators (IPDs) for GDP and for gross national product (GNP) to the addenda.
1.1.11	Real Gross Domestic Product: Percent Change From Quarter One Year Ago	Presents GDP and related components and selected price indexes in a new table.
1.2.1	Percent Change From Preceding Period in Real Gross Domestic Product by Major Type of Product	Added current-dollar final sales of domestic product to the addenda.
1.2.4	Price Indexes for Gross Domestic Product by Major Type of Product	Added the IPD for final sales of domestic product to the addenda.
1.4.1	Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers	Added current-dollar gross domestic purchases and current-dollar final sales to domestic purchasers to the addenda.
1.4.4	Price Indexes for Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers	Added the IPD for final sales to domestic purchasers to the addenda.
1.6.4	Price Indexes for Gross Domestic Purchases	Added the IPD for gross domestic purchases to the addenda.
1.6.7	Percent Change From Preceding Period in Gross Domestic Purchases	Added the IPD for gross domestic purchases to the addenda.
1.7.1	Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross National Product, and Real Net National Product	Added real net domestic purchases and current-dollar GNP to the addenda.
1.7.3	Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Quantity Indexes	Added net domestic purchases to the addenda.
1.7.4	Price Indexes for Gross Domestic Product, Gross National Product, and Net National Product	Added net domestic purchases to the addenda.
1.7.5	Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income	Added net domestic purchases to the addenda.
1.7.6	Relation of Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Chained Dollars	Added net domestic purchases to the addenda.
1.8.3	Command-Basis Real Gross Domestic Product and Gross National Product, Quantity Indexes	Added GDP and command-basis GDP to the table. Added net domestic product and net national product, command-basis net domestic product and net national product, and percent change from preceding period in real GDP, command-basis GDP, and real GNP to the addenda. See the discussion of command-basis real GNP on page 21.
1.8.6	Command-Basis Real Gross Domestic Product and Gross National Product, Chained Dollars	Added GDP and command-basis GDP to the table. Added net domestic product and net national product, command-basis net domestic product and net national product, trading gains index, and terms of trade indexes for goods and services, for goods, and for nonpetroleum goods to the addenda.
	Section 2. Personal Income and Outlays	
2.3.1	Percent Change From Preceding Period in Real Personal Consumption Expenditures by Major Type of Product	Added market-based personal consumption expenditures (PCE) and market-based PCE excluding food and energy to the addenda.
2.3.2	Contributions to Percent Change in Real Personal Consumption Expenditures by Major Type of Product	Added market-based PCE and market-based PCE excluding food and energy to the addenda.
2.3.3	Real Personal Consumption Expenditures by Major Type of Product, Quantity Indexes	Added market-based PCE and market-based PCE excluding food and energy to the addenda.
2.3.5	Personal Consumption Expenditures by Major Type of Product	Added market-based PCE and market-based PCE excluding food and energy to the addenda.
2.3.6	Real Personal Consumption Expenditures by Major Type of Product, Chained Dollars	Added market-based PCE and market-based PCE excluding food and energy to the addenda.
2.8.1	Percent Change From Preceding Period in Real Personal Consumption Expenditures by Major Type of Product, Monthly	Added PCE excluding food and energy, PCE for food, PCE for energy goods and services, market-based PCE, and market-based PCE excluding food and energy to a new addenda.
2.8.3	Real Personal Consumption Expenditures by Major Type of Product, Monthly, Quantity Indexes	Added PCE excluding food and energy, PCE for food, PCE for energy goods and services, market-based PCE, and market-based PCE excluding food and energy to a new addenda.
2.8.4	Price Indexes for Personal Consumption Expenditures by Major Type of Product, Monthly	Added PCE for food to the addenda.
2.8.5	Personal Consumption Expenditures by Major Type of Product, Monthly	Added PCE excluding food and energy, PCE for food, PCE for energy goods and services, market-based PCE, and market-based PCE excluding food and energy to a new addenda.
2.8.6	Real Personal Consumption Expenditures by Major Type of Product, Monthly, Chained Dollars	Added PCE excluding food and energy, PCE for food, PCE for energy goods and services, market-based PCE, and market-based PCE excluding food and energy to a new addenda.
2.8.7	Percent Change From Preceding Period in Prices for Personal Consumption Expenditures by Major Type of Product, Monthly	Added PCE for food to the addenda.
	Section 5. Saving and Investment	
5.1	Saving and Investment	Added saving, investment, capital account transactions (net), and net lending or borrowing by sector. See the discussion of saving and investment by sector on page 21.

Acknowledgments

Acknowledgments

Carol E. Moylan, Chief of the National Income and Wealth Division, supervised the preparation of this year's annual revision of the national income and product accounts. Pamela A. Kelly, Chief of the Government Division, directed major parts of the revision. Brent R. Moulton, Associate Director for National Economic Accounts, provided overall supervision.

BEA staff who made significant contributions to the revision are listed below.

Estimate coordination and review: David F. Sullivan. Alyssa E. Holdren, Robert J. Kornfeld, Clint P. McCully, Eugene P. Seskin, Shelly Smith.

Personal consumption expenditures: Michael Armah. *Goods:* Brendan J. Leary, Harvey L. Davis, Jr., Yukun Fung, Everette P. Johnson, Danit E. Kanal, Matthew D. Tschetter. *Services:* Kyle J. Brown, Robert N. Ganz III, Christina D. Hovland, Teresita D. Teensma.

Investment and foreign transactions: Jennifer A. Ribarsky. *Inventories, foreign transactions, and prices:* Jennifer A. Ribarsky, Marissa J. Crawford, Harry Johnson, Jr., Kate L. Shoemaker, Enrico Tan. *Structures, equipment and software:* Jeffrey W. Crawford, Velma P. Henry, Lindsay Orphanides, Marlyn Rodriguez, Linden L. Webber.

Federal government: Benjamin A. Mandel. Peter G. Beall, Stan J. Bellotti, Andrew P. Cairns, Andrea L. Cook, Raymen G. LaBella, Mark S. Ludwick, Kyle D. Mulgrew, Farah Naz, Michelle D. Robinson, Mary L. Roy, Benyam Tsehaye, Andrew E. Vargo, Bryan Williams.

State and local government: Bruce E. Baker, Steven J. Andrews, Michelle S. Grier, Natalie M. Hayes, Angela C. Padalecki, Brian E. Parks.

Personal income: Kurt Kunze. *Employee compensation:* Janet H. Kmitch, Elizabeth C. Bernstein, James E. Rankin, Brian J. Smith. *Business income:* Howard I. Krakower, Andrew W. Hodge, M. Greg Key, Martin L. Simmons, Jerry L. Stone, Garth K. Trinkl, Dennis R. Weikel. *Property income:* Michael N. Hayes, Denise A. McBride, Charles S. Robinson, Andrew G. Schmidt, Elizabeth M. Terrain.

Consumption of fixed capital: Private: David B. Wasshausen, Michael T. Cusick, Michael D. Glenn, Lisa A. Lynn, Nadia F.P. Sadee. *Government:* Jennifer A. Bennett, Debasis Chaudhuri, Christopher B. Mbu.

Computer systems and operations: Michael J. Boehm, Wanda Y. Chambers, Benjamin D. Cowan, Scott G. He, Douglas J. Klear, Sung H. Lee, Ethan C. Lincoln, Sandip Mehta, Ross F. Metzger, Lisa C. Ninomiya, Michael J. Ocasio, Andrew J. Pinard, James J. Raley III, Michael D. Randall, Karl V. Rohrer, David Rozenshtein.

Supplemental review materials: Duane G. Hackmann, Virginia H. Mannering, Kristina L. Maze, Bonnie A. Retus, David F. Sullivan.

NIPA information: Stephen H. Andrews, Debra M. Blagburn, Mark A. Ledbetter, Lisa S. Mataloni.

Secretarial and program assistance: Esther M. Carter, Katherine Dent, Beverly B. Goodwin, Angela P. Pointer.

Other contributors to the definitional and statistical improvements include the following: Michael Berry, Kyle K. Hood, John Laffman, Marshall B. Reinsdorf, Brian K. Sliker.

Returns for Domestic Nonfinancial Business

By Andrew W. Hodge and Robert J. Corea

THE RETURNS to domestic nonfinancial corporations declined in 2009, before and after taxes, for the third straight year, according to statistics from the Bureau of Economic Analysis (BEA). In addition, a similar measure of profitability for nonfinancial industries—a measure that includes proprietors' income—fell in 2008, the most recent year for which these statistics are available.

Once a year, BEA presents aggregate rates of return for domestic nonfinancial corporations, nonfinancial industries, and a few major industry groups—mining, utilities, and construction; manufacturing; wholesale and retail trade; and "other" nonfinancial industries. In addition, various Q ratios, which compare the financial market value of assets with their replacement costs, are also presented.

The broad measures of profitability defined below and discussed in this article may be useful to economists and policymakers. They show which industries have rising or falling returns. They show the relative volatility of returns. Sector performance is now available through 2008, and corporate returns are available through 2009. Thus, the statistics presented in this article show effects of the recession that began in December 2007.[1]

In addition, these statistics incorporate improved statistical measures from the 2009 comprehensive revision of the national income and product accounts (NIPAs) and the 2010 comprehensive revision of the annual industry accounts.[2]

The returns in this article are calculated as the ratio of the net operating surplus to the net stock of produced assets. For nonfinancial corporations, the net operating surplus is the return accruing to capital after labor costs, intermediate inputs, and consumption of fixed capital are deducted from receipts. The net operating surplus is defined as the sum of corporate profits, net interest, and business current transfer payments (table 1).[3] Produced assets refer to the net stock of

1. As dated by the National Bureau of Economic Research.

2. See Eugene P. Seskin and Shelly Smith, "Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision," Survey of Current Business 89 (September 2009): 15–35 and Nicole M. Mayerhauser and Erich H. Strassner, "Preview of the Comprehensive Revision of the Annual Industry Accounts," Survey 90 (March 2010): 21–34. The corporate data are consistent with the 2009 comprehensive NIPA revision, not the recently released 2010 annual NIPA revision.

3. The estimates of corporate profits and net interest are based on tabulations of "company" data rather than "establishment" data. As a result, net operating surplus of nonfinancial corporations includes the income earned by the corporation's financial services-producing establishments, and it excludes the income earned by the nonfinancial establishments of financial corporations.

1. Consists of agriculture, forestry, fishing and hunting; transportation and warehousing; information; rental and leasing services and lessors of intangible assets; professional, scientific, and technical services; administrative and waste management services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; and other services, except government.

2. Information-communication-technology (ICT)-producing industries consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services. Computer and electronic products are included in manufacturing; the other ICT-producing industries are included in "other" industries.

Note. Industrywide net operating surplus for 2009 will be available in the fall 2010 update of the annual industry accounts.

capital plus inventories valued at current cost.

The corporate data are based on preliminary estimates from the NIPAs and the fixed assets accounts. The statistics on industry returns are calculated using data from the annual industry accounts, the NIPAs, and the fixed assets accounts. To calculate the Q ratios, additional data were drawn from the Federal Reserve Board's flow of funds accounts.

Corporate returns

In 2009, the rates of return for nonfinancial corporations, both before and after taxes decreased for the third straight year. Before taxes, the rates of return fell for the third straight year to 7.4 percent in 2009 from 7.9 percent in 2008 (chart 1 and table 2). The rate of return peaked in 2006 at 10.1 percent and bottomed at 6.5 percent in 1982. After-tax corporate rates of return fell from 7.5 percent in 2006 to 5.7 percent in 2009.

Other measures of profits—such as BEA's measure of corporate profits from current production—have shown a rising trend over the last 30 years. The measures presented in this article exclude the volatile financial sector and compare returns with assets rather than with GDP or corporate value added. Assets have grown faster than either of these two alternative measures over the period, and returns on assets have remained in a stable range over the last 30 years as shown in chart 1.

Current-cost nonfinancial corporate produced assets—the denominator in rates of return—continued

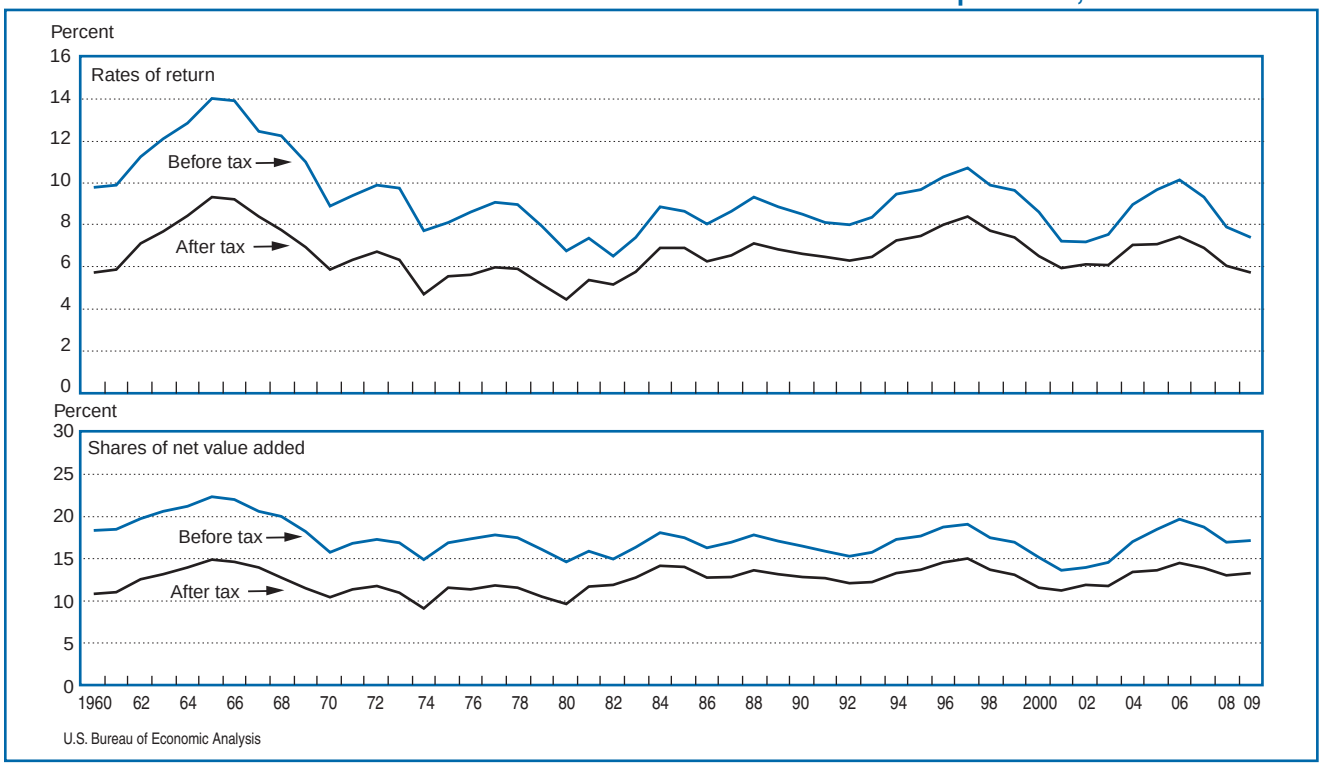
Computer and electronic products are included in manufacturing; the other ICT-producing industries are included in "other" industries.

NOTE. Industrywide net operating surplus for 2009 will be available in the fall 2010 update of the annual industry accounts.

Chart 1. Rates of Return and Shares of Net Value Added for Nonfinancial Corporations, 1960–2009



to grow in 2008 and 2009 as shown in table 1. In contrast, current-dollar GDP and corporate value added both declined in 2009 after increasing in 2008. So about a third of the 2.7 percentage point drop in pretax returns from a peak of 10.1 percent in 2006 to 7.4 percent in 2009 was due to continued growth in the capital stock through this recessionary period.

Industry returns

Rates of return can also be calculated for industry aggregates using data from the annual industry accounts, which provide annually updated data on 65 industries that together account for total economic activity. Like rates of return for nonfinancial corporations, rates of return for nonfinancial industries are also calculated as the ratio of net operating surplus to produced assets.

Like nonfinancial corporations' net operating surplus, nonfinancial industries' net operating surplus consists of corporate profits, net interest, and business current transfer payments. However, it also includes proprietors' income, which reflects the income of sole proprietorships and partnerships.[4] For this article, real estate, which includes owner-occupied housing, is excluded from the nonfinancial industry data—the net operating surplus and produced assets—to allow for a better comparison with the nonfinancial corporate returns data, which do not reflect home ownership.

The pretax rate of return for total nonfinancial industries declined to 13.0 percent in 2008 from 14.1 percent in 2007. The annual industry accounts do not provide after-tax data. The industry rates of return for 2009 will be available when the annual industry accounts are updated in the fall of 2010.

Most of the difference between the total industry rates of return and the corporate rate of return can be attributed to the inclusion of proprietors' income in industry net operating surplus. However, several statistical differences between the annual industry accounts and the NIPAs also affect the estimates. Notably, the annual industry accounts include adjustments that (1) exclude the financial services-producing establishments of primarily nonfinancial corporations and (2) include the nonfinancial services-producing establishments of primarily financial corporations as well as a share of the NIPA statistical discrepancy. Despite the differences between the total industry rates and the pretax corporate rates, the annual patterns of change of each are similar (chart 2).

Specific industry groups

Returns were also updated for four broad nonfinancial industry groups: mining, utilities, and construction; manufacturing; wholesale and retail trade; and "other" nonfinancial industries (chart 3).

In 2008, the rates of return for all four groups declined as the economy slowed. The sharpest decline was in the manufacturing group; the rate of return fell 2.1 percentage points to 16.4 percent in 2008 from 18.5 percent in 2007, but it remained in the high range

4. Proprietors' income reflects both the return accruing to capital and the return to proprietors' and partners' labor, but these returns are not identified in the data.

Chart 2. Rates of Return for Domestic Nonfinancial Corporations and Industries, 1998–2009

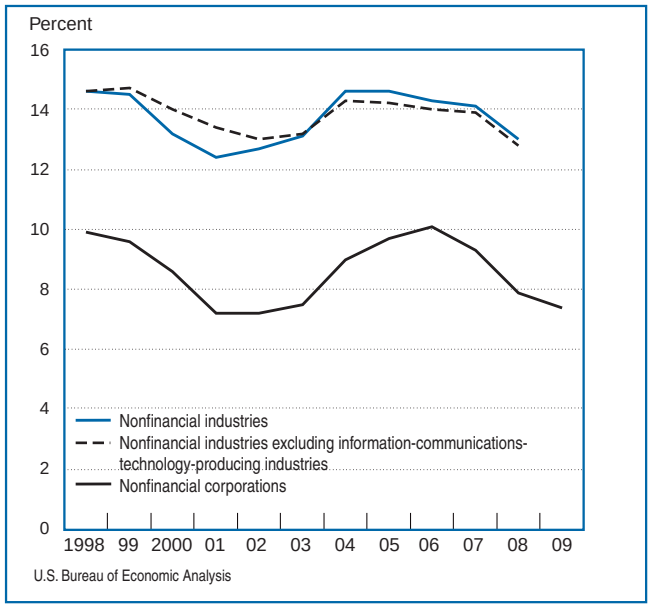


Chart 3. Rates of Return for Domestic Nonfinancial Industry Groups, 1998–2008

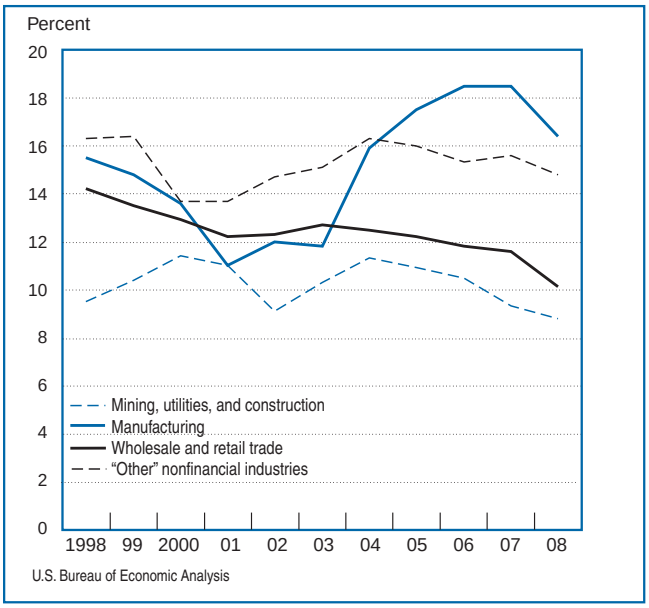


relative to the other groups. Manufacturing was the only industry group with a rate of return for 2008 that exceeded its value for 1998. Returns for the wholesale and retail trade group have fallen for 5 consecutive years, with the largest annual decline in 2008. Returns for the mining, utilities, and construction group declined 0.5 percentage point in 2008 to 8.8 percent, its lowest value in the period covered in this article. The rate of return for the "other" nonfinancial industry group fell 0.8 percentage point to 14.8 percent; the rate of return has ranged between 14.5 percent and 16.5 percent over the last 7 years.

Returns were also calculated for the information-communication-technology (ICT)-producing industries.[5] Returns to ICT-producing industries, which have been in an elevated range of 19 percent to 24 percent over the last 5 years, decreased 0.8 percentage point to 19.0 percent in 2008 from 19.8 percent in 2007.

Users may find these consistent series of sector returns and capital stock helpful for comparative studies. For example, from 2004 to 2008, ICT-producing industries had returns that were above the national average, while their average annual produced asset growth was only 4.5 percent, the smallest percentage increase of the reported sectors. Conversely, the mining, utilities, and construction group experienced the lowest average rate of return, but it achieved the highest average percentage growth in produced assets, which grew at an annual rate of 11.0 percent.

Q ratios

"Tobin's Q," or simply "Q," is the ratio of financial-market valuation of corporate assets to the current-cost value of the assets. A Q ratio above 1 indicates that financial markets value corporate assets above their replacement costs. A value of Q below 1 indicates that the financial markets value corporate assets below the corresponding replacement costs.

Three Q-type ratios for domestic nonfinancial corporations are defined as follows:

- Q1 is calculated as the market value of outstanding equity divided by the net stock of produced assets.
- Q2 adds the book value of outstanding corporate bonds to the numerator used in Q1.[6] The inclusion of bonds makes Q2 a more complete measure of invested capital, but including them at historical cost is clearly inconsistent with the underlying rationale for Q, which is to provide a comparison of market valuation with replacement cost.
- Q3 adds an estimate of the market value of outstanding corporate bonds and net liquid assets to the numerator used in Q1. It also subtracts land from the numerator (because land is not included in the denominator).[7]

All three ratios reached record levels in 1999,

5. The subset of ICT-producing industries consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer design and related services. Computer and electronic products are included in the manufacturing group; the other ICT-producing industries are included in the "other" nonfinancial industries group.

6. Outstanding corporate bonds is a gross estimate; it is not net of financial assets and debt held by nonfinancial corporations.

7. The market value of outstanding bonds is estimated using a procedure developed by James Tobin and Dan Sommers. Briefly, the process begins with published book values of bonds outstanding and the assumption that a bond matures in 10 years and carries a coupon rate equal to the Baa rate that prevailed in the year the bond was issued. The value of land is estimated as the difference between the value of real estate and the value of structures and of equipment and software. Net liquid assets are estimated as financial assets less liabilities other than municipal securities, corporate bonds, and mortgages. The data are from the Board of Governors of the Federal Reserve System, "Flow of Funds Accounts of the United States", statistical release Z.1 and "Selected Interest Rates," statistical release H.15 (Washington, DC: Board of Governors).

The data are available at www.federalreserve.gov/releases/Z1 and www.federalreserve.gov/releases/h15.

Table 3. Q-type Ratios, 1960–2009

	Q1 [1]	Q2 [2]	Q3 [3]		Q1 [1]	Q2 [2]	Q3 [3]
1960	0.77	0.93	0.57	1985	0.46	0.60	0.41
1961	0.90	1.07	0.71	1986	0.52	0.69	0.48
1962	0.85	1.02	0.68	1987	0.51	0.69	0.45
1963	0.90	1.07	0.74	1988	0.54	0.73	0.48
1964	1.01	1.18	0.87	1989	0.63	0.82	0.59
1965	1.08	1.25	0.94	1990	0.57	0.76	0.56
1966	0.87	1.04	0.76	1991	0.74	0.94	0.79
1967	1.04	1.21	0.93	1992	0.79	1.00	0.93
1968	1.13	1.31	1.04	1993	0.85	1.06	1.00
1969	0.86	1.04	0.78	1994	0.80	1.01	0.92
1970	0.78	0.97	0.69	1995	1.01	1.22	1.11
1971	0.84	1.03	0.74	1996	1.02	1.24	1.09
1972	0.97	1.16	0.85	1997	1.24	1.48	1.25
1973	0.68	0.86	0.56	1998	1.49	1.75	1.45
1974	0.40	0.56	0.23	1999	1.87	2.14	1.75
1975	0.46	0.62	0.39	2000	1.51	1.79	1.32
1976	0.52	0.67	0.44	2001	1.25	1.55	1.12
1977	0.41	0.57	0.34	2002	0.91	1.22	0.79
1978	0.38	0.53	0.32	2003	1.17	1.48	1.02
1979	0.40	0.53	0.33	2004	1.23	1.54	1.06
1980	0.46	0.58	0.39	2005	1.20	1.48	0.85
1981	0.37	0.48	0.30	2006	1.27	1.55	0.87
1982	0.38	0.50	0.33	2007	1.29	1.58	0.90
1983	0.43	0.55	0.37	2008	0.77	1.06	0.56
1984	0.40	0.52	0.32	2009	0.96	1.27	0.83

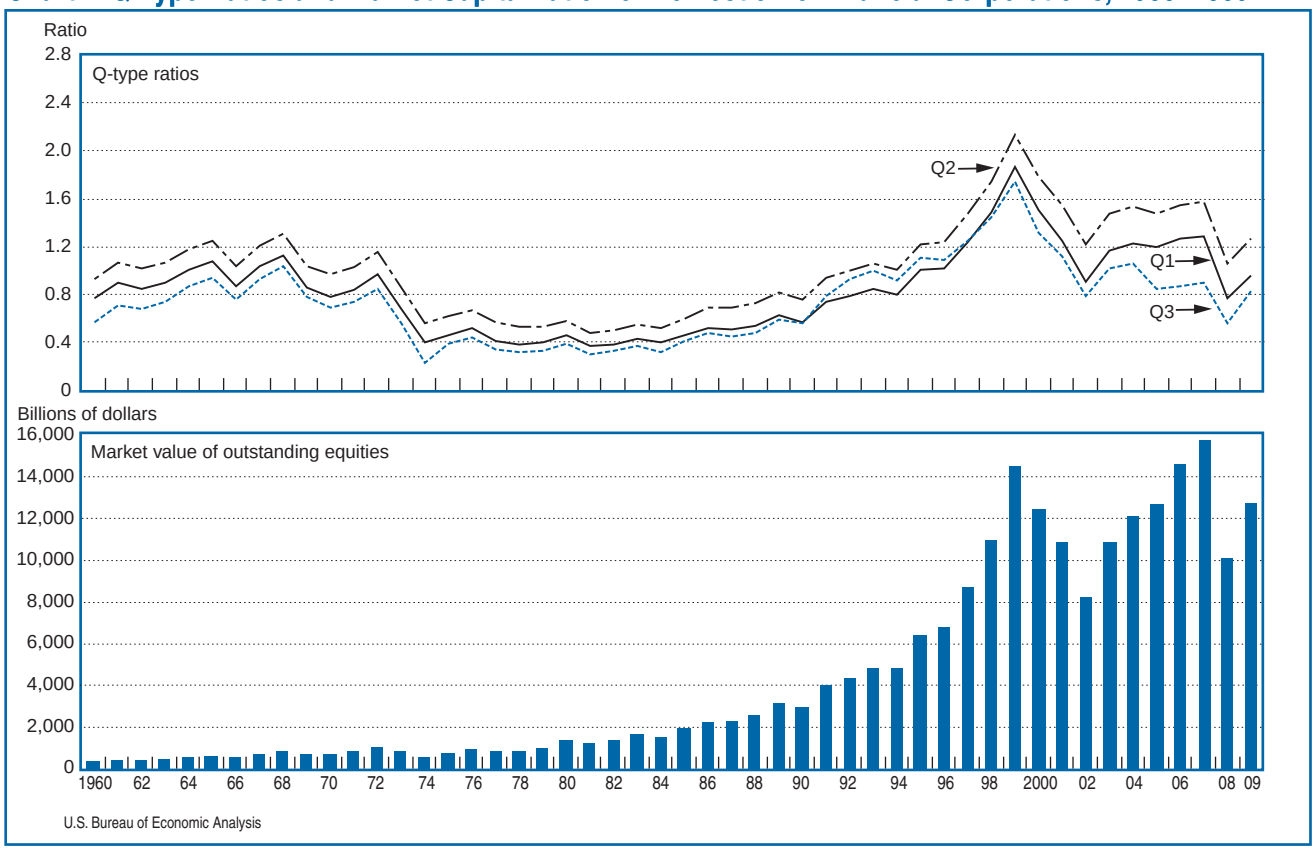
1. Q1 is the market value of outstanding equity divided by the net stock of produced assets valued at current cost.

2. Q2 is the market value of outstanding equity plus book value of outstanding corporate bonds divided by the net stock of produced assets valued at current cost.

3. Q3 is the market value of outstanding equity plus book value of outstanding corporate bonds plus net liquid assets divided by the net stock of produced assets valued at current cost.

dropped sharply in 2000, and continued decreasing until 2002 (chart 4 and table 3). In 2003, all three ratios began rising. In 2008, they fell sharply, reflecting the massive stock market decline, though both Q1 and Q3 fell below 1. In 2009, the stock market recovery more than offset the small continued capital stock gains noted earlier. The Qs recovered to a range of 0.83 to 1.27.

Chart 4. Q-Type Ratios and Market Capitalization of Domestic Nonfinancial Corporations, 1960–2009



National Income and Product Accounts Tables

This set of national income and product accounts (NIPAs) tables presents the most recent estimates of gross domestic product and its components released on July 30, 2010. These estimates include the "advance" estimate for the second quarter of 2010 and preliminary monthly estimates for June 2010. Tables in this section also incorporate estimates from the 2010 annual revision of the NIPAs. The tables present revised annual estimates for 2007–2009, revised quarterly estimates for the first quarter of 2007 through the first quarter of 2010, and revised monthly estimates for January 2007 through May 2010.

For additional information, see the article "Annual Revision of the National Income and Product Accounts" in this issue. All currently available NIPA series estimates are on BEA's Web site at www.bea.gov.

Some tables from the annual revision will be published in upcoming issues of the Survey of Current Business. Tables 3.15–3.17 and 7.15 are scheduled for publication in the September 2010 issue. Tables 3.18B–3.23 are scheduled for the October 2010 issue, and tables 2.9 and 7.20 will be published in the November 2010 issue.

The historical estimates of gross domestic product are presented in "GDP and Other Major NIPA Series, 1929–2010:II" in this issue.

Summary Tables

A. Summary National Income and Product Accounts, 2009 34

1. Domestic Product and Income

1.1.1. Percent Change From Preceding Period in Real Gross Domestic Product 36
1.1.2. Contributions to Percent Change in Real Gross Domestic Product 36
1.1.3. Real Gross Domestic Product, Quantity Indexes 37
1.1.4. Price Indexes for Gross Domestic Product 37
1.1.5. Gross Domestic Product 38
1.1.6. Real Gross Domestic Product, Chained Dollars 38
1.1.7. Percent Change From Preceding Period in Prices for Gross Domestic Product 39
1.1.8. Contributions to Percent Change in the Gross Domestic Product Price Index 39
1.1.9. Implicit Price Deflators for Gross Domestic Product 40
1.1.10. Percentage Shares of Gross Domestic Product 40
1.1.11. Real Gross Domestic Product: Percent Change From Quarter One Year Ago 41
1.2.1. Percent Change From Preceding Period in Real Gross Domestic Product by Major Type of Product 42
1.2.2. Contributions to Percent Change in Real Gross Domestic Product by Major Type of Product 42
1.2.3. Real Gross Domestic Product by Major Type of Product, Quantity Indexes 43
1.2.4. Price Indexes for Gross Domestic Product by Major Type of Product 43
1.2.5. Gross Domestic Product by Major Type of Product 44
1.2.6. Real Gross Domestic Product by Major Type of Product, Chained Dollars 44
1.3.1. Percent Change From Preceding Period in Real Gross Value Added by Sector 45
1.3.3. Real Gross Value Added by Sector, Quantity Indexes 45
1.3.4. Price Indexes for Gross Value Added by Sector 45
1.3.5. Gross Value Added by Sector 46
1.3.6. Real Gross Value Added by Sector, Chained Dollars 46
1.4.1. Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers 46
1.4.3. Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Quantity Indexes 47

1.4.4. Price Indexes for Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers 47
1.4.5. Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers 47
1.4.6. Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Chained Dollars 47
1.5.1. Percent Change From Preceding Period in Real Gross Domestic Product, Expanded Detail 48
1.5.2. Contributions to Percent Change in Real Gross Domestic Product, Expanded Detail 49
1.5.3. Real Gross Domestic Product, Expanded Detail, Quantity Indexes 50
1.5.4. Price Indexes for Gross Domestic Product, Expanded Detail 51
1.5.5. Gross Domestic Product, Expanded Detail 52
1.5.6. Real Gross Domestic Product, Expanded Detail, Chained Dollars 53
1.6.4. Price Indexes for Gross Domestic Purchases 54
1.6.7. Percent Change From Preceding Period in Prices for Gross Domestic Purchases 55
1.6.8. Contributions to Percent Change in the Gross Domestic Purchases Price Index 56
1.7.1. Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross National Product, and Real Net National Product 57
1.7.3. Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Quantity Indexes 57
1.7.4. Price Indexes for Gross Domestic Product, Gross National Product, and Net National Product 57
1.7.5. Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income 58
1.7.6. Relation of Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Chained Dollars 59
1.8.3. Command-Basis Real Gross Domestic Product and Gross National Product, Quantity Indexes 59
1.8.6. Command-Basis Real Gross Domestic Product and Gross National Product, Chained Dollars 60
1.9.3. Real Net Value Added by Sector, Quantity Indexes 61
1.9.4. Price Indexes for Net Value Added by Sector 61
1.9.5. Net Value Added by Sector 61
1.9.6. Real Net Value Added by Sector, Chained Dollars 61
1.10. Gross Domestic Income by Type of Income 62
1.11. Percentage Shares of Gross Domestic Income 62
1.12. National Income by Type of Income 63
1.13. National Income by Sector, Legal Form of Organization, and Type of Income 64
1.14. Gross Value Added of Domestic Corporate Business in Current Dollars and Gross Value Added of Nonfinancial Domestic Corporate Business in Current and Chained Dollars 65
1.15. Price, Costs, and Profit Per Unit of Real Gross Value Added of Nonfinancial Domestic Corporate Business 66
1.16. Sources and Uses of Private Enterprise Income 66

2. Personal Income and Outlays

2.1. Personal Income and Its Disposition 67
2.2B. Wage and Salary Disbursements by Industry 68
2.3.1. Percent Change From Preceding Period in Real Personal Consumption Expenditures by Major Type of Product 68
2.3.2. Contributions to Percent Change in Real Personal Consumption Expenditures by Major Type of Product 69
2.3.3. Real Personal Consumption Expenditures by Major Type of Product, Quantity Indexes 70
2.3.4. Price Indexes for Personal Consumption Expenditures by Major Type of Product 71
2.3.5. Personal Consumption Expenditures by Major Type of Product 72
2.3.6. Real Personal Consumption Expenditures by Major Type of Product, Chained Dollars 73
2.3.7. Percent Change from Preceding Period in Prices for Personal Consumption Expenditures by Major Type of Product 74
2.4.3. Real Personal Consumption Expenditures by Type of Product, Quantity Indexes 75
2.4.4. Price Indexes for Personal Consumption Expenditures by Type of Product 76

2.4.5. Personal Consumption Expenditures by Type of Product 77
2.4.6. Real Personal Consumption Expenditures by Type of Product, Chained Dollars 78
2.5.3. Real Personal Consumption Expenditures by Function, Quantity Indexes 79
2.5.4. Price Indexes for Personal Consumption Expenditures by Function 80
2.5.5. Personal Consumption Expenditures by Function 81
2.5.6. Real Personal Consumption Expenditures by Function, Chained Dollars 82
2.6. Personal Income and Its Disposition, Monthly 83
2.7B. Wage and Salary Disbursements by Industry, Monthly 86
2.8.1. Percent Change From Preceding Period in Real Personal Consumption Expenditures by Major Type of Product, Monthly 87
2.8.3. Real Personal Consumption Expenditures by Major Type of Product, Monthly, Quantity Indexes 88
2.8.4. Price Indexes for Personal Consumption Expenditures by Major Type of Product, Monthly 89
2.8.5. Personal Consumption Expenditures by Major Type of Product, Monthly 90
2.8.6. Real Personal Consumption Expenditures by Major Type of Product, Monthly, Chained Dollars 91
2.8.7. Percent Change from Preceding Period in Prices for Personal Consumption Expenditures by Major Type of Product, Monthly 92
2.9. Personal Income and Its Disposition by Households and by Nonprofit Institutions Serving Households ..... *

3. Government Current Receipts and Expenditures

3.1. Government Current Receipts and Expenditures 93
3.2. Federal Government Current Receipts and Expenditures 94
3.3. State and Local Government Current Receipts and Expenditures 95
3.4. Personal Current Tax Receipts 96
3.5. Taxes on Production and Imports 96
3.6. Contributions for Government Social Insurance 96
3.7. Government Current Transfer Receipts 97
3.8. Current Surplus of Government Enterprises 97
3.9.1. Percent Change From Preceding Period in Real Government Consumption Expenditures and Gross Investment 97
3.9.2. Contributions to Percent Change in Real Government Consumption Expenditures and Gross Investment 98
3.9.3. Real Government Consumption Expenditures and Gross Investment, Quantity Indexes 98
3.9.4. Price Indexes for Government Consumption Expenditures and Gross Investment 99
3.9.5. Government Consumption Expenditures and Gross Investment 99
3.9.6. Real Government Consumption Expenditures and Gross Investment, Chained Dollars 100
3.10.1. Percent Change From Preceding Period in Real Government Consumption Expenditures and General Government Gross Output 101
3.10.3. Real Government Consumption Expenditures and General Government Gross Output, Quantity Indexes 102
3.10.4. Price Indexes for Government Consumption Expenditures and General Government Gross Output 103
3.10.5. Government Consumption Expenditures and General Government Gross Output 104
3.10.6. Real Government Consumption Expenditures and General Government Gross Output, Chained Dollars 105
3.11.1. Percent Change From Preceding Period in Real National Defense Consumption Expenditures and Gross Investment by Type 106
3.11.3. Real National Defense Consumption Expenditures and Gross Investment by Type, Quantity Indexes 107
3.11.4. Price Indexes for National Defense Consumption Expenditures and Gross Investment by Type 108
3.11.5. National Defense Consumption Expenditures and Gross Investment by Type 109
3.11.6. Real National Defense Consumption Expenditures and Gross Investment by Type, Chained Dollars 110
3.12. Government Social Benefits 111
3.13. Subsidies 111

* This table is scheduled to be published in an upcoming issue. Please see the introduction.

3.14. Government Social Insurance Funds Current Receipts and Expenditures 111
3.15.1. Percent Change From Preceding Period in Real Government Consumption Expenditures and Gross Investment by Function ..... *
3.15.2. Contributions to Percent Change From Preceding Period in Real Government Consumption Expenditures and Gross Investment by Function ..... *
3.15.3. Real Government Consumption Expenditures and Gross Investment by Function, Quantity Indexes ..... *
3.15.4. Price Indexes for Government Consumption Expenditures and Gross Investment by Function ..... *
3.15.5. Government Consumption Expenditures and Gross Investment by Function ..... *
3.15.6. Real Government Consumption Expenditures and Gross Investment by Function, Chained Dollars ..... *
3.16. Government Current Expenditures by Function ..... *
3.17. Selected Government Current and Capital Expenditures by Function ..... *
3.18B. Relation of Federal Government Current Receipts and Expenditures in the National Income and Product Accounts to the Budget, Fiscal Years and Quarters ..... *
3.19. Relation of State and Local Government Current Receipts and Expenditures in the National Income and Product Accounts to Bureau of Census *Government Finances* Data, Fiscal Years ..... *
3.20. State Government Current Receipts and Expenditures ..... *
3.21. Local Government Current Receipts and Expenditures ..... *
3.22. Federal Government Current Receipts and Expenditures, Not Seasonally Adjusted ..... *
3.23. State and Local Government Current Receipts and Expenditures, Not Seasonally Adjusted ..... *

4. Foreign Transactions

4.1. Foreign Transactions in the National Income and Product Accounts 112
4.2.1. Percent Change From Preceding Period in Real Exports and in Real Imports of Goods and Services by Type of Product 113
4.2.2. Contributions to Percent Change in Real Exports and in Real Imports of Goods and Services by Type of Product 114
4.2.3. Real Exports and Imports of Goods and Services by Type of Product, Quantity Indexes 115
4.2.4. Price Indexes for Exports and Imports of Goods and Services by Type of Product 116
4.2.5. Exports and Imports of Goods and Services by Type of Product 117
4.2.6. Real Exports and Imports of Goods and Services by Type of Product, Chained Dollars 118
4.3B. Relation of Foreign Transactions in the National Income and Product Accounts to the Corresponding Items in the International Transactions Accounts 119

5. Saving and Investment

5.1. Saving and Investment by Sector 120
5.2.3. Real Gross and Net Domestic Investment by Major Type, Quantity Indexes 121
5.2.5. Gross and Net Domestic Investment by Major Type 121
5.2.6. Real Gross and Net Domestic Investment by Major Type, Chained Dollars 122
5.3.1. Percent Change From Preceding Period in Real Private Fixed Investment by Type 123
5.3.2. Contributions to Percent Change in Real Private Fixed Investment by Type 124
5.3.3. Real Private Fixed Investment by Type, Quantity Indexes 125
5.3.4. Price Indexes for Private Fixed Investment by Type 126
5.3.5. Private Fixed Investment by Type 127
5.3.6. Real Private Fixed Investment by Type, Chained Dollars 128
5.4.1 Percent Change From Preceding Period in Real Private Fixed Investment in Structures by Type 129
5.4.2 Contributions to Percent Change in Real Private Fixed Investment in Structures by Type 129
5.4.3 Real Private Fixed Investment in Structures by Type, Quantity Indexes 130
5.4.4 Price Indexes for Private Fixed Investment in Structures by Type 130

* This table is scheduled to be published in an upcoming issue. Please see the introduction.

5.4.5 Private Fixed Investment in Structures by Type 131
5.4.6 Real Private Fixed Investment in Structures by Type, Chained Dollars 131
5.5.1. Percent Change From Preceding Period in Real Private Fixed Investment in Equipment and Software by Type 132
5.5.2. Contributions to Percent Change in Real Private Fixed Investment in Equipment and Software by Type 132
5.5.3. Real Private Fixed Investment in Equipment and Software by Type, Quantity Indexes 132
5.5.4. Price Indexes for Private Fixed Investment in Equipment and Software by Type 132
5.5.5. Private Fixed Investment in Equipment and Software by Type 133
5.5.6. Real Private Fixed Investment in Equipment and Software by Type, Chained Dollars 133
5.6.5B Change in Private Inventories by Industry 134
5.6.6B Change in Real Private Inventories by Industry, Chained Dollars 134
5.7.5B Private Inventories and Domestic Final Sales by Industry 135
5.7.6B Real Private Inventories and Real Domestic Final Sales by Industry, Chained Dollars 136
5.7.9B Implicit Price Deflators for Private Inventories by Industry 136
5.8.3B Real Gross Government Fixed Investment by Type, Quantity Indexes 137
5.8.4B Price Indexes for Gross Government Fixed Investment by Type 137
5.8.5B Gross Government Fixed Investment by Type 138
5.8.6B Real Gross Government Fixed Investment by Type, Chained Dollars 138
5.9. Changes in Net Stock of Produced Assets (Fixed Assets and Inventories) 139
5.10. Capital Transfers Paid and Received, by Sector and by Type 140

6. Income and Employment by Industry

6.1D. National Income Without Capital Consumption Adjustment by Industry 141
6.2D. Compensation of Employees by Industry 142
6.3D. Wage and Salary Accruals by Industry 143
6.4D. Full-Time and Part-Time Employees by Industry 144
6.5D. Full-Time Equivalent Employees by Industry 145
6.6D. Wage and Salary Accruals Per Full-Time Equivalent Employee by Industry 146
6.7D. Self-Employed Persons by Industry 147
6.8D. Persons Engaged in Production by Industry 148
6.9D. Hours Worked by Full-Time and Part-Time Employees by Industry 149
6.10D. Employer Contributions for Government Social Insurance by Industry 149
6.11D. Employer Contributions for Employee Pension and Insurance Funds by Industry and by Type 150
6.12D. Nonfarm Proprietors' Income by Industry 150
6.13D. Noncorporate Capital Consumption Allowances by Industry 150
6.14D. Inventory Valuation Adjustment to Nonfarm Incomes by Legal Form of Organization and by Industry 151
6.15D. Net Interest by Industry 151
6.16D. Corporate Profits by Industry 151
6.17D. Corporate Profits Before Tax by Industry 152
6.18D. Taxes on Corporate Income by Industry 153
6.19D. Corporate Profits After Tax by Industry 154
6.20D. Net Corporate Dividend Payments by Industry 155
6.21D. Undistributed Corporate Profits by Industry 156
6.22D. Corporate Capital Consumption Allowances by Industry 157

7. Supplemental Tables

7.1. Selected Per Capita Product and Income Series in Current and Chained Dollars 158
7.2.1B Percent Change From Preceding Period in Real Motor Vehicle Output 158
7.2.3B Real Motor Vehicle Output, Quantity Indexes 159
7.2.4B Price Indexes for Motor Vehicle Output 160
7.2.5B Motor Vehicle Output 161
7.2.6B Real Motor Vehicle Output, Chained Dollars 162
7.3.3. Real Farm Sector Output, Real Gross Value Added, and Real Net Value Added, Quantity Indexes 163
7.3.4. Price Indexes for Farm Sector Output, Gross Value Added, and Net Value Added 163
7.3.5. Farm Sector Output, Gross Value Added, and Net Value Added 163
7.3.6. Real Farm Sector Output, Real Gross Value Added, and Real Net Value Added, Chained Dollars 163
7.4.3. Real Housing Sector Output, Real Gross Value Added, and Real Net Value Added, Quantity Indexes 164
7.4.4. Price Indexes for Housing Sector Output, Gross Value Added, and Net Value Added 164
7.4.5. Housing Sector Output, Gross Value Added, and Net Value Added 164
7.4.6. Real Housing Sector Output, Real Gross Value Added, and Real Net Value Added, Chained Dollars 164
7.5. Consumption of Fixed Capital by Legal Form of Organization and Type of Income 165
7.6. Capital Consumption Adjustment by Legal Form of Organization and Type of Adjustment 165
7.7. Business Current Transfer Payments by Type 165
7.8. Supplements to Wages and Salaries by Type 165
7.9. Rental Income of Persons by Legal Form of Organization and by Type of Income 166
7.10. Dividends Paid and Received by Sector 166
7.11. Interest Paid and Received by Sector and Legal Form of Organization 167
7.12. Imputations in the National Income and Product Accounts 168
7.13. Relation of Consumption of Fixed Capital in the National Income and Product Accounts to Depreciation and Amortization as Published by the Internal Revenue Service 170
7.14. Relation of Nonfarm Proprietors' Income in the National Income and Product Accounts to Corresponding Measures as Published by the Internal Revenue Service 170
7.15. Relation of Net Farm Income in the National Income and Product Accounts to Net Farm Income as Published by the U.S. Department of Agriculture ..... *
7.16. Relation of Corporate Profits, Taxes, and Dividends in the National Income and Product Accounts to Corresponding Measures as Published by the Internal Revenue Service 171
7.17. Relation of Monetary Interest Paid and Received in the National Income and Product Accounts to Corresponding Measures as Published by the Internal Revenue Service 172
7.18. Relation of Wages and Salaries in the National Income and Product Accounts to Wages and Salaries as Published by the Bureau of Labor Statistics 172
7.20. Comparison of Income and Outlays of Nonprofit Institutions Serving Households with Revenue and Expenses as Published by the Internal Revenue Service ..... *

* This table is scheduled to be published in an upcoming issue. Please see the introduction.

Table A. Summary National Income and Product Accounts, 2009

[Billions of dollars]

Account 1. Domestic Income and Product Account

Line		
1	Compensation of employees, paid	7,819.5
2	Wage and salary accruals	6,286.9
3	Disbursements (3–12 plus 5–11)	6,281.9
4	Wage accruals less disbursements (4–9 plus 6–13)	5.0
5	Supplements to wages and salaries (3–14)	1,532.6
6	Taxes on production and imports (4–16)	1,024.7
7	*Less:* Subsidies (4–8)	60.3
8	Net operating surplus	3,294.9
9	Private enterprises (2–19)	3,308.1
10	Current surplus of government enterprises (4–26)	–13.2
11	Consumption of fixed capital (6–13)	1,861.1
12	**Gross domestic income**	**13,939.9**
13	Statistical discrepancy (6–21)	179.1
14	**GROSS DOMESTIC PRODUCT**	**14,119.0**

Line		
15	Personal consumption expenditures (3–3)	10,001.3
16	Goods	3,230.7
17	Durable goods	1,026.5
18	Nondurable goods	2,204.2
19	Services	6,770.6
20	Gross private domestic investment	1,589.2
21	Fixed investment (6–2)	1,716.4
22	Nonresidential	1,364.4
23	Structures	451.6
24	Equipment and software	912.8
25	Residential	352.1
26	Change in private inventories (6–4)	–127.2
27	Net exports of goods and services	–386.4
28	Exports (5–1)	1,578.4
29	Imports (5–9)	1,964.7
30	Government consumption expenditures and gross investment (4–1 plus 6–3)	2,914.9
31	Federal	1,139.6
32	National defense	771.6
33	Nondefense	368.0
34	State and local	1,775.3
35	**GROSS DOMESTIC PRODUCT**	**14,119.0**

Account 2. Private Enterprise Income Account

Line		
1	Income payments on assets	3,000.4
2	Interest and miscellaneous payments (3–20 and 4–21)	2,872.1
3	Dividend payments to the rest of the world (5–14)	99.5
4	Reinvested earnings on foreign direct investment in the United States (5–15)	28.8

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.
5. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 1.6.4. Price Indexes for Gross Domestic Purchases

[Index numbers, 2005=100]

1. Excludes software "embedded," or bundled, in computers and other equipment.
2. Some components of final sales of computers include computer parts.
3. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
4. The percent change for this series is calculated from the implicit price deflator in NIPA table 1.6.4.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.
3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Deflator is the gross domestic purchases price index.
2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.
3. This measure is called "real gross national income" in the System of National Accounts, 2008.
4. Deflator is the net domestic purchases price index.

1. Uses gross domestic purchases price index as deflator.
2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.
3. This measure is called "real gross national income" in the System of National Accounts, 2008.
4. Uses net domestic purchases price index as deflator.
5. Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.
6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.
7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.
8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

Table 1.9.3. Real Net Value Added by Sector, Quantity Indexes

[Index numbers, 2005=100]

	Line	2006	2007	2008	2009
Net domestic product	1	**102.530**	**104.242**	**103.761**	**100.363**
Business [1]	2	**102.957**	**104.811**	**103.263**	**98.803**
Nonfarm [2]	3	103.022	105.006	103.285	98.721
Farm	4	94.778	81.636	96.128	104.158

State and local	10	104.291	109.113	113.146	116.191

1. Equals net domestic product excluding net value added of households and institutions and of general government.
2. Equals net domestic business value added excluding net farm value added.
3. Equals gross value added of nonprofit institutions excluding consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
4. Equals compensation of general government employees.

State and local	10	889.0	899.7	913.0	907.1
Residual	11	–0.1	–0.8	5.0	9.8

1. Equals net domestic product excluding net value added of households and institutions and of general government.
2. Equals net domestic business value added excluding net farm value added.
3. Equals gross value added of nonprofit institutions excluding consumption of fixed capital on fixed assets owned and used by nonprofit institutions serving households.
4. Equals compensation of general government employees.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.
3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.
4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net foreign travel	108	.....	.....	.....	.....
Foreign travel by U.S. residents (129)	109	104.355	102.515	99.722	95.569
Less: Expenditures in the United States by nonresidents (130)	110	100.218	107.767	115.773	106.602
Final consumption expenditures of nonprofit institutions serving households (NPISHs) [1]	111	**109.960**	**114.597**	**124.877**	**119.597**
Gross output of nonprofit institutions (133) [2]	112	103.016	105.480	108.252	108.852
Less: Receipts from sales of goods and services by nonprofit institutions (134) [3]	113	100.789	102.568	103.033	105.361

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

NOTE. The figures in parentheses are the line numbers of the corresponding items in table 2.5.3.

Table 2.4.4. Price Indexes for Personal Consumption Expenditures by Type of Product

[Index numbers, 2005=100]

	Line	2006	2007	2008	2009

Commercial and vocational schools (99)	103	30.3	31.5	32.1	31.3
Professional and other services (121)	104	150.0	152.5	151.1	143.9
Personal care and clothing services (14 and parts of 17 and 118)	105	108.5	110.4	109.7	105.8
Social services and religious activities (120)	106	121.8	125.9	129.4	131.0
Household maintenance (parts of 31, 33, and 36)	107	58.2	60.5	60.5	55.1
Net foreign travel	108	–1.0	–10.7	–21.9	–16.5
Foreign travel by U.S. residents (129)	109	104.1	102.3	99.5	95.3
Less: Expenditures in the United States by nonresidents (130)	110	105.1	113.0	121.4	111.8
Final consumption expenditures of nonprofit institutions serving households (NPISHs) [1]	111	**235.4**	**245.3**	**267.3**	**256.0**
Gross output of nonprofit institutions (133) [2]	112	901.0	922.6	946.8	952.1
Less: Receipts from sales of goods and services by nonprofit institutions (134) [3]	113	665.8	677.5	680.6	696.0
Residual	114	–3.5	–14.5	–21.4	–25.4

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

NOTES. The figures in parentheses are the line numbers of the corresponding items in table 2.5.6.

Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 2.5.3 Real Personal Consumption Expenditures by Function, Quantity Indexes

[Index numbers, 2005=100]

	Line	2006	2007	2008	2009

Less: Expenditures in the United States by nonresidents	130	100.218	107.767	115.773	106.602
Net expenditures abroad by U.S. residents	131	.....	.....	.....	.....
Final consumption expenditures of nonprofit institutions serving households (NPISHs) [28]	132	**109.960**	**114.597**	**124.877**	**119.597**
Gross output of nonprofit institutions [29]	133	103.016	105.480	108.252	108.852
Less: Receipts from sales of goods and services by nonprofit institutions [30]	134	100.789	102.568	103.033	105.361

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
2. Consists of shoes and other footwear, and of repair and hire of footwear.
3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
7. Consists of dishes, flatware, and non-electric cookware and tableware.
8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
14. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
21. Consists of premiums less benefits for income loss insurance.
22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
25. Consists of jewelry, watches, luggage, and similar personal items.
26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
27. Consists of tax preparation and other related services, employment agency services, and other personal business services.
28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

Final consumption expenditures of nonprofit institutions serving households (NPISHs) [28]	132	**102.104**	**103.606**	**104.298**	**101.105**
Gross output of nonprofit institutions [29]	133	103.617	106.832	109.594	111.137
Less: Receipts from sales of goods and services by nonprofit institutions [30]	134	104.129	107.955	111.494	114.836

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
2. Consists of shoes and other footwear, and of repair and hire of footwear.
3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
7. Consists of dishes, flatware, and non-electric cookware and tableware.
8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
14. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
21. Consists of premiums less benefits for income loss insurance.
22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
25. Consists of jewelry, watches, luggage, and similar personal items.
26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
27. Consists of tax preparation and other related services, employment agency services, and other personal business services.
28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

Final consumption expenditures of nonprofit institutions serving households (NPISHs) [28]	132	**240.4**	**254.2**	**278.8**	**258.9**
Gross output of nonprofit institutions [29]	133	933.6	985.6	1,037.6	1,058.1
Less: Receipts from sales of goods and services by nonprofit institutions [30]	134	693.3	731.4	758.8	799.2

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
2. Consists of shoes and other footwear, and of repair and hire of footwear.
3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
7. Consists of dishes, flatware, and non-electric cookware and tableware.
8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
14. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
21. Consists of premiums less benefits for income loss insurance.
22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
25. Consists of jewelry, watches, luggage, and similar personal items.
26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
27. Consists of tax preparation and other related services, employment agency services, and other personal business services.
28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

Table 2.5.6 Real Personal Consumption Expenditures by Function, Chained Dollars

[Billions of chained (2005) dollars]

	Line	2006	2007	2008	2009
Personal consumption expenditures	1	**9,073.5**	**9,289.5**	**9,265.0**	**9,153.9**
Household consumption expenditures [1]	2	**8,838.2**	**9,044.3**	**8,998.5**	**8,898.2**

Gross output of nonprofit institutions [30]	133	901.0	922.6	946.8	952.1
Less: Receipts from sales of goods and services by nonprofit institutions [31]	134	665.8	677.5	680.6	696.0
Residual	135	–3.3	–14.4	–22.7	–27.0

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
2. Consists of shoes and other footwear, and of repair and hire of footwear.
3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
7. Consists of dishes, flatware, and non-electric cookware and tableware.
8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
14. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series.
15. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
16. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
17. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
18. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
19. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
21. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
22. Consists of premiums less benefits for income loss insurance.
23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
24. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
25. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
26. Consists of jewelry, watches, luggage, and similar personal items.
27. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
28. Consists of tax preparation and other related services, employment agency services, and other personal business services.
29. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
30. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
31. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 2.6. Personal Income and Its Disposition, Monthly—Continues

[Billions of dollars; months seasonally adjusted at annual rates]

Population (midperiod, thousands) [3]	33	308,930	309,119	309,312	309,509	309,718	309,942

1. Consists of nonmortgage interest paid by households.
2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.
3. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of the estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
2. Consists of gasoline and other energy goods and of electricity and gas services.
3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
2. Consists of gasoline and other energy goods and of electricity and gas services.
3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
2. Consists of gasoline and other energy goods and of electricity and gas services.
3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

2. Consists of gasoline and other energy goods and of electricity and gas services.

3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
2. Consists of gasoline and other energy goods and of electricity and gas services.
3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Table 3.10.3. Real Government Consumption Expenditures and General Government Gross Output, Quantity Indexes

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Table 3.10.4. Price Indexes for Government Consumption Expenditures and General Government Gross Output

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Table 3.10.6. Real Government Consumption Expenditures and General Government Gross Output, Chained Dollars

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 3.11.1. Percent Change From Preceding Period in Real National Defense Consumption Expenditures and Gross Investment by Type

[Percent]

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Table 3.11.3. Real National Defense Consumption Expenditures and Gross Investment by Type, Quantity Indexes

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Consists of payments for medical services for dependents of active duty military personnel at nonmilitary facilities.
2. Consists of mustering out pay, terminal leave pay, and adjusted compensation benefits.
3. Prior to October 2008, benefits for the Supplemental Nutrition Assistance Program were called Food Stamp benefits.
4. Consists largely of payments to nonprofit institutions, aid to students, and payments for medical services for retired military personnel and their dependents at nonmilitary facilities.
5. Consists of general medical assistance and state child health care programs.
6. Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996.
7. Consists of expenditures for food under the supplemental program for women, infants, and children; foster care; adoption assistance; and payments to nonprofit welfare institutions.
8. Consists largely of veterans benefits, Alaska dividends, and crime-victim payments.
9. Consists of federal government social benefits to the rest of the world and includes benefits paid to individuals in the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Table 4.2.4. Price Indexes for Exports and Imports of Goods and Services by Type of Product

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Table 4.2.5. Exports and Imports of Goods and Services by Type of Product

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

1. Exports and imports of gold in the NIPAs differ from those in the ITAs. ITA gold exports (line 2) and imports (line 19) are excluded from the NIPAs; imports of gold in the NIPAs (line 21) is the excess of the value of gold in gross domestic purchases over the value of U.S. production of gold.

2. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs and statistical revisions to the NIPAs that have not yet been incorporated into the ITAs. From 1986 through 1991, the NIPAs include estimates of insurance premium supplements that are not accounted for in the ITAs until 1992.

3. Consists of transactions between the United States and its territories, Puerto Rico, and the Northern Mariana Islands. The treatment of U.S. territories, Puerto Rico, and the Northern Mariana Islands in the NIPAs differs from that in the ITAs. In the NIPAs, they are included in the rest of the world; in the ITAs, they are treated as part of the United States.

4. Beginning with 1988, the ITAs classify certain military grants as services that the NIPAs do not. In the NIPAs these transactions are excluded from exports and included in transfer payments from government.

5. In the ITAs, income transactions between parents and affiliates are recorded on a net basis. In ITA exports, U.S. parents' receipts from foreign affiliates for interest are net of such payments by U.S. parents to foreign affiliates. In ITA imports, U.S. affiliates' payments to foreign parents for interest are net of such receipts by U.S. affiliates from foreign parents. In the NIPAs, these transactions are recorded on a gross basis. The amount of the adjustment is identical in income payments and in income receipts and, thus, does not affect NIPA net income receipts or balance on current account.

ITAs International transactions accounts

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

NOTE. Chain-type quantity indexes for net investment are computed from chained (2005) dollar estimates of net investment by scaling the chained-dollar estimates to 100 in the reference year (2005). Chained (2005) dollar estimates of net investment appear in table 5.2.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

NOTE. Most chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chained (2005) dollar estimates of net investment are calculated by subtracting consumption of fixed capital from gross investment.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded", or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.
3. Excludes software "embedded," or bundled, in computers and other equipment.
4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Residential structures	47	–6.8	–19.3	–24.7	–25.6

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.
3. Consists primarily of railroads.
4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.
3. Consists primarily of railroads.
4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Brokers' commissions on sale of structures	43	98.3	84.1	68.0	62.8
Net purchases of used structures	44	–2.7	–3.7	–4.9	–4.3
Residual	45	1.8	7.1	17.1	11.5
Addenda:					
Private fixed investment in new structures [5]	46	996.4	938.9	850.9	659.4
Nonresidential structures	47	383.0	437.6	463.2	368.9
Residential structures	48	612.4	494.0	372.0	276.6

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.
3. Consists primarily of railroads.
4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Residual	37	–1.1	–3.2	–7.3	–18.0

1. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.5.2 and real growth rates are shown in table 5.5.1.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes net purchases of used vehicles; additional detail is available in table 7.2.6B.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

1. Consists of general government and government enterprise expenditures for fixed assets.
2. Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
3. Consists of Department of Defense new structures, except family housing.
4. Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.
5. Consists of lodging, communication, and manufacturing.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Government	57	0.6	–1.9	0.2	0.4
Abandoned electric plants [13]	58	0.0	0.0	0.0	0.0
Sale of equipment scrap, excluding autos [14]	59	–7.0	–8.5	–9.7	–4.3
Other [15]	60	0.0	3.0	0.5	0.3

1. Estimates of government inventories are not available.
2. Private fixed investment shown in table 5.2.5, line 7.
3. Gross government investment shown in table 5.2.5, line 23.
4. Consists of intersectoral auto valuation adjustment (line 53); brokers' commissions on sale of nonresidential used structures and dealers' margins on used equipment (line 54); private electric plants put in place less electric plants put in use (line 56); sale of equipment scrap, excluding autos (line 59); and other (line 60).
5. Consists of government electric plants put in place less electric plants put in use (line 57).
6. Change in private inventories shown in table 1.1.5, line 13. Inventory estimates are not adjusted for disaster losses, theft, obsolescence, or infestation.
7. Consists of disaster losses. Structures and equipment destroyed are valued at current cost.
8. Consists of disaster and war losses. Structures and equipment destroyed are valued at current cost.
9. Neutral holding gains are the gains derived from holding an asset if the price of an asset changed in the same proportion as the general price level. The chain-type price index for gross domestic purchases is used as a measure for the general price level.
10. Equals lines 1+6-15–18+27-28+37.
11. Used autos are valued at acquisition prices less depreciation in the estimates of the stocks of private fixed assets and consumer durable goods; net purchases of used autos by business from consumers are valued at wholesale prices in gross fixed investment.
12. This adjustment reflects a timing difference between fixed investment and the stock of produced assets. In investment, the value of structures and equipment for electric plants is recorded on a put-in-place basis; in the stocks, the investment is recorded when the plants are put in use.
13. Consists of the value of abandoned nuclear power plants that were never put in use. The investment in these plants is included in gross fixed investment, but does not enter the opening or closing balances—it is included in the adjustments to gross fixed investment shown in line 15.
14. Sale of equipment scrap, excluding autos shown in table 5.5.5, line 35.
15. Consists primarily of statistical revisions to the NIPAs that have not been incorporated into the fixed assets accounts.

By the rest of the world (21–45)	55	**–2.0**	**–0.4**	**5.4**	**–0.6**

1. Consists of federal government investment grants for highways, transit, air and water transportation, and water treatment plants.
2. Consists of the implied subsidy cost of government acquisition of assets such as shares of preferred stock or warrants from private business.
3. Consists of maritime construction subsidies and, beginning with 2009, the homebuyer tax credit provision of the American Recovery and Reinvestment Act of 2009.
4. Beginning with October 2002, consists of payments to the Uniformed Services Retiree Health Care Fund to amortize the unfunded liability.
5. Consists of forgiveness of debts owed by foreign governments to the U.S. government, and the December 1999 transfer to the Republic of Panama of the U.S. government's assets in the Panama Canal Commission. Includes capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands, and the implied subsidy cost of government acquisition of preferred stock and warrants from banks in Puerto Rico through the Troubled Asset Relief Program.

1. NAICS crop and animal production.
2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.
3. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.
6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
7. Includes Coast Guard.
8. Employees of Indian tribal governments are classified in state and local government.
9. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE. Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. NAICS crop and animal production.
2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.
3. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.
6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
7. Includes Coast Guard.
8. Employees of Indian tribal governments are classified in state and local government.
9. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE. Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.
2. NAICS crop and animal production.
3. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.
4. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
5. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
6. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.
7. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
8. Includes Coast Guard.
9. Employees of Indian tribal governments are classified in state and local government.
10. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE. Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.
2. NAICS crop and animal production.
3. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.
4. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.
5. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.
6. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.
7. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.
8. Includes Coast Guard.
9. Employees of Indian tribal governments are classified in state and local government.
10. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE. Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

1. Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Addendum:					
Change in farm inventories [1]	18	–3.7	–0.8	1.0	3.4

1. Beginning with 1991, includes change in farm materials and supplies inventories.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Domestic corporate business	4	**–176.4**	**–180.5**	**–26.3**	**–70.6**
For consistent accounting at historical cost	5	–47.1	–36.4	125.2	65.1
For current-cost valuation	6	–129.2	–144.1	–151.6	–135.7
Financial	7	–20.4	–21.7	–12.0	–15.6
For consistent accounting at historical cost	8	–11.1	–10.6	0.5	–3.6
For current-cost valuation	9	–9.3	–11.0	–12.5	–12.0
Nonfinancial	10	–156.0	–158.8	–14.4	–55.1
For consistent accounting at historical cost	11	–36.1	–25.7	124.7	68.6
For current-cost valuation	12	–119.9	–133.1	–139.1	–123.7
Domestic noncorporate business	13	**80.7**	**76.9**	**139.9**	**122.7**
Sole proprietorships and partnerships	14	97.7	94.3	157.1	138.7
Farm [1]	15	–6.0	–6.1	–6.5	–6.3
Nonfarm	16	103.7	100.5	163.6	145.0
For consistent accounting at historical cost	17	135.5	135.4	199.5	177.9
For current-cost valuation	18	–31.8	–34.9	–35.9	–33.0
Other private business [1]	19	–17.0	–17.4	–17.1	–16.0
Rental income of persons	20	–16.2	–16.6	–16.2	–15.1
Nonfarm tenant-occupied housing	21	–15.2	–15.5	–15.1	–14.0
Farm tenant-occupied housing	22	–0.2	–0.2	–0.2	–0.2
Farms owned by nonoperator landlords	23	–0.3	–0.3	–0.2	–0.2
Nonfarm nonresidential properties	24	–0.5	–0.6	–0.6	–0.6
Proprietors' income	25	–0.7	–0.8	–0.9	–0.9

1. Except for farm proprietorships and partnerships (line 15) and other private business (line 19), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, to consistent service lives and empirically based depreciation schedules. The adjustment for current-cost valuation converts the historical-cost series with consistent accounting to a series valued at current cost. For farm proprietorships and partnerships and for other private business, the historical-cost series is based on consistent service lives and empirically based depreciation schedules, so the adjustment reflects only a conversion to current-cost valuation.

Table 7.7. Business Current Transfer Payments by Type

[Billions of dollars]

	Line	2006	2007	2008	2009
Business current transfer payments (net)	1	**83.0**	**103.3**	**121.7**	**134.0**
Payments to persons (net)	2	**21.4**	**30.5**	**36.7**	**36.0**
Insurance payments to persons by business	3	–0.3	9.1	16.7	15.1

Personal interest income (92+100+101) or (32+61+65)	102	1,127.5	1,265.1	1,314.7	1,222.3

1. Excludes interest paid or received by government enterprises, which is included in the government sector.
2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.
3. Consists of nonmortgage interest paid by households.
4. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 32.
5. Beginning with October 2002, includes the Uniformed Services Retiree Health Care Fund.
6. Includes nonprofit institutions primarily serving households.

NOTE. In this table, imputed interest paid (line 41) is the sum of (1) premium supplements paid to property and casualty insurance carriers by households and institutions, governments, domestic business, and the rest of the world as a measure of imputed services provided to these sectors by the property and casualty insurance providers, (2) the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, households and institutions, governments, and the rest of the world, and (3) the imputed services provided to these sectors in the role of borrowers of financial services; these services are included as negative amounts paid by the borrowers and received by the financial intermediaries.

Excluding imputations (218–219)	228	10,469.8	11,089.5	11,455.4	11,206.5

1. Residential dwellings owned and used by nonprofit institutions serving households are included in owner-occupied housing categories.
2. Includes financial services furnished without payment to government employee retirement plans.
3. Classified as a service in exports, and as an income payment to the rest of the world.
4. Classified as a service in exports, and as an income receipt from the rest of the world.
5. For general government employees, recorded as compensation of employees (wages and salaries) and as a sale; does not affect government consumption expenditures. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.
6. Health insurance premiums paid by employers are included in the calculation of the "net health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calculation of the "life insurance" category of PCE.
7. Consists of the programs for which a social insurance fund is imputed, and for which contributions are set equal to benefits paid. These payments are funded directly out of the current budget. The specific programs consist of workers' compensation, unemployment insurance, and medical services for the dependents of active duty military personnel at nonmilitary facilities. Source data are not available for the corresponding treatment for similar state and local government programs. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.
8. Consists of owner-occupant purchases of new single-family dwellings, including manufactured homes, expenditures on improvements, and payments of commissions on new and existing residential dwellings, less sales of dwellings to government. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.
9. Excludes investment by nonprofit institutions serving households in residential properties, which is included in owner-occupant investment (see footnote 1) and in sales of existing structures to governments. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.
10. The consumption of fixed capital (CFC) of government enterprises is not included in government consumption expenditures; it is deducted in the calculation of the current surplus of government enterprises and is recorded as part of total government CFC.
11. Includes gross investment of government enterprises.

NOTE. "Imputations" are transactions recorded in the national income and product accounts that are not transactions of the market economy. In this table, the imputations shown in the "specific imputations" section are those that affect gross domestic product (GDP). In table 7.11, imputed interest paid by life insurance carriers (line 46) consists of the property incomes earned on life insurance and pension reserves. These incomes are considered to be incomes received by persons and not by the insurance carriers; this reclassification is not considered an imputation for purposes of table 7.12, because it does not affect GDP.

Equals: Consumption of fixed capital, NIPAs	24	**138.3**	**159.7**	**166.9**	**166.9**

1. Consists of intangible assets that the IRS allows to be amortized.
2. Consists of depreciation or amortization of the following items: Breeding, dairy, and work animals; motion picture films; rental videocassettes; and rental clothing.
3. Consists of depreciation of employees' motor vehicles reimbursed by business and depreciation of business motor vehicles charged to current expense.
4. Beginning with 1981, included in IRS depreciation (line 1).
5. Consists of depreciation of assets owned by Federal Reserve banks, federally sponsored credit agencies, credit unions, and nonprofit institutions serving business; depreciation of interest paid by public utilities for own-account investment prior to 1987 (beginning with 1987, included in line 1).
6. Consists of depreciation or amortization of rental videocassettes and rental clothing.

Equals: Net corporate dividend payments, NIPAs	38	**704.8**	**794.5**	**797.7**	**718.9**

1. Consists largely of an adjustment to expense all meals and entertainment, of oilwell bonus payments written off, of adjustments for insurance carriers and savings and loan associations, of amortization of intangible assets, and of tax-exempt interest income.
2. Consists of the Farm Credit System and the Federal Home Loan Banks.
3. Consists of nonprofit organizations serving business and of credit unions.
4. Consists of disaster losses valued at historic-cost less net insurance receipts for disaster-related losses valued at replacement-cost.
5. Includes the imputed financial service charge paid by corporations to domestic securities dealers who do not charge an explicit commission.
6. Beginning with 1984, the investment tax credit is included in other tax credits (line 27).
7. Consists largely of an adjustment to remove capital gains distributions of regulated investment companies.

1. Total annual wages of workers covered by state unemployment insurance (UI) laws and by the Unemployment Compensation for Federal Employees program. Data for the most recent year are preliminary.
2. Consists of unreported wages and salaries paid by employers and of unreported tips.
BLS Bureau of Labor Statistics
NIPAs National income and product accounts

GDP and Other Major NIPA Series, 1929–2010:II

The historical series from the national income and product accounts (NIPAs) have been updated to present revised estimates from the 2010 annual revision and the "advance" estimates for the second quarter of 2010.

Table 1 presents current-dollar estimates of gross domestic product (GDP) and its components. Table 2A presents estimates of real GDP and its components in chained dollars, and table 2B presents estimates of real GDP and its components in chain-type quantity indexes. Table 3 presents price indexes. Table 4 presents national income and personal income.

The estimates are available on BEA's Web site at www.bea.gov.

Table 1. Gross Domestic Product—Continues

[Billions of dollars; quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	Gross domestic product	Personal consumption expenditures			Gross private domestic investment							Net exports of goods and services			Government consumption expenditures and gross investment			Final sales of domestic product	Gross national product	Percent change from preceding period	
		Total	Goods	Services	Total	Fixed investment					Change in private inventories	Net	Exports	Imports	Total	Federal	State and local			Gross domestic product	Final sales of domestic product

See the note at the end of the table.

NOTE. Chain-type estimates provide the best available method for comparing the level of a given series at two points in time. Chained-dollar estimates are obtained by multiplying the chain-type quantity index for an aggregate by its value in current dollars in the reference year (currently 2005) and dividing by 100. For an analysis of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and the chain-type quantity indexes are the same. Thus, chained-dollar estimates can be used to compute "real" (that is, inflation-adjusted) rates of growth. However, comparisons of two or more different chained-dollar series must be made with caution, because the prices used as weights in the chained-dollar calculations usually differ from the prices in the reference period, and the resulting chained-dollar values for detailed GDP components usually do not sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided in most chained-dollar tables by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed components in the table.

It is usually best to make comparisons of aggregate series in current dollars or to use BEA's estimates of contributions to percent change. Measures of the contributions of components to the percentage change in real GDP and to the percentage change in other major aggregates are provided in NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, 5.3.2, 5.4.2, and 5.5.2. In general, the use of chained-dollar estimates to calculate component shares or component contributions may be misleading for periods away from the reference year; component shares of GDP are provided in table 1.1.10. In the November 2003 SURVEY, the article "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" discussed the advantages of using chain-weighted indexes and the challenges of using chained dollars. To assist users in undertaking historical analysis, BEA provides supplemental tables that present estimates for selected timespans in chained 1937, 1952, 1972, and 1987 dollars (see tables 1.1.6A, 1.1.6B, 1.1.6C, and 1.1.6D).

U.S. Multinational Companies

Operations in the United States and Abroad in 2008

By Kevin B. Barefoot and Raymond J. Mataloni Jr.

VALUE ADDED and employment of U.S. multinational companies (MNCs) decreased in 2008, reflecting divergent changes in their U.S. domestic and foreign operations, according to preliminary results from the annual survey of U.S. direct investment abroad conducted by the Bureau of Economic Analysis (BEA).[1] The worldwide current-dollar value added of U.S. MNCs—the combined value added of U.S. parent companies and their majority-owned foreign affiliates (hereafter, "foreign affiliates")—decreased 1.8 percent; value added of U.S. parents decreased 6.5 percent, and value added of their foreign affiliates increased 9.1 percent (table 1). The worldwide employment of U.S. MNCs decreased 0.5 percent; employment of U.S. parents decreased 1.5 percent, and employment of foreign affiliates increased 1.9 percent.

In real terms, decreases in the value added of U.S. MNCs appear to have been widespread by area and by industry. In the United States, the real value added of U.S. parents probably declined faster than the 6.5 percent decrease in current dollars because average U.S. prices continued to rise in 2008. Abroad, the real value added of foreign affiliates in manufacturing decreased 4.8 percent. Real value added of foreign affiliates in non-manufacturing industries is not estimated by BEA, but the available evidence on prices and exchange rates suggests that this is the only major segment of the U.S.-MNC universe that experienced real growth in 2008.

U.S. MNCs were disproportionately negatively affected by the global financial crisis and economic downturn because of their industrial and geographic concentrations. Two industries that were among those most strongly affected by the downturn, manufacturing and finance and insurance, accounted for a relatively high share of value added of U.S. MNCs. Automobile manufacturing was particularly affected as automobile sales fell both in the United States and in several countries where U.S. MNCs have major operations. Geographically, the United States and other member countries of the Organisation for Economic Co-Operation and Development accounted for over 90 percent of the value added of U.S. MNCs worldwide in 2008, but economic growth rates in these countries were slower, on average, than those in other countries.

In contrast, U.S. MNCs in certain other industries and geographic areas experienced strong growth in 2008. Mining is one of the few industries in which the value added of parents and affiliates both displayed strong increases. In that industry, MNC value added

Table 1. Selected Statistics for U.S. Multinational Companies, U.S. Parents, and Foreign Affiliates, 2007–2008

1. Consists of bank parents and their bank and nonbank affiliates.
2. Includes nonbank affiliates of bank parents, in addition to affiliates in banking.

Acknowledgments

The 2008 annual survey was conducted under the direction of David H. Galler, Patricia C. Walker, and Barbara K. Hubbard. James Y. Shin supervised the editing and processing of the reports. The following staff contributed to the processing and editing of the survey or to the related computer programming: Catherine E. Ama, Gregory L. Brace, Kirsten L. Brew, Christina D. Briseno, William T. Coulter, Zemirah T. Courtney, James J. Crim, Laura A. Downey, Andre Garber, Mark D. Goddard, Kenneth T. Grier, David L. Grayton, Carole J. Henry, Jennifer A. Jones, Neeta B. Kapoor, James P. Lashley, Da-Chin Lin, Kevin McCarthy, Marcia S. Miller, Amanda M. Petersen, Robert B. Platner, Kevin J. Reagan, Robert L. Ruiz, Myriam B. Rullan, Aqeel A. Sahibzada, Gary E. Sowers, Nancy F. Steffen, Monique N. Sumpter, and Jeff W. Wilson.

1. A U.S. MNC comprises a U.S. parent company and its foreign affiliates. For both conceptual and practical reasons, the examination of foreign operations of U.S. MNCs in this article generally focuses on data for majority-owned foreign affiliates rather than data for all foreign affiliates. Conceptually, most data users prefer using the data for majority-owned affiliates because such affiliates are unambiguously under U.S. control; foreign affiliates that are minority-owned by a U.S. resident could be under the control of foreign investors. In addition, some of the data items necessary for the examination of foreign operations of U.S. MNCs are more easily collected for majority-owned affiliates, and most foreign affiliates are majority owned; majority-owned affiliates accounted for 85.2 percent of the employment by all nonbank foreign affiliates in 2008.

increased 25 percent, as a sharp increase in the price of crude oil did not result in a significant decrease in worldwide production or consumption of petroleum products.[2] By country, employment and value added of foreign affiliates in emerging markets—such as Brazil, Russia, India, and China, known collectively as the BRIC countries—grew rapidly, buoyed by continued strong economic growth.

Beginning with the 2007 survey, whose results were published last year, BEA has collected data on both bank and nonbank U.S. MNCs in its annual surveys (previously, only data for nonbank MNCs were collected). The new survey data indicate that the value added of bank MNCs decreased 5.0 percent to $188.2 billion, while that by nonbank MNCs decreased 1.6 percent to $3,608.1 billion. The remainder of the article will generally focus on nonbank MNCs because

2. Crude oil prices increased 39 percent in 2008 on the basis of 12-month averages of the refiners' acquisition cost of domestic and imported crude oil from the Energy Information Administration of the U.S. Department of Energy. This source also reports that worldwide consumption of crude oil decreased 0.4 percent, and production increased 1.0 percent.

Key Terms

The following key terms are used to describe U.S. multinational companies (MNCs) and their operations.[1]

U.S. MNCs

U.S. multinational company (U.S. MNC). The U.S. parent and its foreign affiliates. (In this article, an MNC is usually defined as the U.S. parent and its majority-owned foreign affiliates.)

U.S. parent. A person, resident in the United States, that owns or controls 10 percent or more of the voting securities, or the equivalent, of a foreign business enterprise. "Person" is broadly defined to include any individual, branch, partnership, associated group, association, estate, trust, corporation, or other organization (whether or not organized under the laws of any state), or any government entity. If incorporated, the U.S. parent is the fully consolidated U.S. enterprise consisting of (1) the U.S. corporation whose voting securities are not owned more than 50 percent by another U.S. corporation and (2) proceeding down each ownership chain from that U.S. corporation, any U.S. corporation whose voting securities are more than 50 percent owned by the U.S. corporation above it. A U.S. parent comprises the domestic operations of a U.S. MNC, covering operations in the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, and all other U.S. areas.

U.S. direct investment abroad. The ownership or control, directly or indirectly, by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated business enterprise.

Foreign affiliate. A foreign business enterprise in which there is U.S. direct investment, that is, in which a U.S. person owns or controls (directly or indirectly) 10 percent or more of the voting securities or the equivalent. Foreign affiliates comprise the foreign operations of a U.S. MNC over which the parent is presumed to have a degree of managerial influence.

This article focuses on the operations of majority-owned foreign affiliates; for these affiliates, the combined ownership of all U.S. parents exceeds 50 percent. In 2008, these affiliates accounted for 85.2 percent of the employment of all foreign affiliates of U.S. MNCs.

Measures of operations[2]

Value added. The portion of the goods and services sold or added to inventory or fixed investment by a firm that reflects the production of the firm itself. It represents the firm's contribution to gross domestic product in its country of residence, which is the value of goods and services produced by labor and property located in that country. Compared with sales, value added is a preferable measure of production because it indicates the extent to which a firm's output results from its own production rather than from production that originates elsewhere. Sales data do not distinguish between these two sources of production. Value added can be measured as gross output minus intermediate inputs; alternatively, it can be measured as the sum of the costs incurred (except for intermediate inputs) and the profits earned in production. The value-added statistics presented in this article were prepared by summing the cost and profits data collected in the annual and benchmark surveys of U.S. direct investment abroad.[3]

Employment. The number of full-time and part-time employees on the payroll at yearend. If the employment of a parent or an affiliate was unusually high or low because of temporary factors (such as a strike) or large seasonal variation, the number that reflects normal operations or an average for the year was requested.

1. For a comprehensive discussion of the terms and the concepts used, see Raymond J. Mataloni Jr., "A Guide to BEA Statistics on U.S. Multinational Companies," Survey 75 (March 1995): 38–55.

2. Statistics on the operations of U.S. MNCs cover the survey respondent's fiscal year ending in the reference year of the data.

3. For the derivation of the current-dollar value-added estimates, see Raymond J. Mataloni Jr. and Lee Goldberg, "Gross Product of U.S. Multinational Companies, 1977–91," Survey 74 (February 1994): 57.

more information and greater detail are available for their operations.[3] The decrease in value added of nonbank U.S. MNCs was the second largest percent decrease since 1994, the first year for which BEA began to produce annual statistics on value added of nonbank U.S. MNCs (table 2). (A larger decrease occurred in 2001, when value added of nonbank U.S. MNCs fell 9.8 percent.) Similar changes occurred in two other measures of the operations of nonbank U.S. MNCs: employment decreased 1.1 percent to 31.2 million workers, and capital expenditures decreased 1.2 percent to $657.9 billion.

The following are additional highlights of nonbank MNC operations in 2008:

- The operations of U.S. MNCs remained concentrated in the United States: U.S. parents accounted for more than two-thirds, and foreign affiliates for less than a third, of MNCs' combined value added, capital expenditures, and employment. However, the parent shares of value added and employment have declined about 10 percentage points over the preceding two decades.
- Most foreign affiliates continued to be located in high-income countries. Affiliates in these countries accounted for roughly 80 percent of the value added of all affiliates and for nearly 90 percent of the value

3. Three data items discussed in this article—research and development expenditures, trade in goods, and capital expenditures—were not collected for bank MNCs. Although most of the annual survey data BEA publishes cover nonbank MNCs, BEA also publishes selected data for all foreign affiliates—bank and nonbank—by country and by industry of the U.S. parent. These data are available on the BEA Web site at www.bea.gov; click on "International," "About International," "International Investment Division Product Guide," "Operations of U.S. Parent Companies and their Foreign Affiliates," then scroll down to "Comprehensive Financial and Operating Data."

p Preliminary
r Revised
1. Break in series. (Beginning with 1999, BEA expanded its estimates to include data for "very small" foreign affiliates and for parents that had only "very small" foreign affiliates. For details, see the technical note on page 121 of the December 2002 SURVEY OF CURRENT BUSINESS.)

MNC Multinational company
MOFA Majority-owned foreign affiliate
n.a. Not available

added of affiliates that were newly acquired or established (chart 1).

- U.S. MNCs continued to account for a large share of the U.S. trade in goods. Trade associated with U.S. parents or their foreign affiliates accounted for 46.3 percent, or $595.6 billion, of total U.S. exports of goods and for over a third, or $768.1 billion, of total U.S. imports of goods.
- Nonbank U.S. parents acquired or established 300 nonbank foreign affiliates, which had a combined value added of $6.4 billion and a combined employment of 120,600 workers. This was a notable decrease from 2007 when 434 new affiliates were acquired or established, which may have reflected MNCs' budget constraints and weak consumer demand related to the global financial crisis and economic downturn.
- U.S. MNCs' expenditures for research and development (R&D) totaled $236.1 billion. U.S. parents accounted for about 85 percent of the total; however, R&D expenditures by foreign affiliates grew strongly.

Data Availability

The final statistics on the worldwide operations of U.S. multinational companies (MNCs) for 2007 and the preliminary statistics for 2008 are presented in this article The statistics are based on the 2007 and 2008 annual surveys of U.S. direct investment abroad. More detailed statistics are available on BEA's Web site.

The final statistics for U.S.-MNC operations for 1977 and for 1982–2006 are available in publications or in data files that can be downloaded free of charge from the Web site at www.bea.gov.

More information about these products and how to obtain them is available on the BEA Web site at www.bea.gov; click on "International," "About International," "International Investment Division Product Guide."

The Bureau has a free service on its Web site that allows users to interactively access detailed statistics on the operations of U.S. multinational companies, on the operations of foreign-owned companies in the United States, and on other aspects of U.S. direct investment abroad and foreign direct investment in the United States. For an introductory guide to this service, see Ned G. Howenstine, "Primer: Accessing BEA Direct Investment Data Interactively," Survey 86 (May 2006): 61–64.

- The combined value added of foreign affiliates in Brazil, Russia, India, and China increased by about 25 percent to $83.9 billion. This continued a period of rapid growth in value added of affiliates in these countries, which increased their share of the value added of foreign affiliates worldwide from 4.4 percent in 2004 to 6.9 percent in 2008. The growth likely was stimulated by various steps taken by the governments of these countries to improve their business climate, as well as the emergence of a growing middle class, which has created local demand for the types of goods and services produced by MNCs. In 2008, the great majority of total sales by affiliates in these countries were to local customers.
- U.S. MNCs with operations in many countries had higher labor productivity than those with operations in only a few countries. U.S. parents with foreign affiliates in 10 or more countries had an average value added per employee of $154,000, compared with an average of $100,000 for U.S. parents with foreign affiliates in a single country. Research suggests that the parents with higher labor productivity earn higher profits, which allows them to operate profitably in a wide range of foreign countries, including those with challenging foreign business climates; see the box "Global Scope and Productivity."

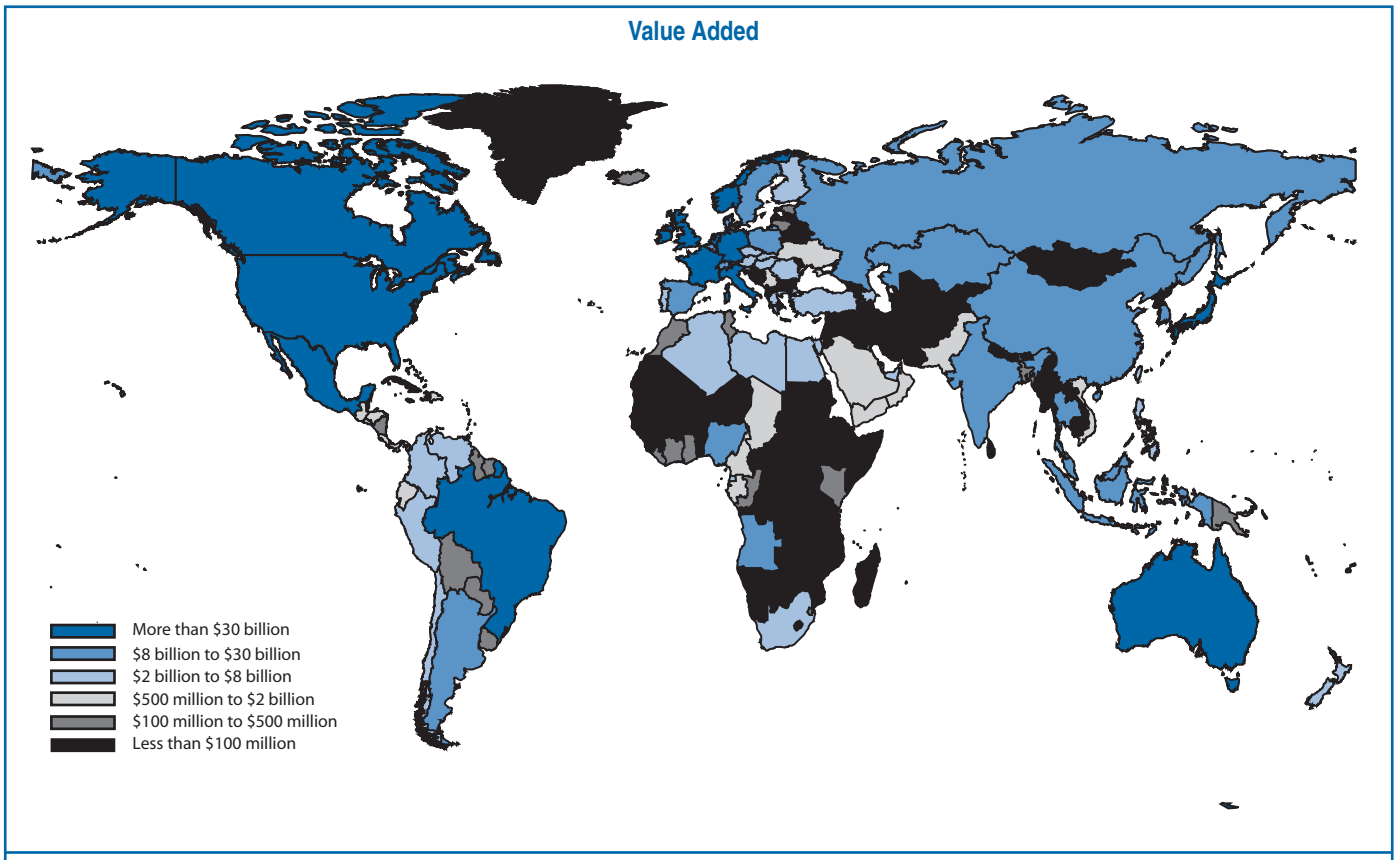
An improvement introduced with the 2008 survey results is an expansion from 27 to 29 in the number of countries for which separate estimates of the real value added of foreign affiliates in manufacturing are available. The two host countries that have been added, China and Singapore, together accounted for 8.8 percent of the real value added of manufacturing affiliates in the reference year (2005), raising the share for which country-level detail is available from 75.0 percent to 83.8 percent of the global total. The new estimates indicate that the real value added of manufacturing affiliates in China increased at a double-digit rate in 2008, while that of affiliates in Singapore declined (see "Real value added in manufacturing" on page 217).

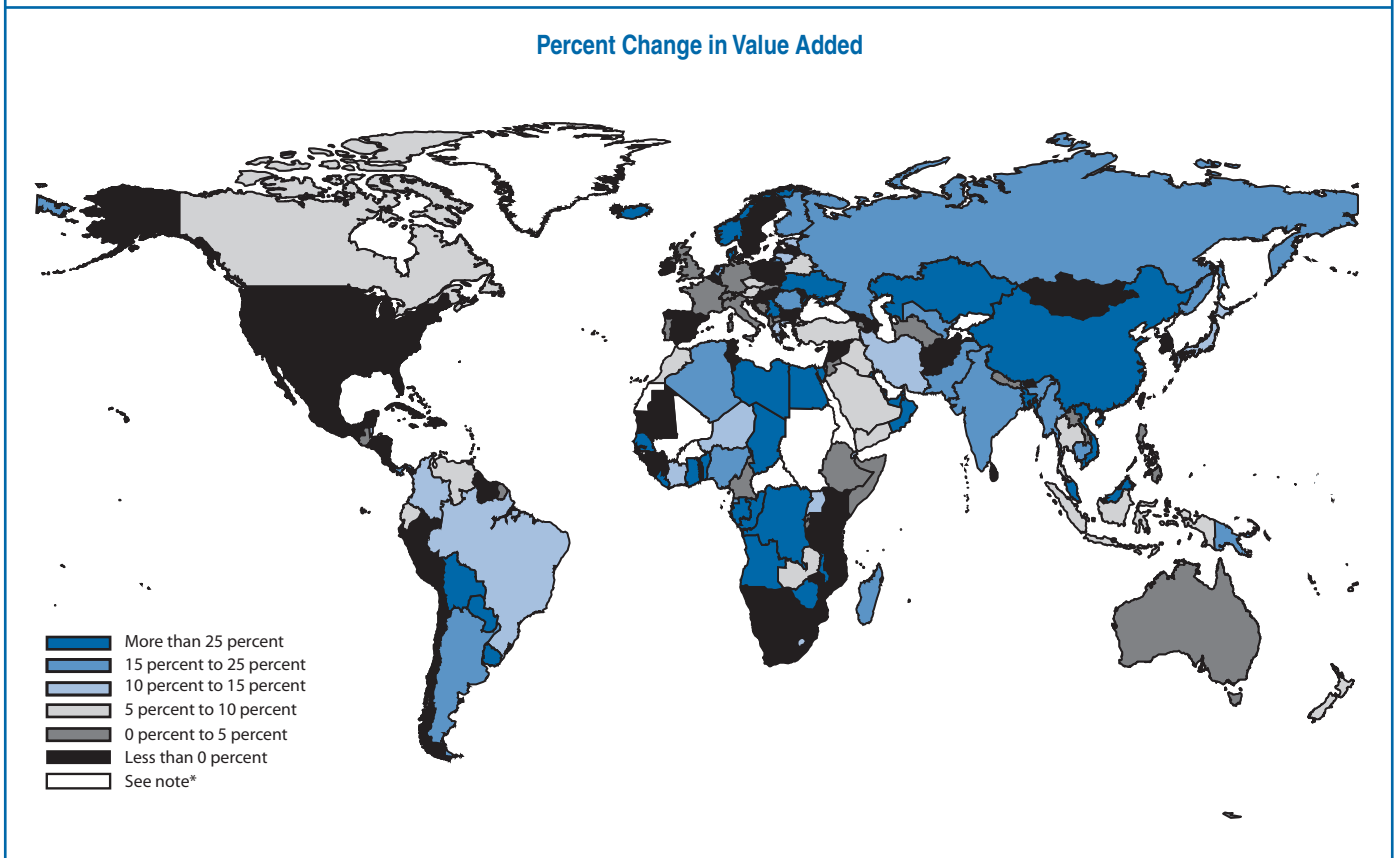
The remainder of this article examines worldwide operations of U.S. MNCs, operations of U.S. parents, and operations of their foreign affiliates.

Worldwide Operations of U.S. MNCs

This section examines the 2008 worldwide operations of U.S. MNCs in all industries as well as the 2008 change in four aspects of the worldwide operations of nonbank U.S. MNCs: value added, employment, U.S. trade in goods, and R&D.

Chart 1. Value Added and Change in Value Added of Nonbank MNCs by Country in 2008





NOTE. The percent change is undefined because value added changes sign between 2007 and 2008, value added was zero in 2007 or 2008, or value added was less than $100 million in 2007 or 2008—for these countries, small dollar changes may produce large percent changes.

U.S. Bureau of Economic Analysis

Multinationals' Global Scope and Productivity

Current scholarship on multinational companies rests on the notion that these firms possess a productivity advantage over their nonmultinational rivals. This idea originated with Stephen Hymer's doctoral dissertation in which he argued that multinational firms required such an advantage to allow them to overcome the additional costs and risks of operating outside of their home country.[1] In recent years, Elhanan Helpman, Marc Melitz, and Stephen Yeaple extended Hymer's idea into a "productivity sorting" model in which firms with higher levels of productivity have greater levels of international engagement.[2] In their model, the least productive class of firms operates only in the home country and serves only the home market, the next most productive class operates only in the home country but serves both the home market and foreign markets—through exports—and the most productive class of all does both of these things plus serves foreign markets through its affiliates in foreign countries. The latest extension of this model is Yeaple's model in which the most productive class of firms is divided into those that operate in only a few foreign countries and a more productive class of firms that operate in many foreign countries.[3] The productivity advantage is expected to increase with the global scope of operations because firms are assumed to access the easiest (that is, least costly) foreign markets first and then to gradually extend their operations to more difficult and more costly foreign markets.

The positive relationship between the labor productivity and the global scope of the operations of U.S. multinational companies can be seen in the results of BEA's 2008 Annual Survey of U.S. Direct Investment Abroad. Average value added per employee was $100,000 for U.S. multinationals that operated in only a single foreign country, $127,000 for those that operated in 2–9 foreign countries, and $154,000 for those that operated in 10 or more foreign countries (table A).[4] These averages, of course, are only suggestive. More robust evidence based on firm-level BEA data on U.S. multinational companies in manufacturing can be found in Yeaple's paper. Using BEA enterprise-level data, he finds a parent's likelihood to invest in any given host country increases with both the parent's size and its total factor productivity.

1. Stephen H. Hymer, *The International Operations of National Firms: A Study of Foreign Direct Investment* (Cambridge, MA: MIT Press, 1976).

2. Elhanan Helpman, Marc J. Meltiz, and Stephen R. Yeaple, "Export Versus FDI With Heterogeneous Firms," *American Economic Review* 94, no. 1 (March 2004): 300–316.

3. Stephen R. Yeaple, "Firm Heterogeneity and the Structure of U.S. Multinational Activity," *Journal of International Economics* 78, no. 2 (July 2009): 206–215.

4. The differences between these averages are significant at the 1 percent level.

BEA is currently conducting research aimed at extending Yeaple's findings. The primary extension of the research is to measure parent productivity at the level of the individual plant rather than at the level of the consolidated corporate enterprise. This more disaggregated measure of parent productivity yields productivity measures by industry, whereas the enterprise-based measure used by Yeaple is an average level of productivity across the industries in which the parent operates. The greater level of disaggregation in the ongoing BEA study was made possible by the construction of a new and unique dataset that combines the BEA enterprise-level data described in this article with data on all U.S. business establishments collected in the U.S. economic censuses and managed by the Census Bureau's Center for Economic Studies. Another extension to Yeaple's research in the BEA study is covering multinationals in nonmanufacturing industries.

Preliminary findings of the BEA study suggest that establishments of U.S. multinationals in manufacturing industries had total factor productivity about 16 percent greater than establishments of companies that operated only in the United States in 2002; the productivity advantage for multinationals in service industries was about 3 percent. A measure of the global scope of operations is used in the study to account for differences in the costliness or riskiness of operating in different host countries to accord with the underlying theory.[5] The preliminary findings suggest that establishments of the multinationals with the greatest global scope in manufacturing were 9.3 percent more productive than those of the multinationals with the least global scope in 2002, and in service industries, the difference was 38.8 percent.

5. The measure of global scope used in this study consists of elements pertaining to the share of the MNC's employment that is in foreign countries, the number of foreign regions in which the firm operates, and the per capita income differences between home (investing) and host countries. The per capita income differences are indicative of the additional costs and risks that the parent enterprise may entail when operating outside of the home country, and investing in a country at a significantly different level of development as measured by per capita income may indicate that the firm has gone further in its foreign engagement than a firm whose investments are limited to countries that are similar to its own.

Table A. Geographic Scope of Worldwide Operations and Average Labor Productivity for U.S. Parent Companies, 2008

	Number of parent companies	Average value added per employee
1 country	337	$100,000
2 to 9 countries	984	$127,000
10 or more countries	794	$154,000

NOTE. To eliminate outliers, excludes parent companies in the 1st percentile and 99th percentile, in terms of labor productivity.

U.S. MNCs in all industries

Current-dollar value added of U.S. MNCs in all industries decreased 1.8 percent in 2008 to $3,796.3 billion. Value added of U.S. MNCs in banking (that is, MNCs for which the U.S. parent is in banking) decreased 5.0 percent to $188.2 billion, and that of nonbank U.S. MNCs decreased 1.6 percent to $3,608.1 billion. Employment by U.S. MNCs in all industries decreased 0.5 percent to 33.0 million workers. Employment of U.S. MNCs in banking increased 11.0 percent to 1.8 million workers, and that of nonbank U.S. MNCs decreased 1.1 percent to 31.2 million workers. Much of the increase in employment in banking and the decrease in employment in nonbank industries resulted from the reclassification of some large, diversified U.S. financial firms to banking from nonbanking because their U.S. parent companies became bank holding companies in 2008.[4]

Nonbank U.S. MNCs

Value added

In current dollars, the value added of nonbank U.S. MNCs decreased 1.6 percent in 2008 to $3,608.1 billion (table 3). The value added of U.S. parents decreased 6.0 percent to $2,396.3 billion, and the value added of foreign affiliates in U.S. dollars increased 8.2 percent to $1,211.9 billion.

The real value added of parents probably declined faster than the 6.0 percent decrease in current dollars because average U.S. prices continued to rise at a rate of 1.5 percent in 2008 (as measured by the implicit price deflator for value added of U.S nonfarm businesses). The available evidence on changes in prices and exchange rates suggests that the real value added of foreign affiliates increased in 2008. The 8.2 percent increase in their current dollar value added exceeded the increase that could be attributed to the combined effects of the 2.9 percent average rate of inflation in host countries and the 2.0 percent depreciation of the dollar against major foreign currencies.[5] Estimates of real value added for foreign affiliates in manufacturing presented later in this article show a drop of 4.8 percent, indicating that the increase for affiliates was in nonmanufacturing industries.

4. Because an MNC is categorized in banking if the U.S. parent is categorized in banking, the foreign affiliates of these firms all became affiliates of MNCs in banking. This contributed to the shift in employment toward MNCs in banking.

Table 3. Value Added of Nonbank U.S. Multinational Companies, by Industry of Parent, 2007 and 2008

[Millions of dollars]

	2007	2008	Change	Percent change
All industries	3,668,153	3,608,142	–60,011	–1.6
Mining	103,662	129,355	25,693	24.8
Utilities	83,674	77,486	–6,188	–7.4
Manufacturing	1,769,210	1,751,719	–17,491	–1.0
Of which:				
Food	110,795	113,239	2,444	2.2
Chemicals	304,000	322,417	18,417	6.1
Primary and fabricated metals	72,938	67,275	–5,663	–7.8
Machinery	100,396	102,218	1,822	1.8
Computers and electronic products	180,589	189,924	9,335	5.2
Electrical equipment, appliances, and components	36,359	39,092	2,733	7.5
Transportation equipment	310,306	289,662	–20,644	–6.7

Information	369,623	348,410	–21,213	–5.7
Finance (except depository institutions) and insurance	291,150	194,368	–96,782	–33.2
Professional, scientific, and technical services	213,491	226,344	12,853	6.0
Other industries	655,060	689,617	34,557	5.3

Employment

In 2008, employment by nonbank U.S. MNCs decreased 1.1 percent to 31.2 million workers, reflecting partly offsetting changes for U.S. parents and foreign affiliates. The employment by U.S. parents decreased 2.1 percent to 21.1 million; the largest decreases were in "other industries," in manufacturing, and in nonbank finance and insurance. The decrease in "other industries" was concentrated in "administration, support, and waste management" (mainly temporary employment services); the decrease in manufacturing was largest in transportation equipment, mainly motor vehicles; and the decrease in nonbank finance and insurance was concentrated in nonbank finance. The 2.1 percent decrease in parent employment, which mainly reflected decreases by companies that were parents in both 2007 and 2008, was greater than the 0.6 percent decrease in employment for all U.S. private nonbank industries.

Employment by foreign affiliates increased 1.1 percent to 10.1 million. By area, the largest increases in level were in Asia and Pacific (mainly China and India). By industry, the largest increases were in "other industries" (mainly retail trade and "accommodation and food services") and "professional, scientific, and technical services."

U.S. trade in goods

In 2008, U.S. exports of goods that involved nonbank U.S. parents or their majority-owned or minority-owned nonbank foreign affiliates—MNC-associated

5. The rate of inflation in 12 major euro area countries and in 15 other major host countries averaged 2.9 percent in 2008. Together, these countries accounted for 73 percent of total value added of foreign affiliates in 2008. The average inflation rate (weighted by foreign affiliate value added) in these countries was derived from GDP implicit price deflators from the World Bank Web site. The weighted average U.S.-dollar price of the currencies of these countries in foreign exchange markets increased 2.0 percent in 2008.

exports—increased 6.4 percent to $595.6 billion (table 4). The increase in exports of goods by all U.S. businesses was nearly twice as large (12.1 percent); as a result, the MNC-associated share of total U.S. exports of goods decreased, falling to 46.3 percent in 2008. The MNC-associated share of total U.S. exports of goods has been declining in recent years, falling 16.2 percentage points over the last decade.

MNC-associated imports of goods increased 6.6 percent to $768.1 billion in 2008. The increase was similar to that in total U.S. imports of goods (7.5 percent). As a result, the MNC-associated share of total U.S. imports of goods remained essentially unchanged, at 36.5 percent, in 2008. Over the last decade, the MNC-associated share of total U.S. imports of goods has decreased slightly, declining 1.4 percentage points.

The increase in MNC-associated exports of goods in 2008 reflected increases in both trade between U.S. parents and their foreign affiliates (intra-MNC trade) and trade between U.S. MNCs and "others" (trade between U.S. parent companies and foreigners other than their own affiliates and trade between foreign affiliates and U.S. residents other than their own parents). Exports by U.S. parents to their foreign affiliates increased 6.4 percent to $227.7 billion (chart 2), and U.S. exports between U.S. MNCs and others also increased 6.4 percent to $367.9 billion. By industry of foreign affiliate, the largest increase in intra-MNC exports was to affiliates in wholesale trade. By industry of U.S. parent, the largest increase in exports between U.S. MNCs and others was by parents in manufacturing and wholesale trade.

The increase in MNC-associated imports of goods reflected increases in both imports shipped by foreign affiliates to their U.S. parents (intra-MNC trade) and U.S. MNC trade with others. Imports by U.S. parents from their foreign affiliates increased 3.3 percent to $276.1 billion, and U.S. imports between U.S. MNCs and others increased 8.5 percent to $492.0 billion. By industry of foreign affiliate, the largest increases in intra-MNC U.S. imports were shipped by affiliates in oil and gas extraction and in petroleum and coal products manufacturing. By industry of U.S. parent, the largest increase in imports between U.S. MNCs and others was to parents in petroleum and coal products manufacturing.

Table 4. U.S. Trade in Goods Associated with Nonbank U.S. MNCs, 2007 and 2008

[Millions of dollars]

	2007	2008
MNC-associated U.S. exports, total	**559,984**	**595,644**
Intra-MNC trade	214,051	227,721
Shipped by U.S. parents to their MOFAs	203,949	215,693
Shipped by U.S. parents to their other foreign affiliates[1]	10,102	12,028
MNC trade with others	345,932	367,923
Shipped by U.S. parents to foreigners other than their own affiliates	303,836	323,243
Of which:		
Shipped by U.S. parents to their foreign parent groups[2]	51,494	51,158
Shipped to foreign affiliates by U.S. persons other than their own parents	42,096	44,680
To MOFAs	42,000	44,680
To other foreign affiliates[3]	96	n.a.
MNC-associated U.S. imports, total	**720,779**	**768,127**
Intra-MNC trade	267,376	276,107
Shipped by MOFAs to their U.S. parents	253,125	262,826
Shipped by other foreign affiliates to their U.S. parents[1]	14,251	13,281
MNC trade with others	453,403	492,020
Shipped to U.S. parents by foreigners other than their own affiliates	396,876	431,070
Of which:		
Shipped to U.S. parents by their foreign parent groups[2]	108,143	120,058
Shipped by foreign affiliates to U.S. persons other than their own parents	56,527	60,950
By MOFAs	51,523	55,660
By other foreign affiliates	5,004	5,290
Addenda:		
All U.S. exports of goods	1,148,199	1,287,442
U.S.-MNC-associated U.S. exports as a percentage of total	48.8	46.3
Intra-U.S.-MNC exports as a percentage of total	18.6	17.7
All U.S. imports of goods	1,956,962	2,103,641
U.S.-MNC-associated U.S. imports as a percentage of total	36.8	36.5
Intra-U.S.-MNC imports as a percentage of total	13.7	13.1

1. This number is calculated as total exports (imports) between U.S. parents and all of their foreign affiliates (as reported for U.S. parents) less exports (imports) between U.S. parents and MOFAs (as reported for MOFAs).

2. Pertains to U.S. parents that are, in turn, owned 10 percent or more by a foreign person. The foreign parent group consists of (1) the foreign parent of the U.S. parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

3. This number is calculated as total exports (imports) associated with "other" (that is, minority-owned and 50-percent owned) foreign affiliates (as reported for affiliates) less the estimate of exports (imports) between U.S. parents and "other" foreign affiliates that are calculated as described in footnote 1. However, these estimates may be imprecise because of differences in the coverage of the data reported for U.S. parents and for foreign affiliates. No estimate of exports can be made for 2008 because the difference was especially large in that year.

MNC Multinational company
MOFA Majority-owned foreign affiliate
n.a. Not available

Research and development

Expenditures for R&D performed by nonbank U.S. MNCs decreased 0.9 percent to $236.1 billion in 2008 (table 5). Expenditures by U.S. parents decreased 2.2 percent to $199.1 billion, whereas expenditures by foreign affiliates increased 7.4 percent to $37.0 billion. As a result, the parent share of worldwide R&D by U.S. MNCs fell from 86 percent to 84 percent. The decrease was most pronounced in computers and electronic products and in chemicals.

The 0.9 percent decrease in R&D by U.S. MNCs was

Table 5. Research and Development Performed by Nonbank U.S. Multinational Companies by Industry of Parent, 2007–2008

[Millions of dollars]

	2007	2008	Change	Percent change
All industries	238,124	236,096	–2,028	–0.9
Mining	707	796	89	12.6
Utilities	29	17	–12	–41.4
Manufacturing	188,898	183,933	–4,965	–2.6
Of which:				
Food	2,399	2,265	–134	–5.6
Chemicals	60,980	59,748	–1,232	–2.0
Primary and fabricated metals	1,277	1,409	132	10.3
Machinery	8,545	9,383	838	9.8
Computers and electronic products	46,672	44,450	–2,222	–4.8
Electrical equipment, appliances, and components	2,337	2,652	315	13.5
Transportation equipment	53,765	51,465	–2,300	–4.3
Wholesale trade	6,266	6,890	624	10.0
Information	20,146	20,738	592	2.9
Finance (except depository institutions) and insurance	180	109	–71	–39.4
Professional, scientific, and technical services	17,988	18,988	1,000	5.6
Other industries	3,828	4,530	702	18.3

not nearly as pronounced as the 29.7 percent decline in the profit-type return of U.S. parent companies, which suggests that U.S. MNCs sought reductions in expenses other than R&D to manage their spending during the U.S. economic recession.[6] For example, spending to acquire or establish new foreign affiliates appears to have fallen sharply in 2008.

The 2008 decrease in worldwide R&D by U.S. MNCs reflected largely offsetting changes by industry. In manufacturing, R&D performed by MNCs decreased 2.6 percent to $183.9 billion. Decreases were especially large in transportation equipment, computers and electronic products, and chemicals. By contrast, in professional, scientific and technical services, R&D increased 5.6 percent to $19.0 billion, and in "other industries," it increased 18.3 percent to $4.5 billion.[7] The difference partly reflects differences in the severity of the impact of the U.S. economic recession on U.S. firms in different industries. For example, the downturn significantly impacted transportation equipment and computers and electronic products manufacturing, restricting the ability of firms in those industries to fund R&D projects.

U.S. Parents' Operations

This section examines the 2008 operations of U.S. parents in all industries as well as the 2008 change in two aspects of the operations of nonbank U.S. parent companies: value added and R&D. Statistics on other selected aspects of the operations of U.S. parent companies—such as assets, employment, and capital expenditures—are presented in tables 16.1 and 16.2.

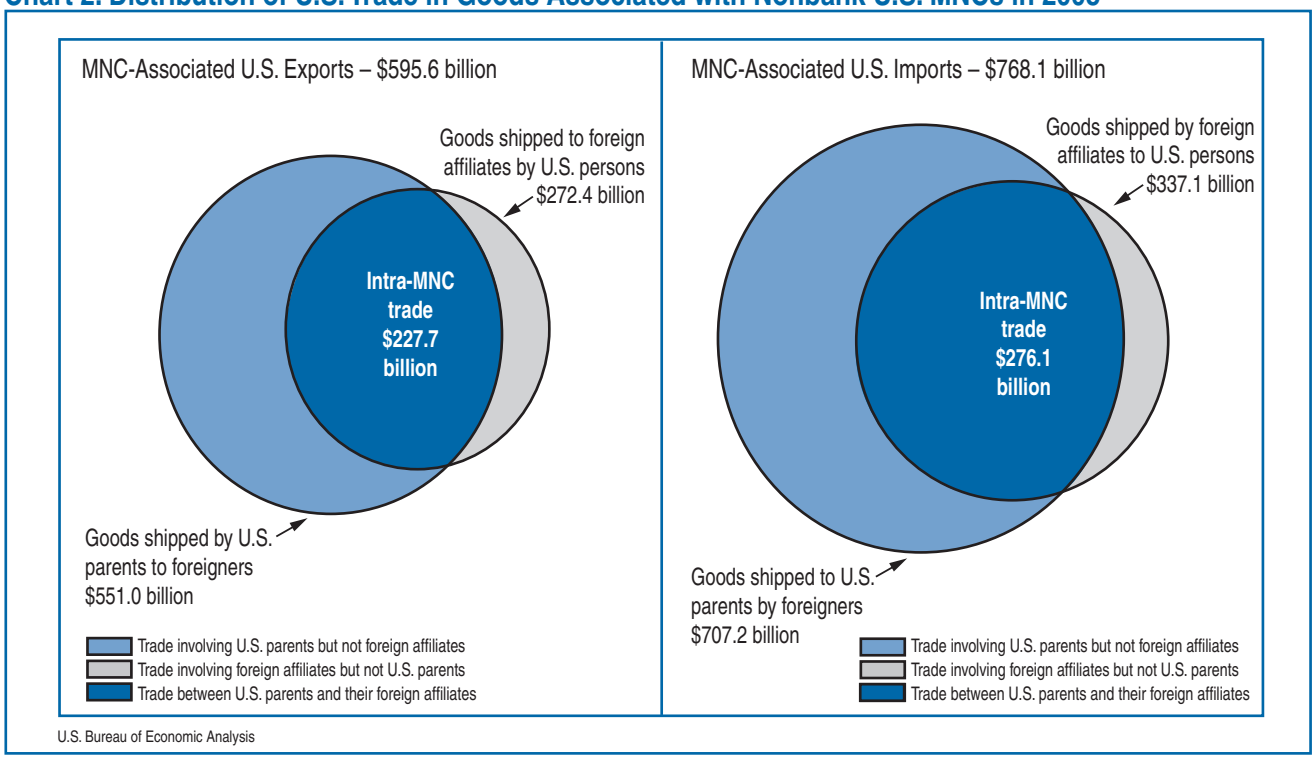
U.S. parents in all industries

Current-dollar value added of U.S. parents in all industries decreased 6.5 percent in 2008 to $2,529.3 billion. Value added of U.S. parents in banking decreased 15.1 percent to $133.0 billion. Value added of nonbank U.S. parents decreased 6.0 percent to $2,396.3 billion. The decrease was especially pronounced in banking because of the negative effects of the financial crisis that began with difficulties in the U.S. subprime mortgage market in the second half of 2007. Employment by parents in all industries decreased 1.5 percent to 22.5 million workers. Employment by parents in banking increased 7.7 percent to 1.4 million workers, and that of nonbank parents decreased 2.1 percent to 21.1

6. Profit-type return is an economic accounting measure of profits from current production. Unlike net income, it is gross of U.S. income taxes, excluding capital gains and losses and income from equity investments, and reflects certain other adjustments needed to convert profits from a financial accounting basis to an economic accounting basis. Statistics on the profit-type return of U.S. parents and foreign affiliates are available on the BEA Web site. (See the box "Data Availability.")

7. The increase in other industries largely reflected spending by parents whose primary source of revenue is fees for the use of intellectual property that they have created.

Chart 2. Distribution of U.S. Trade in Goods Associated with Nonbank U.S. MNCs in 2008



U.S. Bureau of Economic Analysis

million workers. Much of the increase in employment in banking and the decrease in employment in nonbank industries resulted from the change in the classification of some parent companies as mentioned earlier.

Nonbank U.S. parents

Value added

Value added in nonbank finance and insurance declined $83.4 billion or 35.6 percent (table 6). The unprecedented drop in this industry reflected the changes in the classification of some parent companies as well as the turmoil created by the financial crisis, which depressed asset values, raised uncertainty, and constrained firms' financial liquidity.

Value added of parents in manufacturing decreased $62.9 billion or 6.0 percent in 2008. Decreases were widespread by manufacturing industry, but they were largest in petroleum and coal products, transportation equipment, and paper. In petroleum and coal products, value added decreased $31.2 billion or 20.9 percent, as market conditions did not allow U.S. producers to pass on to customers the full value of increases in the cost of crude oil. In transportation equipment, value added decreased $13.9 billion or 6.6 percent, primarily reflecting the sharp decline in U.S. car sales. In paper, value added decreased $6.6 billion or 19.1 percent, primarily reflecting divestitures by some U.S. parents and a sharp drop in sales in secondary lumber operations partly related to a sharp decrease in U.S. new home starts.

By contrast, value added of parents in mining increased $21.8 billion or 33.6 percent, reflecting the sharp rise in crude oil prices.

The 6.0 percent decrease in current-dollar value added of nonbank U.S. parents was mostly accounted for by decreased value added of continuing parents (table 7, line 4). There was also a decrease related to the departure of U.S. parents that sold or liquidated their last foreign affiliate (line 5). These decreases were partly offset by an increase related to unallocated changes (line 6) and an increase related to the addition of new parents to the U.S. MNC universe (line 3).

Research and development

In 2008, expenditures for R&D performed by nonbank U.S. parents decreased 2.2 percent to $199.1 billion. In contrast, R&D performed by all U.S. businesses increased 5.2 percent; as a result, the parent share of total private R&D performed in the United States decreased to 70.3 percent in 2008, from 75.6 percent in 2007 (table 8).

The 2.2 percent decline in U.S. parents' expenditures for R&D was less pronounced than the 29.7 percent decline in their profit-type return. The production of intangible assets, which often occurs through R&D, allows businesses to maintain or improve their competitiveness, which is particularly important in international markets. Thus, multinational companies often attempt to avoid substantial cuts in R&D spending during difficult economic times even

Table 7. Sources of Change in the Value Added of Nonbank U.S. Parent Companies

[Millions of dollars]

1	**2007 level**	**2,548,433**
2	Total change	–152,145
3	New parents[1]	1,310
4	Changes for continuing parents[2]	–131,971
5	Parents departing the universe[3]	–25,906
6	Other changes[4]	4,422
7	**2008 level**	**2,396,288**

1. Parents that established or acquired their first foreign affiliate in 2008.
2. Covers businesses that were parents in both 2007 and 2008. It consists of changes in their existing operations and changes from parents acquiring, establishing, selling, or liquidating parts of their consolidated operations. BEA generally requires survey respondents to fully consolidate their U.S.-parent operations.
3. Parents that sold or liquidated their last foreign affiliate and those that went out of business in 2008.
4. Equals the change in the value added of parents not accounted for in lines 3-5, such as changes resulting from the addition to the survey universe of parents that were required to report in earlier years but did not. Line 6 will also capture any measurement error in the items on the other lines, because it is calculated as the difference between line 2 and the sum of lines 3, 4, and 5.

Table 8. Research and Development Performed by Nonbank U.S. Parent Companies and by All U.S. Businesses, 1997–2008

[Millions of dollars]

	Performed by parents	Performed by all U.S. businesses[1]	R&D by parents as a percentage of R&D by all U.S. businesses
1997	106,800	157,739	67.7
1998	113,777	169,180	67.3
1999	126,291	182,711	69.1
2000	135,467	199,539	67.9

2008	199,105	283,238	70.3

1. The data were obtained from the National Science Foundation Web site www.nsf.gov/statistics/infbrief/nsf10322/.

when their budgets are tight. In addition, much R&D spending is directed toward long-term projects that would be inefficient to stop temporarily because of funding constraints.

Underlying the 2.2 percent decline in expenditures for R&D performed by U.S. parents were offsetting changes by industry (table 9). Decreases in R&D were especially large in manufacturing, down $6.7 billion, to $152.5 billion. Decreases in computers and electronic products, transportation equipment, and chemicals mainly reflected divestitures and other retrenchment in response to weak business conditions. Increases in R&D were especially large in professional, scientific, and technical services (primarily computer systems design and related services).

Operations of Foreign Affiliates

This section examines the 2008 operations of foreign affiliates in all industries as well as the 2008 change in two aspects of the operations of nonbank foreign affiliates of nonbank U.S. parents: value added and research and development. For nonbank foreign affiliates of nonbank U.S. parents, it also examines the distribution by country and by industry of newly acquired or established affiliates and the affiliates' shares of host country GDP. Statistics on other selected aspects of the operations of foreign affiliates—such as assets, employment, and capital expenditures—are presented in tables 18.1 to 20.2.

Foreign affiliates in all industries

Current-dollar value added of foreign affiliates in all industries increased 9.1 percent in 2008 to $1,267.0 billion, in contrast to the 6.5 percent decrease in value added of U.S. parents. Value added of nonbank affiliates of nonbank U.S. parents increased 8.2 percent to $1,211.9 billion, largely reflecting increases in continuing operations. Value added of bank foreign affiliates increased 32.8 percent to $55.1 billion.[8] The increase was primarily accounted for by a $13.6 billion increase by bank affiliates in the United Kingdom. Employment by affiliates in all industries increased 1.9 percent to 10.6 million workers. Employment of nonbank affiliates of nonbank U.S. parents increased 1.1 percent to 10.1 million workers, and that of bank affiliates increased 22.5 percent to 0.4 million workers. The differences in rates of growth in employment for the two foreign-affiliate groups partly resulted from the reclassification of some U.S. parent companies from nonbanks to banking as mentioned earlier.

Table 9. Research and Development Performed by Nonbank U.S. Parent Companies by Major Industry, 2007 and 2008

[Millions of dollars]

	2007	2008	Change	Percent change

Nonbank foreign affiliates of nonbank U.S. parents

Value added

Current-dollar value added of nonbank foreign affiliates of nonbank U.S. parents increased 8.2 percent to $1,211.9 billion in 2008. By area, the increases in value

8. In addition to affiliates in banking, bank foreign affiliates include nonbank affiliates of bank parents, which are included because they are reported together with affiliates in banking on a specialized form for banks that lacked much of the detail collected for nonbank affiliates of nonbank parents.

Revisions

The statistics of MNC operations in 2008 are preliminary. The employment and sales statistics replace the advance summary statistics that were released on April 16, 2010. From the advance to the preliminary statistics, employment was revised down 1.1 percent and sales was revised down 1.0 percent.

The final statistics for MNC operations in 2007 are also presented. The final statistics for employment and sales replace the summary statistics in the April news release and the preliminary statistics that were published in the August 2009 SURVEY OF CURRENT BUSINESS. From the summary to the final statistics, employment was revised down 0.9 percent and sales was revised down 0.1 percent. From the preliminary to the final statistics, employment was revised down 1.7 percent and sales was revised down 0.5 percent.

In addition to the statistics for the levels of U.S. MNC employment and sales, the April news release included 2007–2008 growth rates. The revisions to the levels of the 2007 and 2008 statistics discussed above resulted in revisions to the growth rates; employment growth was revised down 0.1 percentage point and sales growth was revised down 1.0 percentage point.

added of foreign affiliates were widespread, but the largest increases were in Europe and Asia and Pacific (table 10). In Europe, the value added of affiliates increased $30.5 billion or 5.0 percent. The largest increases were in mining (mainly oil and gas extraction) and "other industries" (mainly management of companies and enterprises), and the largest decreases were in manufacturing and nonbank finance and insurance. The increase in Europe was partly due to increases in the Scandinavian countries of Norway and Denmark. Value added in Norway increased 55 percent and that in Denmark almost doubled. The increases in both countries were mainly in oil and gas extraction, and partly reflected a 39 percent increase in crude oil prices. In contrast, value added of affiliates in the United Kingdom decreased, mainly in nonbank finance and insurance and manufacturing, particularly in transportation equipment manufacturing. The decrease in nonbank finance and insurance contrasts with the sharp increase in the value added of bank affiliates. The decrease in transportation equipment manufacturing reflected an 11 percent decline in car sales in the United Kingdom.

In Asia and Pacific, the value added of affiliates increased $22.2 billion or 10.8 percent. The largest increases were in mining and wholesale trade. The increase in wholesale trade was concentrated in Japan and reflected rising sales of computers and other electronic products. The increase in mining was concentrated in Australia, which reflected strong global demand and rising prices for gold and other mineral and energy resources, specifically iron ore and coal. China continued to show strong economic growth, and the value added of manufacturing affiliates in China continued to increase, especially in chemicals manufacturing. The increase reflected strong demand for chemical fertilizers and other basic chemicals. The value added of affiliates in India also increased, primarily because of increases in information-and-communication-technology-related industries. These industries continued to have strong growth in demand from both local and foreign customers.

In Africa, the value added of affiliates increased $13.1 billion or 29.8 percent. The increase was almost entirely due to an increase in mining (mainly oil and gas extraction) and partly reflected the sharp increase in crude oil prices.

In Latin America and Other Western Hemisphere, the value added of affiliates increased $11.0 billion or 8.5 percent. The largest increases were in "other industries" (including retail trade), mining, and manufacturing. By country, the largest increase occurred in Brazil, reflecting continued strong economic growth and consumer demand, specifically in chemicals, food, and transportation equipment manufacturing. The increase in chemicals and food manufacturing partly reflected strong growth in Brazil's agro-chemical industry, including ethanol production.

In Canada, the value added of affiliates increased $10.0 billion or 8.6 percent. The largest increases were in nonbank finance and insurance and mining (mainly oil and gas extraction). The increase for foreign affiliates in nonbank finance and insurance was consistent with the condition of Canadian financial institutions, which generally held up well despite the global financial crisis.[9] The increase in oil and gas extraction partly reflected the rise in oil and gas prices. Offsetting these increases was a decrease in manufacturing, specifically transportation equipment manufacturing.

In the Middle East, the value added of affiliates increased $5.3 billion or 33.1 percent. The increase was concentrated in mining (mainly oil and gas extraction) and reflected the sharp rise in petroleum prices.

By industry sector, the largest value-added increase

9. For further information, see Statistics Canada, "Economic Accounts," in *The Canada Year Book 2009*, catalogue no. 11–402–X (Ottawa: Minister of Industry, 2009): 103.

was in mining. "Other industries" (mainly management of companies and enterprises and retail trade), manufacturing, and wholesale trade also had increases, while nonbank finance and insurance and information both had decreases.

The increase in affiliate value added largely reflected changes for continuing affiliates (table 11, line 6); increases related to unallocated changes (line 8) and the addition of new affiliates to the U.S. MNC universe (line 3) were not as large and were partly offset by a decrease related to the departure of affiliates that were sold or liquidated (line 7).

Newly acquired or established affiliates. Although most of the increase in the value added of foreign affiliates in 2008 resulted from expansions in continuing affiliates, the addition of affiliates that were newly acquired or established during the year also contributed. Data for these affiliates show which U.S. MNCs have been expanding their operations through new business enterprises and thus can provide some evidence of the countries and industries that have offered attractive investment opportunities to U.S. MNCs. In 2008, nonbank U.S. parents acquired or established 300 nonbank foreign affiliates, which had a combined value added of $6.4 billion and a combined employment of 120,600 workers (see table 12 on page 218). While sizable, this is a notable decrease from 2007, when nonbank U.S. parents acquired or established 434 nonbank foreign affiliates with a combined value added of $12.3 billion.

By area, five countries—the United Kingdom, France, the Netherlands, Germany, and Canada—accounted for over 40 percent of the number of new affiliates in 2008, for over 40 percent of their value added, and roughly a third of their employment. All five of these countries are high-income countries, and affiliates in these countries, except those in the Netherlands, primarily serve local markets. The BRIC countries of Brazil, Russia, India, and China together accounted for 8.3 percent of all new affiliates, 6.0 percent of new affiliate value added, and 34.5 percent of new affiliate employment.[10] The large share of total new employment primarily reflected the labor-intensive production technologies used by the manufacturing and "professional, scientific, and technical services" industries in which U.S. MNCs invested in these countries.

By industry, new manufacturing affiliates accounted for 27.7 percent of all new affiliates, for 43.1 percent of their employment, and for 32.8 percent of their value added. New wholesale trade affiliates accounted for only 7.7 percent of all new affiliates and 3.1 percent of their employment, but for 45.7 percent of their value added.

Affiliate share of host-country GDP. Value added of foreign affiliates represents these firms' contributions to their respective host countries' GDP. Among the 51 host countries listed in table 13 on page 219, the share of GDP in 2008 accounted for by nonbank foreign affiliates of nonbank U.S. parents ranged from 20.8 percent in Ireland to 0.1 percent in Saudi Arabia. In only 2 of the 51 host countries—Ireland and Singapore—did the value added of foreign affiliates of U.S. MNCs account for more than 10 percent of GDP. Seven of the top ten countries with high foreign affiliate shares of host-country GDP are high income countries, namely Ireland, Singapore, Canada, Norway, the United Kingdom, Switzerland, and Hong Kong. The relatively high affiliate shares of host country GDP in these countries can be traced to some of the following factors: widespread use of a common language with the United States, marketing and commercial legal systems similar to those in the United States, favorable intellectual property laws, the availability of a skilled work force, political stability, and low corporate tax rates.

Despite the rapid growth of foreign affiliates in the BRIC countries, they combined to account for an average of only 1.0 percent of their collective host countries' GDP in 2008. This share was little changed from 2007 because the rapid growth in affiliate value added in 2008 of 24.2 percent did not significantly exceed the rapid growth in the host countries' GDP of 21.6 percent.

Real value added in manufacturing. In addition to the current-dollar estimates of value added of foreign

Table 11. Sources of Change in Value Added of Nonbank Majority-Owned Foreign Affiliates

[Millions of dollars]

1	**2007 level**	**1,119,720**
2	Total change	92,134
3	New foreign affiliates	6,408
4	Acquired by U.S. parents	2,686
5	Established by U.S. parents	3,723
6	Changes for continuing affiliates[1]	77,963
7	Sales or liquidations of foreign affiliates	–13,506
8	Other changes[2]	21,269
9	**2008 level**	**1,211,854**

1. Covers businesses that were affiliates in both 2007 and 2008. It consists of changes in their existing operations and changes from foreign affiliates acquiring, establishing, selling, or liquidating parts of their consolidated operations. BEA permits survey respondents to consolidate affiliate operations that are in the same country if the affiliates are also in the same industry or are integral parts of a single business operation.

2. Equals the change in the value added of foreign affiliates not accounted for in lines 3–7, such as changes resulting from the addition to the survey universe of affiliates that were exempt from reporting in earlier years and affiliates that were required to report in earlier years but did not. Line 8 will also capture any measurement error in the items on the other lines, because it is calculated as the difference between line 2 and the sum of lines 3, 6, and 7.

10. The term "BRIC" was coined by Goldman Sachs' head of global economic research Jim O'Neill, to describe the four countries where economic development has been especially rapid.

affiliates, BEA prepares estimates of the real value added of foreign affiliates in manufacturing that remove the effects of changes in prices and exchange rates. These estimates provide more meaningful comparisons of value added of foreign affiliates across countries and over time than the current-dollar estimates. Comparisons across countries are enhanced because the estimates in real terms are based on purchasing power parity (PPP) exchange rates rather than on market exchange rates.[11] Comparisons over time are enhanced because the estimates are denominated in chained (2005) dollars that account for both changes in prices and changes in the industry mix of production by manufacturing affiliates. The real value added estimates are restricted to manufacturing because the required source data are not available for other industries.

The real value added of foreign affiliates in manufacturing decreased 4.8 percent to $439.2 billion in 2008 (see table 14 on page 220). The 29 countries for which estimates are available accounted for 76.7 percent of the total.[12] The real value added of manufacturing affiliates in these countries decreased 8.1 percent to $336.8 billion, in line with a 9.8 percent decrease in total manufacturing production in these countries (chart 3). The decreases were widespread across countries and were largest in the United Kingdom, Germany, and Canada. In the United Kingdom, real value added of foreign affiliates decreased $6.2 billion to $42.5 billion, mainly in transportation equipment manufacturing. In Germany, real value added decreased $3.1 billion to $44.7 billion, mainly in computer and electronic products and transportation

11. To translate the value-added estimates that are denominated in foreign currencies into U.S. dollars for international comparisons, PPP exchange rates generally are preferable, because they approximate the number of foreign currency units required in a foreign country to buy the goods and services that are equivalent to those that can be bought in the United States with 1 U.S. dollar. A distinguishing feature of PPP exchange rates is that they are based on the prices of all goods and services produced or sold in a country, both those that are traded internationally and those that are not. For details and for a description of the original methodology used to derive the estimates of real value added, see Raymond J. Mataloni Jr., "Real Gross Product of U.S. Companies' Majority-Owned Foreign Affiliates in Manufacturing," Survey 77 (April 1997): 8–17. The original methodology was significantly improved when the industry detail of the producer price indexes used for deflation was increased from 6 manufacturing industries to 22 manufacturing industries in 2006.

12. Previously, estimates were available for 27 countries and covered 75.0 percent of the total in the reference year (2005). The preparation of estimates for China and Singapore was made possible by newly available host-country data on producer prices by industry. The reference year estimates for these two countries are somewhat less precise; due to source data limitations, they are based on economywide PPP exchange rates rather than industry-specific PPP exchange rates. Economywide PPP exchange rates are not ideally suited for translating production by MNCs, because the product weights, which cover both traded and nontraded goods and services, are not necessarily representative of the types of goods and services produced by MNCs.

Table 12. Newly Acquired or Established Nonbank Majority-Owned Foreign Affiliates by Major Area and Industry of Affiliate, 2007 and 2008

	2007					2008

1. As classified by the World Bank.
NOTE. The statistics in this table cover only newly acquired or established affiliates. They exclude data for consolidated units of existing affiliates that were acquired or established during the year.

equipment manufacturing. In Canada, the real value added decreased $3.0 billion to $41.2 billion, primarily because of transportation equipment manufacturing. The decrease in transportation equipment in all three countries reflected weak car sales in Europe and North America.

In contrast, the real value added of foreign affiliates in China increased $3.4 billion to $33.8 billion or 11.2 percent. The increase reflected China's continued strong rate of economic growth. Between 2004 and 2008, China's share of the worldwide real value added of foreign affiliates rose from 4.6 percent to 7.7 percent. China's share in 2008 was the fourth highest of the 29 selected countries after Germany, the United Kingdom, and Canada. China's share corresponded to its share of affiliates' worldwide manufacturing employment, which ranked second behind Mexico.

The real value added of foreign affiliates in the countries other than the 29 selected countries increased 8.4 percent to $103.5 billion. Based on the market-exchange-rate-based estimates, the increase was most rapid in Latin America and Other Western Hemisphere.

By industry sector for all nonbank foreign affiliates, the largest decrease was in transportation equipment manufacturing. Partly offsetting the overall decrease was an increase in chemicals manufacturing.

Table 13. Value Added of Nonbank Majority-Owned Foreign Affiliates as a Percentage of GDP of Selected Host Countries, 2007 and 2008

	2007	2008

Saudi Arabia	0.1	0.1
Weighted average of countries shown[1]	**2.7**	**2.6**

1. The average share of host-country GDP in these countries was derived as a weighted average in terms of host-country GDP.

NOTES. The countries are sorted in descending order of their 2008 values. If two countries have the same 2008 value, they were sorted using unrounded values.

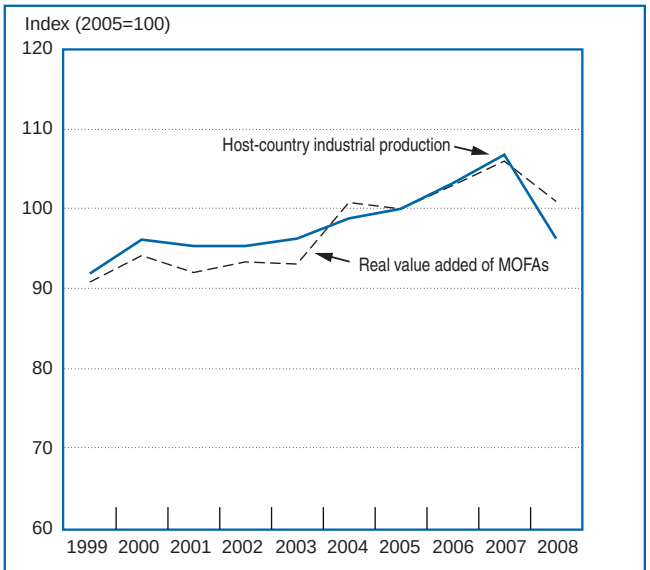
Gross domestic product data for host countries were obtained from the World Bank Web site.

GDP Gross domestic product

Research and development

Expenditures for R&D performed by nonbank foreign affiliates of nonbank U.S. parents increased 7.4 percent, or $2.5 billion, to $37.0 billion in 2008 (see table 15 on page 221). R&D expenditures were concentrated in a small number of host countries, including the Netherlands, Germany, France, China, India, and Brazil. R&D expenditures in the Netherlands nearly doubled, increasing $0.7 billion. Within the Netherlands, the increase was concentrated in manufacturing, specifically chemicals manufacturing.

Chart 3. Real Value Added of MOFAs in Manufacturing and Industrial Production in 29 Selected Countries, 1999–2008



MOFAs Majority-owned foreign affiliates

NOTE. The 29 selected countries are listed below in Table 14.

The composite index of host-country industrial production was derived by weighting each country's index by the country's share in the dollar value of real value added of MOFAs in manufacturing.

U.S. Bureau of Economic Analysis

Offsetting these increases was a decrease in R&D expenditures in the United Kingdom, down 14.1 percent or $0.8 billion. Within the United Kingdom, the decrease was concentrated in manufacturing, specifically transportation equipment and chemicals manufacturing. There was also a decrease in defense-related R&D, particularly aerospace.

R&D expenditures in the BRIC countries continued to grow; the share of affiliate R&D expenditures in these countries grew to 8.1 percent of total affiliate R&D in 2008 from 4.1 percent in 2004. The 2008 increase was partly due to strong growth in India and Brazil, both of which experienced double-digit growth in affiliate R&D. Indian affiliates' R&D expenditures increased 52.4 percent or $0.2 billion. By industry, a large portion of the Indian R&D expenditures were in computers and electronic products manufacturing and in professional, scientific, and technical services. The growth in R&D expenditures by Indian affiliates appears to be driven by the expanded capabilities for R&D and government support in India, which includes the development of an R&D infrastructure, research funding, and increased education for human resource development.

Brazilian affiliates' R&D expenditures increased 30.3 percent or $0.2 billion. By industry, a majority of the Brazilian R&D expenditures were in transportation equipment and computers and electronic products manufacturing. The increase in transportation equipment reflects a continued emphasis on developing flexible fuel vehicles (vehicles that run on more than one fuel, usually gasoline blended with ethanol), which currently make up about 75 percent of total production of light vehicles in Brazil.

By industry sector, the largest increase in R&D expenditures was in manufacturing, followed by professional, scientific, and technical services. The increase in manufacturing reflected sizable growth in computers and electronic products manufacturing in which R&D increased $1.5 billion and helped offset a notable decrease in R&D in transportation equipment manufacturing, which declined $0.5 billion.

Table 14. Real Value Added by Majority-Owned Foreign Affiliates in Manufacturing by Country, 1999–2008

	Billions of chained (2005) dollars										Share of all-countries total (percent)

* Less than $500,000 or less than 0.05 percent.

1. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Statistics on U.S. Direct Investment Abroad

BEA collects two broad sets of data on U.S. direct investment abroad: (1) financial and operating data of U.S. multinational companies and (2) international transactions and direct investment position data. This article presents highlights of statistics derived from the first set of data; the statistics derived from the second set of data are usually published in the July and September issues of the SURVEY OF CURRENT BUSINESS.[1]

Financial and operating statistics. The financial and operating statistics provide a picture of the overall activities of foreign affiliates and U.S. parent companies using a variety of indicators of their financial structure and operations. The statistics on foreign affiliates cover the entire operations of the affiliate, regardless of the share of U.S. ownership. These statistics cover items that are used to analyze the characteristics, performance, and economic impact of multinational companies, such as sales, value added, employment and employee compensation, capital expenditures, goods exports and imports, and research and development expenditures. Separate statistics are available for all affiliates and for affiliates that are majority-owned by their U.S. parent(s).

International transactions and direct investment position statistics. The international transactions statistics cover a foreign affiliate's transactions with its U.S. parent(s), so these statistics relate to the U.S. parent's share, or interest, in its affiliate rather than to the affiliate's size or level of operations. These statistics are key components of the U.S. international transactions accounts (ITAs), the international investment position, and the national income and product accounts. The major data items are capital flows (recorded in the financial account of the ITAs), which measure the funds that U.S. parents invest in their foreign affiliates, and income (recorded in the current account), which measures the return on those investments.

Direct investment position statistics are stock (cumulative) measures, showing the total outstanding level of U.S. direct investment abroad at yearend. Statistics are provided both at historical cost and at current-period prices. The historical-cost statistics are published by country and by industry.

1. See Marilyn Ibarra, "Direct Investment Positions for 2009: Country and Industry Detail," SURVEY 90 (July 2010): 20–35 and Jeffrey H. Lowe, "Direct Investment, 2006–2008: Detailed Historical-Cost Positions and Related Capital and Income Flows," SURVEY 89 (September 2009): 208–282.

* Less than $500,000 (+/–).
D Suppressed to avoid disclosure of data of individual companies.
1. Some parents and foreign affiliates primarily in finance and insurance include investment income in sales or gross operating revenues. Most other parents and affiliates consider investment income an incidental revenue source and include it in their income statements in an "other income" category rather than in sales. BEA collects data on investment income to ensure that—where it is included in total sales—it is not misclassified as sales of services.

Table 16.2. Selected Statistics for Nonbank U.S. Parents by Industry of U.S. Parent, 2008

	Millions of dollars										Thousands of employees
	Total assets	Sales				Net income	Capital expenditures	Research and development expenditures	Value added	Compensation of employees

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on July 30, 2010. These estimates include the "advance" estimates for the second quarter of 2010. The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

Estimates are based on the 2010 revision of the NIPAs. A detailed article about the revision and an extensive set of NIPA estimates will be published in the August issue of the SURVEY OF CURRENT BUSINESS. The estimates for all currently available NIPA series for 1929 forward are on BEA's Web site at www.bea.gov.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Residual	26	16.2	37.8	41.9	40.4	33.8	26.5	17.0

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Gross domestic product excluding food and energy [1]	34	0.8	0.3	0.8	1.1	1.2
Personal consumption expenditures	35	–0.3	–0.7	1.5	2.4	1.9
Personal consumption expenditures excluding food and energy [1]	36	1.5	1.3	1.7	1.8	1.5
Market-based PCE [2]	37	–0.1	–0.6	1.5	2.2	1.7
Market-based PCE excluding food and energy [2]	38	2.1	1.8	1.7	1.4	1.1

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

Implicit price deflator for final sales of domestic product	19	108.608	109.647	109.579	109.808	109.734	110.018	110.535

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.

Services [2]	14	**8,291.4**	**8,278.2**	**8,280.2**	**8,276.3**	**8,293.2**	**8,293.4**	**8,320.6**
Structures	15	**1,166.9**	**973.6**	**975.0**	**974.9**	**933.5**	**895.8**	**926.3**
Residual	16	–22.1	–15.0	–13.1	–13.3	–17.2	–24.8	–25.0
Addenda:								
Motor vehicle output	17	336.8	253.7	223.1	279.3	288.4	315.0	314.6
Gross domestic product excluding motor vehicle output	18	12,884.2	12,610.8	12,567.7	12,568.6	12,718.2	12,813.5	12,891.3
Final sales of computers [3]	19	148.2	155.6	153.8	152.2	158.4	165.5	168.6
Gross domestic product excluding final sales of computers	20	13,098.5	12,747.9	12,678.4	12,729.8	12,884.5	13,000.6	13,076.5

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.
NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Gross housing value added	12	1,185.2	1,190.3	1,182.0	1,191.7	1,193.8	1,190.6	1,191.0

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

Residual	60	–5.7	2.3	11.0	4.7	–13.7	–22.1	–35.7

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.
5. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.
3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Uses gross domestic purchases price index as deflator.
2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.
3. This measure is called "real gross national income" in the System of National Accounts, 2008.
4. Uses net domestic purchases price index as deflator.
5. Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.
6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.
7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.
8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.
3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.
4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Profits after tax with IVA and CCAdj	9	0.074	0.078	0.074	0.078	0.081	0.087	.....

1. The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
NOTE. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.
IVA Inventory valuation adjustment
CCAdj Capital consumption adjustment

2. Personal Income and Outlays

Market-based PCE excluding food and energy [6]	28	–0.2	–1.1	–0.9	2.2	0.7	2.5	2.7

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Final consumption expenditures of nonprofit institutions serving households (NPISHs) [1]	22	0.7	–3.1	–3.4	0.9	–0.1	–2.8	1.0
Gross output of nonprofit institutions [2]	23	2.6	1.4	1.4	2.9	2.8	1.2	2.7
Less: Receipts from sales of goods and services by nonprofit institutions [3]	24	3.3	3.0	3.0	3.6	3.8	2.5	3.3
Addenda:								
PCE excluding food and energy [4]	25	2.3	1.5	2.3	1.5	2.1	1.2	1.1
Energy goods and services [5]	26	14.3	–19.2	4.8	41.5	18.0	16.4	–17.5
Market-based PCE [6]	27	3.4	0.3	1.9	3.0	2.2	1.7	–0.2
Market-based PCE excluding food and energy [6]	28	2.3	1.9	2.3	1.3	1.4	0.7	1.0

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

4. Foreign Transactions

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

5. Saving and Investment

Table 5.1. Saving and Investment by Sector

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Nonresidential structures	28	463.2	368.9	377.0	364.9	334.9	319.2	323.2
Residential structures	29	372.0	276.6	270.8	274.5	268.7	266.3	277.9

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.
3. Excludes software "embedded," or bundled, in computers and other equipment.
4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.
NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonmerchant wholesale trade	24	53.8	53.4	55.7	59.2	58.4
Final sales of domestic business [2]	25	**781.2**	**782.9**	**786.6**	**790.1**	**796.9**
Final sales of goods and structures of domestic business [2]	26	**407.3**	**408.5**	**407.7**	**408.5**	**412.3**
Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales	27	2.44	2.41	2.44	2.47	2.45
Nonfarm inventories to final sales	28	2.21	2.19	2.22	2.23	2.22
Nonfarm inventories to final sales of goods and structures	29	4.24	4.19	4.28	4.32	4.28

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Table 5.7.6B. Real Private Inventories and Real Domestic Final Sales by Industry, Chained Dollars

[Billions of chained (2005) dollars]

	Line	Seasonally adjusted quarterly totals

Final sales of domestic business [2]	26	**726.6**	**726.6**	**732.2**	**734.7**	**736.2**
Final sales of goods and structures of domestic business [2]	27	**387.3**	**388.8**	**393.2**	**396.3**	**397.6**
Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales	28	2.40	2.36	2.32	2.33	2.35
Nonfarm inventories to final sales	29	2.18	2.14	2.11	2.11	2.13
Nonfarm inventories to final sales of goods and structures	30	4.09	3.99	3.92	3.91	3.94

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Addenda:								
Final sales of motor vehicles to domestic purchasers	43	419.2	330.0	318.6	345.6	337.4	355.6	376.0
Private fixed investment in new autos and new light trucks	44	153.3	102.1	98.2	104.8	115.8	128.2	133.7
Domestic output of new autos [2]	45	100.2	59.2	50.0	68.2	76.5	78.2	80.0
Sales of imported new autos [3]	46	89.0	74.3	69.6	82.7	74.9	79.9	80.0

1. Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Industry Data

E. Industry Table

The statistics in this table were published in tables 3a and 5a in "Annual Industry Accounts: Advance Statistics on GDP by Industry for 2009 and Revised Statistics for 1998–2008" in the June 2010 Survey of Current Business.

Table E.1. Percent Changes in Chain-Type Quantity and Price Indexes for Value Added by Industry for 2007–2009

p Preliminary
r Revised
(*) Transactions are less than $500,000 (+/–)
1. Details not shown separately; see totals in lines 56 and 63.
2. Details not shown separately are included in line 69.
3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

p Preliminary
r Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary
r Revised
* Less than $500,000 (+/-)
..... Not applicable

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes in coverage due to year-to-year changes in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, and 24, 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).

5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. The movement of exchange rates does not affect this valuation.

10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

D Suppressed to avoid disclosure of data of individual companies.

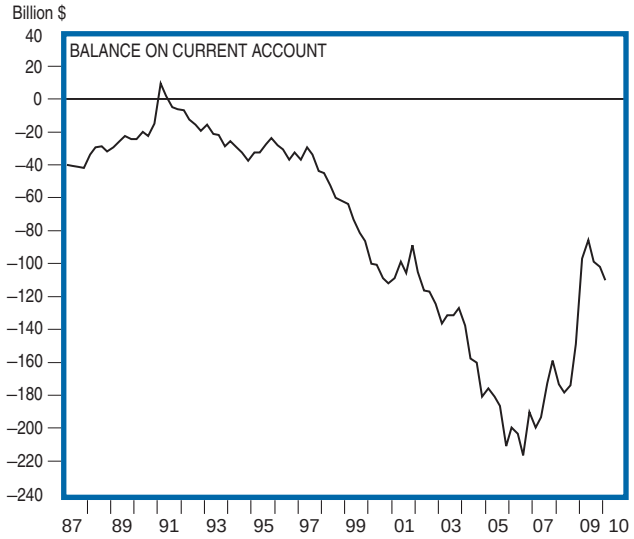
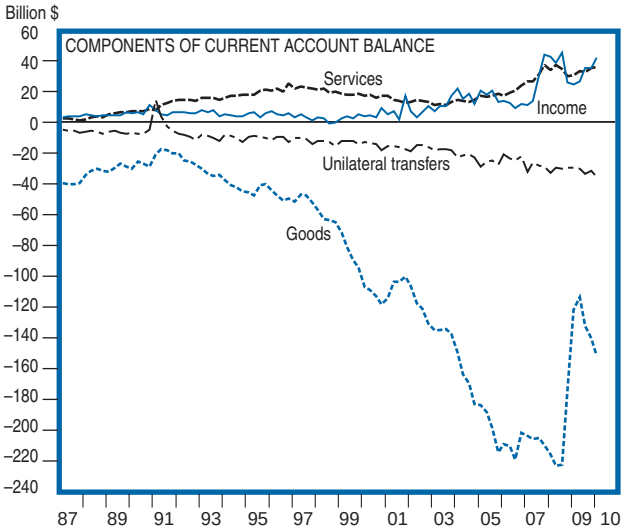
NOTES. The data in this table are from BEA's benchmark survey of the operations of U.S. affiliates of foreign companies; see "Operations of U.S. Affiliates of Foreign Companies: Preliminary Results From the 2007 Benchmark Survey" in the November 2009 SURVEY OF CURRENT BUSINESS.

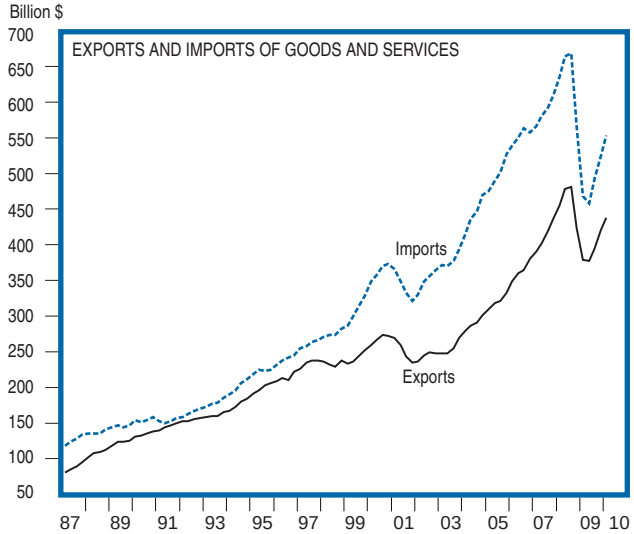
The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

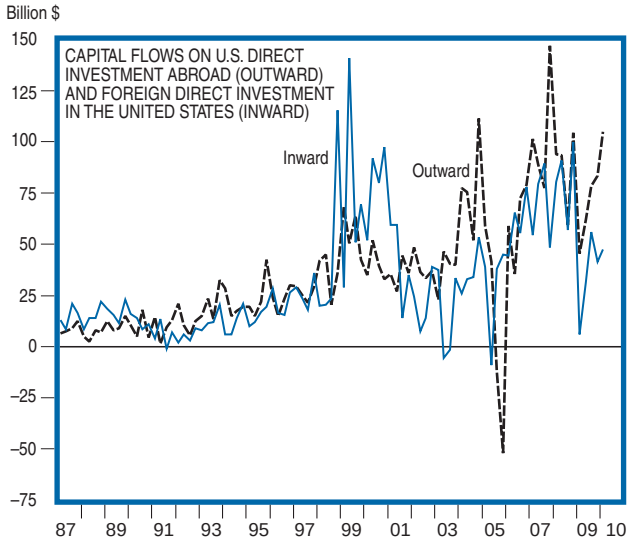
H. Charts

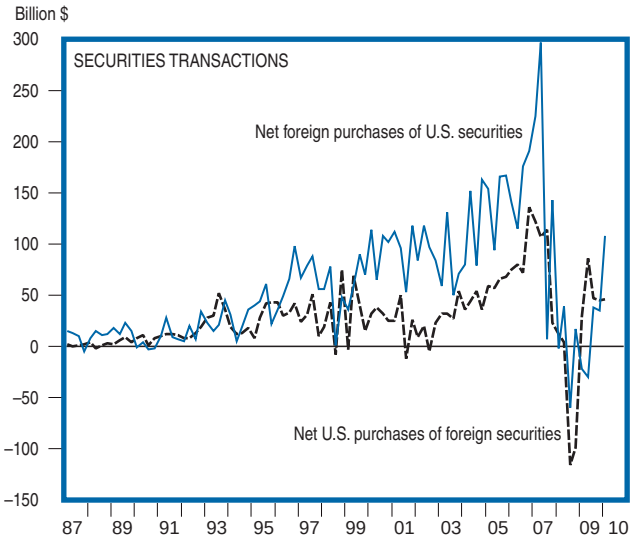
THE U.S. IN THE INTERNATIONAL ECONOMY

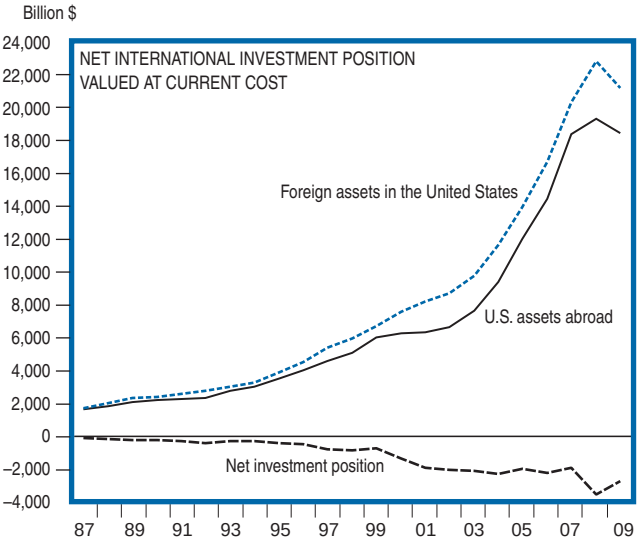












NOTE. All series except those for the international investment position are quarterly and are seasonally adjusted when adjusted data are available. The series are from tables F.2, with opposite signs in some cases, and G.1.

U.S. Bureau of Economic Analysis

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

Table I.1. Personal Income by State and Region

[Millions of dollars, seasonally adjusted at annual rates]

p Preliminary
r Revised
1. Percent change from preceding period was calculated from unrounded data.
NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
Source: Table 1 in the "Regional Quarterly Report" in the July 2010 SURVEY OF CURRENT BUSINESS.

p Preliminary
r Revised
1. Per capita personal income was computed using midyear population estimates of the Census Bureau.
2. Percent change from preceding period was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

p Preliminary
r Revised
1. Per capita disposable personal income was computed using midyear population estimates of the Census Bureau.
2. Percent change from preceding period was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

NOTE. Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP-by-state statistics for 2008 that were released on June 2, 2009.

J. Local Area Table

Table J.1. Personal Income and Per Capita Personal Income by Metropolitan Area, 2006–2008—Continues

1. Per capita personal income was computed using Census Bureau midyear population estimates.
2. Percent change calculated from unrounded data.
3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

Source: Table 1 in the "Personal Income and Per Capita Personal Income by Metropolitan Area, 2006–2008" in the May 2010 SURVEY OF CURRENT BUSINESS.

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.[1]

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006–2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled $100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be $110 ($100 × 1.10). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0}\right)^{m/n} - 1\right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t - 0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. See J. Steven Landefeld, Brent R. Moulton, and Cindy M. Vojtech, "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes," Survey of Current Business (November 2003): 8–16.

ITAs International transactions accounts
NIPAs National income and product accounts

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates.

Concepts and Methods of the U.S. National Income and Product Accounts
- *Introductory Chapters 1–4 (2008)*
- *Chapter 5: Personal Consumption Expenditures (2009)*

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

An Introduction to National Income and Product Accounts (2007)

Measuring the Economy: A Primer on GDP and the National Income and Product Accounts (2007)

The following SURVEY articles describe the 2009 comprehensive revision of the NIPAs.

"Initial Results of the 2009 Comprehensive NIPA Revision" (August 2009)

"Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision" (September 2009)

Preview of the 2009 Comprehensive NIPA Revision
- Changes in Definitions and Presentations (March 2009)
- New Classifications for Personal Consumption Expenditures (May 2008)
- Statistical Changes (May 2009)

"Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes" (March 2008)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2010) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

"Updated Summary of NIPA Methodologies" (November 2009) describes the source data and methods that are used to prepare the estimates.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"The Reliability of the GDP and GDI Estimates of U.S. Economic Activity" (February 2008) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary (now called second), and final (now called third) quarterly estimates of GDP.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1999–2008" (November 2009) describes the improvements that were incorporated into these estimates as part of the 2009 comprehensive NIPA revision.

Satellite account. This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

"Research and Development Satellite Account"
- For 1959–2002 (December 2006)
- For 1959–2004 (October 2007)

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under "About BEA."

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

Annual industry accounts. "Preview of the Comprehensive Revision of the Annual Industry Accounts" (March 2010) provides the details about the upcoming comprehensive revision.

"Annual Industry Accounts" (June 2010) presents the comprehensive revision of these accounts and summarizes the source data and any changes in the methods that are used to prepare the estimates.

Benchmark input-output accounts. *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"
For 2002–2005 (June 2006)
For 1998–2006 (June 2007)
For 2004–2007 (June 2008)
For 2005–2008 (June 2009)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. "A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts" (February 2010) introduces these accounts.

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2010 SURVEY.

"Modernizing and Enhancing BEA's International Economic Accounts: Recent Progress and Future Directions" (May 2010) provides an overview of BEA's initial and long-term plans to introduce the new international statistical standards from recently updated manuals and other improvements to the accounts.

Direct investment. Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey* (2008) and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

Additional improvements are described in the following annual articles: "Direct Investment Positions: Country and Industry Detail" (September) and Operations of U.S. Multinational Companies (August) and of U.S. Affiliates of Foreign Companies (November).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2009 SURVEY.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income (2009) describes the improvements in the methodology that is used to prepare the quarterly and annual estimates. This methodology has been updated in "Regional Quarterly Report: Comprehensive Revision" (November 2009).

Local Area Personal Income (2009) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan divisions and areas, micropolitan areas, and BEA economic areas and regions. This methodology has been updated in "Comprehensive Revision of Local Area Personal Income" (May 2010).

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (June 2009) presents the most recent annual revision.

"Introducing New Measures of the Metropolitan Economy: Prototype GDP-by-Metropolitan-Area Estimates for 2001–2005" (November 2007) describes the potential uses of the estimates.
