Articles

1. GDP and the Economy: Final Estimates for the Fourth Quarter of 2006

Real GDP increased 2.5 percent after increasing 2.0 percent, reflecting a downturn in imports and accelerations in consumer spending, exports, and Federal Government spending. Corporate profits decreased \$4.9 billion after increasing \$61.5 billion.

6. Defense Spending for Goods and Services Shipped Abroad (box)

Government Receipts and Expenditures: Estimates for the Fourth Quarter of 2006

Net government saving increased \$33.7 billion to –\$149.6 billion. Net Federal Government saving increased \$41.8 billion to –\$131.2 billion. Net state and local government saving decreased \$8.2 billion to –\$18.4 billion.

7. Government Receipts and Expenditures: Estimates for the Fourth Quarter of 2006

Net government saving increased \$33.7 billion to –\$149.6 billion. Net Federal Government saving increased \$41.8 billion to –\$131.2 billion. Net state and local government saving decreased \$8.2 billion to –\$18.4 billion.

10. Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2006

These estimates, including the estimates of inventories for manufacturing by stage of fabrication, have been updated.

13. U.S. International Transactions: Fourth Quarter of 2006

The U.S. current-account deficit decreased \$33.6 billion to \$195.8 billion, mainly reflecting a decrease in the deficit on goods. In the financial account, net financial inflows decreased \$65.1 billion to \$164.6 billion.

22. U.S. International Transactions in 2006

The U.S. current-account deficit increased \$65.1 billion to \$856.7 billion, reflecting an increase in the deficit on goods and a shift to a deficit on income. The surplus on services increased. In the financial account, net financial inflows decreased \$66.3 billion to \$719.1 billion.

74. State Personal Income: Fourth Quarter of 2006 and Annual Estimates for 2006

Personal income growth for the Nation was 1.2 percent in the fourth quarter of 2006. Growth accelerated in 18 states and decelerated in 25 states. In 2006, personal income growth for the Nation accelerated, increasing 6.3 percent after increasing 5.2 percent.

Upcoming in the Survey...

Annual Industry Accounts. Advance estimates for 2006 will be published in the May Survey.

Annual Revision of Local Area Personal Income. The estimates of personal income for states, counties, and metropolitan areas for 2003–2005 will also be published in the May Survey.

April 2007

<u>Director's Message</u>

This month's Survey of Current Business includes an easy-to-scan presentation of the "final" estimates of gross domestic product for the fourth quarter of 2006. A similar presentation of fourth-quarter government receipts and expenditures also appears.

Another article presents estimates of state personal income for the fourth quarter of 2006 and the year 2006, during which current-dollar personal income rose 6.3 percent, the highest since the current expansion began in December 2001. In 2005, personal income rose 5.2 percent.

Two articles on the current-account balance also appear in this issue. One presents estimates for the fourth quarter of 2006. The other details estimates for the year 2006, during which the current-account deficit rose to \$857 billion from \$792 billion in 2005.

All articles in this issue are available in the online version of the Survey, which is available at <www.bea.gov/scb/index.htm>. We launched an improved online version in November, in response to frequent requests by users for better search features on our Web site in general. This month, we added a new keyword search feature that allows users to search the Survey archive back to 1994. The new search feature complements other options that allow users to search by issue date and subject.

I'd like to also note that the Bureau of Economic Analysis (BEA) held a well-attended national economic accounts users conference this month. We hold these events periodically for various BEA accounts to receive feedback about our services and inform customers about important initiatives. We heard a lot of good ideas and, as always, will consider them carefully.

J. Steven Landefeld

Director, Bureau of Economic Analysis

iv April 2007

Taking Account...

BEA Economist Analyzes Statistical Discrepancy

Many users of the national income and product accounts (NIPAs) are familiar with the statistical discrepancy, the difference between gross domestic product (GDP) and gross domestic income (GDI). In theory, these measures should be identical. In practice, they differ because of measurement errors, which reflect less than perfect source data.

A working paper by Bruce T. Grimm, an economist at the Bureau of Economic Analysis (BEA), has found few GDP and GDI components that explain the discrepancy in the last 35 years or in major subperiods.

Many components of GDP and GDI have contributed to the statistical discrepancy over time. However, according to Grimm's analysis, it is not possible to identify specific components as contributing to the discrepancy or even whether the same components are contributing in different years or multiyear periods.

Grimm's study also found that statistically significant relationships tended to disappear if the most recent estimates were used in equations explaining the discrepancy.

Specifically, it appears that

improvements to the NIPA estimates in the 1999 and 2003 comprehensive benchmark revisions may have eliminated some previously existing explanatory relationships.

Thus, Grimm's analysis suggests that little can be done to consistently reduce the size of the statistical discrepancy.

Grimm's working paper, along with other papers, is available on the BEA Web site at <www.bea.gov/papers/working_papers.htm>.

BEA Enhances Survey Search Features

In keeping with BEA's goal of providing a high-quality Webbased publication, the Bureau has launched a new archival search feature for the SURVEY OF CURRENT BUSINESS.

The new feature allows people to search the publication's archive back to 1994 using keywords. Previously, people could only use keywords to search the entire BEA Web site. The new keyword search function complements existing search features, which allow searches via subject guides and also by date of publication.

The new keyword search feature relies on technology from Google and Vivisimo and goes beyond traditional Web site search techniques.

The search feature creates clusters of relevant items. People can then browse the results or even search within the clustered items.

The search function is available on the Survey home page at www.bea.gov/scb/index.htm>.

BEA's Web Site Satisfaction Scores Increase

BEA has boosted its customer satisfaction score in 2007. The Bureau's score according to the University of Michigan's American Satisfaction Index has risen to 72 from 68 in the first 3 months of this year.

The increase reflects recent efforts by the Bureau to enhance the Web site in key areas, notably navigation, look and feel, and functionality.

In February, BEA launched a redesigned Web site that made it it easier for users to access interactive data and find relevant information using various search features. An updated Survey format was also launched.

The Web site continues to offer a wide range of other features and tools, including an RSS feed and e-mail subscription service that make it easier for people to stay abreast of BEA releases.

Other improvements are currently in the works.

April 2007 1

GDP and the Economy

Final Estimates for the Fourth Quarter of 2006

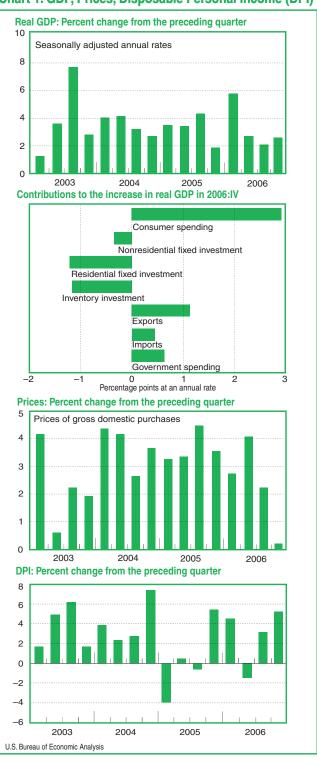

EQNOMIC growth accelerated in the fourth quarter of 2006, according to the "final" estimates of the national income and product accounts (NIPAs).¹ Real gross domestic product (GDP) increased 2.5 percent, revised up 0.3 percentage point from the "preliminary" estimate (chart 1 and table 1).² In the third quarter, it increased 2.0 percent. For 2006, real GDP grew 3.3 percent, compared with a 3.2-percent increase for 2005.

In the fourth quarter, the acceleration in real GDP growth primarily reflected a downturn in imports (subtracted in the derivation of GDP) and accelerations in consumer spending, exports, and Federal Government spending, which were moderated by downturns in investment in inventories and equipment and software investment and by a deceleration in nonresidential structures investment.³

- Prices of goods and services purchased by U.S. residents increased 0.2 percent, following a 2.2-percent increase. Energy prices turned down sharply.
- Real disposable personal income (DPI) increased 5.3 percent after increasing 3.2 percent. The acceleration reflected a downturn in the implicit price deflator used to adjust current-dollar DPI, which decelerated.
- Corporate profits decreased 0.3 percent at a quarterly rate after increasing 3.9 percent (page 4).
- Defense spending turned up. See the related box article on defense spending on page 6.
- Real gross national product increased 3.5 percent after increasing 1.8 percent. The fourth-quarter increase was 1.0 percentage point more than the increase in real GDP, reflecting an increase in net receipts of income from the rest of the world.

Christopher Swann prepared this article.

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

^{1.} Real estimates are in chained (2000) dollars, and price indexes are chain-type measures.

^{2.} Each GDP estimate for a quarter (advance, preliminary, and final) incorporates increasingly comprehensive and improved source data. More information can be found at <www.bea.gov/bea/about/infoqual.htm> and <www.bea.gov/bea/faq/national/gdp_accuracy.htm>. Quarterly estimates are expressed at seasonally adjusted annual rates, which show the value of an activity if the quarterly rate were maintained for a year.

^{3.} In this article, "consumer spending" refers to the NIPA series "personal consumption expenditures," "inventory investment" refers to "change in private inventories," "Federal Government spending" refers to "Federal Government consumption expenditures and gross investment," and "state and local government spending" refers to "state and local government consumption expenditures and gross investment."

Final sales of domestic product . Gross domestic purchases price index		5.6 2.7	2.1 4.0	1.9		5.61	2.11	1.90	3.62		
GDP price index		3.3	3.3	1.9	1.7						

^{1.} The estimates of GDP under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

Consumer spending accelerated, contributing 2.93 percentage points to real GDP growth after adding 1.96 percentage points. Durable goods turned down, reflecting a downturn in motor vehicles and parts. Nondurable goods accelerated; spending for food turned up. An acceleration in services reflected accelerations in spending for medical services and "other" services.

Nonresidential fixed investment turned down; investment in equipment and software turned down.

Residential fixed investment decreased for the fifth consecutive quarter and subtracted 1.21 percentage points from GDP growth.

Inventory investment turned down and subtracted 1.16 percentage points from GDP growth, reflecting a downturn in wholesale trade.

Exports accelerated, adding 1.14 percentage points to GDP growth after adding 0.73 percentage point.

Imports turned down, adding 0.45 percentage point to GDP growth after subtracting 0.93 percentage point. The downturn in goods imports reflected downturns in nonpetroleum industrial supplies and materials, in petroleum and products, and in nonautomotive capital goods. Services imports turned up.

Federal spending picked up; an upturn in defense spending added 0.55 percentage point to GDP growth.

Real final sales of domestic product (real GDP less inventory investment) increased 3.7 percent after increasing 1.9 percent.

GDP and Gross Domestic Purchases

In addition to gross domestic product (GDP), another related measure of economic growth—gross domestic purchases—is included in the national income and product accounts (NIPAs).

GDP measures the market value of final goods and services produced by labor and property in the United States, including the goods that are added to, or subtracted from, inventories. GDP is defined as the sum of consumer spending, business and residential investment, inventory investment, government spending, and exports less imports.

Gross domestic purchases is defined as GDP less exports plus imports. It measures domestic demand for goods and services regardless of their origin. Exports represent foreign demand for U.S. goods and services. Subtracting exports from GDP yields a measure of expenditures that focuses on domestic buyers. Imports can be viewed as the value of goods and services that exceed the domestic supply and that expand the consumption and investment alternatives for domestic purchasers.

Differences between GDP and gross domestic purchases reflect patterns in imports less exports: As imports exceed exports, gross domestic purchases exceeds GDP.

For annual and quarterly estimates of these measures, see NIPA tables 1.4.1 and 1.4.3–1.4.6.

For more information on GDP and gross domestic purchases, see also "A Guide to the National Income and Product Accounts of the United States" on BEA's Web site at www.bea.gov/bea/an/nipaguid.pdf>.

State and local	2.6	2.7	0.1	0.32	0.33	0.01		
Addenda:								
Final sales of domestic product	3.6	3.7	0.1	3.57	3.62	0.05		
Gross domestic purchases price index	0.2	0.2	0.0					
GDP price index	1.7	1.7	0.0					

^{1.} The estimates for GDP under the contribution columns are also percent changes.

The final estimate of real GDP growth in the fourth quarter was 2.5 percent, 0.3 percentage point more than the preliminary estimate. The upward revision to the percent change in real GDP primarily reflected an upward revision to inventory investment that was partly offset by a downward revision to equipment and software investment. For 1978–2005, the revisions, without regard to sign, averaged 0.3 percentage point from the preliminary to the final estimates.

The largest contributor to the downward revision to equipment and software investment was a downward revision to software, which reflected newly available data from the Census Bureau quarterly services survey.

The upward revision to inventory investment was mostly accounted for by a revision to retail motor vehicle inventories, reflecting a revised Bureau of Labor Statistics producer price index for light trucks for October.

Source Data for the Final Estimates

The final estimates of gross domestic product for the fourth quarter of 2006 incorporated the following source data.

Personal consumption expenditures: Retail sales for November and December (revised) and quarterly services survey for the fourth quarter (new).

Nonresidential fixed investment: Construction put in place for November and December (revised) and quarterly services survey for the fourth quarter (new).

Residential fixed investment: Construction put in place for November and December (revised) and Producer Price Index for October.

Change in private inventories: Manufacturers' and trade

inventories for December (revised) and Producer Price Index for October (revised).

Exports and imports of goods and services: International transactions accounts data for the third and fourth quarters (revised) and goods data for December (revised).

Government consumption expenditures and gross investment: State and local government construction put in place for November and December (revised).

GDP prices: Export and import prices for October, November, and December (revised), unit value index for petroleum imports for October, November, and December (revised), and prices of single-family houses under construction for the fourth quarter (revised).

Corporate Profits

Net cash flow	1,379.4	125.3	1.1	30.2	-1.1	10.2	0.1	2.2	-0.1	\

Corporate profits from current production decreased \$4.9 billion, or 0.3 percent, in the fourth quarter after increasing \$61.5 billion in the third quarter.

Profits of domestic financial corporations increased \$20.5 billion, or 4.3 percent, following a decrease of \$9.1 billion.

Profits of domestic nonfinancial corporations decreased \$62.6 billion, or 6.6 percent, after increasing \$75.8 billion.

Taxes on corporate income decreased \$14.4 billion, or 2.9 percent.

After-tax profits increased \$9.6 billion, or 0.8 percent.

Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) decreased \$11.5 billion, or 2.2 percent.

Net cash flow with inventory valuation and capital consumption adjustments (a profits-related measure of internally generated funds available for investment) decreased \$1.1 billion, or 0.1 percent.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. This measure is partly based on tax return

information from the Internal Revenue Service; BEA uses tax accounting measures as a source of information on profits for two reasons: They are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries. BEA also uses other sources of information to estimate pretax profits, including information from the Census Bureau.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging) and capital consumption allowances (tax return depreciation).

Note. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D. IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

Profits with inventory valuation adjustment increased \$4.4 billion, or 0.2 percent. This increase, in contrast to a \$4.9 billion decrease in profits from current production, reflects the capital consumption adjustment, which decreased \$9.3 billion.

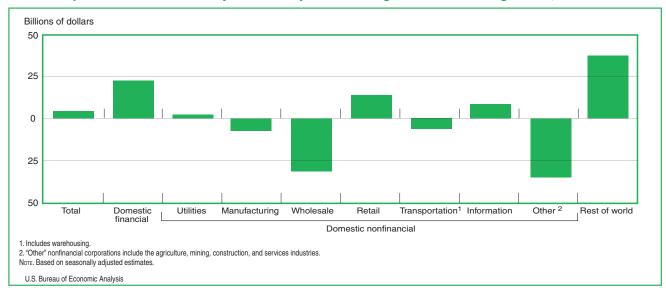

Profits of domestic industries turned down, decreasing \$32.8 billion, or 2.1 percent, although fourth-quarter profit levels were higher than those reported in the first two quarters of 2006.

Profits of domestic financial industries turned up, increasing \$22.6 billion, or 4.5 percent, after decreasing of \$8.1 billion.

Profits of domestic nonfinancial industries turned down, decreasing \$55.4 billion, or 5.1 percent, after increasing \$76.5 billion. The downturn primarily reflected downturns in wholesale trade and in manufacturing, a larger decrease in "other" nonfinancial industries, and a downturn in transportation and warehousing.

Rest-of-the-world profits turned up. Receipts increased \$19.2 billion, and payments decreased \$18.0 billion.

Chart 2. Corporate Profits With Inventory Valuation Adjustment: Change From the Preceding Quarter, 2006:IV

Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of prices on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAdj) for each indus-

try. However, estimates of the CCAdj are only available for two broad categories: Total financial industries and total nonfinancial industries. For more information about BEA's methodology, see "Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends" at <www.bea.gov/bea/mp_national.htm>.

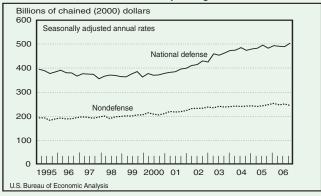

Defense Spending for Goods and Services Shipped Abroad

Defense spending has trended upward since 2001 (chart 1), though annual growth has moderated from a peak of 8.7 percent in 2003 to 1.9 percent in 2006. This article provides a quick overview of how defense expenditures are treated in the national income and product accounts.

In general, defense spending for goods and services purchased by the U.S. Government is considered government consumption or investment. Whether that spending affects gross domestic product (GDP) depends on where the goods and services are produced.

- Government spending for goods and services that are produced domestically and used by the U.S. military no matter where—are considered government consumption or investment, and GDP is directly affected. When the government purchases domestically produced goods or services—for example, a high-mobility multi-purpose wheeled vehicle (HMMWV or Hummer) built in Indiana for use by U.S. troops in Iraq—government investment and GDP increase by the amount of the purchase. In the case of investment goods that have long production times, the national accounts initially record the construction of the good as an increase in private work-inprogress inventories, which boosts GDP. When the final good is delivered to the government, the accounts record the full value of the good as government investment, and the change in private inventories is reduced by the cumulative value of work-in-progress up until delivery.
- Government spending for goods and services that are produced abroad but used by the U.S. military is considered government consumption or investment; however, the value of that spending is offset by an increase in imports of goods or services. Thus, there would be no effect on GDP. For example, the purchase of a howitzer produced by BAE Systems in the United Kingdom and shipped to Iraq for use by the U.S. military results in an increase in government investment and an offsetting increase in imports of capital goods. However, the howitzer becomes part of the Federal capital stock. And the consumption of fixed capital (depreciation) for this howitzer will be added to GDP over the life of the product. Similarly, the purchase of local goods and services by U.S.

Chart 1. Real Federal Government Spending

military or diplomatic installations abroad results in an increase in government consumption and an offsetting increase in imports.

- Financial transfers to foreign governments to finance their purchases of domestically manufactured defense goods or services are not considered government consumption or investment but rather current transfer payments to the rest of the world. The subsequent foreign purchase from a domestic U.S. contractor is included in GDP as an export of goods or services. However, if the purchase is from a foreign affiliate of a U.S. company of a good or service that is produced abroad, the transaction would not be included in GDP as an export, but the profits of the foreign affiliate would be included in gross national product (GNP) as an increase in income receipts from the rest of the world.
- Financial transfers to foreign governments to finance purchases of defense goods and services from foreign companies that are not affiliates of U.S. companies have no effect on GDP or GNP. However, they are recorded in the national accounts as government current expenditures, classified as "other current transfer payments to the rest of the world."
- Payments to military personnel are considered government consumption, boosting GDP, no matter where the personnel are located.

April 2007

Government Receipts and Expenditures

Estimates for the Fourth Quarter of 2006

ET government saving, the difference between current receipts and current expenditures of the Federal Government and state and local governments, was -\$149.6 billion in the fourth quarter of 2006, increasing \$33.7 billion from -\$183.3 billion in the third quarter.

Net Federal Government saving was -\$131.2 billion in the fourth quarter, increasing \$41.8 billion from -\$173.0 billion in the third quarter (see page 8). Current receipts decelerated, and current expenditures turned down.

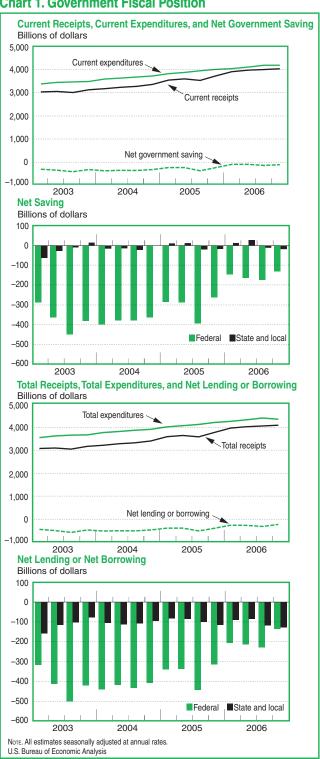

Net state and local government saving was -\$18.4 billion in the fourth quarter, decreasing \$8.2 billion from -\$10.2 billion in the third quarter (see page 9). Current receipts and current expenditures decelerated.

Net borrowing was \$263.7 billion in the fourth quarter, decreasing \$83.7 billion from \$347.4 billion in the third quarter. Federal Government net borrowing was \$135.9 in the fourth quarter, decreasing \$94.5 billion from \$230.4 billion in the third quarter. State and local government net borrowing was \$127.7 billion in the fourth quarter, increasing \$10.7 billion from \$117.0 billion in the third quarter.

Personal current taxes accelerated, reflecting an acceleration in withheld income taxes.

Taxes on corporate income turned down, reflecting a decrease in corporate profits.

Taxes from the rest of the world accelerated, reflecting an increase in taxes paid by U.S. affiliates of foreign corporations.

Contributions for government social insurance accelerated, as contributions by employers and employees for social security accelerated.

National defense consumption expenditures accelerated, as spending for services turned up.

Nondefense consumption expenditures turned down, primarily reflecting downturns in spending for hurricane relief and for research and development.

Government social benefits to persons accelerated, reflecting an acceleration in Medicare benefits.

Grants-in-aid to state and local governments turned down, reflecting a downturn in Medicaid grants.

Interest payments turned down, reflecting the downturn in interest on the public debt paid on Treasury Inflation-Protected Securities.

Federal Government Estimates

Estimates of Federal Government current receipts, current expenditures, and net Federal Government saving are based on data from the Federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other Federal Government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the Federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transac-

tions by component are published annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at <www.bea.gov/bea/dn/nipaweb/nipa_underlying/Index.asp>.

Each year, BEA prepares an article that compares NIPA estimates and the Federal budget.¹ For a historical time series of this comparison, see NIPA table 3.18B.

Personal current taxes turned up as a result of an upturn in state income taxes.

Taxes on corporate income turned down, reflecting a decrease in corporate profits.

Federal grants-in-aid turned down, reflecting a down-turn in Medicaid grants.

Government social benefit payments turned down as a result of a downturn in Medicaid expenditures.

Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: The quinquennial census of governments in years that end in a 2 or a 7 and the *Government Finances* series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at <www.bea.gov/bea/dn/nipaweb/nipa_underlying/Index.asp>. For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from *Government Finances*, see NIPA table 3.19.

BEA now prepares annual estimates of receipts and expenditures of state governments and of local governments.¹ These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); see "Newly Available NIPA Tables" in the October 2006 SURVEY.

10 April 2007

Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2006

The quarterly estimates for the third and fourth quarters of 2006 and monthly estimates for August 2006 to January 2007 are presented in this report.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates. Table 1B presents inventories. And table 2B presents sales. Table 3B presents inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to changes in demand; these ratios supplement the quarterly current-dollar and real estimates of ratios of inventories to final sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.7.5B and 5.7.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at <www.bea.gov>. Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying detail tables" and then on "List of Underlying Detail Tables."

p Preliminary r Revised Nore. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2000) dollar sales are calculated as the product of the chain-type quantity index and the 2000

current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 3B. Real Inventory-Sales Ratios for Manufacturing and Trade, Seasonally Adjusted

[Ratio, based on chained (2000) dollars]

p Preliminary r Revised
Nor. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in

inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

April 2007 13

U.S. International Transactions

Fourth Quarter of 2006

By Matthew J. Argersinger and Erin M. Whitaker

THE U.S. current-account deficit—the combined ■ balances on trade in goods and services, income, and net unilateral current transfers—decreased to \$195.8 billion (preliminary) in the fourth quarter of 2006 from \$229.4 billion (revised) in the third quarter (table A, chart 1). The decrease was mostly accounted for by a decrease in the deficit on goods. In addition, the balance on income shifted to a surplus from a deficit, net unilateral current transfers to foreigners decreased, and the surplus on services increased.

In the financial account, net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$164.6 billion in the fourth quarter, down from \$229.7 billion in the third quarter. Net acquisitions by foreign residents slowed, and net acquisitions by U.S. residents picked up.

The statistical discrepancy—errors and omissions in recorded transactions—was a positive \$31.8 billion in the fourth quarter, compared with a positive \$0.2 billion in the third quarter.

The following are highlights for the fourth quarter:

- Goods imports decreased for the first time in 5 years as a result of a large decline in petroleum and products. Goods exports increased at a more moderate rate than in recent quarters.
- Income receipts increased strongly, and income payments decreased very slightly.
- Net U.S. purchases of foreign securities increased strongly as a result of a step-up in net purchases of foreign stocks and record net purchases of foreign bonds.
- •Net foreign purchases of U.S. securities were boosted by a shift to net purchases of U.S. Treasury securities and record net purchases of U.S. corporate bonds.

r Revised

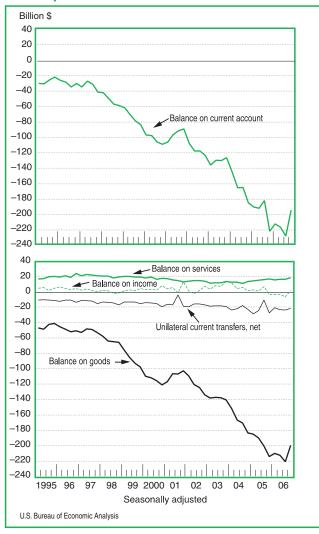

^{1.} Quarterly estimates of U.S. current-account and financial-account components are seasonally adjusted when series demonstrate statistically significant seasonal patterns. The accompanying tables present both adjusted and unadjusted estimates.

• Both U.S. claims and U.S. liabilities reported by U.S. banks increased strongly.

Selected economic and financial market developments

In the fourth quarter, the U.S. dollar changed little on a nominal, trade-weighted, quarterly average basis

Chart 1. U.S. Current-Account Balance and Its Components

Data Availability

The estimates of the U.S. international transactions accounts are presented in tables 1–11 in "U.S. International Transactions in 2006" in this issue. These estimates are also available interactively on BEA's Web site at <www.bea.gov>. Users may view and download the most recent quarterly estimates for an entire table, or they may select the period, frequency, and lines that they wish to view. The estimates are available in an HTML table, in an Excel file, or as comma-separated values.

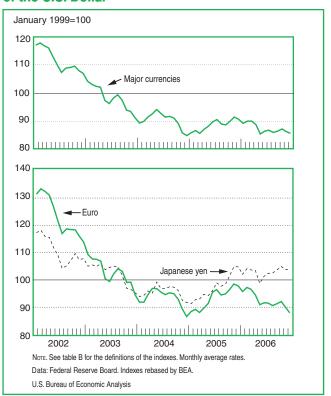

against a group of seven major currencies that are widely traded in international markets (table B, chart 2). The U.S. dollar appreciated 2 percent against the Canadian dollar and 1 percent against the Japanese yen, and it depreciated 1 percent against the euro.

In the United States, data releases in the fourth quarter indicated that U.S. economic growth slowed further in the third quarter, following a substantial slowdown in the second quarter. Releases indicated that the U.S. deficit on trade in goods and services increased in August but decreased in September and October. U.S. monetary authorities left the target level for the Federal funds rate at 5.25 percent, and other U.S. short-term interest rates decreased slightly (chart 3). U.S. long-term interest rates decreased, and U.S. and foreign stock markets increased strongly.

In Europe, data releases indicated that euro area economic growth slowed considerably in the third quarter. Among selected countries, economic activity in Germany, France, and Italy slowed, and activity in Spain remained relatively strong. Euro area monetary authorities raised the minimum bid rate on main refinancing operations, a key policy-controlled interest rate, in two steps to 3.5 percent from 3 percent.

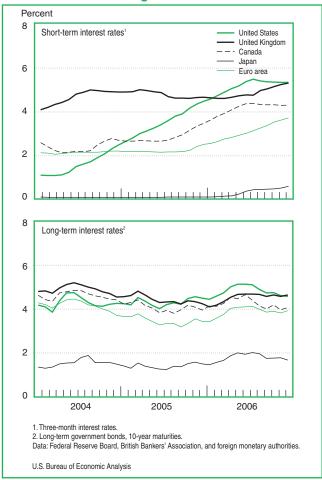

In Japan, reports showed that economic growth in the third quarter changed little. Japanese monetary authorities left their key overnight lending rate at 0.25

Chart 2. Nominal Indexes of Foreign Currency Price of the U.S. Dollar

percent. In Canada, reported third-quarter economic growth changed little, and Canadian monetary authorities left the target level for the overnight rate at 4.25 percent.

Chart 3. U.S. and Foreign Interest Rates

Current Account

Goods and services

The deficit on goods and services decreased \$22.8 billion to \$178.6 billion in the fourth quarter from \$201.4 billion in the third quarter. The deficit on goods decreased \$20.9 billion, and the surplus on services increased \$1.9 billion.

Goods

The deficit on goods decreased to \$197.9 billion in the fourth quarter from \$218.9 billion in the third quarter.

Revisions to the Third-Quarter Estimates

The international transactions accounts estimates for the third quarter of 2006 have been revised from the preliminary estimates that were published in the January 2007 Survey of Current Business. In addition, the estimates for the first, second, and third quarters have been revised to ensure that the seasonally adjusted estimates sum to the same annual totals as the unadjusted estimates. The revisions to the estimates for the first and second quarters were small.

For the third quarter, the current-account deficit was revised to \$229.4 billion from \$225.6 billion. The goods deficit was revised to \$218.9 billion from \$218.6 billion; the services surplus was revised to \$17.5 billion from \$18.3 billion; the deficit on income was revised to \$5.5 billion from \$3.8 billion; and net unilateral current transfers to foreigners were revised to \$22.5 billion from \$21.5 billion. Net financial inflows were revised to \$229.7 billion from \$176.4 billion.

^{1.} For more information on the nominal and real indexes of the foreign exchange value of the U.S. dollar, see Federal Resserve Bulletin, vol. 84 (October 1998); 811-18.
2. Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. trading partners, including the currencies of the euro area countries, Australia, Canada, Japan, Sweden, Switzerland, United Kingdom, Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.
3. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that circulate widely outside the country of issue, including the currencies of the euro area countries, Australia, Canada, Japan, Sweden, Switzerland, and the United Kingdom. The weight for each currency is tis broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the major currency

index. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

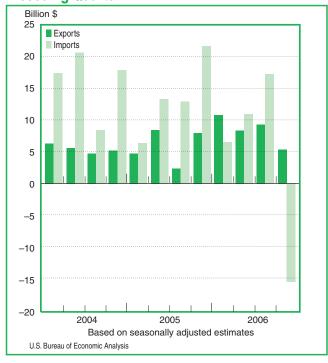

4. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that do not circulate widely outside the country of issue, including the currencies of Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. The weight for each currency is its broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the other important trading partners index. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

5. Data: Federal Reserve Board.

Data: Federal Reserve Board. Monthly and quarterly average rates. Indexes prepared by BEA.
 The euro area includes Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, and Spain

The decrease was largely accounted for by a decrease in imports, which resulted from a substantial decline in imports of petroleum and products. Exports increased, but at a more moderate rate than in the previous four quarters (chart 4).

Chart 4. U.S. Trade in Goods: Change in Value From **Preceding Quarter**

Exports. Exports increased \$5.3 billion, or 2.0 percent, to \$266.6 billion (table C). Real exports increased 2.0 percent, and export prices were virtually unchanged.² More than three-fourths of the increase in value was accounted for by capital goods.

Capital goods increased \$4.1 billion. The increase was mostly attributable to a large rise in civilian aircraft, engines, and parts. Aircraft deliveries were primarily to Singapore and Thailand. Among other capital goods, oil drilling, mining, and construction machinery increased significantly for the third consecutive quarter. Scientific, medical, and hospital equipment and computers, peripherals, and parts also increased. In contrast, semiconductors decreased the most in 4 years.

Consumer goods increased \$1.2 billion as a result of increases in durable goods, mainly household and kitchen appliances and recreational equipment, and in nondurable goods, mainly medical, dental, and pharmaceutical preparations.

Nonagricultural industrial supplies and materials increased \$0.2 billion, substantially less than in the previous three quarters. The slowdown mainly resulted from downturns in chemicals and in energy products. In contrast, nonferrous metals picked up as a result of a large increase in "other" precious metals.

^{2.} Quantity (real) estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters. Real estimates are expressed as chained (2000) dollars. Price indexes (2000 = 100) are also calculated using a chain-type Fisher formula.

r Revised

Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.
 Nore. Percent changes in quarterly estimates are not annualized and are expressed at quarterly rates.

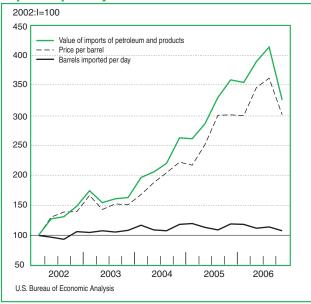

Automotive vehicles, parts, and engines decreased \$0.5 billion after a strong third-quarter increase. The decrease was more than accounted for by a decline in passenger cars, mostly to Germany, Saudi Arabia, and Canada.

Agricultural products decreased \$0.1 billion. Soybeans decreased sharply after a record third-quarter increase. In contrast, corn increased substantially for the third consecutive quarter. Corn prices have increased in recent quarters, partly in response to a rapid expansion in the production of ethanol.

Imports. Imports decreased \$15.6 billion, or 3.3 percent, to \$464.6 billion in the fourth quarter (table C). Real imports decreased 0.6 percent, and import prices decreased 2.7 percent. The decrease in value, the first decrease in 5 years, was more than accounted for by a substantial decline in petroleum and products.

Petroleum and products decreased \$18.0 billion, or 21 percent, after increasing strongly in recent years (chart 5). The average price per barrel fell 17 percent, to \$55.34, in the fourth quarter from a record high in the third quarter. The sharp decline may have partly resulted both from the relatively mild weather at the start of winter that gave rise to unexpectedly weak demand for heating fuel and from the recent slowdown in U.S. economic growth. The average number of barrels imported daily fell 5 percent, to 13.09 million. U.S. domestic production and consumption of petroleum increased slightly, while U.S. inventories remained at high levels. The largest decreases in petroleum imports were from members of OPEC—particularly Venezuela,

Chart 5. Imports of Petroleum and Products: Indexes of Value, Price per Barrel, and Barrels Imported per Day

Algeria, Iraq, and Saudi Arabia—and from Mexico and Russia.

Nonpetroleum industrial supplies and materials decreased \$4.0 billion. The decrease, the largest in several years, was mostly attributable to decreases in chemicals, building materials, nonferrous metals, and iron and steel products. The decrease in building materials may have partly reflected the recent slowdown in U.S. residential construction activity. A substantial fall in U.S. motor vehicle production in the fourth quarter may have contributed to the decline in imports of iron and steel products.

Capital goods decreased \$0.7 billion after increasing moderately strongly in the previous three quarters. The downturn partly reflected a substantial decline in U.S. private fixed investment in the fourth quarter. The largest decreases in imports were in computers, peripherals, and parts, in electric generating machinery, and in semiconductors, all of which had grown strongly in the third quarter. In contrast, civilian aircraft, engines, and parts stepped up, mostly as a result of higher imports of aircraft from France and Germany.

Consumer goods increased \$5.0 billion. In the last two quarters, consumer goods have grown much more strongly than in the recent preceding quarters. The fourth-quarter increase was mostly attributable to a rise in durable goods, particularly in toys and sporting goods and home entertainment equipment from China and in household and kitchen appliances from the Republic of Korea and Ireland. The largest increases in nondurable goods were in textile apparel and medicinal products.

Automotive vehicles, parts, and engines increased \$1.3 billion as a result of rebounds in passenger cars and in other vehicles. Foods, feeds, and beverages increased \$0.3 billion, mostly because of a rise in wine, beer, and related products from France.

Balances by area. The deficits on goods with all the major areas except Canada decreased. Lower imports of petroleum contributed to declines in the deficits with Latin America and Other Western Hemisphere of \$5.6 billion, with Africa of \$4.5 billion, with Europe of \$4.3 billion, and with the Middle East of \$3.3 billion. The deficit with Asia and Pacific decreased \$3.3 billion despite increases in the deficits with Japan and China.

Services

The surplus on services increased to \$19.4 billion in the fourth quarter from \$17.5 billion in the third quarter, as services receipts increased much more than services payments. The services surplus has risen considerably in the last nine quarters, partly as a result of an increase in the surplus on "other" private services (such as business, professional, and technical services, insurance services, and financial services).

In the fourth quarter, "other" private services receipts increased \$1.8 billion to \$46.5 billion. The increase was more than accounted for by a rise in receipts for unaffiliated services—mostly for financial services and business, professional, and technical services. "Other" private services payments increased \$1.2 billion to \$30.1 billion. The increase resulted from increases in payments for unaffiliated services—mostly for insurance services, financial services, and business, professional, and technical services—and for affiliated services.

Travel receipts increased \$0.8 billion to \$22.1 billion. The increase was mostly accounted for by an increase in receipts from overseas travelers, resulting from a pickup in the number of overseas visitors to the United States. Travel payments increased \$0.2 billion to \$18.6 billion. The increase was more than accounted for by a strong rise in payments to Mexico, where the travel industry is recovering from recent hurricanes and other disruptions in travel conditions. Passenger fare receipts increased \$0.1 billion to \$5.7 billion, and passenger fare payments increased \$0.3 billion to \$6.9 billion.

"Other" transportation receipts were virtually unchanged at \$12.2 billion. Receipts for both freight and port services were virtually unchanged. "Other" transportation payments decreased \$0.1 billion to \$16.5 billion. A decrease in payments for port services, which resulted from a decline in airport services, was partly offset by an increase in payments for freight services.

Income

The balance on income shifted to a surplus of \$3.0 billion in the fourth quarter from a deficit of \$5.5 billion in the third quarter. The shift resulted from a large increase in the surplus on direct investment income, as direct investment receipts increased and payments decreased.

Receipts of income on U.S. direct investment abroad increased \$4.2 billion to \$78.3 billion. The increase resulted from higher earnings by foreign affiliates in all major industries, but the largest increases were in holding companies and in finance and insurance. By area, earnings of European affiliates accounted for most of the total increase.

Payments of income on foreign direct investment in the United States decreased \$5.4 billion to \$34.4 billion. The large decline resulted from decreases in the earnings of U.S. affiliates in finance and insurance, in wholesale trade, and in "other" industries. Earnings of finance and insurance affiliates fell largely as a result of a drop in earnings of depository institutions owned by European parent companies. Wholesale trade earnings were lowered by reduced earnings of petroleum wholesale trade affiliates.

Both receipts and payments of income on financial assets other than direct investment increased as a result of higher average positions, in contrast to recent periods when income was boosted mainly by higher average interest rates. In the fourth quarter, receipts of "other" private income increased \$4.0 billion to \$87.6 billion. The increase reflected increases in interest receipts on bank claims and in interest and dividends on U.S. holdings of foreign securities. U.S. Government income receipts increased \$0.2 billion to \$0.7 billion.

Payments of "other" private income increased \$4.2 billion to \$89.0 billion. The increase was attributable to increases in interest payments on foreign holdings of U.S. securities and on bank and nonbank liabilities. Payments of income on U.S. Government liabilities increased \$1.0 billion to \$38.4 billion.

Unilateral current transfers

Net unilateral current transfers to foreigners were \$20.2 billion in the fourth quarter, down from \$22.5 billion in the third quarter. The decrease resulted from decreases in private remittances and other transfers and in U.S. Government grants.

Capital Account

Net capital account payments (outflows) were virtually unchanged at \$0.6 billion in the fourth quarter.

Financial Account

Net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$164.6 billion in the fourth quarter, down from \$229.7 billion in the third quarter. Net acquisitions by foreign residents slowed, and net acquisitions by U.S. residents picked up.

U.S.-owned assets abroad

Net U.S.-owned assets abroad increased \$251.2 billion in the fourth quarter after an increase of \$225.9 billion in the third quarter. The pickup was attributable to a substantial pickup in net U.S. purchases of foreign securities and to a larger increase in claims reported by U.S. banks in the fourth quarter than in the third quarter. In contrast, claims reported by U.S. nonbanking concerns decreased after a third-quarter increase.

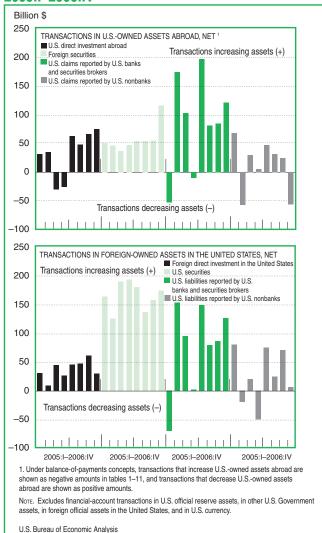

U.S. official reserve assets. U.S. official reserve assets decreased \$1.4 billion in the fourth quarter after a

decrease of \$1.0 billion in the third quarter. The fourth-quarter decrease resulted from a decrease in the U.S. reserve position in the International Monetary Fund (IMF), mostly reflecting the repayment of U.S. dollars to the IMF by Indonesia, Uruguay, and Turkey.

Claims reported by banks and by nonbanks. U.S. claims on foreigners reported by U.S. banks and securities brokers increased \$120.7 billion in the fourth quarter after an increase of \$84.6 billion in the third quarter (chart 6). As frequently occurs, the direction and the size of the change in claims was very similar to the direction and the size of the change in liabilities for these reporters.

Banks' own claims denominated in dollars increased \$104.9 billion after an increase of \$45.1 billion. In recent quarters, interbank lending has been boosted by heightened global merger and acquisition activity, and activity in the fourth quarter was the strongest of

Chart 6. Selected Financial-Account Transactions, 2005:I–2006:IV

the year. Lending by foreign-owned banks in the United States—mostly to their own offices in Europe, Caribbean financial centers, and Japan—was substantial. In addition, brokers and dealers lent funds to foreign nonbanks, mostly in the United Kingdom.

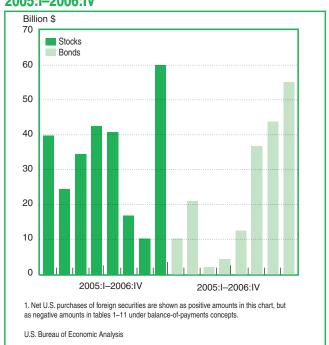

Banks' domestic customers' claims denominated in dollars increased \$20.4 billion after an increase of \$49.3 billion. The fourth-quarter increase largely reflected an increase in negotiable certificates of deposit that was partly offset by a decrease in holdings of commercial paper.

Claims reported by U.S. nonbanking concerns decreased \$57.1 billion after an increase of \$24.1 billion. The decrease was mostly accounted for by a decrease in deposits in the United Kingdom.

Foreign securities. Net U.S. purchases of foreign securities were a record \$115.7 billion in the fourth quarter, up substantially from \$54.4 billion in the third quarter. Net U.S. purchases of foreign stocks increased strongly, and net U.S. purchases of foreign bonds increased to a record level (chart 7).

Net U.S. purchases of foreign stocks were \$60.2 billion, up from \$10.3 billion. After weakening in the previous two quarters, net U.S. purchases stepped up in the fourth quarter, as foreign stock markets outperformed the U.S. stock market for the first time in three quarters. Net U.S. purchases were boosted by exchanges of stock related to foreign acquisitions of U.S. companies. Net U.S. purchases of stocks from Europe

Chart 7. Net U.S. Purchases of Foreign Securities, 2005:I–2006:IV ¹

increased strongly as a result of a rise in net purchases from the United Kingdom, a shift from net sales to net purchases from France, and a decrease in net sales to the Netherlands. Transactions in Asia shifted to large net U.S. purchases from net sales, mainly as a result of increases in net purchases from Hong Kong and Japan.

Net U.S. purchases of foreign bonds were a record \$55.5 billion, up from the previous record of \$44.1 billion in the third quarter. After performing strongly in the third quarter, global bond markets were mixed in the fourth quarter, as emerging markets far outperformed other bond markets. Net U.S. purchases of bonds from Europe, mostly from the United Kingdom where the bonds of many foreign countries are traded, were very strong for the third consecutive quarter. In addition, net U.S. purchases from Latin America and from Caribbean financial centers increased. In contrast, net U.S. sales of bonds to Asia picked up.

Direct investment. U.S. direct investment abroad increased \$74.2 billion in the fourth quarter after an increase of \$65.4 billion in the third quarter. The pickup was mostly accounted for by net equity capital investment abroad, which was the strongest in 2 years. Net equity capital investment was boosted by a rise in the value of U.S. acquisitions, including acquisitions of a few moderately sized foreign technology companies. Reinvested earnings also strengthened. In contrast, net intercompany debt investment abroad shifted from an increase to a decrease.

Foreign-owned assets in the United States

Net foreign-owned assets in the United States increased \$415.8 billion in the fourth quarter after an increase of \$455.6 billion in the third quarter. A much smaller increase in liabilities reported by U.S. non-banking concerns in the fourth quarter than in the third quarter and a slowdown in foreign direct investment in the United States were partly offset by a larger increase in liabilities reported by U.S. banks and a shift to net purchases by foreigners of U.S. Treasury securities.

Foreign official assets. Foreign official assets in the United States increased \$70.5 billion in the fourth quarter after an increase of \$78.4 billion in the third quarter. Assets of Asian countries increased much less in the fourth quarter than in the third quarter. In contrast, assets of European countries increased in the fourth quarter after decreasing in the third quarter.

Liabilities reported by banks and by nonbanks. U.S. liabilities reported by U.S. banks and securities brokers, excluding U.S. Treasury securities, increased \$126.7 billion in the fourth quarter after an increase of \$86.0 billion in the third quarter.

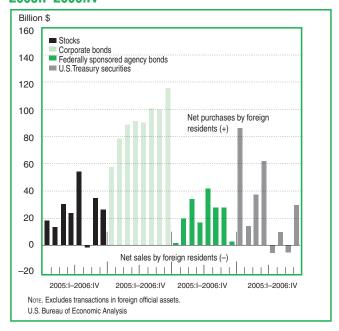

Banks' own liabilities denominated in dollars increased \$85.4 billion after an increase of \$42.6 billion. The fourth-quarter increase resulted from substantial borrowing by U.S.-owned and foreign-owned banks. The borrowing was in the form of deposits and brokerage balances, mostly from foreign banks in Caribbean financial centers and Asia. In contrast, brokers and dealers reduced their borrowing, mainly through a reduction in repurchase agreements with banks in Europe.

Banks' customers' liabilities denominated in dollars increased \$21.4 billion after an increase of \$39.6 billion. The fourth-quarter increase was attributable to increases in negotiable certificates of deposits and other short-term instruments and in "other" liabilities.

U.S. liabilities reported by U.S. nonbanking concerns increased \$6.1 billion after an increase of \$70.3 billion.³ The fourth-quarter increase was more than accounted for by an increase in "other" liabilities, mostly to the United Kingdom.

U.S. Treasury securities. Transactions in U.S. Treasury securities shifted to net purchases by foreigners of \$29.7 billion in the fourth quarter from net sales by foreigners of \$4.9 billion in the third quarter (chart 8). Transactions by both the United Kingdom and

Chart 8. Transactions in U.S. Securities, 2005:I–2006:IV

^{3.} Liabilities reported by U.S. nonbanking concerns include a special adjustment for the refund of duties on U.S. imports of softwood lumber paid by Canadian residents in past quarters and the return of a portion of those refunds to U.S. residents. The adjustment increased U.S. net payments (outflows) to Canada by \$5.0 billion.

Caribbean financial centers shifted to net purchases from net sales, and net purchases by Asia increased.

Other U.S. securities. Net purchases by foreigners of U.S. securities other than U.S. Treasury securities were \$144.9 billion in the fourth quarter, down from \$163.0 billion in the third quarter. The decrease was attributable to decreases in net purchases of federally sponsored agency bonds and of U.S. stocks. In contrast, net purchases of U.S. corporate bonds increased to a record level.

Net purchases by foreigners of U.S. stocks were \$26.4 billion, down from \$35.0 billion. U.S. stock prices increased strongly in the fourth quarter as U.S. corporate earnings remained strong and investors' confidence may have been boosted by the decline in oil prices. The decrease in net purchases by foreigners was more than accounted for by a decrease in net purchases from Europe. In contrast, net purchases from Caribbean financial centers increased.

Net purchases by foreigners of U.S. corporate bonds were a record \$115.7 billion, up from \$99.8 billion. Financial market conditions that have encouraged foreigners to invest heavily in U.S. corporate bonds include the higher yields available on U.S. corporate bonds than on foreign bonds, healthy U.S. corporate

balance sheets, low U.S. bond default rates, and in the fourth quarter, moderating U.S. inflation. In the fourth quarter, prices of non-investment-grade bonds increased, and prices of investment-grade bonds changed little. The increase in net purchases by foreigners resulted from increases in net purchases from Asia, Caribbean financial centers, and Europe.

Net purchases by foreigners of U.S. federally sponsored agency bonds were \$2.9 billion, down markedly from \$28.1 billion. Transactions from Asia and Europe shifted to net sales from net purchases, and net purchases from Caribbean financial centers decreased.

Direct investment. Foreign direct investment in the United States increased \$29.4 billion in the fourth quarter after an increase of \$61.6 billion in the third quarter. The slowdown mainly reflected a shift from an increase to a decrease in net intercompany debt investment in the United States. In addition, reinvested earnings slowed considerably as a result of an increase in the share of earnings that were distributed. In contrast, net equity capital investment in the United States increased, partly as a result of a few large foreign acquisitions of U.S. companies in manufacturing (including computers and electronic products and chemicals) and in finance and insurance.

22 April 2007

U.S. International Transactions in 2006

By Christopher L. Bach

THE U.S. current-account deficit—the combined balances on trade in goods and services, income, and net unilateral current transfers—increased to \$856.7 billion in 2006 from \$791.5 billion in 2005. The increase was more than accounted for by an increase in the deficit on goods and a shift from a surplus to a deficit on income. In contrast, the surplus on services increased, and net unilateral current transfers to foreigners decreased (table A, chart 1).

Net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$719.1 billion in 2006, down from \$785.4 billion in 2005. Net acquisitions by U.S. residents strengthened more than net acquisitions by foreign residents.

The statistical discrepancy—errors and omissions in recorded transactions—was a positive \$141.4 billion in 2006, compared with a positive \$10.4 billion in 2005.

The following are highlights for 2006:

• The deficit on goods again increased by a large amount, but the size of the increase was less than

half that in 2005. Export growth accelerated in response to faster real growth in most advanced and developing economies, and import growth slowed, largely because of a smaller rise in prices of petroleum and petroleum products. Nonpetroleum imports increased at a slightly lower rate than in 2005.

- The surplus on services increased, but the size of the increase was less than half that in 2005. Much of the increase in both services receipts and payments was accounted for by increases in "other" private services
- The balance on income shifted to a deficit from a surplus. The shift was more than accounted for by a substantial increase in the deficit on U.S. Government income and a small increase in the deficit on portfolio income. In contrast, the surplus on direct investment income increased substantially.
- •U.S.-owned assets abroad increased substantially more in 2006 than in 2005. Claims reported by banks increased by a much larger amount, as did U.S. holdings of foreign securities. The increase in

p Preliminary r Revised

U.S. direct investment abroad returned to a more typical size after being held down in 2005 by transactions related to the American Jobs Creation Act of 2004.

•Foreign-owned assets in the United States also increased substantially more in 2006 than in 2005. Claims reported by banks and nonbanks increased by a much larger amount, as did private foreign holdings of U.S. securities other than U.S. Treasury securities. Foreign official assets also increased by a significantly larger amount.

Chart 1. U.S. Current-Account Balance and Its Components

Selected economic and financial conditions

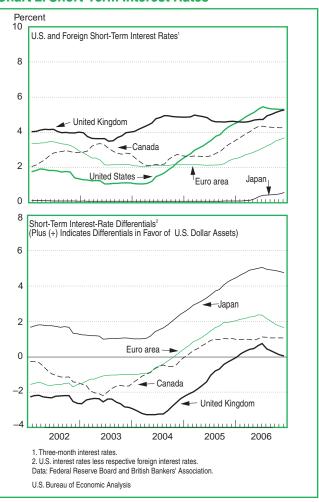

U.S. real gross domestic product increased 3.3 percent in 2006, compared with an increase of 3.2 percent in 2005. Many of the same conditions present in 2005 continued to be present in 2006. Businesses continued to spend vigorously on nonresidential fixed investment, consumer spending remained strong, and corporate profits accelerated further. Both energy prices and prices of energy-related products continued to rise sharply, but core inflation, which excludes food and energy prices, was only slightly higher. U.S. real growth exceeded real growth in most advanced counties by a significant margin again in 2006, and with domestic demand continuing to grow, the U.S. current-account deficit widened further, but only by about half the size of the increase in 2005.

The Federal Reserve raised the target Federal funds rate 100 basis points in four successive steps to 5.25

percent, before pausing in midsummer to assess whether additional tightening would be necessary. These increases brought the total rise in the Federal funds rate since early 2004 to 425 basis points. U.S. short- and long-term interest rates continued to rise faster than rates abroad through midyear; differentials in favor of U.S. assets fell slightly in the last half of the year when short- and long-term interest rates both in the United States and abroad declined a small amount (charts 2 and 3).

Economic growth in many foreign countries accelerated in 2006. Real GDP growth in the euro area increased to 2.4 percent in 2006 from 1.3 percent in 2005; the pickup was particularly evident in Germany and France. The European Central Bank raised the minimum bid rate on main refinancing operations 125 basis points over the course of the year to 3.50 percent at yearend. Real GDP growth in the United Kingdom increased to 2.7 percent from 1.9 percent. The British monetary authority raised the repurchase rate 50 basis

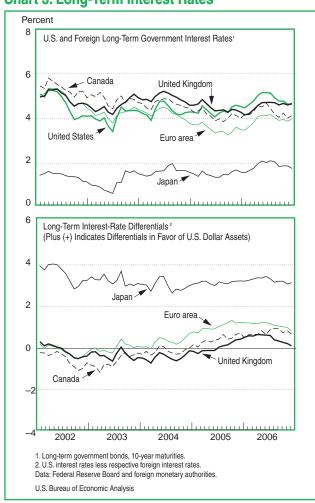

Chart 2. Short-Term Interest Rates

points in the last half of the year to bring the rate to 5.00 percent, just 25 basis points below the U.S. rate. Real GDP growth in Canada increased to 3.1 percent from 2.9 percent. The Canadian monetary authority increased the target for the overnight rate 100 basis points to 4.25 percent in the first half of the year, bringing the rise since September 2005 to 175 basis points. Real GDP growth in Japan increased to 2.7 percent from 2.6 percent. The Japanese monetary authority increased the uncollateralized overnight call rate 25 basis points in the last half of the year (chart 4).

In 2006, the dollar depreciated 1 percent on a tradeweighted yearly average basis against a group of seven major currencies that are widely traded in international markets. However, from December 2005 to December 2006, the dollar depreciated 6 percent against currencies of the group and 7–11 percent against major European currencies (table B, chart 5). The dollar depreciated 11 percent against the British pound, 10 percent against the euro, 7 percent against the Swiss franc, 1 percent against the Canadian dollar, and 1

Chart 3. Long-Term Interest Rates

percent against the Japanese yen. Against other Asian currencies, the dollar depreciated 3 percent against the Chinese yuan and 10 percent against the South Korean won.

Current Account

Goods and services

The deficit on goods and services increased to \$765.3 billion in 2006 from \$716.7 billion in 2005. The deficit on goods increased substantially, and the surplus on services increased (table C).

Goods

The deficit on goods increased to \$836.0 billion in 2006 from \$782.7 billion in 2005. Goods exports picked up, continuing the strong growth that has been evident since mid-2003. Goods imports slowed because of the sizable slowdown in petroleum imports. Nonpetroleum imports continued at about the same strong pace as in 2005 (charts 6 and 7).

Goods exports increased \$129.1 billion, or 14 percent, to \$1,023.7 billion in 2006, following an increase of \$87.1 billion, or 11 percent, in 2005. Capital goods and industrial supplies and materials accounted for nearly three-fourths of the increase in 2006; smaller increases occurred in consumer goods, in automotive vehicles, parts, and engines, and in foods, feeds, and beverages (tables D and E).

Goods imports increased \$182.3 billion, or 11 percent, to \$1,859.7 billion in 2006, following an increase of \$204.4 billion, or 14 percent, in 2005. Industrial supplies and materials accounted for nearly 45 percent of the increase in 2006; sizable increases also occurred in capital goods and in consumer goods (tables D and E).

U.S. exports picked up in 2006, partly in response to the pickup in real GDP growth in the euro area to 2.4 percent from 1.3 percent in 2005 and in the United

p Preliminary

For more information on the nominal and real indexes of the foreign exchange value of the U.S. dollar, see Federal Reserve Bulletin, vol. 84 (October 1998): 811-18.
 Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. trading partners, including the currencies of the euro area countries, Australia, Canada, Japan, Sweden, Switzerland, United Kingdom, Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.
 Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that circulate widely outside the country of issue, including the currencies of the euro area cy ints broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the major currency

index. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

4. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that do not circulate widely outside the country of issue, including the currencies of Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. The weight for each currency is its broad-index weight divided partners index the broad-index weights for all of the currencies included in the other important trading partners index. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

5. Data: Federal Reserve Board. Monthly and quarterly average rates. Indexes prepared by BEA.

^{5.} Data: Federal Reserve Board. Monthly and quarterly average rates. Index redased by BEA.

6. The euro area includes Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, and Spain.

Kingdom to 2.7 percent to 1.9 percent. Growth in Japan, at 2.7 percent, and in Canada, at 3.1 percent, increased slightly. Growth in the newly industrialized countries in Asia increased to 4.9 percent from 4.5 percent and in Latin America increased to 4.8 percent from 4.3 percent (table F).

U.S. imports slowed in 2006 as a result of a sizable slowdown in petroleum imports, largely because of a

smaller increase in prices. Real U.S. GDP growth in the range of 3.2 to 3.3 percent in 2005 and 2006 helped sustain nonpetroleum import growth at about the same pace in both years.

Dollar prices of total U.S. exports increased slightly more rapidly in 2006 than in 2005. Price increases of industrial supplies and materials (including petroleum, chemicals, and metals and metallic products)

^{1.} Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.

slowed slightly, but remained large. Price increases in capital goods were slightly higher, and prices of foods, feeds, and beverages increased after a decrease (table G). When translated into foreign currencies, price increases of U.S. exports were smaller than those in dollar terms because of appreciation of most foreign currencies against the dollar, but prices still increased more rapidly in 2006 than in 2005. Industrial supplies and materials (which includes energy products and metals) were still the largest source of price increase; many other prices declined slightly (table H).

Dollar prices of total U.S. imports increased less rapidly in 2006 than in 2005. Price increases of petro-

p Preliminary

Exports. Goods exports increased \$129.1 billion, or 14 percent, to \$1,023.7 billion in 2006, following an increase of \$87.1 billion, or 11 percent, in 2005 (table D). Export growth has remained strong for 3 consecutive years; the pickup in 2006 was attributable both to more rapid real economic growth abroad and to the cumulative impact of dollar depreciation in recent years. Real exports increased 11 percent in 2006, and export prices increased 3 percent. In value, capital goods and industrial supplies led the increase in 2006, accounting for nearly three-fourths of the rise in total exports, about

China.

the same proportion as in 2005 (chart 8). By area, exports to Asia excluding Japan increased \$37.5 billion; to Europe, \$33.4 billion; to South and Central America, \$27.6 billion; and to Canada, \$18.6 billion.

Capital goods increased \$51.3 billion, or 14 percent, up from a \$31.1 billion, or 9-percent, increase. Civilian aircraft, engines, and parts increased \$14.3 billion, or 23 percent, up from a \$10.8 billion, or 22-percent, increase. Completed aircraft accounted for \$11.4 billion of the increase, reflecting strength in aircraft production and sales; shipments were largely to developing countries in Asia—especially China, India, Thailand, Singapore, and Malaysia—and in South and Central America—especially Brazil and Mexico. Aircraft parts and engines increased to Europe, Singapore, Brazil, Japan, and China (table I).

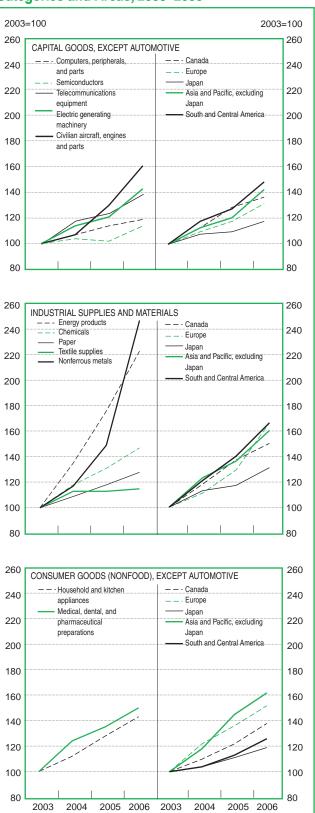

Among machinery categories, industrial, agricultural, and service industry machinery increased \$7.3 billion, or 12 percent, up from an increase of \$5.9 billion, or 11 percent. Machine tools, metalworking, and control instruments jumped to an increase of 17 percent from 2 percent, and electric generating machinery jumped to an increase of 17 percent from 7 percent. Oil drilling, mining, and construction machinery increased 23 percent, about the same as increases in the previous 2 years (table I).

High-technology products increased \$10.4 billion, or 9 percent, following an increase of \$3.0 billion, or 3 percent. Semiconductors increased \$5.2 billion, or 11 percent, following a 2-percent decline; the increase was mostly to Asia, with more than 50 percent of that increase to China. Telecommunications equipment increased \$3.2 billion, or 13 percent, following a 5-percent rise; Mexico accounted for over 40 percent of the rise. Computers, peripherals, and parts increased \$2.0 billion, or 4 percent, following a 6-percent increase, mainly to South and Central America excluding Mexico; China, Australia, Hong Kong, and Europe accounted for the remainder of the increase (table I).

Data Availability

The estimates that are presented in tables 1–11 of the U.S. international transactions accounts are available interactively on BEA's Web site at <www.bea.gov>. Users may view and download the most recent quarterly estimates for an entire table, or they may select the period, frequency, and lines that they wish to view. The estimates are available in an HTML table, in an Excel file, or as comma-separated values.

Chart 8. Growth in Exports by Selected Commodity Categories and Areas, 2003–2006

U.S. Bureau of Economic Analysis

Nonagricultural industrial supplies and materials increased \$41.4 billion, or 19 percent, up from an increase of \$29.2 billion, or 15 percent. Metals and nonmetallic products increased \$19.0 billion, or 35 percent, following an increase of 24 percent. Among major components, nonferrous metals increased \$13.6 billion, or 65 percent; much of the increase was in prices, which increased 38 percent, following increases of 16 percent in 2005 and 24 percent in 2004. In 2006, nearly 50 percent of these shipments were to Europe. Exports of chemicals increased \$9.3 billion, or 12

percent, following an increase of 11 percent. Exports of energy products increased \$8.4 billion, or 26 percent, following an increase of 31 percent; price increases for energy products ranged from 11 to 25 percent (table J).

Consumer goods increased \$13.5 billion, or 12 percent, following an increase of \$12.6 billion, or 12 percent. Nondurable goods increased \$4.7 billion, or 9 percent; most of the increase was attributable to medical, dental, and pharmaceutical preparations. Durable goods increased \$7.7 billion, or 14 percent; household appliances and products and recreation equipment all

Memorandum: Nonpetroleum industrial supplies and materials imports	172,527	164,588	181,420	232,530	272,781	301,208

contributed to the increase.

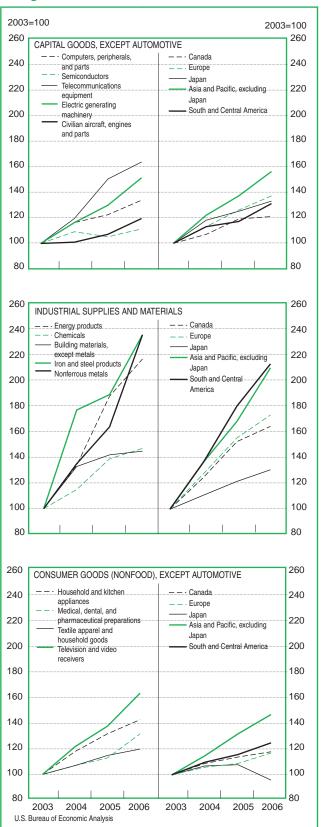

Automotive vehicles, parts, and engines increased \$8.6 billion, or 9 percent, following an increase of \$9.4 billion, or 10 percent. Exports of complete autos both to Canada and to Saudi Arabia slowed; however, shipments of parts, mainly to Mexico, more than tripled.

Foods, feeds, and beverages increased \$7.0 billion, or 12 percent, up from an increase of \$2.4 billion, or 4 percent. A sizable shift to an increase in corn and a smaller but still significant shift to an increase in soybeans accounted for much of the rise in exports. Corn increased \$2.4 billion, or 41 percent, after a \$1.1 billion, or 16-percent, decline in 2005. The export price of corn increased 20 percent in 2006, following a 13percent decrease in 2005. Strength in corn reflected reduced competition from other exporting countries, strong overseas demand, and a jump in prices late in the year in response to a smaller than expected autumn crop. Growing demand for ethanol produced from corn may also have been a factor increasing the price of corn. Soybeans increased \$0.6 billion, or 9 percent, after declines of 4 percent in 2005 and 14 percent in 2004. Soybean prices decreased 2 percent after a decrease of 19 percent in 2005 and an increase of 21 percent in 2004.

Imports. Goods imports increased \$182.3 billion, or 11 percent, to \$1,859.7 billion in 2006, following an increase of \$204.4 billion, or 14 percent, in 2005 (table D). Real imports increased 6 percent, and import prices increased 5 percent. In value, 28 percent of the increase in total imports was in petroleum imports, down from a 35-percent share of the increase in 2005, largely as a result of smaller price increases in petroleum imports. The increase in nonpetroleum imports was about the same size in 2006 as in 2005 (chart 7); the increase was led by capital goods, consumer goods, and nonpetroleum industrial supplies and materials. The increases in consumer goods and capital goods were only slightly larger than in 2005, and the increase in nonpetroleum industrial supplies and materials was down sharply from 2005 (chart 9). By area, imports from Asia excluding Japan increased \$74.4 billion; from South and Central America, \$38.9 billion; from Europe, \$29.2 billion; and from Canada, \$13.1 billion.

Petroleum and products increased \$50.7 billion, or 20 percent, in 2006, following a record increase of \$71.4 billion, or 40 percent, in 2005. Most of the increase in 2006 was attributable to a sharp rise in the average price per barrel, which increased 23 percent to \$60.39 after a steep increase of 37 percent in 2005. The average number of barrels imported daily decreased 2 percent to 13.72 million in 2006, following 3

Chart 9. Growth in Imports by Selected Commodity Categories and Areas, 2003–2006

consecutive years of increases, as U.S. growth moderated over the course of the year and inventories remained high. Domestic production increased slightly, compared with a 5-percent decline in 2005 when supply and production facilities in the U.S. Gulf Coast region were damaged by Hurricanes Katrina and Rita. U.S. consumption decreased 1 percent, following little change in 2005. In volume, the number of barrels imported daily declined from Saudi Arabia and Venezuela and increased from Canada and Mexico (chart 10). For much of the year, most OPEC countries were producing near capacity or followed policies to limit production.

Capital goods increased \$39.2 billion, or 10 percent, following an increase of \$35.7 billion, or 10 percent. All major commodity categories increased, with high-technology products accounting for \$12.9 billion, or nearly a third of the rise. Computers, peripherals, and parts increased \$8.1 billion, up from an increase of \$4.7 billion; these increases were mostly attributable to strong imports from China. Telecommunications equipment increased \$3.2 billion, down sharply from an increase of \$7.6 billion; the slowdown reflected only a moderate increase in 2006 from Malaysia after a jump in 2005. Semiconductors rebounded, rising \$1.6 billion in 2006, following a decrease of \$1.0 billion in 2005; the rebound resulted from increases from Taiwan, Japan, Singapore, and China (table I).

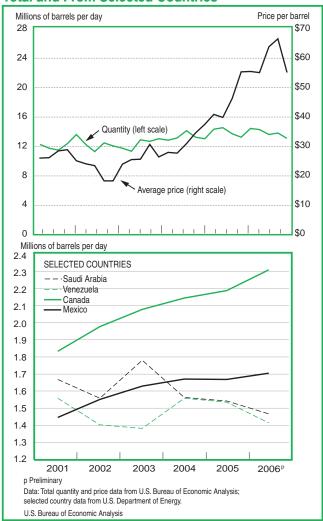

Capital goods were also boosted by increases in machinery. Industrial, agricultural, and service industry machinery, electric generating machinery, and oil drilling, mining, and construction machinery all increased at about the same pace as in 2005; however, imports in both years were well below those in 2004. The increase in imports of civilian aircraft and parts, at \$2.9 billion, was twice as large as the increase in 2005, reflecting strength in aircraft production and sales (table I).

Consumer goods increased \$35.5 billion, or 9 percent, following an increase of \$34.3 billion, or 9 percent. Imports from China accounted for over half of the increase in 2006, compared with over three-fourths of the increase in 2005. Durable goods increased \$19.3 billion, down slightly from an increase of \$20.2 billion; the increase in 2006 was partly attributable to increases in household and kitchen appliances, primarily from China, and in home entertainment equipment, mainly from Mexico and China. Nondurable goods increased \$14.9 billion, up from an increase of \$12.1 billion; the increase was mostly attributable to increases in medical, dental, and pharmaceutical products from Europe and in textile apparel and household goods from China. However, textile imports from China slowed to an increase of 18 percent from a jump of 47 percent.

Late in 2005, the United States and China signed a 3-year agreement that limited U.S. imports of textile apparel products from China, effective January 1, 2006. The agreement was prompted by a surge in imports of textile products from China in the first half of 2005, following the expiration of a previous quota system on December 31, 2004, that capped U.S. imports of textiles and apparel from developing countries.

Nonpetroleum industrial supplies and materials increased \$28.4 billion, or 10 percent, down substantially from increases of \$40.3 billion, or 17 percent, in 2005 and \$51.1 billion, or 28 percent, in 2004. Nearly half of the increase in 2006 was attributable to nonferrous metals, which jumped \$13.9 billion, or 44 percent, following an increase of \$5.8 billion, or 22 percent; prices of aluminum, copper, nickel, zinc, nonmonetary gold, and other precious metals had increases ranging from 15 to 125 percent. Iron and steel products also picked

Chart 10. U.S. Petroleum Imports and Price, Total and From Selected Countries

up, rising \$7.7 billion, or 25 percent, up sharply from an increase of \$1.9 billion, or 7 percent; the increase in 2006 was attributable to higher imports from Asia, led by China, and from Europe. Chemicals and building materials slowed sharply. Among energy products, natural gas imports increased \$6.4 billion, or 18 percent; prices of natural gas fell 11 percent. Natural gas had jumped \$11.0 billion, or 46 percent, primarily because prices rose 37 percent in 2005, partly as a result of hurricane damage to U.S. production facilities in the Gulf Coast region (table J).

Automotive vehicles, parts, and engines increased \$17.2 billion, or 7 percent, up from an increase of \$11.3 billion, or 5 percent. Most of the increase in 2006 was attributable to a jump in imports of passenger cars from Japan and Mexico. Automotive products were also boosted by an increase in parts from China, Mexico, and the Republic of Korea. U.S. sales of autos and light trucks declined 3 percent. Domestic auto production increased 1 percent, down from an increase of 2 percent.

Foods, feeds, and beverages increased \$6.8 billion, or 10 percent, following an increase of \$6.0 billion, or 10 percent. The increase in 2006 was mainly attributable to a rise in vegetables, fruits, nuts, and preparations from South and Central America and "other" agricultural foods, feeds, and beverages. Prices of coffee, cocoa, and sugar, which had increased 21 percent in 2005, increased only 6 percent in 2006. Imports of fish and shellfish—mainly from China, Thailand, and Chile—also increased.

Balances by area. The deficit on goods increased \$53.2 billion to \$836.0 billion in 2006, compared with an increase of \$117.3 billion in 2005. The smaller increase in 2006 resulted from both an acceleration in exports and a slowdown in imports. Capital goods and industrial supplies and materials accounted for nearly three-fourths of the increase in exports. Industrial supplies and materials, dominated by petroleum and products, accounted for nearly 45 percent of

the increase in imports; capital goods and consumer goods each accounted for approximately a fifth of the increase in imports (table K).

The deficit with Asia excluding Japan increased \$36.8 billion. The increase was partly attributable to a sizable increase in imports from China, mainly of consumer goods and capital goods. Exports to China, particularly of capital goods and industrial supplies and materials, accelerated, with the increase in 2006 nearly double that in 2005.

The deficit with members of OPEC increased \$12.1 billion. Imports of petroleum and products from Algeria, Saudi Arabia, Venezuela, and Nigeria more than accounted for the increase. Exports also increased, mainly as a result of increases in industrial supplies and materials to Venezuela and of capital goods to the United Arab Emirates.

The deficit with South and Central America increased \$11.3 billion. Industrial supplies and materials accounted for over half of the increase in imports, while industrial supplies and materials and capital goods accounted for approximately three-fourths of the increase in exports.

The deficit with Japan increased \$5.8 billion. Automotive products and capital goods more than accounted for the increase in imports, while much of the increase in exports was due to capital goods and industrial supplies and materials.

The deficit with Canada decreased \$5.5 billion after rising for 3 years. Imports slowed considerably from large increases in 2004 and 2005, mainly as a result of slowdowns in natural gas, a major component of industrial supplies and materials, and a decrease in automotive products. Exports of all major categories, led by industrial supplies and materials, continued to rise.

The deficit with Europe decreased \$4.1 billion, the first decrease in 9 years. Exports were particularly strong; industrial supplies and materials and capital goods accounted for nearly three-fourths of the increase. The increase in imports slowed, but it was also

Annual Revision of the U.S. International Accounts

The annual revision of the U.S. international accounts to be released in June 2007 will incorporate a number of significant improvements. The expanded geographic details for the accounts introduced last year will be carried further back in time; a consistent presentation will be available for 1999 to the present. BEA is also considering incorporating methodological and presentational changes for financial derivatives. Further, BEA is considering improving its methodologies for estimating interest receipts and payments, and for adjusting imports of com-

puter software from media value to full market value. BEA will incorporate results from the U.S. Treasury Department's annual survey of Foreign Portfolio Investment in the United Sates for June 2006 and its annual survey of U.S. Portfolio Investment Abroad for December 2005. To a limited extent, BEA will incorporate early results from its 2006 benchmark survey of transactions in selected services and intangible assets. Complete results from the benchmark survey of services will be included in the annual revisions to be released in June 2008.

led by industrial supplies and materials and capital goods, which accounted for approximately two-thirds of the rise.

Services

The surplus on services increased to \$70.7 billion in 2006 from \$66.0 billion in 2005 (table L, chart 11).

Services receipts increased \$32.5 billion, or 9 percent, in 2006, down from an increase of \$36.2 billion, or 11 percent, in 2005, and services payments increased \$27.8 billion, or 9 percent, up from an increase of \$24.3 billion, or 8 percent. Growth in travel and passenger fare receipts was significantly less than in 2005, and growth in travel and passenger fare payments slowed slightly. "Other" transportation receipts tracked the pickup in goods exports and "other" transportation payments tracked the slowdown in goods imports. "Other" private services receipts increased

more than "other" private services payments. Transfers under U.S. military sales contracts fell, and direct defense expenditures abroad increased slightly.

Travel receipts increased \$4.0 billion, or 5 percent, in 2006, following an increase of \$7.1 billion, or 10 percent, in 2005. The total number of overseas travelers was unchanged, following a 7-percent increase; within the overseas total, decreases were concentrated in Europe, where the number of visitors fell 2 percent after an increase of 7 percent, and in Japan, where the number of visitors fell 5 percent after an increase of 4 percent. Both European and Asian residents may have substituted travel within Europe and within Asia for trans-Atlantic and trans-Pacific travel.

Travel receipts from Canada increased \$1.4 billion, or 15 percent, in 2006, following an increase of \$1.0 billion, or 12 percent, in 2005. Sizable appreciation of the Canadian dollar against the U.S. dollar encouraged greater spending in the United States, and growth in the number of travelers picked up to 6 percent from 5 percent. Travel receipts from Mexico increased \$0.4 billion, or 5 percent, following an increase of \$0.5 billion, or 9 percent. The number of visitors from Mexico decreased 5 percent, mostly to the U.S. border area, following no increase in 2005.

Travel payments increased \$4.1 billion, or 6 percent, in 2006, following an increase of \$3.4 billion, or 5

percent. The increase in the total number of overseas travelers slowed slightly to 5 percent; within the overseas total, the increase in travelers to Europe slowed to 2 percent from 3 percent, and the increase in travelers to Asia slowed to 8 percent from 10 percent. Travel to Italy for the Winter Olympics and to Germany for the World Cup soccer matches boosted travel to Europe.

Travel payments to Canada increased \$0.3 billion, or 5 percent, in 2006, following a decrease of \$0.3 billion, or 4 percent, in 2005. In 2006, a 6-percent depreciation of the U.S. dollar against the Canadian dollar and high gasoline prices were factors leading to a 9-percent drop in the number of U.S. travelers to Canada. Travel payments to Mexico increased \$0.3 billion, or 3 percent, following an increase of \$0.9 billion, or 10 percent. Growth in the number of travelers slowed, especially to the interior, partly because of hurricanes which damaged major resort areas late in the summer and partly because of violent protests in Mexico City.

Passenger fare receipts increased \$1.1 billion, or 5 percent, in 2006, following an increase of \$2.1 billion, or 11 percent, in 2005. The increase in 2006 reflected a 6-percent increase in the number of visitors on U.S.-flag carriers. Passenger fare payments increased \$1.2 billion, or 5 percent, following an increase of \$2.3 billion, or 10 percent. The increase in 2006 reflected a 5-percent increase in the number of travelers

p Preliminary

r Revised

Consists of transfers under U.S. military agency sales contracts of goods and services, which are not separately indentifiable.
 Consists of imports by U.S. defense agencies of goods and services, which are not separately indentifiable.

on foreign-flag carriers. Sizable price increases resulting from higher fuel costs affected both receipts and payments.

"Other" transportation receipts increased \$6.0 billion, or 14 percent, in 2006, following a \$4.8 billion, or 13-percent, increase in 2005. Increases occurred in almost every geographic area; the largest increases occurred in Europe, China, and Latin America, reflecting growth in exports to, and imports from, those regions. Increases occurred in both port and freight services receipts. Port services receipts increased \$5.0 billion, or 20 percent, up from a 16-percent increase. The increase mostly reflected increases in air and ocean export and import volumes transported by foreign carriers and higher fuel costs. Freight receipts increased \$1.0 billion, or 6 percent, following a 9-percent increase. Air freight receipts were higher as a result of a 10-percent increase in export volume, and ocean freight receipts were slightly lower on little change in volume.

"Other" transportation payments increased \$3.5 billion, or 6 percent, in 2006, following a \$7.9 billion, or 15-percent, increase in 2005. The increase mostly reflected a slower increase in goods imports and higher fuel prices. Increases occurred in almost every geographic area; the largest increases were in Asia (mostly China, Japan, and Taiwan), Europe, and Latin America. Increases occurred in both freight and port services. Freight payments increased \$1.8 billion, or 4 percent, down from a 13-percent increase. A smaller increase in ocean freight payments in 2006 reflected lower volume increases through east coast ports; volume increases through west coast ports were unchanged. Air freight payments increased \$0.2 billion, reflecting only a small increase in volume. Port services payments increased \$1.7 billion, or 10 percent, following a 20-percent increase. Air port services accounted for nearly all of the increase as most U.S. carriers reported higher overseas expenses, mostly the result of an increase in the price of jet fuel. Jet fuel prices increased 18 percent from the previous year. Ocean port services were virtually unchanged.

"Other" private services receipts increased to \$177.3 billion in 2006 from \$158.2 billion in 2005. Financial services increased significantly more in 2006 than in 2005, largely because of higher fees received for financial management and financial advisory services, including fees for arranging mergers and acquisitions. Receipts for business, professional, and technical services also increased somewhat more than in 2005. "Other" private services payments increased to \$114.5 billion from \$98.7 billion. Payments for insurance accounted for much of the step-up, largely as a result of higher premiums. Financial services and business,

professional, and technical services were also higher.

Transfers under U.S. military agency sales contracts decreased \$2.4 billion to \$16.7 billion in 2006 from \$19.0 billion in 2005. The decrease was more than accounted for by a decline in services for reconstruction in Iraq. Transfers of equipment and related services under the Foreign Military Sales program were slightly above those of a year ago. Direct defense expenditures abroad increased to \$31.2 billion, up slightly from \$30.1 billion. Most of the increase was attributable to a sharp increase in purchases of petroleum, partly due to price increases, but personnel expenditures and purchases of supplies and materials to sustain military operations also rose.

Income

The balance on income shifted to a deficit of \$7.3 billion in 2006 from a surplus of \$11.3 billion in 2005 (table C). Income payments increased more than income receipts. The deficit on U.S. Government income increased to \$142.7 billion from \$110.8 billion, and the deficit on "other" private income increased to \$8.4 billion from \$6.0 billion. In contrast, the surplus on direct investment income increased to \$150.3 billion from \$134.4 billion.

Receipts of income on U.S. direct investment abroad were \$295.9 billion in 2006, up from \$251.4 billion in 2005 (table M, chart 12). Earnings increased 18 percent, up from an 11-percent increase in 2005. Stronger economic growth in advanced economies was a major factor boosting earnings growth. In addition, depreciation of the U.S. dollar contributed to the

p Preliminary r Revised

stronger increase in earnings, particularly for affiliates in Europe. Earnings growth in 2006 was largest for holding companies, which increased \$15.0 billion, largely in the Caribbean and Europe. Earnings in "other" industries increased \$13.3 billion, led by mining of petroleum and metals. Earnings in manufacturing increased \$10.2 billion, largely in computers and electronic products, chemicals, and transportation equipment. Earnings in finance and insurance increased \$4.1 billion, and earnings in wholesale trade increased \$1.9 billion.

Payments of income on foreign direct investment in the United States were \$145.6 billion in 2006, up from

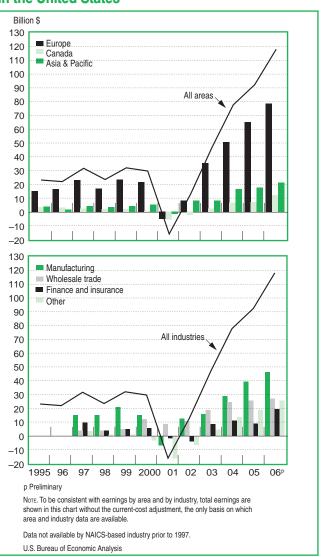

Chart 12. Earnings on U.S. Direct Investment Abroad

\$117.0 billion in 2005 (table M, chart 13). Earnings of U.S. affiliates grew strongly at 25 percent in 2006, up from an increase of 16 percent in 2005, parallel to the pickup in U.S. corporate profits, which accelerated to an increase of 21 percent in 2006 from an increase of 12 percent in 2005. In 2006, the largest increase in earnings was in finance (including depository institutions and insurance), which increased \$10.5 billion, led by both insurance and banking earnings. Earnings in manufacturing increased \$6.9 billion, led by earnings in chemicals, "other," and primary and fabricated metals. Earnings in "other" industries increased \$6.7 billion, and earnings in wholesale trade increased \$1.6 billion.

"Other" private income receipts and "other" private income payments rose strongly again in 2006 after strong increases in 2005. In 2006, outstanding claims

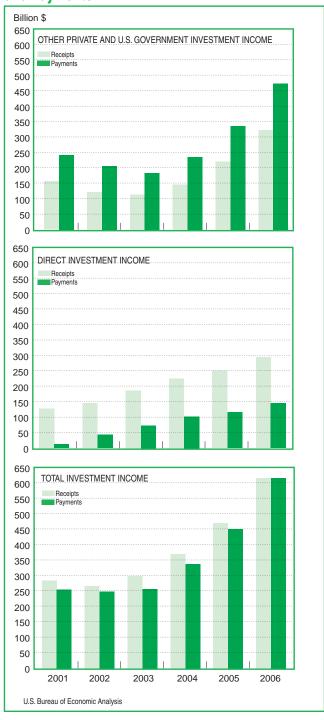

Chart 13. Earnings on Foreign Direct Investment in the United States

and liabilities of banks and nonbanks and holdings of securities increased considerably, but much of the increases in receipts and payments continued to be attributable to sizable increases in U.S. and foreign interest rates.

Receipts of income on "other" private investment increased to \$320.8 billion in 2006 from \$217.6 billion in 2005 (table N, chart 14). More than half of the

Chart 14. U.S. Investment Income: Receipts and Payments

increase was attributable to rising interest rates. Interest received on banks' claims increased \$45.4 billion, mostly because of a 168-basis-point increase in yields; average amounts outstanding increased 16 percent. Income received on securities increased \$25.4 billion; dividends increased \$16.2 billion because of a 27-percent increase in holdings, and interest on bonds increased \$9.2 billion because of a 71-basis-point increase in yields. Interest on "other" (largely nonbank) claims increased \$32.4 billion, mostly because of a rise in yields of 158 basis points.

Payments of income on "other" private investment increased to \$329.2 billion in 2006, up from \$223.6 billion in 2005 (table N, chart 14). Nearly 60 percent of the increase was attributable to rising interest rates. Income paid on banks' liabilities increased \$47.9 billion as a result of a 168-basis-point increase in yields and a 17-percent increase in average amounts outstanding. Income paid on securities increased \$34.7 billion; interest on bonds increased \$28.4 billion because of a 19-percent increase in holdings and a 65-basis-point rise in yields, and dividends on stocks increased \$6.3 billion, mostly because of a 14-percent increase in holdings. Interest paid on "other" (largely nonbank) liabilities increased \$23.0 billion, mostly because of a 144-basis-point increase in yields.

	22.2	42.5	65.5

p Preliminary

Receipts of income on U.S. Government assets were \$2.4 billion in 2006, down from \$2.7 billion in 2005 (table O).

Payments of income on U.S. Government liabilities increased to \$145.1 billion in 2006, up from \$113.6 billion in 2005 (table O). The increase was about evenly split between larger average amounts outstanding and higher yields. Both short- and long-term yields rose, as U.S. monetary policy tightened throughout the first half of the year. Payments on agency bonds increased \$17.3 billion, as holdings increased 25 percent and yields increased 86 basis points. Payments on U.S. Treasury bonds increased \$10.3 billion, as holdings

increased 11 percent and yields increased 16 basis points. Payments on U.S. Treasury bills increased \$3.9 billion, as holdings decreased 9 percent and yields increased 176 basis points.

Unilateral current transfers

Net unilateral current transfers to foreigners were \$84.1 billion in 2006, down from \$86.1 billion in 2005.

U.S. Government grants were \$21.4 billion, down from \$31.4 billion (table O). Grants to Israel and Egypt under the credit waiver program and under economic assistance programs totaled \$0.6 billion in 2006, down from \$6.9 billion in 2005; these grants were lower in 2006 because budget restrictions delayed disbursements to Israel and to Egypt.

U.S. Government grant disbursements for reconstruction in Iraq fell to \$4.6 billion in 2006 from \$7.7 billion in 2005.

Excluding these special transactions with Israel, Egypt, and Iraq, U.S. grants to developing countries for all other purposes were \$15.1 billion in 2006, down slightly from \$15.5 billion in 2005.

Private remittances and other transfers to foreigners increased to \$55.7 billion in 2006 from \$48.4 billion in 2005.

Capital Account

Capital account transactions were net payments (outflows) of \$3.9 billion in 2006, down from \$4.4 billion in 2005. Transactions in 2006 resulted mostly from debt forgiveness.

Financial Account

Net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$719.1 billion in 2006, down from \$785.4 billion in 2005. Net acquisitions by U.S. residents strengthened more than net acquisitions by foreign residents (chart 15).

U.S.-owned assets abroad

Net U.S.-owned assets abroad increased \$1,045.8 billion in 2006, following an increase of \$426.8 billion in 2005. U.S. claims reported by U.S. banks, U.S. direct investment abroad, and net U.S. purchases of foreign securities all increased substantially.

U.S. official reserve assets. U.S. official reserve assets decreased \$2.4 billion in 2006, after decreasing a record \$14.1 billion in 2005. The U.S. reserve position at the International Monetary Fund (IMF) decreased \$3.3 billion, foreign currency assets increased \$0.7 billion, and Special Drawing Rights increased \$0.2 billion. The decrease in the U.S. reserve position at the IMF resulted largely from repayments of dollar funds to the IMF by Argentina, Indonesia, and Turkey. Argentina, Indonesia, Uruguay, and the Philippines all paid off the remainder of their debts owed to the IMF. These repayments of dollar funds were part of \$31.0 billion in total repayments by member countries of IMF credits and loans outstanding in 2006.

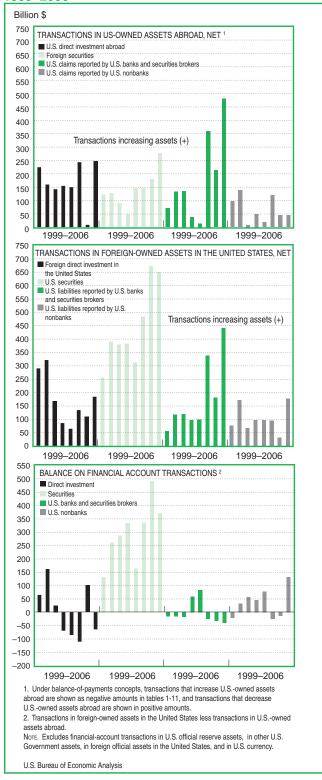

Claims on foreigners reported by banks and nonbanks. U.S. claims reported by U.S. banks and securities brokers increased \$482.4 billion in 2006, up sharply from an increase of \$213.0 billion in 2005

p Preliminary r Revised

(tables P and Q). The increase in 2006 was largely the result of interbank transactions among U.S. and foreign banks, with much of the lending likely associated

Chart 15. Selected Financial Account Transactions, 1999–2006

with the strong pickup in mergers and acquisitions abroad, including lending for syndicated loans. Claims associated with resale agreements also increased, but they were a much smaller source of increase in total claims. Borrowing to finance some of this lending came from banks abroad where short-term interest rates were lower than in the United States, but some of the lending was also financed by the healthy growth in deposits at domestically chartered U.S. banks.

Gross lending and gross borrowing of banks and securities brokers was significantly greater in 2006 than in 2005. On a net basis, U.S. banks and brokers were net suppliers of funds to foreigners of \$41.2 billion in 2006; in 2005, U.S. banks supplied funds to foreigners of \$33.2 billion (table P).

Claims of foreign-owned banks increased \$190.4 billion in 2006, up from \$105.3 billion in 2005. In 2006, most of the increase in claims was in interbank transactions with bank offices abroad. Many of these transactions were likely related to the strong pickup in mergers and acquisitions and to the acceleration in demand for syndicated loans. The size of transactions was particularly large in the last half of the year when acquisition activity intensified. Global merger and acquisition announcements in 2006 increased 35 percent, following an increase of 41 percent in 2005. Total announcements in 2006 narrowly exceeded those at the peak of the technology boom in 2000. More than half of the mergers in 2006 involved companies outside the United States, mostly in Europe. In addition, global syndicated lending increased 11 percent, driven partly by merger and acquisition activity and acquisition-related loans; acquisition-related loans increased 63 percent.² Leveraged buyouts and private equity leveraged loans also created large demands for new bank credit. U.S. banks, especially foreign-owned banks, featured prominently in shifting funds abroad to meet these credit demands.

Claims of U.S.-owned banks increased \$60.6 billion in 2006, down from \$67.4 billion in 2005.

Claims of U.S. securities brokers increased \$71.8 billion in 2006, a shift from a decrease of \$19.2 billion in 2005. The increase in 2006, largely to nonbanks in the United Kingdom, reflected continued increases in activity in foreign financial markets and the associated demand for credit to finance securities transactions.

^{2.} For more information, see Thomson Financial, "Syndicated Loans Review, Fourth Quarter 2006"; at <www.thomson.com/solutions/financial>, click on "Investment Banking" and then "League Tables" and look under "Syndicated Loans."

Claims for banks' customers' accounts increased \$147.0 billion in 2006, up from an increase of \$79.4 billion. In 2006, most of the increase was in certificates of deposit (CDs), which increased \$80.9 billion, up from an increase of \$4.9 billion in 2005. Banks' customers invested heavily in CDs from Europe, with CDs from banks in the United Kingdom accounting for 54 percent of the increase in claims; in France, for 20 percent; and in other European countries, for 11 percent.

Claims for banks' customers' holdings of commercial paper increased \$17.5 billion in 2006, following a small reduction in holdings in 2005. In 2006, U.S. investors purchased 40 percent of their commercial paper from companies in Ireland, 27 percent from the United Kingdom, 25 percent from Australia, and 20 percent from the Caribbean. Global issuance of com-

mercial paper was up 4.8 percent in 2006 from 2005; new issues in 2006 were driven by strong corporate investment and new asset-backed commercial paper products.

Claims reported by U.S. nonbanking concerns increased \$44.4 billion in 2006, following an increase of \$44.2 billion in 2005 (table P). The increase in 2006 was mostly accounted for by an increase in deposits of \$34.0 billion, mostly in the first half of the year. Resale agreements increased \$15.0 billion.

Foreign securities. Net U.S. purchases of foreign securities were \$277.7 billion in 2006, up from \$180.1 billion in 2005 (table P). Net U.S. purchases of foreign bonds were a record \$149.2 billion, up sharply from \$38.0 billion in 2005. In contrast, net U.S. purchases of foreign stocks decreased but remained strong at \$128.5

Excludes liabilities to foreign official agencies.

billion, following record net purchases of \$142.1 billion in 2005.

Bonds. Net U.S. purchases of foreign bonds were a record \$149.2 billion in 2006, a sharp increase from \$38.0 billion in 2005. The previous record was set in 1993 when net U.S. purchases were \$82.9 billion. Much of the step-up in 2006 was in Europe, particularly the United Kingdom, with two-thirds of the step-up occurring in the last half of the year. The step-up followed the U.S. Federal Reserve Board's decision in midsummer to pause in its runup of interest rates, which led to an easing of bond yields throughout the remainder of the year both in the United States and abroad. The United Kingdom was one of the few developed countries to see strong growth in bond and note issuance in 2006, consistent with the long-term trend that has seen that country accounting for an increasing proportion of international debt issuance. Although foreign bond total returns in Asia outpaced total returns in most other areas both in 2006 and in 2005, U.S. investors were net sellers of bonds from Asia in both years, particularly those from China, Singapore,

Total annual returns on bonds of 4 percent in the United States and Canada exceeded returns of 1 percent or less for the European Monetary Union, the United Kingdom, and Japan. The total return on emerging market debt averaged 10 percent. In the United States, the Federal Reserve, concerned about inflation, raised interest rates 100 basis points in the first half of the year. Central banks abroad, also concerned about inflation, tightened monetary policy over the course of the year: The Bank of England raised rates 50 basis points; the European Central Bank, 125 basis points; the Bank of Canada, 100 basis points; and the Bank of Japan, 25 basis points.

Stocks. Foreign equity markets remained strong in 2006, marking the fourth consecutive year of double-digit gains. Foreign stock prices appreciated 16 percent on average in local currencies and 24 percent in U.S. dollar terms, exceeding U.S. returns of 13 percent. In local currency, this was the third consecutive year that foreign equity market returns exceeded U.S. equity market returns. In dollar terms, this was the fifth consecutive year that foreign returns exceeded U.S. equity market returns (chart 16). In general, equity market returns were supported by strong corporate earnings and solid growth in several large economies, particularly in the United States and Europe.

Net U.S. purchases of foreign stocks remained strong at \$128.5 billion in 2006, but they were down from \$142.1 billion in 2005. A sharp decline in net U.S. purchases of Japanese stocks and a shift to net U.S. sales of stocks from Caribbean financial centers were

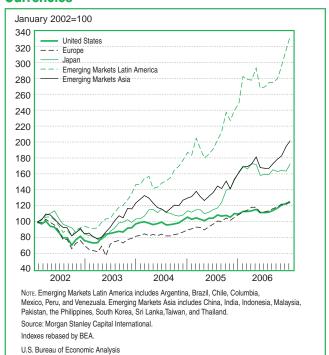

only partly offset by an increase in net U.S. purchases of stocks from the United Kingdom.

Net U.S. purchases of Asian stocks dropped to \$40.1 billion from \$66.8 billion. Net purchases of Japanese stocks fell to \$1.0 billion from \$39.9 billion, more than accounting for the drop. Japanese markets lagged behind other equity markets returning only 6 percent in local currency and 5 percent in dollar terms in 2006 after rising 43 percent in local currency and 24 percent in dollar terms in 2005. The drop to only \$1.0 billion in net purchases from Japan follows a period from 2003 to 2005 when net purchases from Japan averaged \$38.0 billion annually and accounted for a third of total net U.S. purchases. In contrast, net purchases of equities from other Asian countries increased in 2006. Net purchases from Hong Kong, where markets appreciated 27 percent in local currency and 26 percent in dollar terms, were \$20.1 billion, up from \$7.4 billion.

Transactions in stocks from Caribbean financial centers shifted to net U.S. sales of \$19.9 billion from net U.S. purchases of \$2.9 billion.

Net U.S. purchases of European stocks were \$84.8 billion, up from \$54.9 billion. Most of the step-up was accounted for by a step-up in net purchases from the United Kingdom. In 2006, gains on British stocks fell below U.S. returns in local currency terms, gaining only 11 percent; however, because of appreciation of the pound against the dollar, returns more than doubled to 26 percent when converted into dollars. Nearly

Chart 16. Selected Stock Price Indexes in Local Currencies

half of the step-up in net purchases occurred in the fourth quarter, when prices in equity markets world-wide strengthened considerably.

Direct investment. U.S. direct investment abroad was \$248.9 billion in 2006, up from \$9.1 billion in 2005 (table M).

Reinvested earnings shifted from negative investment of \$11.2 billion to positive investment of \$213.1 billion. Earnings in 2006 continued to be strong and distributions no longer exceeded earnings as in 2005, when many of the distributions were encouraged by one-time incentives associated with the American Jobs Creation Act of 2004. The act allowed U.S. parent companies to distribute foreign affiliate earnings at favorable U.S. rates of taxation.

Net equity capital investment abroad increased from \$39.7 billion to \$42.5 billion. The increase followed a sharp decline in 2005. Net equity investment abroad has remained in the range of \$35–\$43 billion annually in 4 of the last 5 years. The year 2004 was the exception, partly as a result of the restructuring of a large foreign media company that raised net equity investment abroad substantially. The largest increases in net equity investment abroad in 2006 were in finance and insurance and in holding companies.

Net intercompany debt investment decreased to \$6.8 billion from \$19.4 billion. A sizable decrease in investment occurred in holding companies.

Foreign-owned assets in the United States

Net foreign-owned assets in the United States increased \$1,764.9 billion in 2006, following an increase of \$1,212.3 billion in 2005. U.S. liabilities reported by U.S. banks, private foreign holdings of U.S. securities other than U.S. Treasury securities, and foreign official assets in the United States all increased by substantially larger amounts in 2006 than in 2005. In contrast, foreign private holdings of U.S. Treasury securities increased by a much smaller amount.

Foreign official assets. Foreign official assets in the United States increased \$300.5 billion in 2006, following an increase of \$199.5 billion in 2005. Dollar assets of developing and OPEC countries increased \$288.6 billion, up from an increase of \$227.3 billion. China continued to accumulate foreign reserves at a nearrecord pace and accounted for much of the increase in 2006; increases in recent years have reflected sharply rising Chinese trade surpluses. Dollar assets of OPEC members also increased, reflecting higher oil revenues. Dollar assets of industrial countries increased \$11.9 billion, following a decrease of \$27.8 billion. In 2006, an increase in assets of Western European countries was largely offset by a decrease in assets of Japan.

Liabilities reported by banks and nonbanks. U.S. liabilities reported by U.S. banks and securities brokers increased \$441.2 billion in 2006, up sharply from an increase of \$179.8 billion in 2005 (tables P and Q). Much of the increase in funds borrowed by both U.S.-owned and foreign-owned banks was likely recycled to branches and offices abroad to support the pickup in merger and acquisition activity. Some of the increase in these liabilities was also due to significantly higher short-term interest rates in the United States than abroad, which encouraged placement of funds in the United States.

Liabilities of U.S.-owned banks increased \$128.3 billion in 2006, following an increase of \$90.5 billion in 2005, indicating increased demand for borrowed funds, mainly through interbank borrowings. Liabilities of foreign-owned banks increased \$94.8 billion in 2006, following an increase of \$72.0 billion in 2005. Both U.S.-owned and foreign-owned banks were likely involved in the recycling of the funds back to Europe to support strengthened merger and acquisition activity and were key sources of funds for increased syndicated lending abroad. Funds were also borrowed to meet credit demands for stepped-up leveraged buyouts and private equity leveraged loans.

Liabilities of U.S. securities brokers increased \$32.7 billion in 2006, compared with an increase of \$13.0 billion in 2005. The increase was largely in the form of repurchase agreements with nonbanks in the United Kingdom.

Liabilities for banks' customers' accounts increased \$156.4 billion in 2006, following a \$7.0 billion increase in 2005. The increase was in negotiable certificates of deposit (CDs), which increased \$60.7 billion, up from a \$10.9 billion increase, and in other liabilities (including loans), which increased \$95.1 billion, following a decrease of \$11.2 billion. The stronger rise in short-term interest rates in the United States than in rates abroad encouraged these inflows.

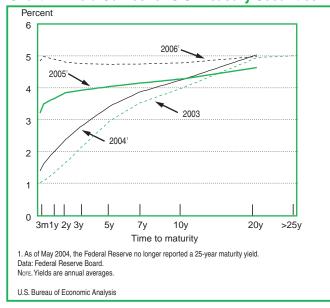

Liabilities reported by U.S. nonbanking concerns increased \$176.5 billion, following an increase of \$30.1 billion in 2005 (table P). The increase was largely accounted for by an increase in loans, advances, and other borrowing from the United Kingdom.

U.S. Treasury securities. Net purchases of U.S. Treasury securities by private foreigners fell to \$29.4 billion in 2006, down from a record \$199.5 billion in 2005 (table P). In 2006, the top purchaser of Treasury securities was Asia with purchases of \$52.2 billion; within Asia, Japan purchased \$24.7 billion, Hong Kong purchased \$13.8 billion, and China purchased \$9.5 billion. However, private investors in the United Kingdom were net sellers of \$19.7 billion, and private

investors in Caribbean financial centers were net sellers of \$16.5 billion. The especially small net purchases of Treasury securities in 2006 were in marked contrast to the sizable net purchases in 2002–2005, which averaged nearly \$100 billion annually in 2002–2004 and totaled \$200 billion in 2005. Many private investors preferred to purchase higher yielding U.S. corporate investment-grade and corporate high-yield bonds despite their higher risk.

Relative to 2005, the Treasury yield curve flattened in 2006 on an average annual basis (chart 17). In 2006, short-term interest rates increased 164 basis points in

Chart 17. Yield Curves for U.S. Treasury Securities

response to the tightening of monetary policy, intermediate-term rates increased 89 basis points, and long-term rates increased about 50 basis points. There was little difference in the cost of borrowing across the entire maturity spectrum.

Other U.S. securities. Net foreign purchases of U.S. securities other than U.S. Treasury securities were a record \$621.2 billion in 2006, up from \$474.1 billion in 2005 (table P). Net foreign purchases of U.S. corporate bonds were a record \$406.3 billion, up from \$316.0 billion. Net foreign purchases of U.S. federally sponsored agency bonds were a near-record \$100.9 billion, up from \$72.4 billion, the strongest since 2000 when net foreign purchases peaked at \$101.0 billion. Net foreign purchases of U.S. stocks were \$114.0 billion, the strongest since 2001, up from \$85.8 billion.

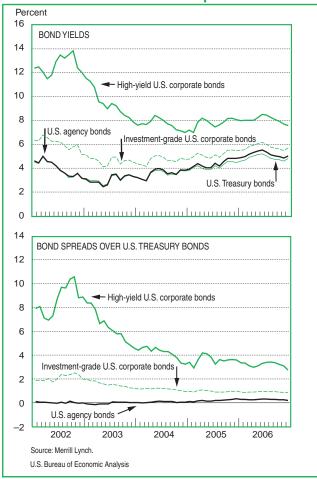

Corporate bonds. Net foreign purchases of U.S. corporate bonds were a record \$406.3 billion, up from the previous record of \$316.0 billion in 2005. Net purchases from the United Kingdom increased to \$189.6 billion from \$140.2 billion, and net purchases from investment funds in Caribbean financial centers more than doubled to \$85.5 billion from \$40.6 billion. Net purchases from Asia were almost flat at \$55.1 billion; a decrease in net purchases from Japan by half was offset by increased net purchases from China, Hong Kong, and Singapore. Record net purchases in 2006 were driven by strong corporate earnings, strengthened balance sheets, and near-record low default rates amid an environment of moderate inflation and growth in the United States. Merger and acquisition activity and equity buybacks picked up in 2006 and partly contributed to a record level of corporate bond issuance for the year. Global issuance of international bonds and notes increased over 10 percent for the year, well above the average annual growth of 4 percent for 2000–2005. Improved market liquidity and lower credit spreads may have encouraged increased reliance on debt funding for corporate takeovers.

Spreads of U.S. investment-grade corporate bonds over Treasury bonds diminished 9 basis points in 2006 after widening 13 basis points in 2005, and spreads of non-investment-grade bonds decreased 83 basis points after an increase of 48 basis points; as a result, new debt was less expensive for U.S. corporate borrowers, particularly for those with lower credit ratings (chart 18).

In 2006, U.S. long-term interest rates stayed well above long-term rates in Japan, the euro area, Canada, and the United Kingdom, favoring investment in U.S. bonds. U.S. corporate bonds posted a 4-percent gain in total returns for investment-grade bonds and a 12-percent total return for non-investment-grade bonds. By comparison, the annual total returns for investment-grade bonds in local currency were 0.6 percent for bonds of the European Monetary Union, 1.0 percent for the United Kingdom, 0.1 percent for Japan, and 4.4 percent for Canada.

Agency bonds. Net foreign purchases of U.S. federally sponsored agency bonds were a near-record \$100.9 billion in 2006, up from \$72.4 billion in 2005. The increase was attributable to a \$27.9 billion increase in net purchases from investment funds in Caribbean financial centers and to transactions with Europe, which shifted to net purchases of \$13.7 billion from net sales of \$11.9 billion. Net purchases from Asia remained sizable at \$44.9 billion, but were down from \$62.5 billion. Total returns on agency bonds were 4 percent, up from

2 percent. Spreads of agency bonds over Treasury bonds narrowed 11 basis points.

Stocks. Net foreign purchases of U.S. stocks in 2006 were the strongest in 5 years at \$114.0 billion, up from \$85.8 billion in 2005. Net purchases from Europe were \$75.1 billion, up from \$43.2 billion, and net purchases from investment funds in Caribbean financial centers were \$24.6 billion, up from \$13.8 billion. In contrast, net purchases from Canada fell to \$12.8 billion from \$20.4 billion, and transactions with Asia shifted to net sales of \$1.2 billion from net purchases of \$8.5 billion.

In 2006, the S&P Index was up 14 percent, the Dow Jones Industrial Average was up 16 percent, and the NASDAQ Composite was up 10 percent—all well

above their annual gains in 2005 and 2004. The rise in U.S. stock prices was partly attributable to record corporate profits, robust merger and acquisition activity, and continued growth in dividend payouts and equity buybacks. Most of the gains occurred in the second half of the year when long-term interest rates pulled back after the Federal Reserve paused in its runup in interest rates after more than 2 years of tightening, oil prices fell sharply, and corporate earnings were stronger than expected. By comparison, in local currencies, the MSCI European Stock Index was up 16 percent, the MSCI Japan Index was up 6 percent, the MSCI Emerging Markets Index for Asia was up 24 percent, and the MSCI Emerging Markets Index for Latin America was up 34 percent. As a result of appreciation of most major European currencies and most Asian currencies against the dollar in 2006, returns were significantly larger when translated into dollars; European returns in dollar terms increased 30 percent, compared with 16 percent in local currencies, and Asian returns increased 30 percent, compared with 24 percent.

U.S. currency flows. Net U.S. currency shipments to foreigners were \$12.6 billion in 2006, down from \$19.4 billion in 2005. Outflows weakened significantly because few new economic and political crises occurred, and countries that have been using dollars as a result of economic and political instability have recently been more stable, giving residents greater confidence in bank deposits and local currency.

Direct investment. Foreign direct investment in the United States was \$183.6 billion in 2006, up from \$109.8 billion in 2005 (table M).

Net intercompany debt transactions shifted to positive net investment in the United States of \$24.8 billion from negative investment of \$6.9 billion in 2005. By area, the largest changes were a sizable shift to an increase in investment from continental Europe and a reduction in investment from the Caribbean. By industry, the largest changes were in "other," finance (including depository institutions) and insurance, and wholesale trade.

Reinvested earnings increased to \$80.3 billion from \$58.9 billion. The increase reflected an increase in affiliates' earnings, as well as an increase in the share of earnings reinvested to 63 percent in 2006 from 57 percent in 2005. By area, the largest increases were from

continental Europe and Canada. By industry, the largest increases were in finance (except depository institutions) and insurance and in "other."

Net equity capital investment in the United States increased to \$78.5 billion from \$57.7 billion. This marked the first step-up in equity investment after 5 consecutive years of slowing. Still, investment in 2006 was only 30 percent of its peak in 2000 of \$259.6

billion. Economic growth in the home countries of several major investors in the United States picked up significantly in 2006, especially in Europe. In addition, favorable financing conditions encouraged foreign acquisitions of U.S. firms; in 2006, the largest acquisitions, mainly by companies in continental Europe, were in communications equipment, pharmaceuticals, chemicals, insurance, and banking.

p Preliminary

Note. OPEC members are Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela. Excludes Ecuador beginning January 1993 and Gabon in January 1995. Some accounts are estimated from regional data because individual country data are not available.

Footnotes to U.S. International Transactions Tables 1–11

General notes for all tables: P Preliminary. P Revised. Less than \$500,000 (+/-). Suppressed to avoid disclosure of data of individual companies. Quarterly estimates are not annualized and are expressed at quarterly rates.

Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, —: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

- 2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2a.
- 3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.
- 4. Includes transfers of goods and services under U.S. military grant programs.
- 5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
- exclude U.S. affiliates' receipts from foreign parents.

 6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
- 7. At the present time, all U.S. Treasury-owned gold is held in the United States
 - 8. Includes sales of foreign obligations to foreigners.
- 9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
- 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
- 11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5.
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.
- 13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the Survey of Current Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

Additional footnotes for historical data in July issues of the Survey:

- 14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.
- 15. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.
- 16. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2006 issues of the Survey.

Table 2a:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Survey), except for 1974–81, when they represent transactions values, f.a.s. foreign port of exportation (see July issues of the Survey for historical data). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" monthly data supplied by the Census Bureau (see Technical Notes in the December 1985 Survey). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The sea-

sonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see technical Notes in the June 1980 Survey, in the June 1988 Survey, and in the June 1991 Survey). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975–80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.

- 2. Adjustments in lines A5 and A13, B20, B75, and B130 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.
- 3. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 11, line 5 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 11, line 22 (direct defense expenditures).
- 4. Addition of electric energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the Survey for historical data).
- 5. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair; and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974–81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the Survey for historical data).
- 6. For 1988–89, correction for the understatement of crude petroleum imports from Canada.
- 7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 11, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: Members of OPEC: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (excludes Ecuador beginning in January 1993 and Gabon beginning in January 1995). Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates.

Table 3:

- 1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.
- 2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.
- 3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.
- 4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

Table 4:

- 1. Complete instrument detail is only available beginning with 2003.
- 2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

Table 5:

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4,

and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.

- 2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.
- 3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
- 4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.
- 5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contra-entry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
- 6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.
- 7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.
- 8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

Table 6a:

- 1. For bank affiliates, includes only interest on permanent debt investment by their parent companies. Excludes interest between financial parent companies and nonbank financial affiliates.
- 2. For bank affiliates, includes only permanent debt investment by their parent companies. Excludes intercompany debt between financial parent companies and nonbank financial affiliates.

Table 7a:

- 1. Beginning with 2005, source data for new issue estimates are no longer separately available. New issues continue to be included in net purchases.
- 2. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 8a:

- 1. Prior to 2003, securities brokers' claims on and liabilities to their foreign affiliates are included in the estimates. They are excluded beginning in 2003.
- Complete instrument detail is only available beginning with 2003.
 Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parent groups), where both the U.S. and foreign firms are classified in a finance industry, but the firms are neither banks nor securities brokers.
- 4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 9a:

- 2. Complete instrument detail is only available beginning with 2003.
- 3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.
- 4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-
- 5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.
- 6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.
 - 7. Prior to 2003, includes only deposits.
- 8. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 10a:

- 1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.
 - Complete instrument detail is only available beginning with 2003.
- 3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreignowned.
- 4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 11:

For footnotes 1-13, see table 1.

- 14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Finland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.
 - 15. Quarterly estimates for Mexico are available beginning with 2004.
- 16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.
 - Details are not shown separately; see totals in lines 56 and 63.
 - 18. Details not shown separately are included in line 69.
- 19. At the global level, the statistical discrepancy represents net errors and omissions in recorded transactions. For individual countries and regions, it may also reflect discrepancies that arise when transactions with one country or region are settled through transactions with another country or region.

Note. Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. goods export statistics reflect country of reported destination; in many cases the goods may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of securities transactions reflects the country with which transactions occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

State Personal Income

Fourth Quarter of 2006 Annual Estimates for 2006

By David G. Lenze

PERSONAL income for the United States grew 1.2 percent in the fourth quarter, the same as in the third quarter, according to estimates from the Bureau of Economic Analysis (BEA) (chart 1). ¹

For the year 2006, growth was strong. Personal income increased 6.3 percent, the highest annual growth rate since the current expansion began in December 2001. In 2005, personal income grew 5.2 percent. Notably, personal current taxes, which are deducted from personal income to obtain the amount available for spending or saving, increased 13.1 percent in 2006, more than double the growth rate of personal income.

The estimates of annual personal income discussed in this article are preliminary. They are scheduled to be revised later this year when more complete and more detailed data become available. Quarterly estimates are revised every quarter.

Personal income is the income received by all persons from all sources; it is defined as the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. Personal income for the Nation is the sum of personal income estimates for all states and the District of Columbia. Some of the data used to estimate personal income are compiled on a place-of-work basis, but because state personal income reflects the income of residents of a state, a residence adjustment is required.

Fourth Quarter of 2006

The 1.2-percent growth rate in the third and fourth quarters of 2006 was below the average growth rate of 1.4 percent over the last 3 years (chart 2). Growth exceeded inflation; the national price index for personal consumption expenditures fell 0.2 percent in the

fourth quarter after rising 0.6 percent in the third quarter.

Growth accelerated in 18 states and decelerated in 25 in the fourth quarter. The largest acceleration, 2.1 percentage points, was in North Dakota. The largest deceleration, 2.6 percentage points, was in the state of Washington. Growth accelerated in four of eight BEA regions—New England, Mideast, Great Lakes, and Plains—and decelerated in the others.

Earnings

Nationally, earnings by place of work—the sum of wages, wage supplements, and proprietors' income—rose 1.3 percent in the fourth quarter, compared with 0.8 percent in the third quarter. Earnings is typically the largest contributor to personal income growth. In the fourth quarter, the leading industry contributors to earnings growth were finance and insurance, professional and technical services, and state and local government.

Extraction of minerals (including oil, gas, copper,

Acknowledgments

The quarterly and preliminary annual estimates of state personal income were prepared by Suet N. Boudhraa, Daniel R. Corrin, Carrie L. Litkowski, and Matthew A. von Kerczek, under the supervision of James M. Zavrel, Chief of the Regional Income Branch. The preliminary annual estimates of disposable personal income were prepared by Ann E. Dunbar. The tables were prepared by Alison Adam, Giselle Cubillos-Moraga, H. Steven Dolan, and Gary V. Kennedy, under the supervision of Kathy A. Albetski, Chief of the Regional Economic Information System Branch. Robert L. Brown, Chief of the Regional Economic Measurement Division, provided general guidance.

^{1.} Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter percent changes are calculated from unrounded data and are not annualized.

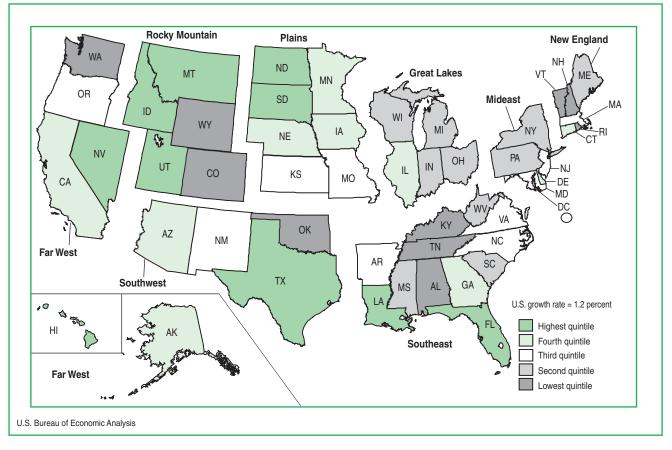

Chart 1. Personal Income: Percent Change in 2006:IV

nickel, uranium, and gold) continued its strong contribution to earnings growth in the area stretching from Louisiana, Texas, Oklahoma, and New Mexico through Colorado, Wyoming, and Montana and into Alaska. The mining industry was the biggest contributor to fourth-quarter earnings growth in four of those states (table A).

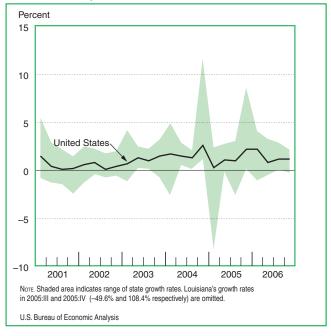

In contrast, construction subtracted from earnings growth in most states, with the notable exceptions of Louisiana, which is still rebuilding property damaged and destroyed by the hurricanes and flood in 2005, and Wyoming, whose mining sector continues to support construction. Construction also contributed small amounts to earnings growth in 10 other states, such as Nevada and Texas, with the fastest personal income growth.

Dividends, interest, and rent

These items, known as property income, grew 0.9 percent in the fourth quarter of 2006, down from 2.5 percent in the third quarter.

Personal interest income, the largest component of property income, fell 1.3 percent in the fourth quarter, the first decline since the second quarter of 2004. Per-

Chart 2. Range of State Personal Income Quarterly Growth Rates, 2001–2006

sonal interest income turned down, reflecting a broad decline in interest rates over the quarter.

Rental income of persons and personal dividend income both rose. Rental income growth decelerated, mainly reflecting a deceleration in space rent and an acceleration in total expenses.

Transfer receipts

Transfer receipts grew 0.7 percent in the fourth quarter of 2006, down from 1.8 percent in the third quarter. Personal current transfers decelerated because of a downturn in state and local government benefits (mainly Medicaid payments).

Annual Estimates, 2006

U.S. personal income grew 6.3 percent in 2006, up from 5.2 percent in 2005 (chart 3). Inflation, as measured by the national price index for personal consumption expenditures, was 2.8 percent in 2006, down from 2.9 percent in 2005.

The growth in 2006 was the strongest annual growth since the current expansion began in December 2001. However, the 2006 estimates reflect more-than-usual statistical uncertainty for some states, particularly Louisiana, which lost about 200,000 residents and is still feeling the effects of the hurricanes

^{1.} Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and sala-

ries, and proprietors' income.

2. "Other" consists of the wage and salary disbursements to U.S. residents employed by international organizations and

foreign embassies and consulates in the U.S.

3. Data are suppressed to avoid disclosure of confidential information.

and flood in 2005.² The Federal Emergency Management Agency (FEMA) transferred about \$700 million in assistance to residents of Louisiana in 2006.

All eight BEA regions registered solid accelerations in personal income growth. For the third consecutive year, the Southwest region enjoyed the fastest growth (8.3 percent, up from 7.7 percent), and the Great Lakes region saw the slowest growth (4.8 percent, up from 4.0 percent). The contrast between the two regions reflected a mining boom in the Southwest and employment losses in auto manufacturing in the Great Lakes.

Personal income growth accelerated in 39 states. Louisiana's 19.4 percent growth, which followed an 8.7-percent decline in 2005, was the largest. The large upswing reflects the consequences of the property lost in two hurricanes and a flood and the state's subsequent recovery.³ The compensation component of personal income grew 6.6 percent in Louisiana in 2006; the other components (the parts most affected by property losses) grew 56.9 percent. Compared with 2004, Louisiana's personal income is 9.0 percent higher

while U.S. personal income is 11.8 percent higher.

Michigan grew the slowest of all states in 2006 (3.1 percent) and was 1 of 11 states with decelerating growth. In 2005, Michigan grew 3.5 percent. The slow-down partly reflected cutbacks in auto industry employment, especially in the last half of the year. The effects of the cutbacks on earnings were offset by the payment of lump-sum wages to workers accepting buyout offers. The downturn in automotive employment had ripple effects on earnings in other industries, particularly construction and real estate.

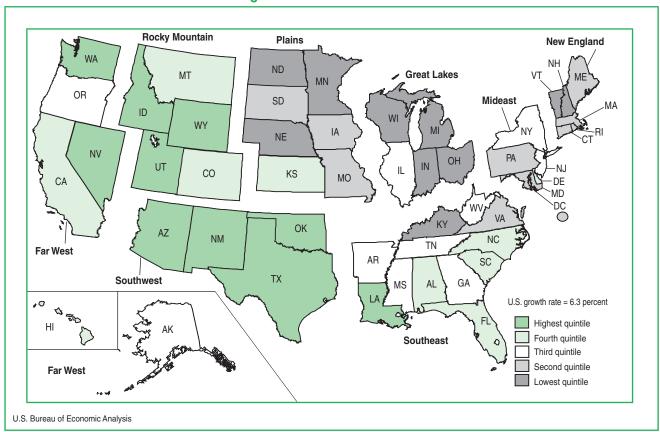

Earnings

Nationally, earnings by place of work grew 6.1 percent, compared with 5.6 percent in 2005. Professional and technical services, health care and social assistance, and construction contributed the most to earnings growth. Farming subtracted from earnings growth in all but nine states. Farm earnings declined because of rising production expenses and because of a decrease in government payments.

Dividends, interest, and rent

Property income grew 8.9 percent, compared with 2.4 percent in 2005. Dividends and interest growth both accelerated in 2006, while rental income increased in 2006 after declining in 2005.

^{2.} The large migration out of the state may result in larger-than-normal revisions in the future.

^{3.} For details about how BEA accounts for natural disasters in state personal income, see David G. Lenze, "State Personal Income: Fourth Quarter of 2005 and Per Capita Income for 2005," Survey of Current Business 86 (April 2006): 71–76.

Transfer receipts

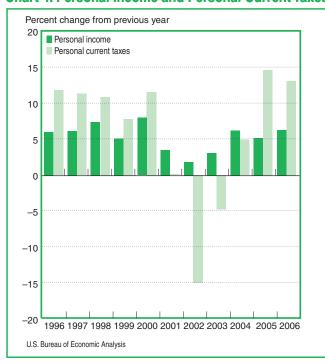

Transfer receipts grew 5.0 percent in 2006 compared with 7.0 in 2005

Personal current taxes

Personal current taxes, which are deducted from personal income to obtain disposable personal income, increased 13.1 percent in 2006, while personal income increased only 6.3 percent. Personal current taxes are primarily taxes on income rather than on sales or real property.

Disparities between the growth in personal current taxes and personal income are not uncommon (chart 4). For one thing, personal income is not identical to the individual income tax base. Personal income includes several items, such as Medicaid and Medicare benefits and the property income of pension funds,

Chart 4. Personal Income and Personal Current Taxes

which are not subject to state and Federal income taxes. In addition, some types of taxable income, such as pensions and capital gains, are not included in personal income.

There can also be important timing differences. Although BEA measures withholding taxes on wages and salaries on an accrual basis, taxes on other types of income, including capital gains, are usually measured on a payments basis. In addition, changes in tax laws can also lead to a disparity between income growth and income tax growth. In 2006, several individual income tax law changes went into effect. However, Federal and most state tax rates did not change.

By state, personal current taxes increased most rapidly in 2006 in Wyoming (21.0 percent) and increased least rapidly in Maine (6.9 percent). In general, the states with the highest personal income growth had the highest personal current taxes growth.

Per capita personal income

U.S. per capita income grew 5.2 percent in 2006, up from 4.2 percent in 2005.

Louisiana's per capita income rebounded 25.5 percent in 2006 after falling 9.0 percent in 2005. The extreme swing in Louisiana resulted from the effects of the uninsured fixed assets destroyed by and as a consequence of Hurricanes Katrina and Rita in 2005, a population loss of more than 200,000 residents, many of whom were low-income, and solid wage gains in 2006.

Connecticut led the Nation with per capita income of \$49,852—37 percent above the national average. Typically, the list of top 10 states with the highest per capita incomes varies little from year to year. Wyoming, however, following a sustained 10-year climb from 33rd place, returned to the top 10 after a 23-year absence. Its ranking is strongly tied to the mining industry, which has long-term expansionary and contractionary cycles.

Mississippi had the lowest per capita income of all states, \$26,535—27 percent below the national average. The bottom 10 states were all ranked in the bottom 10 last year.

Alternative Measures of Household Income

Three of the most widely used measures of household income are BEA's measure of personal income, the Census Bureau's measure of money income, and the Internal Revenue Service's measure of adjusted gross income of individuals.1

Personal income, in general, is a more comprehensive measure. Personal income is defined as the sum of wage and salary disbursements, supplements to wages and salaries, proprietors' income with inventory and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and personal current transfer receipts, less contributions for government social insurance. Because the personal income of an area represents the income that is received by, or on behalf of, all the persons who live in that area, and because the estimates of some components of personal income (wage and salary disbursements, supplements to wages and salaries, proprietors' income, and contributions for government social insurance) are made on a place-of-work basis, state personal income includes an adjustment for residence. Personal income includes the incomes of individuals, of nonprofit institutions that primarily serve individuals, of private noninsured welfare funds, and of private trust funds. The property income earned on life insurance and annuity reserves of life insurance carriers and earned on the assets of noninsured pension plans are also included in personal income.

Money income consists of income in cash and its equivalents that is received by individuals. It excludes but personal income includes—employer contributions for employee pension and insurance funds, lump-sum payments except those received as part of earnings, certain in-kind personal current transfer receipts, such as Medicaid, Medicare, and food stamps, and imputed income.² Money income includes—but personal income excludes—personal contributions for government social insurance, income from government employee retirement plans and from private pensions and annuities, and income from regular interpersonal transfers, such as child support.

In addition, personal income at the national, state, and local area levels is presented annually on a per capita (or simple average per person) basis. Money income at the national level is presented annually both on a per capita basis and on a median household basis; median money income for states from the Current Population Survey is presented annually as 2- and 3-year averages.³ Personal income is not adjusted for inflation, but the national estimates of money income are available in inflation-adjusted dollars, using the consumer price

Adjusted gross income (AGI) consists of the taxable income prior to exemptions and the standard or itemized deductions that is reported by individuals on their Federal income tax return. It includes—but personal income excludes—personal contributions for social insurance, gains and losses on the sale of assets, and income from government employee retirement plans and from private pensions and annuities. AGI excludes—but personal income includes—the income of the recipients of taxable incomes who, legally or illegally, did not file an individual income tax return. In particular, AGI excludes the income of many individuals with low incomes who are exempt from filing tax returns. In addition, adjusted gross income excludes certain types of income that are not taxed—such as tax-exempt interest and nontaxable transfer payments, including Medicare, Medicaid, and welfare benefit payments—and it includes the taxable portion of social security benefit payments.

^{2.} Imputations are added to personal income so that a comprehensive account of total production and its distribution can be presented. For a description of these imputations, see State Personal Income: 2005 Methodology at <www.bea.gov/bea/regional/pdf/spi2005/ Complete_Methodology.pdf>.

^{3.} For local areas, the most recent estimates of money income for 2004 are median household income estimates from the Small Area Income and Poverty Estimates.

^{4.} At the national level, BEA also presents real per capita disposable personal income (DPI). (DPI is personal income less personal current taxes; real DPI is DPI divided by the implicit price deflator for personal consumption expenditures.) For the sources of the prices used for this deflator, see "Updated Summary NIPA Methodologies," SURVEY 88 (November 2006): 10-27.

 ^{1.} Bureau of Economic Analysis, available at <www.bea.gov>.
 2. Census Bureau, Current Population Survey, available at <www.census.gov>. Census calculates CPS per capita money income using the civilian noninstitutional population total as of March of the following

^{3.} Internal Revenue Service (IRS), available at <www.irs.gov>. The IRS does not produce per capita adjusted gross income (AGI). The measures shown are derived by dividing aggregate IRS AGI (less deficit) by total population from the Census Bureau (also used by BEA in the calculation of state per capita

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

p Preliminary r Revised 1. Percent change was calculated from unrounded data.

Table 2. Annual Personal Income and Per Capita Personal Income by State and Region

			Pe	rsonal income						Per capi	ta personal	income 1

p Preliminary
r Revised
1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The
population estimates were released by the Bureau of the Census in December 2006.

^{2.} Percent change was calculated from unrounded data.

Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

			Disposa	able persona	l income				Per	capita dispos	sable persona	al income ¹

Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

P Preliminary
Revised

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.
L Less than \$500,000, but the estimates for this item are included in the total.
n.a. Not available

The industry classification uses the 2002 North American Industry Classification System (NAICS).
 Midyear population estimates of the Bureau of the Census.
 Per capita personal income is total personal income divided by total midyear population.
 Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.

 ^{5.} The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadaian and Mexican residents commuting into the United States.
 6. Rental income of persons includes the capital consumption adjustment.
 7. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

^{8. &}quot;Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 5. Personal Income by Major Source and [Millions of dollars,

p Preliminary
r Revised
D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.
1. The estimates of earnings are based on the 2002 North American Industry Classification System (NAICS).
2. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.
3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements

to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

April 2007 D–1

BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at <www.bea.gov>. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

D-2 April 2007

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on March 29, 2007. These estimates include the "final" estimates for the fourth quarter of 2006.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to <www.bea.gov> and subscribe. The "Selected NIPA Tables" are available later that day.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification Industrial Classification (SICJ); fater estimates for these industries are based at the System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

trial Classification (SIC); later esumates for trace in account and SIC Classification (SIC); (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Includes government consumption expenditures, which are for services (such as education and national defense)

^{2.} Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.
3. Some components of final sales of computers include computer parts.
Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and the sum of the detailed lines of goods, of services, and of structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
 Equals compensation of general government employees plus general government consumption of fixed capital.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
 Equals compensation of general government employees plus general government consumption of fixed capital.

Gross housing value added	12	856.7	887.8	863.2	878.2	886.8	892.9	893.4

^{1.} Equals gross domestic product excluding gross value added of households

4. Equals compensation of general government employees plus general government consumption of fixed capital.

Nore: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

ment.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

^{4.} Equals compensation of general government employees plus general government consumption of fixed capital.

Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

^{4.} Equals compensation of general government employees plus general government consumption of fixed capital.

and institutions and of general government.

2. Equals gross domestic business value added excluding gross farm value added.

Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions, serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

^{1.} The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

2. Excludes software 'embedded,' or bundled, in computers and other equipment.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

Consists of compensation of employees, proprietors' income with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj), rental income of persons with CCAdj, corporate profits with IVA and CCAdj, net interest and miscellaneous payments, and consumption of fixed capital.
 Consists of gross national factor income less consumption of fixed capital.

^{1.} Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.
3. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.
 Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.
 Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

 ^{1.} Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

^{1.} The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Nore. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

^{1.} Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-follar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

3. Government Current Receipts and Expenditures

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Nors: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Table 3.10.6. Real Government Consumption Expenditures and General **Government Gross Output, Chained Dollars**

[Billions of chained (2000) dollars]

^{1.} Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

^{1.} Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

^{1.} Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software 'embedded,' or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

-	1						·	

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

ule 3.3.1.

S. Excludes software "embedded," or bundled, in computers and other equipment.

Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and

related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures

brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most

^{1.} This series is certified in eclasus burders as the content dost inventiones.

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from the lateral Parapula Service statistics. primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

 ^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at everage prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.
 2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

 ^{1.} Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
 2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Nors. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chaimed (2000) dollar inventory series are calculated to ensure that the chaimed (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal.

^{1.} Consists of finance and insurance and bank and other holding companies.
2. Consists of credit intermediation and related activities; securities, commodity contracts, and other financial investments and related activities; insurance carriers and related activities; funds, trusts, and other financial vehicles; and bank and other holding companies.
3. Consists of wood products; normetallic mineral products; primary metals; other transportation equipment; furniture and related products; and miscellaneous manufacturing.
4. Consists of textile mills and textile product mills; apparel; leather and allied products; paper products; primary metals; other transportation and related support activities; and plastics and rubber products.
5. Consists of textile mills and textile product mills; apparel; leather and allied products; printing and related support activities; and plastics and rubber products.
5. Consists of agriculture, forestry, fishing, and hunting; mining; construction; real estate and rental and relating professional, scientific, and technical services; administrative and waste management services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; and other services, except government.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

Consists of used light trucks only.
 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of personal consumption expenditures, private fixed investment, and gross government investment.

^{1.} Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

D-46 April 2007

B. NIPA-Related Table

Table B.1 presents the most recent estimates of personal income and its components and the disposition of personal income. These estimates were released on March 30, 2007.

April 2007 D–47

C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2006 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates—Continues

Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
 Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

^{3.} Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

D-58 April 2007

International Data

F. Transactions Tables

Table F.1 presents estimates of U.S. international trade in goods and services that were released on April 13, 2007. It includes revised estimates for January 2007 and preliminary estimates for February 2007.

The sources for the other tables in this section are noted.

For BEA's full set of detailed estimates of U.S. international transactions, visit BEA's Web site at <www.bea.gov>.

p Preliminary

Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers. Source: Table 3 in "U.S. International Transactions in 2006" in the April 2007 Survey of Current Business.

Footnotes to Tables F.2. and F.3.

- 1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows-increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims) Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account trans-
- actions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S.
- claims).

 2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, overage, and timing) of Census statistics to balance of payments basis; see table 2a in "U.S. International Transactions in 2006" in the April 2007 Survey of Current Business.

 3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 58.

- Includes transfers of goods and services under U.S. military grant programs.
 Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. affiliates' receipts from foreign parents.
 Beginning in 1982, the "other transfers" component includes Laxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
 At the present time, all U.S. Treasury-owned gold is held in the United States.
 Includes sales of foreign obligations to the criegingers.
 Consists of bills, certificates, marketable bonds and nonear nonear convertible and nonconvertible bonds and notes.

- notes.

 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S.
- Government corporations and agencies.

 11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5 in "U.S. International Transactions in 2006" in the April 2007 Survey of Current Business.

- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local govern-
- ments.

 13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Ricc, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in the Survex. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.38 of the full set of NIPA tables.

- Additional footnotes to Table E.3:

 14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Finland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

 15. Quarterly estimates for Mexico are available, beginning with 2004.

 16. Includes, as part of international and unallocated (not shown here), taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.

 17. Details are not shown separately; see totals in lines 56 and 63.

 18. Details not shown separately; see totals in lines 56 and 63.

 19. At the global level, the statistical discrepancy represents net errors and omissions in recorded transactions. For individual countries and regions, it may also reflect discrepancies that arise when transactions with one country or region are settled through transactions with another country or region.

^{1.} Includes royalties. license fees, and other fees associated with the use of intangible assets, including patents, trade

Includes royalities, licelise lees, and other lees associated with the gord in liteligued easies, including paterials, licelise secrets, and other proprietary rights, that are used in connection with the production of goods.
 Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

p Preliminary r Revised

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current

 ^{1.} Represents gains or losses on loneigh-currency-denominated assets and labilities due to their revaluation at curren exchange rates.
 2. Includes changes in coverage, capital gains and losses of direct investment affiliates, and other adjustments to the value of assets and liabilities.
 3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.
 4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

^{5.} Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

THE U.S. IN THE INTERNATIONAL ECONOMY

D-70 April 2007

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available on CD–ROM. For information on state personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross domestic product by state, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

Table I.1. Personal Income by State and Region

[Millions of dollars, seasonally adjusted at annual rates]

Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2006.
 Percent change was calculated from unrounded data.
 Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. Source: Table 2 "State Personal Income: Fourth Quarter of 2006 and Annual Estimates for 2006" in the April 2007 SURVEY OF CURRENT BUSINESS.

D Suppressed to avoid disclosure of data of individual companies.

Nore: Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GDP by state excludes, and national GDP includes, the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. GDP by state and national GDP also have different revision sched-

ules.

Source: This table reflects the GDP-by-state estimates for 2005 that were released on October 26, 2006. Detailed estimates are available on BEA's Web site at <www.bea.gov>.

D-74 April 2007

p Preliminary

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The metropolitan area definitions used by BEA for its personal income estimates are the new county-

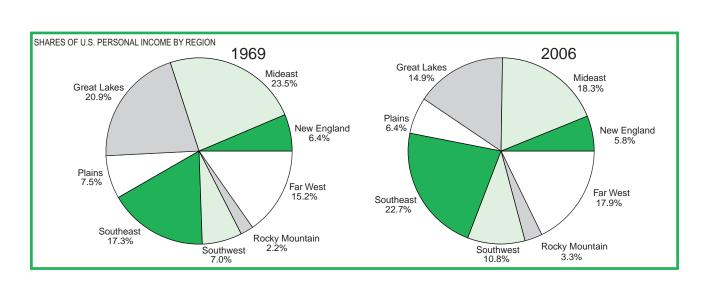

based definitions issued by the Office of Mangagement and Budget in June 2003 (with revisions released February 2004, March 2005, and December 2005) for federal statistical purposes.

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001–2002 uses prices for 2001 and 2002 as weights, and the 2001–2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2000) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 (\$100 \times 1.10). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such differences is provided by a "residual" line—the differ-

ence between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_o is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

^{1.} See J. Steven Landefeld, Brent R. Moulton, and Cindy M. Vojtech, "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes," Survey of Current Business (November 2003): 8–16.

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at <www.bea.gov>; see "Methodology Papers" and the Survey of Current Business under "Publications."

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

Government Transactions (1988)

Personal Consumption Expenditures (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following Survey articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003) Statistical Changes (September 2003)

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty In-

surance in the NIPAs: Changes in Concepts and Methods" (October 2003)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2006) presents revisions and describes any changes in the data and the methods that are used to prepare the estimates.

"Updated Summary NIPA Methodologies" (November 2006) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary, and final quarterly estimates of GDP.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the most recent comprehensive NIPA revision.

"Fixed Assets and Consumer Durable Goods for 1995–2005" (September 2006) provides estimates that reflect the incorporation of the most recent annual NIPA revision.

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross-domestic-product-by-industry accounts) and one satellite account.

Annual industry accounts. "Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

"Annual Industry Accounts" (December 2006) presents the annual revision of these accounts and describes the source data and any changes in the methods that are used to prepare the estimates.

In addition, see the following articles.

"Preview of the Benchmark Input-Output Accounts for 2002" (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts" (March 2004) provides the details about the comprehensive revision.

"Benchmark Input-Output Accounts for the U.S. Economy, 1997" (December 2002)

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"Research and Development Satellite Account" For 1959–2002 (December 2006)

"U.S. Travel and Tourism Satellite Accounts"

For 1996 and 1997 (July 2000)

For 1998–2003 (September 2004)

For 2001–2004 (June 2005)

For 2002–2005 (June 2006)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITAs). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2006 Survey.

Direct investment. International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a

collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It includes "A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey, and "A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 Survey

In addition, the updated methodologies are available in U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey (2004), and in Foreign Direct Investment in the United States: Final Results From the 2002Benchmark Survey (2006).

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for states and for local areas.

"Comprehensive Revision of State Personal Income for 1969–2003" (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

"The Reliability of the State Personal Income Estimates" (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

"Comprehensive Revision of Local Area Personal Income for 1969–2002" (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the DVD–ROM Regional Economic Information System, 1969–2004.

Gross state product. "Comprehensive Revision of Gross State Product" (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

"Gross State Product by Industry for 1998–2005" (July 2006) presents the most recent annual revision.
