BEA 04-56

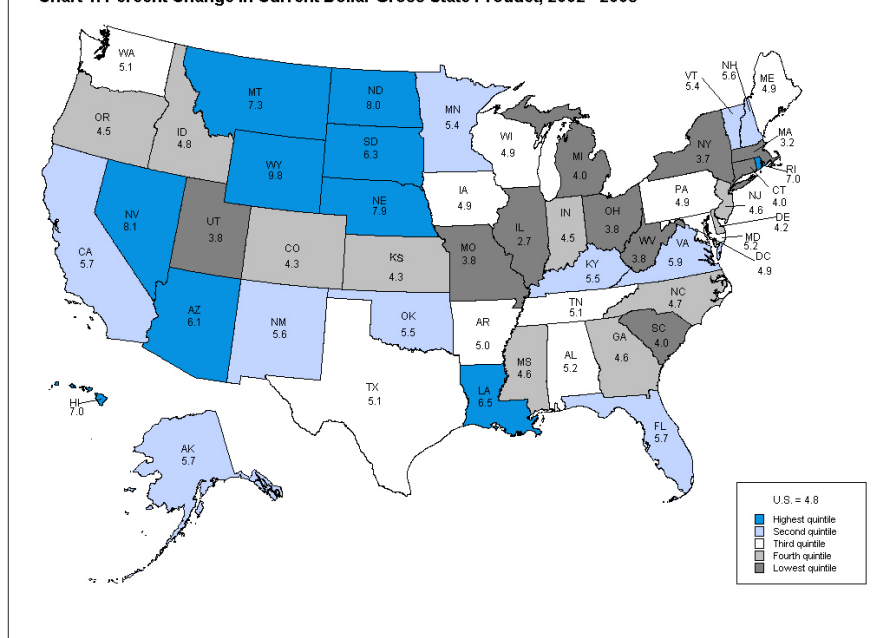

COMPREHENSIVE REVISION OF GROSS STATE PRODUCT (GSP), 1977-2002 AND ACCELERATED GSP ESTIMATES FOR 2003

The Bureau of Economic Analysis (BEA) is today releasing new and revised estimates of gross state product (GSP), the most comprehensive measure of the overall economic activity of each state. Today's release provides prototype accelerated GSP estimates for 2003 and the first GSP estimates on a North American Industry Classification System (NAICS) basis for 1998-2002.¹

Highlights for 2003

- In 2003, GSP growth accelerated in 38 states and was positive in all states.
- Most of the fastest growing states in 2003 are states that have large concentrations of farming and/or mining activity, including
 - Louisiana, Wyoming, Nevada, North Dakota, and Montana, which have large concentrations of mining activity; and
 - North and South Dakota, Montana, and Nebraska, which have large concentrations of farming activity.

Chart 1. Percent Change in Current Dollar Gross State Product, 2002 - 2003

¹ For users interested in a longer historical time series, we also are providing revised GSP estimates for 1977-97 on a Standard Industrial Classification (SIC) basis.

- For 1999-2003, the fastest growing states--those in the top growth quintile in 2003—were also generally the faster growing states throughout the period, and the slowest growing states—those in the lowest growth quintile in 2003—were generally the slow growing states throughout the period.

Industry Detail for 2002

- In 2002, all states except Louisiana and New York had positive real GSP growth. States in the highest growth quintile had strong growth in services-providing industries.
- High-tech manufacturing, in particular, computer and electronic product manufacturing, was one of the largest contributors to growth in Idaho, Arizona, Minnesota, and New Mexico for 2001-2002.

Revisions to the Estimates

- For 1998-2000, patterns of state economic growth from the revised estimates are similar to those previously published. Based on average annual growth, three states moved out of the top growth quintile into a lower quintile, while only one state moved from the bottom growth quintile.
- The industries with the largest revisions are insurance and banking, where BEA improved the measurement of output for this comprehensive revision. Revisions to these industries are relatively large in certain states.
- The revisions to total GSP for 1977-97 are small in all states, with the largest percentage revision in an economic census year in Louisiana (-2.6 percent in 1992), due mainly to improvements in methodology of the banking and insurance sectors.

Tables 1-4 show these results in more detail. All of these data are available without charge on BEA's Web site:

[<www.bea.gov>](http://www.bea.gov)

BEA is interested in your comments

This release marks the first step toward regularly providing more timely estimates of GSP by industry. More details on the 2003 prototype estimates and methodology and on this comprehensive revision of BEA's GSP estimates will appear in an article in the January 2005 issue of the Survey of Current Business, BEA's monthly journal. Given the experimental nature of the accelerated estimates, BEA is interested in your views on the proposed methodology for the estimates, the appropriate level of industry detail, and the tradeoff between accuracy and timeliness. We encourage your feedback on the value of this initiative in BEA's Strategic Plan. Please e-mail your comments to BEA's Associate Director for Regional Economics, John W. Ruser, at gspread@bea.gov

Additional Information

Estimates for 1977-2002 are provided on both a nominal and chained dollar basis, while the prototype 2003 estimates are provided on a nominal basis only. The comprehensive revisions to these estimates, which are carried out every 4 to 5 years, are an important part of BEA's regular process for improving and modernizing its accounts to keep pace with the changing U.S. economy.

The prototype 2003 GSP estimates are being released 12 months after the reference year, an acceleration of six months from the previous schedule. The 2003 estimates are based on BEA wage and salary and proprietors' income estimates released September 28, 2004 and on accelerated GDP by industry estimates released June 17, 2004. Next year, as part of its Strategic Plan goal of significantly accelerating the release of its estimates, BEA plans to release both nominal dollar and real total GSP estimates for 2004 six months after the reference year, and it plans to release NAICS sector-level accelerated GSP estimates 11 months after the reference year.
