September 2012 Bureau of Economic Analysis Volume 92 Number 9

iii. **Director's Message**

iv. **Taking Account**

Articles

1. **GDP and the Economy: Second Estimates for the Second Quarter of 2012**

Real GDP increased 1.7 percent after increasing 2.0 percent in first quarter. Consumer spending, business investment, and residential investment slowed. Government spending and inventory investment decreased less in the second quarter than in the first quarter.

11. **Government Receipts and Expenditures: Second Quarter of 2012**

Net government saving decreased $20.7 billion to –$1,207.1 billion. Net federal government saving decreased $35.8 billion to –$1,094.5 billion. Net state and local government saving increased $14.9 billion to –$112.7 billion.

14. **Newly Available NIPA Tables**

Statistics on federal and state and local government spending by function and a comparison of NIPA and USDA net farm income that reflect the 2012 annual NIPA revision.

21. **Fixed Assets and Consumer Durable Goods for 2008–2011**

Statistics on the net stock of equipment and software, on business and government structures, and on consumer durable goods that reflect the 2012 annual NIPA revision.

28. **Direct Investment for 2009–2011: Detailed Historical-Cost Positions and Related Financial and Income Flows**

Statistics on (1) the direct investment positions and international transactions of U.S. and foreign multinational companies and (2) the composition of investment by U.S. companies abroad and foreign companies in the United States.

33. **U.S. Direct Investment Abroad Tables**

68. **Foreign Direct Investment in the United States Tables**

Upcoming in the Survey...

U.S. International Services. Statistics on cross-border trade for 2011 and services supplied through affiliates for 2010.

State Personal Income. Revised annual and quarterly estimates for 2009–2011 and for the first quarter of 2012 and preliminary estimates for the second quarter of 2012.

Director's Message

In this issue, we present detailed statistics on direct investment positions at historical cost (book value) and financial and income flows for U.S. direct investment abroad and for foreign direct investment in the United States. Summary statistics on services transactions between affiliates and their parent companies are also presented. All of these statistics complement the statistics presented in two international articles in the July 2012 Survey of Current Business.

Elsewhere in this issue, we continue to publish tables from the 2012 annual revision of the national income and product accounts (NIPAs), including updated statistics on government spending by function. In addition, we also published updated fixed assets accounts statistics, which now reflect the 2012 annual revision of the NIPAs. We also present the second estimate of gross domestic product for the second quarter and government receipts and expenditures statistics, also for the second quarter.

I'd also like to note that 6 months ago, we launched a blog to complement our efforts to keep the public informed about the statistics, research, and other information we regularly release. We hope readers will find these posts a reliable source of easy-to-understand information about the U.S. economy and will gain interesting perspectives from some of the statistics that will be featured. Since the blog launched in April, we have published more than 40 items. Recent topics include a look at Bureau of Economic Analysis (BEA) data regarding digitally enabled services and a look at BEA's new Web portal devoted to coastal state economies.

As always, we welcome any comments and suggestions.

J. Steven Landefeld
Director, Bureau of Economic Analysis

Taking Account...

BEA paper looks at RIMS II multipliers

In a recent paper, Zoë O. Ambargis, of the Bureau of Economic Analysis (BEA), and Rebecca Bess, formerly of BEA, discuss the proper use of the popular BEA regional input-output multipliers, known as RIMS II, providing helpful background information, practical tips, and examples.

The RIMS II multipliers are widely used in the public and private sectors to estimate the local impact of a change in economic activity.

These multipliers are constructed from a detailed set of industry accounts that measure the commodities produced by each industry and the use of these commodities by other industries and final users.

By incorporating information about inter-industry relationships, the RIMS II multipliers can estimate the impact of economic activity on particular industry sectors within a region. (However, input-output models do not account for price changes that may result from increased competition for scarce resources).

When using RIMS II, there are four measures of changes in total economic activity that can be estimated—gross output, value added, earnings, and employment.

In the public sector, federal government agencies use these multipliers to study the impact of government regulations. In addition, state transportation departments use the multipliers to estimate the regional impact of airport construction projects.

In the private sector, analysts and consultants use RIMS II to estimate the regional economic impact of a variety of projects, such as the development of shopping malls and sports stadiums.

The RIMS II multipliers have proven to be a cost-effective way for many analysts to estimate the economic impacts of changes in a regional economy.

However, it is important to keep in mind that like all economic impact models, RIMS II provides approximate estimates of economic impacts. RIMS II multipliers are best suited for estimating the impacts of small changes on a regional economy.

Users should also note that RIMS II multipliers are not the same as macroeconomic multipliers, also known as Keynesian multipliers, which are used to assess the effects of fiscal stimulus on gross national product. While the two sets of multipliers share some similarities, they were designed with different goals in mind.

Macroeconomic multipliers are based on behavioral assumptions related to how individuals adjust their labor supply, saving, and consumption decisions in response to an initial economic change that affects their income. The value of macroeconomic multipliers largely stems from the fact that they are constructed from empirical estimates of the interrelationships between related economy-wide measures of activity.

By contrast, one of the main advantages of RIMS II multipliers is that they can be used to estimate industry-specific changes in economic activity.

Examples of cases in which the RIMS II multipliers can be useful include the following:

- A refrigerated warehousing company that expands its facility.
- A local winery that has "gone green" by installing solar panels to generate its own electricity increases exports.
- A local alpaca apparel manufacturer that hires more workers and invests in new computers to meet an increase in demand for its products.
- A construction project funded by a federal grant to replace an existing school.
- An amusement park that experiences an increase in sales after installing a new roller coaster.
- A local tractor manufacturer that lays off 100 employees because of a decrease in demand for its tractors.

The paper is available on the BEA Web site at www.bea.gov.

For more information about the BEA RIMS II multipliers, including background, a detailed user handbook, and information about how to order the product directly online, please visit www.bea.gov/regional/rims.

GDP and the Economy

Second Estimates for the Second Quarter of 2012

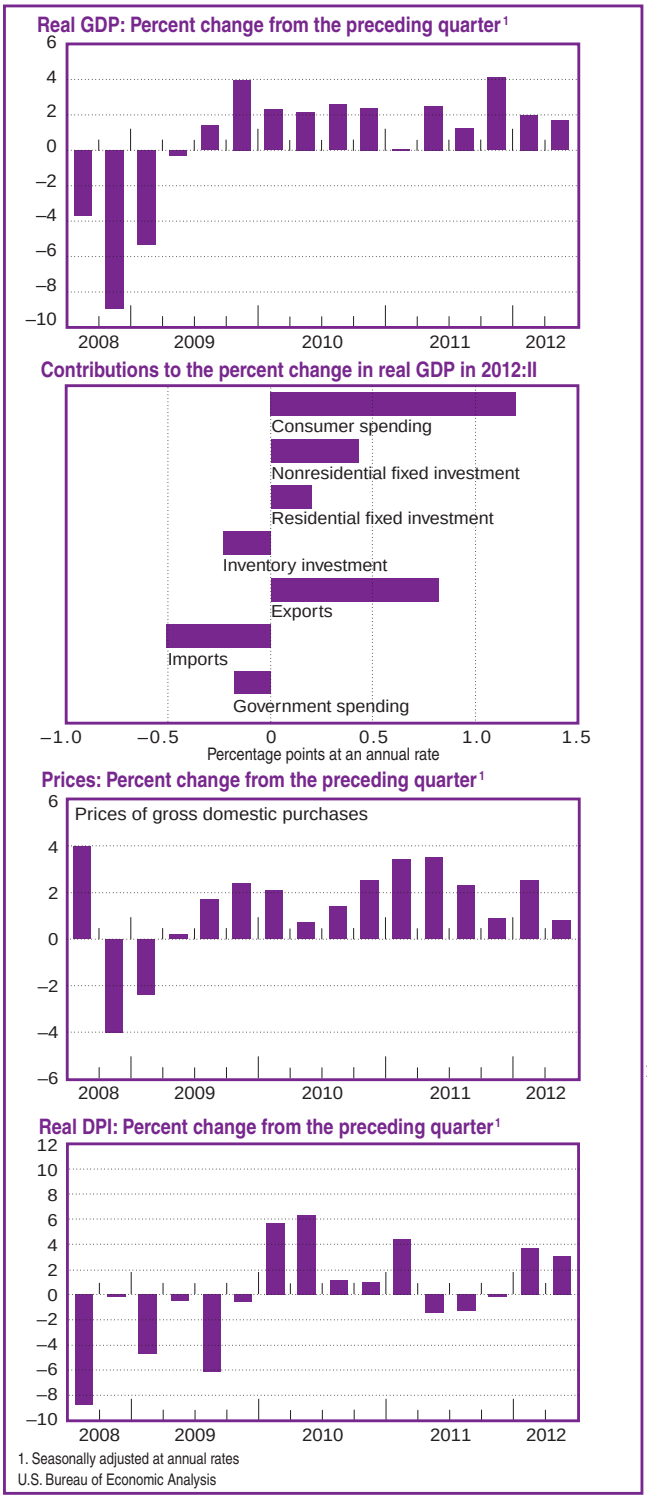
REAL GROSS domestic product (GDP) increased at an annual rate of 1.7 percent in the second quarter of 2012, according to the second estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).[1] The second estimate of real GDP growth was revised up 0.2 percentage point from the advance estimate, reflecting a downward revision to imports and upward revisions to consumer spending, to exports, and to state and local government spending that were partly offset by downward revisions to inventory investment and to nonresidential fixed investment.[2] In the first quarter, real GDP increased 2.0 percent.

- Prices of goods and services purchased by U.S. residents increased 0.8 percent in the second quarter, 0.1 percentage point more than in the advance estimate, after increasing 2.5 percent in the first quarter. Energy prices turned down in the second quarter, and food prices decelerated. Excluding food and energy, gross domestic purchases prices increased 1.4 percent in the second quarter after increasing 2.4 percent in the first quarter.
- Real disposable personal income (DPI) increased 3.1 percent in the second quarter, 0.1 percentage point less than in the advance estimate, after increasing 3.7 percent (revised) in the first quarter. In the second quarter, current-dollar DPI increased 3.8 percent after increasing 6.3 percent (revised) in the first quarter. The sharper deceleration in current-dollar DPI than in real DPI reflected a sharp deceleration in the personal consumption expenditures (PCE) implicit price deflator, which is used to deflate DPI. The second estimate of current-dollar DPI was revised down 0.2 percentage point; the revision was more than accounted for by a downward revision to personal income.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 4.0 percent in the second quarter, the same rate as in the advance estimate; in the first quarter, the rate was 3.6 percent.

1. "Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see "Revisions to GDP, GDI, and Their Major Components" in the July 2011 Survey of Current Business. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures" "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

Chart 1. GDP, Prices, Disposable Personal Income (DPI)



Christopher Swann prepared this article.

Real GDP Overview

Table 1. Real Gross Domestic Product and Components

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)					Contribution to percent change in real GDP (percentage points)

1. The estimates under the contribution columns are also percent changes.

NOTE. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

Table 2. Real Gross Domestic Product (GDP) and Related Measures

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)					Contribution to percent change in real GDP (percentage points)			
	2012	2011		2012			2011		2012	
	II	III	IV	I	II		III	IV	I	II
Gross domestic product [1]	**100.0**	**1.3**	**4.1**	**2.0**	**1.7**		**1.3**	**4.1**	**2.0**	**1.7**
Final sales of domestic product	99.6	2.3	1.5	2.4	2.0		2.35	1.56	2.35	1.97
Change in private inventories	0.4	.....	.....	.....	.....		–1.07	2.53	–0.39	–0.23
Goods	28.3	2.1	16.1	3.9	2.4		0.58	4.23	1.09	0.68
Services	64.7	0.5	–1.0	0.6	1.4		0.33	–0.62	0.38	0.91
Structures	7.0	5.5	7.2	7.4	2.1		0.37	0.49	0.50	0.15
Addenda:										
Motor vehicle output	2.8	1.5	24.0	30.9	6.6		0.03	0.55	0.72	0.18
GDP excluding motor vehicle output	97.2	1.3	3.6	1.3	1.6		1.25	3.54	1.23	1.55
Final sales of computers	0.4	31.5	31.1	4.5	–19.5		0.12	0.12	0.02	–0.09
GDP excluding final sales of computers	99.6	1.2	4.0	1.9	1.8		1.16	3.97	1.94	1.83
Gross domestic income (GDI) [2]	.....	–0.2	4.5	3.8	0.6		.....	.....	.....	.....

1. The estimates under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP. The third-quarter change reflect the incorporation of revised wage and salary estimates for the third quarter of 2011.

NOTE. For GDP and its components, percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

Consumer spending slowed in the second quarter, adding 1.20 percentage points to real GDP growth after adding 1.72 percentage points in the first quarter. Slowdowns in both durable and nondurable goods were partly offset by a pickup in services.

Nonresidential fixed investment slowed, contributing 0.43 percentage point to real GDP growth after contributing 0.74 percentage point. Structures decelerated, and equipment and software slowed somewhat (see page 4).

Residential fixed investment decelerated, adding 0.20 percentage point to real GDP growth after adding 0.43 percentage point (see page 4).

Inventory investment decreased less than in the first quarter, subtracting 0.23 percentage point from real GDP growth after subtracting 0.39 percentage point (see page 5).

Exports accelerated, contributing 0.82 percentage point to real GDP growth after contributing 0.60 percentage point. A pickup in goods exports was partly offset by a slowdown in services exports (see page 6).

Imports slowed slightly, subtracting 0.51 percentage point from real GDP growth after subtracting 0.54 percentage point. Services imports slowed, while goods imports picked up (see page 6).

Federal government spending decreased less than in the first quarter, subtracting 0.01 percentage point from real GDP growth after subtracting 0.34 percentage point (see page 7).

State and local government spending also decreased less, subtracting 0.17 percentage point from real GDP growth after subtracting 0.26 percentage point (see page 7).

Real final sales of domestic product, real GDP less inventory investment, slowed, increasing 2.0 percent after increasing 2.4 percent.

Motor vehicle output slowed sharply, adding 0.18 percentage point to real GDP growth after adding 0.72 percentage point.

Final sales of computers turned down, subtracting 0.09 percentage point from real GDP growth after adding 0.02 percentage point.

Real gross domestic income, which measures the output of the economy as the costs incurred and the incomes earned in the production of GDP, increased 0.6 percent after increasing 3.8 percent.

Consumer Spending

Table 3. Real Personal Consumption Expenditures (PCE)

[Seasonally adjusted at annual rates]

	Share of current-dollar PCE (percent)	Change from preceding period (percent)					Contribution to percent change in real PCE (percentage points)			
	2012	2011		2012			2011		2012	
	II	III	IV	I	II		III	IV	I	II

Financial services and insurance	7.6	4.5	–2.0	3.8	2.6		0.33	–0.15	0.28	0.19
Other services	8.9	–0.9	3.0	1.1	–0.2		–0.08	0.26	0.10	–0.01
Final consumption expenditures of NPISHs [2]	2.7	18.2	–4.9	–1.2	3.0		0.46	–0.14	–0.03	0.08
Gross output of NPISHs [3]	10.9	0.9	3.1	4.1	2.1		0.10	0.34	0.44	0.23
Less: Receipts from sales of goods and services by NPISHs [4]	8.3	–4.4	6.0	5.9	1.9		–0.36	0.47	0.47	0.15

1. The estimates under the contribution columns are also percent changes.
2. Net of expenses, or gross operating expenses less primary sales to households.
3. Net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
4. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

NOTE. Percent changes are from NIPA table 2.3.1, and contributions, from NIPA table 2.3.2; shares are calculated from NIPA table 2.3.5.

NPISHs Nonprofit institutions serving households

Consumer spending slowed in the second quarter, reflecting a deceleration in spending for goods, especially for durable goods, that was partly offset by a pickup in spending for services.

Spending for durable goods slowed, reflecting downturns in spending for motor vehicles and parts and for furnishings and durable household equipment and a slowdown in recreational goods and vehicles.

Spending for nondurable goods also slowed, mainly reflecting a downturn in spending for clothing and footwear and a slowdown in spending for "other" nondurable goods that were partly offset by an upturn in spending for gasoline and other energy goods.

Spending for services accelerated, mainly reflecting an upturn in spending for housing and utilities, especially for electricity and gas, that was partly offset by decelerations in spending for health care and for food services and accommodations.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
3. Excludes software "embedded," or bundled, in computers and other equipment.
4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

Note. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

Private fixed investment decelerated in the second quarter, reflecting decelerations in both nonresidential fixed investment and residential fixed investment.

The deceleration in nonresidential fixed investment reflected decelerations in structures and in equipment and software.

The deceleration in structures mainly reflected a downturn in power and communication that was partly offset by an upturn in manufacturing.

The deceleration in equipment and software reflected a downturn in information processing equipment and software and decelerations in "other" equipment and in transportation equipment that were partly offset by an upturn in industrial equipment.

The slowdown in residential fixed investment reflected a downturn in "other" structures and a slowdown in single-family structures that were partly offset by a pickup in multifamily structures. Within "other" structures, a downturn in improvements was partly offset by an acceleration in brokers' commissions.

Food and beverage stores	2.0	1.6	0.9	2.4	–0.4	–0.4	–0.7	1.5	–2.8
General merchandise stores	–1.5	–0.7	2.5	–1.0	2.3	0.8	3.2	–3.5	3.3
Other retail stores	–0.2	–1.6	–2.2	0.8	6.5	–1.4	–0.6	3.0	5.7
Other industries	0.3	–1.5	1.7	–5.7	11.7	–1.8	3.2	–7.4	17.4
Residual [2]	–3.3	–5.8	1.3	–7.1	–11.0	.....	.....	.....	.....
Addenda: Ratios of private inventories to final sales of domestic business: [3]									
Private inventories to final sales	2.34	2.32	2.32	2.32	2.32	.....	.....	.....	.....
Nonfarm inventories to final sales	2.14	2.12	2.13	2.13	2.13	.....	.....	.....	.....
Nonfarm inventories to final sales of goods and structures	3.99	3.94	3.92	3.90	3.90	.....	.....	.....	.....

1. The levels are from NIPA table 5.6.6B.
2. The residual is the difference between the first line and the sum of the most detailed lines.
3. The ratios are from NIPA table 5.7.6B.

NOTE. The chained-dollar series are calculated as the period-to-period change in end-of-period inventories. Quarterly changes are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, chained-dollar estimates are usually not additive.

Real inventory investment decreased $7.0 billion in the second quarter after decreasing $13.6 billion in the first quarter. The smaller decrease primarily reflected an upturn in "other" industries and smaller decreases in manufacturing industries and in wholesale trade that were partly offset by a downturn in mining, utilities, and construction and a slowdown in retail trade.

The smaller decrease in inventory investment in manufacturing industries primarily reflected an upturn in durable-goods industries.

The smaller decrease in inventory investment in wholesale trade industries reflected a smaller decrease in nondurable-goods industries that was partly offset by a slowdown in durable-goods industries.

The slowdown in inventory investment in retail trade mainly reflected a sharp deceleration in motor vehicle and parts dealers and a downturn in food and beverage stores.

Inventory Investment

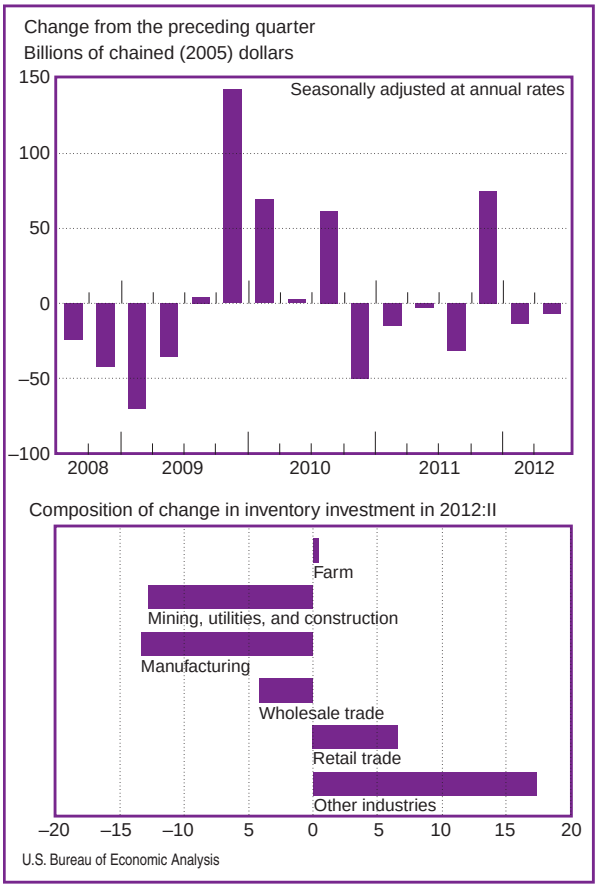
The change in real private inventories, often called real private inventory investment, represents the change in the physical stock of goods held by businesses. It includes finished goods, goods at various stages of production, and raw materials.

The change in private inventories is a key component of gross domestic product (GDP), which aims to measure output derived from current production. To include the value of currently produced goods that are not yet sold and to exclude the value of goods produced in previous periods, the change in private inventories must be included in the GDP calculation.

Thus, GDP can also be seen as the sum of final sales of domestic product and the change in private inventories (see table 2).

For most industries, the estimates of change in private inventories are prepared by revaluing book-value estimates of inventories from the Census Bureau to a replacement-cost basis and calculating the change over a quarter or a year. BEA provides estimates for incomplete industry data.

Chart 4. Real Private Inventory Investment



Exports and Imports

Table 6. Real Exports and Imports of Goods and Services

[Seasonally adjusted at annual rates]

	Share of current-dollar exports and imports (percent)	Change from preceding period (percent)					Contribution to percent change in real exports and imports (percentage points)

Imports of services [2]	**16.5**	**13.8**	**–1.7**	**9.0**	**4.6**		**2.15**	**–0.27**	**1.41**	**0.75**
Addenda:										
Exports of agricultural goods [3]	6.7	–13.7	11.8	–2.5	27.0		.....	.....	.....	.....
Exports of nonagricultural goods	64.1	8.4	5.4	4.7	5.5		.....	.....	.....	.....
Imports of nonpetroleum goods	67.4	4.4	7.2	9.2	3.9		.....	.....	.....	.....

1. The estimates under the contribution columns are also percent changes.
2. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.
3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

NOTE. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

Exports of goods and services accelerated in the second quarter, reflecting an acceleration in exports of goods that was partly offset by a deceleration in exports of services.

The acceleration in exports of goods reflected upturns in industrial supplies and materials, in foods, feeds, and beverages, and in nonautomotive consumer goods. In contrast, nonautomotive capital goods turned down, mainly reflecting a downturn in civilian aircraft, engines, and parts. Both "other" exports of goods and automotive vehicles, engines, and parts decelerated.

The deceleration in exports of services mainly reflected a slowdown in travel and a downturn in passenger fares.

Imports of goods and services slowed slightly, reflecting a slowdown in imports of services that was partly offset by a pickup in imports of goods.

The pickup in imports of goods primarily reflected a smaller decrease in petroleum and products and an upturn in nonautomotive consumer goods that were partly offset by a slowdown in automotive vehicles, engines, and parts, by downturns in nonpetroleum industrial supplies and materials and in "other" imports of goods, and by a slowdown in nonautomotive capital goods.

The slowdown in imports of services mainly reflected decelerations in travel and in passenger fares and a downturn in "other" transportation that were partly offset by a pickup in "other" private services.

Gross investment	10.3	–3.5	–0.4	–9.8	–2.9	–0.37	–0.04	–1.06	–0.31

1. The estimates under the contribution columns are also percent changes.

NOTE. Percent changes are from NIPA table 3.9.1, contributions from NIPA table 3.9.2, and shares are calculated from NIPA table 3.9.5.

Government spending decreased less in the second quarter than in the first quarter, reflecting smaller decreases in both federal government spending and state and local government spending.

The smaller decrease in federal government spending reflected a smaller decrease in national defense spending that was partly offset by a downturn in nondefense spending. Within defense spending, gross investment turned up, mainly reflecting an upturn in spending for equipment and software, and consumption expenditures decreased less than in the first quarter. Within nondefense spending, a slowdown in consumption expenditures was partly offset by a smaller decrease in gross investment.

The smaller decrease in state and local government spending reflected a smaller decrease in gross investment, especially in structures, that was partly offset by a larger decrease in consumption expenditures.

Government Spending

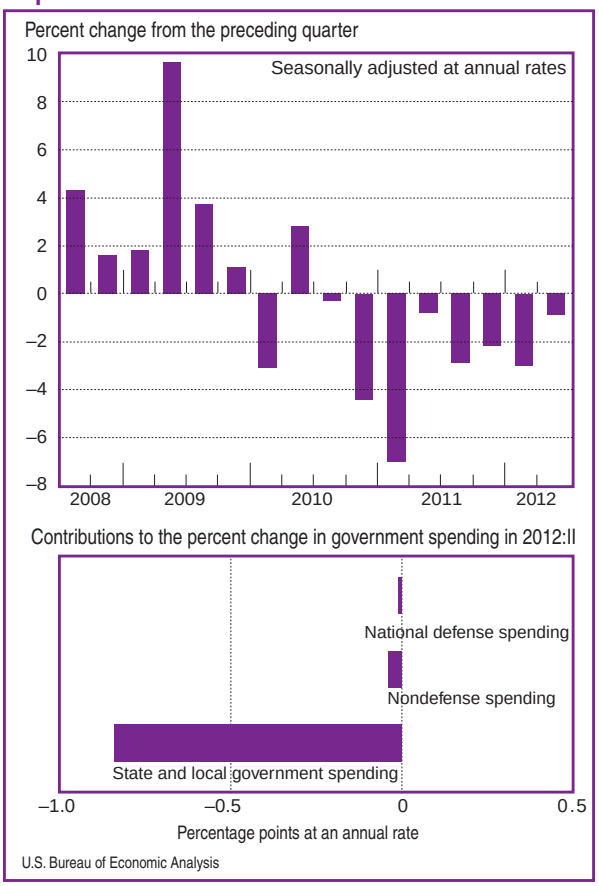
"Government consumption expenditures and gross investment," or "government spending," consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government's gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital (which represents a partial measure of the services provided by government-owned fixed capital).

Gross investment consists of new and used structures (such as highways and dams) and of equipment and software purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

Chart 6. Real Government Consumption Expenditures and Gross Investment



Prices

Energy goods and services	4.7	–5.0	8.1	–13.5	.....	.....	.....	.....
Excluding food and energy	1.9	1.3	2.2	1.8	.....	.....	.....	.....
Gross domestic product (GDP)	3.0	0.4	2.0	1.6	.....	.....	.....	.....
Exports	1.7	–3.8	2.8	0.6	.....	.....	.....	.....
Imports	–1.9	0.0	5.6	–3.9	.....	.....	.....	.....

1. The estimates under the contribution columns are also percent changes

NOTE. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions are from NIPA table 1.6.8. GDP, export, and import prices are from NIPA table1.1.7.

Prices of goods and services purchased by U.S. residents as measured by the price index for gross domestic purchases slowed in the second quarter, primarily reflecting decelerations in consumer prices and in prices paid by government.

Consumer prices decelerated sharply, mainly reflecting a downturn in nondurable goods, especially in the prices paid for gasoline and other energy goods.

Prices paid for nonresidential fixed investment slowed, reflecting a deceleration in prices paid for equipment and software, especially transportation equipment prices.

Prices paid for residential investment turned up, increasing 0.9 percent after decreasing 1.4 percent.

Prices paid by the federal government slowed, mainly reflecting a slowdown in prices paid for national defense consumption expenditures, mainly for petroleum and military compensation.

Prices paid by state and local governments slowed, primarily reflecting a downturn in prices paid for consumption expenditures, mainly for petroleum.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, slowed somewhat.

The GDP price index increased 1.6 percent, 0.8 percentage point more than the increase in the price index for gross domestic purchases, reflecting a decrease in import prices (3.9 percent), in contrast to an increase in export prices (0.6 percent).

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between imports prices (included in the gross domestic purchases index) and exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the dollar depreciation FAQ Answer ID 498 on BEA's Web site.

1. The estimates under the contribution columns are also percent changes.

The second estimate of the second-quarter increase in real GDP was 0.2 percentage point more than in the advance estimate. The average revision (without regard to sign) between the advance estimate and the second estimate is 0.5 percentage point.

Consumer spending was revised up, reflecting an upward revision to services that was partly offset by a downward revision to goods. Within services, the largest contributor to the revision was an upward revision to electricity and gas. Within goods, the downward revision was more than accounted for by a downward revision to motor vehicle fuels, lubricants, and fluids.

Nonresidential fixed investment was revised down; the revision was mainly accounted for by downward revisions to computers and peripheral equipment and to "other" information processing equipment.

Inventory investment was revised down, primarily reflecting downward revisions to wholesale trade inventories and to mining, utilities, and construction inventories that were partly offset by an upward revision to retail trade inventories (especially motor vehicle dealers' inventories).

Exports was revised up; the revision was more than accounted for by an upward revision to goods, especially nonautomotive consumer goods.

Imports was revised down; the revision was primarily to goods and was widespread.

State and local government spending was revised up; the revision was more than accounted for by gross investment, primarily in structures.

Personal Income for the First Quarter of 2012

With the release of the second estimates of GDP, BEA also releases revised estimates of various income-related measures for the previous quarter. This revision reflects the incorporation of 50-state first-quarter tabulations from the quarterly census of employment and wages from the Bureau of Labor Statistics; last month, BEA incorporated tabulations from a 19-state sample.

Wage and salary disbursements increased $133.5 billion, an upward revision of $10.2 billion. Personal current taxes increased $31.7 billion, an upward revision of $1.7 billion. Contributions for government social insurance, which is subtracted in calculating personal income, increased $19.8 billion, an upward revision of $1.1 billion.

As a result of these revisions,

- Personal income increased $209.7 billion, an upward revision of $9.8 billion.
- Disposable personal income increased $178.1 billion, an upward revision of $8.2 billion.
- Personal saving increased $35.0 billion, an upward revision of $8.2 billion.
- The personal saving rate was 3.6 percent, the same as the previously published rate.

Source Data for the Second Estimates

Personal consumption expenditures: retail sales for April, May (revised) and June (new). Motor vehicle registrations for June (new). Energy Information Administration data for motor vehicle fuels, lubricants, and fluids, and for gas services and retail electricity sales for May (new).

Nonresidential fixed investment: construction spending (value put in place) for April and May (revised) and June (new). Manufacturers' shipments (M3) of machinery and equipment for May and June (revised). Exports and imports for April and May (revised) and June (new).

Residential fixed investment: construction spending for April and May (revised) and June (new).

Change in private inventories: manufacturers' inventories for April, May, and June (revised) and trade inventories for April and May (revised) and June (new).

Exports and imports: international transactions accounts for April and May (revised) and June (new).

Government consumption expenditures and gross investment: state and local construction spending for April and May (revised) and June (new).

IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

Profits from current production increased $10.4 billion, or 0.5 percent at a quarterly rate, in the second quarter after decreasing $53.0 billion, or 2.7 percent, in the first quarter.

Domestic profits of financial corporations decreased $39.2 billion, or 9.1 percent, after decreasing $12.3 billion, or 2.8 percent.

Domestic profits of nonfinancial corporations increased $30.4 billion, or 2.8 percent, after increasing $7.3 billion, or 0.7 percent.

Profits from the rest of the world increased $19.2 billion, or 4.8 percent, after decreasing $48.0 billion, or 10.7 percent. In the second quarter, receipts increased $6.2 billion, and payments decreased $13.1 billion.

Taxes on corporate income decreased $5.4 billion, or 1.2 percent, after increasing $83.2 billion, or 22.5 percent. About $43 billion of the first-quarter increase in taxes reflected the effect of the expiration of "bonus depreciation" in 2011.

Undistributed corporate profits, a measure of net saving that equals after-tax profits less dividends, decreased $5.2 billion, or 0.7 percent, after decreasing $145.5 billion, or 16.8 percent.

Net cash flow from current production, a profits-related measure of internal funds available for investment, decreased $11.3 billion, or 0.6 percent, after decreasing $169.8 billion, or 8.5 percent.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Census Bureau Quarterly Financial Reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

Government Receipts and Expenditures

Second Quarter of 2012

NET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was –$1,207.1 billion in the second quarter of 2012, decreasing $20.7 billion from –$1,186.4 billion in the first quarter of 2012.

Net federal government saving was –$1,094.5 billion in the second quarter, decreasing $35.8 billion from –$1,058.7 billion in the first quarter (see page 12). Current receipts decelerated and current expenditures accelerated in the second quarter.

Net state and local government saving was –$112.7 billion in the second quarter, increasing $14.9 billion from –$127.6 billion in the first quarter (see page 13). Current receipts accelerated and current expenditures decelerated in the second quarter.

Net borrowing was $1,338.8 billion in the second quarter, decreasing $0.3 billion from $1,339.1 billion in the first quarter. Federal government net borrowing was $1,191.3 billion in the second quarter, increasing $18.8 billion from $1,172.5 billion in the first quarter. State and local government net borrowing was $147.6 billion, decreasing $19.0 billion from $166.6 billion in the first quarter

"Net lending or net borrowing (–)" is an alternative measure of the government fiscal position. Net borrowing is the financing requirement of the government sector, and it is derived as net government saving plus the consumption of fixed capital and net capital transfers received less gross investment and net purchases of nonproduced assets.

Net lending or net borrowing (–)	**–1,191.3**	**88.2**	**28.9**	**182.6**	**–18.8**

Personal current taxes decelerated, reflecting a deceleration in withheld income taxes.

Taxes on corporate income turned down. First-quarter corporate profits had been boosted by the expiration at the end of 2011 of the 100 percent bonus depreciation deduction for qualified business investment.

Contributions for government social insurance decelerated because of a deceleration in social security contributions. First-quarter social security contributions had been boosted as a result of an increase in the maximum taxable wage base.

Government social benefits to persons turned down in the second quarter as a result of a deceleration in social security, veterans pensions, and supplemental security income following the first-quarter cost-of-living adjustment. Unemployment benefits decreased more as fewer people qualified for extended benefits and as fewer people claimed emergency benefits.

Grants-in-aid to state and local governments turned up, reflecting an upturn in Medicaid grants and a smaller decrease in education grants.

Interest payments turned up because of an upturn in inflation expense payments on Treasury Inflation-Protected Securities.

Capital transfer payments decreased less, reflecting the pattern of capital injected into Fannie Mae and Freddie Mac. The second-quarter capital injections decreased approximately $18.8 billion at an annual rate; about $19 million ($76 million at an annual rate) was provided to Freddie Mac in the second quarter.

Federal Government Estimates

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa_underlying/Index.asp.

Each year, BEA translates the information in the federal budget into a NIPA framework.[1] For a historical time series of these estimates, see NIPA table 3.18B, which was published in the October 2011 Survey.

1. See Mark S. Ludwick and Stan J. Bellotti, "NIPA Translation of the Fiscal Year 2013 Federal Budget," Survey of Current Business 92 (March 2012): 11–21.

Subsidies	0.5	0.0	0.0	0.1	0.0
Less: Wage accruals less disbursements	0.0	0.0	0.0	0.0	0.0
Net state and local government saving	**–112.7**	**–43.4**	**1.5**	**–11.1**	**14.9**
Social insurance funds	2.3	–0.1	–0.1	–0.2	–0.2
Other	–115.0	–43.4	1.7	–10.9	15.1
Addenda:					
Total receipts	**2,145.6**	**–51.6**	**–3.5**	**4.4**	**26.6**
Current receipts	2,075.4	–52.8	–4.7	9.9	25.0
Capital transfer receipts	70.1	1.2	1.2	–5.6	1.6
Total expenditures	**2,293.1**	**–11.9**	**–6.1**	**12.7**	**7.5**
Current expenditures	2,188.1	–9.4	–6.2	21.1	10.0
Gross government investment	315.7	0.6	3.0	–5.8	0.2
Capital transfer payments					
Net purchases of nonproduced assets	11.0	0.0	–0.1	–0.2	–0.2
Less: Consumption of fixed capital	221.7	3.1	2.9	2.4	2.5
Net lending or net borrowing (–)	**–147.6**	**–39.7**	**2.6**	**–8.3**	**19.0**

Personal current taxes accelerated in the second quarter because of an acceleration in personal income taxes.

Taxes on production and imports decelerated as a result of decelerations in both sales and severance taxes.

Federal grants-in-aid turned up in the second quarter because of upturns in both Medicaid grants and public order and safety grants and a smaller decrease in education grants.

Consumption expenditures turned down in the second quarter, reflecting a deceleration in compensation of general government employees and a downturn in expenditures for nondurable goods.

Government social benefits accelerated in the second quarter as a result of an acceleration in Medicaid benefits.

Capital transfer receipts turned up, reflecting an upturn in transportation grants driven by an upturn in highway grants.

Gross government investment turned up in the second quarter because of a smaller decrease in spending for structures.

Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa_underlying/Index.asp. For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.[1] These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); they were published in the October 2011 SURVEY.

1. Bruce E. Baker, "Receipts and Expenditures of State Governments and of Local Governments," SURVEY 85 (October 2005): 5–10.

Newly Available NIPA Tables

This report continues the presentation of the 2012 annual revision of the national income and product accounts (NIPAs), which began in the August 2012 issue of the Survey of Current Business. The current issue presents NIPA tables 3.15.1–3.15.6, 3.16, 3.17, and 7.15.

The August 2012 Survey includes an article that summarizes the results of the annual revision followed by the presentation of most of the NIPA tables. It also includes historical estimates in "GDP and Other Major NIPA Series, 1929–2012:II."

Some tables from the annual revision will be published in future issues of the Survey. Tables 3.18B and 3.19–3.23 are scheduled for publication in the October 2012 issue, and tables 2.9 and 7.20 are scheduled for publication in the November 2012 issue.

The NIPA tables published in the August issue and those that appear in this issue are available as interactive tables on BEA's Web site at www.bea.gov by clicking on "Interactive Data."

NOTE. Government consumption expenditures and gross investment is net of sales to other sectors. Thus, growth in the prices or quantities of sales to other sectors may partially, exactly, or more than offset the growth in the prices or quantities of gross consumption expenditures and gross investment.

The residual line is the difference between the first line and the sum of the most detailed lines.

1. Equals federal government current expenditures less grants-in-aid to state and local governments plus state and local government current expenditures. Federal grants-in-aid to state and local governments by function are shown in NIPA table 3.17.

2. Equals unallocable state and local government expenditures, less "wage accruals less disbursements" shown in NIPA table 3.1.

3. Consists of state and local government publicly owned liquor store systems, government-administered lotteries and parimutuels, and other commercial activities.

4. Consists of social insurance funds, including old age, survivors, and disability insurance (social security), and railroad retirement. Excludes government employee retirement plans.

5. Less "wage accruals less disbursements" as shown in NIPA table 3.2.

6. Equals unallocable state and local government expenditures less "wage accruals less disbursements" shown in NIPA table 3.3.

7. Consists of current expenditures for sanitation. Beginning with 2007, includes housing subsidies related to Hurricanes Katrina and Rita.

1. Equals consumption expenditures, government social benefits, interest payments, subsidies, less "wage accruals less disbursements;" for federal government, also includes grants-in-aid to state and local governments and other current transfer payments to the rest of the world (net). Government, federal government, and state and local government current expenditures are shown separately in NIPA tables 3.1, 3.2, and 3.3.

2. Federal grants-in-aid to state and local governments are included in federal current expenditures; because the grants are transactions between levels of government, they are eliminated in the consolidation of the government sector.

3. For more information about capital transfers, see NIPA table 5.10.

4. Federal investment grants to state and local governments are excluded in the consolidation of the federal and state and local sectors.

5. Includes federal investment grants to state and local governments.

6. Consists of disaster-related benefits payments by state-owned insurance entities.

USDA U.S. Department of Agriculture

Fixed Assets and Consumer Durable Goods for 2008–2011

The Bureau of Economic Analysis (BEA) produces statistics on fixed assets and consumer durable goods as part of its efforts to measure the wealth of the nation. Fixed assets are produced assets that are used repeatedly, or continuously, in processes of production for more than a year; consumer durable goods are tangible commodities purchased by consumers that can be used repeatedly and continuously over a period of 3 or more years.

New statistics on fixed assets and consumer durable goods for 2011, revised statistics for 2009 and 2010, and previously published statistics for 2008 are presented in this report. The statistics for 2009–2011 incorporate the results of the 2012 annual revision of the national income and product accounts, which was released on July 27, 2012.[1] These statistics cover (1) the net stock of equipment and software and of structures owned by business and by government and (2) the net stock of durable goods owned by consumers. The statistics are presented in current dollars and in chain-type quantity indexes, in tables 1–7. In addition, table 1 presents the statistics in chained (2005) dollars.

The statistics are available interactively by industry and by asset type on BEA's Web site at www.bea.gov. The statistics on net stock, depreciation (consumption of fixed capital), and the average age of net stocks for 1925–2011 and on fixed investment for 1901–2011 are also available on the Web site.

Marlyn Rodriguez prepared this report. Robert J. Kornfeld supervised the preparation of the statistics on private fixed assets and consumer durable goods. Jennifer A. Bennett supervised the preparation of the statistics on government fixed assets. Mark Bailey, Michael T. Cusick, Michael D. Glenn, Mark A. Ledbetter, Christopher B. Mbu, and Nadia F.P. Sadée prepared the statistics.

1. See Eugene P. Seskin and Alyssa E. Holdren, "Annual Revision of the National Income and Product Accounts," Survey of Current Business 92 (August 2012): 6–31. For the methods used to derive these estimates, see *Fixed Assets and Consumer Durable Goods, 1925–97* on BEA's Web site at www.bea.gov; see also "Fixed Assets and Consumer Durable Goods for 1997–2010," Survey 91 (September 2011): 27–40.

1. These estimates are from fixed assets accounts table 1.1.
2. These estimates are from fixed assets accounts table 1.2.
3. These estimates are from fixed assets accounts table 9.1. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Tables 2–7 follow.

1. These estimates are from fixed assets accounts table 2.1.
2. These estimates are from fixed assets accounts table 2.2.
3. Excludes software "embedded" or bundled in computers and other equipment.
4. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.
5. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.
6. Consists primarily of railroads.
7. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.
8. Consists primarily of dormitories and of fraternity and sorority houses.
n.e.c. Not elsewhere classified

Table 3. Net Stock of Private Fixed Assets by Industry in Current Dollars and in Chain-Type Quantity Indexes

3. Consists of furniture, clocks, lamps, lighting fixtures, and other household decorative items, carpets and other floor coverings, and window coverings.
4. Consists of major household appliances and small electric household appliances, except built-in appliances, which are classified as part of residential structures.
5. Consists of dishes, flatware, and nonelectric cookware and tableware.
6. Consists of motorcycles, bicycles and accessories, and pleasure boats, aircraft, and other recreational vehicles.

Direct Investment for 2009–2011

Detailed Historical-Cost Positions and Related Financial and Income Flows

By Jeffrey H. Lowe

THIS article presents detailed statistics on direct investment positions at historical cost (book value) and related financial and income flows for U.S. direct investment abroad—or "outward direct investment"—and for foreign direct investment in the United States—or "inward direct investment." Summary statistics on services transactions with foreign affiliates and foreign parent companies are also presented.[1] (For definitions, see the box "Key Terms.") These statistics complement the statistics presented in two articles in the July 2012 SURVEY OF CURRENT BUSINESS by providing more detail by country, industry, and account.[2] For 2009–11, the statistics reflect the incorporation of new or revised data from BEA's quarterly surveys of transactions between parents (both U.S. and foreign) and their affiliates, and annual surveys of financial and operating data of U.S. parent companies and their foreign affiliates and of U.S. affiliates of foreign companies.

The statistics in this article differ from some of the counterpart statistics in the international investment position and international transactions accounts.[3]

- These statistics are presented at historical cost, which is the only valuation method for which detailed statistics by country and industry are available. In contrast, the aggregate statistics on the direct investment position in the international investment position accounts are presented at current cost and at market value.
- These statistics are presented without a current-cost adjustment. In contrast, the statistics on direct investment income (in the current account) and direct investment financial flows (in the financial account) in the U.S. international transactions accounts are presented with a current-cost adjustment.

1. Global totals (all countries and all industries) for royalties and license fees and other private services are shown in table 2 (for U.S. direct investment abroad, see page 33 and for foreign direct investment in the United States, see page 68). Breakdowns by country and by industry are not included in this presentation. Country detail and detail by type of service or intangible asset will be available in the October SURVEY OF CURRENT BUSINESS article on U.S. international services.

2. See Kevin B. Barefoot and Marilyn Ibarra-Caton, "Direct Investment Positions for 2011: Country and Industry Detail," SURVEY 92 (July 2012): 19–34 and Jeffrey R. Bogen and Jessica M. Hanson, "Annual Revision of the U.S. International Transactions Accounts," SURVEY 92 (July 2012): 35–46.

3. See Elena L. Nguyen, "The International Investment Position of the United States at Yearend 2011," SURVEY 92 (July 2012): 9–18 and Sarah P. Scott, "U.S. International Transactions: First Quarter of 2012," SURVEY 92 (July 2012): 50–97.

Direct Investment Tables

Following this article, two sets of tables are presented—one set for outward direct investment (tables 1–16) and one set for inward direct investment (tables 1–17). In each set, tables 1–15 present similar data.

- Table 1 shows the direct investment positions and rates of return at historical cost, current cost, and market value.
- Table 2 presents the positions and related financial, income, and services flows for 2000–2011 at historical cost and as they are presented in the international investment position accounts and international transactions accounts.
- Tables 3–16 present direct investment positions and international transactions by country of foreign affiliate or foreign parent, by industry of affiliate, and by account. For outward direct investment, table 16 presents statistics that are classified not only by industry of affiliate but also by industry of U.S. parent. For inward direct investment, table 16 presents statistics that are classified not only by country of foreign parent but also by country of ultimate beneficial owner (UBO).
- Table 17 (for inward direct investment) provides a breakdown of the foreign direct investment position in the United States by industry of the UBO of the U.S. affiliate. It shows the value of investments owned by private entities (businesses and individuals, estates, and trusts) and the value owned by foreign governments and government-related entities.

Revisions

Outward direct investment

The revised statistics on the U.S. direct investment position abroad at yearend, financial flows, and income reflect the incorporation of revised data from quarterly surveys of transactions between U.S. parents and their foreign affiliates and information from annual surveys of financial and operating data of foreign affiliates.

As noted in the July 2012 SURVEY article on direct investment positions, the total outward direct investment position at historical cost for all areas was revised down $28.4 billion for 2009 and $117.3 billion for 2010 (table A). The downward revision for 2009 resulted from similar-size downward revisions to financial outflows without current-cost adjustment and to valuation adjustments.[4] The downward revision for 2010 resulted from a sizable downward revision to 2010 valuation adjustments, the downward revision to the position for 2009, and a downward revision to 2010 financial outflows.

Financial outflows without current-cost adjustment were revised down $15.7 billion for 2009 and $24.5 billion for 2010, and they were revised up $12.8 billion for 2011. For 2009, the revision resulted from downward revisions to reinvested earnings and to equity investment. For 2010, almost half of the downward revision was accounted for by a downward

4. Financial flows without current-cost adjustment consist of reinvested earnings without current-cost adjustment and equity and intercompany debt investment. Financial outflows increase the U.S. direct investment position abroad and financial inflows reduce the position.

Data Availability

Detailed statistics on the outward direct investment position and related financial and income flows for 1982–2011 and detailed statistics on the inward direct investment position and related financial and income flows for 1980–2011 are available on BEA's Web site at www.bea.gov under "International" and "Direct Investment and Multinational Companies."

1. The only accounts for which 2011 statistics were previously available by country were financial outflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct investment positions for 2011 are preliminary and were first published in the July 2012 SURVEY OF CURRENT BUSINESS.

revision to intercompany debt investment; the remainder was almost equally divided between equity investment and reinvested earnings. For 2011, the upward revision was more than accounted for by an upward revision to intercompany debt investment that was partly offset by a downward revision to equity investment.

Income without current-cost adjustment was revised up for all 3 years—albeit only slightly for 2009, up $13 million. It was revised up $11.0 billion for 2010 and $2.7 billion for 2011. In all 3 years, the revisions resulted from upward revisions to earnings; interest receipts were revised down in 2009 and 2010 and revised up only slightly in 2011.

Inward direct investment

The revised statistics on the foreign direct investment position in the United States at yearend, financial flows, and income reflect the incorporation of revised data from the quarterly surveys of transactions between U.S. affiliates and their foreign parents and information from annual surveys of financial and operating data of U.S. affiliates.

As noted in the July 2012 Survey article on direct investment positions, the total inward direct investment position at historical cost for all areas was revised down $45.1 billion for 2009, and down $78.4 billion for 2010 (table B). For 2009, the downward revision was mainly attributable to a downward revision to valuation adjustments and, to a lesser extent, a downward revision to financial inflows.[5] For 2010, the downward revision was the result of the downward revision to the 2009 position, a downward revision to financial inflows for 2010, and a much smaller downward revision to valuation adjustments for 2010.

Financial inflows without current-cost adjustment were revised down $9.3 billion for 2009 and $30.3 billion for 2010, and they were revised up $7.0 billion for 2011. For 2009, the downward revision resulted from

5. Financial inflows increase the foreign direct investment position in the United States and financial outflows reduce the position.

Table B. Foreign Direct Investment in the United States: Comparison of Previously Published and Revised Estimates by Area, 2009–2011

1. The only accounts for which 2011 statistics were previously available by country were financial inflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct investment positions for 2011 are preliminary and were first published in the July 2012 Survey of Current Business.

downward revisions to both intercompany debt investment and equity investment that were partly offset by an upward revision to reinvested earnings. For 2010, the downward revision reflected downward revisions to reinvested earnings and intercompany debt investment that were partly offset by an upward revision to equity investment. For 2011, the upward revision was more than accounted for by an upward revision to equity investment; intercompany debt investment was also revised up, but to a much lesser extent.

Income without current-cost adjustment was revised up $9.7 billion for 2009 and it was revised down $5.2 billion for 2010 and $1.1 billion for 2011. For 2009 and 2010, the revisions were almost entirely attributable to revisions to affiliates' earnings. For 2011, the downward revision mostly reflected a downward revision to interest payments.

Acknowledgments

The statistics on the U.S. direct investment position abroad and related financial and income flows are based largely on data from BEA's quarterly surveys of transactions between U.S. parent companies and their foreign affiliates. The surveys were conducted under the supervision of Mark W. New, who was assisted by Iris Branscome, David L. Grayton, Marie K. Laddomada, Sherry Lee, Louis C. Luu, Leila C. Morrison, Elizabeth A. Ocalan, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo and Kevin R. Smith.

The statistics on the foreign direct investment position in the United States and related financial and income flows are based largely on data from BEA's quarterly survey of transactions between U.S. affiliates of foreign companies and their foreign parents. The survey was conducted under the supervision of Jessica M. Hanson, who was assisted by Eric A. Bryda, Peter J. Fox, Edward J. Kozerka, Susan M. LaPorte, Robert L. Rosholt, and Helen P. Yiu. Computer programming for data estimation and tabulation was provided by Karen E. Poffel and Paula D. Brown.

The statistics on royalties and license fees and other private services (shown in table 2) are based largely on data from BEA's quarterly surveys of transactions in selected services and intangible assets with foreign persons. The surveys were conducted under the supervision of Christopher J. Emond, who was assisted by Pamela Aiken, Suhail Ally, Felix Anderson, Stacey Ansell, Damon C. Battaglia, Annette Boyd, Faith M. Brannam, Jamela Des Vignes, Hope R. Jones, Eddie L. Key, Kiesha Middleton, Steven J. Muno, Mark Samuel, and Clifton Tillman. Computer programming for data estimation and tabulation was provided by Tracy Leigh. Jeffrey Bogen, Lori Chang, Anne Flatness, C. Omar Kebbeh, John Sondheimer, and Gregory Tenentes were also involved in the preparation of the estimates.

Key Terms—Continues

For a more detailed discussion of the terms in this box, see the methodologies in *Foreign Direct Investment in the United States: Final Results From the 2007 Benchmark Survey* and *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey.* These methodologies are available on BEA's Web site at www.bea.gov. Under "International," click on the "Methodologies" tab, then click on the "Direct Investment and MNCs" tab.

Direct investment

This is investment in which a resident (in the broad legal sense, including a person or company) of one country obtains a lasting interest in, and a degree of influence over, the management of a business enterprise in another country. In the United States and in the international statistical guidelines, the criterion used to define direct investment is ownership of at least 10 percent of the voting securities of an incorporated business enterprise or the equivalent interest in an unincorporated business enterprise.

U.S. direct investment abroad (outward direct investment) represents the ownership or control, directly or indirectly, by one U.S. resident, the **U.S. parent,** of at least 10 percent of a foreign business enterprise, which is called a **foreign affiliate.**

Foreign direct investment in the United States (inward direct investment) represents the ownership or control, directly or indirectly, by one foreign resident, the foreign parent, of at least 10 percent of a U.S. business enterprise, which is called a **U.S. affiliate.** Foreign direct investment includes net equity and net debt investments by the foreign parent, and net debt investment by any other members of the foreign parent group. The **foreign parent group** consists of (1) the foreign parent, (2) any foreign person (including a company), proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the **ultimate beneficial owner (UBO),** and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

The UBO of a U.S. affiliate is the first person, proceeding up the affiliate's ownership chain, beginning with the foreign parent, which is not more than 50 percent owned by another person. The UBO ultimately owns or controls the affiliate and derives the benefits and assumes the risks associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

Key Terms

Direct investment position

This is the value of direct investors' equity in, and net outstanding loans to, their affiliates. The direct investment position may be viewed as the direct investors' net financial claims on their affiliates. BEA reports statistics on the positions for outward direct investment and inward direct investment at historical cost, current cost, and market value. This article features the **historical-cost** measure, which is principally derived from the financial accounting records of affiliates and generally reflects the acquisition cost of the investments, cumulative reinvested earnings, and cumulative depreciation of fixed assets. For additional information, see the box "Alternative Measures of the Direct Investment Positions" in Barefoot and Ibarra-Caton, 20.

Direct investment financial flows result from transactions that change financial claims (assets) and liabilities between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parents. Financial **outflows** result from transactions that increase U.S. assets or decrease U.S. liabilities. Financial **inflows** result from transactions that decrease U.S. assets or increase U.S. liabilities. Direct investment financial flows consist of equity investment, intercompany debt investment, and reinvested earnings.

Equity investment is the difference between equity increases and decreases. Equity increases result from parents' (1) establishments of new affiliates, (2) payments to unaffiliated parties for the purchase of capital stock or other equity interests when they acquire an existing business, (3) payments to acquire additional ownership interests in their existing affiliates, and (4) capital contributions to their existing affiliates. Equity decreases are the funds parents receive when they reduce their equity interests in their affiliates.

Intercompany debt investment results from changes in outstanding loans between parents (or for inward investment, other foreign parent group members) and their affiliates, including loans by parents to affiliates and loans by affiliates to parents.

Reinvested earnings (without current-cost adjustment) are the parents' share of the current-period operating earnings of their affiliates, less distributions of earnings that affiliates make to their parents. In the international transactions accounts, reinvested earnings include a **current-cost adjustment** that reflects current-period prices. The current-cost adjustment converts depreciation charges to a current-cost, or replacement-cost, basis; it adds charges for depletion of natural resources back to income and reinvested earnings because these charges are not treated as production costs in the national income and product accounts; and it reallocates expenses for mineral exploration and development across periods so that they are written off over their economic lives rather than all at once.

Various **valuation adjustments** to the historical-cost position are made to account for the differences between changes in the historical-cost positions, which are measured at book value, and direct investment financial flows, which are measured at transaction value. However, unlike the positions on current-cost and market-value bases, the historical-cost position is not usually adjusted to account for changes in the replacement cost of the tangible assets of affiliates or in the market value of parent companies' equity in affiliates.

Valuation adjustments to the historical-cost position consist of **currency-translation adjustments** and **"other" adjustments.** Currency-translation adjustments account for changes in the exchange rates used to translate affiliates' foreign-currency-denominated assets and liabilities into U.S. dollars. "Other" valuation adjustments account for (1) differences between the proceeds from the sale or liquidation of affiliates and their book values, (2) differences between the purchase prices of affiliates and their book values, (3) writeoffs resulting from uncompensated expropriations of affiliates, (4) the reclassification of investment positions between direct investment and other investment, and (5) capital gains and losses on transactions, excluding currency-translation adjustments, such as the sale of assets, excluding inventories, or capital gains and losses that represent the revaluation of the assets of ongoing affiliates for reasons other than exchange-rate changes, such as the write-down of assets. In addition, if an affiliate's industry classification changes, offsetting valuation adjustments are made to move the position from the former to the current industry. Offsetting adjustments are also made when the political boundaries of a country change and results in the change in the country of the affiliate, and for inward direct investment, when transactions between foreign residents result in a change in the country of the foreign parent.

Direct investment income (without current-cost adjustment)

This is the return on the direct investment position. It consists of (1) earnings, that is, the parents' shares in the net income from the operations of their affiliates, and (2) net interest received by parents (or foreign parent groups) from affiliates from outstanding loans and trade accounts. As in the case of reinvested earnings (see above), in the international transactions accounts, direct investment income includes a **current-cost adjustment** that reflects current-period prices.

Services transactions

These are receipts and payments between parents and their affiliates for services provided by one to the other. They consist of **royalties and license fees** for the use, distribution, or sale of intangible property or rights (including patents, trademarks, copyrights, and other intellectual property) and **other private services** (consisting of service charges, including management fees and allocated expenses, and rentals for tangible property).

U.S. direct investment abroad tables 1–16 and foreign direct investment in the United States tables 1–17 follow.

U.S. Direct Investment Abroad Tables

General Notes to the Tables

- Detail may not add to totals because of rounding.
- An asterisk "(*)" indicates a nonzero value between –$500,000 and $500,000, between –0.5 percent and 0.5 percent, or a reinvestment ratio greater than zero but less than 0.005.
- A "(D)" indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (27) comprises Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.
- OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Angola, Ecuador, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

1. Historical-cost financial outflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value financial outflows include reinvested earnings with the adjustment.
2. Historical-cost direct investment income excludes capital gains and losses and the current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest.
3. Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum exploration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. The current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.
4. Market-value direct investment income measures the financial return to investors, so it includes capital gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustments. The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions.

1. Prior to 2006, the income, royalties and license fees, and other private services statistics in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these statistics are presented gross, or before deduction, of U.S. and foreign withholding taxes.

2. The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.

3. In 2011, fees for the rights to distribute film and television recordings were reclassified from other private services to royalties and license fees beginning with the statistics for 1999. Because the reclassification was only implemented below the aggregate level for statistics on U.S. parents' receipts and payments for 2006 forward, the 1999–2005 statistics with country and industry detail (available on BEA's Web site) continue to include fees for the rights to distribute film and television recordings in other private services.

Note. See the text for details on how the statistics shown in the top panel differ from those in the international investment position accounts and the international transactions accounts.

1. An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
2. Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.
3. Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

Table 5.2. Change in the Historical-Cost U.S. Direct Investment Position Abroad by Account, 2010

[Millions of dollars]

	Total (= column 2 + column 10)	Financial outflows without current-cost adjustment								Valuation adjustments			
		Total (= column 3 + column 6 + column 7)	Equity			Reinvested earnings without current-cost adjustment	Intercompany debt			Total (= column 11 + column 12 + column 13)	Translation adjustments [2]	Capital gains and losses of affiliates	Other [3]
			Net (= column 4 – column 5)	Increases	Decreases		Net (= column 8 – column 9)	Increases in U.S. parents' receivables	Increases in U.S. parents' payables [1]

1. An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
2. Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.
3. Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

Table 5.3. Change in the Historical-Cost U.S. Direct Investment Position Abroad by Account, 2011

[Millions of dollars]

	Total (= column 2 + column 10)	Financial outflows without current-cost adjustment								Valuation adjustments			
		Total (= column 3 + column 6 + column 7)	Equity			Reinvested earnings without current-cost adjustment	Intercompany debt			Total (= column 11 + column 12 + column 13)	Translation adjustments [2]	Capital gains and losses of affiliates	Other [3]
			Net (= column 4 – column 5)	Increases	Decreases		Net (= column 8 – column 9)	Increases in U.S. parents' receivables	Increases in U.S. parents' payables [1]

1. An increase in U.S. parents' payables is a decrease in net intercompany debt and a financial inflow.
2. Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.
3. Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of foreign affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country or industry classification of a foreign affiliate.

1. Reinvested earnings without current-cost adjustment divided by earnings without current-cost adjustment.

NOTE. In this table, earnings and distributed earnings are shown before deduction of withholding taxes.

n.d. Reinvestment ratio is not defined because reinvested earnings without current-cost adjustment are negative.

Table 7. U.S. Direct Investment Abroad: Income Without Current-Cost Adjustment, 2009–2011

[Millions of dollars]

	2009					2010					2011

1. For 2011, the "Euro area" includes Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia and Spain. For 2011, the U.S. direct investment position in the "Euro area" was $1,481,348 million; financial outflows without current-cost adjustment were $157,387 million; and direct investment income without current-cost adjustment was $140,321 million.

2. Prior to 2011, data were included in the Netherlands Antilles.

3. Prior to 2011, included data for Curacao, Sint Maarten, and the Netherlands Islands, Caribbean (Bonaire, Saba, and St. Eustasius).

OWH Other Western Hemisphere

Table 15. U.S. Direct Investment Abroad: Selected Items by Detailed Industry of Foreign Affiliate, 2007–2011—Continues

[Millions of dollars]

	Direct investment position on a historical-cost basis					Financial outflows without current-cost adjustment (inflows (–))					Income without current-cost adjustment

Foreign Direct Investment in the United States Tables

General Notes to the Tables

- Detail may not add to totals because of rounding.
- An asterisk "(*)" indicates a nonzero value between –$500,000 and $500,000, between –0.5 percent and 0.5 percent or a reinvestment ratio greater than zero but less than 0.005.
- A "(D)" indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (27) comprises Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.
- OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Angola, Ecuador, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

Tables 1 through 17 follow.

1. Historical-cost financial inflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value financial inflows include reinvested earnings with the adjustment.

2. Historical-cost direct investment income excludes capital gains and losses and the current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest.

3. Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum exploration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. Current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

4. Market-value direct investment income measures the financial return to investors, so it includes capital gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustments. The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions.

U.S. affiliates' receipts	11,855	12,688	15,886	16,688	17,634	16,505	19,752	23,051	26,109	27,526	28,962	29,521

1. Prior to 2006, the income, royalties and license fees, and other private services statistics in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these statistics are presented gross, or before deduction, of U.S. and foreign withholding taxes.

2. The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.

3. In 2011, fees for the rights to distribute film and television recordings were reclassified from other private services to royalties and license fees beginning with the statistics for 1999. Because the reclassification was only implemented below the aggregate level for statistics on U.S. affiliates' payments and receipts for 2006 forward, the 1999–2005 statistics with country and industry detail (available on BEA's Web site) continue to include fees for the rights to distribute film and television recordings in other private services.

NOTE. See the text for details on how the statistics in the top panel differ from those in the international investment position accounts and the international transactions accounts.

Table 3. Foreign Direct Investment Position in the United States on a Historical-Cost Basis, 2008–2011

	Direct investment position				Change

1. An increase in U. S. affiliates' receivables is a decrease in net intercompany debt and a financial outflow.
2. Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of U.S. affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country and industry classification of a U.S. affiliate.

1. An increase in U. S. affiliates' receivables is a decrease in net intercompany debt and a financial outflow.
2. Other valuation adjustments primarily account for differences between the proceeds from the sale or liquidation of U.S. affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual countries and industries, adjustments may also be made to effect changes in the country and industry classification of a U.S. affiliate.

Table 6. Foreign Direct Investment in the United States: Earnings Without Current-Cost Adjustment and Reinvestment Ratios, 2008–2011—Continues

[Millions of dollars]

	2008				2009				2010

1. Reinvested earnings without current-cost adjustment divided by earnings without current-cost adjustment.

NOTE. In this table, earnings and distributed earnings are shown before deduction of withholding taxes.

n.d. Reinvestment ratio is not defined because reinvested earnings without current-cost adjustment are negative.

1. In 2011, the "Euro area" includes Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain. For 2011, the "Euro area" direct investment position in the United States was $1,037,308 million; financial inflows without current-cost adjustment were $58,524 million; and income without current-cost adjustment was $62,200 million.

2. Prior to 2011, data were included in the Netherlands Antilles.

3. Prior to 2011, included data for Curacao, Sint Maarten, and Netherlands Islands, Caribbean (Bonaire, Saba, and St. Eustasius).

OWH Other Western Hemisphere

1. The ultimate beneficial owner is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The country of ultimate beneficial owner is often the same as that of the foreign parent, but it may be a different foreign country or the United States.

2. Prior to 2011, data were included in the Netherlands Antilles.

3. Prior to 2011, included data for Curacao, Sint Maarten, and Netherlands Islands, Caribbean (Bonaire, Saba, and St. Eustasius).

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on August 29, 2012. These estimates include the second estimates for the second quarter of 2012. Also included are revised estimates of wages and salaries and of affected income-side series for the first quarter of 2012.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at www.bea.gov.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Residual	26	20.2	–7.8	0.2	–10.6	–14.5	–24.3	–26.6

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Personal consumption expenditures excluding food and energy [1]	36	1.3	1.6	1.7	1.9	1.8
Market-based PCE [2]	37	2.7	3.0	2.8	2.5	1.7
Market-based PCE excluding food and energy [2]	38	1.3	1.6	1.9	2.0	1.9

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

Gross housing value added	12	1,196.3	1,203.5	1,207.1	1,204.6	1,202.6	1,199.0	1,194.6

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

Consumption expenditures	58	103.866	101.434	101.566	101.140	100.946	100.818	100.550
Gross investment	59	97.973	90.054	89.983	89.180	89.085	86.829	86.189

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.

Residual	60	–17.5	–57.4	–53.4	–61.9	–68.8	–83.5	–82.8

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.
5. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE. The residual line is the difference between the first line and the sum of the most detailed lines.

Implicit price deflator for gross domestic purchases [4]	63	1.6	2.5	3.5	2.3	0.6	2.7	0.8

1. Excludes software "embedded," or bundled, in computers and other equipment.
2. Some components of final sales of computers include computer parts.
3. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.
4. The percent change for this series is calculated from the implicit price deflator in NIPA table 1.6.4.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.
3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).
2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.
3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.
4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Command-basis gross national product	12	2.5	1.7	2.0	2.2	3.4	0.3	3.0
Command-basis net national product [1]	13	2.8	1.7	2.0	2.2	3.6	0.0	3.1
After-tax income received by the personal sector:								
Disposable personal income	14	1.8	1.3	–1.5	–1.3	–0.2	3.7	3.1

1. In this table, the net measures are the corresponding gross measures less the depreciation of fixed assets as measured by the consumption of fixed capital.
2. Equals gross domestic purchases less change in private inventories.
3. The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis measures, see NIPA tables 1.8.3 and 1.8.6.

Command-basis net national product [1]	13	11,453.6	11,647.1	11,604.1	11,667.1	11,769.9	11,770.5	11,861.8
After-tax income received by the personal sector:								
Disposable personal income	14	10,016.5	10,149.7	10,157.8	10,125.6	10,121.5	10,213.9	10,291.6

1. In this table, net measures are the corresponding gross measures less the depreciation of fixed assets as measured by the consumption of fixed capital.
2. Equals gross domestic purchases less change in private inventories.
3. The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis estimates, see NIPA tables 1.8.3 and 1.8.6.

2. Personal Income and Outlays

Final consumption expenditures of nonprofit institutions serving households (NPISHs) [1]	22	1.1	3.8	8.4	18.2	–4.9	–1.2	3.0
Gross output of nonprofit institutions [2]	23	1.4	2.7	2.7	0.9	3.1	4.1	2.1
Less: Receipts from sales of goods and services by nonprofit institutions [3]	24	1.5	2.3	0.8	–4.4	6.0	5.9	1.9
Addenda:								
PCE excluding food and energy [4]	25	1.8	2.9	1.5	1.8	3.1	3.5	0.6
Energy goods and services [5]	26	1.1	–2.8	–7.0	1.4	–10.1	–8.7	22.4
Market-based PCE [6]	27	1.9	2.8	1.2	1.4	2.2	2.3	1.9
Market-based PCE excluding food and energy [6]	28	2.0	3.3	1.8	1.5	3.5	3.5	0.7

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Market-based PCE excluding food and energy [6]	28	1.0	1.4	2.3	2.1	1.5	2.2	1.7

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Residual	26	–7.5	–9.2	–9.5	–9.1	–9.6	–9.8	–11.0

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Residual	61	–2.9	–2.5	–2.8	–3.1	–2.5	–1.8	–2.3

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

5. Saving and Investment

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded," or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Nonresidential structures	28	310.3	318.8	314.7	329.7	338.7	349.0	351.4
Residential structures	29	269.4	263.2	261.4	260.8	270.3	283.8	285.9

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.
3. Excludes software "embedded," or bundled, in computers and other equipment.
4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."
2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales	27	2.69	2.66	2.66	2.67	2.63
Nonfarm inventories to final sales	28	2.40	2.38	2.38	2.39	2.35
Nonfarm inventories to final sales of goods and structures	29	4.68	4.58	4.57	4.58	4.51

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Final sales of goods and structures of domestic business [2]	27	**400.1**	**406.0**	**412.4**	**418.3**	**421.5**
Ratios of private inventories to final sales of domestic business:						
Private inventories to final sales	28	2.34	2.32	2.32	2.32	2.32
Nonfarm inventories to final sales	29	2.14	2.12	2.13	2.13	2.13
Nonfarm inventories to final sales of goods and structures	30	3.99	3.94	3.92	3.90	3.90

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Sales of imported new autos [3]	46	82.4	89.6	89.3	84.9	89.7	101.0	95.9

1. Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Table 7.5. Consumption of Fixed Capital by Legal Form of Organization and Type of Income

[Billions of dollars]

	Line	2010	2011	Seasonally adjusted at annual rates

1. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

2. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

3. Consists of nonmortgage interest paid by households.

4. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

5. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2012 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates—Continues

D. Charts

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

p Preliminary
r Revised
(*) Transactions are less than $500,000 (+/–)
1. Details not shown separately; see totals in lines 56 and 63.
2. Details not shown separately are included in line 69.
3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.
4. Calculated excluding financial derivatives, net (line 70).

p Preliminary
r Revised
(*) Transactions are less than $500,000 (+/–)
1. Details not shown separately; see totals in lines 56 and 63.
2. Details not shown separately are included in line 69.
3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.
4. Calculated excluding financial derivatives, net (line 70).

p Preliminary
r Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary
r Revised
* Less than $500,000 (+/–)
..... Not applicable

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.
2. Includes changes due to year-to-year shifts in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of more comprehensive survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.
3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, 24, and 25 are not available.
4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).
5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.
7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.
8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.
9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve Systems balance sheet. The movement of exchange rates does not affect this valuation.
10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

(*) Less than $500,000

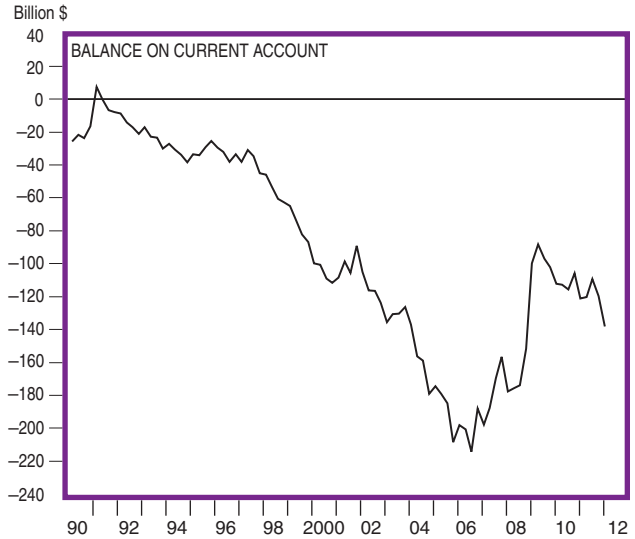
D Suppressed to avoid disclosure of data of individual companies.

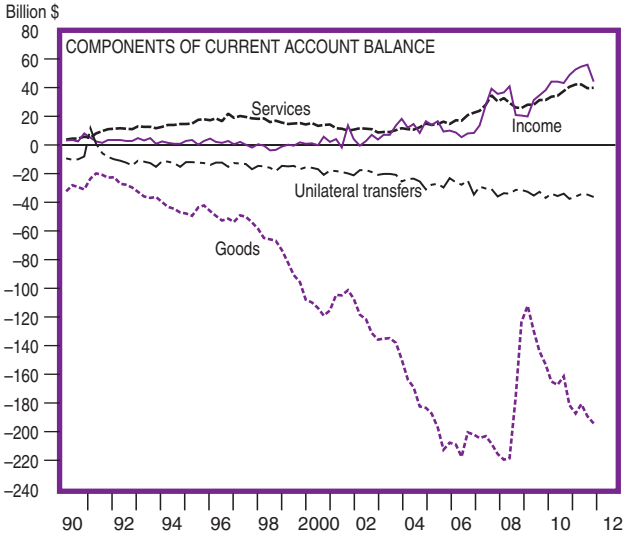
NOTES. The data in this table are from BEA s annual survey of the operations of U.S. affiliates of foreign companies; see "U.S. Affiliates of Foreign Companies: Operations in 2010" in the August 2012 SURVEY OF CURRENT BUSINESS.

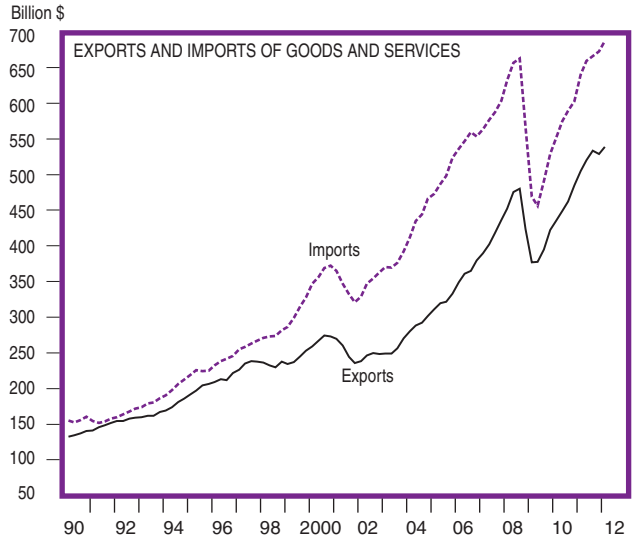
Size ranges are given in employment cells that are suppressed. The size ranges are: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

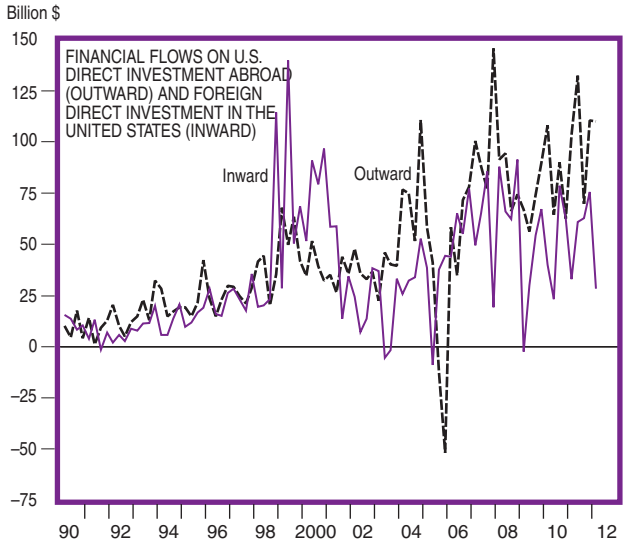
H. Charts

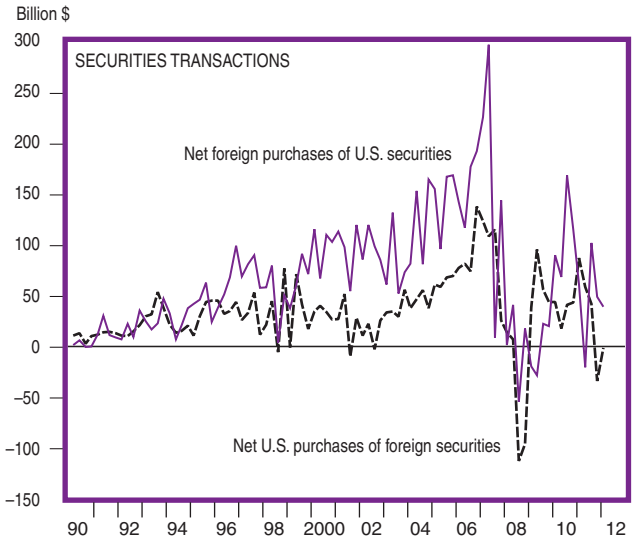
THE U.S. IN THE INTERNATIONAL ECONOMY

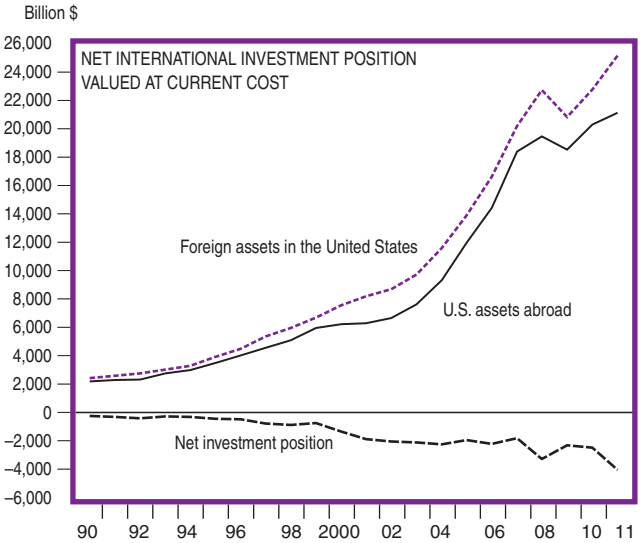












NOTE. All series except those for the international investment position are quarterly and are seasonally adjusted when adjusted data are available. The series are from tables F.2, with opposite signs in some cases, and G.1.

U.S. Bureau of Economic Analysis

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

p Preliminary
r Revised
1. Percent change from preceding period was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and the timing of the availability of source data.

p Preliminary
r Revised
1. Percent change was calculated from unrounded data.
Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
Source: Table 3 in the "Regional Quarterly Report" in the April 2012 Survey of Current Business

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2011

[Millions of dollars]

State and region	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable–goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

NOTE. Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP by state statistics for 2011 that were released on June 5, 2012.

J. Local Area Tables

Table J.1. Personal Income and Per Capita Personal Income by Metropolitan Area, 2008–2010—Continues

1. Per capita personal income was computed using Census Bureau midyear population estimates.
2. Percent change was calculated from unrounded data.
3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released in February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates. The first seven chapters have been updated to reflect the 2011 annual NIPA revision.

Concepts and Methods of the U.S. National Income and Product Accounts (2011)
- "Introductory Chapters 1–4"
- "Chapter 5: Personal Consumption Expenditures"
- "Chapter 6: Private Fixed Investment"
- "Chapter 7: Change in Private Inventories"
- "Chapter 8: Net Exports of Goods and Services"
- "Chapter 9: Government Consumption Expenditures and Gross Investment

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

An Introduction to National Income and Product Accounts (2007)

Measuring the Economy: A Primer on GDP and the National Income and Product Accounts (2007)

The following SURVEY articles describe the 2009 comprehensive revision of the NIPAs.

"Initial Results of the 2009 Comprehensive NIPA Revision" (August 2009)

"Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision" (September 2009)

"Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes" (March 2008)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2012) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

"Updated Summary of NIPA Methodologies" (November 2011) describes the source data and methods that are used to prepare the estimates.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Revisions to GDP, GDI, and Their Major Components" (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary (now called second), and final (now called third) quarterly estimates of GDP.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1997–2010" (September 2011) describes the improvements that were incorporated into these estimates as part of the 2011 annual NIPA revision.

Satellite account. This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

"Research and Development Satellite Account"
- For 1959–2002 (December 2006)
- For 1959–2004 (October 2007)
- For 1959–2007 (December 2010)

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under "About BEA."

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

Annual industry accounts. *Measuring the Nation's Economy: An Industry Perspective* (2011) provides an overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

Benchmark input-output accounts. *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"
For 2005–2008 (June 2009)
For 2004–2009 (November 2010)
For 2007–2010 (June 2011)
For 2003–2011 (June 2012)

International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. "A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts" (February 2010) introduces these accounts.

U.S. International Transactions Accounts: Concepts and Estimation Methods (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2012 SURVEY.

"Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report" (May 2012) updates BEA's plans to introduce the new international statistical standards from recently updated manuals and its plans for changes that were included in the 2011 annual revision.

Direct investment. Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey* (2008) and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

Additional improvements are described in the following annual articles: "Direct Investment Positions: Country and Industry Detail" (July) and "Operations of U.S. Multinational Companies" (November 2011) and "Operations of U.S. Affiliates of Foreign Companies" (August 2012).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2011 SURVEY.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income and Employment (2011) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

Local Area Personal Income and Employment (2011) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (December 2010) presents the results of the most recent comprehensive revision.

"Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area" (November 2007) describes the potential uses of the estimates.

Appendixes

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.[1]

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006–2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled $100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be $110 ($100 × 1.10). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0}\right)^{m/n} - 1\right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t - 0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.
