

Director's Message

Taking Account

BEA paper suggests a new concept of multinational enterprises for the System of National Accounts 2008.

Articles

GDP and the Economy: Third Estimates for the Second Quarter of 2015

Real GDP increased 3.9 percent after increasing 0.6 percent in the first quarter of 2015. The second-quarter increase reflected a notable contribution from consumer spending.

U.S. International Services: Trade in Services in 2014 and Services Supplied Through Affiliates in 2013

In 2014, the U.S. surplus on the trade in services was \$233.1 billion. In 2013, services supplied to foreign markets by the foreign affiliates of U.S. multinationals enterprises exceeded services supplied to U.S. markets by the U.S. affiliates of foreign multinational enterprises.

U.S. International Transactions: Second Quarter of 2015

The current-account deficit decreased \$8.6 billion to \$109.7 billion. In the financial account, net U.S. borrowing decreased \$0.6 billion to \$59.7 billion.

The U.S. Net International Investment Position at the End of the Second Quarter of 2015

The net international investment position was $-\$6,688.3$ billion at the end of the second quarter of 2015; at the end of the first quarter of 2015, the net position was $-\$6,801.4$ billion.

Annual Revision of Gross Domestic Product by Metropolitan Area: Advance Statistics for 2014 and Revised Statistics for 2001–2013

Real GDP increased in 282 of the nation's 381 metropolitan areas in 2014. Real GDP for metropolitan areas in the United States increased 2.3 percent in 2014 after increasing 1.9 percent in 2013.

Regional Quarterly Report

State personal income grew on average 0.9 percent in the second quarter of 2015, up from 0.8 percent in the first quarter. Detailed annual statistics for 2014 are also presented.

BEA News Release Schedule for 2016

Upcoming in the Survey...

Summary of NIPA Methodologies. Updated source data and methods used to prepare current-dollar and real gross domestic product and current-dollar gross domestic income.

Activities of U.S. Affiliates of Foreign Multinational Enterprises. A look at the value added, employment, goods exports and imports, and the R&D activity of these affiliates.

Director's Message

In this issue, we're pleased to provide our annual article on U.S. international services, which includes detailed annual statistics on trade in services and services delivered via affiliates of multinational enterprises. This year, we introduced a new presentation in the tables that accompany the article. It offers a longer time span of the accounts and conforms to the revised format used in BEA's international services interactive tables, which were introduced in 2014. The data also include expanded country-level and industry-level detail for services supplied through affiliates.

Other articles discuss international transactions and the international investment position for the second quarter of 2015.

We're pleased to highlight our gross domestic product (GDP) by metropolitan area statistics in this issue, which now include statistics for 2014. GDP growth was widespread across metropolitan areas last year, increasing in 282 of the nation's 381 metropolitan areas. In addition, our *Regional Quarterly Report* discusses state personal income trends for the second quarter. For the first time, the article presents data on population growth.

And as usual in October, we take a look at the third estimates of the GDP accounts for the second quarter.

Brian C. Moyer
Director, Bureau of Economic Analysis

Taking Account...

BEA paper suggests a new MNE concept for the SNA

In the global economy and in national economies, multinational enterprises (MNEs) play a unique and important role. As this role continues to evolve, an accurate and complete picture of economically meaningful transactions within MNEs, and consequently among national economies, becomes even more important for economists, policymakers, businesses, and others.

In a recent working paper, Dylan G. Rassier, an economist with the Bureau of Economic Analysis (BEA), proposes improving the *System of National Accounts 2008* (SNA) treatment of transactions within MNEs by differentiating between the concept of legal residence, the principle that effectively guides the treatment of MNEs in the SNA, and the concept of economic residence in the SNA's rest of world accounts.

The SNA is a widely followed guide for national statistical agencies that is released under the auspices of the United Nations, the European Commission, the Organisation for Economic Co-operation and Development, the International Monetary Fund and the World Bank Group.

The scope of the residence concept includes transactions conducted within MNEs, which are often structured in ways that involve entities established for purposes other than production

and often engage in internal transactions, the paper notes.

These two features present challenges for economic accounting. Under the latter feature, internal transactions are valued using transfer pricing methods that may fail to reflect market outcomes.

However, while such failure inevitably affects economic accounting statistics, any distortions that result from mispriced transactions are presumably limited because transfer prices are subject to strict regulatory scrutiny and enforcement by national tax authorities.

A bigger challenge is accounting for transactions involving MNEs that are structured for purposes other than economic production. Such structuring facilitates the use of artificial locations of inputs and outputs and of debt and equity.

The result is a wedge between the location of production and the location of the underlying factors of production, which affects the accuracy and relevance of core SNA measures as well as the interpretability of the measures.

In the case of an entity with little or no physical presence and little or no economic activity, residence in the SNA is determined by the economic territory in which the entity is legally incorporated or registered. As a result, the SNA rest of world account includes transactions conducted within MNEs regardless of economic substance.

While the use of legal residence was intended to be a pragmatic exception to an otherwise economic concept of residence, it likely leads to distortions throughout the core framework of the SNA as MNE activity increases. It has also and has been shown empirically to generate questionable results for some measures in the United States.

Rassier also notes that the economic literature on the formation of MNEs, global guidance on the taxation of MNEs, and economic accounting alternatives to legal residence all lend support to a concept of economic residence in lieu of legal residence.

His paper specifically proposes differentiating SNA supplemental measures under the current legal residence concept from SNA core measures under an economic residence concept in the rest of world account.

The change will likely be most palpable in SNA domestic aggregates such as gross domestic product, disposable income, saving, and net lending/net borrowing, which tend to become less accurate under the legal residence concept.

Overall, the pure concept of economic residence proposed in [the paper](#) will yield an improved core framework that is more consistent with the objectives of the SNA.

(This summary was prepared by the SURVEY OF CURRENT BUSINESS staff in conjunction with the paper's author.)

GDP and the Economy

Third Estimates for the Second Quarter of 2015

REAL GROSS domestic product (GDP) increased 3.9 percent at an annual rate in the second quarter of 2015, according to the third estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).¹ In the first quarter of 2015, real GDP increased 0.6 percent. The third estimate of real GDP growth in the second quarter was revised up 0.2 percentage point from the second estimate that was released in August. Consumer spending and nonresidential fixed investment increased more than previously estimated.²

- The second-quarter increase in real GDP primarily reflected positive contributions from consumer spending, exports, nonresidential fixed investment, state and local government spending, and residential fixed investment. Imports, which are a subtraction in the calculation of GDP, increased.
- Prices of goods and services purchased by U.S. residents increased 1.5 percent in the second quarter, in contrast to a decrease of 1.6 percent in the first quarter. Energy prices turned up in the second quarter, while food prices decreased more in the second quarter than in the first quarter. Excluding food and energy, prices increased 1.2 percent in the second quarter after increasing 0.2 percent.
- Real disposable personal income (DPI) increased 1.2 percent in the second quarter after increasing 3.9 percent in the first quarter. Current-dollar DPI increased 3.4 percent after increasing 1.9 percent. The differences in the movements in real DPI and current-dollar DPI reflected an upturn in the implicit price deflator for consumer spending, which is used to deflate DPI.
- Corporate profits from current production increased \$70.4 billion in the second quarter after decreasing \$123.0 billion in the first quarter (see table 3).
- Real gross domestic income increased 0.7 percent in the second quarter after increasing 0.4 percent in the first quarter.

1. “Real” estimates are in chained (2009) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see “[The Revisions to GDP, GDI, and Their Major Components](#)” in the August 2014 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which reflect a rate of activity for a quarter as if it were maintained for a year.

2. In this article, “consumer spending” refers to “personal consumption expenditures,” “inventory investment” refers to “change in private inventories,” and “government spending” refers to “government consumption expenditures and gross investment.”

1. The estimates of GDP under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP.

NOTE: For GDP and its components, percent changes are from NIPA tables 1.1.1 and 1.2.1, contributions to percent change are from NIPA tables 1.1.2 and 1.2.2, and shares are from NIPA table 1.1.10, or they are calculated from table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

The acceleration in real GDP in the second quarter reflected an upturn in exports, a pickup in consumer spending, a deceleration in imports, an upturn in state and local government spending, and an acceleration in nonresidential fixed investment that were partly offset by slowdowns in private inventory investment and in federal government spending.

The pickup in consumer spending primarily reflected pickups in both goods and services.

The pickup in goods primarily reflected an upturn in motor vehicles and parts and a pickup in "other" non-durable goods (largely tobacco and prescription drugs).

The pickup in services reflected pickups in "other" services (mainly net foreign travel and communication), in food services and accommodations, and in financial services and insurance and an upturn in recreation services that were mostly offset by a downturn in housing and utilities and a slowdown in health care.

The acceleration in nonresidential fixed investment primarily reflected an upturn in structures that was partly offset by a deceleration in equipment.

The slowdown in private inventory investment reflected a slowdown in nonfarm inventory investment and a downturn in farm inventory investment.

The upturn in exports reflected an upturn in goods exports that was partly offset by a slowdown in services exports. In goods, the upturn was widespread; the largest contributors were nonautomotive capital goods; automotive vehicles, engines, and parts; industrial supplies and materials; and "other" goods. In services, the largest contributor to the slowdown was travel.

The deceleration in imports reflected slowdowns in both goods and services imports. In goods, the largest contributors to the slowdown were consumer goods, industrial supplies and materials, and "other" goods. In services, the largest contributors to the slowdown were downturns in transport and in government goods and services.

The slowdown in federal government spending reflected a downturn in nondefense spending and a slowdown in national defense spending.

The upturn in state and local government spending primarily reflected an upturn in investment in structures.

Gross domestic purchases price index	1.5	1.5	0.0
GDP price index	2.1	2.1	0.0

1. The estimates of GDP under the contribution columns are also percent changes.

The third estimate of the second-quarter change in real GDP was 0.2 percentage point higher than the second estimate released in August. The upward revision primarily reflected upward revisions to consumer spending, to nonresidential fixed investment, and to residential fixed investment that were partly offset by a downward revision to private inventory investment.

The upward revision to consumer spending reflected widespread upward revisions to spending for services. Leading contributors were “other” services, transportation services, and health care services.

The upward revision to nonresidential fixed investment primarily reflected an upward revision to investment in nonresidential structures, specifically commercial and health care buildings and educational and vocational buildings.

The upward revision to residential fixed investment primarily reflected an upward revision to single-family structures.

The downward revision to private inventory investment primarily reflected a downward revision to non-farm inventory investment, specifically to wholesale trade industries and to nondurable-goods manufacturing industries.

Source Data and Methodologies

For the details about the source data and the methodologies that are used for the estimates, see [Concepts and Methods of the U.S. National Income and Product Accounts](#) on BEA’s Web site.

Source data for the third estimate. The third estimate of GDP for the second quarter of 2015 incorporated the following source data.

Consumer spending: Census Bureau retail sales data for June (revised) and quarterly services survey data for the second quarter (new), Energy Information Administration electricity and natural gas usage and unit value data for May (revised) and June (new), and Securities and Exchange Commission FOCUS report data for the second quarter (new).

Nonresidential fixed investment: Census Bureau construction spending data for May and June (revised) and quarterly services survey data for the second quarter (new).

Residential fixed investment: Census Bureau construction spending data for May and June (revised).

Inventory investment: Census Bureau manufacturers’ and trade inventories for June (revised) and *Quarterly Financial Report* data for the second quarter (revised).

Exports and imports: Bureau of Economic Analysis international transactions accounts data for April through June (revised).

Government spending: Census Bureau construction spending data for May and June (revised).

Corporate Profits

Nonfinancial	1,282.8	67.7	1.5	-70.5	24.3	5.4	0.1	-5.3	1.9
Rest of the world	405.1	18.5	-4.4	-29.0	11.4	4.5	-1.0	-6.9	2.9
Receipts from the rest of the world	674.9	16.1	-13.5	-40.0	24.9	2.3	-1.9	-5.8	3.8
Less: Payments to the rest of the world	269.8	-2.4	-9.1	-11.0	13.4	-0.8	-3.3	-4.1	5.2
Less: Taxes on corporate income	549.0	-9.0	-6.1	5.5	31.3	-1.7	-1.2	1.1	6.0
Equals: Profits after tax	1,533.9	99.6	-19.5	-128.4	39.2	6.5	-1.2	-7.9	2.6
Net dividends	879.6	-3.5	18.6	6.3	1.2	-0.4	2.2	0.7	0.1
Undistributed profits from current production	654.3	103.1	-38.1	-134.7	38.0	15.0	-4.8	-17.9	6.2
Net cash flow	2,161.1	76.7	18.7	-135.5	48.1	3.6	0.8	-6.0	2.3

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.

Profits from current production increased \$70.4 billion, or 3.5 percent at a quarterly rate, in the second quarter after decreasing \$123.0 billion, or 5.8 percent, in the first quarter.

Profits of domestic financial corporations increased \$34.6 billion, or 9.6 percent, after decreasing \$23.4 billion, or 6.1 percent.

Profits of domestic nonfinancial corporations increased 24.3 billion, or 1.9 percent, after decreasing \$70.5 billion, or 5.3 percent.

Profits from the rest of the world increased \$11.4 billion, or 2.9 percent, after decreasing \$29.0 billion, or 6.9 percent. In the second quarter, receipts increased \$24.9 billion, and payments increased \$13.4 billion.

Taxes on corporate income increased \$31.3 billion, or 6.0 percent, in the second quarter after increasing \$5.5 billion, or 1.1 percent, in the first quarter.

Net dividends increased \$1.2 billion, or 0.1 percent, after increasing \$6.3 billion, or 0.7 percent.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including the

Census Bureau *Quarterly Financial Report*, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service (IRS) data when these data are available for two reasons: the IRS data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

Profits with inventory valuation adjustment (IVA) increased \$62.7 billion, or 2.7 percent at a quarterly rate, in the second quarter after increasing \$85.2 billion, or 3.8 percent, in the first quarter.

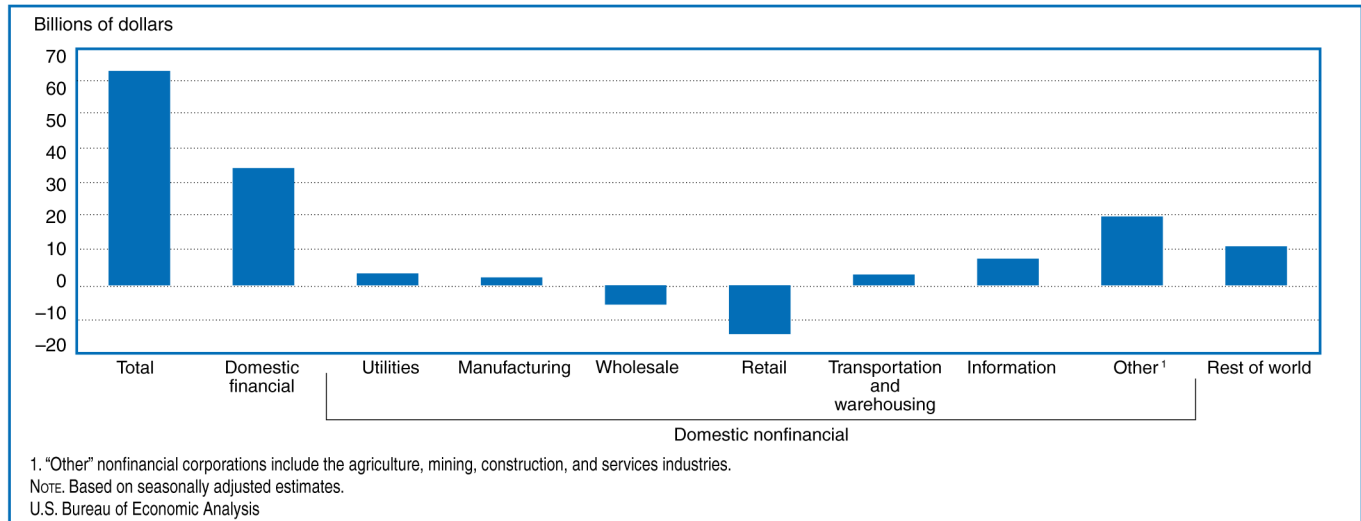

Profits of domestic industries increased \$51.3 billion, or 2.6 percent, after increasing \$114.2 billion, or 6.2 percent.

Profits of domestic financial industries increased \$34.3 billion, or 8.1 percent, after decreasing \$3.1 billion, or 0.7 percent.

Profits of domestic nonfinancial industries increased \$17.0 billion, or 1.1 percent, after increasing \$117.3 billion, or 8.3 percent; the increase primarily reflected an increase in “other” nonfinancial industries that was partly offset by a decrease in retail trade industries. A small increase in manufacturing industries reflected an increase in durable goods that was mostly offset by a decrease in nondurable goods.

NOTE: Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.
IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

Chart 2. Corporate Profits With Inventory Valuation Adjustment: Change From the Preceding Quarter, 2015:II

Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of price changes on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAdj) for

each industry. However, estimates of the CCAdj are only available for two broad categories: total financial industries and total nonfinancial industries. For more information about BEA’s methodology, see “Corporate Profits” in *Concepts and Methods of the U.S. National Income and Product Accounts* on BEA’s Web site.

27	Residual	-23.9	-35.1	-31.5	-40.3	-41.5	-40.8	-44.6

Legend / Footnotes:

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

42	Market-based PCE excluding food and energy ⁴	1.3	1.3	1.2	1.1	1.1

Legend / Footnotes:

1. Final sales to domestic purchasers less government consumption expenditures and gross investment.

2. The arithmetic average of gross domestic product and of gross domestic income, deflated by the implicit price deflator for GDP.

3. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

4. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

Legend / Footnotes:

1. Prior to 1959, inventories held by construction establishments are included in nondurable goods. Beginning with 1959, these inventories are included in durable goods. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Legend / Footnotes:

1. Prior to 1959, inventories held by construction establishments are included in nondurable goods. Beginning with 1959, these inventories are included in durable goods. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

8	Final sales to private domestic purchasers ¹	13,985.5	14,648.8	14,565.7	14,770.9	14,910.1	14,924.1	15,126.3

Legend / Footnotes:

1. Final sales to domestic purchasers less government consumption expenditures and gross investment.

Table 1.4.6. Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Chained Dollars

[Billions of chained (2009) dollars] Seasonally adjusted at annual rates
Last Revised on: September 25, 2015 - Next Release Date October 29, 2015

Line		2013	2014	2014			2015	
				II	III	IV	I	II
1	Gross domestic product	15,583.3	15,961.7	15,901.5	16,068.8	16,151.4	16,177.3	16,333.6
2	Less: Exports of goods and services	2,018.1	2,086.4	2,086.8	2,096.0	2,123.9	2,091.4	2,117.5
3	Plus: Imports of goods and services	2,435.6	2,528.9	2,530.1	2,525.1	2,587.5	2,632.5	2,652.1
4	Equals: Gross domestic purchases	16,001.4	16,405.8	16,346.6	16,498.9	16,617.2	16,720.8	16,870.7
5	Less: Change in private inventories	61.4	68.0	77.1	79.9	78.2	112.8	113.5
6	Equals: Final sales to domestic purchasers	15,929.8	16,326.3	16,255.4	16,409.2	16,529.2	16,597.7	16,747.2
	Addenda:							
7	Final sales of domestic product	15,511.4	15,881.7	15,809.7	15,978.6	16,062.9	16,053.8	16,209.7
8	Final sales to private domestic purchasers ¹	13,082.6	13,497.7	13,428.3	13,569.8	13,700.8	13,770.1	13,901.6

Legend / Footnotes:

1. Final sales to domestic purchasers less government consumption expenditures and gross investment.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

63	Residual	-45.9	-62.6	-58.4	-68.4	-72.6	-74.2	-78.4

Legend / Footnotes:

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software embedded, or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. Prior to 1959, current surplus of government enterprises (line 22) is not shown separately; subsidies are included net of the current surplus of government enterprises in line 18.

2. The arithmetic average of gross domestic product and of gross domestic income.

3. Consists of compensation of employees, proprietors' income with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj), rental income of persons with CCAdj, corporate profits with IVA and CCAdj, net interest and miscellaneous payments, and consumption of fixed capital.

4. Consists of gross national factor income less consumption of fixed capital.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. The arithmetic average of gross domestic product and of gross domestic income, deflated by the implicit price deflator for GDP.
3. Gross national income deflated by the implicit price deflator for gross national product.
4. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Legend / Footnotes:

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100.

Table 1.14. Gross Value Added of Domestic Corporate Business in Current Dollars and Gross Value Added of Nonfinancial Domestic Corporate Business in Current and Chained Dollars

[Billions of dollars] Seasonally adjusted at annual rates

Last Revised on: September 25, 2015 - Next Release Date October 29, 2015

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

Legend / Footnotes:

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.
2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.
3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.
4. Consists of nonmortgage interest paid by households.
5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

28	Market-based PCE excluding food and energy ⁶	1.8	3.1	5.3	4.3	4.9	1.7	4.1

Legend / Footnotes:

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas services.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Legend / Footnotes:

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas services.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. Consists primarily of contributions by residents of the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

2. Prior to 1960, interest payments to persons (line 28) and interest receipts on line 12 are not shown separately, but are included in interest payments (line 27), which is shown net of interest receipts. Interest payments to persons and business includes interest accrued on the actuarial liabilities of defined benefit pension plans for government employees.

3. Prior to 1999, current transfer payments to the rest of the world (line 26) are displayed net of current transfer receipts from the rest of the world (line 18).

4. Prior to 1959, subsidies (line 30) and the current surplus of government enterprises (line 19) are not shown separately; subsidies are presented net of the current surplus of government enterprises.

5. Prior to 1960, government social benefits to the rest of the world are included in line 26, 'Other current transfer payments to the rest of the world.'

Legend / Footnotes:

1. Includes dividends tax for 1933-34 and automobile use tax for 1942-46 as shown in table 3.4.

2. Includes the capital stock tax for 1933-45 as shown in table 3.5.

3. Consists primarily of contributions by residents of the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

4. Prior to 1960, interest payments to persons and business (line 33) and interest receipts (line 15) are not shown separately, but are included in interest payments (line 32), which is shown net of interest receipts. Interest payments to persons and business includes interest accrued on the actuarial liabilities of defined benefit pension plans for federal government employees.

5. Rents and royalties are receipts from the leasing of federally owned lands and mineral deposits. These values do not include bonus payments made to secure such leases.

6. Prior to 1999, current transfer payments to the rest of the world are displayed net of current transfer receipts from the rest of the world.

7. Prior to 1959, subsidies (line 35) and the current surplus of government enterprises (line 22) are not shown separately; subsidies are presented net of the current surplus of government enterprises.

8. Prior to 1960, government social benefits to the rest of the world (line 28) are included in line 31, 'Other current transfer payments to the rest of the world.'

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.
5. Includes federal purchases of research and development produced by state and local general government.

Legend / Footnotes:

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Legend / Footnotes:

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.
5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Prior to 1999, current taxes, contributions for government social insurance, and transfer receipts from the rest of the world (line 13) are not separately displayed, and line 29 includes current taxes and transfer payments to the rest of the world net of current taxes, contributions for government social insurance, and transfer receipts from the rest of the world.

3. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

Legend / Footnotes:

n.e.c. Not elsewhere classified

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes net exports of goods under merchanting, beginning in 1999, reclassified from services to goods.

3. Includes maintenance and repair services, insurance services, financial services, telecommunication, computer and information services and other other business services.

4. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Legend / Footnotes:

n.e.c. Not elsewhere classified

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2 and real growth rates are shown in table 4.2.1.

3. Includes net exports of goods under merchanting, beginning in 1999, reclassified from services to goods.

4. Includes maintenance and repair services, insurance services, financial services, telecommunication, computer and information services and other other business services.

5. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

Legend / Footnotes:

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software embedded, or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Legend / Footnotes:

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software embedded, or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

32	Private fixed investment in information processing equipment and software	610.2	641.6	640.6	642.3	661.2	665.2	666.4

Legend / Footnotes:

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Excludes software embedded, or bundled, in computers and other equipment.

7. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

Table 5.3.6. Real Private Fixed Investment by Type, Chained Dollars

[Billions of chained (2009) dollars] Seasonally adjusted at annual rates

Last Revised on: September 25, 2015 - Next Release Date October 29, 2015

8. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

9. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

10. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Legend / Footnotes:

1. This series is derived from the Census Bureau series 'current cost inventories.'

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Legend / Footnotes:

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

29	Nonfarm inventories to final sales of goods and structures	4.21	4.13	4.09	4.17	4.13

Legend / Footnotes:

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

30	Nonfarm inventories to final sales of goods and structures	3.82	3.79	3.81	3.90	3.88

Legend / Footnotes:

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar inventory series are calculated to ensure that the chained (2009) dollar change in inventories for 2009 equals the current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

U.S. International Services

Trade in Services in 2014 and Services Supplied Through Affiliates in 2013

By Alexis N. Grimm and Charu S. Krishnan

TO PROVIDE a broad perspective on services provided by and to the United States in international markets, this article presents information on services provided through two channels: (1) conventional trade in services and (2) services supplied by affiliates of multinational enterprises (MNEs).¹

In this article, trade in services refers to exports and imports that are included in the U.S. international transactions accounts (ITAs). Services supplied through affiliates refers to services supplied by majority-owned affiliates of MNEs through the channel of direct investment. It covers transactions between foreign affiliates of U.S. companies and foreign residents, both in the local economy and in other foreign markets, and transactions between U.S. affiliates of foreign companies and U.S. residents. Because of the importance of physical proximity to customers in the delivery of services, many MNEs serve foreign markets partly or wholly through their affiliates located in, or close to, the markets they serve rather than through trade. As in previous years, the majority of services

both provided by and to the United States internationally in 2013 was through affiliates (table A and chart 1).²

2. Differences in coverage and classification make it difficult to precisely compare trade in services with services supplied through affiliates. For example, distributive services are included in services supplied through affiliates but not in services trade. Statistics on trade in services are also collected and published by type of service, but services supplied through affiliates are collected and published by the affiliate's primary industry. [More information](#) on the difficulty of comparing trade in services with services supplied through affiliates is available on BEA's Web site.

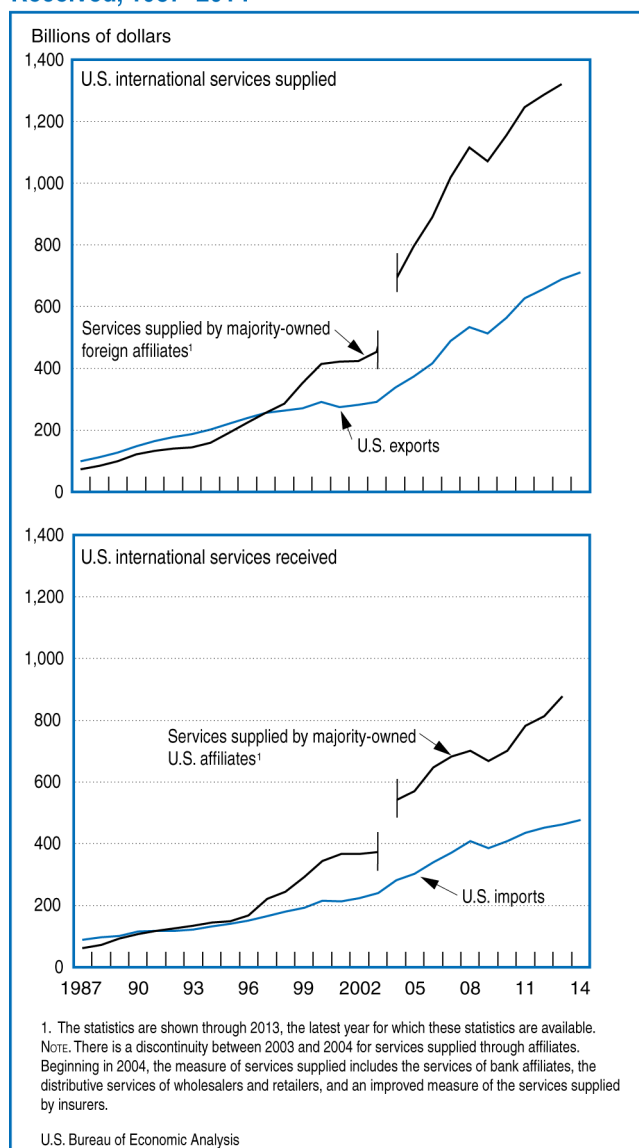

1. The term "affiliates" in this article refers to majority-owned affiliates. The statistics on services supplied through affiliates cover the full value of services provided by majority-owned affiliates, irrespective of the percentage of ownership. More information on the definitions and coverage of trade in services and services supplied through affiliates is available at the Bureau of Economic Analysis (BEA) Web site. For more information on the definitions and methodology of the major categories of trade in services, see "Part III: Statistical Methodologies" in *International Economic Accounts: Concepts and Methods*.

Table A. Services Supplied to Foreign and U.S. Persons Through Trade and Through Affiliates

NOTE: Historical statistics for 1986 forward are available on BEA's Web site.

Chart 1. U.S. International Services Supplied and Received, 1987–2014

This year the Bureau of Economic Analysis (BEA) introduces a new presentation of international trade in services and services supplied through affiliates in the tables that accompany this article. This new presentation includes a longer time span of the accounts and conforms to the updated format of BEA's international services [interactive tables](#), which were introduced in 2014. In addition, BEA continues to improve the coverage of, and access to, its international services statistics by expanding country-level and industry-level detail for services supplied through affiliates. Additional industries have been added to “[Table 3.1. Services Supplied to Foreign Persons by U.S. MNEs Through Their MOFAs, by Industry of Affiliate and by Country of Affiliate](#)” and additional countries have been added to “[Table 4.2. Services Supplied to U.S. Persons by Foreign MNEs Through Their MOUSAs, by Country of UBO](#).” In addition, statistics on services supplied through affiliates that were previously only available in BEA's annual publications on the activities of MNEs are now also available in “[Table 3.4. Services Supplied to Foreign Persons by U.S. MNEs Through Their MOFAs, by Country of Affiliate and by Industry of Affiliate](#)” and “[Table 4.3. Services Supplied to U.S.](#)

[Persons by Foreign MNEs Through Their MOUSAs, by Industry of Affiliate.”](#)

In 2014, U.S. exports of services were \$710.6 billion, and U.S. imports of services were \$477.4 billion, resulting in a services trade surplus of \$233.1 billion (chart 2).³ The United States retained its position as the world's leader in exports and imports of services.⁴ In 2013—the latest year for which statistics are available—services supplied to foreign markets through majority-owned foreign affiliates of U.S. multinational enterprises were \$1,320.9 billion. Services supplied to the United States through majority-owned U.S. affiliates of foreign multinationals were \$878.5 billion. A discussion of U.S. trade in services in 2014 begins in the next section; a discussion of services supplied through affiliates begins on page 16.

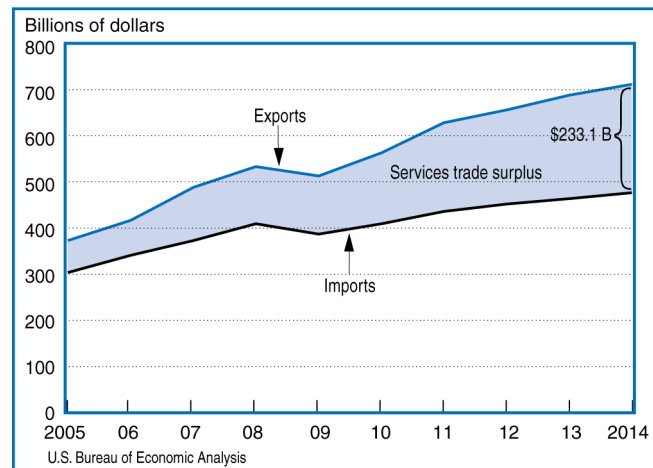

3. The statistics in this article are consistent with the less detailed statistics published in table 3.1 of the international transactions accounts.

4. [World Trade Organization \(WTO\) Press Release 739](#) (April 14, 2015). The statistics in the press release differ slightly from the statistics presented in this article. The WTO statistics are presented on the basis of the fifth edition of the International Monetary Fund's *Balance of Payments Manual*, whereas the BEA statistics are presented on the basis of the sixth edition of the *Manual*, and the BEA statistics were revised in June 2015.

Data Availability

Detailed statistics for U.S. international services accompany this article in a new presentation format in tables 1.1–4.3. Trade in services statistics and statistics on services supplied internationally through majority-owned affiliates can also be accessed through BEA's interactive tables. The [interactive tables](#) cover additional years of data and supplemental detail not available in the tables that accompany this article. With this year's release, BEA is publishing additional country- and industry-level detail for services supplied through affiliates.

Chart 2. U.S. International Services Trade Surplus, 2005–2014

U.S. Trade in Services in 2014

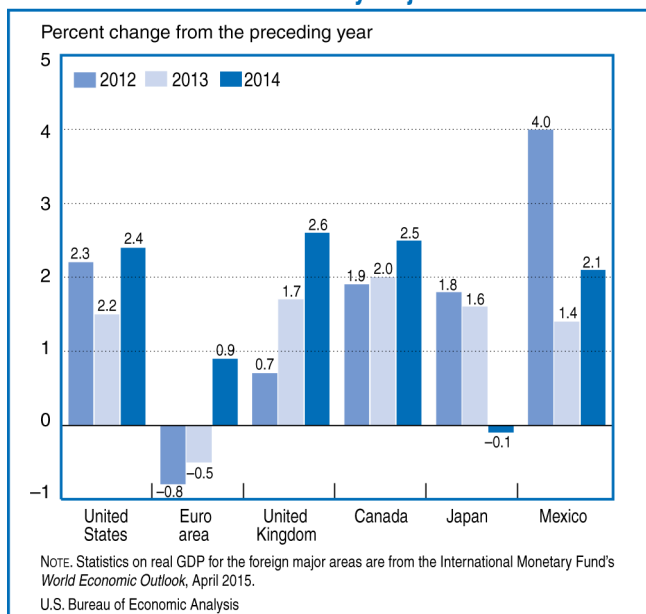

In 2014, the U.S. surplus on trade in services increased 4 percent, to \$233.1 billion, after increasing 10 percent in 2013. In contrast to the persistent U.S. deficit on trade in goods, which was \$741.5 billion in 2014, the United States has historically recorded a surplus on trade in services (chart 2). In 2014, growth in services exports decreased to 3.3 percent from 4.8 percent, while growth in services imports increased to 3.0 percent from 2.6 percent (table A). In 2014, real gross domestic product (GDP) of the United States and of many of its major trading partners grew at a faster rate than in 2013 (chart 3). In addition, the value of the U.S. dollar relative to the currencies of many of the major U.S. trading partners increased in 2014 (chart 4).

The surplus on trade in services in 2014 was largest in charges for the use of intellectual property n.i.e., \$88.2 billion, and in financial services, \$67.8 billion (chart 5). The surplus in charges for the use of intellectual property partly reflects the high level of research and development (R&D) performed in the United States. In 2011 (the most recent year that statistics are available), the United States was the largest single R&D-performing country, accounting for just under 30 percent of R&D performed

worldwide.¹ The surplus in financial services partly reflects the dominance of U.S. exchanges in global securities trading; for example, based on data from the World Federation of Exchanges, the United States was the single largest host country for stock exchanges in 2014, with U.S. exchanges accounting for 53 percent of the value of equities traded on all the world's exchanges.²

1. National Science Board, *Science and Engineering Indicators 2014* (Arlington, VA: National Science Foundation, 2014 (NSB 14-01)).
 2. Based on data from the December 2014 [monthly report](#) from the World Federation of Exchanges.

Chart 3. Growth in Real GDP by Major Area

Summary Statistics

Summary statistics on trade in services by category and the five largest countries in each category are presented following this section in tables E–N and charts 6–12. For more detailed statistics, see [tables 1.1–2.3](#) that accompany this article.

Chart 4. Foreign Currency Price of the U.S. Dollar

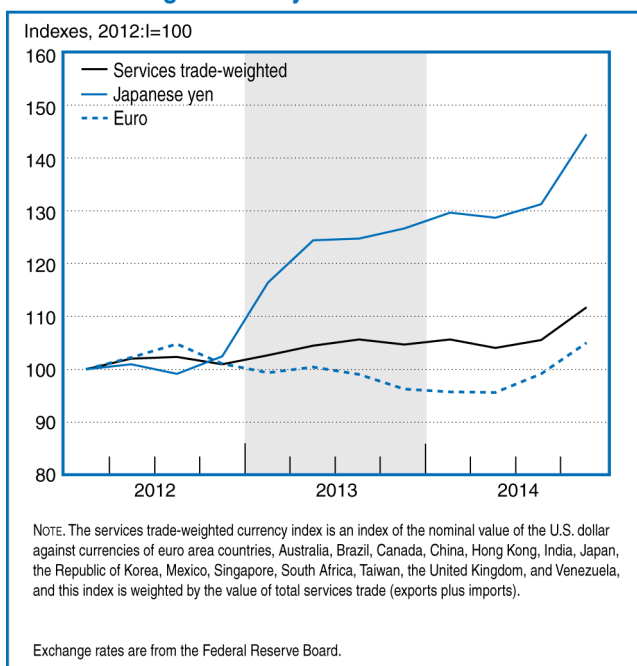

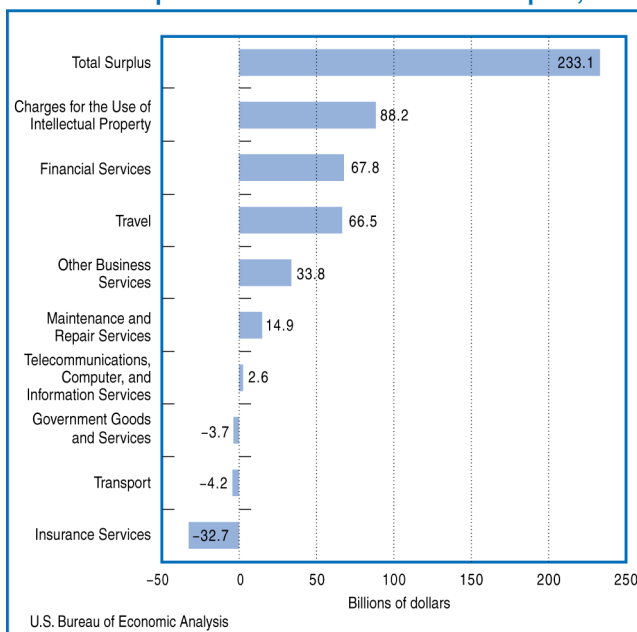

Chart 5. Composition of Trade in Services Surplus, 2014

U.S. Trade in Services

Both exports and imports of services reached record levels. For exports, the largest increases were in other business services, \$7.6 billion, in travel (for all purposes including education), \$4.3 billion, and in maintenance and repair services, \$3.7 billion (table B). For imports, the largest increases were in travel (for all purposes including education), \$6.7 billion, other business services, \$4.4 billion, and transport, \$3.6 billion.

For services exports, all categories except government goods and services grew. The largest percentage increases were in maintenance and repair services, 20 percent, and in other business services, 6 percent (table B). The growth in maintenance and repair services reflected growth in industrial-type maintenance services. The growth in other business services reflected growth in research and development services and in professional and management consulting services.

For services imports, five of the nine categories grew. The largest percentage increases were in charges for the use of intellectual property, 8 percent, and in travel (for all purposes including education), 6 percent. The growth in charges for the use of intellectual property largely reflected growth in audio-visual and related products. The growth in travel (for all purposes including education) reflected growth in other personal travel, which includes

tourism.

By area, Europe remained the largest market for U.S. services exports, followed by the Asia and Pacific region. The United Kingdom was the largest market for exports in 2014 (table C). The top categories of exports to the

(*) Transactions between zero and \$500,000.

n.i.e. Not included elsewhere

D Suppressed to avoid disclosure of data of individual companies.

1. The rank is based on the total value of services exports or imports in 2014.

2. All travel purposes include (1) business travel, including expenditures by border, seasonal, and other short-term workers and (2) personal travel, including health-related and education-related travel.

U.S. Trade in Services

United Kingdom were financial services and other business services. Canada was the second-largest market for exports in 2014. The top categories of exports to Canada were travel (for all purposes including education) and other business services.

Europe also remained the largest source of U.S. services imports, followed by the Asia and Pacific region. The United Kingdom was the largest provider of services to the United States. The top categories of imports from the United Kingdom were other business services and travel (for all purposes including education). Germany was the second-largest provider of services to the United States. The top categories of imports from Germany were transport and other business services.

Services trade includes trade between unaffiliated parties and trade within MNEs. Trade within MNEs (affiliated trade) accounted for 28 percent of exports in 2014, up 1 percentage point from 2013 (table D). Affiliated trade accounted for 28 percent of imports in 2014, up less than 1 percentage point from 2013. For exports in 2014, growth in unaffiliated trade decreased to 3 percent from 5 percent, and growth in affiliated trade increased

to 5 percent from 3 percent. For imports in 2014, growth in unaffiliated trade increased to 2 percent from 1 percent, and growth in affiliated trade decreased to 4 percent from 6 percent.

Transport exports increased. The increase mainly reflected a 3 percent increase in air services, which accounted for 75 percent of exports of transport services in 2014 (chart 6).

Air passenger services increased, reflecting an increase in the number of foreign visitors on U.S. airlines and a decrease in average airfares.

Exports to countries other than the five largest countries increased, driven by a 14 percent increase in exports to Brazil.

Transport imports increased. The increase reflected an increase in air services, which accounted for 57 percent of imports of transport services in 2014 (chart 7).

Air passenger services increased, reflecting an increase in the number of U.S. travelers on foreign airlines and an increase in average airfares.

Imports from Germany increased, mainly reflecting an increase in air passenger services.

Imports from countries other than the five largest countries increased. The largest increases were in imports from Mexico, France, and China.

1. The rank is based on the total value of exports or imports of transport services in 2014.

Travel exports increased, mainly reflecting an increase in education-related travel.

Education-related travel exports increased as both the number of international students and their average expenditures increased.

Travel exports to China increased, reflecting a 21 percent increase in education-related travel and a 10 percent increase in other business travel and other personal travel.

Exports to countries other than the five largest countries increased, with strong increases in exports to the Asia and Pacific region, particularly India and Korea (chart 8).

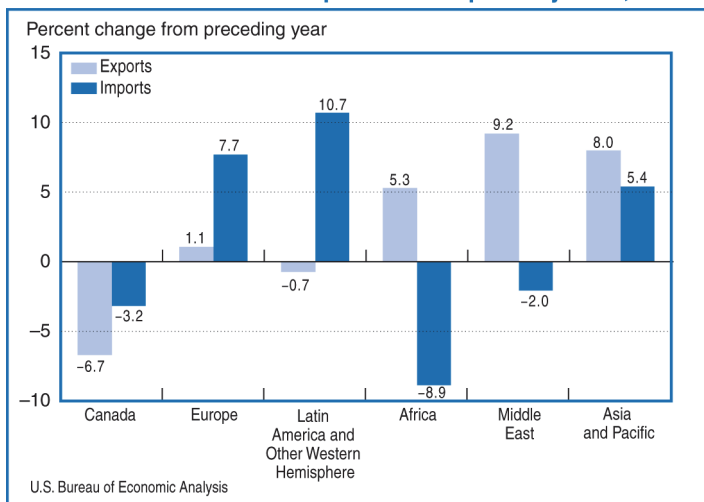

Travel imports increased, mainly reflecting an increase in other personal travel that was partly offset by a decrease in other business travel.

Other personal travel imports increased as the number of U.S. travelers abroad increased and their average expenditures increased.

Mexico remained the largest market for U.S. travel abroad in 2014 as a result of increases in both the number of U.S. travelers to Mexico and their average expenditures.

1. The rank is based on the total value of exports or imports of travel (for all purposes including education) in 2014.

Chart 8. Growth in Travel Exports and Imports by Area, 2014

Other countries.....	11,998	11,452	10,368	-1,084	-9.5

1. The rank is based on the total value of exports or imports of insurance services in 2014.

Exports of insurance services increased, mainly reflecting a 7 percent increase in direct insurance.

Insurance exports to Bermuda increased, reflecting a 34 percent increase in direct insurance and auxiliary insurance services that reflected a 90 percent increase in premiums received for direct insurance.

Imports of insurance services decreased, reflecting an 8 percent decrease in reinsurance, mainly in imports of reinsurance from the Other Western Hemisphere region and Europe.

Insurance imports from Bermuda continued to decrease, mainly because of an 8 percent decrease in reinsurance. In recent years, alternative reinsurance capital, such as catastrophe bonds and other insurance-linked securities, has grown, and this growth has put pressure on reinsurance pricing.

Insurance imports from Ireland increased. The increase reflected a 36 percent increase in reinsurance, which reflected a 49 percent increase in premiums paid for reinsurance.

n.i.e. Not included elsewhere. D Suppressed to avoid disclosure of data of individual companies.
 1. The rank is based on the total value of exports or imports of charges for the use of intellectual property n.i.e. in 2014.
 2. "Other countries" includes international organizations. Payments to international organizations for the use of intellectual property are often substantial.

Exports that reflect charges for the use of intellectual property increased. The increase mainly reflected an increase in charges associated with industrial processes, which represented the largest portion of exports in 2014 (chart 9).

The increase in exports that reflect charges associated with rights related to industrial processes primarily reflected an increase in manufacturing abroad. Charges for these rights are generally based on the level of production and are therefore closely linked to manufacturing.

Exports that reflect charges associated with computer software decreased, mostly reflecting a decrease in exports to the Asia and Pacific region.

Exports to Ireland increased. Ireland continued to be the largest source of exports that reflect charges for the use of intellectual property.

Imports that reflect charges for the use of intellectual property increased. The largest increase was in charges associated with audio-visual and related products, which accounted for a larger share of imports in 2014 than in 2013 (chart 10).

The increase in charges associated with audio-visual and related products was partly due to payments to international organizations, which included charges for the rights to broadcast the 2014 soccer World Cup games in Brazil.

Imports from Switzerland decreased, mainly reflecting decreases in charges associated with the use of trademarks and computer software.

Exports of telecommunications, computer, and information services continued to increase. Exports were up 10 percent from 2012.

Exports to countries other than the five largest countries increased, with particularly large increases in exports to Singapore and China.

Imports of telecommunications, computer, and information services decreased, with the largest decreases occurring in imports from China, the Netherlands, and Canada.

Imports of telecommunications services decreased, with the largest decrease in imports from Europe, particularly from the United Kingdom and from the Netherlands.

Imports from India increased, mainly reflecting an increase in computer services.

1. The rank is based on the total value of exports or imports of telecommunications, computer, and information services in 2014.

Exports of other business services increased, mainly reflecting increases in research and development services and in professional and management consulting services (chart 11).

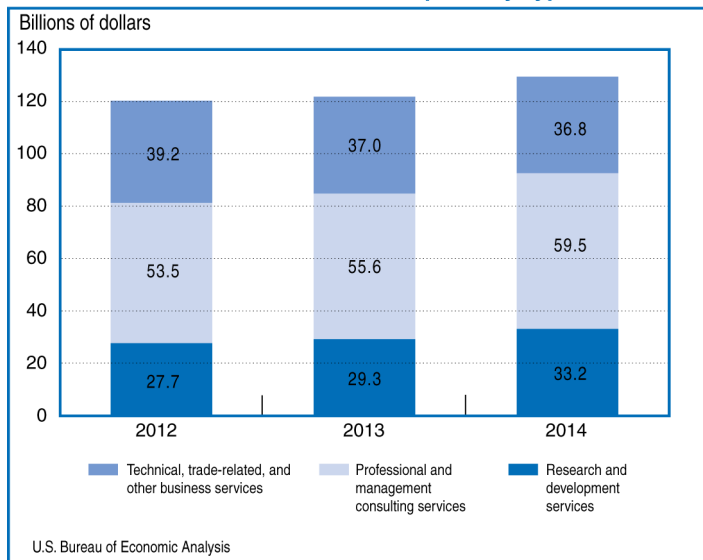

Exports of business and management consulting and public relations services increased, reflecting a large increase in exports to Europe, particularly to Ireland, the United Kingdom, and Switzerland.

Exports of operating leasing services decreased in all regions except Canada.

Exports to Ireland continued to increase and were up 63 percent from 2010, particularly in research and development services.

1. This category includes mining, trade-related services, sports and performing arts, training services, and other business services n.i.e. (not included elsewhere)
 2. The rank is based on the total value of exports of other business services in 2014.

Imports of other business services increased, mainly reflecting increases in professional and management consulting services and in research and development services (chart 12).

Imports of business and management consulting and public relations services increased, with the largest increase in imports from Europe, particularly from the United Kingdom.

Imports of industrial engineering decreased for the third year in a row.

Imports from Canada decreased, reflecting a 32 percent decrease in technical, trade-related, and other business services.

1. This category includes mining, trade-related services, sports and performing arts, training services, and other business services n.i.e. (not included elsewhere)

2. The rank is based on the total value of imports of other business services in 2014.

Exports of government goods and services decreased after increasing for 3 years in a row.

The decrease in countries other than the five largest countries mainly reflects a decrease in equipment and services provided to Afghanistan through grant programs funded by the U.S. government. Afghanistan is included in the Other Asia and Pacific region, which is included in “other countries” in this table.

Imports of government goods and services decreased for the fourth year in a row.

Imports from countries other than the five largest countries decreased, mainly reflecting decreases in imports from countries in the Middle East and the Asia and Pacific region.

n.i.e. Not included elsewhere
 1. The rank is based on the total value of exports or imports of government goods and services n.i.e. in 2014.

Services Supplied Through Affiliates in 2013

U.S. international services delivered via the channel of direct investment consists of (1) services supplied to local markets and other foreign markets by foreign affiliates of U.S. multinational enterprises (MNEs) and (2) services supplied to the U.S. market by U.S. affiliates of foreign MNEs. In 2013, services supplied by U.S. MNEs to foreign markets through their affiliates increased to \$1,320.9 billion from \$1,285.9 billion in 2012. Services supplied by foreign MNEs to the U.S. market through their U.S. affiliates increased to \$878.5 billion from \$813.3 billion. The difference between international services supplied through affiliates to foreign markets and to U.S. markets was \$442.4 billion in 2013, compared with \$472.7 billion in 2012.¹

Services supplied abroad through foreign affiliates of U.S. MNEs grew 3 percent in 2013 after growing 3 percent in 2012. The continuation of moderate growth of services supplied was consistent with only small changes in economic growth in many of the major markets as well as in emerging markets served by affiliates (chart 3). In Europe, the euro area contracted for the second straight year, though by slightly less than in 2012. Economic growth in most other major markets served by affiliates was positive in 2013. The United Kingdom's GDP growth picked up 1 percentage point, nearly matching that of Canada, which was little changed. Japan's GDP growth decreased slightly. GDP growth in emerging markets and developing economies, such as Mexico, decreased slightly in 2013, but as in recent years, growth in emerging markets still outpaced growth in advanced economies.

1. It is not meaningful to highlight the difference between services supplied through affiliates to foreign markets and to U.S. markets by industry partly because of differences in the level of industry consolidation between foreign affiliates of U.S. companies and U.S. affiliates of foreign companies.

Summary Statistics

Summary statistics on services supplied by foreign affiliates of U.S. MNEs for certain selected countries and industries of the affiliate are presented following this section in tables Q–R and charts 13–16. Statistics on services supplied by U.S. affiliates of foreign MNEs for certain countries of UBO and industries of the affiliate are presented in tables S–T and charts 17–20. For more detailed statistics, see [tables 3.1–4.3](#) that accompany this article.

The value of the dollar relative to the currencies of many of the U.S.'s largest trading partners was largely unchanged throughout 2013. However, the dollar strengthened against the Japanese yen, so the dollar value of services provided by affiliates in Japan decreased (chart 4).

Services supplied abroad through affiliates increased in all major regions except Africa. Affiliates in the Asia and Pacific region contributed the largest share of growth, followed by affiliates in Europe and in South and Central America (summarized in table Q and charts 13 and 14 on page 19). In Asia and Pacific, nearly every major industry grew. Affiliates in Singapore and India, where economic growth picked up in 2013, contributed nearly two-thirds of the total growth in services supplied through affiliates, and together, they more than offset a significant decrease in services supplied by affiliates in Japan. In Europe, growth in services supplied through affiliates in Germany, Switzerland, and Ireland more than accounted for the growth in services supplied through affiliates; this growth was partly offset by a contraction in the United Kingdom, the top country of foreign affiliates in 2013 in terms of services supplied (table O). For affiliates in Europe, the increases were largest for affiliates in wholesale trade, information, and retail trade; the combined increase in these industries more than offset a large decrease in finance and insurance. European affiliates again accounted for the largest share of services supplied by affiliates in foreign markets, but that share continued to shrink because that growth was outpaced by the growth of services supplied by affiliates in Asia and Pacific. Services supplied in South and Central America grew strongly in 2013. Mexico, the top country of foreign affiliates in that region in terms of services supplied in 2013, led the increase despite slow economic growth. More than three-quarters of the increase in South and Central America was in retail trade and in finance and insurance.

Services supplied by foreign affiliates of U.S. MNEs increased in all major industry categories except manufacturing and finance and insurance; the increase was largest in information and in wholesale trade (summarized in table R and charts 15 and 16 on page 20). In information services, the increase was largely accounted for by increases among affiliates that provide Internet search and social networking services, particularly in Ireland. In wholesale trade, most of the increase was in

Services Supplied Through Affiliates in 2013

services supplied by nondurable-goods merchant wholesalers, especially wholesalers of farm product raw materials and of drugs and druggists' sundries. Services supplied in mining and in retail trade also increased significantly; in mining, the increase was nearly fully accounted for by growth in support activities for oil and gas operations supplied by affiliates, and in retail trade, it was led by growth in general merchandise and in non-store retailers, such as online merchants.

Foreign affiliates not only supply services to foreign markets, but they also supply services to the U.S. market (which are classified as U.S. imports of services). Services supplied to foreign markets, which include local markets and other foreign markets, accounted for 92 percent of services supplied by foreign affiliates, and services supplied to the U.S. market accounted for the remaining 8 percent of foreign affiliates' \$1,440.9 billion in services supplied worldwide in 2013 (table P). In 2013, transac-

tions in the affiliates' local market accounted for 71 percent of services supplied worldwide by affiliates, while transactions with parties in other foreign markets accounted for 20 percent. Services supplied by foreign affiliates worldwide grew 3 percent in 2013; services supplied to foreign markets grew 3 percent, and services supplied to the U.S. market grew 5 percent. For services supplied to foreign markets in 2013, services supplied to the affiliates' local market grew 2 percent, and services supplied to other foreign markets grew 6 percent.

Services supplied to the U.S. market by U.S. affiliates of foreign MNEs grew 8 percent in 2013, up from 4 percent in 2012, despite little change in U.S. economic growth (chart 3). The largest increases were in services supplied through affiliates with ultimate beneficial owners (UBOs) in Asia and Pacific and in Europe; services supplied by affiliates with UBOs in Canada, the United States, Central America, and Other Western Hemisphere

MNEs Multinational enterprises 0 Transactions are possible but are zero for a given period.

D Suppressed to avoid disclosure of data of individual companies.

1. The rank is based on the total value of services supplied to foreign persons by U.S. MNEs through

their majority-owned foreign affiliates or services supplied to U.S. persons by foreign MNEs through their majority-owned U.S. affiliates in 2013.

Services Supplied Through Affiliates in 2013

also grew (summarized in table S and charts 17 and 18 on page 21).² Affiliates with UBOs in Asia and Pacific accounted for nearly two-thirds of the growth in all services supplied to the U.S. market; the growth was largely accounted for by acquisitions of U.S. affiliates. Growth in services supplied by affiliates with UBOs in Asia and Pacific increased in most major industries. The largest increase was in information due to the large increase in wireless telecommunications for Japan, but increases in services supplied through affiliates in wholesale trade, in finance and insurance, and in professional, scientific, and technical services were also significant. For affiliates with UBOs in Europe, nearly three-quarters of the increase was accounted for by growth in affiliates with UBOs in France, Germany, and the United Kingdom, which were the top three European UBO countries of U.S. affiliates in 2013 in terms of services supplied (table O). Services supplied by affiliates with UBOs in Europe increased in most major industries; the largest increases were in professional, scientific, and technical services, especially advertising and related services, and in wholesale

2. The UBO of a U.S. affiliate is that person or entity, proceeding up the affiliate's ownership chain, beginning with and including the foreign parent, that is not owned by more than 50 percent by another person. Unlike the foreign parent, the UBO of an affiliate may be located in the United States. The UBO of each affiliate is identified to ascertain the person or entity that ultimately owns or controls the U.S. affiliate and therefore ultimately derives the benefits from ownership or control.

**Table P. Services Supplied Through Affiliates
by Destination, 2012–2013**

	Billions of dollars		Percent change from preceding year		Percent of total services supplied	
	2012	2013	2012	2013	2012	2013
Services supplied by U.S. MNEs through their majority-owned foreign affiliates						
Total services supplied	1,400	1,441	4.0	2.9
Services supplied to U.S. persons.....	114	120	14.3	4.9	8.2	8.3

MNEs Multinational enterprises

trade. For affiliates of UBOs in Canada, the United States, Central America, and Other Western Hemisphere, the increases in services supplied were small compared with those for Asia and Pacific and Europe. For affiliates with UBOs in the Middle East and in Africa, services supplied through affiliates contracted in 2013 for the second straight year.

Services supplied by U.S. affiliates of foreign MNEs increased in all seven major industry categories; the largest increases were in information, in professional, scientific, and technical services, in wholesale trade, and in real estate and rental and leasing (summarized in table T and charts 19 and 20 on page 22). More than half of the increase in services supplied by U.S. affiliates was accounted for by affiliates in information, particularly in wireless telecommunications, reflecting the acquisitions of U.S. affiliates in wireless communications by Japanese companies. Increases in telecommunications for affiliates with UBOs in Germany and Mexico were also large. In wholesale trade, growth in services supplied by U.S. affiliates was widespread across subindustries; the growth was more than accounted for by affiliates with UBOs in Asia and Pacific and in Europe. In professional, scientific, and technical services, the largest increases were in advertising and related services, especially for affiliates with UBOs in France, and in computer systems design and related services, particularly for affiliates with UBOs in Japan. In real estate and rental and leasing, services supplied through affiliates in both rental and leasing and real estate increased; more than half of the increase was in services supplied by affiliates with UBOs in Europe.

U.S. affiliates not only supply services to the U.S. market, but they also supply services to other markets (which are classified as U.S. exports of services). However, U.S. market transactions account for the vast majority of the services supplied by U.S. affiliates worldwide. In 2013, U.S. market transactions accounted for 91 percent of U.S. affiliates' \$963.8 billion in services supplied worldwide (table P). This large share reflects the dominant size of the U.S. market, compared with the sizes of other nearby markets. Services supplied by U.S. affiliates worldwide grew 7 percent in 2013; services supplied to the U.S. market grew 8 percent, and services supplied to foreign markets grew 1 percent.

MNEs Multinational enterprises

In Canada, services supplied by affiliates increased slightly. Significant growth in real estate and rental and leasing and in professional, scientific, and technical services more than offset sharp decreases in finance and insurance and in retail trade.

In Switzerland, services supplied increased, and the increase was largest in wholesale trade—particularly in nondurable goods—as well as in professional, scientific, and technical services and in retail trade.

In Mexico, services supplied increased, and the increase was widespread across industries. The largest increases were in retail trade and in finance and insurance.

In United Kingdom Islands, Caribbean, services supplied increased sharply. The increase was largely accounted for by acquisitions of affiliates in finance and insurance and by increases in services supplied by existing affiliates in wholesale trade and in real estate and rental and leasing.

In Africa, services supplied decreased, following a strong increase in 2012 (chart 13). More than half of the decrease was accounted for by the acquisitions of U.S. MNE's foreign affiliates in utilities by foreign-owned companies. Africa accounted for the smallest share of services supplied by foreign affiliates by major area in 2013 (chart 14).

In India, services supplied increased, and more than half of the increase was in professional, scientific, and technical services, particularly computer systems design and related services.

 D Suppressed to avoid disclosure of data of individual companies.

Some affiliates that are primarily manufacturers also deliver services as a secondary activity. In manufacturing, services supplied by affiliates decreased for the second straight year (chart 15). The 2013 decrease was more than accounted for by a decrease in services supplied by Canadian affiliates.

In wholesale trade, services supplied increased, and the increase was mostly accounted for by an increase in services supplied by nondurable-goods merchant wholesalers that was partly offset by a significant decrease in services supplied by merchant wholesalers in petroleum and petroleum products. Except for “other industries,” wholesale trade is the largest major industry category for services supplied to foreign persons by affiliates of U.S. MNEs (chart 16).

In retail trade, services supplied increased, and the increase was largest for affiliates in general merchandise and nonstore retail, particularly online retailers.

In information, services supplied increased, and the increase was largest for affiliates that provide Internet search and social networking services, particularly in Ireland.

In real estate and rental and leasing, services supplied increased but at a slower rate than in 2012. The increase was more than accounted for by growth in automotive equipment rental and leasing that was due to the transfer of ownership of some affiliates in Canada from Canadian companies to U.S. MNEs.

In health care and social assistance, services supplied increased sharply. The increase was mostly accounted for by the transfer of ownership of some affiliates in Canada and Europe from foreign companies to U.S. MNEs.

MNEs Multinational enterprises
UBO Ultimate beneficial owner

For France, services supplied through affiliates to the U.S. market increased, and the increase was largest in insurance and in professional, scientific, and technical services, particularly advertising and related services.

For Mexico, services supplied increased, and the increase was more than accounted for by an increase in sales to new customers for some affiliates in telecommunications.

For the Middle East, services supplied decreased for the second straight year (chart 17). The 2013 decrease was more than accounted for by a decrease in services supplied in manufacturers' secondary activities that reflected foreign parents' partial divestment in some manufacturing affiliates that led the affiliates to become minority owned rather than majority owned.

For Japan, services supplied increased sharply. Most of the increase was accounted for by acquisitions of U.S. affiliates in telecommunications. Japanese-owned affiliates now account for nearly half of all services supplied through affiliates in telecommunications. Japan's growth was the major contributor to the increase of Asia and Pacific's share of all services supplied by affiliates to U.S. persons to 25 percent, its highest level since at least 1999, the first year for which BEA published statistics by region on services supplied (chart 18).

For the United States as a UBO, services supplied increased, and the increase was more than accounted for by the transfer of ownership of some affiliates in insurance from MNEs in the United Kingdom to U.S. MNEs. This transfer did not affect total services supplied, because it was also recorded as a decrease in services supplied by U.S. affiliates of the MNEs in the United Kingdom.

MNEs Multinational enterprises

In wholesale trade, services supplied increased, and the increase was widespread across subindustries. The largest increases were in merchant wholesalers of drugs and druggists' sundries and of electrical goods. (Drugs and druggists' sundries and electrical goods are not included in either of the industries of wholesale trade in table T. More detail for these two subindustries is available in tables 3.1 and 3.3, which accompany this article.)

In telecommunications, services supplied more than doubled. The increase, which was primarily due to acquisitions of U.S. affiliates by Japanese companies, accounted for nearly 60 percent of the total growth in services supplied to U.S. persons in 2013. The increase in telecommunications contributed to a 53 percent increase in information services, which raised information's share of all services supplied to 13 percent in 2013 from 9 percent in 2012 (charts 19 and 20).

In finance and insurance, services supplied increased because an increase in finance exceeded a decrease in insurance. Both the increase in finance and the decrease in insurance were more than accounted for by the reclassification of some German-owned affiliates in insurance to commodities and financial securities trading.

In computer systems design and related services, services supplied increased. The increase was due both to the acquisitions of new U.S. affiliates and to the growth in services supplied by existing affiliates.

In transportation and warehousing, services supplied increased. The largest increases were in transit and ground passenger transport and in couriers and messengers.

Chart 19. Growth in Services Supplied Through Affiliates to U.S. Persons by Major Industry of Affiliate, 2012 and 2013

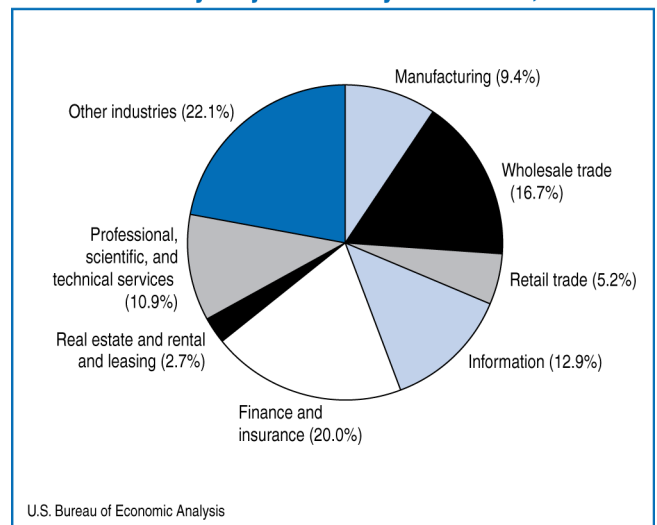

Chart 20. Services Supplied Through Affiliates to U.S. Persons by Major Industry of Affiliate, 2013

Revisions

The revised statistics published in this article supersede those presented in the October 2014 SURVEY OF CURRENT BUSINESS.

Trade in services. The revised statistics on trade in services published in this article correspond to the less detailed statistics by type of service published in the July 2015 SURVEY article “[Annual Revision of the U.S. International Transactions Accounts](#).”

As noted in the July 2015 article, exports and imports for 2012–2013 were revised to incorporate newly available and revised source data from (1) the Bureau of Economic Analysis (BEA) quarterly surveys of international trade in services, (2) BEA’s 2013 Benchmark Survey of Insurance Transactions by U.S. Insurance Companies With Foreign Persons, and (3) other source data.

For 2012 and 2013, total exports and total imports were revised upward (table U). The largest revision was to imports for 2012, which were revised upward 0.4 percent (\$1.7 billion). Exports were revised upward 0.2 percent (\$1.6 billion) for 2012. For 2013, imports were revised upward 0.3 percent (\$1.6 billion), and exports were revised upward 0.1 percent (\$0.5 billion). For exports, the main contributor to the upward revisions for 2012 and 2013 was maintenance and repair services n.i.e., largely due to a reclassification of repairs related to foreign military sales from exports of government goods and services n.i.e. For imports, the main contributor to the upward revisions for 2012 and 2013 was insurance services, which reflects the incorporation of information from the 2013 benchmark survey. For additional information on these changes, see the next section “Improving the International Services Statistics.”

Services supplied through affiliates. The statistics on services supplied through affiliates for 2013 are preliminary. The statistics for 2012 were revised to incorporate newly available and revised source data from BEA’s surveys of MNEs. For 2012, services supplied to foreign persons by U.S. MNEs through their majority-owned foreign affiliates were revised downward 0.5 percent (\$7.0 billion). Services supplied to the United States by foreign MNEs through their majority-owned U.S. affiliates were revised upward 1.4 percent (\$11.4 billion).

Improving the International Services Statistics

The Bureau of Economic Analysis (BEA) continues to improve its statistics on international services. Some changes have now been implemented, and others are under way.¹

Reclassification of repairs related to foreign military sales from exports of government goods and services n.i.e.

Beginning with statistics for 1999, repairs related to the Foreign Military Sales (FMS) program—including upgrades to aircraft and other military equipment—were reclassified to the services exports category “maintenance and repair services n.i.e.” Previously, these repairs were included in the services exports category “government goods and services n.i.e.” International statistical guidelines recommend that services supplied by, and to, governments be classified into specific services categories whenever possible. As a result of this change maintenance and repair services n.i.e. and government goods and services n.i.e. were revised, but total services exports were not revised because the revisions were offsetting.

Incorporation of the results of the 2013 benchmark survey of insurance transactions

The statistics presented in this article incorporate the results of the 2013 Benchmark Survey of Insurance Trans-

actions by U.S. Insurance Companies With Foreign Persons. Unlike the quarterly surveys of insurance services, the benchmark survey, conducted every 5 years, collects the total for each type of transaction without a reporting threshold and has a lower reporting threshold (\$2 million) than the quarterly surveys (\$8 million) for the reporting of country and affiliation detail; as a result, BEA has a basis for estimating transactions that fall below the quarterly survey thresholds. In addition, the coverage of the benchmark survey was increased to include newly identified companies engaged in international trade. The incorporation of information from the benchmark survey resulted in upward revisions to insurance exports and imports for 2012 and 2013.

Ongoing work

Work to improve several accounts within the international economic accounts is continuing. The following changes to the accounts are proposed:

- Introducing financial intermediation services indirectly measured (FISIM)
- Identifying and reclassifying certain transactions related to intellectual property
- Categorizing manufacturing services on physical inputs owned by others
- Developing a personal, cultural, and recreational services category

For a more detailed discussion of these changes, see “Improving the International Services Statistics” in the October 2014 article.²

1. See the “Catalog of Major Revisions to the U.S. International Accounts, 1976–2008” on BEA’s Web site. For changes implemented from 2009 to 2014, see the appendixes on improvements in each October Survey article in this series. See also Jeffrey R. Bogen, Mai-Chi Hoang, Kristy L. Howell, and Erin M. Whitaker, “Comprehensive Restructuring and Annual Revision of the U.S. International Transactions Accounts” SURVEY OF CURRENT BUSINESS 94 (July 2014) and C. Omar Kebbeh and Cavan Wilk, “Annual Revision of the U.S. International Transactions Accounts,” SURVEY 95 (July 2015).

Using BEA Data for Research on International Trade in Services and on MNEs

The data that BEA collects on its surveys of international trade in services and of the activities of multinational enterprises are valuable resources for researchers. Many past and ongoing projects have used a link between the two data sets; these projects combine information on trade in services with information on several aspects of the operations of multinational enterprises (MNEs), such as employment, sales, and value added.¹

One ongoing study, “Headquarter Services in the Global Integration of Production,” explores how production integration between U.S. parents and foreign affiliates affects the role that U.S. parents play in providing certain types of headquarter services to their foreign affiliates. Preliminary results provide a rich picture of the relationships between firms’ different degrees of vertical linkages to their U.S. parents and the strategic positioning of headquarter services by industry and by country. A separate ongoing interagency project links BEA’s data on international trade in intellectual property and on the operations of MNEs with the National Science Founda-

tion’s Business Research and Development and Innovation Survey (BRDIS); this study is examining the relationship between research and development expenses and international trade in intellectual property for MNEs.

Studies by [BEA’s special sworn researchers](#) have also made use of BEA’s data on the activities of MNEs and data on international services. One ongoing study, “Patent Protection and the Industrial Composition of Multinational Activity: Evidence from U.S. Multinational Firms,” uses the linked data to examine how the extent of patent protection in developing countries affects U.S. MNEs’ decisions to engage in technology licensing with a foreign affiliate or with an unaffiliated foreign firm. One past study, “Export Versus FDI and the Communication of Complex Information,” looked at how the complexity in the communication between firms and their customers affected U.S. firms’ decisions about whether to serve foreign markets by establishing foreign affiliates or by exporting.

More information about [current and past research](#) at BEA, including research conducted by BEA’s special sworn researchers, can be found on [BEA’s Web site](#).

1. For more information on the link between BEA’s trade in services and MNE surveys, see Kevin Barefoot and Jennifer Koncz-Bruner “[A Profile of U.S. Exporters and Importers of Services](#)” *SURVEY OF CURRENT BUSINESS* 92 (June 2012).

Data Sources and Acknowledgments

Data Sources

The statistics in this article are largely based on data collected from surveys conducted by the Bureau of Economic Analysis (BEA). Statistics for some services are based on data from a variety of other sources, including U.S. Customs and Border Protection, other federal surveys, private sources, and partner countries.

BEA conducts mandatory surveys of trade in services, some of which are targeted to specific services industries. For trade in services, data on many types of services are collected on the Quarterly Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons (BE-125) and on the related benchmark survey (BE-120).

All of BEA's surveys of international services and a guide to the reporting requirements for the surveys are

available on BEA's Web site. For additional information on these surveys, on surveys from other sources, and on definitions and methodology for the statistics on the trade in services, see *International Economic Accounts: Concepts and Methods*.

The data on services supplied through majority-owned affiliates are collected on BEA's surveys of the activities of multinational enterprises. All of BEA's surveys of U.S. MNEs and of U.S. affiliates of foreign MNEs and a guide to reporting requirements for the surveys are available on BEA's Web site. For the methodologies for these surveys, see *Foreign Direct Investment in the United States: Final Results From the 2012 Benchmark Survey* and *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey* on BEA's Web site.

Acknowledgments

The estimates of trade in services and services supplied through affiliates were prepared by the following staff members of the Balance of Payments Division and the Direct Investment Division.

Estimates of trade in services were prepared under the guidance of Molly E. Garber and Christopher J. Stein. Travel and air passenger transport estimates were prepared by Thomas Anderson, Laura L. Brokenbaugh, Edward F. Dozier, Alexis N. Grimm, Ryan Howley, Marilyn Ibarra-Caton, and Charu S. Krishnan. Transport estimates were prepared by Edward F. Dozier, C. Omar Kebbeh, and Steven J. Muno. Estimates for services other than travel and transport were prepared by Pamela N. Aiken, Suhail Ally, Felix Anderson, Stacey L. Ansell, Damon C. Battaglia, Jeffrey R. Bogen, Faith M. Brannam, Jamela Des Vignes, Andre Garber, Brian C. Goddard, Hope R. Jones, C. Omar Kebbeh, Eddie L. Key, Kiesha V. Middleton, Patricia A. Mosley, Steven J. Muno, Michelle Murillo, Maya Ortiz, Mark P. Samuel, and John A. Sondheimer.

Results from the 2013 benchmark survey of insurance transactions were processed and incorporated into BEA's statistics on trade in insurance services by Christopher J. Stein, Andre Garber, Brian C. Goddard, Damon C. Battaglia, Fritz Mayhew, Benjamin P. Kavanaugh, and

Gregory A. Tenentes.

The processing of the survey data used to prepare the estimates of services supplied through majority-owned affiliates was conducted by the following staff members of the Direct Investment Division under the guidance of Mark D. Goddard and Jennifer Rodriguez: Catherine Ama, George Bogachevsky, Gregory Brace, Kirsten Brew, Polly Cheung, Stephen Corsiglia, James Crim, Constance Deve, Laura Downey, Kenneth Grier, Nazre Jamil, James Lashley, Qi Lee, Da-Chin Lin, Sonya Marsh, Kevin McCarthy, Demetria McCormick, Marcia Miller, Yetunde Olayinka, Amanda Petersen, Amber Phelan, Kevin Reagan, Makia Riley, Ann Robinson, Roberto Ruiz, Myriam Rullan, Aqeel Sahibzada, John Starnes, and Daniel Wakjira. Alexis N. Grimm performed additional calculations to prepare the statistics on services supplied through affiliates.

The information in tables 1.1–2.3 was compiled by John Sondheimer, and the information in tables 1.1, 3.1–4.2 was compiled by Neeta B. Kapoor. The interactive tables were compiled by Benjamin Kavanaugh and Mitchell Shabani. Computer programming for data estimation and suppression and the generation of the tables was provided by Carole J. Henry, Neeta B. Kapoor, Fritz H. Mayhew, Dan Powell, and Gary Sowers.

U.S. International Services Tables

The following tables present statistics for U.S. international services that were published on October 15, 2015. Additional historical statistics for the tables can be viewed and downloaded from the international services [interactive database](#) on BEA's Web site.

To print selected tables, use the Print option on the drop down menu under File at the top, then choose Current Page or Pages (for example choose 2 or 3-5).

() Transactions between zero and +/- \$500,000.*

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

MOUSAs Majority-owned U.S. affiliates

1. For 1986-1988, these statistics are rounded to the nearest hundred million.

2. For 1986-1988, the statistics have been adjusted to be consistent with those for 1989 forward for the purposes of this presentation. These adjustments reflect definitional and methodological improvements made in the 1989 Benchmark Survey of U.S. Direct Investment Abroad to exclude investment income from sales of services by affiliates in finance and insurance.

3. Beginning in 1999, sales by foreign affiliates were classified as goods or services based on industry codes derived from NAICS rather than the SIC system, which resulted in a redefinition of sales of services and a net shift of sales from goods to services. See [Survey of Current Business 81 \(November 2001\): 58](#).

4. Beginning in 2004, services provided by bank affiliates and by the nonbank affiliates of U.S. banks are included in the statistics. Also beginning in 2004, the statistics are presented as "services supplied" rather than "sales of services." Compared with sales of services, services supplied adds 1) wholesalers' and retailers' distributive services, 2) insurers' premium supplements, and 3) banks' implicitly-charged services; it subtracts a proxy measure of insurers' expected losses. For more information, see [Survey of Current Business 89 \(October 2009\): 37](#).

5. Beginning in 1997, sales by U.S. affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System (NAICS); the statistics for prior years were based on codes derived from the 1987 Standard Industrial Classification (SIC) System. This change resulted in a redefinition of sales of services by affiliates and a net shift of sales from goods to services. See [Survey of Current Business 79 \(October 1999\): 61](#).

Legend / Footnotes:

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOFAs in construction represent sales in secondary, nonconstruction industries.

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

()* Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

1. Services supplied by an affiliate to persons in the country where the affiliate is located.

2. Services supplied by an affiliate to persons in foreign countries other than the country where the affiliate is located.

3. These only include transactions with foreign affiliates of the same U.S. MNE.

Table 3.3. Services Supplied to Foreign Persons by U.S. MNEs Through Their MOFAs, by Industry of Affiliate and by Destination

[Millions of dollars]

Release Date: October 15, 2015

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

()* Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

1. Services supplied by an affiliate to persons in the country where the affiliate is located.

2. Services supplied by an affiliate to persons in foreign countries other than the country where the affiliate is located.

3. These only include transactions with foreign affiliates of the same U.S. MNE.

MNEs Multinational enterprises

MOUSAs Majority-owned U.S. affiliates

UBO Ultimate beneficial owner

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries.

2. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

Legend / Footnotes:

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable

MNEs Multinational enterprises

MOUSAs Majority-owned U.S. affiliates

UBO Ultimate beneficial owner

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries.

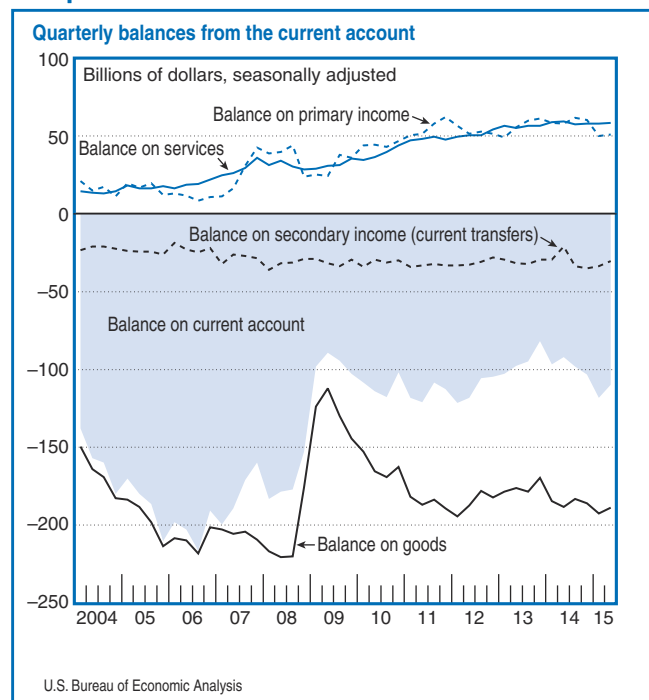

U.S. International Transactions

Second Quarter of 2015

THE U.S. CURRENT-ACCOUNT deficit—a net measure of transactions between the United States and the rest of the world in goods, services, primary income (investment income and compensation), and secondary income (current transfers)—decreased to \$109.7 billion (preliminary) in the second quarter of 2015 from \$118.3 billion (revised) in the first quarter (chart 1; see also table A on page 2).¹ The deficit decreased to 2.4 percent of current-dollar gross domestic product (GDP) from 2.7 percent in the first quarter.

1. Quarterly statistics are seasonally adjusted when series demonstrate statistically significant seasonal patterns; seasonally adjusted statistics are cited in this article when available.

Chart 1. U.S. Current-Account Balance and Its Components

The decrease in the current-account deficit was largely accounted for by decreases in the deficits on goods and secondary income. The decrease was also attributable to increases in the surpluses on primary income and services.

Net U.S. borrowing measured by financial-account transactions was \$59.7 billion in the second quarter, down from \$60.3 billion in the first quarter (table A). Net U.S. acquisition of financial assets excluding financial derivatives decreased more than net U.S. incurrence of liabilities excluding financial derivatives. However, a shift to net lending in transactions in financial derivatives more than offset the combined changes in net acquisition of assets and net incurrence of liabilities excluding financial derivatives, thereby slightly decreasing net U.S. borrowing measured in the financial account.

The statistical discrepancy—the difference between net acquisition of assets and net incurrence of liabilities in the financial account (including financial derivatives) less the difference between total credits and total debits recorded in the current and capital accounts—was \$49.9 billion in the second quarter, compared with \$58.0 billion in the first quarter.

Data Availability and Methodology

Detailed statistics for U.S. international transactions accompany this article in tables 1.1–9.1. The statistics and a description of the estimation methods used to compile them are also available on BEA's Web site.

The links in the text and tables of this article are to the latest available statistics in the interactive tables.

For the statistics, see "[International Data.](#)" For the methods, see *U.S. International Transactions Accounts: Concepts and Methods.*

William J. Zeile prepared this article.

p Preliminary r Revised n.a. Not available

1. The statistical discrepancy is the difference between net acquisition of assets and net incurrence of liabilities in the financial account (including financial derivatives) less the difference between total credits and total debits recorded in the current and capital accounts.

2. Sum of current- and capital-account balances.

3. Sum of net U.S. acquisition of financial assets and net transactions in financial derivatives less net U.S. incurrence of liabilities.

NOTE: The statistics are presented in table 1.2 on BEA's Web site.

Current-account highlights

- The deficit on goods decreased to \$188.4 billion in the second quarter from \$192.2 billion in the first quarter (table A).
- The surplus on services increased to \$58.4 billion from \$57.9 billion.
- The surplus on primary income increased to \$50.6 billion from \$49.7 billion.
- The deficit on secondary income decreased to \$30.3 billion from \$33.8 billion.

Financial-account highlights

- Net U.S. acquisition of financial assets excluding financial derivatives was \$137.5 billion in the second quarter, down from \$320.2 billion in the first quarter (see chart 9 on page 7).
- Net U.S. incurrence of liabilities to foreigners excluding financial derivatives was \$199.0 billion, down from \$340.3 billion.
- Net transactions in financial derivatives other than reserves were \$1.8 billion in the second quarter, compared with -\$40.1 billion in the first quarter; the change represents a shift to net lending from net borrowing.

Revisions

The preliminary statistics for U.S. international transactions for the first quarter of 2015 that were published in the July 2015 SURVEY OF CURRENT BUSINESS have been revised to incorporate new or revised source data.

Preliminary and Revised First-Quarter 2015 Statistics

[Millions of dollars, seasonally adjusted]

	Preliminary	Revised
Balance on goods	-188,990	-192,156
Balance on services	58,730	57,868
Balance on primary income	50,754	49,748
Balance on secondary income (current transfers)	-33,830	-33,754

p Preliminary r Revised
NOTE: The statistics are presented in table 2.1 on BEA's Web site.

Goods exports increased to \$384.8 billion in the second quarter from \$382.8 billion in the first quarter, a 0.5 percent increase (table B and chart 2).

Exports increased in four of the six major general-merchandise end-use categories. The largest increase was in industrial supplies and materials. This increase was more than accounted for by an increase in petroleum and products, which was partly offset by a decrease in metals and nonmetallic products. Exports decreased in nonmonetary gold and in two major general-use categories. The largest of these decreases was in consumer goods except food and automotive, mainly due to a decrease in durable goods.

Exports to China and Mexico increased after decreasing in the first quarter. In contrast, exports to Canada decreased for the third consecutive quarter (chart 3).

Chart 2. Growth in Goods Exports and Imports

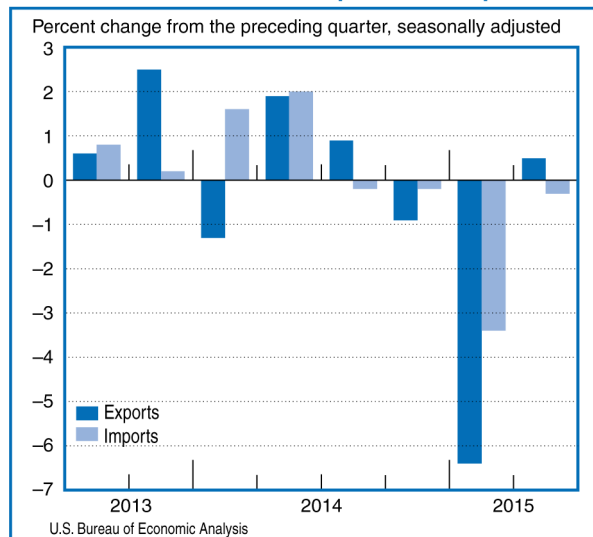

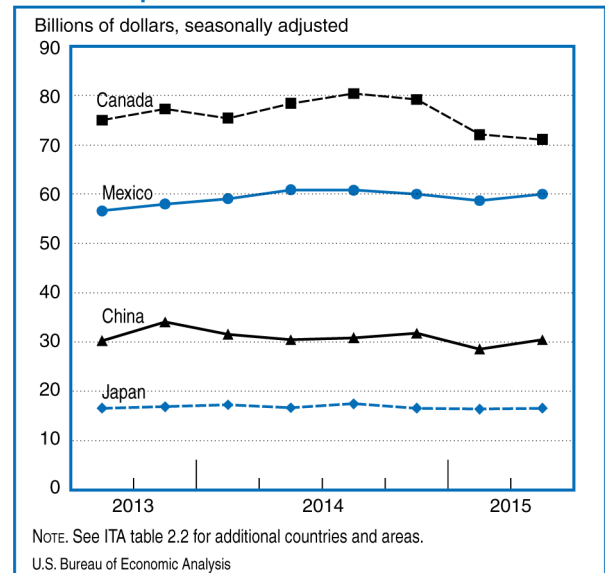

Chart 3. Exports of Goods to Selected Countries

NOTE: See ITA table 2.2 for additional countries and areas.

p Preliminary r Revised

NOTE: The statistics are presented in table 2.1 on BEA's Web site.

Goods imports decreased to \$573.1 billion in the second quarter from \$575.0 billion in the first quarter, a 0.3 percent decrease (table C and chart 2 on page 3).

Imports decreased in three of the six major general-merchandise end-use categories. The largest decrease—which more than accounted for the total decrease in goods imports—was in industrial supplies and materials, largely reflecting decreases in petroleum and products and in metals and nonmetallic products. Imports increased in nonmonetary gold and in three general-merchandise end-use categories. The largest of these increases was in automotive vehicles, parts, and engines.

Imports from China decreased after increasing for four consecutive quarters, and imports from Canada decreased for the third consecutive quarter. Imports from Mexico increased after decreasing in the first quarter, and imports from Japan increased slightly for the second consecutive quarter (chart 4).

The deficit on petroleum and products decreased in the second quarter to \$19.8 billion. The second-quarter deficit was less than half that of the fourth quarter of 2014. Imports of petroleum and products decreased for the fifth consecutive quarter. Exports increased after decreasing for two consecutive quarters. The deficit on nonpetroleum products increased for the sixth consecutive quarter, to \$168.6 billion (chart 5).

NOTE: The statistics are presented in table 3.1 on BEAs Web site. For additional information on services, see Alexis N. Grimm and Charu S. Krishnan, "U.S. International Services: Trade in Services in 2014 and Services Supplied Through Affiliates in 2013" in this issue of the SURVEY OF CURRENT BUSINESS.

Chart 6. Growth in Services Exports and Imports

Services exports increased to \$179.9 billion from \$178.9 billion, a 0.6 percent increase (table D and chart 6). Exports increased in seven of the nine major services categories. The largest increases were in other business services—mostly in professional and management consulting services and in research and development—and in personal travel. Transport decreased, reflecting a decrease in air passenger transport.

Services imports increased to \$121.6 billion from \$121.0 billion, a 0.5 percent increase. Imports increased in six of the nine major services categories. The largest increase was in travel (for all purposes including education). The largest decrease was in transport, mainly air freight transport.

Exports to China increased for the sixth consecutive quarter. In contrast, exports to the United Kingdom and Canada each decreased for the second consecutive quarter. Imports from Japan increased slightly after decreasing in the first quarter. Imports from Germany fell for the second quarter in a row (chart 7).

Secondary income (current transfer) payments.....	65,160	66,712	66,591	64,997	-1,594

p Preliminary r Revised

1. Secondary income receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

NOTE: The statistics are presented in table 4.1 and table 5.1 on BEA's Web site.

Investment income receipts—income receipts from foreigners on U.S. holdings of financial assets abroad—increased to \$200.1 billion in the second quarter from \$193.0 billion in the first quarter (table E and chart 8). The increase mainly reflected an increase in direct investment income on equity from foreign affiliates, particularly affiliates in Ireland, the Netherlands, and Bermuda. Income on portfolio investment also increased, largely because of an increase in income on equity and investment fund shares.

Receipts for compensation of U.S. residents paid by nonresident employers were nearly unchanged at \$1.8 billion.

Investment income payments—income payments to foreigners on U.S. liabilities—increased to \$146.9 billion from \$140.8 billion. The increase was due primarily to an increase in direct investment payments on foreign equity in U.S. affiliates, partly reflecting affiliate income growth from increased sales of motor vehicles and an increase in oil prices. The increase was also due to an increase in portfolio investment income payments, particularly interest on debt securities.

Payments for compensation of foreign residents paid by U.S. residents increased to \$4.3 billion from \$4.2 billion.

Secondary income receipts increased to \$34.7 billion from \$32.8 billion. The increase was more than accounted for by an increase in U.S. government transfers, particularly fines and penalties.

Secondary income payments decreased to \$65.0 billion from \$66.6 billion, reflecting a decrease in U.S. government grants to foreigners that was partly offset by an increase in private transfers.

p Preliminary r Revised (-) Net sales
NOTE: The statistics are presented in table 1.2, table 6.1, table 7.1, and table 8.1 on BEA's Web site.

Net acquisition of direct investment assets was \$101.1 billion in the second quarter, up from \$67.4 billion in the first quarter (table F and chart 10). The increase was largely accounted for by a shift to net acquisition of debt instrument assets by both U.S. parent companies and U.S. affiliates. The increase was also due to an increase in net acquisition of equity other than reinvestment of earnings.

Net U.S. acquisition of portfolio investment assets abroad was \$166.3 billion, down from \$233.5 billion (see chart 11 on page 8). The decrease reflected a decrease in net purchases of equity securities, to \$116.7 billion from \$168.7 billion, and a decrease in net purchases of debt securities, to \$49.6 billion from \$64.8 billion.

Net U.S. sales of other investment assets abroad were \$129.0 billion, a shift from net acquisitions of \$23.4 billion (see chart 12 on page 8). The shift to net sales mainly reflected (1) a shift to net foreign repayment of loans to foreign residents provided by U.S. nonbank financial institutions, such as securities dealers and financial holding companies, and (2) an increase in net U.S. withdrawals of deposits abroad by U.S. nonbanking concerns.

Transactions in U.S. reserve assets decreased holdings by \$0.9 billion in the second quarter after decreasing holdings by \$4.2 billion in the first quarter; the decrease mostly reflected changes in the U.S. reserve position in the International Monetary Fund for both quarters.

p Preliminary r Revised (-) Net repayment

NOTE: The statistics are presented in table 1.2, table 6.1, table 7.1, and table 8.1 on BEA's Web site.

Net incurrence of direct investment liabilities to foreigners was \$78.2 billion in the second quarter, down from \$190.2 billion in the first quarter (table G; see also chart 10 on page 7). The decrease was more than accounted for by a decrease in net foreign-resident investment in equity other than reinvestment of earnings from an unusually high level in the first quarter.

Net U.S. incurrence of portfolio investment liabilities to foreigners was \$271.0 billion, up from \$101.1 billion (chart 11). The increase was more than accounted for by an increase in net foreign purchases of U.S. debt securities to \$288.2 billion from \$68.6 billion. Partly offsetting this increase, net foreign sales of U.S. equity and investment fund shares were \$17.2 billion, a shift from net foreign purchases of \$32.5 billion.

Net U.S. repayment of other investment liabilities to foreigners was \$150.1 billion, a shift from net incurrence of \$49.0 billion (chart 12). The shift to net U.S. repayment mainly reflected repayments of loan liabilities of U.S. banks and nonbank financial institutions to foreign financial institutions.

Table 1.1. U.S. International Transactions

[Millions of dollars]

Release Date: September 17, 2015 - Next Release Date: December 17, 2015

Legend / Footnotes:

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

2. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.

3. The statistical discrepancy, which can be calculated as line 38 less line 37, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit.

4. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).

5. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.

Table 1.2. U.S. International Transactions, Expanded Detail

[Millions of dollars]

Release Date: September 17, 2015 - Next Release Date: December 17, 2015

Legend / Footnotes:

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. All travel purposes include 1) business travel, including expenditures by border, seasonal, and other short-term workers and 2) personal travel, including health-related and education-related travel.

2. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

3. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.

4. The statistical discrepancy, which can be calculated as line 109 less line 108, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit.

5. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).

6. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.

Table 1.3. U.S. International Transactions, Expanded Detail by Area and Country

[Millions of dollars]

Release Date: September 17, 2015 - Next Release Date: December 17, 2015

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

1. All travel purposes include 1) business travel, including expenditures by border, seasonal, and other short-term workers and 2) personal travel, including health-related and education-related travel.

2. Income on a directional basis is organized according to whether the income derives from outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Income on a directional basis for individual areas and countries is without current-cost adjustment. See table 4.2 for additional information on income on a directional basis without current-cost adjustment. In table 1.3, the adjustment to convert income from an asset/liability basis to a directional basis at the global level and the current-cost adjustment at the global level are included in "International organizations and unallocated."

3. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

4. Includes transactions for outward direct investment rather than net acquisition of direct investment assets. Also see footnote 5.

5. Financial transactions on a directional basis are organized according to whether the transactions relate to outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Financial transactions on a directional basis for individual areas and countries are without current-cost adjustment. See table 6.1 for additional information on financial transactions on a directional basis without current-cost adjustment. In table 1.3, the adjustment to convert financial transactions from an asset/liability basis to a directional basis at the global level and the current-cost adjustment at the global level are included in "International organizations and unallocated."

6. Includes transactions for inward direct investment rather than net incurrence of direct investment liabilities. See also footnote 5.

7. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.

8. The statistical discrepancy, which can be calculated as line 109 less line 108, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit. For individual countries and areas, the statistical discrepancy partly results from discrepancies that arise when transactions with one country or area are settled through transactions with another country or area.

9. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).

10. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.

11. Estimates of financial derivatives for several countries and the OPEC area are not available separately. Estimates for Luxembourg are included in Other Euro area. Estimates for Argentina, Brazil, Mexico, and Venezuela are included in Other South and Central America. Estimates for China, Hong Kong, India, Korea, Singapore, and Taiwan are included in Other Asia and Pacific. Estimates for South Africa are included in Other Africa. In addition, estimates for the Middle East are combined with estimates for Asia and Pacific and included in Other Asia and Pacific. Estimates for OPEC area countries are included in the regional totals for Other South and Central America, Other Africa, and Other Asia and Pacific.

12. Includes, as part of international and unallocated, global totals for taxes withheld; current-cost adjustments associated with direct investment income and financial transactions; adjustments to convert direct investment income and financial transactions from an asset/liability basis to a directional basis; and net U.S. incurrence of liabilities to foreigners from currency transactions.

Legend / Footnotes:

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. The residual is calculated as the difference between the commodity-based seasonally adjusted total and the sum of the individual countries and the all other countries aggregate. The seasonally adjusted country and world area data will not sum to the commodity-based seasonally adjusted totals because the seasonally adjusted country and world area data and the commodity-based totals are derived from different aggregations of the export and import data and from different seasonal adjustment models. For additional information, see these [FAQs](#).

Table 3.2. U.S. International Trade in Services by Area and Country, Seasonally Adjusted
Detail

[Millions of dollars]

Release Date: September 17, 2015 - Next Release Date: December 17, 2015

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

()* Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. The residual is calculated as the difference between the service type-based seasonally adjusted total and the sum of the individual countries and the all other countries aggregate. The seasonally adjusted country and world area data will not sum to the seasonally adjusted service type-based totals because the seasonally adjusted country and world area data and the service type-based totals are derived from different aggregations of the export and import data and from different seasonal adjustment models.

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Income on an asset/liability basis is organized according to whether the income derives from an asset or a liability. Income receipts derive from U.S. parent and U.S. affiliate claims (assets), and income payments derive from U.S. affiliate and U.S. parent liabilities.

2. Income on a directional basis is organized according to whether the income derives from outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Income receipts derive from U.S. parent claims and liabilities, and income payments derive from U.S. affiliate claims and liabilities.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Primarily withholding taxes received and fines levied by U.S. government agencies.

2. Primarily insurance-related transfers: pensions and benefits received from Canada, Germany, and the United Kingdom; antitrust-related class-action lawsuits; and personal transfers received by U.S. residents.

3. Nonmilitary and military assistance provided to foreigners in the form of goods, services, or cash under programs enacted by the U.S. Congress.

4. Primarily U.S. government social security and retirement benefits paid to former U.S. residents who reside abroad and contributions to international organizations and commissions to meet the financial obligations of membership and to fund United Nations peacekeeping operations.

5. Personal transfers (sometimes called remittances) from U.S. resident immigrants to foreign residents.

6. Primarily insurance-related transfers: withholding taxes paid by U.S. companies; and charitable donations by U.S. entities.

Table 6.1. U.S. International Financial Transactions for Direct Investment

[Millions of dollars]

Release Date: September 17, 2015 - Next Release Date: December 17, 2015

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

()* Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Financial transactions on an asset/liability basis are organized according to whether the transactions relate to an asset or a liability. Net U.S. acquisition of direct investment assets relates to U.S. parent and U.S. affiliate acquisition of claims (assets). Net U.S. incurrence of direct investment liabilities relates to U.S. affiliate and U.S. parent incurrence of liabilities.

2. Financial transactions on a directional basis are organized according to whether the transactions relate to outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Transactions for outward investment relate to transactions for U.S. parent claims and liabilities. Transactions for inward investment relate to transactions for U.S. affiliate liabilities and claims.

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

The U.S. Net International Investment Position at the End of the Second Quarter of 2015

By Kyle L. Westmoreland

THE U.S. NET international investment position—the value of the accumulated stock of U.S. assets less the value of the accumulated stock of U.S. liabilities—was $-\$6,688.3$ billion (preliminary) at the end of the second quarter of 2015 (chart 1).¹ The U.S.

1. For comprehensive statistics on the international investment position, including annual statistics beginning with 1976 and quarterly statistics beginning with the fourth quarter of 2005, see BEA's [interactive tables](#).

Chart 1. U.S. Net International Investment Position, 2007:IV–2015:II

net international investment position increased $\$113.1$ billion from the end of the first quarter to the end of the second quarter, reflecting an $\$892.4$ billion decrease in the value of U.S. liabilities that exceeded a $\$779.3$ billion decrease in the value of U.S. assets. The negative net international investment position represents a U.S. net liability to the rest of the world. At the end of the first quarter of 2015, the net investment position was $-\$6,801.4$ billion (revised).

Highlights

- The $\$113.1$ billion increase in the net investment position reflected net other changes in position of $\$168.2$ billion that were partly offset by net financial transactions of $-\$55.1$ billion (table A).² Other changes in position include price changes, exchange-rate changes, and other changes in volume and valuation.³

2. For the statistics on financial transactions, see the financial account in [table 1.2](#) of the U.S. international transactions accounts. Quarterly financial transactions presented in this article are not seasonally adjusted. Detail on other changes in position such as price changes, exchange-rate changes, and other changes in volume and valuation is only presented for annual statistics in the June news release each year.

3. For information on the valuation of U.S. assets and liabilities and a description of the estimation methods, see “[International Investment Position Accounts](#)” in *International Economic Accounts: Concepts and Methods*.

Table A. Change in the U.S. Net International Investment Position

[Billions of dollars, not seasonally adjusted]

	Position, 2015:I	Change in position in 2015:II			Position, 2015:II
		Total	Attributable to:		
			Financial-account transactions	Other changes in position	
U.S. net international investment position	-6,801.4	113.1	-55.1	168.2	-6,688.3
Net international investment position excluding financial derivatives.....	-6,880.2	155.7	-56.9	212.6	-6,724.4
Financial derivatives other than reserves, net.....	78.7	-42.6	1.8	-44.4	36.1
U.S. assets	25,317.0	-779.3	(¹)	(¹)	24,537.7
Assets excluding financial derivatives.....	21,940.7	135.5	144.9	-9.4	22,076.2
Financial derivatives other than reserves, gross positive fair value.....	3,376.4	-914.9	(¹)	(¹)	2,461.5
U.S. liabilities	32,118.5	-892.4	(¹)	(¹)	31,226.0
Liabilities excluding financial derivatives.....	28,820.8	-20.2	201.7	-221.9	28,800.6
Financial derivatives other than reserves, gross negative fair value.....	3,297.6	-872.2	(¹)	(¹)	2,425.4

1. Financial transactions and other changes in financial derivatives positions are available only on a net basis; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives.

- U.S. assets decreased \$779.3 billion and U.S. liabilities decreased \$892.4 billion, mostly as a result of decreases in the value of financial derivatives.⁴
- U.S. assets excluding financial derivatives increased \$135.5 billion, reflecting financial transactions of \$144.9 billion that were partly offset by other changes in position of $-\$9.4$ billion.
- U.S. liabilities excluding financial derivatives decreased \$20.2 billion, reflecting other changes in position of $-\$221.9$ billion that were mostly offset by financial transactions of \$201.7 billion.

The increase in the net investment position reflected the effects of price decreases for U.S. assets and liabilities and the appreciation of most major foreign currencies against the U.S. dollar. The net investment position increased 1.7 percent in the second quarter, compared with an increase of 3.1 percent in the first quarter and an average quarterly decrease of 7.3 percent from the first quarter of 2011 through the fourth

4. A derivatives contract with a positive fair value represents the amount that a foreign resident would have to pay to a U.S. counterparty if the contract were terminated or settled. A contract with a negative fair value represents the amount that a U.S. resident would have to pay to a foreign counterparty if the contract were terminated or settled. The gross positive (negative) fair value is the sum of all contracts with positive (negative) fair values. Fair values differ from notional values, which are the underlying amounts used to calculate payments on contracts.

Market Value: The Featured Measure of Direct Investment Positions in the International Investment Position

Investment positions for direct investment are valued at current-period prices based on a revaluation of book values reported on BEA's direct investment surveys. Direct investment at market value became BEA's featured measure of direct investment at current-period prices with the June 2014 comprehensive restructuring of the international economic accounts.¹ The market-value measure values owners' equity at current-period prices using indexes of stock market prices.² Direct investment positions at market value are presented on an asset/liability basis according to whether the positions are assets or liabilities. Assets include U.S. parent and U.S. affiliate claims, and liabilities include U.S. affiliate and U.S. parent liabilities.

1. BEA also publishes direct investment at current cost and at historical cost. Direct investment at current cost is an alternative current-price measure that values the U.S. and foreign parent shares of their affiliates' investment in (1) plant and equipment using the current cost of capital equipment, (2) land using general price indexes, and (3) inventories using estimates of their replacement cost (table 2.1). Direct investment at historical cost, including country and industry detail, is discussed in "Direct Investment Positions for 2014: Country and Industry Detail" in the July 2015 SURVEY OF CURRENT BUSINESS.

2. For additional information on the market-value and current-cost methods, see "Valuation of the U.S. Net International Investment Position," SURVEY 71 (May 1991): 40–49.

quarter of 2014. The net investment position was equal to 3.2 percent of the value of all U.S. financial assets at the end of the second quarter, down from 3.3 percent at the end of the first quarter.⁵

U.S. assets. U.S. assets were \$24,537.7 billion at the end of the second quarter, compared with \$25,317.0 billion at the end of the first quarter (chart 2). The \$779.3 billion decrease reflected a \$914.9 billion decrease in the value of financial derivatives that was partly offset by a \$135.5 billion increase in the value of assets excluding financial derivatives.

U.S. assets excluding financial derivatives were \$22,076.2 billion at the end of the second quarter, compared with \$21,940.7 billion at the end of the first quarter. The \$135.5 billion increase reflected a \$144.9 billion increase resulting from financial transactions that was partly offset by a \$9.4 billion decrease resulting from other changes in position (table A). Other changes in position reflected the decrease in foreign equity and bond prices that lowered the value of U.S. direct investment and portfolio investment assets. Decreases in foreign equity and bond prices were mostly offset by the appreciation of major foreign currencies against the U.S. dollar that raised the value of U.S. assets in dollar terms.⁶

5. Board of Governors of the Federal Reserve System (FRS), *Financial Accounts of the United States, Second Quarter 2015*, Z.1. Statistical Release (Washington, DC: FRS, September 18, 2015). According to the September release, the value of all U.S. financial assets was \$206,473.5 billion at the end of the second quarter. The value of U.S. assets abroad was \$24,537.7 billion, or 11.9 percent of all U.S. assets, down from 12.3 percent at the end of the first quarter.

6. According to the Federal Reserve Board's major currencies index, foreign currencies appreciated 2.4 percent against the U.S. dollar from the end of the first quarter of 2015 to the end of the second quarter. The major currencies index is a weighted average of the foreign exchange values of the U.S. dollar against a subset of the broad index currencies that circulate widely outside the country of issue. See FRS, "Nominal Major Currencies Dollar Index" in "Foreign Exchange Rates—H.10" (weekly release of daily data).

Chart 2. U.S. Assets and Liabilities, 2007:IV–2015:II

U.S. liabilities. U.S. liabilities were \$31,226.0 billion at the end of the second quarter, compared with \$32,118.5 billion at the end of the first quarter (chart 2). The \$892.4 billion decrease reflected an \$872.2 billion decrease in the value of financial derivatives and a \$20.2 billion decrease in the value of liabilities excluding financial derivatives.

U.S. liabilities excluding financial derivatives were \$28,800.6 billion at the end of the second quarter, compared with \$28,820.8 billion at the end of the first quarter. The \$20.2 billion decrease reflected a \$221.9 billion decrease resulting from other changes in position that was mostly offset by a \$201.7 billion increase resulting from financial transactions. Other changes in position were mostly attributable to decreases in U.S. bond prices that lowered the value of U.S. portfolio investment liabilities. These decreases were slightly offset by increases in the value of U.S. liabilities denominated

in foreign currencies as the U.S. dollar weakened in the second quarter.

Revisions

The U.S. net international investment position at the end of the first quarter of 2015 was revised to -\$6,801.4 billion from the previously published value of -\$6,794.0 billion. The \$7.4 billion downward revision to the net position reflected a \$7.3 billion downward revision to U.S. assets and a \$0.1 billion upward revision to U.S. liabilities.

U.S. assets at the end of the first quarter were revised to \$25,317.0 billion from \$25,324.4 billion; U.S. liabilities were revised to \$32,118.5 billion from \$32,118.3 billion. These revisions reflect revised source data from the Treasury International Capital reporting system and from BEA's quarterly surveys of direct investment.

Table 1 follows.

Table 1.3. Change in the Yearend U.S. Net International Investment Position

[Millions of dollars]

Release Date: September 29, 2015 - Next Release Date: December 29, 2015

Legend / Footnotes:

0 Transactions or other changes are possible but are zero for a given period.

(*) Transactions or other changes between zero and +/- \$500,000.

n.a. Not available

..... Not applicable

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes due to year-to-year shifts in the composition of reporting panels and to the incorporation of more comprehensive survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial transactions, price changes, or exchange-rate changes.

3. Financial transactions and other changes in financial derivatives positions are available only on a net basis, which is shown on line 3; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives.

4. Data are not separately available for price changes, exchange-rate changes, and changes in volume and valuation not included elsewhere.

Table 2.1. U.S. Direct Investment Positions at the End of the Period

[Millions of dollars] NOTE: End of quarter positions begin in the fourth quarter of 2005.

Release Date: September 29, 2015 - Next Release Date: December 29, 2015

Legend / Footnotes:

n.a. Not available

..... Not applicable

1. Positions on an asset/liability basis are organized according to whether the positions are assets or liabilities. Assets include U.S. parent and U.S. affiliate claims, and liabilities include U.S. affiliate and U.S. parent liabilities.

2. Positions on a directional basis are organized according to whether the positions are for outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). The outward direct investment position includes U.S. parent claims less U.S. parent liabilities. The inward direct investment position includes U.S. affiliate liabilities less U.S. affiliate claims.

Annual Revision of Gross Domestic Product by Metropolitan Area

Advance Statistics for 2014 and Revised Statistics for 2001–2013

By Frank T. Baumgardner, Sharon D. Panek, and Ralph M. Rodriguez

ECONOMIC GROWTH WAS widespread across metropolitan areas in 2014; real gross domestic product (GDP) increased in 282 of the nation's 381 metropolitan areas (chart 1), according to the advance statistics from the Bureau of Economic Analysis (BEA). For the United States as a whole, real GDP by metropolitan area—the sum of current-dollar GDP for all metropolitan areas deflated by a national price measure—increased 2.3 percent in 2014 after increasing 1.9 percent in 2013 (table 1).

GDP by metropolitan area—the metropolitan area counterpart to GDP in the national income and product accounts (NIPAs)—is the most comprehensive measure of overall economic activity in a metropolitan area. In September, BEA released advance current-dollar and chained-dollar (real) statistics on GDP by metropolitan area for 2014.

Highlights for 2014 include the following:

- Professional and business services was one of the leading industry group contributors to growth in many metropolitan areas in 2014.
- Finance, insurance, real estate, rental, and leasing contributed to growth in many metropolitan areas, with concentrated areas benefiting from this industry's growth.
- Wholesale and retail trade growth was widespread, contributing to growth in many metropolitan areas.
- Natural resources and mining was a major contributor to strong growth in several metropolitan areas located in the Cline shale formation and in the Permian Basin (both in Texas) and in the Marcellus shale formation (which spans several states).
- Government and construction each detracted from growth in many metropolitan areas.

Gross Domestic Product (GDP) by Metropolitan Area Statistics

Metropolitan (statistical) areas that are defined by the U.S. Office of Management and Budget are standardized county-based areas that have at least one urbanized area with a population of 50,000 or more and adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

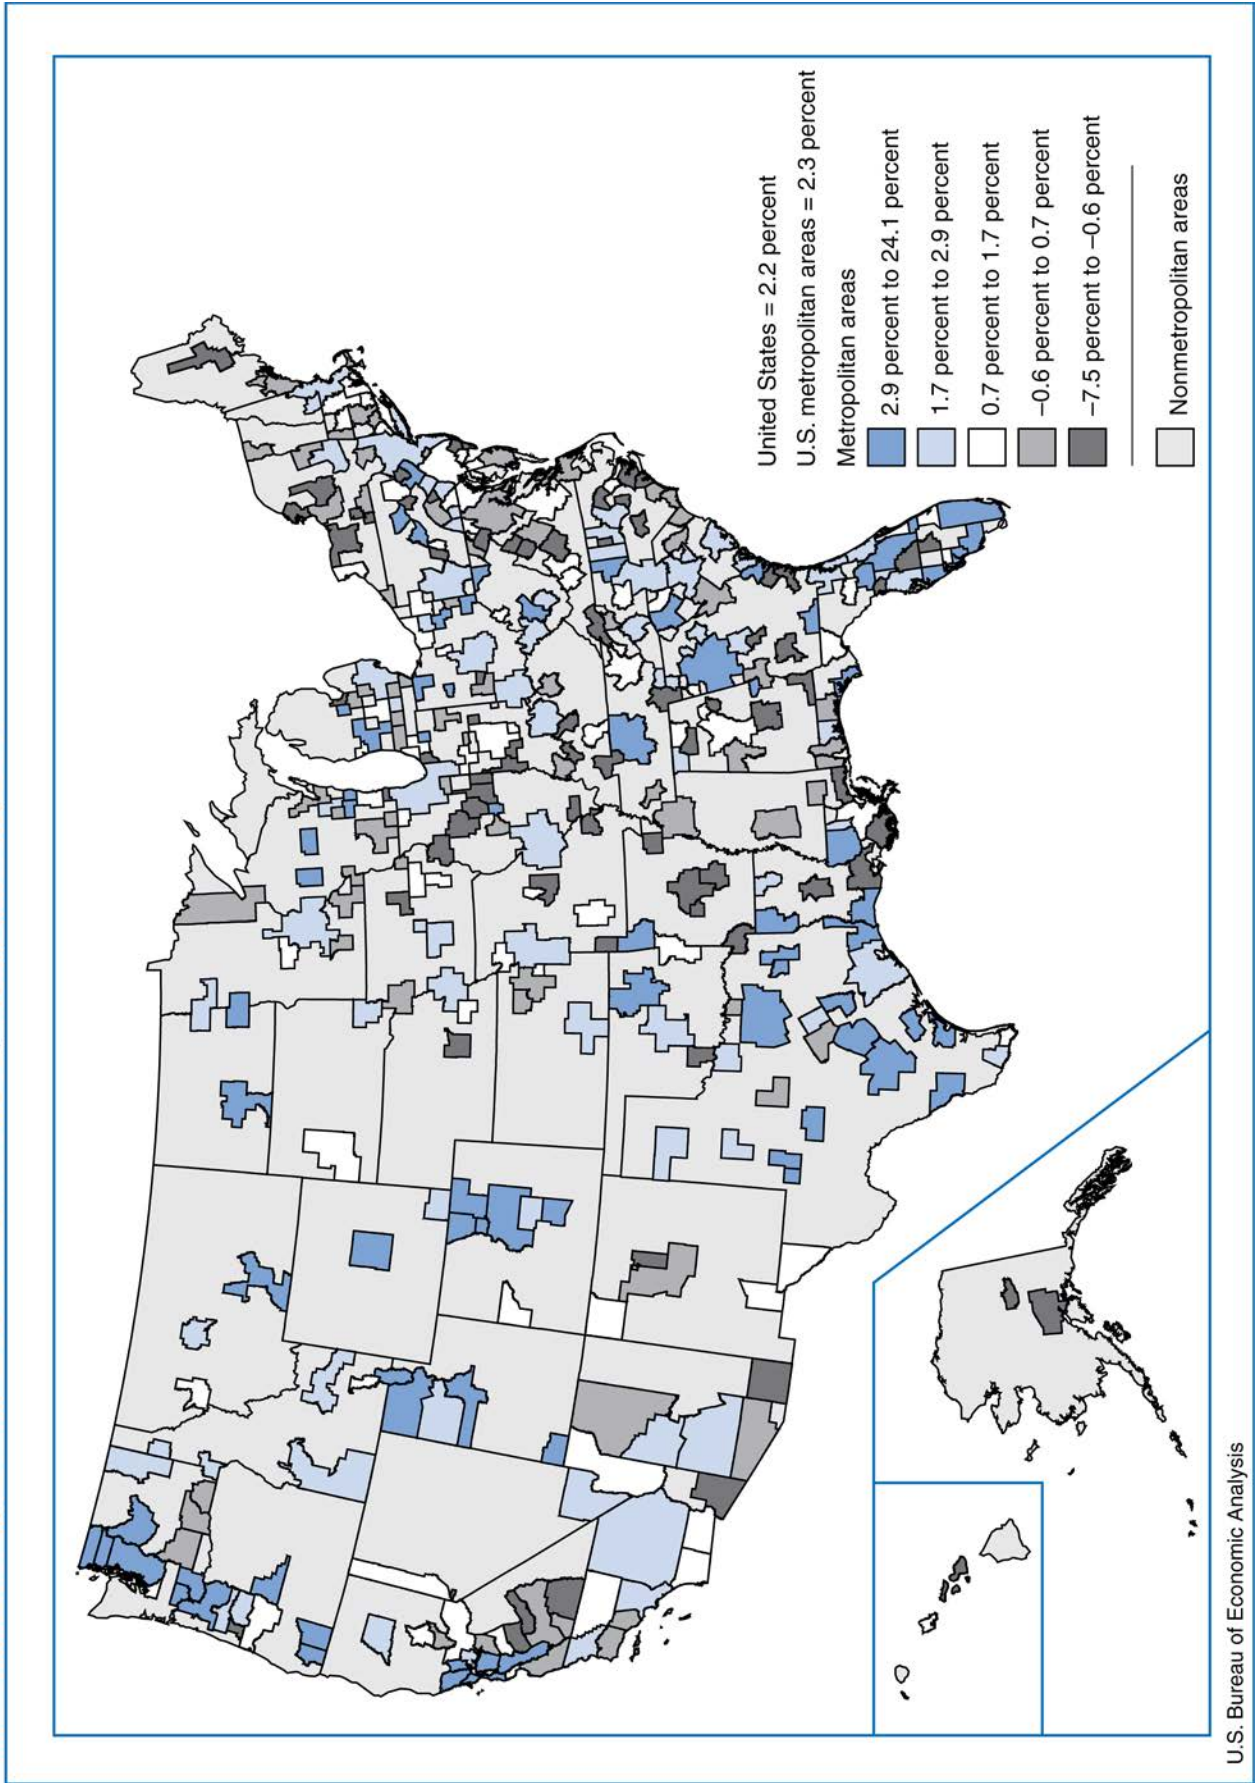

GDP by metropolitan area is the most comprehensive measure of overall economic activity in a metropolitan area—it is the metropolitan area counterpart to the nation's GDP. The methodology developed for these statistics is relatively simple and allows for the production of timely statistics.

GDP by metropolitan area is derived as the sum of the value added originating in all of the industries in the metropolitan area. Real GDP by metropolitan area is an inflation-adjusted measure based on national prices for the goods and services produced within that area. The statistics on real GDP by metropolitan area and on quantity indexes with a reference year of 2009 were derived by applying national chain-type price indexes to the statistics on current-dollar GDP by metropolitan area for 61

industry subsectors based on the 2007 North American Industry Classification System. Then, the chain-type price index formula that is used in the national accounts is used to calculate the statistics on total real GDP by metropolitan area and on real GDP by metropolitan area at more aggregated industry levels.

The statistics on GDP by metropolitan area are consistent with those on GDP by state released on June 10, 2015 which are based on the annual revision of the national income and product accounts (NIPAs) released in July 2014 and the national GDP by industry statistics released on November 13, 2014. The growth rate of real GDP in the nation's metropolitan areas usually differs from the NIPA real GDP growth rates released annually in July, partly because of the inclusion of nonmetropolitan areas in the national statistics. The growth rates also differ because of differences in the timing of production cycles and the availability of data in preparing national and regional statistics, which preclude the incorporation of the immediately preceding annual NIPA revisions into the advance statistics on GDP by metropolitan area.

Chart 1. Percent Change in Real Gross Domestic Product by Metropolitan Area, 2014

After providing an overview on the importance of metropolitan areas to the nation, this article will discuss the industries that drove national economic growth and the metropolitan areas where these industries were concentrated. It will then examine patterns in per capita real GDP by metropolitan area before concluding with a discussion of the revisions to the statistics on GDP by metropolitan area.

The importance of metropolitan areas

Metropolitan areas accounted for 90.5 percent of the nation's GDP in 2014, with the five largest metropolitan areas accounting for 23.5 percent of national GDP. In most states, metropolitan areas likewise accounted for most of GDP. Among the single-state metropolitan areas, Urban Honolulu, HI, accounted for the largest percentage of GDP by state in 2014 (76.6 percent).

Metropolitan area sizes vary significantly. Most metropolitan areas (275) have populations under 500,000. GDP for these small metropolitan areas ranges from \$32.6 billion (Midland, TX) to \$1.9 billion (Sebring, FL). GDP for large metropolitan areas, which include areas with populations greater than 500,000, ranges from \$1.6 trillion (New York-Newark-Jersey City, NY-NJ-PA) to \$14.6 billion (Deltona-Daytona Beach-Ormond Beach, FL).

Metropolitan areas also vary in terms of their economic output. Much of this can be explained by the industries that are typically concentrated in the areas. Often the trends shown in national GDP are driven by a few metropolitan areas in which specific industries, such as mining, are most heavily concentrated.

Metropolitan area growth

In 2014, increases in U.S. metropolitan areas were led by growth in the following industry groups: professional and business services; finance, insurance, real estate, rental, and leasing; and wholesale and retail trade (table 2). One or more of these three industry groups contributed to growth in 366 of the 381 metropolitan areas nationwide. In contrast, government and construction each detracted from growth in 2014.

Professional and business services. This industry group contributed 0.61 percentage point to real GDP growth for the nation's metropolitan areas in 2014. In addition, this group contributed to growth in 314 of the nation's 381 metropolitan areas in 2014, notably in the small metropolitan area of Midland, MI (4.56 percentage points) and in San Francisco-Oakland-Hayward, CA (2.05 percentage points).

Professional and business services was the leading contributor to growth in 38 of 106 large metropolitan areas and in 31 of the 275 small metropolitan areas.

Finance, insurance, real estate, rental, and leasing.

This industry group contributed 0.34 percentage point to real GDP growth for the nation's metropolitan areas in 2014. In addition, this industry added to growth in 188 metropolitan areas. Growth in this industry accounted for more than half of real GDP growth in 39 metropolitan areas and contributed more than 1 percentage point to growth in 41 metropolitan areas, notably in the small metropolitan areas of Naples-Immokalee-Marco Island, FL (3.84 percentage points) and Panama City, FL (3.46 percentage points).

Growth in this industry group was widespread across both large and small metropolitan areas. This industry was the leading contributor to growth in 43 of the 275 small metropolitan areas and in 17 of 106 large metropolitan areas.

Wholesale and retail trade. This industry group contributed 0.34 percentage point to real GDP growth for the nation's metropolitan areas in 2014. In 2013, this industry group contributed 0.24 percentage point to real GDP growth. This industry contributed to real GDP growth in 323 metropolitan areas and was the leading contributor to growth in 64 metropolitan areas. It accounted for more than half of real GDP growth in 52 metropolitan areas and contributed more than 1 percentage point to growth in 16 metropolitan

Advance Statistics on Gross Domestic Product (GDP) by Metropolitan Area for 2014

As with the previous releases of advance statistics, the 2014 advance statistics are based on source data that are incomplete or subject to further revision by the source agency. Revised statistics, based on more complete data, will be released in September 2016.

The advance statistics are prepared at the sector level of the North American Industry Classification System. The advance 2014 statistics use subsector-level industry detail for unpublished county wages for metropolitan areas from the Bureau of Labor Statistics' Quarterly Census of Employment and Wages, and the advance 2014 current-dollar statistics on GDP by state, which were released on June 10, 2015. The annual percent change in county wages from 2013 to 2014 was calculated and then applied to the county GDP statistics underlying the statistics on GDP by metropolitan area for 2013. These extrapolated statistics for all sectors were scaled to the advance statistics on GDP by state for 2014 by allocating the difference between the two measures among the counties. The resulting county statistics were then summed to their related metropolitan areas to yield GDP by metropolitan area.

areas, notably in the small metropolitan areas of Battle Creek, MI (2.85 percentage points) and Mobile, AL (1.96 percentage points).

This industry group was the leading contributor to growth in 49 of the 275 small metropolitan areas and in 15 of the 106 large metropolitan areas.

Natural resources and mining. Although this industry group was not a major contributor to growth for the nation, it was the leading contributor to growth in 32 metropolitan areas, including 7 of the 10 fastest growing metropolitan areas in 2014. Notably, this industry group contributed significantly to growth in the two fastest growing metropolitan areas in 2014—Midland, TX (24.1 percent) and San Angelo, TX (11.4 percent)—and to growth in the fifth fastest growing metropolitan area, Wheeling, WV-OH (9.5 percent). In Midland, TX, mining shale oil deposits in the Permian Basin contributed to strong growth; in San Angelo, TX, mining in the Cline shale formation contributed to strong growth. In Wheeling, WV-OH, strong growth in natural gas extraction from the Marcellus shale formation along with expansions in coal mining drove growth.¹ Each of these metropolitan areas has populations of less than 500,000.

Contributions to growth from natural resources and mining were concentrated in small metropolitan areas.

1. The location of these formations can be found on a [map](#) released by the Energy Information Administration.

Data Availability

Summary statistics on gross domestic product (GDP) by metropolitan area in current dollars and in real chained (2009) dollars for 2001–2014 as well as quantity indexes are presented in tables 1–6 that accompany this article. More detailed statistics for metropolitan areas and the U.S. metropolitan portion can be accessed interactively on [BEA's Web site](#).

The following annual statistics are available.

- Advance statistics on current-dollar GDP by metropolitan area, real GDP by metropolitan area in chained (2009) dollars, and quantity indexes for 2014 for 22 sectors based on the North American Industry Classification System (NAICS).
- Current-dollar and real GDP by metropolitan area and quantity indexes for 2001–2013 for 22 NAICS-based sectors and for 61 NAICS-based subsectors.
- Per capita real GDP by metropolitan area for 2001–2014

E-mail gdpbymetro@bea.gov or call 202–606–5341 for further information.

The industry group was the leading contributor to growth in 28 of the 275 small metropolitan areas and in only 4 of the 106 large metropolitan areas.

Construction. This industry group subtracted 0.02 percentage point from U.S. metropolitan area real GDP growth in 2014. In addition, it subtracted from growth in 247 metropolitan areas. The largest subtractions occurred in the small metropolitan areas of Brunswick, GA (2.09 percentage points), Goldsboro, NC (1.94 percentage points), Gulfport-Biloxi-Pascagoula, MS (1.67), and The Villages, FL (1.44 percentage points).

The decline in construction was widespread across both large and small metropolitan areas. This sector subtracted from growth in 185 of 275 small metropolitan areas and in 62 of the 106 large metropolitan areas.

Government. This industry group subtracted 0.01 percentage point from U.S. metropolitan area real GDP growth in 2014. In addition, it subtracted from growth in 236 metropolitan areas. The largest subtractions were from growth in the small metropolitan areas of Jacksonville, NC (1.64 percentage points) and Hinesville, GA (1.40 percentage points).

The slowdown in the government sector was widespread across both large and small metropolitan areas. This sector subtracted from growth in 173 of the 275 small metropolitan areas and in 63 of the 106 large metropolitan areas.

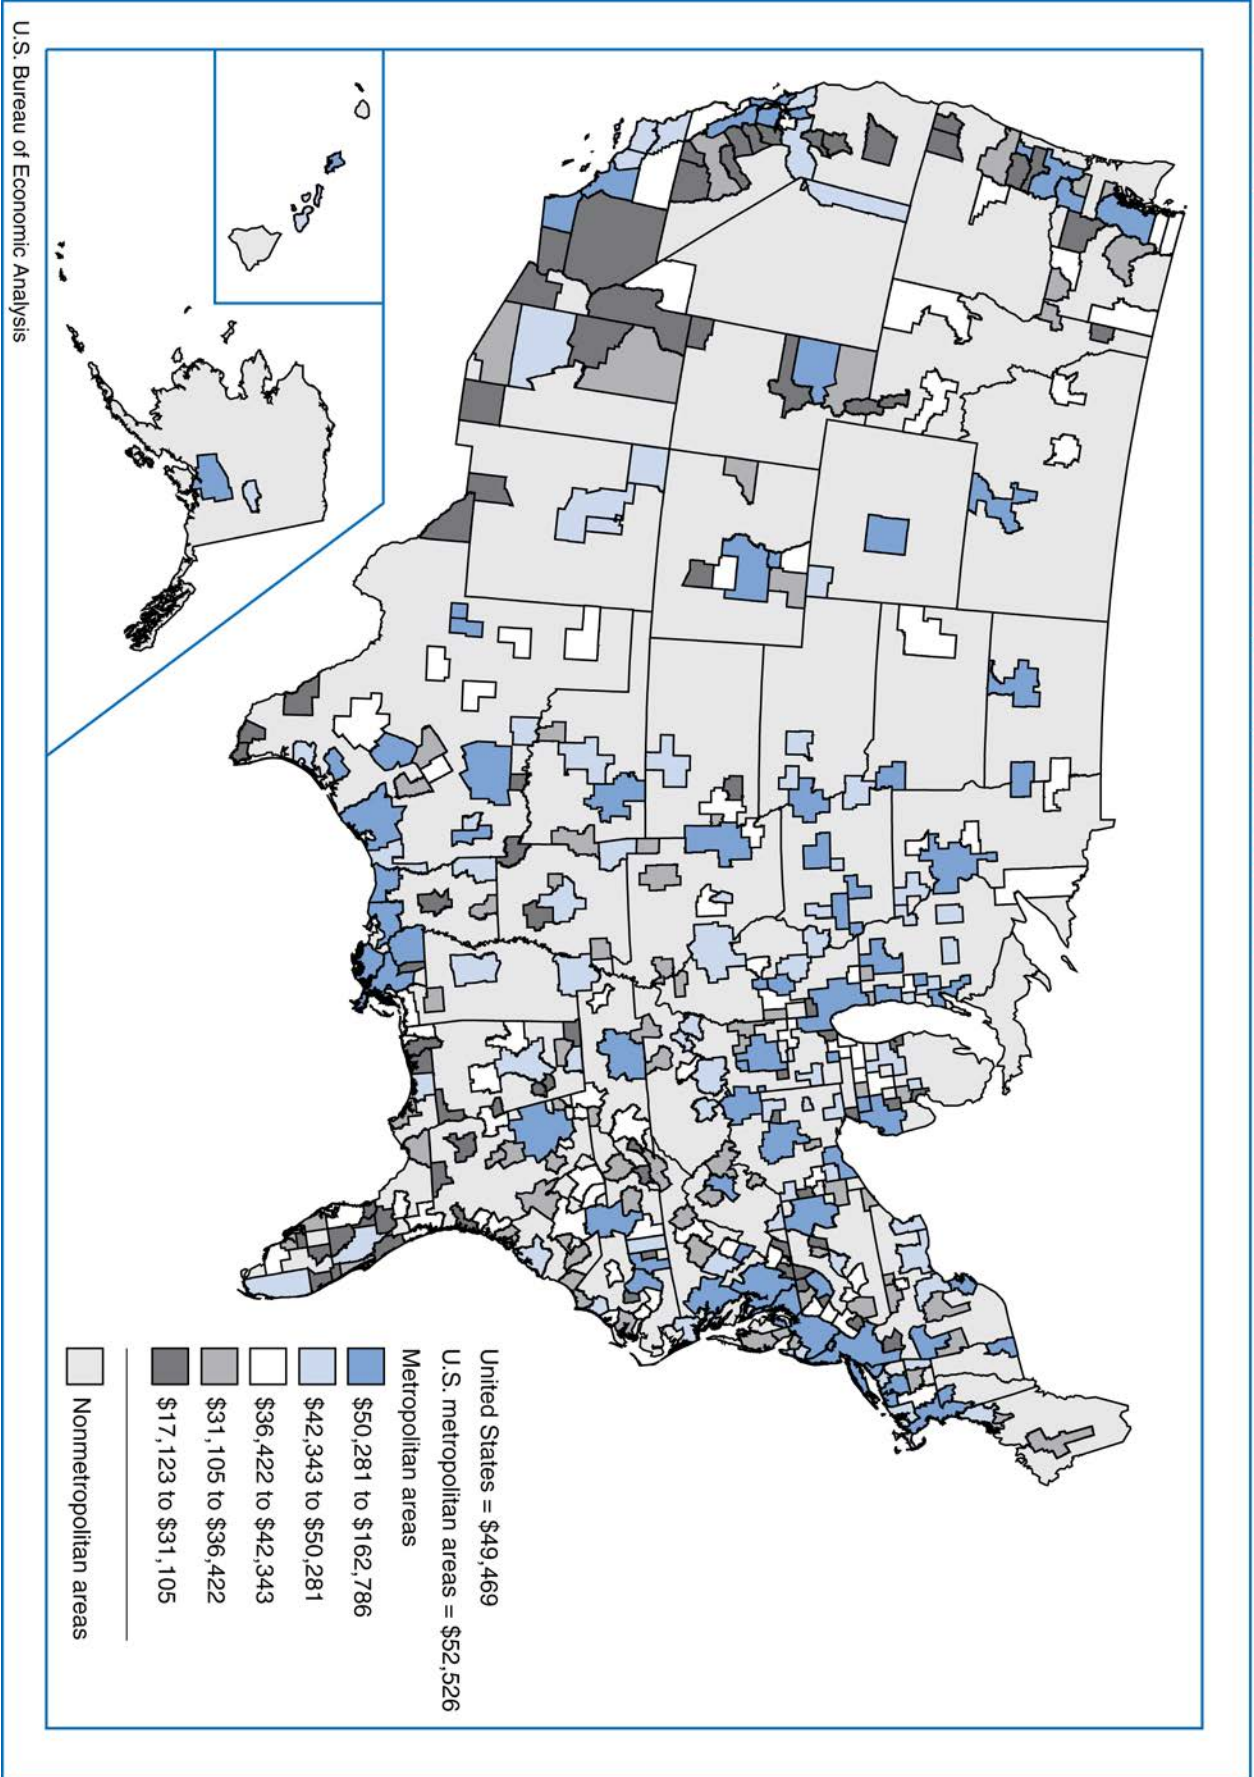

Per capita real GDP by metropolitan area

Per capita real GDP for the nation's metropolitan areas was \$52,526 in 2014, 6.2 percent higher than the national average (table 3 and chart 2).² The five metropolitan areas with the highest per capita real GDP in 2014 were Midland, TX; San Jose-Sunnyvale-Santa Clara, CA; Bridgeport-Stamford-Norwalk, CT; San Francisco-Oakland-Hayward, CA; and Casper, WY. Midland, TX, had the highest per capita real GDP in the nation at \$162,786, which was 229.0 percent higher than the national average. A strong concentration in the mining industry contributed greatly to per capita real GDP in this area.

The five metropolitan areas with the lowest per capita real GDP in 2014 were Sebring, FL; Lake Havasu City-Kingman, AZ; The Villages, FL; Punta Gorda, FL; and Homosassa Springs, FL. Sebring, FL, had the lowest per capita real GDP in the nation at \$17,123, which was 65.4 percent lower than the national average.

2. Per capita real GDP by metropolitan area was computed using Census Bureau midyear population estimates.

Chart 2. Per Capita Real Gross Domestic Product by Metropolitan Area, 2014

Revisions

The statistics on GDP by metropolitan area for 2001–2013 that were released in September 2014 have been revised. The revised statistics incorporate the annual revisions from GDP by industry (November 2014), GDP by state (June 2015), and local area personal income (March 2015).

Current-dollar statistics. The revisions to the current-dollar GDP statistics, measured as a percentage of the previously published statistics, were modest for most metropolitan areas (table 4). The mean absolute revision (MAR) was 3.7 percent for 2009–2013. The MARs were less than 4.0 percent for all metropolitan areas except Little Rock-North Little Rock-Conway, AR (9.1 percent), Longview, TX (4.8 percent), Waterloo-Cedar Falls, IA (4.8 percent), and Jonesboro, AR (4.3 percent). The revisions to the statistics for Little Rock-North Little Rock-Conway, AR, were mainly due

to revisions in information; revisions to the statistics for Longview, TX, were mainly due to revisions in nondurable-goods manufacturing; revisions to the statistics for Waterloo-Cedar Falls, IA, were mainly due to revisions in durable-goods manufacturing; and revisions to the statistics for Jonesboro, AR, were mainly due to revisions in information.

Real growth rates. The revisions to real GDP growth rates are measured as a percentage point difference from the previously published growth rate. The MAR of annual growth rates for metropolitan areas was 0.9 percentage point for 2009–2013. For 2009–2013, the MAR of annual growth rates was less than 4 percentage points for all metropolitan areas except Gulfport-Biloxi-Pascagoula, MS (4.8 percentage points) (table 5). Revisions to nondurable-goods manufacturing led to revisions in real GDP growth rates for Gulfport-Biloxi-Pascagoula, MS.

Acknowledgments

The statistics on gross domestic product (GDP) by metropolitan area were prepared by the staff of the Regional Product Division under the direction of Charles Ian Mead, Chief, Clifford H. Woodruff III, Chief of the Regional Product Branch, and Sharon D. Panek, Chief of the GDP by State Services Section. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. Contributing staff members were Frank T. Baumgardner, Jacob R. Hinson, Jeremy D. Montgomery, and Ralph M. Rodriguez.

The staff would like to thank Robert P. Tate and Albert H. Yoon of the GDP by State Goods Section for their contributions in reviewing the statistics. The staff would also like to thank Mauricio Ortiz, Chief of the Regional Income Division, John A. Rusinko, Chief of the Compensation Branch, Nicholas R. Empey, Chief of the Data and Administrative Systems Group, John D. Laffman, Callan S. Swenson, Melanie V. Carrales, and Jonas D. Wilson for their support in producing the statistics and data tables.

Tables 1–6 accompany this article.

Second quarter of 2015

States displayed three distinctive patterns of current-dollar personal income growth in the second quarter of 2015. In New York and 15 other states, personal income resumed growing in the second quarter (table A).¹ On average personal income grew 1.0 percent in these states after falling 0.4 percent in the first quarter. In California, Florida, Texas, and 13 other states, personal income growth slowed in the second quarter of 2015. On average, these states grew 0.9 percent after growing 1.3 percent in the first quarter. In Nevada, Washington, and 11 other states, personal income growth accelerated to 1.0 percent in the second quarter from 0.6 percent in the first quarter.

Overall, state personal income grew 0.9 percent in the second quarter, up from 0.8 percent in the first quarter (chart 1). Across states, second-quarter personal income growth rates ranged from zero in Oklahoma to 1.5 percent in the state of Washington.

1. State personal income, which is measured in current dollars, is the sum of net earnings by place of residence, property income, and personal current transfer receipts. Quarterly estimates in dollars are expressed at seasonally adjusted annual rates; quarter-to-quarter percent changes are not annualized.

Chart 1. Range of State Personal Income Quarterly Growth Rates

David G. Lenze prepared the report on state personal income.

Quarterly State Personal Income

For the first time, BEA is making population growth statistics available in this article (table A). Overall, population grew 0.2 percent in both quarters. Population growth rates ranged from -0.1 percent in West Virginia to 0.5 percent in North Dakota.

The inflation rate, as measured by the national price index for personal consumption expenditures, was 0.5 percent in the second quarter, compared with -0.5 percent in the first quarter.

(L) Absolute value less than 0.05 percent

In most states, including the four largest—California, Florida, New York, and Texas—property income together with personal current transfer receipts contributed more to personal income growth than net earnings (table B). Notable exceptions included the capital region (Maryland, Virginia, and the District of Columbia) and New Jersey and Washington state, where net earnings growth exceeded the combined growth of property income and transfers.

(L) Absolute value less than 0.05 percent

second quarter in 6 of the 24 industries for which BEA publishes quarterly statistics, including mining—which declined 3.6 percent—and durable-goods manufacturing—which declined 0.4 percent. This was the second consecutive decline for both industries.

Earnings declined in five states in the second quarter. In three states, North Dakota (down 0.3 percent), West Virginia (down 0.4 percent), and Wyoming (down 0.4 percent), the decline was the second consecutive decline and was concentrated in mining.² In North Dakota, for example, earnings fell in construction, manufacturing, transportation, and seven other industries, with 50 percent of the decline in mining.

Mining earnings declined 3.6 percent in the second quarter in Texas, a state which accounts for nearly half of the nation's mining earnings. However, in contrast to other major mining states, the earnings decline in Texas was offset by earnings growth in other industries, such as finance, professional services, and government, so that total earnings in Texas continued to grow. Total earnings

2. Not only did earnings fall for two consecutive quarters, state unemployment insurance (UI) benefits rose for two consecutive quarters, rising 115 percent in North Dakota, 66 percent in Wyoming, and 27 percent in West Virginia. Second-quarter earnings also declined in Oklahoma (0.5 percent) and Kansas (0.4 percent).

grew 0.2 percent in the second quarter in Texas and 0.9 percent in the first quarter.

Mining in Texas and Oklahoma is dominated by oil and gas extraction, which accounted for 75 percent or more of mining earnings in 2014 (table D). In contrast,

Table D. Composition of Mining Earnings, 2014

	United States	North Dakota	Oklahoma	Texas	West Virginia	Wyoming
Total mining earnings (billions of dollars)	183.9	3.8	17.1	90.0	3.4	3.8
	Percent of total					
Oil and gas extraction	63.4	16.9	78.8	74.8	20.7	33.4
Mining (except oil and gas)	11.7	6.2	0.9	1.2	59.6	32.6
Support activities for mining	24.9	76.9	20.3	24.0	19.6	34.0

the relatively young mining industry in North Dakota is dominated by support activities, which accounted for 77 percent of mining earnings. West Virginia's mining earnings are concentrated in mining other than oil and gas (coal, most importantly), which peaked in the second quarter of 2012, much earlier than in the other states (chart 2).

Professional services contributed the most to second-quarter earnings growth nationally, as it did in the first quarter. Earnings in professional services grew 1.5 percent in the second quarter after increasing 2.0 percent in the first quarter (table C).

Total earnings grew 1.0 percent or more in the second quarter in 4 states: Washington (1.4 percent), Nevada (1.1 percent), New York (1.0 percent), and Virginia (1.0 percent). Professional services was the largest contributor to second-quarter earnings growth in Washington and Virginia, accommodations was the largest contributor in Nevada, and in New York, finance contributed the most.

Chart 2. Mining Earnings for North Dakota, Oklahoma, Texas, Wyoming, and West Virginia

U.S. Bureau of Economic Analysis

Annual State Personal Income

As is customary in September, BEA released several sets of detailed annual statistics for the previous year: tax payments by level of government; transfer receipts by major program; a decomposition of property income into imputed and monetary components; detailed farm income and expenses; and wages, compensation, earnings, and employment for three-digit North American Industry Classification System (NAICS) industries. The new estimates are based on surveys and tabulations of administrative data. In some cases they replace previously reported averages of quarterly estimates of personal current transfer receipts and farm proprietors' income that were based on extrapolations of past trends.

Personal current transfer receipts

Personal current transfer receipts growth accelerated to 4.2 percent in 2014 from 2.5 percent in 2013 (table E). Medical benefits, which increased 6.7 percent in 2014 after rising 3.9 percent in 2013, played a major role in the acceleration as did other transfer receipts. In contrast, income maintenance benefits declined 0.9 percent in 2014, and unemployment insurance benefits declined 42.6 percent.

Most of the growth in other transfer receipts was from two components that are new for 2014: the health insurance premium assistance tax credit (\$14.8 billion) and

the cost-sharing reduction subsidies (\$5.3 billion). Both are related to provisions of the Affordable Care Act. The health insurance premium assistance tax credit is a refundable federal income tax credit for health insurance purchased through an Affordable Care Act Exchange.¹ The cost-sharing reduction subsidy, available to some recipients of health insurance premium assistance tax credits, reduces deductibles, copayments, and other out-of-pocket charges incurred while using the health insurance.

Personal current transfer receipts increased 19.2 percent in Alaska in 2014 after increasing 0.1 percent in 2013. This was the largest increase of all the states. The biggest contributor to the increase in 2014 was the Alaska Permanent Fund Dividend, which amounted to \$1,629 per person in 2014 (3 percent of per capita personal income) up from \$770 in 2013.

Detailed farm income and expenses

Farm proprietors' income fell 17.6 percent in 2014 (table F) from its record high level of \$99.3 billion in 2013. Although the value of farm production increased 2.5 percent, production expenses increased 6.9 percent. In

1. Under BEA's new accounting treatment for refundable income tax credits, the full amount of the tax credit is treated as a personal current transfer receipt rather than as an offset to personal current taxes.

Table E. Components of Personal Current Transfer Receipts, United States

Net income of corporate farms ⁴	1.0	-30.6	162	-4,931

1. Cash receipts from marketings plus value of inventory change.

2. Imputed and miscellaneous income received.

3. Including the value of inventory change of materials and supplies.

4. Including statistical adjustment.

Annual State Personal Income

addition, government payments fell 11.2 percent and other farm-related income fell 15.8 percent in 2014 after rising in 2013. The decline in government payments brought them to the lowest level since 1997. As government payments have become a smaller share of net farm income, imputed and miscellaneous income received, which includes indemnity payments (benefits) from crop insurance, has become more important (chart 3).²

More than half of the decline in farm proprietors' income in 2014 was in just five states: Illinois (\$4.2 billion), Kansas (\$2.2 billion), Minnesota (\$1.7 billion), Iowa (\$1.7 billion), and Indiana (\$1.6 billion).

Chart 3. Components of Net Farm Income, United States

² Net farm income consists of the net income of corporate farms and farm proprietors' income.

Revisions to Annual State Personal Income

The Bureau of Economic Analysis (BEA) has revised its quarterly and annual state personal income statistics. Each September, BEA typically revises the preliminary estimates released in March in order to incorporate the results of the annual revision of the national income and product accounts (NIPAs), to incorporate state source data that are more complete and more detailed than those previously available (table G), and to update the seasonal factors used for the quarterly estimates.¹

In addition, this year's annual revision introduced a set of changes in data sources and methodological improvements that were discussed in detail in the July issue of the *SURVEY OF CURRENT BUSINESS*.² They include the following:

- A new treatment of federal refundable income tax credits affects estimates of personal current transfer receipts and personal current taxes for 1976 forward.
- New journey-to-work data from the American Community Survey replace extrapolations of journey-to-work patterns from the Census of Population and affect estimates of the residence adjustment for 2002 forward.
- A more comprehensive tabulation of certain items reported on income tax returns from the Internal Revenue Service for monetary rental income of persons affects estimates for 1998 forward.
- Data from the Department of Labor for black lung disability benefits replace statistics formerly obtained from the Department of the Treasury and affect estimates for 2009 forward.
- Data from the Department of the Treasury for unemployment compensation for railroad employees and for railroad retirement and disability benefits replace statistics formerly obtained from the Census Bureau and affect estimates from 2009 onwards.
- New estimates of mid-quarter population based on data from the Census Bureau and new estimates of quarterly per capita personal income for the first quarter of 2010 forward.

1. See Stephanie H. McCulla and Shelly Smith, "The 2015 Annual Revision of the National Income and Product Accounts," *SURVEY 95* (August 2015).

2. See David G. Lenze, "Preview of the 2015 Annual Revision of the State Personal Income Accounts" in the "Regional Quarterly Report," *SURVEY 95* (July 2015).

Revisions to personal income for 1976 to 1997 were minor for every state and entailed raising personal current transfer receipts (and personal income) by the non-refundable portion of the earned income tax credit, which had formerly been an offset to personal current taxes.

Revisions for 1998–2001 were similarly small but included revisions to monetary rent as well as to personal current transfer receipts.

Revisions to personal income for 2002 and subsequent years are larger (table H). These revisions are primarily related to the introduction of new journey-to-work data for the residence adjustment; revised source data from the U.S. Department of Agriculture (which incorporated the 2012 Census of Agriculture) for 2008 forward; and new source data from the Internal Revenue Service (IRS) for income reported on 2013 income tax returns.

The largest revisions to personal income resulting from the new journey-to-work data were for Alaska (less earnings outflows), the District of Columbia (more earnings outflows) and Connecticut (more earnings inflows). The residence adjustment contributed 3.56 percentage points to the revision to Connecticut's personal income for 2014, 4.38 percentage points to the revision to Alaska's personal income, and –10.45 percentage points to the revision to the District of Columbia's personal income (table I).

The largest revisions to personal income resulting from the new USDA source data were for Nebraska, Iowa, and Idaho. Farm proprietors' income contributed 2.12 percentage points to the revision to personal income for Nebraska in 2014, 1.15 percentage points for Iowa, and –1.20 percentage points for Idaho.

The largest revisions to personal income resulting from the new IRS source data were to personal income for Alaska, North Carolina, and South Dakota. Nonfarm proprietors' income contributed –2.36 percentage points to the revision to personal income for North Carolina, –1.92 percentage points for South Dakota, and –1.40 percentage points for Alaska. Dividends, interest, and rent contributed 1.08 percentage points to the revision to personal income for Wyoming and –0.95 percentage point for Nebraska.

Revisions to Annual State Personal Income

Table G. Regional Source Data Used to Estimate State Personal Income and Personal Current Taxes

Annual estimates	
Wages and salaries by industry	
In general	QCEW wage data; MEPS employee contributions for health insurance data (certain states only).
Farm	USDA farm labor expense data.
Agriculture and forestry support activities	USDA farm labor expense data.
Rail transportation	RRB state payroll and employment data; Journey to work data from the Census of Population.
Educational services	CBP payroll data; Official Catholic Directory data.
Membership associations and organizations	CBP payroll data; RRB payroll data.
Private households	Census Bureau ACS data; Census Bureau population data.
Military	DOD personnel data; Coast Guard personnel and payroll data.
State and local government	Census Bureau Annual Survey of Public Employment and Payroll data; CES employment data.
Employer contributions for employee pension and insurance funds by industry	
Rail transportation	FRA casualties data.
State and local government	Census Bureau Annual Survey of Public Pensions contributions and membership data; actuarial data from the CAFRs for a sample of state and local government retirement systems; MEPS employee contributions for health insurance data.
All other industries	NAIC earned premium data and NASI employers cost of self insurance data; MEPS employee contributions for health insurance data.
Employer contributions for government social insurance by industry	
All industries	Census Bureau State Government Finances data; QCEW data on contributions to unemployment insurance funds; OES data on employee wage distributions; CPS industry data on hours worked.
Proprietors income	
Farm	USDA gross income and expense data; USDA ARMS corporate farm income data; Census of Agriculture livestock purchased and corporate farm income data.
Nonfarm industries	IRS data on net receipts and profits of proprietorships and partnerships.
Residence adjustment	
	ACS Journey to work data; IRS wage data.
Dividends, interest, and rent	
	USDA gross rental value of farm dwellings data; IRS income tax data on dividends, taxable interest, S Corporation distributions, and gross rents and royalties; ACS data on the aggregate value of dwellings and mobile homes; OPM federal civilian retirement payments data and DOD military retirement payments data; SSA Social Security benefits data.
Personal current transfer receipts	
	SSA data on Social Security benefits and Supplemental Security Income benefits; Census Bureau state and local government finance data on disability benefits, income maintenance benefits, and education benefits; CMS and DOD medical benefits data; DVA veterans benefits data; USDA SNAP data; USDA WIC data; IRS Refundable Earned Income Tax Credits and Child Tax Credit data; PBGC benefits data; DOL unemployment benefits data; DOE Pell Grants data; ACF TANF foster care and adoption assistance data; World Trade Center Health Registry data; DOL black lung disability benefits data; Census Bureau population data; Department of the Treasury unemployment compensation and disability benefits for railroad employees.
Employee and self-employed contributions for government social insurance	
	SSA Earnings and Employment Data for Workers Covered under Social Security and Medicare and other unpublished SSA data; California state temporary disability insurance data; Census Bureau state temporary disability insurance data; CMS supplemental medical insurance enrollment data; personal contributions for state unemployment insurance data from the states; DVA veterans' insurance premiums data.
Personal current taxes	
	IRS income tax data; Census Bureau quarterly tax collections and state tax collections data; Census Bureau state and local government finance data.
Quarterly estimates	
Wages and salaries by industry	
In general	QCEW wage data; CES employment data.
Transportation and warehousing	DOT payroll data.
Military	DOD personnel data; Coast Guard payroll data.
Personal current transfer receipts	
	DOL unemployment benefits data; CMS medical benefits data.

Personal Income in the NIPAs and State Personal Income

The level of personal income in the national income and product accounts (NIPAs) differs from the national total in the state personal income statistics because of differences in coverage and timing of the availability of source data.

The differences in coverage stem from different concepts of residence. For NIPA personal income, a U.S. resident has a center of economic interest in the country and resides, or expects to reside, in the country for a year or more. For state personal income, a resident is a participant in a U.S. regional economy, regardless of the individual's national citizenship or duration of residence.¹

In general, the NIPA measure of personal income is broader than state personal income:

- NIPA personal income includes the earnings of federal civilian and military personnel stationed abroad and the property income received by the federal retirement plans of these workers. The regional measure of personal income does not include this income.²
- NIPA personal income includes all income earned by U.S. citizens living abroad for less than a year. State personal income excludes the portion earned while an individual lives abroad.
- NIPA personal income includes the income of foreign nationals only if they live and work in the United States for a year or more. State personal income includes the income of resident foreign nationals working in the United States—including migrant workers—regardless of length of stay or residency.

The annual estimates of personal income in the NIPAs also diverge from the national totals of state personal income because of differences in the timing of the avail-

ability of source data. For example, farm proprietors' income in the NIPAs differs from farm proprietors' income in state personal income because the latter incorporates revised U.S. Department of Agriculture data that were not available until after the national estimate was released.

Both NIPA and state personal income include the income of U.S. residents employed by international organizations or by other countries while living in the United States, and both exclude the income of foreign nationals employed by their home governments. NIPA personal income also includes the income of foreign nationals working at international organizations in the United States.³ In addition, both measures exclude the income of private U.S. citizens living outside the country for a year or more.

3. For more information on the treatment of border workers in the residence adjustment, see [State Personal Income and Employment](#).

State and National Estimates of Personal Income

[Billions of dollars]

	2012	2013	2014
Personal income in the NIPAs	13,915.1	14,068.4	14,694.2
Plus adjustments for:			
Coverage differences	-14.9	-13.7	-14.0
Federal workers abroad.....	-27.0	-26.5	-27.3
Wages and salaries.....	-17.9	-17.8	-18.1

Proprietors' income.....	4.7	10.5	3.6
Personal current transfer receipts.....	<0.1	<0.1	<0.1
Statistical discrepancy ³	-0.4	-0.7	-0.7
Equals: State personal income	13,904.5	14,064.5	14,683.1

1. Employer contributions for government social insurance and for employee pension and insurance funds for Federal workers stationed abroad.

2. Investment income received by Federal retirement plans that is attributed to Federal workers stationed abroad.

3. Includes revisions made in the NIPAs that are not yet reflected in state personal income concerning wages of border workers and foreign nationals working for international organizations.

1. See [State Personal Income and Employment](#) on BEA's Web site.

2. For a description of military coverage in state personal income, see "[New Treatment of State Estimates of Military Compensation](#)," SURVEY 85 (October 2005): 116.

Data Availability

The complete set of quarterly and annual statistics on state personal income and employment for all states and the District of Columbia and for all years are available interactively on BEA's Web site.

In general, the estimates were revised for 1976 forward.

The state personal income statistics are also available through members of the BEA User Group, which consists of

state agencies and universities that help BEA disseminate the statistics in their states. A list of the BEA user groups is available on BEA's Web site.

For more information about the statistics, contact the Regional Income Division at 202-606-5360, fax 202-606-5322, or email reis@bea.gov.

Acknowledgments

The annual revision of state personal income was prepared by the Regional Income Division under the direction of Mauricio Ortiz, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a division-wide effort.

The estimates of nonfarm wages and salaries, supplements to wages and salaries, and personal current tax receipts were prepared by the Compensation Branch under the supervision of John A. Rusinko, Chief. Major responsibilities were assigned to Peter Battikha, Michael L. Berry, Elizabeth P. Cologer, John D. Laffman, David G. Lenze, Paul K. Medzerian, Tommy Wiederhold, and Joseph L. Stauffer. Contributing staff members were Terence J. Fallon, Russell C. Lusher, Elizabeth C. McCormack, Krishna J. Parajuli, and Ross A. Stepp.

The quarterly estimates of state personal income and the annual estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional Income Branch, under the supervision of Lisa C.

Ninomiya, Chief. Major responsibilities were assigned to Brian J. Maisano, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Suet M. Boudhraa, Guillaume Kasten-Sportes, Solomon Kublashvili, Enrique B. Lopez, Toan A. Ly, Nathaniel R. Milhous, W. Timothy McKeel, Linda M. Morey, Jesse E. Park, and Troy P. Watson.

The estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income were prepared by the Farm Income and Employment Section under the supervision of James M. Zavrel, Assistant to the Division Chief. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin, Michelle A. Harder, and Brooke N. Pearson.

The public use tabulations and data files were assembled and the tables were prepared by the Data and Administrative Systems Group. Major responsibilities were assigned to Jeffrey L. Newman, Michael J. Paris, and Callan S. Swenson. Contributing staff members were Melanie Carrales, Monique B. Tyes, and Jonas D. Wilson.
