## Articles

**1. GDP and the Economy: Third Estimates for the Fourth Quarter of 2011**

Real GDP rose 3.0 percent after rising 1.8 percent in the third quarter. Inventory investment turned up, and consumer spending and residential investment picked up. Federal government spending turned down, and state and local government spending decreased more.

**6. Government Receipts and Expenditures for the Fourth Quarter of 2011**

Net government saving increased \$67.3 billion to -\$1,176.6 billion. Net federal government saving rose \$65.6 billion to -\$1,095.1 billion. Net state and local government saving rose \$1.7 billion to -\$81.5 billion.

**9. Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2011**

Updated statistics, including statistics on inventories for manufacturing by state of fabrication.

**13. Research Spotlight: Estimates of Categories of Personal Consumption Expenditures Adjusted for Net Foreign Travel Spending**

BEA research separates spending by nonresidents traveling in the United States from spending by U.S. residents, providing a more detailed look at consumer spending.

**22. U.S. International Transactions for the Fourth Quarter of 2011 and for 2011**

The U.S. current-account deficit rose \$16.5 billion to \$124.1 billion in the fourth quarter, as the surplus on income declined and the deficit on goods and services increased. In 2011, the current-account deficit increased \$2.5 billion to \$473.4 billion.

**58. Regional Quarterly Report**

State personal income growth ranged from 0.5 percent in Wisconsin to 1.5 percent in North Dakota in the fourth quarter of 2011. In 2011, growth ranged from 3.4 percent in Maine to 8.1 percent in North Dakota.

### Upcoming in the Survey...

**Annual Industry Accounts.** Advance statistics on GDP by industry for 2011.

**BEA's International Economic Accounts.** A progress report on modernizing these accounts to align them with updated international guidelines.

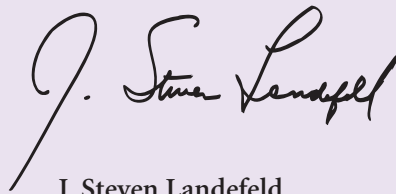

**Local Area Personal Income.** Annual revision of these statistics for 2008–2010.

## Director's Message

Personal consumption expenditures ranks as one of the most widely watched BEA economic indicators, widely used to gauge consumer demand and to track spending patterns. The measure includes spending by Americans regardless of whether they buy goods and services domestically or abroad. By definition, it does not include purchases by foreign tourists in the United States. Accounting for the distinction has important implications for specific industries, such as the hotel, health care, and education industries. In this issue, a *Research Spotlight* takes a look at recent BEA research in this area.

Also in this issue, the *Regional Quarterly Report* looks at state personal income statistics for the fourth quarter of 2011 as well as personal and per capita personal income for 2011. Fourth-quarter 2011 growth ranged from 0.5 percent in Wisconsin to 1.5 percent in North Dakota. The average was 0.8 percent, the same as in the third quarter. State personal income rose an average 5.1 percent in 2011 after rising 3.7 percent in 2010.

Other articles detail international transactions accounts statistics, also for the fourth quarter of 2011, as well as the third estimates of fourth-quarter gross domestic product and government receipts and expenditures.

J. Steven Landefeld  
Director, Bureau of Economic Analysis

## Taking Account...

### Updated travel and tourism estimates released

Real spending on travel and tourism increased at an annual rate of 4.6 percent in the fourth quarter of 2011 after increasing 0.6 percent in the third quarter, according to recent estimates from the Bureau of Economic Analysis (BEA) travel and tourism accounts. By comparison, growth in real gross domestic product increased 3.0 percent (third estimate) in the fourth quarter after increasing 1.8 percent in the third quarter.

Overall growth in prices for travel and tourism goods and services turned down in the fourth quarter, and most industries saw increased employment.

**Tourism spending.** Real spending in most industries accelerated or turned up. Real spending on traveler accommodations increased 7.4 percent in the fourth quarter after decreasing 0.7 percent in the third quarter. Spending on passenger air transportation turned up 1.5 percent in the fourth quarter after decreasing 3.0 percent in the third quarter. Spending on food services and drinking places accelerated.

For all of 2011, total real spending on travel and tourism increased 3.5 percent, compared with 3.0 percent in 2010.

**Tourism prices.** Prices for passenger air transportation accelerated, increasing 6.9 percent in the fourth quarter after increasing 3.0 percent in the third quarter. Airlines continued to

increase fares in the fourth quarter to cover the increased costs of fuel. Prices for traveler accommodations turned down, decreasing 8.3 percent in the fourth quarter after increasing 11.9 percent in the third quarter.

For all of 2011, prices for travel and tourism goods and services increased 4.6 percent after increasing 3.6 percent in 2010.

**Tourism employment.** Employment in the travel and tourism industries increased 1.2 percent in the fourth quarter of 2011 after increasing 1.7 percent in the third quarter. By comparison, overall U.S. employment increased 1.4 percent in the fourth quarter after increasing 0.9 percent in the third quarter. Most travel and tourism industries saw increases in employment; the industries that did not experience increases include traveler accommodations, air transportation services, and recreation and entertainment. The largest increase in employment was in food services and drinking places, which increased 3.8 percent in the fourth quarter.

For all of 2011, tourism-related employment increased 1.5 percent after decreasing 1.4 percent in 2010.

For more information about the travel and tourism accounts, please visit the BEA Web site.

### New and updated FAQs available on BEA Web site

BEA provides a frequently asked questions (FAQs) feature on its

Web site that provides a wealth of answers to questions about the Bureau—its statistics, methodologies, surveys, services, Web site, and related topics. The service was relaunched recently with a new, more intuitive user interface and a cleaner design. The updated service includes an easy way for BEA customers to suggest questions for BEA staff.

Several new FAQ items have been recently added:

- Does offshoring lead to overstated measures of output and productivity growth for the U.S. manufacturing sector?
- Does the Bureau of Economic Analysis (BEA) publish relative-importance weights used in the derivation of chain-type quantity and price indexes for personal consumption expenditures?
- What is the difference between “foreign parent” and “ultimate beneficial owner” in BEA’s data on foreign direct investment in the United States?

The FAQ service can be accessed on the BEA Web site.

### U.S. economy at a glance offers updated statistics

BEA provides a snapshot view of the economy via its “U.S. Economy at a Glance” page on its Web site. The page offers data and charts from the Bureau’s national, international, regional, and industry statistical program areas with links to relevant press releases and other information.

# GDP and the Economy

## Third Estimates for the Fourth Quarter of 2011

REAL GROSS domestic product (GDP) increased at an annual rate of 3.0 percent in the fourth quarter of 2011, according to the third estimates of the national income and product accounts (chart 1 and table 1).<sup>1</sup> In the third quarter, real GDP increased 1.8 percent.

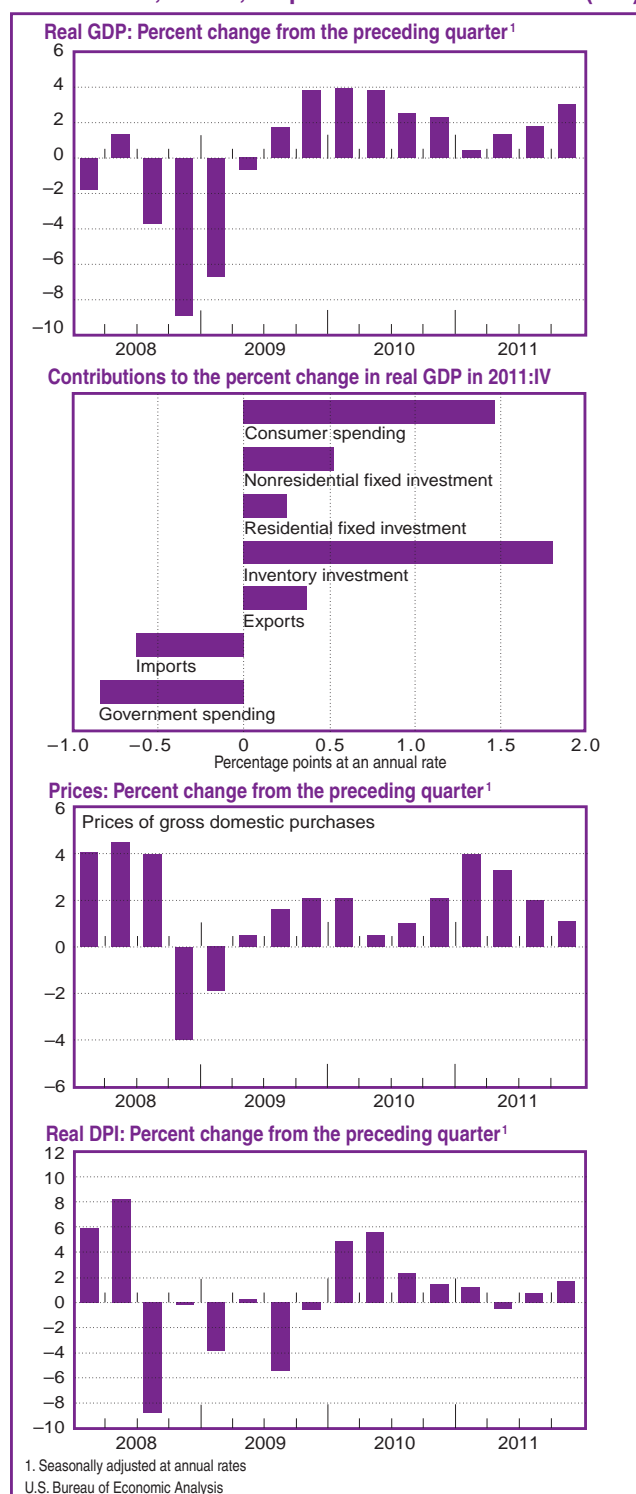

The third estimate of real GDP growth was the same as the second estimate, primarily reflecting a downward revision to exports that was offset by an upward revision to nonresidential fixed investment (page 3).<sup>2</sup>

- Prices of goods and services purchased by U.S. residents, as measured by the gross domestic purchases price index, increased 1.1 percent in the fourth quarter after increasing 2.0 percent in the third quarter. Energy prices turned down, and food prices decelerated in the fourth quarter. Excluding food and energy, gross domestic purchases prices increased 1.2 percent after increasing 1.8 percent.
- Real disposable personal income (DPI) increased 1.7 percent in the fourth quarter, 0.3 percentage point more than in the second estimate; in the third quarter, real DPI increased 0.7 percent. Current-dollar DPI increased 2.9 percent in the fourth quarter, also 0.3 percentage point more than in the second estimate, after increasing 3.1 percent. The upward revision to current-dollar DPI reflected a downward revision to personal current taxes and an upward revision to personal income. The fourth-quarter acceleration in real DPI, in contrast to the slight deceleration in current-dollar DPI, reflected a large deceleration in the implicit price deflator that is used to deflate DPI.
- The personal saving rate was 4.5 percent; in the third quarter, the rate was 4.6 percent.
- Real gross domestic income increased 4.4 percent in the fourth quarter after increasing 2.6 percent in the third quarter.
- Corporate profits increased \$16.8 billion in the fourth quarter after increasing \$32.5 billion in the third quarter (page 4).

1. “Real” estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see “Revisions to GDP, GDI, and Their Major Components” in the July 2011 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, “consumer spending” refers to “personal consumption expenditures (PCE),” “inventory investment” refers to “change in private inventories,” and “government spending” refers to “government consumption expenditures and gross investment.”

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

Christopher Swann prepared this article.

1. The estimates of GDP under the contribution columns are also percent changes.

NOTE: Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

The pickup in consumer spending reflected an acceleration in durable goods, mainly reflecting a pickup in motor vehicles and parts. In contrast, services slowed.

The deceleration in nonresidential fixed investment reflected a deceleration in equipment and software and a downturn in structures.

The pickup in residential fixed investment reflected an upturn in "other" structures that was more than accounted for by an upturn in improvements.

Inventory investment turned up sharply, reflecting upturns in both wholesale trade and manufacturing industries.

The slowdown in exports reflected slowdowns in both services and goods exports. A downturn in travel was the largest contributor to the slowdown in services. The slowdown in goods was led by a downturn in automotive vehicles, engines, and parts.

The pickup in imports primarily reflected a pickup in imports of goods that mainly reflected a smaller decrease in nonautomotive consumer goods, a pickup in nonautomotive capital goods, and an upturn in petroleum and products that were partly offset by a downturn in automotive vehicles, engines, and parts.

The downturn in federal government spending reflected a downturn in defense spending that was partly offset by an upturn in nondefense spending.

Table 2. Real Gross Domestic Product (GDP) and Related Measures

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)					Contribution to percent change in real GDP (percentage points)

Final sales of computers.....	0.6	14.7	13.0	42.1	21.2	0.08	0.07	0.22	0.12	
GDP excluding final sales of computers.....	99.4	0.3	1.3	1.6	2.8	0.27	1.26	1.60	2.83	
<b>Gross domestic income (GDI)</b> <sup>2</sup> .....	.....	<b>2.4</b>	<b>0.2</b>	<b>2.6</b>	<b>4.4</b>	.....	.....	.....	.....	

1. The estimates under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP. The fourth-quarter change reflects the incorporation of revised wage and salary estimates for the fourth quarter of 2011.

NOTE: For GDP and its components, percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

Real final sales of domestic product, real GDP less inventory investment, increased 1.1 percent after increasing 3.2 percent.

Motor vehicle output increased 20.4 percent and contributed 0.47 percentage point to real GDP growth after increasing 5.1 percent and contributing 0.12 percentage point to real GDP growth.

Final sales of computers increased 21.2 percent and contributed 0.12 percentage point to real GDP growth after increasing 42.1 percent and contributing 0.22 percentage point.

Real gross domestic income (GDI), which measures the output of the economy as the costs incurred and the incomes earned in the production of GDP, increased 4.4 percent after increasing 2.6 percent.

## Revisions to GDP

Final sales of domestic product .....	1.1	1.1	0.0	1.10	1.14	0.04
Gross domestic purchases price index .....	1.1	1.1	0.0			
GDP price index .....	0.9	0.9	0.0			

1. The estimates for GDP under the contribution columns are also percent changes.

The percent change in real GDP was the same as in the second estimate and primarily reflected a downward revision to exports that was offset by an upward revision to nonresidential fixed investment; consumer spending was revised down slightly. The average revision (without regard to sign) between the second estimates and the third estimates is 0.3 percentage point.

The downward revision to consumer spending reflected a small downward revision to spending for services that was mostly offset by a small upward revision to spending for goods. In services, the largest contributors to the downward revision were recreation services and financial services and insurance, reflecting the incorporation of newly available fourth-quarter quarterly services survey (QSS) data from the Census Bureau. In goods the upward revision was widespread.

The upward revision to nonresidential fixed investment was primarily accounted for by an upward revision to equipment and software, mainly custom and prepackaged software, reflecting the incorporation of newly available fourth-quarter QSS data.

The downward revision to exports was to both goods and services. In goods, the revision was widespread; the largest contributor was "other" goods, primarily reflecting a downward revision to foreign military sales, based on the incorporation of newly available Department of Defense data for the fourth quarter. In services, the revision was also widespread; the largest contributor was travel, primarily reflecting the incorporation of revised quarterly data from the international transactions accounts.

## Source Data for the Third Estimates

The third estimate of GDP for the fourth quarter of 2011 incorporated the following source data.

*Personal consumption expenditures:* Census Bureau quarterly services survey data for the fourth quarter (new) and Energy Information Administration (EIA) fuels data for December (new).

*Nonresidential fixed investment:* Census Bureau construction spending (value put in place) data for November and December (revised) and quarterly services survey data for the fourth quarter (new).

*Residential fixed investment:* Census Bureau construction spending (value put in place) data for November and December (revised).

*Change in private inventories:* manufacturers' and trade inventories for December (revised), Census

Bureau Quarterly Financial Report data for mining (new), and EIA coal and petroleum utility stock data for November (new) and EIA natural gas data for December (new).

*Exports and imports of goods and services:* international transactions accounts data for October, November, and December (revised) and data for goods for December (revised).

*Government consumption expenditures and gross investment:* Census Bureau construction spending (value put in place) data for November and December (revised).

*GDP prices:* export and import prices for October, November, and December (revised), unit value index for petroleum imports for December (revised).

## Corporate Profits

Rest of the world.....	409.3	37.9	34.6	5.4	-41.5	10.2	8.4	1.2	-9.2	
Receipts from the rest of the world.....	625.2	20.3	49.0	-10.5	-25.2	3.4	8.0	-1.6	-3.9	
Less: Payments to the rest of the world.....	215.9	-17.7	14.4	-16.0	16.4	-8.1	7.2	-7.4	8.2	
Less: Taxes on corporate income.....	410.7	17.6	-1.8	-9.1	-0.7	4.3	-0.4	-2.2	-0.2	
Equals: Profits after tax.....	1,576.2	1.4	63.0	41.6	17.5	0.1	4.3	2.7	1.1	
Net dividends .....	831.7	19.0	13.6	14.0	10.3	2.5	1.7	1.7	1.3	
Undistributed profits from current production .....	744.5	-17.6	49.3	27.7	7.2	-2.6	7.5	3.9	1.0	
Net cash flow .....	1,892.8	21.1	86.2	35.8	44.8	1.2	5.0	2.0	2.4	

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.

Profits from current production increased \$16.8 billion, or 0.9 percent at a quarterly rate, in the fourth quarter after increasing \$32.5 billion, or 1.7 percent, in the third quarter.

Domestic profits of financial corporations increased \$29.9 billion, or 7.0 percent, after increasing \$9.2 billion or 2.2 percent.

Domestic profits of nonfinancial corporations increased \$28.4 billion, or 2.6 percent, after increasing \$17.9 billion, or 1.7 percent.

Profits from the rest of the world decreased \$41.5 billion, or 9.2 percent, after increasing \$5.4 billion, or 1.2 percent. In the fourth quarter, receipts decreased \$25.2 billion, and payments increased \$16.4 billion.

Taxes on corporate income decreased \$0.7 billion, or 0.2 percent, after decreasing \$9.1 billion, or 2.2 percent.

Undistributed corporate profits, a measure of net saving that equals after-tax profits less dividends, increased \$7.2 billion, or 1.0 percent, after increasing \$27.7 billion, or 3.9 percent.

Net cash flow increased \$44.8 billion, or 2.4 percent, after increasing \$35.8 billion, or 2.0 percent. Net cash flow is a profits-related measure of the internal funds available for investment that equals undistributed profits (after dividends) plus capital consumption allowances less capital transfers paid.

### Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including the

Census Bureau Quarterly Financial Report, Federal Deposit Insurance Corporation Call Reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

IVA.....	-18.6	-25.7	55.6	14.9	26.9				
CCAj.....	100.9	-89.8	-8.1	-4.6	-1.8				

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D. IVA Inventory valuation adjustment CCAj Capital consumption adjustment

Profits with inventory valuation adjustment (IVA) increased \$18.6 billion, or 1.0 percent at a quarterly rate, in the fourth quarter, reflecting an increase in profits of domestic industries that was partly offset by a large decrease in profits from the rest of the world. The difference between this increase in profits and the increase in profits from current production reflects the capital consumption adjustment, which decreased \$1.8 billion. In the third quarter, profits with IVA increased \$37.2 billion, or 2.0 percent.

Profits of domestic industries increased \$60.1 billion, or 4.2 percent, after increasing \$31.7 billion, or 2.3 percent.

Profits of domestic financial industries increased \$30.1 billion, or 6.7 percent, after increasing \$9.8 billion, or 2.2 percent.

Profits of domestic nonfinancial industries increased \$30.1 billion, or 3.1 percent, after increasing \$22.0 billion, or 2.3 percent. The acceleration reflected upturns in information, in retail trade, in utilities, and in wholesale trade and a small pickup in transportation and warehousing. In contrast, profits of "other" nonfinancial industries turned down, and profits of manufacturing industries decelerated.

**Chart 2. Corporate Profits With Inventory Valuation Adjustment: Change From the Preceding Quarter, 2011:IV**

### Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of price changes on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAj) for

each industry. However, estimates of the CCAj are only available for two broad categories: total financial industries and total nonfinancial industries. For more information about BEA's methodology, see "Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends" at [www.bea.gov/methodologies/index.htm](http://www.bea.gov/methodologies/index.htm).

# Government Receipts and Expenditures

## Fourth Quarter of 2011

**N**ET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was  $-\$1,176.6$  billion in the fourth quarter of 2011, increasing  $\$67.3$  billion from  $-\$1,243.9$  billion in the third quarter of 2011.

Net federal government saving was  $-\$1,095.1$  billion in the fourth quarter, increasing  $\$65.6$  billion from  $-\$1,160.7$  billion in the third quarter (see page 7). Current receipts continued to increase, while current expenditures decreased less in the fourth quarter than in the third quarter.

Net state and local government saving was  $-\$81.5$  billion in the fourth quarter, increasing  $\$1.7$  billion from  $-\$83.2$  billion in the third quarter (see page 8). Both current receipts and current expenditures decreased less in the fourth quarter than in the third quarter.

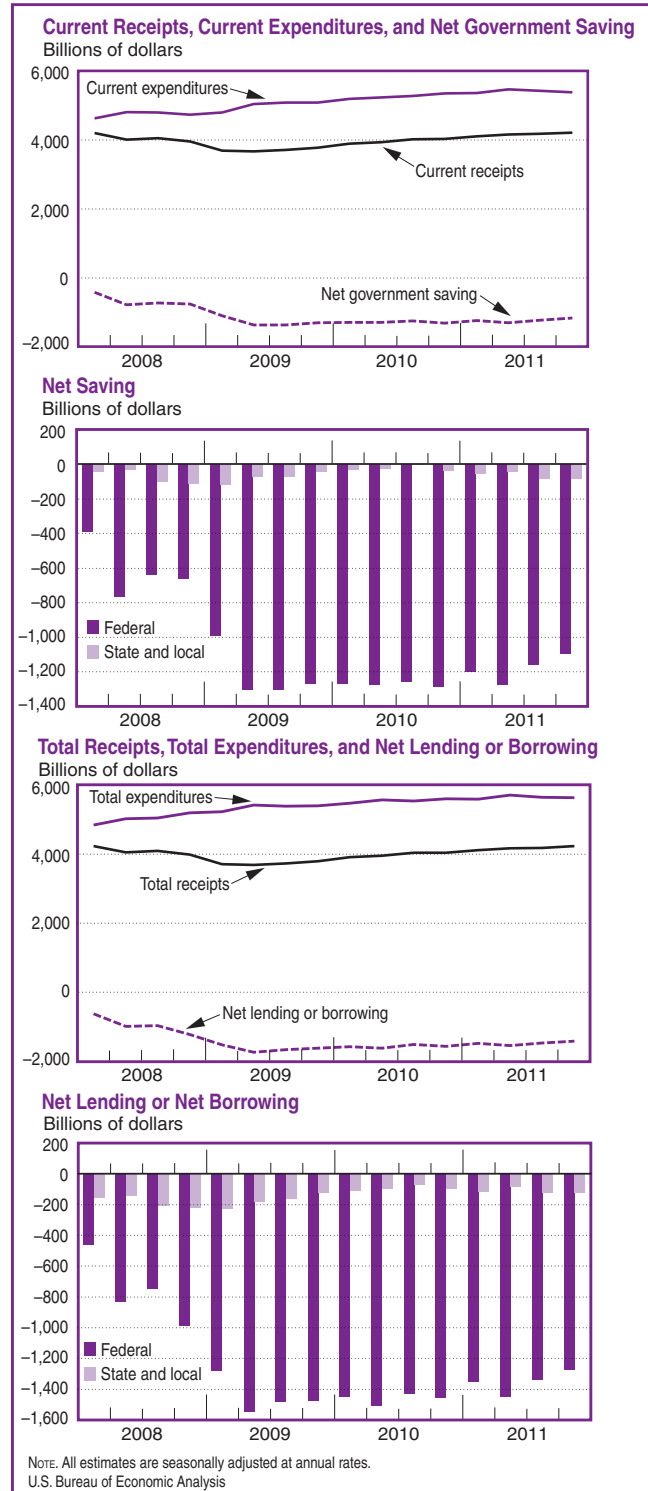

Net borrowing was  $\$1,398.7$  billion in the fourth quarter, decreasing  $\$62.0$  billion from  $\$1,460.7$  billion in the third quarter. Federal government net borrowing was  $\$1,271.7$  billion in the fourth quarter, decreasing  $\$63.0$  billion from  $\$1,334.7$  billion in the third quarter. State and local government net borrowing was  $\$126.9$  billion, increasing  $\$1.0$  billion from  $\$125.9$  billion in the third quarter.

“Net lending or net borrowing (–)” is an alternative measure of the government fiscal position. Net borrowing is the financing requirement of the government sector, and it is derived as net government saving plus the consumption of fixed capital and net capital transfers received less gross investment and net purchases of nonproduced assets.

<b>Net lending or net borrowing (-)</b> .....	<b>-1,271.7</b>	<b>106.4</b>	<b>-96.6</b>	<b>114.7</b>	<b>63.0</b>

Personal current taxes accelerated as a result of an acceleration in withheld income taxes.

Taxes on corporate income decreased less in the fourth quarter than in the third quarter, reflecting a smaller decrease in receipts from Federal Reserve banks.

Consumption expenditures turned down, primarily because of a downturn in defense spending. Nondefense spending turned up.

Government social benefits to persons decelerated, reflecting downturns in Medicare benefits and veterans benefits.

Grants-in-aid to state and local governments decreased less in the fourth quarter than in the third quarter, because of an upturn in Medicaid grants and a smaller decrease in education grants.

Interest payments decreased less in the fourth quarter than in the third quarter, reflecting a smaller decrease in interest paid to persons and businesses on Treasury Inflation-Protected Securities.

Capital transfer payments turned up in the fourth quarter, reflecting capital injected into Fannie Mae and Freddie Mac. About \$13.8 billion (\$55.1 billion at an annual rate) was provided to Fannie Mae and Freddie Mac, an increase of \$28.8 billion at an annual rate.

### Federal Government Estimates

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables

3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at [www.bea.gov/national/nipaweb/nipa\\_underlying/Index.asp](http://www.bea.gov/national/nipaweb/nipa_underlying/Index.asp).

Each year, BEA translates the information in the federal budget into a NIPA framework.<sup>1</sup> For a historical time series of these estimates, see NIPA table 3.18B, which was published in the October 2011 SURVEY.

1. See Mark S. Ludwick and Stan J. Bellotti, "NIPA Translation of the Fiscal Year 2013 Federal Budget," SURVEY OF CURRENT BUSINESS 92 (March 2012): 11–21.

### Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available

annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at [www.bea.gov/national/nipaweb/nipa\\_underlying/Index.asp](http://www.bea.gov/national/nipaweb/nipa_underlying/Index.asp). For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.<sup>1</sup> These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); they were published in the October 2011 SURVEY.

1. Bruce E. Baker, "Receipts and Expenditures of State Governments and of Local Governments," SURVEY 85 (October 2005): 5–10.

## Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2011

This report presents quarterly estimates for the third and fourth quarters of 2011 and monthly estimates for August 2011 to January 2012.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates. Table 1B presents inventories. Table 2B presents sales. Table 3B presents the inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to changes in demand; these ratios supplement the quarterly current-dollar and real estimates of ratios of inventories to final

sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.7.5B and 5.7.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at [www.bea.gov](http://www.bea.gov). Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying Detail Tables," on "Begin using the data," and then on "Section 0. Real Inventories and Sales."

<sup>p</sup> Preliminary

<sup>r</sup> Revised

NOTES. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in

inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

r Revised

Notes. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar sales are calculated as the product of the chain-type quantity index and the 2005

current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

NOTES. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in

inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

## Research Spotlight

# Estimates of Categories of Personal Consumption Expenditures Adjusted for Net Foreign Travel Spending

By Michael Armah and Teresita Teensma

**P**ERSONAL consumption expenditures (PCE) is one of the most closely monitored macroeconomic metrics in the United States, widely used to gauge U.S. consumer demand for goods and services and to track consumer spending patterns. At the aggregate level, PCE measures the spending by U.S. residents regardless of whether they purchase goods and services domestically (in the United States) or whether they purchase goods and services from nonresidents while traveling abroad. By definition, it does not include purchases by nonresidents who are visiting the United States for a limited time.<sup>1</sup> This distinction has important implications for macroeconomic analysis.<sup>2</sup>

Recently, BEA began a research project aimed at better separating spending by nonresidents from spending by U.S. residents in the detailed PCE statistics in order to provide a more detailed picture of consumer spending.

Because the measure of PCE is designed to capture spending by U.S. residents, it includes the payments by U.S. residents to nonresidents for passenger fares and travel services and the purchases of goods and services by U.S. residents while traveling, working, or attending school outside the United States. Capturing the spending by U.S. residents for goods and services while traveling outside the United States is important in order to accurately account for how U.S. residents spend and save their disposable income. However, these purchases by U.S. residents from nonresidents do not gen-

erally represent demand for U.S. products and thus are not included in the measure of final demand or GDP. As a result, these purchases are offset by subtracting their value as imports of goods and services when calculating GDP from the expenditures approach. Conversely, the payments by nonresidents to U.S. residents for travel services and the purchases by nonresidents of goods and services while traveling, working, attending school, or receiving medical treatment in the United States are not included in PCE. These purchases in the United States by nonresidents are out of scope in measuring saving and the saving rate of U.S. households, which requires tracking income and spending by U.S. residents only. However, the spending by nonresidents in the United States is an important component in measuring U.S. GDP from the expenditures approach because it represents nonresidents' final demand for U.S. goods and services and thus is recorded as exports in the calculation of GDP.

The source data used to estimate most of the PCE components is revenue (or sales) reported by businesses. These data combine purchases by both residents and nonresidents in the United States because most businesses cannot distinguish between purchases by U.S. residents and those by nonresidents. In order

1. In both the national income and product accounts and the international transactions accounts, residents of the United States are individuals who reside or expect to reside in the United States for 1 year or more. Nonresidents are foreign nationals who reside outside of the United States for more than 1 year or who reside permanently outside of the United States. The exceptions are U.S. students who study abroad and foreign students who study in the United States and U.S. government employees (and their families) who are stationed abroad.

2. By excluding nonresidents, spending by U.S. residents can be matched with their income flows so that the measure of U.S. personal saving, which is calculated as disposable personal income less personal outlays, is consistent. The personal saving rate, which is derived as the ratio of personal saving to disposable personal income, may be used to analyze the relationship between household income, household asset and debt accumulation, and household consumption patterns. By far, PCE represents the majority of these personal outlays used in the calculation of personal saving.

The research described in this article thus provides an important tool to better understand the borrowing behavior of U.S. households.

### What is PCE?

PCE represents the amount of goods and services purchased by U.S. consumers in a specific period. Final demand, or gross domestic product (GDP), consists of PCE, business investment, government spending, and the amount of goods and services exported by the United States less the amount of goods and services imported into the United States; PCE accounts for approximately 70 percent of the value of GDP.

PCE statistics are used by policymakers and business decisionmakers for a variety of reasons, including measuring the effects of tax policy changes on consumer demand, identifying growing consumer markets for certain goods and services, and tracking changes in the U.S. saving rate.

to derive total PCE for the United States, the adjustment “net foreign travel” is made to accurately account for this distinction in the aggregate—but not in the detailed PCE categories. As a result, detailed PCE spending categories—such as gasoline, food and beverages (for example, food purchased from grocery stores), purchased meals and beverages (for example, restaurant meals), clothing and footwear, air transportation, recreation services, and hotel and motel services—include spending in the United States by both U.S. residents and nonresidents and exclude spending by U.S. residents abroad. However, in principle, these detailed categories should include spending by U.S. residents wherever the spending takes place and should exclude spending in the United States by nonresidents.

Nonresident travelers in the United States are important consumers of U.S. goods and services, especially U.S. services. Nonresident spending accounts for less than 2 percent of total PCE, but it accounts for a significant share of certain PCE categories. In addition, the goods and services that are sold to these nonresident travelers—such as hotel and motel services, air transportation services, and purchased meals and beverages—rely on a substantial share of direct and indirect output from other industries, which in turn helps support employment for a significant number of U.S. residents. Furthermore, because both travel by nonresidents in the United States and travel by U.S. residents abroad have grown dramatically in recent years, identifying the PCE products and services that are purchased by these two groups provides data users with additional analytical tools for evaluating the effect of nonresident spending on the U.S. economy.

As mentioned above, because of source data limitations, it is difficult to remove nonresident purchases from the detailed categories of goods and services and to add U.S. resident purchases abroad to the detailed categories of goods and services. As a result, aggregated PCE is adjusted for net spending for foreign travel (“net foreign travel”), which is calculated as spending by U.S. residents abroad less spending by nonresidents in the United States. However, using statistics from the travel and tourism satellite accounts, the benchmark input-output accounts, and the international transactions accounts, spending by U.S. residents and by nonresidents can be allocated to the detailed PCE categories.<sup>3</sup>

This article discusses the results of this reallocation for 2002–2008 and describes the source data and methods used. The tables in this article provide an alternative derivation of the detailed PCE categories that

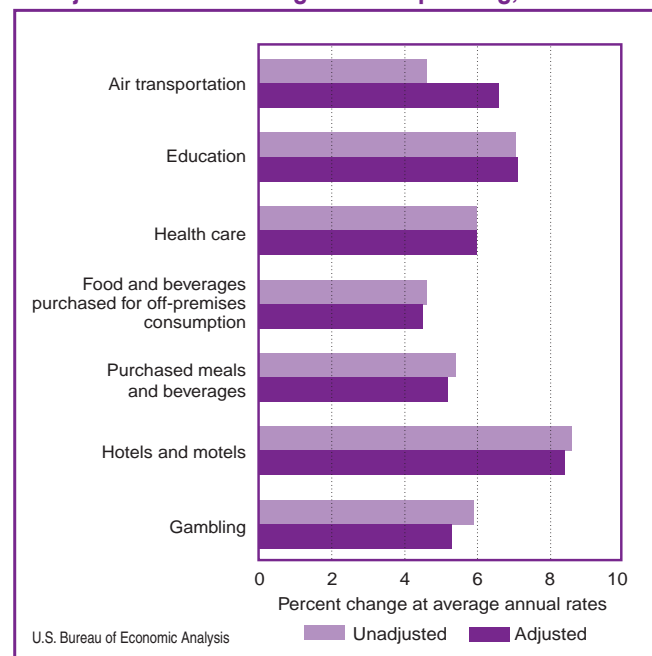

are adjusted for foreign travel spending. This analysis was done on the current-dollar measures of consumer spending (that is, the measures are not adjusted for inflation). Among the highlights of this reallocation are the following:

- Average growth in domestic spending on hotels and motels was boosted by spending by nonresidents traveling in the United States.
- Spending for health care services by U.S. residents outside the United States grew faster than spending for health care services by nonresidents in the United States.
- Spending for education services by U.S. residents abroad grew faster than spending by nonresidents in the United States, but total spending for education by nonresidents in the United States continues to be significantly higher than that by U.S. residents abroad.

These adjusted detailed PCE categories are more tightly aligned with national accounting concepts, but most of the adjustments did not meaningfully change the trends in BEA’s published, unadjusted categories of consumer spending. However, for a few categories, the adjustments did have a meaningful effect on published trends (chart 1).

For most of these categories, data for 2002–2008 showed that nonresident spending in the United States outpaced U.S. residents spending abroad (tables 1 and 2); however, nonresidents spent far less for air transportation services than U.S. residents spent abroad. The growth rate of the adjusted estimate of spending

**Chart 1. Selected PCE Categories Adjusted and Unadjusted for Net Foreign Travel Spending, 2002–2008**

3. For more information on the U.S. travel and tourism satellite accounts, see [www.bea.gov/industry/index.htm#satellite](http://www.bea.gov/industry/index.htm#satellite).

that of the unadjusted category because spending by U.S. residents traveling abroad increased more than spending by nonresidents traveling in the United States and because U.S. residents spent significantly more for air transportation abroad than nonresidents in the United States.

- Adjusted spending for gambling grew at an average annual rate of 5.3 percent, compared with the 5.9 percent growth rate of the unadjusted spending, which reflects the increase in nonresident spending on gambling in the United States.

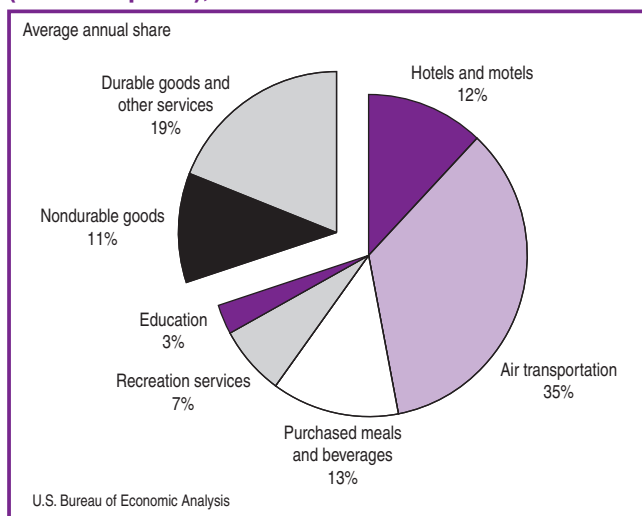

### Spending patterns of U.S. residents abroad and nonresidents

As noted, total PCE includes total spending for foreign travel by U.S. residents and excludes total spending in the United States by nonresidents; therefore, total PCE is not affected by the adjustments to the estimates of the detailed categories that reflect spending by U.S. residents that is net of spending in the United States by nonresidents.

The allocations of net foreign travel to the detailed spending categories were primarily based on the assumption that the spending pattern of U.S. residents traveling abroad is similar to the spending pattern of nonresidents traveling in the United States. Because of this assumption, the spending pattern of U.S. residents traveling abroad for many detailed goods and services categories was similar to the spending pattern of nonresidents traveling in the United States.

Spending for air transportation accounted for more than 35 percent of the spending by U.S. residents abroad in 2002–2008 (chart 2), followed by the combination of durable goods and other services (19 percent), purchased meals and beverages (mainly

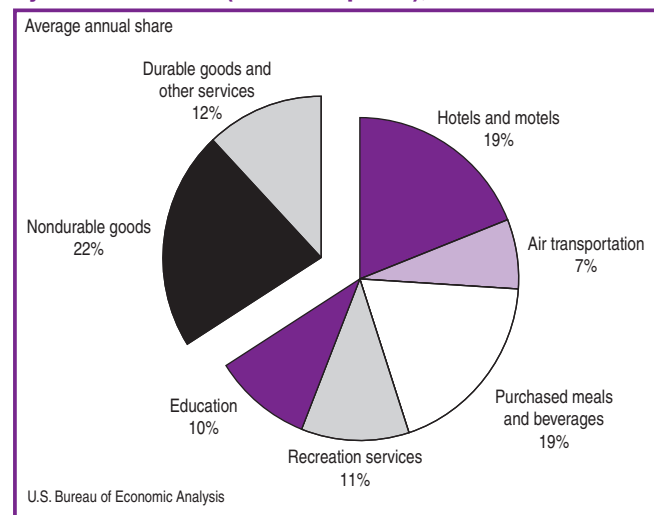

**Chart 2. Foreign Travel by U.S. Residents (Travel Imports), 2002–2008**

restaurant meals) (13 percent), hotels and motels (12 percent), nondurable goods (including food purchased at grocery stores) (11 percent), recreation services (7 percent), and education services (3 percent).

As for the spending by nonresidents in the United States in 2002–2008 (chart 3), spending for nondurable goods (including food purchased at grocery stores) accounted for 22 percent, followed by hotels and motels (19 percent), purchased meals and beverages (mainly restaurant meals) (19 percent), the combined durable goods and other services (12 percent), education services (10 percent), recreation services (11 percent), and air transportation (7 percent).

**Chart 3. Expenditures in the United States by Nonresidents (Travel Exports), 2002–2008**

The share of spending by U.S. residents traveling abroad for air transportation services is significantly larger than the share of spending by nonresidents traveling in the United States because the spending for air transportation services by U.S. residents consists of the more expensive international air fares of U.S. carriers and foreign carriers. The share of spending by nonresidents traveling in the United States for air transportation services is much smaller because their spending for air transportation services consists of the less expensive domestic air transportation services and excludes their spending for international air transportation services, which is also excluded from the unadjusted estimate of PCE for air transportation services.

The net effect of these purchases of travel-related goods and services on the U.S. balance of trade in 2002–2008 was positive. Average spending by nonresidents in the United States outpaced spending by U.S. residents abroad in all of the selected detailed goods and services categories except air transportation (tables 1 and 2). The sustained goods and services surplus

in net foreign travel spending reinforces the important role that nonresidents play in the U.S. economy, particularly in the demand for travel-related goods and services.

### Methodology for Adjusting the Selected Categories

#### PCE for net foreign travel

The published estimate of PCE for net foreign travel is derived as the value of foreign travel expenditures by U.S. residents less expenditures in the United States by nonresidents. Foreign travel by U.S. residents (which is classified as travel imports) consists of (1) expenditures for goods and services by U.S. residents traveling outside the United States, (2) value of passenger fares purchased by U.S. residents traveling outside the United States, and (3) expenditures for goods and services by U.S. students studying abroad. Expenditures by nonresidents in the United States (which is classified as travel exports) consists of (1) expenditures for goods and services by nonresidents traveling in the United States, (2) medical expenditures by nonresidents traveling in the United States, and (3) expenditures for goods and services by foreign students studying in the United States.<sup>4</sup>

4. These estimates are from "Table 2.4.5U. Personal Consumption Expenditures by Type of Product," which is available at [www.bea.gov](http://www.bea.gov). Under "National," select "Consumer Spending," and under "Estimates," click on "Underlying Detail Tables."

Using annual statistics on "Demand for Commodities by Type of Visitors" from table 3 of BEA's U.S. travel and tourism satellite accounts, detailed data from BEA's 2002 benchmark input-output accounts, and detailed data from BEA's international transactions accounts, BEA can now identify the types of products that U.S. residents are purchasing while traveling, working, or attending schools outside the United States. Thus, purchases that are currently recorded as "foreign travel by U.S. residents" in PCE can be allocated to specific spending categories of goods and services. Similarly, specific types of nonresident expenditures in the United States can be removed from the corresponding categories of goods and services spending rather than recorded as a negative adjustment to total PCE.

#### Allocation of foreign travel by U.S. residents

Table 1 shows the breakout of expenditures by U.S. residents traveling outside the United States into goods and services spending categories. Note that "total foreign travel by U.S. residents" (that is, travel imports) equals the currently published value.

**Allocation of the expenditures by U.S. residents traveling outside the United States.** Expenditures by U.S. residents traveling outside the United States were allocated to most of the selected, detailed categories of goods and services based on estimates of expenditures by tourists (nonresidents) in the United States from

1. These PCE categories are adjusted to include net spending for foreign travel, which is calculated as spending by U.S. residents abroad, minus spending by nonresidents in the United States.

the U.S. travel and tourism satellite accounts. These allocations are based on the major assumption that the spending patterns of U.S. residents traveling abroad are similar to the spending patterns of nonresidents traveling in the United States. Specifically, ratios of nonresident spending by type of goods and services to total nonresident spending were derived from the annual estimates in the satellite accounts to provide “commodity” shares.<sup>5</sup> These commodity shares were then applied to the published estimate of expenditures by U.S. residents traveling abroad to derive estimates of U.S. resident spending abroad by major type of goods and services. The estimates by major categories were then broken down into detailed PCE commodities based on more detailed commodity shares derived from table 2.4.5.U in the national income and product accounts and from the 2002 benchmark input-output (I-O) accounts.<sup>6</sup>

The estimates of spending by U.S. residents traveling abroad for the following three detailed categories were based on different methodologies and indicators: hotel and motel services, health care services, and food and beverages purchased for off-premises consumption (nondurable goods). Estimates of spending for hotels and motels were based on private trade source data. Estimates of spending for health care services were based on data on medical services imports from BEA’s detailed statistics on cross-border trade in services.<sup>7</sup> Estimates of spending for food and beverages for off-premises consumption were based on comparable private trade source data on meals purchased by nonresidents traveling in the United States.

**Passenger fares by U.S. residents traveling abroad.** Spending by U.S. residents on passenger fares for foreign travel was broken down into spending for air transportation and spending for water transportation. The estimates of spending for air transportation were based on data on scheduled international passenger revenue for U.S. carriers from the Department of Transportation and on data on passenger fares on foreign carriers (imports) from the international transactions accounts. The estimates of spending for water transportation were based on data on deep sea water passenger transportation from a trade source.

5. The data are from “Table 3. Demand for Commodities by Type of Visitor,” which is available at [www.bea.gov](http://www.bea.gov). Under Industry,” select “Travel and Tourism Satellite Accounts” and then “Travel and tourism data.”

6. Detailed commodity shares were derived from “Table 2.4.5.U–I–O, Personal Consumption Expenditures by Type of Product with 2002 Input-Output Commodity Composition” because the commodity groups are more detailed PCE categories than those in the satellite accounts. Estimates for this article were based on unpublished data for detailed items in the PCE–I–O bridge table.

7. These statistics are published in “Table 1. Trade in Services” on BEA’s Web site at [www.bea.gov](http://www.bea.gov); under “International,” select “International Services” and then “International Services Statistics,” and then click on “Detailed statistics for cross-border trade.”

#### **Expenditures by U.S. students studying abroad.**

Detailed data on U.S. students’ expenditures abroad are not available; therefore, the share of the spending allocated to education (that is, tuition expenses) of U.S. students studying abroad was based primarily on the share of the spending of foreign students in the United States from BEA’s international transactions accounts that reflects the assumption that education accounts for about 70 percent of foreign students’ total expenditures in the United States.<sup>8</sup> The basic assumption is that the consumption pattern of students studying in a foreign country is the same regardless of the country where the consumption takes place. The remaining 30 percent of foreign students’ expenditures in the United States was allocated to goods and other services based on published PCE data and judgmental adjustments based on an analysis of the spending patterns of foreign students in the United States.

#### **Allocation of expenditures by nonresidents in the United States**

Table 2 shows the breakdown of expenditures in the United States by nonresidents across the relevant goods and services spending categories. As with travel imports, the “total expenditures in the United States by nonresidents” (that is, travel exports) equal the currently published value.

**Travel-related expenditures by nonresidents in the United States.** Like expenditures by U.S. residents traveling abroad, total travel-related expenditures in the United States by nonresidents were allocated to specific categories of goods and services using the travel and tourism satellite accounts. Ratios of spending by nonresidents by type of goods and services to total nonresident spending in the travel and tourism satellite accounts provided the “commodity” shares that were applied to PCE total nonresident spending to derive estimates of all the spending categories by nonresidents except hotel and motel services, health care, and education. Because the commodity groups in the satellite accounts are less detailed than the PCE spending categories, the 2002 PCE and input-output accounts bridge table was used to further allocate the spending categories of the travel and tourism satellite accounts to the more detailed PCE categories.

For hotel and motel services purchased by nonresidents in the United States, data on nonresident spending for lodging from the international transactions accounts were used.

8. This assumption includes assumptions about participation rates of part-time and full-time attendance and the calculation of foreign students’ tuition expenses from the Department of Education data on the number of students multiplied by the average tuition rates of public and private schools.

**Medical expenditures by nonresidents in the United States.** Medical expenditures by nonresidents in the United States consists of expenditures for medical services provided to foreign residents admitted to U.S. hospitals as inpatients and as outpatients and to those who seek emergency room treatment. Outpatient prescription and nonprescription drugs are not included.<sup>9</sup> Using data from BEA's international transaction accounts, these expenditures were directly allocated to the PCE health care category.

**Expenditures by foreign students studying in the United States.** As mentioned above, estimates of expenditures by foreign students in the United States were based on statistics from BEA's international transactions accounts, reflecting the assumption that the share of foreign students' education expenses in the United States is approximately 70 percent of their total expenditures in the United States. These education expenditures of foreign students in the United States were allocated to PCE education services purchased by nonresidents.

### Adjusted detailed PCE estimates

The derivation of adjusted categories of PCE from the detailed estimates for foreign travel by U.S. residents and for expenditures in the United States by nonresidents is shown in table 4.

First, total consumer expenditures in the United States by U.S. residents and by nonresidents (line 1) is calculated as the published total PCE minus published foreign travel by U.S. residents (line 70) plus the published expenditures in the United States by nonresidents (line 24). The difference between total consumer expenditures in the United States and total published PCE is the value of published net foreign travel. Within PCE, household consumption expenditures (line 9) and other services (line 21) reflect the subtraction of

foreign travel by U.S. residents and the addition of expenditures in the United States by nonresidents. The PCE categories in lines 2–7, 10–20, and 22 and 23 are equal to their published values.

Second, spending by nonresidents in the United States and the corresponding categories in lines 24–46 is subtracted from the corresponding categories in lines 1–23 to yield consumer expenditures in the United States by U.S. residents and the corresponding categories in lines 47–69.

Third, PCE categories adjusted for net foreign travel spending in lines 93–115 are calculated as consumer expenditures in the United States by U.S. residents in lines 47–69 plus spending by U.S. residents abroad in lines 70–92.

3. The estimates are from line 109 in NIPA table 2.4.5 and line 129 in NIPA table 2.5.5.

4. These PCE categories are adjusted to include net spending for foreign travel, which is calculated as spending by U.S. residents abroad, minus spending by nonresidents in the United States.

# U.S. International Transactions

## Fourth Quarter and Year 2011

THE U.S. CURRENT-ACCOUNT deficit—a net measure of transactions between the United States and the rest of the world in goods, services, income, and unilateral current transfers—increased to \$124.1 billion (preliminary) in the fourth quarter of 2011 from \$107.6 billion (revised) in the third quarter (see pages 24–27).<sup>1</sup> The deficit increased to 3.2 percent of current-dollar gross domestic product (GDP) after dipping to 2.8 percent in the third quarter.<sup>2</sup> Most of the increase resulted from a decrease in the surplus on income and an increase in the deficit on goods; a smaller contribution came from a decrease in the surplus on services. In 2011, the current-account deficit increased slightly to \$473.4 billion from \$470.9 billion in 2010 (see page 30). The 2011 deficit decreased to 3.1 percent of current-dollar GDP from 3.2 percent in 2010; this GDP-scaled deficit has been close to 3 percent for the last 3 years, well below the record peak of 6.0 percent reached in 2006.

Net financial inflows to the United States were \$48.6 billion in the fourth quarter, down from \$153.7 billion in the third quarter (see pages 28–29). Net financial flows reflect combined transactions in U.S.-owned assets abroad, foreign-owned assets in the United States, and financial derivatives. However, the preliminary statistics exclude fourth-quarter transactions for financial derivatives because the data are not yet available. In 2011, net financial inflows increased to \$394.1 billion from \$254.3 billion in 2010 (see page 31).

The statistical discrepancy—net errors and omissions in recorded transactions—was \$75.5 billion in the fourth quarter, compared with  $-\$45.8$  billion in the third quarter. In 2011, the statistical discrepancy was \$80.5 billion, compared with \$216.8 billion in 2010.

1. Quarterly statistics are seasonally adjusted when series demonstrate statistically significant seasonal patterns; seasonally adjusted statistics are cited in this article when available.

2. Current-dollar GDP is used to provide a consistently scaled comparison across time. In this context, its use does not imply that these international transactions accounts statistics are components of GDP.

**Chart 1. U.S. Current-Account Balance and Its Components and Net Financial Flows**

p Preliminary r Revised n.a. Not available

1. Excludes transactions in net financial derivatives.

2. Change from prior period, not the sum of changes in components.

3. Sum of U.S.-owned assets abroad, foreign-owned assets in the United States, and financial derivatives.

NOTE: The statistics, except for net financial flows, are presented in table 1 after this article and on BEA's Web site.

## Data Availability and Methodology

Detailed statistics for U.S. international transactions are presented in tables 1–12 after this article. The statistics and a description of the estimation methods used to compile them are available at [www.bea.gov](http://www.bea.gov) under “International.” For the statistics, click on “Detailed estimates.” For the methods, see “U.S. International Transactions Accounts: Concepts and Estimation Methods,” under “Methodologies.”

## Current-account highlights

- The deficit on goods increased, reflecting a small increase in imports and a small decrease in exports.
- The surplus on services decreased slightly as a result of a small decrease in services receipts and a small increase in services payments.
- The surplus on income decreased after increasing the previous three quarters, as receipts decreased and payments increased.

## Financial-account highlights

- U.S.-owned assets abroad and foreign-owned assets in the United States both increased less than in the third quarter.
- U.S.-owned assets abroad increased for the ninth quarter out of the last 10 quarters. The fourth-quarter increase resulted from an increase in U.S. government assets other than official reserve assets that was mostly offset by a decrease in U.S. private assets.
- Foreign-owned assets in the United States increased for the 10th straight quarter, but the increase was considerably smaller than in the third quarter. The fourth-quarter increase reflected an increase in “other” foreign assets in the United States.

## Revisions

The preliminary statistics for U.S. international transactions for the third quarter that were published in the January 2012 SURVEY OF CURRENT BUSINESS have been revised to reflect new or revised source data. In addition, the statistics for the first, second, and third quarters have been revised to ensure that the seasonally adjusted statistics sum to the same annual totals as the unadjusted statistics.

Revisions to the statistics for the first and second quarters were small. In the third quarter, the current-account deficit was revised down to \$107.6 billion from \$110.3 billion. The goods deficit was revised down to \$180.9 billion from \$181.8 billion; the services surplus remained at \$46.2 billion; the income surplus was revised up to \$60.6 billion from \$58.3 billion; and net outflows of unilateral current transfers were revised up to \$33.5 billion from \$33.0 billion. Net financial inflows were revised down to \$153.7 billion from \$183.9 billion.

p Preliminary r Revised

**Trends in the Trade in Goods**

The deficit on goods increased in the fourth quarter, after decreasing in the third quarter. Relative to current-dollar GDP, the goods deficit increased to 4.9 percent in the fourth quarter from 4.8 percent in the third quarter. Current-dollar goods imports increased 0.6 percent, and exports decreased 0.6 percent.

Growth in real exports slowed in the fourth quarter, and real imports picked up. For the first time since the first quarter of 2011, real imports grew faster than real exports (table C).

Goods exports decreased after increasing for nine consecutive quarters. Four of the six major end-use categories decreased in the fourth quarter; the largest decrease was in industrial supplies and materials. The other two major categories changed little from the third quarter.

Foods, feeds, and beverages decreased slightly after a larger decrease in the third quarter. A drop in grains and preparations was partly offset by increases in vegetables, fruits, nuts and preparations and in soybeans.

Industrial supplies and materials decreased after increasing for 10 quarters. The decrease was more than accounted for by a drop in nonferrous metals.

Capital goods increased for the 10th straight quarter, but by the smallest amount over this period. The largest fourth-quarter increase was in oil drilling, mining, and construction machinery.

Automotive vehicles, parts, and engines decreased slightly, mainly because of a decrease in trucks, buses, and special purpose vehicles.

Consumer goods rose, reflecting increases in both nondurable and durable goods. Among nondurable goods, the increase was attributable to medicinal, dental, and pharmaceutical products. Durable goods increased for the 10th straight quarter; the fourth-quarter increase was mostly within "other," which was led by gems, jewelry, and collectibles.

<sup>p</sup> Preliminary    <sup>r</sup> Revised  
n.e.c. Not elsewhere classified  
NOTE: The statistics are presented in table 2 after this article and on BEA's Web site. Additional goods imports statistics are also available on BEA's Web site.

Goods imports increased slightly in the fourth quarter, the 10th consecutive quarter of growth. Five of the six major end-use categories increased, and the largest increase was in capital goods.

Foods, feeds, and beverages increased after decreasing slightly in the third quarter. The increase was led by "other" agricultural foods, feeds, and beverages.

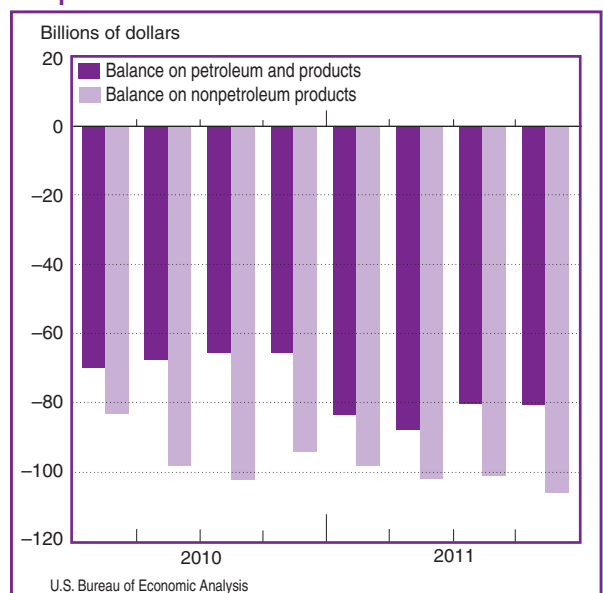

Industrial supplies and materials decreased less than in the third quarter. The fourth-quarter decrease was led by declines in natural gas and nonferrous metals that were partly offset by an increase in petroleum and products.

Capital goods rose for the 10th consecutive quarter. The fourth-quarter increase was mostly due to increases in civilian aircraft, engines, and parts and in electric generating machinery, electric apparatus, and parts.

Automotive vehicles, parts, and engines was nearly unchanged. Increases in engines, parts, and accessories and in passenger cars offset a decrease in trucks, buses, and special purpose vehicles.

Consumer goods increased slightly after decreasing in the third quarter; an increase in durable goods more than offset a decrease in nondurable goods. Durable goods increased as a result of an increase in "other" household goods, mostly in cell phones. Nondurable goods decreased as a result of a decrease in apparel, footwear, and household goods.

**Chart 3. Balance on Total Petroleum and Nonpetroleum Products**

**Goods Deficit by Area and Type of Product**

The goods deficit increased \$5.5 billion in the fourth quarter after decreasing \$8.8 billion in the third quarter. The increase was more than accounted for by an increase in the deficit with Europe, but the deficits with Canada and Latin America and Other Western Hemisphere also increased. Deficits with Asia and Pacific, the Middle East, and Africa decreased.

**Petroleum products.** The deficit on petroleum products increased slightly in the fourth quarter after decreasing considerably in the third quarter and increasing in the first and second quarters. The fourth-quarter increase was due to an increase in the value of imports that was larger than that of exports.

Travel receipts—purchases of goods and services by foreign travelers in the United States—decreased for the first time since the second quarter of 2009.

Passenger fare receipts decreased after increasing in the three preceding quarters.

“Other” transportation receipts turned down after rising in the previous nine quarters. The fourth-quarter decrease was mostly attributable to freight services.

Royalties and license fees increased less than in the third quarter.

“Other” private services receipts increased less than in the third quarter; an increase in business, professional, and technical services was partly offset by a decrease in financial services.

Travel payments—purchases of goods and services by U.S. travelers abroad—edged down after increasing in the previous three quarters.

Passenger fare payments decreased slightly after increasing in the previous six quarters.

“Other” transportation payments decreased for a second consecutive quarter. The fourth-quarter decrease was the result of lower payments for both port and freight services.

“Other” private services payments increased for the fourth straight quarter; the increase was more than accounted for by business, professional, and technical services.

<sup>p</sup> Preliminary <sup>r</sup> Revised  
Note: The statistics are presented in tables 1, 4, and 7 after this article and on BEA's Web site.

Income receipts on U.S. direct investment abroad decreased for the second straight quarter after increasing nine consecutive quarters. The fourth-quarter decrease reflected lower foreign-affiliate earnings in manufacturing and in wholesale trade.

“Other” private income receipts decreased for the first time since the first quarter of 2010. Dividend income fell as U.S. holdings of foreign stocks decreased.

U.S. government receipts decreased for a second straight quarter after increasing for two quarters.

Income payments on foreign direct investment in the United States increased. The increase was largely due to growth in U.S.-affiliate earnings in manufacturing that was partly offset by a decrease in affiliate earnings in wholesale trade.

“Other” private income payments decreased slightly after increasing for four straight quarters. The decrease mostly resulted from lower dividend payments that reflected lower foreign holdings of U.S. corporate stocks.

U.S. government payments increased for the third consecutive quarter because of an increase in foreign holdings of U.S. Treasury bonds.

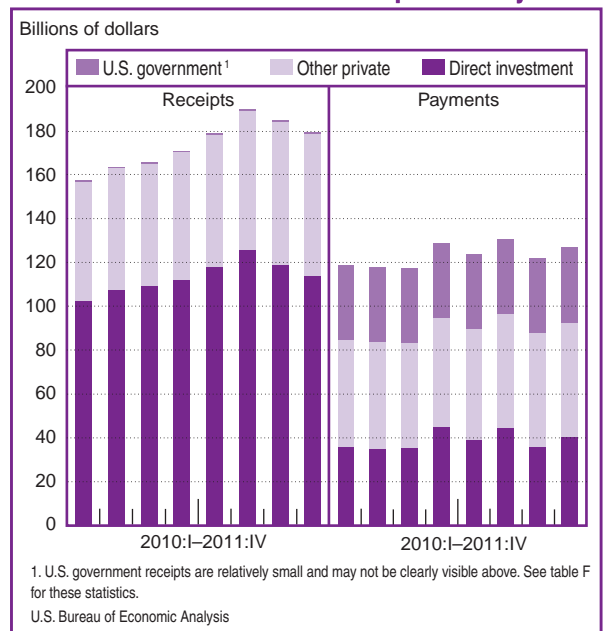

**Trends in Income**

The surplus on income fell to \$50.3 billion in the fourth quarter after building up over the first three quarters of 2011. Relative to U.S. current-dollar GDP, the surplus was 1.3 percent, slipping from 1.6 percent in the third quarter.

Income receipts decreased for a second straight quarter as a result of lower direct investment receipts after increasing in the previous five quarters. Income payments increased in the fourth quarter after decreasing in the third quarter; the increase reflected higher direct investment payments.

Direct investment receipts decreased for a second quarter in a row after increasing for nine consecutive quarters. However, the fourth-quarter receipts were 47 percent higher than in the first quarter of 2009. Direct investment payments decreased in the fourth quarter after increasing in the third quarter; payments have seesawed in recent quarters. Despite this recent trend, fourth-quarter payments were more than three times the payments in the first quarter of 2009.

**Chart 6. Investment Income Receipts and Payments**

1. U.S. government receipts are relatively small and may not be clearly visible above. See table F for these statistics.

<sup>1</sup> Excludes transactions in financial derivatives.

NOTE: Under balance-of-payments conventions, increases in U.S.-owned assets abroad are shown with a negative sign, and decreases are shown with a positive sign. The statistics are presented in tables 1, 7, 8, and 10 after this article and on BEA's Web site.

U.S. official reserve assets increased for the fourth consecutive quarter. The increase was less than in the third quarter due to a smaller increase in the U.S. reserve position in the International Monetary Fund.

The rise in “U.S. government assets, other than official reserve assets” was sharply higher than in the third quarter as a result of increased dollar liquidity swaps between the U.S. Federal Reserve System and foreign central banks, mostly the European Central Bank.

U.S. direct investment increased, mostly because of a sharp rise in equity investment. A shift to outflows from inflows of intercompany debt investment also contributed.

U.S. sales of foreign securities exceeded U.S. purchases for the first time since the fourth quarter of 2008, reflecting shifts from net purchases to net sales of foreign stocks and bonds, mainly in European securities.

U.S. claims on foreigners reported by nonbanks decreased more than in the third quarter. The larger decrease reflected a larger reduction in U.S. deposits abroad.

U.S. claims on foreigners reported by U.S. banks and securities brokers—such as U.S. residents’ deposits at foreign banks and loans to foreigners—decreased more than in the third quarter. Claims for banks’ own accounts increased in the fourth quarter after decreasing in the third quarter.

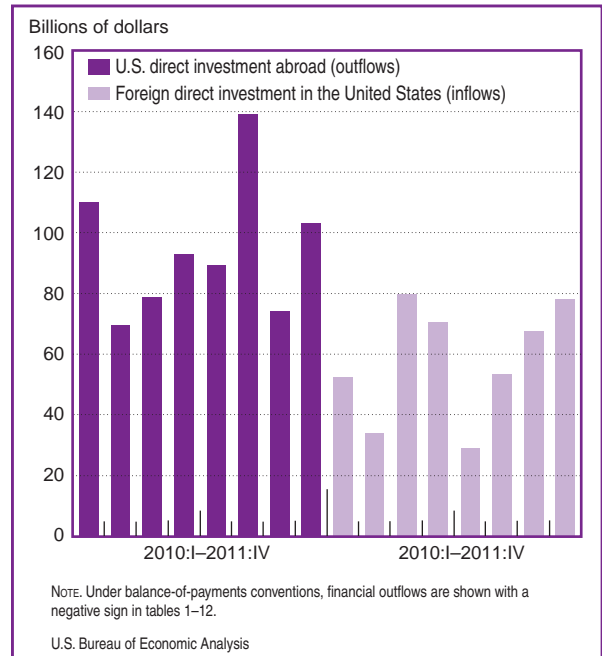

### Developments in the Financial Account

U.S.-owned assets abroad rose slightly in the fourth quarter after a moderate increase in the third quarter and a small decrease in the second quarter. Foreign-owned assets in the United States rose for the 10th straight quarter, but by much less than in the third quarter. As a result, net inflows were much lower than in the third quarter.

The rise in U.S.-owned assets abroad resulted from direct investment abroad and an increase in “U.S. government assets, other than official reserve assets” that were mostly offset by declines in claims reported by U.S. banks and securities brokers and U.S. nonbanks and in U.S. net sales of foreign securities. U.S. government assets increased the most since the fourth quarter of 2008; the increase was primarily due to dollar liquidity swaps. U.S. direct investment abroad was higher than in the third quarter. For the first time since the fourth quarter of 2008, U.S. transactions in foreign securities were net sales rather than net purchases. U.S. claims reported by U.S. banks and securities brokers and U.S. nonbanks declined for the third consecutive quarter.

The increase in foreign-owned assets in the United States was more than accounted for by inflows from private foreign investors (increases in “other” foreign assets). These inflows reflected foreign purchases of U.S. Treasury securities, which exceeded foreign sales (but by less than the record level of the third quarter) and direct investment. Several outflows tempered the increase in foreign-owned assets in the United States: a decrease in U.S. liabilities to foreigners reported by U.S. banks and brokers, stronger foreign sales than foreign purchases of U.S. securities other than U.S. treasury securities, and decreases in U.S. liabilities to foreigners reported by nonbanks.

p Preliminary r Revised  
1. Excludes transactions in financial derivatives.  
NOTE. The statistics are presented in tables 1, 7, 8, and 11 after this article and on BEA's Web Site.

Foreign official assets in the United States fell for the first time since the second quarter of 2001 because of foreign official sales of U.S. Treasury securities exceeding purchases.

Foreign direct investment in the United States picked up for the third consecutive quarter. The fourth-quarter pickup was mainly the result of an increase in reinvested earnings. Net equity capital investment and intercompany debt investment also increased.

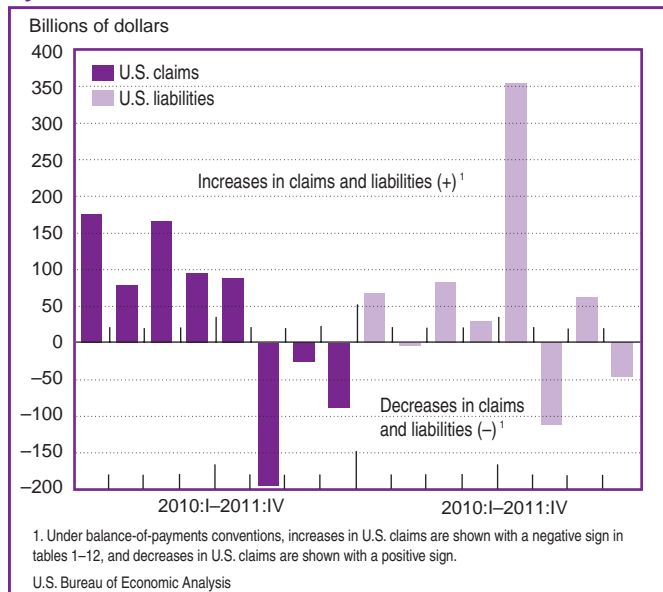

Purchases of U.S. Treasury securities by private foreigners exceeded sales, but by less than the record level of net purchases reached in the third quarter. The slowdown resulted from a decrease in net purchases of long-term Treasury bonds, which was partly offset by an increase in net purchases of short-term Treasury securities.

Sales of other U.S. securities by private foreigners exceeded purchases in the fourth quarter. Net sales were higher than in the third quarter, mostly due to a sharp rise in net sales of U.S. corporate bonds, that was partly offset by a decrease in net sales of U.S. stocks.

U.S. liabilities to foreigners reported by nonbanks decreased for a second quarter. The larger fourth-quarter decrease was due to a shift to a decrease in commercial liabilities, mostly to Europe.

U.S. liabilities to foreigners reported by U.S. banks and securities brokers—such as foreign residents' deposits at U.S. banks and loans to U.S. residents—fell after rising in the third quarter. Banks' and brokers' liabilities for own accounts decreased after increasing in the third quarter.

<sup>p</sup> Preliminary

Note: The statistics are presented in tables 1 and 2 after this article and on BEA's Web site.

In 2011, the current-account deficit rose slightly after a much sharper increase in 2010. In 2011, an increase in the deficit on goods was nearly offset by increases in the surpluses on income and services. Previously, the current-account deficit had decreased for 3 consecutive years, bottoming out in 2009 to its lowest level in a decade.

Goods exports continued to grow sharply for the second consecutive year as all the major end-use categories rose. Three-fourths of the increase was accounted for by industrial supplies and materials (led by petroleum and products) and capital goods.

Services exports increased for the second consecutive year. All the major categories of services receipts increased, and the largest increases were in "other" private services (led by business, professional, and technical services), in royalties and license fees, and in travel.

Income receipts continued to rebound for the second straight year. Direct investment receipts, which also continued a post-2009 rebound, accounted for more than half of the increase. "Other" private receipts increased after 3 consecutive years of decline.

Goods imports continued to rebound. With the strong increases in the past 2 years, goods imports climbed past the previous peak reached in 2008. In 2011, all the major end-use categories increased; the largest increase was in industrial supplies and materials, particularly petroleum and products.

Services imports rose to a level surpassing the previous peak reached in 2008. "Other" private services, which accounted for over half of the increase, was led by business, professional, and technical services. Passenger fares, travel, other transportation, and royalties and license fees increased by nearly equal amounts.

Income payments posted moderate growth for the second consecutive year, but did not return to the peak reached in 2007. "Other" private payments grew moderately, turning around a 3-year decline. Direct investment payments also rose moderately after a larger increase in 2010. Recent declines in U.S. government payments slowed.

<b>Memorandum:</b>					
Net financial flows <sup>2</sup> .....	730,568	245,919	254,289	394,137	139,848

p Preliminary n.a. Not available

1. Excludes transactions in financial derivatives.

2. Sum of U.S.-owned assets abroad, foreign-owned assets in the United States, and financial derivatives.

3. Equals the sum of financial derivatives for the first, second, and third quarters of the year.

NOTE: The statistics, except for net financial flows, are presented in tables 1, 7, 8, 10, and 11 after this article and on BEA's Web site.

U.S. official reserve assets increased more sharply than in 2010 as a result of an increase in the U.S. reserve position in the International Monetary Fund.

U.S. government assets other than official reserve assets increased as a result of drawings by foreign central banks on dollar liquidity swaps from the U.S. Federal Reserve System, mostly by the European Central Bank.

U.S. direct investment abroad increased for the second consecutive year, nearly returning to the peak reached in 2007. A rise in reinvested earnings accounted for more than half of the increase. A shift to outflows of net intercompany debt investment and an increase in net equity capital investment also contributed.

U.S. purchases of foreign securities exceeded sales in 2011 less than in 2010 as a result of a decrease in net U.S. purchases of foreign bonds. Net U.S. purchases of foreign stocks increased slightly.

U.S. claims on foreigners reported by U.S. banks and securities brokers decreased in 2011 after increasing in 2009 and 2010. In 2011, both claims for own accounts and claims for customers' accounts fell.

Foreign official assets in the United States increased, the smallest increase since 2002. The slowdown was more than accounted for by a drop in net purchases of U.S. Treasury securities.

Foreign direct investment in the United States was slightly less than in 2010. The slowdown was due to a decrease in net equity investment that was mostly offset by an increase in net intercompany debt investment.

Purchases of U.S. Treasury securities by private foreigners exceeded sales in 2011, by less than in 2010.

Sales of other U.S. securities by private foreigners exceeded purchases in 2011, a shift from net purchases in 2010. Most of the shift was caused by a decrease in net purchases of U.S. stocks by foreigners. An increase in net sales of U.S. corporate bonds and a shift to net sales from net purchases of federally sponsored agency bonds also contributed to the shift.

U.S. liabilities to foreigners reported by U.S. banks and securities brokers increased more in 2011 than in 2010 after decreasing in 2008 and 2009. The 2011 increase was larger primarily due to a larger rise in liabilities for own accounts. A smaller decrease in liabilities for customers' accounts also contributed.

## Footnotes to U.S. International Transactions Tables 1–12

**General notes for all tables:** <sup>P</sup> Preliminary. <sup>†</sup> Revised. 0 Transactions are possible, but are zero for a given period. (\*) Transactions are less than \$500,000(±). <sup>D</sup> Suppressed to avoid disclosure of data of individual companies. n.a. Transactions are possible, but data are not available. .... Not applicable, or for data periods 1960–1997, transactions that are 0, “not available,” or “not applicable.” Quarterly estimates are not annualized and are expressed at quarterly rates.

### Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. See table 2 footnotes for explanations of the various balance of payments adjustments made to convert goods on a Census-basis to goods on a balance of payments basis. The adjustments are made to improve coverage, eliminate duplication and align the goods data with national and international accounting guidelines.

3. Includes some goods: Mainly military equipment and supplies in lines 5 and 22 that are commingled in the source data and cannot be separately identified. Beginning with statistics for 1999, line 5 excludes equipment and supplies exported under the U.S. Foreign Military Sales program that can be separately identified, and line 22 excludes petroleum purchases abroad by U.S. military agencies that can be separately identified.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the “other transfers” component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. At the present time, all U.S. Treasury-owned gold is held in the United States.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 6.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

13. Conceptually, the sum of line 77 and line 39 is equal to “net lending or net borrowing” in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

14. Beginning with 2003, includes securities brokers' claims on their foreign affiliates. Prior to 2003, they are included in the claims of nonbanking concerns.

15. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates. Prior to 2003, they are included in the liabilities of nonbanking concerns.

16. Calculated excluding financial derivatives, net (line 70).

17. Equals the sum of financial derivatives for the first, second, and third quarters of the year. Appears only with the preliminary release of annual statistics for a given year.

Additional footnotes for historical data in July issues of the SURVEY:

18. For 1974, includes extraordinary U.S. Government transactions with

India. See “Special U.S. Government Transactions,” June 1974 SURVEY, p. 27.

19. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.

20. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2010 issues of the SURVEY.

### Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation; imports, Census basis, represent Customs values. Seasonally adjusted data reflect the application of seasonal factors developed jointly by BEA and the U.S. Census Bureau (CENSUS).

2. Difference between transactions included in primary source data provided to BEA by the U.S. Department of Defense and transactions included in the Census trade data. Negative values may result from timing differences for transactions recorded in the two data sets.

3. Addition for low-value (below reporting threshold) transactions for 1999–2009 to phase in a revised low-value methodology that was implemented by CENSUS beginning with statistics for 2010.

4. Addition of electric energy exports to Mexico; deduction of exposed motion picture film for sale or rental; net change in stock of U.S.-owned grains in storage in Canada; and coverage adjustments for special situations where certain exports are not included in the Census data.

5. Addition of electric energy imports from Mexico; deduction of exposed motion picture film for sale or rental; deduction of the value of repairs of U.S. vessels abroad; and coverage adjustments for special situations where certain imports are not included in the Census data.

6. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 12, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council, and sales of satellites to Intelsat. Members of OPEC include Algeria, Angola (beginning with the first quarter of 2007), Ecuador (beginning with the fourth quarter of 2007), Indonesia (ending with the fourth quarter of 2008), Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

7. Lines B24, B83, and B142 include CENSUS's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published by Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.

### Table 3:

1. Royalties and license fees and “other private services” by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, distribution of film and television recordings and other intellectual property rights.

4. Other services receipts (exports) include mainly expenditures of foreign residents working temporarily in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

### Table 4:

1. Beginning with 2003, includes interest on securities brokers' claims on their foreign affiliates. Prior to 2003, it is included in the interest on claims of nonbanking concerns.

2. Beginning with 2003, gross interest receipts on U.S. holdings of special drawing rights (SDRs) are included in U.S. government receipts. Prior to 2003, interest receipts on U.S. holdings of SDRs, net of interest payments on U.S. allocations of SDRs, are included in U.S. government receipts.

3. Beginning with 2003, includes interest on securities brokers' liabilities to their foreign affiliates. Prior to 2003, it is included in the interest on liabilities of nonbanking concerns.

4. Beginning in 2003, gross interest payments on U.S. allocations of SDRs are included in U.S. government payments. Prior to 2003, interest receipts on U.S. holdings of SDRs, net of interest payments on U.S. allocations of SDRs, are included in U.S. government receipts.

### Table 5:

1. Complete instrument detail is only available beginning with 2003.

2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

**Table 6:**

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.

2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.

4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.

5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contra-entry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

9. Beginning in the fourth quarter of 2007, includes drawings and repayments under temporary reciprocal currency arrangements between the U.S. Federal Reserve System and foreign central banks that do not meet the strict definition of U.S. reserve assets.

10. Includes allocations of special drawing rights (SDRs) in the third quarter of 2009.

**Table 7:**

1. Interest on intercompany debt between financial parent companies and their financial affiliates is excluded from direct investment income. Prior to 2007, interest on the permanent debt investment of bank parent companies in their bank affiliates was included in direct investment income.

2. Intercompany debt investment between financial parent companies and their financial affiliates is excluded from direct investment financial flows. Prior to 2007, the permanent debt investment of bank parent companies in their bank affiliates was included in direct investment financial flows.

**Table 8:**

1. Beginning with 2005, source data for new issue estimates are no longer separately available. New issues continue to be included in net purchases.

2. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

**Table 9:**

1. Prior to 2003, securities brokers' claims on and liabilities to their foreign affiliates are included in the estimates. They are excluded beginning in 2003.

2. Complete instrument detail is only available beginning with 2003.

3. Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parent groups), where both the U.S. and foreign firms are classified in a

finance industry, but the firms are neither banks nor securities brokers.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

**Table 10:**

1. Beginning with 2003, includes securities brokers' claims on their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.

4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.

6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.

7. Prior to 2003, includes only deposits.

8. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

**Table 11:**

1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

**Table 12:**

For footnotes 1–15, see table 1.

16. At the global level, the statistical discrepancy represents net errors and omissions in recorded transactions. For individual countries and regions, it may also reflect discrepancies that arise when transactions with one country or region are settled through transactions with another country or region.

17. Details not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

19. Estimates of financial derivatives for several countries are not available separately. Estimates for Luxembourg are included in Other Euro area. Estimates for Argentina, Brazil, Mexico, and Venezuela are included in Other South and Central America. Estimates for China, Hong Kong, India, Korea, Singapore, and Taiwan are included in Other Asia and Pacific. Estimates for South Africa are included in Other Africa. In addition, estimates for the Middle East are combined with estimates for Asia and Pacific and included in Other Asia and Pacific.

20. Calculated excluding financial derivatives, net (line 70).

21. Equals the sum of financial derivatives for the first, second, and third quarters of the year.

22. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated U.S. direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.

NOTE. Definitions for geographic areas are available on BEA's Web site at [www.bea.gov](http://www.bea.gov). Country data are based on information available from U.S. reporting sources. In some instances, the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. goods export statistics reflect country of reported destination; in many cases the goods may be transhipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of securities transactions reflects the country with which transactions occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

## REGIONAL QUARTERLY REPORT

### State Personal Income and More . . .

#### In this report...

- Fourth-quarter 2011 state personal income statistics, page 58
- Annual state personal income statistics, 2011, page 61
- Acknowledgments, page 63
- Alternative measures of household income, page 64

For information about BEA regional statistics, go to [www.bea.gov](http://www.bea.gov).

#### Fourth quarter of 2011

State personal income growth averaged 0.8 percent in the fourth quarter of 2011, the same as in the third quarter (chart 1).<sup>1</sup> Growth ranged from 0.5 percent in Wisconsin to 1.5 percent in North Dakota. The inflation rate as measured by the national price index for personal consumption expenditures fell to 0.3 percent in the fourth quarter of 2011 from 0.6 percent in the third quarter.

#### Industry earnings

The private nonfarm sector accounted for almost all of the earnings growth in the fourth quarter (as well as in the third quarter) in most states. On average, it grew 1.5 percent in the fourth quarter, down from 1.7 percent in the third quarter. Government earnings fell 0.1

1. Personal income is the sum of net earnings by place of residence, property income, and personal current transfer receipts. In this article, quarter-to-quarter percent changes are not annualized. Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise stated.

**Chart 1. Range of State Personal Income Quarterly Growth Rates**

*David G. Lenze prepared the report on state personal income.*

**State Personal Income, Fourth Quarter 2011**

percent in the fourth quarter, and farm earnings fell 3.6 percent (table A).

Nationally, the largest gains in earnings in the fourth quarter were in finance, retail trade, and health care. Earnings in finance grew \$16 billion in the fourth quarter, a slowdown from the \$20 billion increase in the third quarter. The finance industry contributed more to earnings growth than any other industry in 13 states, including New York, Connecticut, and Delaware. Earnings in retail trade grew \$13 billion, a small acceleration from the \$12 billion increase in the third quarter. The retail trade industry was the largest contributor to earnings growth in Georgia and Idaho. Earnings in health care grew \$12 billion, down from the \$18 billion increase in the third quarter. The health care industry was the largest contributor to growth in seven states, including Arizona and Florida.

Earnings in mining grew 9.0 percent nationally, faster than every other industry, and accounted for the bulk of the earnings growth in the fourth quarter in the six fastest growing states: North Dakota, Wyoming, Oklahoma, Texas, Louisiana, and West Virginia.<sup>2</sup> The strong fourth-quarter growth in mining follows 5.8 percent growth in the third quarter, when it also grew faster than every other industry except amusements, which equaled its 5.8 percent growth.<sup>3</sup> Mining earnings are now at the highest level in 3 years.

Nationally, earnings in the utilities industry fell 1.3 percent in the fourth quarter after declining 0.8 percent in the third quarter (chart 2). These declines are unique among private nonfarm industries. The 9.7 percent decline from the second to the fourth quarter in West Virginia was particularly notable because it brought utilities earnings in this state to the lowest level since the second quarter of 2007. Texas was the only state with an

2. These six states also had the fastest personal income growth in the fourth quarter of 2011.

3. The amusements industry is called arts, entertainment, and recreation in table A.

**Chart 2. U.S. Utilities Earnings, by Component**

U.S. Bureau of Economic Analysis

## State Personal Income, Fourth Quarter 2011

increase in utilities earnings in the fourth quarter, with a 1.0 percent increase.<sup>4</sup>

### Other income

Personal current transfer receipts fell 0.3 percent nationally in the fourth quarter after declining 0.5 percent in the third quarter. Much of the fourth-quarter decline was in state unemployment insurance compensation, which has declined for seven consecutive quarters. Medicare and Medicaid payments to providers of health care to individuals also declined, while Social security benefits rose.<sup>5</sup>

Personal current transfer receipts provided under the American Recovery and Reinvestment Act of 2009 fell 14 percent nationally to \$39 billion in the fourth quarter, with declines in every state (table B).

Property income increased 0.6 percent nationally in the fourth quarter (after increasing 0.1 percent in the third quarter), the net effect of a 2.1 percent decline in interest income, a 1.6 percent rise in dividends, and a 4.9 percent rise in rental income net of expenses.

4. In the state personal income accounts, the utilities industry consists primarily of the generation, transmission, and distribution of electricity by privately owned businesses. The industry also includes natural gas distribution and water and sewerage utilities. According to the Quarterly Census of Employment and Wages published by the Bureau of Labor Statistics, wages in electric utilities were 75 percent, wages in natural gas distribution were 20 percent, and wages in water and sewerage utilities were 5 percent of total private wages in the utilities industry in 2010, the latest year for which data are available. BEA records the wages of publicly owned utilities—such as the Tennessee Valley Authority—in the government sector

5. See “Table 2.1. Personal Income and Its Disposition” in the national income and product accounts. BEA estimates only two components of personal current transfer receipts by state on a quarterly basis—state unemployment insurance compensation and American Recovery and Reinvestment Act receipts.

ARRA American Recovery and Reinvestment Act of 2009

1. Some ARRA funding, such as for Medicaid, replaced state funding and had no net effect on personal current transfer receipts.

## State Personal Income, 2011

### Annual statistics 2011

State personal income rose an average 5.1 percent in 2011 after rising 3.7 percent in 2010. State personal income growth ranged from 3.4 percent in Maine to 8.1 percent in North Dakota. The inflation rate increased to 2.5 percent in 2011 from 1.8 percent in 2010.

Net earnings (net of contributions for government social insurance and adjusted for residence) grew an average 5.6 percent in 2011 after growing 3.0 percent in 2010

and declining 5.0 percent in 2009. Net earnings has recovered its prerecession level and reached a new peak in 46 states.<sup>6</sup> Net earnings in Arizona, Michigan, Nevada, and Oklahoma is still below the peak reached in 2007 or 2008, by as much as 6.0 percent in Nevada (table C).

Net earnings growth in 2011 was boosted by a

6. It should be noted that in Alaska, alone among the 50 states, net earnings did not decline in 2009.

## State Personal Income, 2011

2 percentage point reduction in the personal contribution rate for social security.<sup>7</sup> The reduction was one of the provisions of the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010.

Although earnings grew in every private industry in 2011 and in every private industry except construction in 2010, earnings still remain below the previous peak reached in 2008 or earlier in nine industries: forestry, mining, utilities, construction, durable-goods manufacturing, nondurable-goods manufacturing, information, finance, and real estate (table D).

The professional services industry became the second largest private industry in the United States after health care in 2011 (chart 3).<sup>8</sup> Professional services generated 12.3 percent of private earnings in 2011, compared with

7. For all the states and the District of Columbia, aggregate employee and self-employed contributions for government social insurance fell \$85.5 billion in 2011. These contributions are subtracted in the calculation of personal income.

8. There are 19 "sectors," or what this article is calling private industries, in the North American Industry Classification System.

12.1 percent for manufacturing and 13.5 percent for health care. Across states, health care was the largest private industry in 23 states, and manufacturing was the

The quarterly and preliminary annual estimates of state personal income were prepared by Nacola A. Alexander, Michelle A. Harder, Andy K. Kim, Carrie L. Litkowski, Enrique B. Lopez, and Matthew A. von Kerczek under the supervision of Mauricio Ortiz, Chief of the Regional Income Branch.

The preliminary annual estimates of disposable per-

sonal income were prepared by Ann E. Dunbar and Joseph L. Stauffer.

This article was prepared by David G. Lenze. The tables were prepared by Jonas D. Wilson under the guidance of Jeffrey L. Newman. Sharon C. Carnevale, Chief of the Regional Income Division, provided general guidance.

## Alternative Measures of Household Income

Three of the most widely used measures of household income are BEA's measure of personal income, the Census Bureau's measure of money income, and the Internal Revenue Service's measure of adjusted gross income of individuals.<sup>1</sup>

Personal income, in general, is a more comprehensive measure. For both the national and regional accounts, personal income is defined as the sum of wage and salary disbursements, supplements to wages and salaries, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and personal current transfer receipts, less contributions for government social insurance. Because the personal income of an area represents the income that is received by, or on behalf of, all the persons who live in that area and because the estimates of the earnings component of personal income is made on a place-of-work basis, state personal income includes an adjustment for residence. Personal income includes the incomes of individuals, of nonprofit institutions that primarily serve individuals, of private noninsured welfare funds, and of private trust funds. It also includes property income earned on life insurance and annuity reserves of life insurance carriers and earned on the assets of noninsured pension plans.

Money income consists of income in cash and its equivalents before taxes and does not include the value of noncash benefits. It excludes, but personal income includes, employer contributions for employee pension and insurance funds, lump-sum payments except those received as part of earnings, certain in-kind personal current transfer receipts—such as Medicaid, Medicare, and food stamps—and imputed income.<sup>2</sup> Money income includes, but personal income excludes, personal contributions for government social insurance, distributions from government employee retirement plans and from private pensions and annuities, and income from regular inter-personal transfers, such as child support.

In addition, personal income at the national, state, and

local area levels is presented annually on a per capita (or simple average per person) basis. Money income at the national level is presented annually both on a per capita basis and on a median household basis; median money income for states from the Current Population Survey is presented annually as two- and three-year averages.<sup>3</sup> State personal income is not adjusted for inflation, but the national estimates of money income are available in inflation-adjusted dollars, using the consumer price index.<sup>4</sup>

Adjusted gross income (AGI) consists of the taxable income prior to exemptions and the standard or itemized deductions that is reported by individuals on their Federal income tax return. It includes, but personal income excludes, personal contributions for social insurance, gains and losses on the sale of assets, and taxable distributions from government employee retirement plans and from private pensions and annuities. AGI excludes, but personal income includes, the income of the recipients of taxable incomes who, legally or illegally, did not file an individual income tax return. In particular, AGI excludes the income of many individuals with low incomes who are exempt from filing tax returns. Additionally, adjusted gross income excludes certain types of income that are not taxed—such as tax-exempt interest and nontaxable transfer payments, including Medicare, Medicaid, and welfare benefit payments—and it includes the taxable portion of social security benefit payments.

3. Although these state-level estimates of median household income and poverty are available on the Census Web site, they are no longer published in the Census Bureau report. The Census Bureau is now focusing on annual estimates of median household income and poverty for states and smaller geographic areas with populations of 65,000 or more from the American Community Survey. For guidance on the uses of the Census Bureau income products see [www.census.gov/hhes/www/income/method/guidance/index.html](http://www.census.gov/hhes/www/income/method/guidance/index.html).

4. At the national level, BEA also presents real per capita disposable personal income (DPI). (DPI is personal income less personal current taxes; real DPI is DPI divided by the implicit price deflator for personal consumption expenditures.) For the sources of the prices used for this deflator, see "Chapter 5: Personal Consumption Expenditures," in *NIPA Handbook* at [www.bea.gov/national/pdf/NIPAhandbookch5.pdf](http://www.bea.gov/national/pdf/NIPAhandbookch5.pdf).

1. See also John Ruser, Adrienne Pilot, and Charles Nelson, "Alternative Measures of Household Income: BEA Personal Income, CPS Money Income, and Beyond" [www.bea.gov/about/pdf/AlternativemeasuresHHincomeFESAC121404.pdf](http://www.bea.gov/about/pdf/AlternativemeasuresHHincomeFESAC121404.pdf); the Census Bureau's *Income, Poverty and Health Insurance Coverage in the United States: 2010 Report*; the Internal Revenue Service's annual *Individual Income Tax Returns*; and Mark A. Ledbetter, "Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income: New Estimates for 2005 and Revised Estimates for 2004," *SURVEY OF CURRENT BUSINESS* 87 (November 2007): 35–41.

2. Imputations are added to personal income in both the national and regional measures so that a comprehensive account of total production and its distribution can be presented. For a description of these imputations, see *State Personal Income and Employment Methodology* at [www.bea.gov/regional/methods.cfm](http://www.bea.gov/regional/methods.cfm).

### Alternative Per Capita Income Measures

	Per capita income		
	2009	2010	2011
State personal income <sup>1</sup> .....	38,846	39,937	41,663
Money income <sup>2</sup> .....	26,530	26,487	(NA)
Adjusted gross income <sup>3</sup> .....	24,860	26,008	(NA)

n.a. Not available

1. Bureau of Economic Analysis, available at [www.bea.gov](http://www.bea.gov).

2. U.S. Census Bureau, Current Population Survey, 2009 and 2010 Annual Social and Economic Supplements, available at [www.census.gov/hhes/www/income/data/historical/people/index.html](http://www.census.gov/hhes/www/income/data/historical/people/index.html). The Census Bureau calculates per capita money income using the civilian noninstitutional population as of March of the following year.

3. Internal Revenue Service (IRS), Statistics of Income Tax Stats, available at [www.irs.gov/taxstats/index.html](http://www.irs.gov/taxstats/index.html). Adjusted gross income (AGI) for 2010 is preliminary. The IRS does not produce per capita AGI. The estimates shown are derived by dividing aggregate AGI by total population from the Census Bureau (also used by BEA in the calculation of state per capita personal income).

p Preliminary

r Revised

1. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

p Preliminary  
r Revised  
1. Percent change was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 4. Personal Income by Major Source

[Millions]

p Preliminary

r Revised

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

L Less than \$500,000, but the estimates for this item are included in the total.

1. The estimates of earnings for 2011 are based on the 2007 North American Industry Classification System (NAICS).

2. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it

consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

## National Data

### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on March 29, 2012. These estimates include the third estimates for the fourth quarter of 2011 and for 2011 annual totals.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at [www.bea.gov](http://www.bea.gov).

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to [www.bea.gov](http://www.bea.gov) and subscribe. The "Selected NIPA Tables" are available later that day.

Market-based PCE excluding food and energy <sup>2</sup> .....	38	0.7	0.9	1.3	1.6	1.8

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE: Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).  
 2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.  
 3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded" or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded" or bundled, in computers and other equipment.

NOTE: The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).  
 2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.  
 3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.  
 4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).  
 Note: The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.  
 IVA Inventory valuation adjustment  
 CCAAdj Capital consumption adjustment

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.
5. Consists of gasoline and other energy goods and of electricity and gas services.
6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

  6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.
- NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table 2.3.7. Percent Change from Preceding Period in Prices for Personal Consumption Expenditures by Major Type of Product

	Line	2010	2011	Seasonally adjusted at annual rates					
				2010	2011

Other services .....	21	2.5	2.0	1.4	2.0	1.8	2.3	2.4	
Final consumption expenditures of nonprofit institutions serving households (NPISHs) <sup>1</sup> .....	22	-1.1	2.3	6.0	2.0	2.5	0.7	-0.4	
Gross output of nonprofit institutions <sup>2</sup> .....	23	1.8	2.2	2.3	2.4	2.7	2.0	1.2	
Less: Receipts from sales of goods and services by nonprofit institutions <sup>3</sup> .....	24	2.8	2.2	1.1	2.5	2.7	2.4	1.8	
<b>Addenda:</b>									
PCE excluding food and energy <sup>4</sup> .....	25	1.4	1.4	0.7	1.6	2.3	2.1	1.3	
Energy goods and services <sup>5</sup> .....	26	10.3	16.4	24.7	40.7	15.0	3.3	-3.2	
Market-based PCE <sup>6</sup> .....	27	1.5	2.5	1.8	4.0	3.5	2.6	1.2	
Market-based PCE excluding food and energy <sup>6</sup> .....	28	1.0	1.4	0.3	1.3	2.4	2.3	1.4	

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

 NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
2. Excludes software "embedded" or bundled, in computers and other equipment.
3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.
4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded" or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Residential structures .....	29	268.3	263.3	261.9	260.5	261.4	260.9	270.4

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded" or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.  
NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Private inventories to final sales.....	28	2.33	2.34	2.34	2.32	2.32
Nonfarm inventories to final sales.....	29	2.12	2.14	2.15	2.13	2.13
Nonfarm inventories to final sales of goods and structures.....	30	3.91	3.94	3.96	3.90	3.88

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Sales of imported new autos <sup>3</sup> .....	46	83.0	90.6	86.6	99.0	89.2	84.0	90.2

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

### C. Historical Measures

This table is derived from the “Selected NIPA Tables” that are published in this issue and from the “GDP and Other Major NIPA Series” tables that were published in the August 2011 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

**Table C.1. GDP and Other Major NIPA Aggregates—Continues**

[Quarterly estimates are seasonally adjusted at annual rates]

### D. Charts

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

<sup>p</sup> Preliminary

<sup>r</sup> Revised

1. Reflects adjustments necessary to bring Census Bureau data in line with the concepts and definitions used by BEA

to prepare the international and national accounts.

2. Contains goods that cannot be separately identified.

Source: U.S. Bureau of Economic Analysis and U.S. Census Bureau.

p Preliminary

r Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary

r Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary

r Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary  
 r Revised  
 1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.  
 2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.  
 3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.  
 4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.  
 5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.  
 4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.  
 5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

r Revised

\* Less than \$500,000 (+/-)

..... Not applicable

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes due to year-to-year shifts in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of more comprehensive survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, 24, and 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).

5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. The movement of exchange rates does not affect this valuation.

10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

D Suppressed to avoid disclosure of data of individual companies.

Notes: The data in this table are from BEA's annual survey of the operations of U.S. affiliates of foreign companies; see "U.S. Affiliates of Foreign Companies: Operations in 2009" in the August 2011 SURVEY OF CURRENT BUSINESS.

Size ranges are given in employment cells that are suppressed. The size ranges are: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

H. Charts

THE U.S. IN THE INTERNATIONAL ECONOMY

NOTE: All series except those for the international investment position are quarterly and are seasonally adjusted when adjusted data are available. The series are from tables F.2, with opposite signs in some cases, and G.1.  
U.S. Bureau of Economic Analysis

## Regional Data

### I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at [www.bea.gov](http://www.bea.gov). For information on state personal income, e-mail [reis@bea.gov](mailto:reis@bea.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail [gdpbystate@bea.gov](mailto:gdpbystate@bea.gov); write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary

r Revised

1. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.  
Source: Table 2 in the "Regional Quarterly Report" in the April 2012 Survey of Current Business

p Preliminary

r Revised

1. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

NOTE: Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP by state statistics for 2010 that were released on June 7, 2011.

p Preliminary

1. Percent change calculated from unrounded data.

2. The metropolitan area definitions used by BEA for its personal income estimates are the county-based

definitions issued by the Office of Management and Budget as of December 2009, for federal statistical purposes.

### A. Additional Information About the NIPA Estimates

#### Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.<sup>1</sup>

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006–2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2005) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (\$100 × 1.10). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_0$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and  $n$  is the number of periods between the earlier periods and the later periods (that is,  $t - 0$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.  
ITAs: International transactions accounts  
NIPAs: National income and product accounts

## B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at [www.bea.gov](http://www.bea.gov).

### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

**National income and product accounts (NIPAs).** This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates.

*Concepts and Methods of the U.S. National Income and Product Accounts*

“Introductory Chapters 1–4” (2009)

“Chapter 5: Personal Consumption Expenditures” (2009)

“Chapter 6: Private Fixed Investment” (2010)

“Chapter 7: Change in Private Inventories” (2010)

“Chapter 8: Net Exports of Goods and Services” (2011)

“Chapter 9: Government Consumption Expenditures and Gross Investment (2011)

*Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends* (2002)

*An Introduction to National Income and Product Accounts* (2007)

*Measuring the Economy: A Primer on GDP and the National Income and Product Accounts* (2007)

The following SURVEY articles describe the 2009 comprehensive revision of the NIPAs.

“Initial Results of the 2009 Comprehensive NIPA Revision” (August 2009)

“Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision” (September 2009)

Preview of the 2009 Comprehensive NIPA Revision Changes in Definitions and Presentations (March 2009)

New Classifications for Personal Consumption Expenditures (May 2008)

Statistical Changes (May 2009)

“Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O

Accounts and Proposed Definition and Statistical Changes” (March 2008)

In addition, see the following articles.

“Annual Revision of the National Income and Product Accounts” (August 2011) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

“Updated Summary of NIPA Methodologies” (November 2011) describes the source data and methods that are used to prepare the estimates.

“Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“Revisions to GDP, GDI, and Their Major Components” (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

“Gross Domestic Product: Revisions and Source Data” (February 2006) describes the categories of data that are used for the advance, preliminary (now called second), and final (now called third) quarterly estimates of GDP.

**Fixed assets and consumer durable goods.** *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 1997–2010” (September 2011) describes the improvements that were incorporated into these estimates as part of the 2011 annual NIPA revision.

**Satellite account.** This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

“Research and Development Satellite Account”

For 1959–2002 (December 2006)

For 1959–2004 (October 2007)

For 1959–2007 (December 2010)

### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at [www.bea.gov](http://www.bea.gov) under “About BEA.”

## Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

**Annual industry accounts.** *Measuring the Nation's Economy: An Industry Perspective* (2011) provides an overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

**Benchmark input-output accounts.** *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”

For 2004–2007 (June 2008)

For 2005–2008 (June 2009)

For 2004–2009 (November 2010)

For 2007–2010 (June 2011)

## International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

**International transactions accounts and international investment position accounts.** “A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts” (February 2010) introduces these accounts.

*U.S. International Transactions Accounts: Concepts and Estimation Methods* (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2011 SURVEY.

“Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report” (May 2011) updates BEA's plans to introduce the new international statistical standards from recently updated manuals and its plans for changes that were included in the 2011 annual revision.

**Direct investment.** Updated methodologies are

available in *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey* (2008) and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

Additional improvements are described in the following annual articles: “Direct Investment Positions: Country and Industry Detail” (July) and “Operations of U.S. Multinational Companies” (August 2010) and “Operations of U.S. Affiliates of Foreign Companies” (August 2011).

**International services.** The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2011 SURVEY.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

## Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

*State Personal Income and Employment* (2011) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

*Local Area Personal Income and Employment* (2011) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

**Gross domestic product.** Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

*Gross Domestic Product by State* (2006) describes the sources and the methods that are used to prepare the estimates.

“Gross Domestic Product by State” (December 2010) presents the results of the most recent comprehensive revision.

“Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area” (November 2007) describes the potential uses of the estimates.
