Results of the 2011 Flexible Annual Revision of the National Income and Product Accounts

Brent R. Moulton
Associate Director for National Economic Accounts
Bureau of Economic Analysis
July 29, 2011
BEA revises estimates each year in order to:

- incorporate most complete and reliable source data,
- provide a more detailed picture of the economy, and
- make improvements to methods used for preparing the estimates.
Period covered by revisions

- Most series, including national income and personal income, were revised for 2008–10.
- Some series, including GDP, personal consumption expenditures, and fixed investment were revised back to 2003.
- The reference year remains 2005.
- Components with revisions for 2005 resulted in revisions to the indexes and chained-dollar estimates for the entire historical time span.
- Revisions to percent changes before the first quarter of 2003 were small.
  - Affected only by rounding and interpolation.
New and revised source data

- Census Bureau surveys:
  - Annual survey of manufactures
  - Annual retail trade survey
  - Annual wholesale trade survey
  - Services annual survey
  - Construction spending (value put in place)
  - Government finances
- Bureau of Labor Statistics: wage and salary data
- Internal Revenue Service: tabulations of tax returns for corporations and for sole proprietorships and partnerships
- Office of Management and Budget: federal government budget data
- BEA: international transactions accounts

PCE: Additional improvements

- Medical and hospitalization insurance services.
  - Incorporation of annual AM Best data.
  - Allows for more frequent updates to the estimates.

- Retail control.
  - Removal of food services.
  - Improves the allocation of industry sales to PCE commodities.
**Imports of petroleum: New seasonal adjustment**

- Revised back to 2007.
- Direct seasonal adjustment of quantity data.

**Comparison of seasonal factors**

- Price data
- Quantity data
Communication equipment: Updated prices

- Impacts private fixed investment, exports, and imports of communication equipment.
- Revised back to 2003.
- Incorporate quality-adjusted Federal Reserve Board price indexes for several types of communication equipment.
PCE: Improved P&C insurance prices

- Revised back to 2008.
- New deflators based on BLS PPIs.

Price indexes for motor vehicle insurance, 2008-2011
PCE: Expanded use of QSS data

- PCE for portfolio management and investment advice services.
  - Begins with the first quarter of 2011.
  - Based on Census quarterly services survey (QSS) data on “other financial investment activities.”
Mortgage Interest Paid: Improved Methodology

- Incorporation of up-to-date monthly mortgage servicing data on actual loans
- More accurate picture of loan performance in the mortgage market
- Improved estimates of rental income of persons
- Also reflected in estimates of net interest and personal interest income
- Revised back to 2008
Government social benefits: Updated presentation

- New presentation will focus on the largest and most significant programs.
