

# BUSINESS SITUATION

**I**N the second quarter of 2001, U.S. production was virtually flat, according to the “preliminary” estimates of the national income and product accounts (NIPAs). Over the past four quarters, real gross domestic product (GDP) has increased only 1.2 percent, as investment and exports were cut back and as consumer spending eased off in the wake of below-average income growth and declining household wealth. In the previous 37 quarters of the expansion that began in the second quarter of 1991, real GDP had grown at an average annual rate of 3.6 percent.

This article was prepared by Daniel Larkins, Ralph W. Morris, Jennifer S. Argueta, and Pamela A. Kelly.

According to the preliminary estimates,

- Real gross domestic product (GDP)—a measure of domestic production of goods and services—increased 0.2 percent in the second quarter, the weakest showing since the first quarter of 1993, when GDP decreased 0.1 percent (table 1 and chart 1).<sup>1</sup> The 0.2-percent increase is 0.5 percentage point less than last month’s “advance” estimate

for the second quarter. (The source data underlying the revision to GDP and its components are discussed in the section “Revisions.”)

- Real private inventory stocks were liquidated at a faster pace than in the first quarter and at a

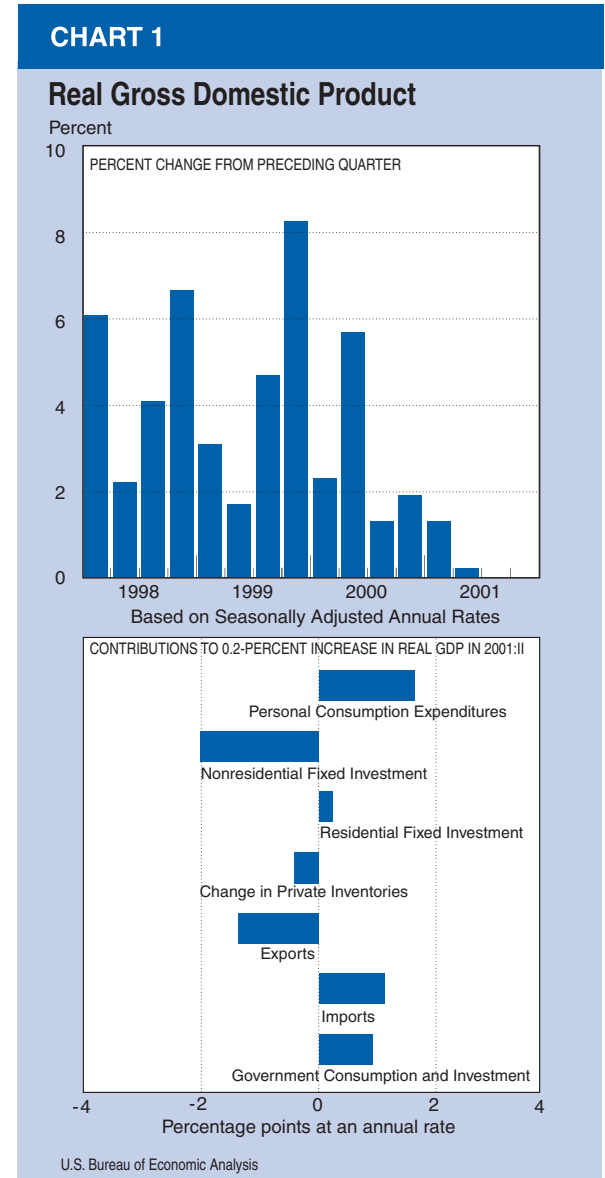

1. Quarterly estimates in the NIPAs are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.

Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters; real estimates are expressed both as index numbers (1996=100) and as chained (1996) dollars. Price indexes (1996=100) are also calculated using a chain-type Fisher formula.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1996) dollar levels and residuals, which measure the extent of nonadditivity in each table, are shown in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are shown in NIPA table S.1. (See “Selected NIPA Tables,” which begins on page D-2 in this issue.)

faster pace than had been estimated last month. The back-to-back declines in inventory stocks are the first since 1991.

- The growth of gross domestic purchases—a measure of domestic demand for goods and services regardless of where they were produced—was revised down 0.4 percentage point, to 0.4 percent.<sup>2</sup>

State and local .....	0.34	0.31	0.73	0.85

NOTE.—More detailed contributions to percent change in real gross domestic product are shown in NIPA table 8.2. Contributions to percent change in major components of real gross domestic product are shown in tables 8.3 through 8.6.

- The production of goods was revised down 1.1 percentage points to a 3.5-percent decrease, and the production of structures was revised down 1.9 percentage points to a 2.5-percent increase. In contrast, production of services was revised up 0.1 percentage point to a 2.3-percent increase.

Despite these revisions, the preliminary and advance estimates paint pictures of the economy that are similar in broad outline and in many important details. In both estimates,

- GDP growth slowed from the first quarter to the second, and the second-quarter growth was the smallest in years.

- Inventories were liquidated for the second consecutive quarter.

- The growth of final sales of domestic product—GDP less inventory investment—slowed sharply.

- The largest contributors to the second-quarter increase in real GDP were consumer spending and government spending (table 2).<sup>3</sup>

2. Gross domestic purchases is calculated as the sum of personal consumption expenditures, gross private domestic investment, and government consumption expenditures and gross investment; thus, gross domestic purchases includes imports of goods and services, which are subtracted in the calculation of GDP, and does not include exports of goods and services, which are added in the calculation of GDP.

3. In the NIPAs, consumer spending is shown as personal consumption expenditures, government spending is shown as government consumption expenditures and gross investment, and inventory investment is shown as change in private inventories.

- GDP growth was held down by drops in business investment in equipment and software and in exports of goods.

- Real final sales of computers decreased sharply, while real motor vehicle output turned up (table 3). (In the preliminary estimate, real GDP less final sales of computers increased 0.5 percent, and real GDP less motor vehicle output decreased 0.6 percent.)

- The growth of real disposable personal income slowed slightly, and the personal saving rate changed little.<sup>4</sup> (The rate was 1.1 percent in the preliminary estimate.)

4. The personal saving rate is measured as personal saving as a percentage of current-dollar disposable personal income. The national saving rate, which is measured as gross saving as a percentage of gross national product and which was not available at the time of the advance estimate, decreased to 17.2 percent from 17.3 percent; it was the fourth consecutive decrease.

### Personal Consumption Expenditures

Real personal consumption expenditures (PCE) posted a third consecutive below-average increase, 2.5 percent, in the second quarter (table 4 and chart 2).<sup>5</sup> Decelerations in nondurable goods and durable goods more than offset a modest acceleration in services.

Expenditures for nondurable goods increased 0.4 percent after increasing 2.4 percent. Most of the deceleration was accounted for by downturns

in energy products and in food. Slowdowns in clothing and shoes and in "other" nondurable goods also contributed.

Expenditures for durable goods increased 7.1 percent after increasing 10.6 percent. Motor vehicles decelerated, primarily reflecting a downturn in new autos. In contrast, furniture and household equipment increased more than in the first quarter.

Expenditures for services increased 2.6 percent after increasing 1.8 percent. "Other" services accelerated, partly reflecting an upturn in brokerage

5. The average annual rate of growth for real PCE over the current expansion is 3.6 percent.

1. Includes jewelry and watches, ophthalmic products and orthopedic equipment, books and maps, bicycles and motorcycles, guns and sporting equipment, photographic equipment, boats, and pleasure aircraft.

2. Includes tobacco, toilet articles, drug preparations and sundries, stationery and writing supplies, toys, film, flowers, cleaning preparations and paper products, semidurable house furnishings, and magazines and newspapers.

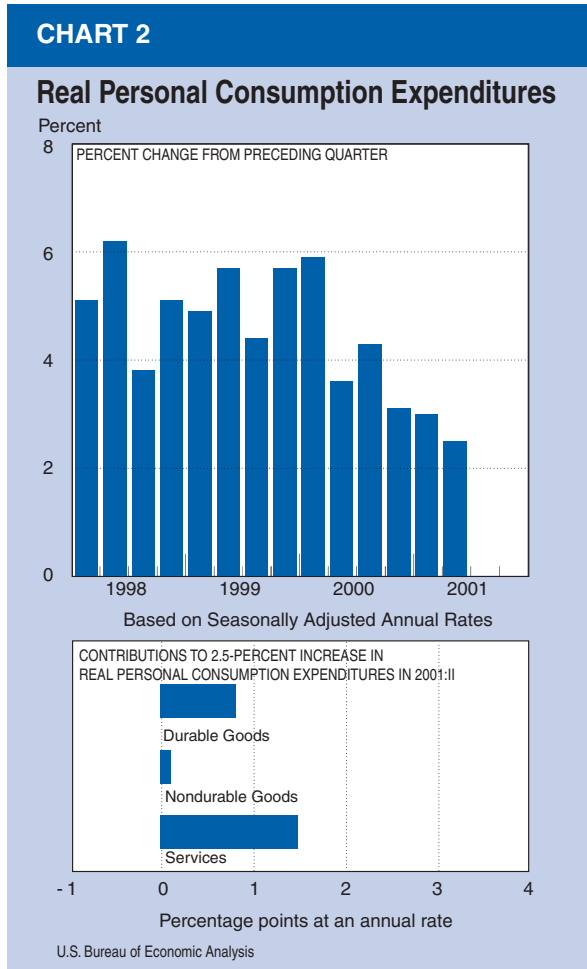

3. Includes personal care, personal business, education and research, religious and welfare activities, and net foreign travel.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA tables 2.3 and 8.9B (motor vehicles). Percent changes in major aggregates are shown in NIPA table S.1.

and investment counseling. Spending for medical care services stepped up.

Some of the factors frequently considered in the analysis of consumer spending continued becoming less favorable (chart 3). The unemployment rate increased to 4.5 percent, the highest rate since

1998. The Index of Consumer Sentiment (prepared by the University of Michigan's Survey Center) decreased for the fifth consecutive quarter. Real disposable personal income increased slightly less than in the first quarter.

### Private Fixed Investment

In the second quarter, real private fixed investment decreased for the first time in 6 years (table 5 and chart 4). Nonresidential investment dropped after changing little; residential investment increased less than in the first quarter.

*Nonresidential fixed investment.*—Real private nonresidential fixed investment decreased 14.6 percent after slipping 0.2 percent. Before the first-quarter decrease, nonresidential fixed investment had increased for 35 consecutive quarters.

Spending on equipment and software decreased much more than in the first quarter. Information processing equipment and software fell sharply; computers fell dramatically after a modest decrease, and communications equipment dropped sharply for the second straight quarter. Industrial

equipment turned down, its first decrease in more than 2 years and its largest since 1975. Transportation equipment decreased after increasing; motor vehicles contributed to the downturn.

Spending on structures turned down. Commercial buildings, industrial buildings, and public utilities all decreased in the second quarter after increasing in the first.

The investment climate has generally been unfavorable in recent quarters. In the last four quarters, domestic corporate profits and capacity utilization has decreased steadily, and real final sales of domestic product has faltered.<sup>6</sup> Long-term interest rates have trended down, but only modestly; for example, the yield on high-grade corpo-

6. The growth of real final sales averaged 2.3 percent over the last four quarters, compared with 3.5 percent over the earlier part of the current expansion.

 U.S. Bureau of Economic Analysis

### Inventory Investment

Real inventory investment (that is, change in private inventories) was -\$38.4 billion in the second quarter and -\$27.1 billion in the first (table 6 and chart 6). Back-to-back declines in the stock of inventories last occurred in 1991. Inventories were much less of a drag on GDP growth in the second quarter, however, because the \$11.3 billion decrease in inventory investment followed a \$69.9 billion first-quarter decrease as liquidation replaced accumulation.

The second-quarter decrease in inventory investment was dominated by manufacturing inventories, which decreased \$35.5 billion after decreasing \$15.0 billion. Inventories of durable-goods manufacturers decreased considerably more than in the first quarter; inventories of computers, machinery, and electronic products and of electrical equipment, appliances, and components turned down, and inventories of fabricated metal products decreased more than in the first quarter.

1. Includes inventories held by establishments in the following industries: Transportation; communication; finance, insurance, and real estate; and services.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA tables 5.11B and 8.9B (motor vehicles).

In contrast, inventories of transportation equipment decreased much less than in the first quarter.

Inventories of nondurable-goods manufacturers decreased more than in the first quarter, mainly reflecting a downturn in inventories of chemicals and chemical products.

Wholesale trade inventories increased \$4.7 billion after decreasing \$3.0 billion. Inventories of

nondurable goods increased considerably more than in the first quarter, mainly reflecting an upturn in inventories of farm products and a step-up in inventories of drugs and sundries. Inventories of durable goods decreased more than in the first quarter, largely reflecting a downturn in electrical goods.

Retail trade inventories decreased \$13.1 billion after decreasing \$15.3 billion. Inventories of motor vehicle dealers decreased considerably less than in the first quarter; other retail inventories decreased after increasing.

Farm inventories decreased \$2.3 billion after increasing \$0.2 billion. Crop inventories decreased more than in the first quarter, and livestock inventories decreased after increasing.

The ratio of real private nonfarm inventories to final sales of goods and structures decreased to 3.67 from 3.68 (see NIPA table 5.13). A ratio that includes all final sales of domestic businesses decreased to 2.08 from 2.09.<sup>7</sup> For both ratios, these are the lowest levels in the current expansion.

7. Using the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, using the "goods and structures" ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. Production of some services may require substantial inventories, while production of other services may not.

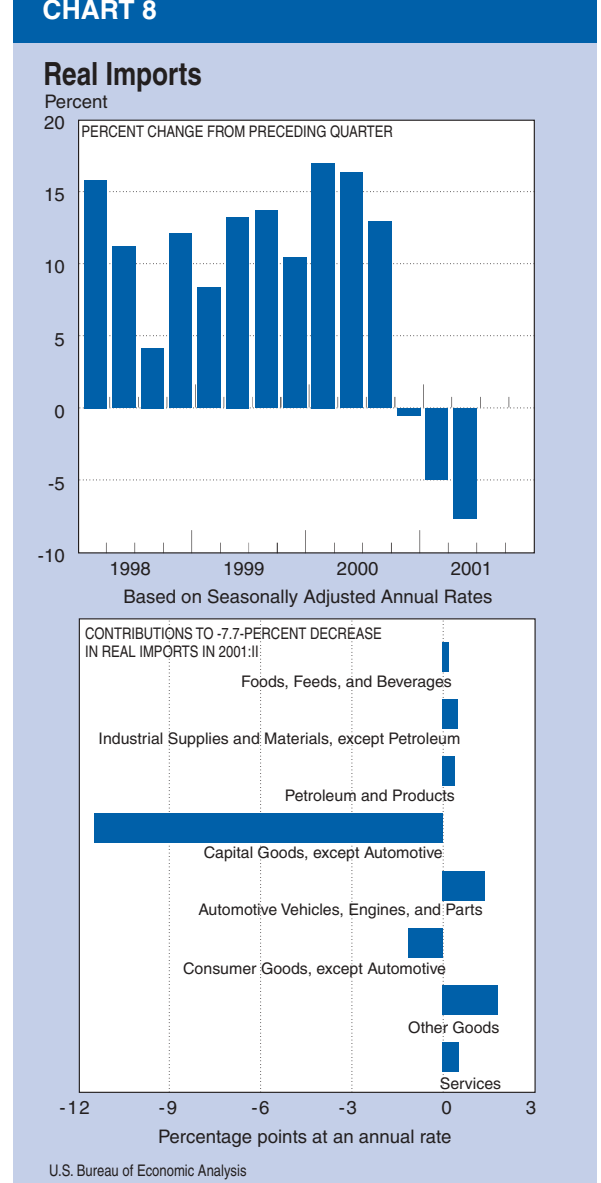

### Exports and Imports

Both exports and imports declined for the third consecutive quarter—exports after 6 consecutive increases, and imports after 38 increases.

Real exports of goods decreased much more than in the first quarter (table 7 and chart 7). Non-automotive capital goods turned down, reflecting sharper declines in “other” nonautomotive capital goods and in computers and peripheral equipment

as well as a downturn in civilian aircraft. Nonautomotive consumer goods and foods, feeds, and beverages also turned down. In contrast, automotive goods turned up.

Exports of services again increased a little. Modest increases in passenger fares, in transfers under U.S. military agency sales contracts, and in royal-

ties and license fees were largely offset by declines in “other” services and in “other” transportation.

Real imports of goods decreased more than in the first quarter (chart 8). A steeper decline in nonautomotive capital goods (and also in nonautomotive consumer goods) more than offset upturns in “other” goods and in automotive goods.

Petroleum and products increased less than in the first quarter.

Imports of services increased less than in the first quarter. “Other private services” slowed, and “other” transportation decreased more than in the first quarter. In contrast, passenger fares and travel turned up.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA table 4.4. Percent changes in major aggregates are shown in NIPA table S.1.

## Government Spending

Government spending increased 5.4 percent in the second quarter, about the same as in the first. Federal Government spending increased less than in the first quarter, and State and local government spending increased more (table 8 and chart 9).

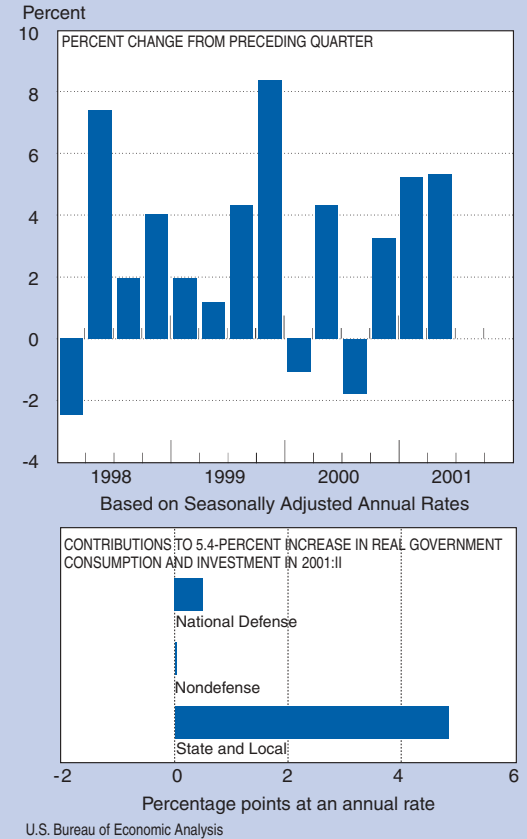

Federal defense spending slowed, reflecting a slowdown in consumption spending, especially for services. Investment turned up, reflecting an upturn in equipment and software.

Federal nondefense spending changed little after decreasing. Consumption spending, especially for services other than compensation of employees, turned up. Investment, especially for structures, turned down.

The pickup in State and local government spending was due to investment in structures. Consumption spending increased less than in the first quarter, reflecting a slowdown in compensation of employees.

### CHART 9

## Real Government Consumption and Investment

**Table 8.—Real Government Consumption Expenditures and Gross Investment**  
[Seasonally adjusted at annual rates]

State and local .....	1,069.3	7.5	6.7	16.2	18.8	3.0	2.7	6.4	7.4
Consumption expenditures .....	847.0	6.3	5.9	8.6	7.9	3.1	2.9	4.2	3.8
Gross investment .....	222.9	1.3	0.8	7.7	11.3	2.6	1.6	16.1	23.1

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are shown in NIPA table 3.8. Percent changes in major aggregates are shown in NIPA table S.1.

**Prices**

The price index for gross domestic purchases, which measures the prices paid for goods and services purchased by U.S. residents, increased 1.4 percent in the second quarter, about half as much as in the first quarter (table 9 chart 10). Prices of gross domestic purchases less food and energy posted a similar slowdown, from 2.3 percent to 1.0 percent. The slowdowns mainly reflected decelerations in the prices of PCE and government spending. In contrast, prices of nonresidential fixed investment decreased less than in the first quarter.

The deceleration in PCE prices was widespread; prices of energy, food, and medical care services slowed, and prices of motor vehicles turned down. Prices paid by the Federal Government slowed sharply after a first-quarter increase that reflected a pay raise for civilian and military personnel.<sup>8</sup>

The smaller second-quarter decrease in prices of private nonresidential fixed investment reflected smaller second-quarter declines in prices of computers and peripheral equipment and of transportation equipment.

8. In the NIPAs, an increase in the rate of Federal employee compensation is treated as an increase in the price of employee services purchased by the Federal Government.

U.S. Bureau of Economic Analysis

## Revisions

The preliminary estimate of a 0.2-percent increase in real GDP in the second quarter is 0.5 percentage point less than the advance estimate (table 10). This revision is equal to the average revision, without regard to sign, from the advance estimate to the preliminary estimate in the past 20 years.

The major contributors to the second-quarter revision were change in private inventories (–0.46 percentage point) and exports of goods (–0.33 percentage point). The negative contributions of these components were partly offset by the positive contributions of a downward revision to imports of goods (0.19 percentage point) and an upward revision to PCE for services (0.14 percentage point).

The downward revision to private inventory investment was mainly accounted for by manufac-

turing inventories and reflected the incorporation of newly available Census Bureau data on inventories for June and revised data for May.

The revisions to exports and imports of goods were largely to nonautomotive consumer goods and to “other” nonautomotive capital goods. The revisions mainly reflected the incorporation of newly available Census Bureau data on trade in goods for June.

The upward revision to PCE for services was mainly to medical care services, reflecting revisions to producer price indexes from the Bureau of Labor Statistics, and to foreign travel, reflecting newly available data from BEA’s international transactions accounts.

NOTE.—The preliminary estimates for the second quarter of 2001 incorporate the following revised or additional major source data that were not available when the advance estimates were prepared.

*Personal consumption expenditures:* Retail sales for May and June (revised), consumers’ share of new-car purchases for June, average unit value for domestic new autos for June (revised), and consumers’ share of new-truck purchases for June.

*Nonresidential fixed investment:* Construction put-in-place for April and May (revised) and June, manufacturers’ shipments of machinery and equipment for May and June (revised), manufacturers’ shipments of complete civilian aircraft for April and May (revised) and June, and exports and imports of machinery and equipment for May (revised) and June.

*Residential fixed investment:* Construction put-in-place for April and May (revised) and June.

*Change in private inventories:* Manufacturing and trade inventories for May (revised) and June.

*Exports and imports of goods and services:* Exports and imports of goods for May (revised) and June.

*Government consumption expenditures and gross investment:* Monthly Treasury Statement detailed data for June, Department of Defense detailed financial reports for the second quarter, and State and local government construction put-in-place for April and May (revised) and June.

*Wages and salaries:* Employment, average hourly earnings, and average weekly hours for May and June (revised).

*GDP prices:* Detailed merchandise export and import price indexes for April through June (revised), unit-value index for petroleum imports for May (revised) and June, and housing prices for the second quarter.

### Corporate Profits

Corporate profits decreased again in the second quarter. The current production measure decreased \$28.5 billion (or 3.6 percent at a quarterly rate)—about half as much as in the first quarter and after a \$47.4 billion drop in the fourth quarter of 2000 (table 11).<sup>9</sup>

Domestic corporate profits were reduced about \$14 billion by the effects of Tropical Storm Allison and other severe storms. Excluding the storm-related losses, profits from current production decreased 1.8 percent (quarterly rate).

Profits of domestic financial corporations decreased \$4.6 billion (2.5 percent). These profits were reduced by about \$13 billion by the payment of storm-related insurance benefits.

Profits of domestic nonfinancial corporations decreased \$21.1 billion (4.5 percent). Unit profits of these corporations fell, as unit labor costs increased again after large increases in the first and fourth quarters; unit nonlabor costs also increased in these three quarters. The real output of domestic nonfinancial corporations changed little in the second quarter.<sup>10</sup> Profits of domestic nonfinancial

corporations were reduced about \$1 billion by uninsured losses associated with the storms.

A drop in rest-of-world profits reflected lower receipts from foreign affiliates of U.S. corporations. Payments of earnings by U.S. affiliates of foreign corporations decreased.<sup>11</sup>

Cash flow from current production, a profits-related measure of internally generated funds available for investment, decreased \$10.7 billion after decreasing \$35.1 billion in the first quarter and \$23.2 billion in the fourth.<sup>12</sup> Despite the drop in cash flow, the ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, increased from 69.5 percent to 71.6 percent. During 1991–99, the ratio fluctuated between 72 percent and 94 percent; it averaged 84 percent.

9. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C (see "Selected NIPA Tables," which begins on page D–2 of this issue) as corporate profits with inventory valuation and capital consumption adjustments.

Percent changes in profits are shown at quarterly, not annual, rates.

10. Output is defined here as real gross product of nonfinancial corporate business. It is a measure of the contribution, or value added, of nonfinancial corporations to the Nation's output and is measured as the sum of incomes generated by these businesses.

11. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.

12. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

*Domestic industry profits and related measures.*— Domestic industry profits decreased \$21.3 billion after dropping \$38.6 billion in the first quarter and \$61.2 billion in the fourth.<sup>13</sup> The largest second-quarter decreases were in durable-goods manufacturing, in the transportation and public utilities group, and in financial corporations, especially insurance.

Profits before tax decreased less than profits from current production. The difference between

---

13. Domestic industry profits are estimated as the sum of corporate profits before tax and the inventory valuation adjustment; they are shown in NIPA table 6.16C (on page D-16 of this issue). Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only for total financial and total nonfinancial industries.

the two measures reflected decreases in both the inventory valuation adjustment and the capital consumption adjustment.<sup>14</sup>

---

14. As prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits—a capital-gains-like element in profits—result from an increase in inventory prices, and inventory losses—a capital-loss-like element in profits—result from a decrease in inventory prices. In the NIPAs, inventory profits or losses are removed from business incomes by the inventory valuation adjustment (IVA); a negative IVA removes inventory profits, and a positive IVA removes inventory losses.

The capital consumption adjustment converts depreciation valued at historical cost and based on service lives and depreciation patterns specified in the tax code to depreciation valued at current cost and based on empirical evidence on the prices of used equipment and structures in resale markets. For information on depreciation in the NIPAs, see Arnold J. Katz and Shelby W. Herman, "Improved Estimates of Fixed Reproducible Tangible Wealth, 1929-95," *SURVEY OF CURRENT BUSINESS* 77 (May 1997): 69-92.

## Government Sector

The combined current surplus of the Federal Government and of State and local governments—the NIPA measure of net saving by government—decreased \$16.9 billion, to \$210.7 billion, in the second quarter after decreasing \$23.6 billion in the first (table 12).<sup>15</sup> Both the Federal current surplus and the State and local government current surplus decreased less in the second quarter than in the first.

### Federal

The Federal Government current surplus decreased \$16.0 billion, to \$189.3 billion, in the second quarter after decreasing \$17.2 billion in the first. Both current receipts and current expenditures decelerated.

---

15. Net saving equals gross saving less consumption of fixed capital (CFC); the estimates of gross saving, CFC, and net saving are shown in NIPA table 5.1. For NIPA estimates of government current receipts, current expenditures, and the current surplus or deficit for 1999 and 2000, see NIPA tables 3.1, 3.2, and 3.3 in this issue.

*Current receipts.*—Federal current receipts increased \$5.3 billion in the second quarter after increasing \$9.9 billion in the first. The deceleration was more than accounted for by decelerations in contributions for social insurance and in personal tax and nontax receipts. These decelerations were partly offset by a smaller decrease in corporate profits tax accruals in the second quarter than in the first.

Contributions for social insurance increased \$3.3 billion after increasing \$13.9 billion. The deceleration primarily reflected a deceleration in contributions for social security (old-age, survivors, disability, and health insurance), which increased \$3.6 billion after increasing \$13.2 billion. In the first quarter, contributions for social insurance were boosted \$4.8 billion by an increase in the social security taxable wage base.

Personal tax and nontax receipts increased \$8.2 billion after increasing \$10.9 billion. The deceleration was more than accounted for by income taxes, which increased \$8.3 billion after increasing \$11.1

billion; first-quarter tax receipts were boosted \$5.1 billion (net) by estimated annual levels of final settlements, refunds, and back taxes.

Corporate profits tax accruals decreased \$5.2 billion after decreasing \$14.4 billion, reflecting the smaller decrease in domestic corporate profits before tax.

*Current expenditures.*—Current expenditures increased \$21.3 billion in the second quarter after increasing \$27.1 billion in the first. Consumption expenditures increased less than in the first quarter, and net interest paid decreased more than in the first quarter. In contrast, “subsidies less current surplus of government enterprises” turned up, and grants-in-aid to State and local governments and “transfer payments (net)” accelerated.

Consumption expenditures increased \$2.3 billion after increasing \$13.4 billion. The deceleration was more than accounted for by a deceleration in defense consumption expenditures.

Defense consumption expenditures increased \$1.2 billion after increasing \$13.0 billion. The deceleration was more than accounted for by services, which decreased \$1.3 billion after increasing \$13.7 billion. Within services, “other services”—which includes spending for research and development, personnel support, and installation support—decreased \$2.1 billion after increasing \$10.9 billion. Also within services, compensation of employees increased \$0.5 billion after increasing \$3.0 billion; first-quarter compensation was boosted \$3.6 billion by a pay raise in January 2001.

Net interest paid decreased \$11.3 billion after decreasing \$6.4 billion. Gross interest paid decreased \$10.9 billion after decreasing \$5.6 billion, reflecting larger decreases in interest paid to persons and business.

“Subsidies less current surplus of government enterprises” increased \$2.3 billion after decreasing \$2.7 billion. The upturn was accounted for by a downturn in the Postal Service current surplus and by a smaller decrease in agricultural subsidies. The Postal Service current surplus decreased \$2.0 billion after increasing \$1.0 billion; the first-quarter surplus had been boosted \$2.1 billion by a postal rate increase that was effective on January 7, 2001. Agricultural subsidies decreased \$0.3 billion after decreasing \$2.7 billion; the smaller decrease reflected the pattern of the newly authorized emergency agricultural subsidies.

Grants-in-aid to State and local governments increased \$17.2 billion after increasing \$13.9 billion. The acceleration was accounted for by grants

for health and hospitals, which includes payments to States for the children’s health insurance program.

“Transfer payments (net)” increased \$10.8 billion after increasing \$8.8 billion. The acceleration was more than accounted for by transfer payments to the rest of the world, which increased \$1.3 billion after decreasing \$19.7 billion; the first-quarter decrease followed a large fourth-quarter increase that included the annual payment of \$3.2 billion

State and local government.....	-63.0	-.7	-4.7	-13.0	-9.8

1. “Net lending or borrowing” is conceptually similar to “net financial investment” in the flow-of-funds accounts prepared by the Board of Governors of the Federal Reserve System. The two measures differ primarily because government net lending or borrowing is estimated from data for transactions, whereas net financial investment is estimated from data for financial assets. There are also small conceptual differences, such as the classification of the Federal Government’s railroad retirement and veterans life insurance programs.

(\$13.0 billion at an annual rate) to Israel for economic support. In contrast, transfer payments to persons increased \$9.6 billion after increasing \$28.4 billion. The deceleration was mostly accounted for by decelerations in benefit payments for social security (old-age, survivors and disability insurance) and for supplemental security income and by a downturn in benefit payments for veterans pensions; first-quarter payments for these and other programs were boosted \$15.6 billion by a 3.5-percent cost-of-living adjustment.

### ***State and local***

The State and local government current surplus decreased \$0.8 billion, to \$21.5 billion, in the second quarter after decreasing \$6.3 billion in the first. Both current receipts and current expenditures decelerated.

*Current receipts.*—State and local government current receipts increased \$20.8 billion in the second quarter after increasing \$27.0 billion in the first. The deceleration was more than accounted for by a downturn in personal tax and nontax receipts and by a deceleration in indirect business tax and nontax accruals. In contrast, Federal grants-in-aid accelerated, and corporate profits tax accruals declined less than in the first quarter.

Personal tax and nontax receipts decreased \$2.4 billion after increasing \$4.5 billion. The downturn was accounted for by a downturn in personal income taxes, which decreased \$3.2 billion after increasing \$3.7 billion as some States returned excess revenues to taxpayers in the form of one-time refunds.

Indirect business tax and nontax accruals increased \$6.4 billion after increasing \$10.6 billion. The deceleration was mostly accounted for by decelerations in nontaxes and in sales taxes. Within nontaxes, the deceleration followed a step-up in the first quarter in out-of-court settlement payments to the States by tobacco companies.

Corporate profits tax accruals decreased \$0.7 billion after decreasing \$2.3 billion, reflecting the smaller decrease in domestic corporate profits before tax.

*Current expenditures.*—Current expenditures increased \$21.6 billion in the second quarter after

increasing \$33.3 billion in the first. The deceleration was accounted for by decelerations in “subsidies less current surplus of government enterprises” and in consumption expenditures.

“Subsidies less current surplus of government enterprises” increased \$2.2 billion after increasing \$11.8 billion. Subsidies increased \$2.5 billion after increasing \$12.2 billion; first-quarter subsidies had been boosted \$3.0 billion (\$12.0 billion at an annual rate) as the result of electricity purchases by the State of California.

Consumption expenditures increased \$14.5 billion after increasing \$16.7 billion. The deceleration was more than accounted for by “other services,” which increased \$0.5 billion after increasing \$4.8 billion, reflecting a deceleration in spending for natural gas. In contrast, nondurable goods increased \$2.2 billion after increasing \$0.7 billion, reflecting an acceleration in spending for petroleum products.

### ***Net lending or net borrowing***

“Net lending or net borrowing(–),” an alternative measure of the government fiscal position, is the financing requirement of the government sector. It is derived as the current surplus plus the consumption of fixed capital and “capital transfers received (net)” less gross investment and net purchases of nonproduced assets.

Net lending decreased \$33.1 billion after decreasing \$23.3 billion. The larger decrease was more than accounted for by Federal Government net lending, which decreased \$23.3 billion after decreasing \$10.3 billion. The larger decrease was attributable to an upturn in “net purchases of nonproduced assets” that resulted from a downturn in receipts for radio spectrum sales, to a downturn in “capital transfers received (net)” that resulted from a downturn in estate and gift tax receipts, and to an upturn in gross investment.

Government gross investment increased \$15.2 billion after increasing \$8.1 billion. Federal Government gross investment increased \$2.1 billion after decreasing \$2.3 billion; the turnaround reflected an upturn in equipment and software investment. State and local government gross investment increased \$13.1 billion after increasing \$10.4 billion; the acceleration was attributable to investment in structures. 

## Note on Profitability of Domestic Nonfinancial Corporations, 1960–2000

THE profitability of domestic nonfinancial corporations decreased slightly in 2000, as the rate of return on capital slipped to 8.6 percent from 8.8 percent in 1999 (chart 1 and table 1). This rate was the lowest since 1995, but it was still higher than its average for the 1990s, and it was substantially higher than its average for the 1980s. In contrast, it was far below the levels posted in the high-productivity-growth years of the 1960s.

NOTE.—This report was prepared by Daniel Larkins and Ralph W. Morris.

Capital's share of total income dropped to 17.0 percent from 17.5 percent; although this was its lowest level since 1993, it was only a little lower than its average over the last three decades. The share in 2000 was close to the midpoint of the relatively narrow range within which capital's share has fluctuated in during this period.

The rate of return may be calculated in many ways (see the box "Alternative Measures of Rates of Return"). In this note, it is calculated as the ratio of "property income" to "produced assets." Property income is prof-

CHART 1

### Rate of Return and Property Income's Share of Domestic Income, Domestic Nonfinancial Corporations, 1960–2000

Source: Table 2.

NOTE.—Columns 1–2 are percentages of the net stock of produced assets (averages of end-of-year values for adjacent years) valued at current costs. Columns 4–6 are percentages of domestic income.

its of domestic nonfinancial corporations with inventory valuation and capital consumption adjustments plus net interest (table 2).<sup>1</sup> (In the United Nations' System of National Accounts, the sum of profits and net interest is termed "net operating surplus.") "Produced assets" is the current-cost value for domestic nonfinancial corporations of the net stock of equipment and software and of structures and the replacement-cost value of inventories.<sup>2</sup>

1. Corporate profits and net interest are based on tabulations of "company" data rather than of "establishment" data. As a result, property income for domestic nonfinancial corporations includes income earned by financial establishments of those corporations; similarly, it excludes income earned by nonfinancial units of financial corporations. For a discussion of the industrial distribution of NIPA series, see "A Guide to the NIPAs," (June 2001): M-21 - M-22, available on BEA's Web site at <www.bea.doc.gov/bea/an/nipaguid.htm>. For a discussion of produced assets, see Shelby W. Herman, "Fixed Assets and Consumer Durable Goods," SURVEY OF CURRENT BUSINESS 80 (April 2000): 17-30.

2. In other contexts, different definitions of these terms may be appropriate. For example, for the economy as a whole, some part of proprietors' income might be included in property income.

### Alternative Measures of Rates of Return

This box describes several rates of return that differ from the one featured in the note.

The income measure in the numerator of the rate of return ratio could be defined exclusive of net interest or in terms of some measure of profits other than the current production variant. For example, the numerator could be profits after tax (with or without the inventory valuation and capital consumption adjustments), or it could be profits as calculated on the basis of financial-accounting standards.

The denominator could include the stocks of assets valued at historical cost, that is, at the prices at which the assets were purchased. However, comparing current-income streams with historical-cost assets is problematic at best. Moreover, the mix of inventory-accounting methods (such as last-in-first-out and first-in-first-out) would make historical-cost valuation of inventories difficult. (The Census Bureau's *Quarterly Financial Report (QFR)* contains estimates of fixed assets based on historical costs and total inventories based on a mixture of accounting methods; these estimates are available for all manufacturing corporations with assets over \$250,000 and for corporations included in the mining and trade areas with assets over \$50 million.)

The denominator of the rate of return ratio need not be limited to produced assets. For example, land (including subsoil resources), goodwill, and intellectual property might also be included. Alternatively, stockholders' equity or sales could be used as the denominator, as is done for mining, manufacturing, retail trade, and wholesale trade corporations by the Census Bureau in the *QFR*. (*QFR* measures of profits based on financial-accounting standards, not profits from current production, are used in the numerators.)

Capital's share is calculated as the ratio of domestic property income to domestic income; it is the portion of domestic income that is not labor income.

### Q-type ratios

"Tobin's-Q," or simply "Q," is the ratio of the valuation of assets in financial markets to the current-cost value of produced assets. A value of Q above 1 indicates that newly produced physical assets may be purchased more cheaply than (the ownership claims to) existing assets. Such a situation may induce businesses to purchase newly produced physical assets instead of acquiring existing assets; alternatively, it may induce financial investors to reduce the prices they will offer for financial assets. Likewise, a value of Q below 1 indicates that claims to existing physical assets may be acquired more cheaply than newly produced assets.

**Table 2—Property Income of Domestic Nonfinancial Corporations and Related Series 1960–2000**

[Billions of dollars]

Year	Domestic property income			Domestic income	Produced assets <sup>1</sup>
	Total	Profits from current production	Net interest

1999	693.9	530.3	163.6	3,966.1	8,095.7
2000	722.2	550.1	172.1	4,257.4	8,664.4

1. Produced assets consist of structures, equipment and software, and inventories; they are valued at current cost at end of year. Through 1997, the estimates for structures and equipment and software are available on the BEA Web site; go to <www.bea.doc.gov/bea/dn2/facd.htm> and choose table 6A. Revised estimates for 1998 and 1999 and new estimates for 2000 are from "Fixed Assets and Consumer Durable Goods for 1925–2000" in this issue. Inventories are from legal-form and industry detail underlying NIPA table 5.12.

NOTE.—Property income is profits from current production plus net interest. Profits from current production is corporate profits with inventory valuation adjustment and capital consumption adjustment. Profits after tax is also shown with inventory valuation adjustment and capital consumption adjustment.

Three Q-type ratios for domestic nonfinancial corporations are shown in chart 2.

- Q1 is calculated as the market value of outstanding equity divided by the net stock of produced assets.
- Q2 differs from Q1 by adding the book value of outstanding corporate bonds to the numerator.<sup>3</sup> The inclusion of bonds makes Q2 a more complete measure of invested capital.
- Q3 differs from Q1 by adding an estimate of the market value of outstanding corporate bonds and net liquid assets to the numerator. In addition, an estimate of the value of land is subtracted from the numerator because land is not included in the denominator.<sup>4</sup>

All three ratios trace similar patterns over time. All three dropped sharply in 2000 after reaching record levels in 1999, but all three still remained considerably above 1 and were higher than in all but 2 years since 1960. (The ratios had moved above 1 in the mid-1990s.) The decreases in 2000 mainly reflected an 18.8-percent drop in the market value of equities as shown in the bottom panel of chart 2.

3. "Outstanding bonds" is a gross estimate; that is, it is not net of financial assets/debt held by nonfinancial corporations.

4. The Bureau of Economic Analysis is grateful to James Tobin for providing an unpublished paper describing a procedure for approximating the market value of bonds outstanding (James Tobin and Dan Sommers, "Explanation of Revised Estimates of Tobin's 'q' Ratio, 1950-1997," (April 20, 1999)). In brief, the *book value* of bonds issued in year *t* is estimated as the change in the book value of bonds outstanding in year *t* plus the book value of bonds issued 10 years earlier (which are assumed to have matured in year *t*). In year *t*, the *market value* of bonds issued in earlier years is estimated from the book value of bonds issued in those years by calculating the present value of principal and (semiannual) coupons not yet paid on those bonds (discounted by the interest rate on 10-year Baa bonds in year *t*). Finally, the *market value* of bonds outstanding in year *t* is the sum of the market values of bonds issued in years *t-9* through *t*.

The value of land is estimated as the difference between the value of real estate and the value of structures and of equipment and software.

Net liquid assets is estimated as financial assets less liabilities other than municipal securities, corporate bonds, and mortgages.

The data are from the Federal Reserve Board, *Flow of Funds Accounts of the United States*, Statistical Release Z.1 and "Selected Interest Rates," Statistical Release H.15 (Washington, DC: Board of Governors of the Federal Reserve System).

U.S. Bureau of Economic Analysis

## Customer Service Report for Fiscal Year 2001

THE Bureau of Economic Analysis (BEA) produces national economic statistics that enable government and business decisionmakers, researchers, and the American public to follow and understand the performance of the Nation's economy. As users of our data, your understanding of an ever-changing U.S. economy is one of our top priorities. It's not just enough for you to know what's happening in the economy, you need to know why and how it's happening.

*Understanding the new economy.*—In the past year, BEA has brought you information to enhance your knowledge of how the U.S. economy works. For example, we published the following articles in our monthly SURVEY OF CURRENT BUSINESS.

- “A Note on the Impact of Hedonics and Computers on Real GDP,” which reviewed the data on hedonic price indexes and their impact on real GDP growth and concluded that there was no evidence of an overstatement in the measured decline of computer prices. [December 2000]

- “Measuring the New Economy,” which described the coverage of the new economy in BEA's economic accounts and discussed plans to improve our measurements of e-business and high tech in the accounts to reflect the evolving economy. [March 2001]

- “Trends in Consumer Spending, 1959–2000,” which showed the growth in consumer spending and its share of total domestic spending in current dollars. It also detailed the increase in the services' share of consumer spending and the decrease in nondurable goods' share. [March 2001]

- “Comparing NIPA Profits With S&P Profits,” which compared these two estimates and detailed how their purposes, definitions, and methodologies explain the differences between them. [April 2001]

- “NAICS in BEA's Economic Accounts,” which discussed the gradual implementation of the North American Industry Classification System (NAICS) to replace the Standard Industrial Classification (SIC) system as the basis for identifying, compiling, and presenting industry data. [May 2001]

- “An Upcoming Change in the NIPA Presentation of Private Inventories by Industry,” which described the changes in the NIPA tables that resulted from the conversion of the inventory estimates by industry from the SIC to NAICS. [June 2001]

NOTE.—This report was prepared by Verna M. Learnard.

- “Convergence in State Per Capita Personal Income,” which confirmed that differences among States narrowed from 1950 to 1979, but that there is little evidence of convergence since then. [June 2001]

In 2000, BEA conducted a Customer Satisfaction Survey, to better understand what our customers need and want. You wanted more data, and you wanted it to be easier to access and to use. In response to some of your comments, here is what we did.

*Electronic data dissemination.*—We have continued to improve our Web site <www.bea.doc.gov> by providing more information in more user-friendly formats. For example, the databases for our national income and product accounts tables and for our State personal income estimates can now be accessed interactively. You can now select the data for the period and the geographic area you want and then display it or download it into a spreadsheet. In addition, much of our data is now available in spreadsheet format, which facilitates analysis and enables access to the data by those who are visually impaired. Check out our Web site's “What's new?” page to keep abreast of new developments.

In the past year, we also updated four popular CD-ROM's.

- *Survey of Current Business, 1994–2000* contains all of the articles from BEA's monthly journal for 1994 through 2000 and includes selected articles for 1987–93.

- *State Personal Income, 1929–99* presents estimates of total and per capita personal income and detailed estimates for the United States, regions, and States.

- *Regional Economic Information System (REIS), 1969–99* presents annual estimates of personal income, earnings, and employment for counties, metropolitan areas, States, and regions.

- *Gross Product by Industry for the United States and States* presents gross domestic product (GDP) by industry for 1947–99, detailed gross output for 1977–99, manufacturing product shipments for 1977–96, manufacturing industry shipments for 1977–99, and detailed indirect business taxes for 1978–99. For the States, it presents gross state product (GSP) by industry, compensation of employees, indirect business taxes, and property-type income for 1977–99.

*Order-processing operation.*—BEA continues to maintain its toll-free customer service line for you to place orders for BEA products and services. The BEA Order Desk can be reached at 1–800–704–0415 (outside the

United States, call 202-606-9666.) You can access BEA's *Catalog of Products* on our Web site, or contact the Order Desk to receive a copy.

*Access to our staff.*—Our staff is always ready to assist you. Send your questions and comments by e-mail to <webmaster@bea.doc.gov>, or talk to one of our specialists. “BEA’s Contacts for Users,” which is updated regularly, is available on our Web site or by mail from

the Public Information Office. For customer assistance, contact

## Annual NIPA Revision

### Newly Available Tables

AS PART of the annual revision of the national income and product accounts (NIPA's), this report presents the newly available tables 8.28 and 5.16. The August 2001 issue of the SURVEY OF CURRENT

BUSINESS included an article that described the revision and most of the full set of NIPA tables. The remaining tables, 3.15–3.20 and 9.1–9.6, are scheduled to be published in the October SURVEY.

**Table 8.28.—Comparison of Personal Income in the National Income and Product Accounts (NIPA's) with Adjusted Gross Income as Published by the Internal Revenue Service (IRS)**

[Billions of dollars]

	Line	1997	1998	1999	2000
<b>Personal income, NIPA's</b> .....	1	<b>6,937.0</b>	<b>7,426.0</b>	<b>7,777.3</b>	<b>8,319.2</b>
Less: Portion of personal income not included in adjusted gross income .....	2	2,494.8	2,627.9	2,726.1	.....

Other types of income .....	15	61.5	93.2	126.9	.....
<b>Equals: BEA-derived adjusted gross income</b> .....	16	<b>5,594.3</b>	<b>6,123.7</b>	<b>6,526.3</b>	.....
<b>Adjusted gross income, IRS</b> .....	17	<b>4,970.0</b>	<b>5,416.0</b>	<b>5,851.6</b>	.....
<b>Adjusted gross income (AGI) gap<sup>2</sup></b> .....	18	<b>624.3</b>	<b>707.7</b>	<b>674.7</b>	.....
AGI gap (line 18) as a percentage of BEA-derived AGI (line 16) .....	19	11.2	11.6	10.3	.....
AGI of IRS (line 17) as a percentage of BEA-derived AGI (line 16) .....	20	88.8	88.4	89.7	.....

1. Consists of the imputations included in personal income shown in table 8.21 except for employer contributions for health and life insurance (line 146). In table 8.28, these premiums are included in line 4.

2. Consists of income earned by low-income individuals who are not required to file income tax returns, of unreported income that is included in the NIPA measure, and of gross errors and omissions in lines 2 through 15. Also includes the net effect of errors in the IRS adjusted gross income (line 17) and NIPA personal income (line 1) measures. Such errors can arise from the sample used by IRS to estimate line 17 and from the source data used by BEA to estimate line 1.

Government .....	47	4,942.9	5,141.7	5,429.8	5,742.6
Private inventories <sup>1</sup> .....	48	1,296.5	1,325.6	1,422.4	1,507.1
<b>Addenda:</b>					
Intersectoral auto valuation adjustment <sup>12</sup> .....	49	23.1	26.4	27.5	25.8
Brokers' commissions on sale of nonresidential used structures and dealers' margins on used equipment .....	50	9.7	10.5	10.9	11.9
Electric plants put in place less electric plants put in use <sup>13</sup> .....	51	3.5	2.7	2.6	-2
Private .....	52	3.6	2.7	2.4	-2
Government .....	53	-1	0	.1	0
Abandoned electric plants <sup>14</sup> .....	54	0	0	0	0

1. Estimates of government inventories are not available.  
2. Private fixed investment shown in table 5.2, line 4.  
3. Gross government investment shown in table 5.2, line 20.  
4. Consists of intersectoral auto valuation adjustment (line 49); brokers' commissions on sale of nonresidential used structures and dealers' margins on used equipment (line 50); and private electric plants put in place less electric plants put in use (line 52).  
5. Consists of government electric plants put in place less electric plants put in use (line 53).  
6. Equals consumption of fixed capital shown in table 1.9, line 5 less the other changes in volume of private fixed assets (line 29) and government enterprises fixed assets (line 32).  
7. Change in private inventories shown in table 1.1, line 12. Inventory estimates are not adjusted for disaster losses, theft, obsolescence, or infestation.  
8. Consists of disaster losses. Structures and equipment destroyed are valued at current cost.  
9. Consists of disaster and war losses. Structures and equipment destroyed are valued at current cost.  
10. Neutral holding gains are the gains derived from holding an asset if the price of an asset changed in the same proportion as the general price level. The chain-type price index for gross domestic purchases is used as a measure for the general price level.  
11. Equals lines 1+6-15-18+27-28+33.  
12. Used autos are valued at acquisition prices less depreciation in the estimates of the stocks of private fixed assets and consumer durable goods; net purchases of used autos by business from consumers are valued at wholesale prices in gross fixed investment.  
13. This adjustment reflects a timing difference between fixed investment and the stock of produced assets. In investment, the value of structures and equipment for electric plants is recorded on a put-in-place basis; in the stocks, the investment is recorded when the plants are put in use.  
14. Consists of the value of abandoned nuclear power plants that were never put in use. The investment in these plants is included in gross fixed investment, but does not enter the opening or closing balances—it is included in the adjustments to gross fixed investment shown in line 15.

## Fixed Assets and Consumer Durable Goods for 1925–2000

THIS report presents new estimates of net stocks for 2000, revised estimates for 1998–99, and a summary of previously published estimates for 1925–97. These estimates, which cover the net stock of equipment and software and of structures owned by business and government and the net stock of durable goods owned by consumers, incorporate the revised national income and product accounts estimates for 1998–2000.<sup>1</sup>

Tables 1–15 present the revised estimates of fixed assets and consumer durable goods. The odd-numbered tables except table 15 present current-cost estimates; the even-numbered tables present real-cost measures in terms of chain-type quantity indexes.

*Data availability.*—The historical estimates, including

1. See Brent R. Moulton, Eugene P. Seskin, and David F. Sullivan, “Annual Revision of the National Income and Product Accounts: Annual Estimates, 1998–2000, and Quarterly Estimates, 1998:1–2001:1,” *SURVEY OF CURRENT BUSINESS* 81 (August 2001): 7–32. For the methods used to derive net stocks see U.S. Bureau of Economic Analysis, *Fixed Reproducible Tangible Wealth in the United States, 1925–94* (Washington, DC: U.S. Government Printing Office, August, 1999): M–1—M–36; and Shelby W. Herman, “Fixed Assets and Consumer Durable Goods: Estimates for 1925–98 and New NIPA Table—Changes In Net Stock of Produced Assets,” *SURVEY* 80 (April 2000): 17–30.

NOTE.—Shelby W. Herman prepared this report.

these revisions, for the tables presented here are available from BEA’s Web site at <www.bea.doc.gov> (click on “GDP and related data,” scroll down to “Fixed assets,” and click on “Spreadsheets”) or on STAT-USA’s Web site at <www.stat-usa.gov>. At the end of October, additional estimates reflecting the revision will be available on these Web sites. These estimates will include the corresponding estimates for depreciation (consumption of fixed capital) and for investment in current dollars and as chain-type quantity indexes, and the average age of net stocks; the historical-cost estimates for private net stocks, depreciation, investment, and average age; and detailed asset-by-industry data for net stocks, depreciation, and investment in current and in 1996 dollars.

In addition, a CD-ROM that contains all the above estimates at current and historical cost and in chain-type quantity indexes will be available this winter.

In 2002, BEA will publish *Fixed Assets and Consumer Durable Goods in the United States, 1925–97*. This volume will present the estimates described above except the detailed asset-by-industry data.

*Tables 1–15 follow.* 

**Table 1.—Current-Cost Net Stock of Fixed Assets and Consumer Durable Goods, 1925–2000**

1. Excludes software "embedded" or bundled in computers and other equipment.

2. Consists of office buildings, except those occupied by electric and gas utility companies.

3. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other buildings used for commercial purposes.

4. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

5. Consists primarily of streets, dams, reservoirs, sewer and water facilities, parks, and airfields.

6. Consists primarily of dormitories and of fraternity and sorority houses.  
n.e.c. Not elsewhere classified.

# Foreign Direct Investment in the United States

## Detail for Historical-Cost Position and Related Capital and Income Flows, 2000

THE following tables present detailed estimates of the foreign direct investment position in the United States on a historical-cost, or book-value, basis and estimates of the related capital and income flows; summary estimates of services transactions are also presented. These estimates can be used, for example, to see how the geographic and the industrial composition of foreign companies' investment in the United States has changed over time. These estimates supplement the estimates presented in articles in the July 2001 SURVEY OF CURRENT BUSINESS that summarized developments in the direct investment positions at historical cost in 2000 and the revisions to the international transactions accounts.<sup>1</sup>

The estimates for 1997–2000 of the foreign direct investment position at yearend and the estimates of capital flows, income, and services transactions incorporate the results of BEA's 1997 benchmark survey of foreign direct investment in the United States (FDIUS); the prior benchmark survey covered 1992. The revisions to the estimates for 1998 forward also reflect the incorporation of new or revised data from BEA's quarterly surveys of transactions between U.S. affiliates and their foreign parents and annual surveys of financial

and operating data of U.S. affiliates.<sup>2</sup> For a discussion of the revisions to the estimates, see the technical note that follows.

The estimates in tables 3–18 differ in two respects from those for comparable items in the international investment position of the United States and in the U.S. international transactions accounts.<sup>3</sup> First, these estimates are on a historical-cost basis, the only basis on which detailed estimates by country and by industry are available; in contrast, the aggregate estimates of the direct investment position that are included in the international investment position are presented on both a current-cost and a market-value basis, and the aggregate estimates of direct investment income (recorded in the current account) and capital flows (recorded in the financial account) in the U.S. international transactions accounts are presented on a current-cost basis. Second, the estimates of direct investment income and services in these tables, unlike those in the U.S. international transactions accounts, are net (after deduction) of U.S. and foreign withholding taxes; estimates that are gross of withholding taxes are not available by country or by industry.

Table 1 presents the total foreign direct investment position in the United States and a comparable rate of return on the position on all three valuation bases (historical cost, current cost, and market value); table 2 presents a reconciliation of the estimates in tables 3–18 with those in the U.S. international transactions accounts.

---

1. See Maria Borga and Raymond J. Mataloni, Jr., "Direct Investment Positions for 2000: Country and Industry Detail," SURVEY 81 (July 2001): 16–29 and Christopher L. Bach, "U.S. International Transactions: Revised Estimates for 1989–2000," SURVEY 81 (July 2001): 30–36. For capital flows, income, and services transactions, the estimates published here for 2000 are the first estimates published in detail by country and industry.

NOTE.—Jeffrey H. Lowe prepared this report.

### Data Availability

Estimates of the foreign direct investment position in the United States and of transactions between foreign parents and their U.S. affiliates that enter the U.S. international transactions accounts (balance of payments) are available on BEA's Web site. For estimates for 1997–2000 in downloadable spreadsheets (.xls format) and in downloadable ASCII files, and for estimates for 1980–1996 in downloadable ASCII files, go to <[www.bea.doc.gov](http://www.bea.doc.gov)>, see "International," click on "Balance of payments and related data," and then under "Foreign direct investment in the United States," click on "Balance of Payments and Direct Investment Position Data."

---

2. A U.S. affiliate is a U.S. business enterprise in which a single foreign investor owns at least 10 percent of the voting securities, or the equivalent.

3. See Harlan W. King, "The International Investment Position of the United States at Yearend 2000," SURVEY 81 (July 2001): 7–15; and Douglas B. Weinberg, "U.S. International Transactions, First Quarter 2001," SURVEY 81 (July 2001): 37–81, which includes annual estimates for 1969–2000.

### Acknowledgments

The survey from which the data for the foreign direct investment position in the United States and the related capital and income flows were drawn was conducted under the supervision of Gregory G. Fouch, assisted by Peter J. Fox, Michelle L. Granson, Y. Louise Ku-Graf, Tracy K. Leigh, Beverly E. Palmer, and Christine L. Perrone. Computer programming for data estimation and tabulation was provided by Karen E. Poffel, assisted by Neeta B. Kapoor.

### Technical Note

The estimates for 1997–2000 of the foreign direct investment position at yearend and the estimates of capital flows, income, and services transactions presented here incorporate the results of BEA's 1997 benchmark survey of foreign direct investment in the United States (FDIUS); the previous benchmark survey covered 1992. The revisions to the estimates for 1998 forward also reflect the incorporation of new or revised data from BEA's quarterly and annual surveys of FDIUS.

Benchmark surveys are normally conducted every 5 years and cover virtually the entire universe of U.S. affiliates of foreign direct investors in terms of value.<sup>4</sup> In the 1997 survey, reports were required from all affiliates that had total assets, sales, or net income (or loss) greater than \$3 million in their 1997 fiscal year. Affiliates that did not meet these criteria were exempt from reporting.<sup>5</sup>

In nonbenchmark years, the estimates of the direct investment position and balance of payments flows are derived from data reported quarterly by all foreign-owned U.S. businesses above a size-exemption level and from estimates for smaller affiliates. The quarterly survey collects data on existing affiliates, exiting affiliates, and affiliates that entered the direct investment universe since the most recent benchmark survey. The estimates for affiliates not reporting in the quarterly surveys are derived by extrapolating data from the benchmark survey or from the prior quarterly survey, using movements in the data for affiliates that reported in the current quarterly survey.

#### *Benchmarking the 1997 quarterly survey data*

The benchmarking procedure for 1997 consisted of a series of four steps that mainly compared the data reported in the quarterly sample survey of FDIUS with the data reported in the 1997 benchmark survey. First, for affiliates that reported in both surveys, the data from the quarterly surveys were reconciled with the data from the benchmark survey. Significant discrepancies were investigated and resolved, usually in favor of the benchmark survey data, which are generally considered more accurate because they are reported later than the quarterly survey data. Additionally, because the benchmark survey data are more comprehensive, they

4. For a detailed description of the methodology underlying FDIUS statistics, including basic concepts and definitions, see U.S. Bureau of Economic Analysis, *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* (Washington, DC: U.S. Government Printing Office, June 2001); see the inside back cover of this issue for order information. This methodology can also be found on BEA's Web site at <[www.bea.doc.gov/bea/mp.htm](http://www.bea.doc.gov/bea/mp.htm)>. Downloadable data tables in .xls and .pdf formats from the benchmark survey are available at <[www.bea.doc.gov/bea/di1fdiop.htm](http://www.bea.doc.gov/bea/di1fdiop.htm)>; click on "Comprehensive financial and operating data."

5. In contrast to the practice in past benchmark surveys, the results for this survey, as well as the estimates linked to it, include estimates for the affiliates that were exempt from reporting. These estimates were based on information supplied by the affiliates in their claims for exemption. The exempt affiliates accounted for less than 0.2 percent of the total assets, sales, and net income of all affiliates.

can be more thoroughly edited and cross-checked.

As part of this reconciliation process, the benchmark survey data were adjusted from a fiscal year basis to a calendar year basis—that is, from the basis on which the data were reported to the basis on which the U.S. international transactions accounts and the international investment position of the United States are compiled. For about three-fourths of the affiliates, the fiscal year coincided with the calendar year, so no adjustment was necessary.<sup>6</sup> For affiliates whose fiscal year did not coincide with the calendar year but that reported on both the quarterly survey and the benchmark survey, the sum of the quarterly survey data for the four quarters of the affiliate's 1997 fiscal year was reconciled with the fiscal year 1997 total reported in the benchmark survey. The calendar year estimates for these affiliates were derived as the sum of (1) the reconciled quarterly data for the quarters that were included in both fiscal and calendar year 1997 and (2) the data from the quarterly survey for the calendar quarters not covered by the benchmark survey.

Second, data for affiliates that, for some reason, did not report in the benchmark survey but did report (or whose data was estimated based on reports they previously filed) in the quarterly survey were added to the quarterly estimates.

Third, data were removed from the quarterly estimates for any affiliates that the benchmark survey indicated had either left the survey universe or been consolidated into other affiliates since the 1992 benchmark survey (and whose exit or consolidation had not already been captured by BEA's quarterly and annual surveys).

Fourth, the data for affiliates that reported in the benchmark survey (or whose data were estimated based on exemption claims from that survey) but did not report in the quarterly and annual surveys were added to the quarterly estimates. The procedure used for adding the data depended on the item being estimated. For equity capital flows, intercompany debt flows, interest, royalties and license fees, and charges for other services, the data from the benchmark survey for fiscal year 1997 were used as the estimates for calendar year 1997 and were distributed evenly among the four calendar quarters of the year. For earnings and related items, the fiscal year data from the benchmark survey were distributed among the four calendar quarters on the basis of the quarterly pattern of earnings for affiliates that were reported on both surveys—adjusted for outliers—within selected major industry sectors.

#### *Estimates for 1998 forward*

For 1998 forward, universe estimates of the direct investment position and balance of payments flows are

6. The fiscal year data for the direct investment position, capital flows, income, royalties and license fees, and charges for other services were published in *Foreign Direct Investment in the United States: Final Results*.

generally derived from (1) data reported in the quarterly surveys for a sample of the affiliates that also reported in the 1997 benchmark survey, (2) data reported in the quarterly surveys for affiliates that entered the direct investment universe since the 1997 benchmark survey and that met the reporting criteria for the quarterly survey, and (3) estimates for affiliates that did not report in the quarterly surveys.

Conceptually, the estimates of the direct investment position and the balance of payments flows cover the affiliate universe. To ensure coverage that is as complete as that in the 1997 benchmark survey, estimates are prepared for affiliates that reported in the benchmark survey (or whose data were estimated based on information filed on exemption claims from that survey) but that did not report in the quarterly surveys, either because they were exempt or because they should have reported but did not. The estimates for these affiliates are derived by extrapolating the data previously reported by or estimated for them—such as in the benchmark survey or in BEA's survey of U.S. businesses newly acquired or established by foreign direct investors—based on movements in the data reported in the subsequent quarters by a matched sample of affiliates. (External, publically available information is also used in preparing the estimates.) The universe estimates are derived by adding the estimates for these affiliates to the data for the affiliates that reported in the quarterly survey.

This procedure is applied to all data items except intercompany debt flows; the estimates of these flows are derived as the change in the sample data for the intercompany debt positions reported in the quarterly surveys, supplemented in some cases with data from the annual survey of FDIUS. Because intercompany debt flows are highly volatile and subject to large revisions, BEA is unable to include estimates of these flows for affiliates that do not report.

#### *Revisions to the estimates*

Reflecting a variety of procedures designed to keep the estimates between benchmark surveys up to date, the revisions to the estimates of the position were small for all of the years 1997–99. The previously published estimates had been kept up to date not only by incorporating data reported on the quarterly survey, but also by incorporating information from the annual survey of FDIUS and the survey of U.S. businesses newly acquired or established by foreign direct investors. In addition, estimates were made of the unreported equity capital flows of U.S. affiliates that were late or delinquent in filing their quarterly survey reports or that were exempt from reporting on the quarterly survey.<sup>7</sup> Finally, some

information, mainly for larger affiliates, from the benchmark survey had already been incorporated in previous revisions to the estimates.

*Revisions for 1997.*—Table A compares the revised estimates for 1997 with the estimates that were linked to the 1992 benchmark survey.

The direct investment position on a historical-cost basis was revised down \$8.0 billion, to \$681.8 billion. Capital inflows were revised down \$0.1 billion, to \$103.4 billion, and income was revised down \$0.4 billion, to \$39.9 billion. Net payments for royalties and license fees were revised down \$45 million, to \$3.8 billion, and net receipts for other services were revised up \$47 million, to \$1.2 billion. Except for the 4-percent upward revision in the net receipts for other services account, all these revisions are 1 percent or less. Some of the revisions for individual countries and industries were also larger than 1 percent.

*Revisions for 1998–2000.*—The position was revised down 2 percent for both 1998 and 1999. Capital inflows were revised down 4 percent for 1998, up 9 percent for 1999, and down 10 percent for 2000. For capital inflows, the revision for 1998 largely resulted from a downward revision to net equity capital inflows. The revision for 1999 resulted from upward revisions to intercompany debt inflows and net equity capital inflows. The revision for 2000 mainly resulted from a downward revision to intercompany debt inflows. Income was revised down 1 percent for 1998 and 2 percent for 1999, and it was revised up less than 1 percent for 2000; the revisions were largely to earnings.

#### *Classification by industry*

The revised annual estimates of the foreign direct investment position and capital flows, income, and services transactions for 1997 forward—and the quarterly estimates of capital flows, income, and services transactions that underlie these annual estimates—are classified by industry on the basis of classifications derived from the 1987 Standard Industrial Classification (SIC). Work is underway to reclassify these estimates on the basis of the 1997 North American Industry Classification System (NAICS). When that work is completed, the by-industry estimates of the position, capital flows, income, and services transactions for FDIUS for 1997 forward will be presented on a NAICS basis.<sup>8</sup>

8. Data from the 1997 benchmark survey were the first data for FDIUS to be classified on a NAICS basis. Estimates for 1998 forward from the survey of U.S. businesses newly acquired or established by foreign direct investors and from the annual survey of FDIUS are also based on NAICS.

7. For information on the estimates of unreported equity capital flows, see "U.S. International Transactions, First Quarter 1992 and Revised Estimates for 1976–91," SURVEY 72 (June 1992): 75–76 and "U.S. International Transactions, Revised Estimates for 1983–92," SURVEY 73 (June 1993): 61.

**General Notes to the Tables**

- Detail may not add to totals, because of rounding.
- An asterisk “(\*)” indicates a value between –\$500,000 and \$500,000.
- A “(D)” indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (15) comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom.
- OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

1. On a historical-cost basis, direct investment income excludes capital gains and losses and is computed without a current-cost adjustment to earnings; it equals the sum of lines 9 and 14 of table 2. The rate of return based on historical cost equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures shown in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest. However, it differs from the measure disaggregated by country and industry in subsequent tables, which is recorded net (after deduction) of withholding taxes, because withholding tax data are not available by country or industry.

2. On a current-cost basis, direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings; the latter adjusts depreciation, depletion, and expensed exploration and development costs to reflect current-period prices, and to more closely

align income earned in a given period with charges against income in the same period, as required for the national and international economic accounts. Income on a current-cost basis equals line 1 of table 2. The rate of return based on current cost equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

3. On a market-value basis, direct investment income measures financial return to investors; thus, it includes capital gains and losses of the affiliate but excludes the current-cost adjustment, which is an economic accounting adjustment, and currency translation adjustments. It is derived as line 1 minus line 8 of table 2, plus the part of the total in column 11 of table 5 that represents capital gains and losses other than currency translation adjustments. The rate of return based on market value equals this measure of income divided by the average of the beginning- and end-of-year direct investment positions at market value.

1. Withholding taxes on "other" services transactions between U.S. affiliates and their foreign parent groups are assumed to be negligible, and no estimates of them are made. Therefore, there is no difference between the before-tax estimates shown in the international transactions accounts and the after-tax estimates shown in the following tables.

NOTE.—This table reconciles the estimates for which country and industry detail are presented in this report with the aggregate estimates presented in the U.S. international transactions accounts in the July 2001 SURVEY OF CURRENT BUSINESS (see "U.S. International Transactions, First Quarter 2001," SURVEY 81 (July 2001): 37-81). In the international transactions accounts, the earnings component of direct investment income and the reinvested earnings component of capital inflows are adjusted to a current-cost basis, and direct investment current-account items are adjusted to be gross (before deduction) of U.S. and foreign withholding taxes. These adjustments are not made to the estimates in tables 3-18 in this report, because the source data needed to make the adjustments by country and industry are not available.

1. An increase in U.S. affiliates' receivables is a decrease in intercompany debt and, thus, a capital outflow.

NOTE.—In this table, unlike in the international transactions accounts, reinvested earnings are shown without a current-cost adjustment.

**Table 6.—Foreign Direct Investment in the United States: Earnings and Reinvestment Ratios**

(Millions of dollars or ratio)

1. Reinvested earnings divided by earnings.

2. Reinvested ratio is not defined because reinvested earnings are negative.

NOTE.—In this table, distributed earnings are shown before deduction of withholding taxes. Unlike in the international transaction accounts, reinvested earnings are shown without a current-cost adjustment.

1. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals. In 2000, U.S. affiliates' payments for service charges were \$11,274 million, payments of rentals for the use of tangible property were \$1,038 million, and payments of film and television tape rentals were \$8 million; U.S. affiliates' receipts were \$11,698 million, \$311 million, and \$14 million, respectively.

Note.—In this table, unlike in the international transactions accounts, royalties and license fees and charges for other services are shown net of withholding taxes.

1. The data reflect a discontinuity between 1993 and 1994 due to the reclassification from direct investment to other investment accounts of intercompany debt flows and associated income payments between parent companies and affiliates that are nondepository financial intermediaries.

2. Data for 1997 forward are now based on the 1997 Benchmark Survey; previously, they were based on the 1992 Benchmark Survey.

3. Consists of service charges, rental for the use of tangible property, and film and television tape rentals.

Note.—In this table, unlike in the international transactions accounts, income, royalties and license fees, and charges for other services are shown net of withholding taxes, and capital inflows, reinvested earnings, and income are shown without a current-cost adjustment.

1. The ultimate beneficial owner is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The country of ultimate beneficial owner is often the same as that of the foreign parent, but it may be a different foreign country or

the United States.

Note.—In this table, unlike in the international transactions accounts, income is shown net of withholding taxes and without a current-cost adjustment.

## U.S. Direct Investment Abroad

### Detail for Historical-Cost Position and Related Capital and Income Flows, 2000

THE following tables present detailed estimates of the U.S. direct investment position abroad on a historical-cost, or book-value, basis and estimates of the related capital and income flows; summary estimates of services transactions are also presented. These estimates can be used, for example, to see how the geographic and the industrial composition of U.S. companies' investment abroad has changed over time. These estimates supplement the estimates presented in articles in the July 2001 SURVEY OF CURRENT BUSINESS that summarized the developments in the direct investment positions at historical cost in 2000 and the revisions to the international transactions accounts.<sup>1</sup>

The estimates in tables 3–18 differ in two respects from those for comparable items in the international investment position of the United States and in the U.S.

international transactions accounts.<sup>2</sup> First, these estimates are on a historical-cost basis, the only basis on which detailed estimates by country and by industry are available; in contrast, the aggregate estimates of the direct investment position that are included in the international investment position are presented on both a current-cost and a market-value basis, and the aggregate estimates of direct investment income (recorded in the current account) and capital flows (recorded in the financial account) in the U.S. international transactions accounts are presented on a current-cost basis. Second, the estimates of direct investment income and services in these tables, unlike those in the U.S. international transactions accounts, are net (after deduction) of U.S. and foreign withholding taxes; estimates that are gross of withholding taxes are not available by country or by industry.

Table 1 presents the total U.S. direct investment position abroad and a comparable rate of return on the position on all three valuation bases (historical cost, current cost, and market value); table 2 presents a reconciliation of the estimates in tables 3–18 with those in the U.S. international transactions accounts.

1. See Maria Borga and Raymond J. Mataloni, Jr., "Direct Investment Positions for 2000: Country and Industry Detail," SURVEY 81 (July 2001): 16–29 and Christopher L. Bach, "U.S. International Transactions: Revised Estimates for 1989–2000," SURVEY 81 (July 2001): 30–36. For capital flows, income, and services transactions, the estimates published here for 2000 are the first estimates published in detail by country and industry.

2. See Harlan W. King, "The International Investment Position of the United States at Yearend 2000," SURVEY 81 (July 2001): 7–15; and Douglas B. Weinberg, "U.S. International Transactions, First Quarter 2001," SURVEY 81 (July 2001): 37–81, which includes annual estimates for 1969–2000.

NOTE.—Jeffrey H. Lowe prepared this report.

#### Data Availability

Estimates of the U.S. direct investment position abroad and of transactions between U.S. parents and their foreign affiliates that enter the U.S. international transactions accounts (balance of payments) are available on BEA's Web site. For estimates for 1998–2000 in downloadable spreadsheets (.xls format) and in downloadable ASCII files and for estimates for 1982–97 in downloadable ASCII files, go to <www.bea.doc.gov>, see "International," click on "Balance of payments and related data," and then under "U.S. direct investment abroad," click on "Balance of Payments and Direct Investment Position Data."

Tables 1–18 follow. 

#### Acknowledgments

The survey from which the data for the U.S. direct investment position abroad and the related capital and income flows were drawn was conducted under the supervision of Mark W. New, assisted by Howard S. Chenkin, Jennifer C. Chilzer, Laura A. Downey, Javier J. Hodge, Marie K. Laddomada, Sherry Lee, Leila C. Morrison, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo.

**General Notes to the Tables**

- Detail may not add to totals, because of rounding.
- An asterisk “(\*)” indicates a value between -\$500,000 and \$500,000.
- A “(D)” indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The country category “International” consists of affiliates that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, or offshore oil and gas drilling.
- “Eastern Europe” comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia,

- Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.
- The European Union (15) comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom.
  - OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela.

1. On a historical-cost basis, direct investment income excludes capital gains and losses and is computed without a current-cost adjustment to earnings; it equals the sum of lines 9 and 14 of table 2. The rate of return based on historical cost equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures shown in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest. However, it differs from the measure disaggregated by country and industry in subsequent tables, which is recorded net (after deduction) of withholding taxes, because withholding tax data are not available by country or industry.

2. On a current-cost basis, direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings; the latter adjusts depreciation, depletion, and

expensed exploration and development costs to reflect current-period prices, and to more closely align income earned in a given period with charges against income in the same period, as required for the national and international economic accounts. Income on a current-cost basis equals line 1 of table 2. The rate of return based on current cost equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

3. On a market-value basis, direct investment income measures financial return to investors; thus, it includes capital gains and losses of the affiliate but excludes the current-cost adjustment, which is an economic accounting adjustment, and currency translation adjustments. It is derived as line 1 minus line 8 of table 2, plus the total in column 12 of table 5. The rate of return based on market value equals this measure of income divided by the average of the beginning- and end-of-year direct investment positions at market value.

1. Withholding taxes on "other" services transactions between U.S. parents and their foreign affiliates are assumed to be negligible, and no estimates of them are made. Therefore, there is no difference between the before-tax estimates shown in the international transactions accounts and the after-tax estimates shown in the following tables.

NOTE.—This table reconciles the estimates for which country and industry detail are presented in this report with the aggregate estimates presented in the U.S. international transactions accounts in the July 2001 SURVEY OF CURRENT BUSINESS (see "U.S. International Transactions, First Quarter 2001," SURVEY 81 (July 2001): 37-81). In the international transactions accounts, the earnings component of direct investment income and the reinvested earnings component of capital outflows are adjusted to a current-cost basis, and direct investment current-account items are adjusted to be gross (before deduction) of U.S. and foreign withholding taxes. These adjustments are not made to the estimates in tables 3-18 in this report, because the source data needed to make the adjustments by country and industry are not available.

IT International transactions

1. An increase in U.S. parents' payables is a decrease in intercompany debt, and, thus, a capital inflow.

2. Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.

NOTE.—In this table, unlike in the international transactions accounts, reinvested earnings are shown without a current-cost adjustment.

**Table 6.—U.S. Direct Investment Abroad: Earnings and Reinvestment Ratios**

1. Reinvested earnings divided by earnings.

2. Reinvestment ratio is not defined because reinvested earnings are negative.

NOTE.—In this table, distributed earnings are shown before deduction of withholding taxes. Unlike in the international transactions accounts, earnings and reinvested earnings are shown without a current-cost adjustment.

1. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals. In 2000, U.S. parents' receipts of service charges were \$15,660 million, receipts of rentals for the use of tangible property were \$1,522 million, and receipts of film and television tape rentals were \$2,421 million; U.S. parents' payments were \$12,933 million, \$4 million, and \$4 million, respectively.  
 NOTE.—In this table, unlike in the international transactions accounts, royalties and license fees and charges for other services are shown net of withholding taxes.

1. The data for direct investment position, capital outflows, and income reflect a discontinuity between 1993 and 1994 due to the reclassification from direct investment to other investment accounts of intercompany debt flows and associated income payments between parent companies and affiliates that are nondepository financial intermediaries. There is no discontinuity in royalties and license fees and in charges for other services.

2. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals.  
 NOTE.—In this table, unlike in the international transactions accounts, income, royalties and license fees, and charges for other services are shown net of withholding taxes, and capital outflows, reinvested earnings, and income are shown without a current-cost adjustment.

NOTE.—In this table, unlike in the international transactions accounts, income is shown net of withholding taxes and without a current-cost adjustment.

# BEA CURRENT AND HISTORICAL DATA

## National, International, and Regional Data

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on three Web

sites. BEA's Web site at <[www.bea.doc.gov](http://www.bea.doc.gov)> contains data, articles, and news releases from the national, industry, international, and regional programs. The Federal Statistical Briefing Room (FSBR) on the White House Web site at <[www.whitehouse.gov/fsbr/esbr.html](http://www.whitehouse.gov/fsbr/esbr.html)> provides key economic statistics, including gross domestic product. The Commerce Department's STAT-USA Web site at <[www.stat-usa.gov](http://www.stat-usa.gov)> provides detailed databases and news releases from BEA and from other Federal Government agencies by subscription.

The tables present annual [A], quarterly [Q], and monthly [M] data

### National Data

#### A. Selected NIPA tables [A, Q]

S. Summary tables.....	D-2
1. National product and income .....	D-3
2. Personal income and outlays .....	D-7
3. Government current receipts and expenditures...	D-8
4. Foreign transactions.....	D-12
5. Saving and investment .....	D-14
6. Income and employment by industry.....	D-17
7. Quantity and price indexes.....	D-18
8. Supplemental tables .....	D-25

#### B. Other NIPA and NIPA-related tables

B.1 Personal income [A, M] .....	D-30
B.2 Disposition of personal income [A, M] .....	D-30
B.3 Gross domestic product by industry [A].....	D-31
B.4 Personal consumption expenditures by type [A] .....	D-32
B.5 Private fixed investment in structures by type [A].....	D-33
B.6 Private fixed investment in equipment and software by type [A].....	D-33
B.7 Consumption and wage and salary accruals by industry [A].....	D-34
B.8 Employment by industry [A].....	D-35
B.9 Wage and salary accruals by employee and by industry [A].....	D-36
B.10 Farm sector output, gross product, and national income [A].....	D-37
B.11 Housing sector output, gross product, and national income [A].....	D-37
B.12 Net stock of private fixed assets by type [A] .....	D-38

#### C. Historical measures

C.1 GDP and other major NIPA aggregates .....	D-39
-----------------------------------------------	------

#### D. Domestic perspectives [A, Q, M].....

#### E. Charts

Selected NIPA series.....	D-44
Other indicators of the domestic economy .....	D-50

### International Data

#### F. Transactions tables

F.1 U.S. international transactions in goods and services [A, M] .....	D-52
F.2 U.S. international transactions [A, Q].....	D-53
F.3 U.S. international transactions by area [Q].....	D-54
F.4 Private services transactions [A] .....	D-57

#### G. Investment tables [A]

G.1 U.S. international investment position .....	D-58
G.2 USDIA: Selected items .....	D-59
G.3 Selected financial and operating data of foreign affiliates of U.S. companies .....	D-60
G.4 FDIUS: Selected items .....	D-61
G.5 Selected financial and operating data of U.S. affiliates of foreign companies .....	D-62

#### H. International perspectives [A, Q, M] .....

#### I. Charts

The United States in the international economy .....	D-64

### Regional Data

#### J. State and regional tables

J.1 Personal income [Q] .....	D-65
J.2 Personal income and per capita personal income [A].....	D-66
J.3 Disposable personal income and per capita disposable personal income [A] .....	D-67
J.4 Gross state product [A].....	D-68

#### K. Local area table

K.1 Personal income and per capita personal income by metropolitan area [A] .....	D-69
--------------------------------------------------------------------------------------	------

#### L. Charts

Selected regional estimates.....	D-71
----------------------------------	------

### Appendixes

#### A: Additional information about the NIPA estimates

Statistical conventions.....	D-73
Reconciliation tables [A, Q].....	D-74

#### B: Suggested reading .....

D-75

# National Data

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on August 29, 2001, and include the “preliminary” estimates for the second quarter of 2001.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly; in most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the “Selected NIPA Tables” are available later that day, on BEA’s Web site <[www.bea.doc.gov](http://www.bea.doc.gov)> and on STAT-USA’s Web site <[www.stat-usa.gov](http://www.stat-usa.gov)>.

The “Selected NIPA Tables” are also available on printouts or diskettes from BEA. To order NIPA subscription products, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666)

## S. Summary Tables

**Table S.1.—Summary of Percent Change From Preceding Period in Real Gross Domestic Product and Related Measures**

	[Percent]						
	1999	2000	Seasonally adjusted at annual rates				
			2000			2001

State and local.....	994.7	1,026.3	1,020.1	1,027.6	1,034.3	1,050.5	1,069.3
Residual.....	.1	-4.4	-8.6	-6.0	-3.3	5.2	14.2

NOTE.— Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Chain-type quantity indexes for the series in this table are shown in table 7.1.

1. Estimates for durable goods and nondurable goods for 1997 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

NOTE.— Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Percent changes from preceding period for gross domestic product and for final sales of domestic product are shown in table 8.1.

Chain-type quantity indexes for the series in this table are shown in table 7.17.

**Table 1.5.—Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers**

State and local .....	653.5	669.0	667.1	670.9	674.3	679.0	683.6
Residual .....	-1.6	-6.9	-6.2	-8.0	-8.7	-7.2	-3.5

1. Equals gross domestic product less gross product of households and institutions and of general government.

2. Equals gross domestic business product less gross farm product.

3. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8.

NOTE.— Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.14.

<b>Equals: Command-basis gross national product</b>	<b>8,898.0</b>	<b>9,236.3</b>	<b>9,243.1</b>	<b>9,263.6</b>	<b>9,328.6</b>	<b>9,354.7</b>	<b>9,365.4</b>
<b>Addendum:</b>							
Terms of trade <sup>2</sup>	103.3	101.3	101.7	101.1	101.1	101.7	102.8

1. Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.

2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Percent changes from preceding period for gross national product are shown in table 8.1.

Chain-type quantity indexes for the series in this table are shown in table 7.3.

1. Effective with the estimates scheduled for release on November 30, 2001, chained-dollar gross product of nonfinancial corporate business for 1998 to 2001 will be revised to reflect revisions to the gross product price indexes for nonfinancial industries.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Energy goods and services ..	283.4	286.4	286.7	287.2	294.4	292.2	284.2
Personal consumption expenditures less food and energy .....	4,836.3	5,089.0	5,056.9	5,117.9	5,159.2	5,208.4	5,257.3

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE.— Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.4.

Contributions to the percent change in real personal consumption expenditures are shown in table 8.3.

## 3. Government Current Receipts and Expenditures

Federal	221.8	233.4	236.4	233.8	231.5	237.6	238.8
State and local	634.0	670.7	667.3	674.7	680.9	689.5	699.7

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

See footnotes to table 3.7.  
Chain-type quantity indexes for the series in this table are shown in table 7.11.  
Contributions to percent change in real government consumption expenditures and gross investment are shown in table 8.6.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Chain-type quantity indexes for the series in this table are shown in table 7.9.

\* Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.10.

Contributions to the percent change in real exports and in real imports of goods and services are shown in table 8.5.

See footnotes to table 4.3.

Residual .....	-45.8	-93.5	-89.1	-102.4	-110.8	-105.0	-86.3

1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component; accurate estimates of these contributions are shown in table 8.4.

2. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table are shown in table 7.6.

Contributions to the percent change in real private fixed investment are shown in table 8.4.

Nonmerchant wholesale trade.....	1.8	4.4	3.9	6.2	3.5	-4	.1

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE.— Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE.— Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (1996) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures.....	3.62	3.63	3.67	3.53	3.47

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

NOTE.— Estimates in this table are based on the North American Industry Classification System (NAICS).

Nonfarm inventories to final sales of goods and structures.....	3.72	3.72	3.75	3.68	3.67

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas, the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

NOTE.— Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (1996) dollar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equals the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-of-year chain-weighted and fixed-weighted inventories are equal. Chained (1996) dollar final sales are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

1. Equals gross domestic product less gross product of households and institutions and of general government.

2. Equals gross domestic business product less gross farm product.

3. Equals compensation of general government employees plus general government consumption of fixed capital.

Motor vehicle output .....	.43	-.03	-.07	-.51	-.77	-.59	.71
Final sales of computers <sup>2</sup> .....	.36	.45	.55	.37	.30	.10	-.30

1. Excludes software "embedded," or bundled, in computers and other equipment.

2. For some components of final sales of computers, includes computer parts.

NOTE.—The quantity indexes on which the estimates in this table are based are shown in tables 7.1, 7.2, 7.4, 7.6, 7.9, 7.11, and 7.17.

Table 8.3.—Contributions to Percent Change in Real Personal Consumption Expenditures by Major Type of Product

	1999	2000	Seasonally adjusted at annual rates				
			2000			2001	
			II	III	IV	I	II
<b>Percent change at annual rate:</b>

<b>Addenda:</b>							
Energy goods and services .....	.10	.05	.61	.03	.49	-.15	-.56
Personal consumption expenditures less food and energy .....	4.40	4.23	2.29	3.96	2.64	3.11	3.05

1. Consists of gasoline, fuel oil, and other energy goods, and of electricity and gas.

NOTE.—The quantity indexes on which the estimates in this table are based are shown in table 7.4. The estimates in this table differ from those in table 8.2 because this table shows contributions to real personal consumption expenditures, whereas table 8.2 shows contributions to real gross domestic product.

**Table 8.4.—Contributions to Percent Change in Real Private Fixed Investment by Type**

<b>Imports of services<sup>1</sup>.....</b>	<b>.18</b>	<b>1.94</b>	<b>1.94</b>	<b>2.53</b>	<b>.01</b>	<b>.74</b>	<b>.55</b>

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment were reclassified from goods to services.

NOTE.—The quantity indexes on which the estimates in this table are based are shown in table 7.10. The estimates in this table differ from those in table 8.2 because this table shows contributions to real exports and to real imports, whereas table 8.2 shows contributions to real gross domestic product. Because imports are subtracted in the calculation of gross domestic product, the contributions of components of real imports have opposite signs in this table and in table 8.2.

**Table 8.6.—Contributions to Percent Change in Real Government Consumption Expenditures and Gross Investment by Type**

Equipment and software.....	.36	.25	.31	.25	.20	-.02	-.10

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new own-account investment and related expenditures for goods and services are classified as investment in structures and in software.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—The quantity indexes on which the estimates in this table are based are shown in table 7.11. The estimates in this table differ from those in table 8.2 because this table shows contributions to real government consumption expenditures and gross investment, whereas table 8.2 shows contributions to real gross domestic product.

Sales of imported new autos <sup>3</sup> .....	79.9	85.5	85.5	84.7	85.4	82.3	85.7

1. Except for exports and imports, consists of new trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

1. Except for exports and imports, consists of new trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table are shown in table 7.18B.

<sup>p</sup>Preliminary.<sup>r</sup>Revised.

1. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

2. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of

the following month; the annual estimate is the average of the monthly estimates. Prior to January 2001, first-of-the-month estimates are from Census Bureau surveys and are consistent with the 1990 Census of Population. Beginning with January 2001, first-of-the-month estimates are derived by BEA based on extrapolations of the Census Bureau estimates.

Source: U.S. Bureau of Economic Analysis.

## Annual Estimates

Except as noted for table B.3 below and for table B.12, these tables are derived from the NIPA tables that were published in the August 2001 SURVEY OF CURRENT BUSINESS; they are consistent with the most recent comprehensive and annual revisions.

1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income—that is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1996) dollar statistical discrepancy equals the current-dollar statistical discrepancy deflated by the implicit price deflator for gross domestic business product.

2. Equals GDP in chained (1996) dollars less the statistical discrepancy and the sum of GDP by industry of

the detailed industries. The value of not allocated by industry reflects the nonadditivity of chained-dollar estimates and the differences in source data used to estimate real GDP by industry and the expenditures measure of real GDP.

NOTE.—Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 1 and 6 in "Gross Domestic Product by Industry for 1997–99" in the December 2000 Survey.

1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.  
 2. Includes luggage.  
 3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.  
 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.  
 5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.  
 6. Consists of transient hotels, motels, clubs, schools, and other group housing.  
 7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.  
 8. Includes such household furnishings as floor coverings, comforters, quilts, blankets, pillows, picture frames, mirrors, art products, portable lamps, and clocks. Also includes writing equipment and hand, power, and garden tools.  
 9. Consists largely of textile household furnishings, including piece goods allocated to household use. Also includes lamp shades, brooms, and brushes.  
 10. Consists of maintenance services for appliances and household furnishings, moving and warehouse expenses, postage and express charges, premiums for fire and theft insurance on personal property less benefits and dividends, and miscellaneous household operation services.  
 11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.  
 12. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others providing health and allied services, not elsewhere classified.  
 13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.  
 14. Consists of (1) premiums, less benefits and dividends, for health, hospitalization, and accidental death and dismemberment insurance provided by commercial insurance carriers, and (2) administrative expenses (including consumption of fixed capital) of nonprofit and self-insured health plans.  
 15. Consists of premiums, less benefits and dividends, for income loss insurance.  
 16. Consists of premiums, less benefits and dividends, for privately administered workers' compensation.  
 17. Consists of (1) operating expenses of commercial life insurance carriers, (2) administrative expenses of private noninsured pension plans and publicly administered government employee retirement plans, and (3) premiums, less benefits and dividends, of fraternal benefit societies. For commercial life insurance carriers,

excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies. For pension and retirement plans, excludes services furnished without payment by banks, credit agencies, and investment companies.  
 18. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.  
 19. Consists of premiums, less benefits and dividends, for motor vehicle insurance.  
 20. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.  
 21. Consists of admissions to professional and amateur athletic events and to racetracks.  
 22. Consists of dues and fees excluding insurance premiums.  
 23. Consists of billiard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; sightseeing buses and guides; private flying operations; casino gambling; and other commercial participant amusements.  
 24. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.  
 25. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants.  
 26. For government institutions, equals student payments of tuition.  
 27. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.  
 28. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, social welfare, foreign relief, and political organizations, museums, libraries, and foundations. The expenditures are net of receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.  
 29. Beginning with 1981, includes U.S. students' expenditures abroad; these expenditures were \$0.3 billion in 1981.  
 30. Beginning with 1981, includes nonresidents' student and medical care expenditures in the United States;

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.

2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.

3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.

5. Consists primarily of dormitories and of fraternity and sorority houses.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Includes new computers and peripheral equipment only. Because of rapid changes in relative prices, the chained-dollar estimates for computers are especially misleading as a measure of the contribution or relative importance of this component.

2. Excludes software "embedded," or bundled, in computers and other equipment.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

n.e.c. Not elsewhere classified.

1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.

2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air.

3. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.

4. Includes Coast Guard.

5. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.  
 2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air.  
 3. Consists of museums, botanical and zoological gardens; engineering and management services; and

services, not elsewhere classified.  
 4. Includes Coast Guard.  
 5. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

Net interest .....	316.2	338.6	376.0	.....	.....	.....

1. Equals personal consumption expenditures for housing less expenditures for other housing as shown in table B.4.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

“Table B.12.—Net Stock of Private Fixed Assets; Equipment, Software, and Structure; by Type” is not published in the issue. For the annual revision of these estimates, see “Fixed Assets and Consumer Durable Goods for 1925–2000” in this issue.

## C. Historical Measures

This table is derived from the "GDP and Other Major NIPA Series" tables that were published in the August 2001 issue of the SURVEY OF CURRENT BUSINESS and from the "Selected NIPA Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1.—GDP and Other Major NIPA Aggregates

[Quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	Billions of chained (1996) dollars			Percent change from preceding period		Chain-type price indexes		Implicit price deflators		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product	Gross domestic product	Final sales of domestic product	Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price index		Implicit price deflators

<sup>p</sup> Preliminary.

<sup>r</sup> Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

<sup>P</sup> Preliminary.

1. Credits, +; Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital accounts transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis;

see table 2 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the SURVEY.

3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S

13. Conceptually, line 76 is equal to "net foreign investment" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table

2 in appendix A in this issue. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5B of the full set of NIPA tables published annually in the August issue of the Survey.

14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; small trans-

actions in business services that are not reported by country; and net U.S. currency flows, for which geographic source data are not available.

17. Details not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

NOTE.—The data in tables F.2 and F.3 are from tables 1 and 10 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the SURVEY.

<sup>P</sup> Preliminary.

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and inter-

national organizations in the United States and film and television tape rentals. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

NOTE.—The data in this table are from table 3 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the U.S. international transactions accounts.

# International Data

## F. Transactions Tables

Table F.1 includes the most recent estimates of U.S. international trade in goods and services; the estimates were released on August 17, 2001, and include "preliminary" estimates for June 2001 and "revised" estimates for May 2001. The sources for the other tables in this section are as noted.

**Table F.1—U.S. International Transactions in Goods and Services**

<sup>p</sup> Preliminary.

<sup>r</sup> Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

Source: U.S. Bureau of Economic Analysis and U.S. Bureau of the Census.

<sup>P</sup> Preliminary.

1. Credits, +; Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -; Imports of goods and services and income payments; unilateral current transfers to foreigners; capital accounts transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis;

see table 2 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the Survey.

3. Includes some goods:

13. Conceptually, line 76 is equal to "net foreign investment" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table

2 in appendix A in this issue. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5B of the full set of NIPA tables published annually in the August issue of the Survey.

14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; small trans-

actions in business services that are not reported by country; and net U.S. currency flows, for which geographic source data are not available.

17. Details not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

NOTE.—The data in tables F.2 and F.3 are from tables 1 and 10 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the SURVEY.

P Preliminary.

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and inter-

national organizations in the United States and film and television tape rentals. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

NOTE.—The data in this table are from table 3 in "U.S. International Transactions, First Quarter 2001" in the July 2001 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the U.S. international transactions accounts.

<sup>p</sup> Preliminary.<sup>r</sup> Revised.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

5. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

NOTE.—The data in this table are from table 1 in "The International Investment Position of the United States at Yearend 2000," in the July 2001 issue of the SURVEY OF CURRENT BUSINESS.

D Suppressed to avoid disclosure of data of individual companies.

1. The industry classification system used to classify the data for U.S. affiliates is based on the North American Industry Classification System. Prior to 1997, the affiliate data were classified using an industry classification system based on the Standard Industrial Classification system.

Notes.—The data in this table are from BEA's annual survey of the operations of U.S. affiliates of foreign

companies; see "U.S. Affiliates of Foreign Companies: Operations in 1999," in the August 2001 issue of the SURVEY OF CURRENT BUSINESS.

Size ranges are given in employment cells that are suppressed. The size ranges are: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

## H. International Perspectives

Quarterly data in this table are shown in the middle month of the quarter.

1. All exchange rates are from the Board of Governors of the Federal Reserve System.

2. Rates for selected euro-area currencies can be derived from the euro rate by using the following conversion rates: 1 euro = 6.55957 French francs, 1.95583 German marks, and 1936.27 Italian lire.

3. The rate shown for the United States is an index of the weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of major U.S. trading partners, January 1997=100 and reflects revised trade weights. For more information on the exchange rate indexes, see "New Summary

Measures of the Foreign Exchange Value of the Dollar," *Federal Reserve Bulletin*, vol. 84 (October 1998), pp. 811-18.

NOTE.—U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. GDP growth rates for other countries are calculated from levels published by those countries. Most other data (including U.S. consumer prices and U.S. share prices, both of which have been rebased to 1995 to facilitate comparison) are © OECD and are reproduced with permission.

I. Charts

### THE U.S. IN THE INTERNATIONAL ECONOMY

## Regional Data

## J. State and Regional Tables

The tables in this section include the most recent estimates of State personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual State personal income estimates and the gross state product estimates are available on CD-ROM. For information on State personal income, e-mail [reis.remd@bea.doc.gov](mailto:reis.remd@bea.doc.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail [gspread@bea.doc.gov](mailto:gspread@bea.doc.gov); write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The 2000 per capita personal income estimates are based on the April 1, 2000 decennial census population counts as released by the Census Bureau on December 28, 2000. Per capita personal income estimates for 1991-99 are not shown because the Census Bureau has not yet published State population estimates for the intercensal years that are consistent with the decennial census counts.

2. Percent change was calculated from unrounded data.

NOTE.—The personal income level shown for the United States is derived as the sum of the

State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. The 2000 per capita disposable personal income estimates are based on the April 1, 2000 decennial census population counts as released by the Census Bureau on December 28, 2000. Per capita disposable personal income estimates for 1991-99 are not shown because the Census Bureau has not yet published State population estimates for the intercensal years that are consistent with the decennial census counts.

2. Percent change was calculated from unrounded data.

NOTE.—The personal income level shown for the United States is derived as the sum of the

State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

NOTE.—Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy. In addition, GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and

for military equipment, except office equipment. Also, GSP and GDP have different revision schedules.

Source: This table has been updated to reflect the GSP estimates for 1999, which were released on June 4, 2001. Detailed estimates are available on BEA's Web site at <www.bea.doc.gov> under "State and local area data."

K. Local Area Table

Table K.1.—Personal Income and Per Capita Personal Income by Metropolitan Area, 1997–99

### Additional Information About the NIPA Estimates

#### Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in “real GDP.”) For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997–98 uses prices for 1997 and 1998 as weights, and the 1997–98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula.<sup>1</sup> These annual changes are “chained” (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated “chained (1996) dollar estimates.” These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component

increased by 10 percent in 1997, then the “chained (1996) dollar” value of this component in 1997 would be \$110 ( $\$100 \times 1.10$ ). Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A “residual” line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2–8.6.

BEA also publishes the “implicit price deflator” (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding “chain-type” price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

*Percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100,$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_o$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and  $n$  is the number of periods between the earlier and later periods (that is,  $t - o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.

## Reconciliation Tables

**Table 1.—Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings**  
[Percent change from preceding period]

	1999	2000	Seasonally adjusted at annual rates					
			2000				2001	
			I	II	III	IV	I	II <sup>p</sup>
<b>BEA-derived compensation per hour of all persons in the nonfarm business sector (less housing)<sup>1</sup></b> .....	<b>4.4</b>	<b>6.1</b>	<b>6.2</b>	<b>7.6</b>	<b>7.1</b>	<b>8.9</b>	<b>5.1</b>	<b>4.6</b>

Plus: Contribution of wages and salaries per hour of persons in housing and in nonprofit institutions .....	0	-0.1	0.1	-0.3	-0.3	-0.6	-0.1	-0.1
Less: Contribution of wages and salaries per hour of persons in government enterprises, unpaid family workers, and self-employed .....	-0.1	-0.1	0.1	-0.1	-0.1	-0.3	0.1	-0.1
<b>Equals: BEA-derived wages and salaries per hour of all employees in the private nonfarm sector</b> .....	<b>4.7</b>	<b>6.4</b>	<b>6.4</b>	<b>7.7</b>	<b>7.2</b>	<b>9.0</b>	<b>5.2</b>	<b>4.7</b>
Less: Contribution of wages and salaries per hour of nonproduction workers in manufacturing .....	0.2	0	0.4	0.6	0.8	1.0	0.2	0.4
Less: Other differences <sup>2</sup> .....	0.9	2.5	1.8	3.3	2.7	3.0	1.0	0
<b>Equals: BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls</b> .....	<b>3.6</b>	<b>3.8</b>	<b>4.1</b>	<b>3.8</b>	<b>3.7</b>	<b>5.0</b>	<b>4.0</b>	<b>4.3</b>
<b>Addendum:</b> BLS estimates of compensation per hour in the nonfarm business sector <sup>3</sup> .....	4.4	6.1	6.2	7.6	7.1	8.9	5.1	4.7

<sup>p</sup> Preliminary.

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid family workers.

2. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also

include differences in seasonal adjustment procedures.

3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

BLS Bureau of Labor Statistics.

ITA's International transactions accounts

NIPA's National income and product accounts

## Appendix B

# Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, regional, and international accounts.

### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product), the estimates of wealth and related estimates, gross product by industry, the input-output accounts, and the satellite accounts.

**National income and product accounts (NIPAs).** This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

*An Introduction to National Economic Accounting* (1985) [also in the March 1985 SURVEY]

*Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends* (1985)

*Foreign Transactions* (1987) [A revised version is forthcoming.]

*GNP: An Overview of Source Data and Estimating Methods* (1987) [Most of the information in this paper has been superseded by "A Guide to the NIPAs" (March 1998 SURVEY).]

*Government Transactions* (1988)

*Personal Consumption Expenditures* (1990)

These methodologies have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs. The most recent revisions are described in the following SURVEY articles.

"A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts" Definitional and Classificational Changes (August 1999)

New and Redesigned Tables (September 1999)

Statistical Changes (October 1999)

"Improved Estimates of the National Income and Product Accounts: Results of the Comprehensive Revision"

For 1959–98 (December 1999)

For 1929–99 (April 2000)

"Annual Revision of the U.S. National Income and Product Accounts" (August 2001)

"A Guide to the NIPAs" (March 1998) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPAs are presented, describes the statistical conventions that are used, and lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP).

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in *State Personal Income, 1929–97* (1999).

"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPAs.

"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998) evaluates these estimates by examining the record of revisions to them.

**Wealth and related estimates.** *Fixed Reproducible Tangible Wealth in the United States, 1925–94* (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

**Gross product by industry.** "Improved Estimates of

### Mission and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts are available on BEA's Web site at <[www.bea.doc.gov](http://www.bea.doc.gov)>. For information about the development and the implementation of the plan, see these SURVEY articles.

"Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)

"Mid-Decade Strategic Review of BEA's Economic Accounts: An Update" (April 1995)

"BEA's Mid-Decade Strategic Plan: A Progress Report" (June 1996)

Gross Product by Industry for 1947–98” (June 2000) describes the most recent comprehensive revision of these estimates.

“Gross Domestic Product by Industry for 1997–99” (December 2000) describes the most recent annual revision of these estimates.

**Input-output accounts.** “Benchmark Input-Output Accounts for the U.S. Economy, 1992” (November 1997) describes the preparation of the 1992 accounts and the concepts and methods that underlie the accounts.

“Annual Input-Output Accounts of the U.S. Economy” presents annual tables that update the 1992 benchmark accounts

For 1996 (January 2000)

For 1997 (January 2001)

**Satellite accounts.** These accounts extend the analytical capacity of the national accounts by focusing on one aspect of economic activity.

“Integrated Economic and Environmental Satellite Accounts” and “Accounting for Mineral Resources: Issues and BEA’s Initial Estimates” (April 1994)

“A Satellite Account for Research and Development” (November 1994)

“U.S. Transportation Satellite Accounts”

For 1992 (April 1998)

For 1996 (May 2000)

“U.S. Travel and Tourism Satellite Accounts”

For 1992 (July 1998)

For 1996 and 1997 (July 2000)

### International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

**International transactions accounts (ITA’s).** *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITA’s and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA’s.

“U.S. International Transactions, Revised Estimates” is a series of articles about the annual ITA revisions and the improvements in methodology; the latest article is published in the July 2001 SURVEY.

**Direct investment.** *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The “Methodology for U.S. Direct Investment Abroad,” which is also available in *U.S. Direct*

*Investment Abroad: 1994 Benchmark Survey, Final Results* (1998)

“A Guide to BEA Statistics on U.S. Multinational Companies,” which is also available in the March 1995 SURVEY

“A Guide to BEA Statistics on Foreign Direct Investment in the United States,” which is also available in the February 1990 SURVEY

In addition, the updated methodology for foreign direct investment in the United States is available in *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* (2001)

**International services.** *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

### Regional accounts

The regional accounts include estimates of personal income and gross state product.

**Personal income.** Estimates of personal income are prepared for States and for local areas.

“Comprehensive Revision of State Personal Income for 1969–99” (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM *State Personal Income, 1929–99*.

“Comprehensive Revision of Local Area Personal Income for 1969–98” (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM *Regional Economic Information System, 1969–99*.

**Gross state product.** “Comprehensive Revision of Gross State Product by Industry, 1977–94” (June 1997 SURVEY) summarizes the sources and the methods that are used to prepare the estimates. “Gross State Product by Industry, 1977–98” (October 2000) describes the most recent comprehensive revision of these estimates.

#### Availability

Most of the items listed here are available on our Web site at <[www.bea.doc.gov](http://www.bea.doc.gov)>; in particular, look under Methodologies. Our online *Catalog of Products* provides descriptions of both our printed and electronic publications. The *Catalog* also includes links to compressed files of our diskette products that can be downloaded for free.

For specific information about the availability of our most recently released estimates and products, see “Getting BEA’s Estimates” on the inside back cover.
