1. In these descriptions, "new" indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and "revised" indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.

2. Revisions reflect the annual revision of BEA's international transactions accounts (ITAs). For more information, see Barbara Berman, Erin (Yiran) Xin, and Douglas B. Weinberg, "Annual Update of the U.S. International Transactions Accounts," *Survey of Current Business* 98 (July 2018). Additionally, revisions may reflect changes previously incorporated into the ITAs but not into the NIPAs because they affected years outside of the periods open for revision. The years impacted by the incorporation of revised ITA data are noted in the "Major source data incorporated" column.

3. The statistical discrepancy is gross domestic product (GDP) less gross domestic income (GDI); it is also the difference between gross national product (GNP) and gross national income (GNI), which is GDI plus net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GDP and GNP are estimated independently from the income-side measures of GDI and GNI.

4. CCAAdj is calculated as capital consumption allowances less consumption of fixed capital.

NOTE: For more information on the changes in definitions and in methodologies that were introduced as part of the 2018 comprehensive revision of the NIPAs, see Jason W. Chute, Stephanie H. McCulla, and Shelly Smith, "Preview of the

2018 Comprehensive Revision of the National Income and Product Accounts: Changes in Methods, Definitions and Presentations," *Survey of Current Business* 98 (April 2018).
