## SUMMARY FOR SEPTEMBER.

On the whole, industrial activity in September was maintained at about the same level as in other recent months. Figures reported to this department show that, with the resumption of coal mining and the settlement of the railroad strike, there has been increased activity in many industries. Reports also indicate that the consumptive demand for merchandise has been greatly stimulated by the cooler weather and more settled conditions.

Since the settlement of the strike, bituminous coal production has remained relatively steady at about $10,000,000$ tons per week. This rate of production, while more than sufficient for current consumption, does not permit the accumulation of the necessary reserves against the demand of colder weather. Bituminous production is clearly limited by the transportation facilities. Anthracite production is averaging about $2,000,000$ tons per week and is capable of but little further expansion.

The railroad situation is becoming more and more the key to industrial activity. In addition to the shortage of cars for coal, reports indicate that the movement of crops, building material, and other products is being delayed. Freight-car loadings are the largest since the fall of 1920 . The net available sur-
plus of idle freight cars, which a few months ago amounted to hundreds of thousands of cars, has completely disappeared, and in its place the railroads report a shortage of more than 100,000 cars beyond those available to supply the demand.
Iron and steel production recovered somewhat in September from the low point reached in August, although it is not yet back to the level of a few months ago. Unfilled orders of the United States Steel Corporation continued to increase, reaching a total of $6,692,000$ tons at the end of September. The prices of all iron and steel products rose sharply last month.
Cotton consumption declined slightly in September, but the total of 495,344 bales is still above the monthly average for this year. Exports of cotton remained at an abnormally low level.
Many movements, including building construction, automobile production, and certain foodstuffs, are showing the effects of seasonal conditions.
Prices remained relatively steady, with advances in some groups offset by declines in others.

Employment conditions continued to improve. More men were employed in New York and Wisconsin state factories last month than at any time since November, 1920.

## BUSINESS INDICATORS.

BANK CLEARINGS OUTSIDE NEW YORK CITY (VALUES).

PRICE OF 25 INDUSTRIAL STOCKS.

## BUSINESS INDICATORS.

The following table gives comparative index numbers for a selected list of important business movements. It is believed that this table will prove useful, because it separates out from the large mass of material a comparatively small number of items which are often regarded as indicative of business in general.

The table has been divided into two parts, the first containing those items for which index numbers can be calculated, using 1913 as a base. The second part contains items for which comparable data back to 1913 are not available. This latter group of index numbers is calculated by letting the 1919 monthly average equal 100. Care should therefore be exercised in comparing the absolute value of the iwo sets of data. In either group, however, the upward or downward trend of the index numbers, compared to previous months, does reflect the present tendency in each item and will give a basis for business judgment.

WHOLESALE PRICE COMPARISONS.-MAXIMUM PRICE COMPARED TO PRICE IN RECENT MONTHS.
Note.-Prices to the producer on farm products are from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are from U. S. Department of Labor, Bureau of Labor Statistics, except market price of wool compiled by U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. As far as possible all quotations represent prices to the producer or at the mill. See diagram on opposite page.

WITH INDEX OF ALL COMMODITIES AT WHOLESALE

## BUSINESS CONDITIONS IN SEPTEMBER.

The following pages present a review by principal industries of the more important statistics shown in the table on the "Trend of business movements" and in the detailed tables which make up the bulk of this number. Summaries of production, stocks, sales, and price changes are also given.

## PRODUCTION.

Production on the whole remained relatively stationary during September, with advances in some commodities offset by declines in others. Furthermore, with the beginning of the fall months there was a seasonal slackening in the output of many commodities. On the basis of the number of increases or decreases in production without reference to the commodity or the extent of change, the September record is less favorable than for other recent months.

Of the 52 commodities for which September production figures are available on a 1919 base, 18 showed increases over August, 30 declined, and 4 remained the same. During the month of August, of these same commodities, 39 advanced, 12 declined, and 1 showed no change. The increases in September were largely in the foodstuffs, fuel, and metal groups, while building materials, paper, automobiles, etc., contained many declines, a large number of which are distinctly seasonal movements.

Compared with September a year ago, there were 48 advances, 3 declines, and 1 without change. The declines occurred in oleomargarine and cottonseed-oil production and in anthracite coal. Comparison with the 1919 average shows 32 advances and 20 declines.

In connection with a comparison of productive activity, it is of interest to note the figures on the per cent of full-time capacity operations so far reported for a few industries in connection with the 1921 census of manufactures. The 1921 schedule asked the manufacturers to report the per cent of full-time capacity operation on which their plants were run in 1921. These figures, weighted with the value of the products of each firm, are being averaged for each industry. Up to the time of writing reports have been issued for 26 industries, the value of whose products totaled $\$ 2,865,481,717$ in 1921 and $\$ 4,353,476,309$ in 1919. Compared to the value of all manufactured products in 1919 of $\$ 62,418,078,773$, these industries represent approximately 7 per cent of the total. Although too small to be of any particular significance, the average of the full-time capacity operation of these industries weighted with the 1921 value of their products is equal to 58.9 per cent. The table at the top of the next page gives the list of these industries mith their 1921 operating percentages and the value of their products in the two census years.

Comparison of September Production with Pre-War.
[Relative monthly production 1913=100.]

Course of Production Since 1919.
[Relative monthly production 1919=100.]

There was a further tendency for stocks to decline in September, although a number of seasonal increases occurred. Of the 42 commodities listed in the accompanying table and for which comparative figures are available back to 1919 , there were 19 increases, 22 decreases, and 1 without change. Compared to a year ago, there were 14 increases, 27 decreases, and 1 without change. Practically all building materials show very much smaller stocks than were carried a year ago.

[Taken at end of each month.]

Course of Commodity Stocks Since 1919.
[Relative stocks 1919 100.]

SAIES.
The increased demand for goods as indicated in current reports is reflected in the figures on commodity sales as reported in this bulletin. Of the 14 individual commodities listed in the accompanying table, 9 showed increased sales in September, compared with August, while 5 decreased. The commodities showing decreases in sales in September are merchant pig iron, structural steel, oak flooring, redwood lumber, and leather belting. Compared with a year ago, every one of these commodities except merchant pig iron shows a marked increase in sales.

Other distribution movements for the most part continued to maintain or to increase their recent improved condition.

1 Items based on value. 2.Relative proportion of orders to total transactions.

## PRICES.

The wholesale price index of the Department of Labor showed a drop of two points in September, bringing it to 153 , compared to 100 as the 1913 average. This decline was due entirely to the drop in the prices of fuel, particularly coal. The group of fuel and lighting declined 10 per cent during the month, while all other groups showed an increase with the exception of foods and chemicals and drugs, which showed no change. The index of metals amd metal products increased 6.3 per cent and building materials rose 4.7 per cent.

Both Dun's and Bradstreet's index numbers, in which fuel and lighting have relatively little weight, showed increases for the month of September. The regrouping of the Department of Labor prices by the Federal Reserve Board shows a decrease of 2.9 per cent in agricultural products for the month; a decline of 9.6 per cent in mineral products and a total decline for all raw materials of 2.9 per cent.
The retail food price index of the Department of Labor rose one point, or to 140 in September. The quarterly figures on the cost of living compiled by the Bureau of Labor Statistics showed a decline of 0.2 per cent in the total during the third quarter of this year. The index number stands at 166.3, compared to 100 in 1913. There was an increase of 5.4 per cent in the cost of fuel and light as compared with the second
quarter and a rise of 0.1 per cent in the cost of housing. Other items declined slightly or remained stationary.

The monthly index of the cost of living compiled by the National Industrial Conference Board rose one point in September. This index number now stands at 156 , compared with 165 a year ago.
The prices of individual commodities as given on pages 4 and 5 show clearly the declines which occurred in farm products and foods, and the marked increases in metals and building materials. Of the 9 farm products on which relative prices to the producer are given, 6 declined; 2, wheat and lambs, increased; and 1, wool, showed no change in September. The decline of 20.4 per cent in the price the farmer received for potatoes and 22.1 per cent in the prices of cottonseed are particularly marked. Both declines are largely seasonal, but the former is due especially to the very large crop.

Of the 52 remaining wholesale market prices shown in the table on page 4, 27 advanced, 15 declined, and 10 remained unchanged. A month ago these same 52 commodities showed 23 advances, 20 declines, and 9 without change. The most marked increases in September occurred in pig iron, lumber, and steel beams.

## TEXTILES.

Receipts of wool at Boston in September totaled only $21,304,000$ pounds, or approximately half the amount received in August. This seasonal decline makes the September receipts the smallest for any month since last December. Total receipts so far this year are about 15 per cent greater than for the same months of 1921.

Woolen and worsted machinery showed a marked increase in activity compared to recent months. This increase occurred in all classes of machines. Prices of wool and of woolen manufactures showed little change compared with the last few months.

The Bureau of the Census is now compiling monthly figures on the mill consumption of wool exclusive of the American Woolen Co. and a few small firms who are not disposed to submit their figures voluntarily. This has necessitated omitting any comparison with monthly figures prior to 1921 , when the American Woolen Co. was reporting. Furthermore, the figures on annual consumption compiled from production, plus imports, less exports for the years 1913 to 1918, have also been omitted from the tables, since such figures are hardly comparable with the present monthly compilations. The consumption figures now being compiled are sufficient to give the general trend of this movement.

A small decline occurred in the consumption of cotton by textile mills in September, although the total of 495,344 bales is slightly above the average consumption for the preceding eight months of this year. Exports of cotton were some 95,000 bales greater than the very low record in August, but still far below what they were a year ago. September
exports amounted to 368,890 bales. The average monthly exports for the first nine months of this year have been approximately 430,000 bales. For the same period last year exports averaged 480,000 bales per month, while in the pre-war years exports averaged more than 700,000 bales per month. Thus, while domestic consumption of cotton is about on a level with the pre-war figures, exports average only about 60 per cent of the 1913 movement.

Exports and Consumption of Cotton.

Imports of cotton in the first 21 days of September, the period covered by the import record of that month, amounted to only 4,628 bales, or 68 per cent less than the comparatively low figure for August. Total imports in the first 9 months of this year have been 69 per cent larger than during the same months of 1921. Exports of cotton cloth totaled $51,302,000$ square yards in September, a slight increase over August, but less than in other recent months.

Cotron Ginned to Specified Dates.

There was a slight decline in the production of knit underwear during September according to the association report. Shipments also fell off, but orders received and unfilled orders on hand increased. Compared with a year ago, this industry is on a very much better basis. The production of fine cotton goods in New England increased somewhat in September while sales were 78 per cent greater than in August.

Silk consumption, as measured by warehouse withdrawals, totaled 34,212 bales in September, or only a little below the high record attained in August. Stocks of raw silk showed a large increase in September, with a total of 36,795 bales on hand. This is the largest holding reported since December, 1920. The New York price of raw silk increased more than 50 cents per pound in September.

## METALS.

The production of both pig iron and steel ingots recovered somewhat after the decline in August, due to the fuel situation. The September pig-iron production totaled $2,034,000$ tons, or 218,000 tons more than in August, but still below the recent peak of 2,405,000 tons reached in July. Steel-ingot production, prorated to 100 per cent, rose from 2,532,000 tons in August to 2,714,000 tons in September, but is below the maximum reached in May of $3,099,000$ tons. Ingot production, so far this year, is nearly 70 per cent ahead of the same months of 1921 , while pig-iron production is 50 per cent greater. Merchant pig-iron production increased in September, but shipments, unfilled orders, and stocks all declined.

Exports of iron and steel declined sharply in September, giving the lowest figure since the latter months of 1921. Exports so far this year are about one-third less than for the same months of 1921.

Unfilled orders of the United States Steel Corporation continued to increase in September, reaching a total of $6,692,000$ tons, or 742,000 tons more than at the end of August. The movement of iron ore through the Sault Ste. Marie Canal showed a decline of nearly $2,300,000$ tons compared with August. The prices of all iron and steel products rose sharply during September. Pig iron continued to show the largest increases. The composite figure compiled by the Iron Age showed a rise of 17 per cent over August.

Production of Pig Iron and Steel Ingots, and United States Steel Corporation's Unfilled Orders.

The production and shipments of sheets decreased in September compared with August, but sales and unfilled orders both increased.

Sales of structural steel showed a slight seasonal decline in September. The tonnage booked during that month was equivalent to 61.9 per cent of the shop capacity. Figures compiled by the Department of Commerce from 137 identical fabricators for each of the last six months indicate the recent trend in this industry. The total shop capacity of the 137 firms was equal to 218,155 tons per month. The actual sales reported were as follows:

Fabricated Structural Steel Sales.
[Reported by 137 firms with a capacity of 218,155 tons per month.]

| MONTH. | Tonnage booked. | Per cent of capacity. |
| :---: | :---: | :---: |
| April. | 188,873 | 86.6 |
| May.. | 170, 166 | 78.0 |
| June. | 151,511 | 69.5 |
| July.... | 140,829 | 64.6 |
| August. | 141,561 | 64.9 |
| September. | 135,069 | 61.8 |

Shipments of locomotives declined in September compared to the preceding months, but unfilled orders increased. There was a very large increase in the orders for domestic freight cars. According to the figures compiled by the Iron Trade Review, freightcar orders in the first 9 months of this year have totaled 126,020 , compared to only 8,000 in the corresponding months of last year.
Copper production in September totaled 95,665,000 pounds, or about 5 per cent less than in August. The August output represented the maximum production for the 21 months for which these monthly figures are available. For the 9 months of this year, copper production has totaled $677,367,000$ pounds, which is about two-thirds more than the production in the corresponding period of 1921. Exports of copper decreased in September continuing the downward movement noted last month. Total exports in September amounted to $58,167,000$ pounds.
The production of zinc increased in September, reaching the highest figure recorded since November, 1920. Stocks continued to decline, and at $37,612,000$ pounds established a new low record for recent years. Both receipts and shipments at St . Louis were less than in August. Stocks of tin also declined in September.
The prices of zinc and lead rose during September, while tin declined slightly and copper showed no significant change.

FUEL.
The resumption of bituminous mining at the beginning of September caused the output for the month to rise to $40,964,000$ tons, compared to $22,328,000$ tons in August. The September production is the largest since October a year ago except for March, when stocks were being built up in anticipation of the strike. Bituminous production has been maintained at an average of about $10,000,000$ tons a week ever since the settlement of the strike. The present rate of production is limited only by the ability of the railroads to handle the product. The production of bituminous coal in the first nine months of 1922 has amounted to $267,627,000$ tons, compared to $302,804,000$ tons in same months of 1921. Bituminous production is thus only 11.6 per cent behind last year's production; but consumption is much greater this year, and more bituminous must be used as a substitute for anthracite. The rate of production increased slightly in the first two weeks of October, due to better transportation facilities.

Coal Production.

Anthracite production increased from 161,000 tons in August to $4,979,000$ tons in September. Mining in the anthracite field was not resumed until the second week in September, consequently the output for the month is considerably below the $7,000,000$ to $8,000,000$ tons normally produced. Recent reports show that anthracite production is now averaging about $2,000,000$ tons per week. Anthracite production so far this year has amounted to only $27,178,000$ tons or 60.8 per cent less than was produced in the corresponding months last year.

Coke production, both beehive and by-product, increased in September. The total production by both processes was $2,850,000$ tons, compared to $2,333,000$ tons in August.

Exports of coal and coke showed a marked increase in September. The total for bituminous of $1,175,000$ tons is the largest for any month of this year except March.

Prices of coal and coke were slightly lower in September, and since the 1 st of October still greater recessions have occurred. The weighted mine average price, compiled by the Coal Age from 14 representative fields, reached its maximum of $\$ 6.73$ per ton the last of July. Since that time this price has declined to $\$ 4.19$ in the last week of October. Before the strike this mine average price was about $\$ 2.20$. The success of the measures adopted to control the price of coal during the strike may be judged from the fact that in August, 1920, the mine average price rose to above $\$ 9.50$, while during the recent strike, with supply conditions infinitely worse, the maximum reached was $\$ 6.73$.

The production of crude petroleum in September amounted to $45,246,000$ barrels, a slight decline, com-
pared with the four preceding months. Production so far this year has exceeded the corresponding months of 1921 by about $50,000,000$ barrels, or nearly 15 per cent. September consumption amounted to 49,610 ,000 barrels, compared to 50,141,000 barrels in August. Stocks of crude petroleum again increased, and at $273,264,000$ barrels represents a new high mark. The price of Kansas-Oklahoma crude remained unchanged at $\$ 1.25$ per barrel, which is 50 per cent less than the price in the early months of this year.

Production, Consumption, Imports, and Stocks of Petroleum.

The production of gasoline in August, the latest month available, totaled $549,958,000$ gallons, or $20,000,000$ gallons less than the high mark reached in July. Gasoline consumption made a large increase, and at 583,688,000 gallons in August marks the largest figure so far recorded for this movement. Gasoline stocks declined and were nearly $200,000,000$ gallons below the peak reached last April. Exports of gasoline declined in August but rose again in September.

The production of kerosene during August amounted to $184,383,000$ gallons, a decline of about 6 per cent, compared to the relatively high figure recorded in

July. Stocks declined nearly $30,000,000$ gallons during August. The production of both lubricating oil and gas and fuel oil also declined in August.

> Stocks of Petroleum as Reported and as Translated into Days' Supply.

## PAPER AND PULP.

The production of newsprint paper declined in September from the high point reached in August. Howerer, the output of 125,402 tons is considerably above the average and is far ahead of any month of last year. Shipments totaled 126,494 tons, while consumption by publishers increased nearly 10 per cent over August. Stocks showed little change. There was a slight increase in the spot market price, while contract prices showed a small decline.
Paper purchases by printers were considerably heavier in August than in the preceding months. Printing activity was also greater.
A further increase occurred in the production of corrugated board for paper box containers, compared with preceding months. The production of solid fiber board declined slightly. In the folding box and label industries declines occurred in both production and new orders, although these movements were on a much higher level than a year ago.

## AUTOMOBILES.

The production of automobiles and trucks declined in September, compared to preceding months. The production of passenger cars totaled 186,562 , the lowest figure recorded since March. Truck production dropped from 24,200 in August to 18,843 . The maximum monthly production for the year was recorded in June, with totals of 263,027 passenger cars and 25,984 trucks. The September drop was partly sea-
sonal and partly due to the closing of the Ford factory for a part of the month because of fuel shortage.

## BUILDING OPERATIONS.

The cost of building construction continued to rise during September. The price of building material to contractors as reported to the Department of Commerce from some 50 cities showed further increases during the month. The index number for the cost of material in a six-room frame house rose from 189 in August to 193 in September. For a six-room brick house the index of material costs rose from 193 to 197. In November, 1921, these index figures were 166 and 173 for a frame and brick house, respectively. In both instances the average cost for 1913 is taken as 100. The index number of the cost of a standard concrete factory building as compiled by the Aberthaw Construction Co. rose from 190 in August to 192 in September. This latter index includes not only cost of material, but also the cost of labor. A year ago the index of the cost of a concrete factory building stood at 160, compared to an index number of 265 when building costs were at their peak in July, 1920.

Volume of Building Contracts Awarded, by Classes.

Contracts awarded for building construction in the 27 northeastern cities showed a seasonal decline in September, both in amount of floor space and in the total cost. The total floor space included in the contracts awarded in September amounted to $44,275,000$ square feet, compared with $54,019,000$ square feet in August. The total floor space in contracts awarded during the first nine months of 1921 has amounted to $440,589,000$ square feet, an increase of 61 per cent over the corresponding months of 1921. The total value of contracts awarded in September was $\$ 271,493,000$, a decline of about $\$ 50,000,000$ from the total for August. Contracts awarded for residential buildings were approximately the same both in floor space and value in August and September. Contracts for industrial buildings showed a marked decrease in the latter month.

Fire losses in September, according to figures compiled by the New York Journal of Commerce, reached the highest total hitherto recorded. The total value of these losses for the month is given as $\$ 41,515,000$, or almost double the losses reported for August. Fire losses during the first nine months of 1922 have exceeded the losses in the corresponding months of last year by more than 17 per cent.

## BUILDING MATERIALS.

On the whole there was a slight decline in the production of lumber during September. The most important drop was that shown by southern pine, where the production on the basis reported in this bulletin declined from 479,138,000 feet in August to 445,258 ,000 feet in September. The production of Douglas fir showed no significant change from the preceding month, although the September total of $477,222,000$ feet was a fraction of a per cent greater than the output in August. The remaining species of lumber so far reported showed no significant change with the exception of northern pine lumber and lath. In each of these two latter items production declined nearly 20 per cent compared with August.

In most instances shipments of lumber were smaller in September than in August, due to transportation difficulties. Stocks of lumber, where reported, showed a very material increase during the past month. Mill stocks of southern pine increased approximately $90,000,000$ feet during the month, while stocks of western pine showed an increase of $125,000,000$ feet. The September price of "B" and better southern pine rose from $\$ 46.12$ per thousand feet in August to $\$ 49.45$ in September. A year ago this grade of lumber was selling at $\$ 35.79$. No. 1 common Douglas fir showed a price increase of 18 per cent in September. The present price of $\$ 19.50$ per thousand feet is almost double the price for the same grade of lumber a year ago.

The first decline reported for many months in the production of flooring occurred in September. The output of oak flooring was 13.6 per cent less than in August, while maple flooring declined 4.1 per cent. Shipments also declined in both species. Orders booked showed a significant decline in the case of oak flooring, but for maple there was a slight increase in this item. Stocks on hand showed practically no change from the preceding month.

The production of clay fire brick declined slightly in September compared with August, but the output is still greater than in any other month during the past year. Shipments increased in September and, with a total of $52,693,000$ bricks, represent the peak of this movement since the closing months of 1920 . There was a slight decline in stocks on hand, but a significant increase in new orders and in unfilled orders at the end of the month. The production of silica brick increased 33 per cent in September and establishes a new high record for this commodity since the close of 1920. The production of face brick also increased during September, although the output was not so great as in the months of May, June, and July. Shipments were smaller than in any recent month, while stocks and unfilled orders both increased.

The production of Portland cement in September amounted to $11,424,000$ barrels. This was a slight decline from the maximum output of $11,664,000$ barrels reached in August. Shipments were considerably smaller in September, while a further very marked decline occurred in stocks. The total stocks reported at the end of September amounted to only $4,723,000$ barrels, which may be compared with the maximum reported last April of $14,470,000$ barrels. The price of cement continued to increase in September, and is now higher than at any time since January, 1921.

Shipments of sanitary enamel ware declined in September with the exception of miscellaneous items. Stocks of enamel ware showed further marked seasonal declines.

Orders received for sanitary pottery, as reported by the association, increased over 19 per cent in September, compared with August. This industry appears to be on a much higher level than at any time in the past three years.

## LEATHER.

Figures compiled by the Bureau of the Census show a slight decline in the production of sole leather in September, compared to August, while the output of skivers and of oak and union harness both increased. The figures now compiled on these three movements by the Bureau of Census are not exactly comparable with the figures reported by the Tanners' Council up to and including May, 1922. The Census figures are much more complete and represent approximately the
entire industry, while the Tanners' Council figures covered only about 80 per cent. In ordęr to give some measure of the trend of these movements, index numbers for recent months have been calculated by using chain relatives. The index numbers thus represent the same percentage increases or decreases from month to month as the statistics show, but do not take account of the absolute increase due to the inclusion of more forms.

Exports of sole leather declined nearly 20 per cent, compared with August. Exports of upper leather showed no significant change. The total exports of sole leather during the first nine months of this year have exceeded the exports in the corresponding months of last year by 50 per cent, while upper leather exports have been 120 per cent greater.
Sales of leather belting declined in September from the high point reached in August. Exports of boots and shoes fell off slightly. This latter movement has been only half as large so far this year as a year ago.
Prices of hides and leather tended slightly higher in September, although the price of hemlock sole remained unchanged.

## NAVAL STORES.

Net receipts of both turpentine and rosin at the three principal points declined in September after the rise recorded in August. For the year to date the receipts of rosin have been 37 per cent greater while receipts of turpentine were 6 per cent less than a year ago. Stocks of both commodities increased in September. Stocks of rosin were slightly higher than a year ago, while stocks of turpentine were only about half as great as in September, 1921.

## OIL SEEDS.

Stocks of cottonseed showed the usual seasonal increase in September with a total quantity of 403,223 tons on hand, compared to 390,970 tons a year ago. The production of cottonseed oil in September was $98,609,000$ pounds, compared to $99,803,000$ pounds in September, 1921. Stocks of cottonseed oil were slightly larger than a year ago. The price of refined oil declined during the month.

Receipts of flaxseed at Minneapolis and Duluth were much larger than a year ago, while shipments were less. Stocks of seed declined at Minneapolis but increased at Duluth. Shipments of linseed oil were more than double this movement in August and much larger than a year ago. Shipments of linseed-oil cake showed even larger increases over the corresponding periods than in the case of oil. For the year to date both movements were below the nine months of 1921.

## CEREALS.

Exports of wheat' and flour in September were equivalent to $31,839,000$ bushels, a decrease of 18 per cent, compared with August. Exports in the first nine months of this year have been 41 per cent less than in the corresponding months of 1921. Receipts and shipmerts of wheat in the principal markets were also less in September than in August and considerably smaller than in the month of September last year. To a considerable extent a slower movement of wheat this year is due to transportation difficulties, although the unsatisfactory price has kept much of it off the market. The price of No. 1 northern wheat at Chicago declined again in September, reaching a price of \$1.13, compared with $\$ 1.37$ for the same grade of wheat a year ago. There was a slight increase in the Chicago price of No. 2 winter, but this, too, is well below the corresponding price a year ago. The price of flour at both Minneapolis and Kansas City declined in September.
Exports of corn, including meal, showed a further marked decline in September. The total exports, equivalent to $9,769,000$ bushels, were nearly 27 per cent less than the August movement. Receipts at principal markets increased during the month, although shipments were slightly less. A further increase occurred in grindings of starch and glucose manufacturers. A slight rise occurred in the Chicago price of No. 2 corn, which now stands about 10 cents a bushel more than the price prevailing a year ago.

Exports of oats, including meal, amounted to $4,870,000$ bushels in September. This is the largest export of oats recorded for any month in recent years. The export movement of oats for the nine months of this year totals $27,757,000$ bushels, which is 320 per cent greater than the exports in the corresponding months of 1921.

Exports of rye, including flour, also showed a very large increase in September, with a total equivalent to $11,163,000$ bushels. This is the largest export movement of rye recorded for any single month. Exports of barley also increased during September.

The exports of all cereals, including flour and meal as grain, were equivalent to $61,312,000$ bushels in September, compared to $60,284,000$ bushels in August and $67,642,000$ bushels in September, 1921. Measured in this way, our cereal exports so far this year are nearly 14 per cent less than in the corresponding period of 1921.

A marked seasonal increase occurred in the movement of rice during September. Receipts at mills were more than double the receipts in August. Shipments from the mills were 50 per cent greater than in the preceding month. Stocks of domestic rice in the hands of mills and dealers increased over 54 per cent in September compared with August.

## MEATS AND LIVE STOCK.

Receipts and shipments of both cattle and hogs at the primary markets were considerably larger in September than in August. This was particularly true with movements of cattle, where receipts showed an increase of over 10 per cent and shipments were approximately 20 per cent larger than in the preceding months. Shipments of stocker and feeder cattle increased 27 per cent and the total of 597,000 head may be compared with 395,000 head reported in this movement a year ago. There was a slight decrease in the number of hogs slaughtered during September, although this movement is considerably in excess of the slaughter in September a year ago. Exports of pork products declined in September. In the first nine months of this year exports of pork products have been 20.8 per cent less than in the corresponding months of the preceding year. In the same period exports of beef have declined 10.5 per cent. Storage holdings of pork declined during September and are now on approximately the same level as a year ago. There was an increase of 11 per cent in the storage holdings of beef last month. Prices of both cattle and hogs increased during September. In both instances prices are now considerably better than they were a year ago. Corn-fed cattle at Chicago were quoted in September at $\$ 10.71$ per hundred, compared with $\$ 8.38$ a year ago. Heary hogs sold last month at an average of $\$ 9.17$, compared with $\$ 7.95$ in September, 1921.

Receipts and shipments of sheep also increased during September. Stocker and feeder shipments were approximately 50 per cent greater than in August and about the same level as in September last year. Prices of sheep in Chicago declined slightly, but lambs brought the highest average price since last April.

$$
15566^{\circ}-22-2
$$

Receipts of poultry at five principal markets showed a seasonal increase of about 10 per cent in September. Cold-storage holdings of poultry declined slightly last. month.

Inspected Slaughter, Consumption, and Cold-Storage Holdings of Beef Products.

Inspected Slaughter, Consumption, Exports and ColdStorage Holdings of Pork Products.

OTHER FOODSTUFFS.
The usual seasonal decline occurred in the receipts of eggs at the principal markets. As usual, a further decline occurred in the holdings of storage eggs during September; however, storage holdings were still a million and a half cases greater than the average for this season of the year. Storage holdings of both butter and cheese also declined during the past month. Average prices were slightly higher than in August.

Exports of condensed and evaporated milk amounted to $10,549,000$ pounds in September, which is a decline of about 6 per cent below the August exports and nearly 30 per cent less than the exports in September last year.

Meltings ot raw sugar declined from 540,000 long tons in August to 313,000 long tons in September. This is a decrease of 42 per cent for the month, although total meltings so far this year have been 50 per cent greater than in the same period a year ago. Stocks of raw sugar also declined during September, while exports dropped from 89,824 tons to 12,870 tons. Prices of both raw and refined sugar declined in New York, while the average retail price reported by the Department of Labor dropped 2 per cent compared with August.

Further seasonal declines occurred in the Cuban movement of raw sugar. Stocks at the end of September were down to 341,329 tons, compared with stocks amounting to $1,183,488$ tons at the end of September last year. Exports of raw sugar from Cuba in September totaled 213,728 tons, which was nearly 40 per cent less than the exports in August, but was almost twice as large as the corresponding movement in September last year.

Imports, Meltings, and Stoces of Raw Sugar.

Beginning with July, 1922, the Bureau of the Census has undertaken to compile monthly reports on the production and stocks of sugar. Up to the time of writing, reports have been issued for the months of July and August. The accompanying table gives the more important figures from these reports. The data from refiners for the months of July and August are not strictly comparable. The July report includes returns from all refiners in the United States except Arbuckle Bros., while for the August report no returns were received either from Arbuckle Bros. or from the Federal Sugar Refining Co.

Production and Stocks of Sugar.

TOBACCO.
Production in the tobacco manufacturing industry underwent a considerable decline in all branches, as compared with August, but was still materially higher than a year ago. Exports increased and the price of Burley tobacco remained unchanged. Stocks of tobacco declined from the previous quarterly report at the end of June and were also lower than a year ago, except for cigar tobacco.

## Relative Production of Cigars, Cigarettes, and Manufactured Tobacco. <br> [Average monthly production 1913=100.]

WATER TRANSPORTATION.
Traffic through the Panama Canal in August was slightly less than the record figure for July. The total cargo movement amounted to $1,166,000$ tons, which makes August the second largest month since the canal has been in operation. The tonnage carried in American vessels showed a large increase over recent months, and at 563,000 tons was the largest for any month since the middle of 1920.

Traffic through the Sault Ste. Marie canals amounted to $10,986,000$ tons in September, a slight increase over August and $4,500,000$ tons more than the corresponding movement in September last year, but still considerably below the 1920 movement when the September tonnage totaled $12,425,000$.

Traffic on the New York State canals amounted to 281,000 tons in September, compared with 321,000 tons in August and 269,000 tons in September, 1921.

Ocean freight rates to the United Kingdom and to Europe declined in September, according to the weighted index figures compiled by the Federal Reserve Board.

Entrances and Clearances of Vessels in United States Foreign Trade, and Ships Under Construction.

RAILROAD TRANSPORTATION.
There was a further marked increase in railroad freight traffic during September. The average weekly car loadings for the month were 934,816 , which was an increase of 4.4 per cent over August. Coal loadings, which rose from an average of 98,499 cars in August to 170,512 cars in September, were largely responsible for this increase, although loadings of live stock and miscellaneous freight also increased. In September last year the average weekly total loading amounted to 840,318 cars, or almost 100,000 cars less than in September this year. In the third week of October this year total loadings exceeded $1,000,000$ cars, which, with the exception of four weeks in the fall of 1920 , is the greatest on record.

The number of surplus idle freight cars declined from 70,455 in August to only 5,843 in September. A year ago there were 172,420 idle cars, while only three months ago, at the end of June, idle cars amounted to 339,225 . In place of this surplus of cars there is a constantly increasing shortage that
can not be filled. At the end of last April the railroads reported that there were requests for only 842 cars which were not filled. At the end of August the railroads lacked 58,670 cars to meet their demands, and at the end of September this shortage had increased to 130,325 cars, an increase for the month of 122 per cent. More than half of this number consisted of box cars, while about one-fourth were coal cars.

The total operating revenue of class 1 railroads for August was $\$ 473,877,000$, an increase of about $\$ 50$,000,000 compared with August. This increase practically all occurred in freight revenue. Operating expenses in August amounted to $\$ 387,100,000$, an increase of over 22 per cent compared with July, and by far the heariest operating expense for any month of this year. The net operating income was, therefore, reduced to $\$ 52,580,000$, compared with $\$ 69,239$,000 in July, $\$ 76,594,000$ in June, and $\$ 90,160,000$ in August last year. The number of Pullman passengers carried in September was 2,990,000, representing a decline of 3.4 per cent from August, but an increase over September of last year.

## LABOR.

There was a further increase in the number of workers employed in New York and Wisconsin state factories. The total factory pay roll in New York state increased 4.5 per cent, reaching an index number of 221 , compared to 100 in 1914. Unemployment in Pennsylvania declined, reaching a new low record.

Immigration, Emigration, and Immigration Quota.

## DISTRIBUTION MOVEMENT.

Reports received during recent weeks indicate a marked and significant improvement in the demand for commodities by consumers. This has brought about a much more active condition in both wholesale and retail trade. After a lapse of many months there has been a resumption of rural buying in recent weeks. The combined sales of the two large mailorder houses showed an increase of over 21 per cent in September compared with August.

Chain-store sales also increased in September. This was particularly marked in the case of shoe chains, where a seasonal increase of over 45 per cent was noted, and in music chains, where sales increased nearly 20 per cent for the month. In practically every instance September sales this year were significantly above those in the corresponding month of last year.

Sales of Mail-Order Horses and Cbain Stores.

Department-store sales increased 21 per cent in September, with an index number of 103 for the month compared to 93 in September last year. Magazine advertising for the month of October showed another increase of nearly 20 per cent, making the total linage $1,485,000$ compared to $1,325,000$ in October last year. A corresponding seasonal increase ocatred in the September newspaper adrertising. Postal receipts increased 6.5 per cent in September.

## PUBLIC FINANCE.

The total interest-bearing debt of the United States showed a further decrease in September. The total debt at the end of the month was $\$ 22,558,000,000$, or $\$ 243,000,000$ less than the month before. Within the past twelve months the interest-bearing debt has been reduced $\$ 1,117,000,000$.

Customs receipts in September totaled $\$ 53,135,000$, compared with $\$ 39,012,000$ in August. Custom receipts so far this year have been 43.4 per cent greater than a year ago. Ordinary receipts in September totaled $\$ 454,809,000$, an increase of 110 per cent over August, due to the income-tax installment, but far less than in September last year, when receipts totaled $\$ 689,328,000$. Ordinary disbursements also increased in September and were considerably larger than a year ago. A further increase occurred in the amount of money in circulation. The per capita amount is given as $\$ 41.04$ in September, compared with $\$ 39.93$ in August and \$213.11 in September last year.

## BANKING AND FINANCE.

Debits to individual bank accounts showed a significant increase in September, both in New York City and outside. Preliminary reports indicate that still further increases will be shown by the October figures. Both debits and bank clearings were considerably higher than in the correspending month of last year.

Bills Discounted and Total Investments of Federal Reserve Banks.

Bills discounted by the Federal reserve banks showed further increases in September. The total of $\$ 420,000,000$ mily be compared with the low point of $\$ 350,000,000$ in July, $192: 2$, and with $\$ 1,403,000,000$ in September hast year. There were slight increases in the notes in cireulation and in the total reserves of the Federal reserve banks. Total deposits declined slightly, and the reserve ratio dropped from 79.2 to 78.4. A year ago this ratio stood at 69.0.

Federal reserve member bank loans and discounts increased approximately 2 per cent in September, while member bank investments declined for the first time in more than a year.
Loans anil Discorets ani, Total Invesments of Federai. Reserve Member Banks.

Interest rates on both call and time loans showed a marked increase. The rate on 60 to 90 day commercial paper rose from 3.93 per cent in August to 4.18 for September. The low point in interest rates was reached in July, when the average for time loans stood at 3.78 per cent.

Savings banks statistics from seven Federal Reserve districts showed an increase in deposits in six districts and a decline in one (Philadelphia). United States postal savings deposits showed a further decline.

## LIFE INSURANCE.

Reports compiled by the principal life insurance companies showed a further decrease of 6 per cent in the amount of new insurances written in September compared with August. The total insurance written by these companies, which represent about 77 per cent of the total insurance outstanding, has amounted to $\$ 4,620,606,000$ in the first nine months of this year. This is an increase of more than 9 per cent over the new business written in the corresponding months of 1921. The largest increase has occurred in group insurance, which for the nine months is 127 per cent greater than last year.

## BUSINESS FINANCES.

The number of failures reported for September was 1,566, a decrease of 8.6 per cent compared with August, and the smallest reported for any month in more than a year. Total liabilities amounted to $\$ 36,908,000$, which is also less than either the liabilities in the preceding month or the corresponding month a year ago.

Number of Busivess Famares ani Amount of Defavited Llablimpies.

Dividend and interest payments in September totaled $\$ 3,566,507,000$, showing a setisonal increase of over 47 per cent, compared with August. New capital issues also showed a marked increase in September compared either with the preceding month or with September last year. For the first three quarters of 1922 new capital issues have been one-third greater than in the corresponding period of 1921.

There were further increases in the prices of both industrial and railroad stocks on the New York Exchange during September. The average price of 25 industrials stood at 107.02 in September compared with 103.68 in August and 74.10 in September last year. Compared with the arerage prices in 1913 these 25 industrials now show an increase of 84 per cent, while the 25 railroad stocks average 17 per cent less than the corresponding price in 1913. Stock sales on the New York Exchange totaled 21,775,000 shares in September, an increase of 22 per cent orer August, but considerably less than the sales in the months of March to June of this year.

Bond sales on the New York Exchange showed a marked decrease compared with August. The total
sales of miscellaneous bonds amounted to $\$ 203,184,000$, a decline of nearly 9 per cent from the total in Sugust. Bond prices continued to rise according to the index numbers compiled by Dow, Jones \& Co. The combined index for prices and yield for 40 representative bonds stood at 77.47 in September, compared to 76.80 in August and $60.7 \pm$ in September last year.

Receipts of gold at the mint showed a decline of 13 per cent in September, although the total for the nime months of this year is considerably above the corresponding figure for last year. Imports of gold totaled $\$ 29,316,000$ in September, an increase of nearly $\$ 10,000,000$ over August. Imports of gold so far this year have amounted to $\$ 214,408,000$, which is 62 per cent less than the imports in the first nine months of 1921. The Rand output of gold remained practically the same as in August.

The production of silver in September amounted to $5,325,000$ fine ounces. This is a decline of 4.3 per cent, compared with the output in August, but other than that it represents the largest production for any month in almost two years. Imports of silver increased in September and for the nine months of this year are 20 per cent greater than a year ago. The price of silver increased slightly both at New York and at London.

## FOREIGN TRADE.

Exports in September were valued at $\$ 317,000,000$, an increase of nearly 5 per cent over August, but somewhat less than in September last year. Imports were reported for only the first 21 days of September-up to the time the new tariff law went into effect. During this period imports were received to the value of $\$ 232,000,000$. It is probable that from $\$ 80,000,000$ to $\$ 100,000,000$ more would be added to the September figures if they covered the full calendar month.

Foreign exchange rates declined on the average during September. The rate on sterling fell off 3 cents, while small declines occurred in Italian, Belgium, and Swiss rates. Rates for France and the Netherlands remained unchanged. Canadian exchange rose to par, while Argentine and Brazilian rates were lower. The revised index of foreign exchange compiled by the

Federal Reserve Board fell off one point, standing at 68 , compared to 100 as par.

## Imports and Exports of the United States.

*Covers only the first 21 darsin September.
TRADE OF FOREIGN COUNTRIES.
Because of the large size of this publication and the increasing amount of available domestic data, it has been decided to discontinue the tables on the trade of foreign countries with the exception of Great Britain and Canada. An understanding of the movements in these two latter countries is of particular significance to domestic trade. Those who wish to follow the trade of other foreign countries will find the figures given currently in Commerce Reports, published weekly by this department.

Trade of the United Kingdom showed a marked decline in imports in September and an increase in exports. For the nine months of 1922 British imports are 12 per cent less than a year ago, while exports are 1.4 per cent greater. Large increases have occurred in the exports of many important commodities. Coal exports so far this year are 240 per cent greater than last year. Iron and steel exports have increased over 100 per cent, while exports of textile manufactures are from 60 to 70 per cent greater.

Canadian trade declined in both imports and exports in September compared with the high record of August. Exports of canned salmon and cheese increased. Wheat exports declined from the August figure, but they are still considerably larger than a year ago.

## INDEXES OF PRODUCTION AND MARKETING.

In recent numbers of the Survey there have been published detailed discussions of certain index numbers of production and marketing dealing particularly with raw materials. The following tables give the recent figures for each of these index numbers, compared with the corresponding months of 1921. The methods of compiling these indices and the weighting factors used are discussed in detail in the issues of the Survey referred to.

## TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures, designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

August, 1922.-This column gives the August figures corresponding to those for September shown in the next column--in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending June 30, 1922.
September, 1922.-In this column are given the figures covering the month of September, or, as in the case of stocks, etc., the situation on September 30 or October 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter ending September 30 or the condition on that date. Where this column is left blank, no figures for September were available at the time of going to press (November 7).
Corresponding month, August or September, 1921.-.The figures in this column present the situation exactly a year previous to those in the "September, 1922," column (that is, generally September, 1921), but where no figures are available for September, 1922 , the August, 1921, figures have been inserted in this column for comparison with the August, 1922, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1921.
Cumulative total through latest month.- These columns set forth, for those items that can properly be cumulated, the cumulative total for the first nine months of the calendar years 1921 and 1922, respectively, except where the September, 1922, figures are lacking, in which case the cumulative total for eight months in each year is given.
Percentage increase $(+$ ) or decrease ( - ) cumulative) 1922 from 1921 . -This column shows the per cent by which the cumulated total for the first nine months of 1922 is greater $(+)$ or less $(-)$ than the total for the corresponding period of 1921.
Base year or period.-For purposes of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921 and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen.
Index numbers.-In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919, to equal 100 . If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100 . The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next.
Percentage increase ( + ) or decrease ( $(-)$ September from August.-The last column shows the per cent increase or decrease of the figure for the last month compared with the preceding month.

${ }^{1}$ Twolve months' average, November, 1920, to October, 1921, inclusive.

2 Six months' average, July to December, inclusive.
${ }_{5}^{4}$ Ten months' average, March to December, inclusive.

- Very large percentage increase.
${ }_{a a}^{a}$ Thevised. figures are recomputed to a normal capacity of the industry previously estimated at 180,000 tons, in order to make them comparable with figures compiled by the Structural Steel Society prior to April, 1922. The plant capacity, as shown by the Census Bureau summary of reporting firms, since April, is considerably higher, being 218,155 tons for 137 firms reporting in September.

${ }^{1}$ Except receipts into sight, compiled by New Orleans Cotton Exchange, and world visible supply of American cotton, compiled by Commercial and Finance Chronicle. Production estimates from U.S. Department of Agriculture, Bureau of Agricultural Economics; imports and exports from U.S. Department of Commerce, Bureau of Foreigh and Domestic Commerce; consumption and stocks at mills and warehouses from U. S. Department of Commerce, Bureau of the Census.
a These figures are for fiscal years; those following are for calendar years.
${ }^{3}$ Running bales counting round as half bales; linters are included.
4500 -pound bales.
5 Figures listed for years 1913 through 1922 represent monthly averages of cotton consumed and on hand at end of month during crop years (beginning Aug. 1 of the preceding year and ending July 31 of the year to which the figure is credited). Figures are in running bales, counting round as half bales, and do not include linters.

- These figures represent world visible supply of American cotton.
as rerted as reported eart month. 8 Covers first 21 days only, during which period the old tariff law was in effect.

1 Imports of total raw silk, unmanufactured fibers and burlap are from U.S. Department of Commerce, Bureau of Foreignand Domestic Commerce; consumption and stock
at warehnuses of raw silk are from the Silk Association of A metica, sales of elastic webbing are from the Webbing Manufacturers Exchange.
Total unmanufactured silk, including raw silk, cocoons and waste.
${ }^{3}$ Consumption figures represent withdrawals from warehouses. Note that February to December, 1920, inclusive, is used as the base period.
${ }^{4}$ Includes flax, hemp, i stle, jute, kapok, manila, New Zealand flax, sisal, etc.
${ }^{5}$ Covers first 21 days only, during which period the old tariff law was in effect

## ACTIVE TEXTILE MACHINERY.

Table 5.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.
Based on data from Government sources. ${ }^{1}$
[Base year in bold-faced type.]

${ }^{1}$ Data from U.S. Department of Commerce, Bureau of Census.
: The monthly averages are for cotton crop years (beginning Aug. 1 and ending July 31). Figures opposite any one year represent the monthly average number of active cotton spindles for the period beginning Aug. 1 of the preceding year.
${ }^{2}$ Data for 1913 collected by the National A ssociation of Wool Manufacturers.

- Reported as of the 1st of the month.

## CRUDE STEEL.

## Table 11.-INDEX NUMBERS.

## Based on data from Government and non-Government sources.

[Base year in bold-faced type; numerical data on opposite page.]

See footnotes on opposite page also.
${ }^{1}$ Yearly figures represent the monthly averages of total production of all companies as compiled annually by the $A$ merican lron and Steel Institute. The institute reports monthly production figures for 30 companies which produced 84.2 per cent of the total output of the country in 1920 and 87.5 per cent in 1921 . In order to make the monthly figures comparable, they have been calculated to a 100 per cent production on the basis of the above percentages, the 1922 figures being calculated on the 1921 average.

3 Chepts, blue, black oreel and earnings reported by . S. Steel Corporation
${ }^{3}$ Sheets, blue, black, and galvanized, reported by the National Association of Sheet and Tin Plate Manufacturers, representing almost all the independent sheet manufacturers.

- This column gives a total of pig iron and rolled products as used by the Iron Trade Review, which is comparable each month back to 1913 . column gives the total of all pig iron and rolling-mill products as compiled by the $U$. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

${ }^{8}$ Mexican petroleum shipments from the three ports, Tampico, Port Lobos, and Tuxpam, form the best current measure of Mexican oil production. These figures are compiled from those published in the Oil Trade Journal. Current month is approximate from the Wall Street Journal.
"Stocks held by refiners. less exports to the Philippine Islands.
oxpepresents production transported from field of production, does not include oil consumed at locality of production.
7 Covers first 21 days only, during which period the old tariff law was in effect.

[^8]
## HIDES AND LEATHER-_PRODUCTION AND STOCKS.

Table 25.-INDEX NUMBERS.
Based on data from Government and non-Government sources.
[Base year in bold-faced type; numerical data on opposite page.]

${ }^{1}$ Based on figures compiled by the U.S. Department of Commerce, Bureau of the Census. The data embrace returns from packers, tanners, dealers, importers, and manufacturers. As eiven in the monthly reports by the Bureau of the Census, the returns for hides and skins are expressed in numbers of hides and sins. For the above summary these have been reduced to pounds on the basis of the average weights of each class. Similarly data on leather have been converted to pounds or square feet from reports in skins, sides, backs, butts, pounds, etc.
${ }^{2}$ Prior to July, 1922, these figures were compiled by the Tannerg' Council. Since July, 1922, they have been compiled by the Bureau of the Census and for skiver and harness production represent returns from a mueh larger number of firms than reported to the Tanners' Council. Hence the figures from July, 1922 , on are not directly comparable with those for preceding months. The index numbers in Table 25 for the months after July, 1922, have been computed by chain relatives and take account of the percentage variation rather than the absolute variation in the figures. The index numbers show the trend of the industries irrespective of the change in the number of firms reporting.

## HIDES AND LEATHER-PRODUCTION AND STOCKS.

Table 26.-NUMERICAL DATA.
From Government and non-Government sources.
[Base year in bold-faced type; index numbers on opposite page.]

See footnotes on opposite page also.
*Beginning December, 1919, these statistics cover amount of harness leather "stuffed" rather than that produced, but it is stated that the variation between these items is small.
${ }^{4}$ Includes estimated production of firms outside Tanners' Council.
6 Data from the Leather Betting Exchange, and is estimated to represent from 65 to 75 per cent of the industry.
Includes skins with and without wool, but does not include weight of wool.

- Compiled by U. S. Department of Commerce, Bureau of the Census, from over 1,000 firms each month. Figures for 1919 are those reported by the Census of Manufac tures for that year.
${ }^{8}$ Preliminary figures.

${ }^{1}$ Data on production and stocks of paper at mills from Federal Trade Commission; exports from 1. . S. Demartment of Commerce, Bureau of Foreign and Domestic Commerce ( 1913 monthly average $=4,772$ tons); paper boxes from The Container Club and National Association of Corrugated and Fibre Box Manufacturers.

2 Average of last six months of Fear.
Per cent of normal operating time and left-hand production column represent 17 and 16 identical firms, respectively, as reported by The Container Club, except that or the first three of the six months of 1919 reported, two companies are omitted which do not appreciably effect the total. The figures in the right-hand production column are from 17 identical firms as reported by the National A ssociation of Corrugated and Fibre Bor Manufacturers. Noindex numbers have been calculated on these latter figures or on the per cent of operating time.
National cent of normal operating time and left-hand production column reported by The Container Club from six or seven firms. The right-hand figures are from the frms reported. No index numbers have been calculated on these latter figures or on the per cent of operating time.
b Stocks at end of year.

OTHER PAPER PRODUCTS.
Table 33.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.
From Government and non-Government sources. ${ }^{1}$
[Base year in bold-faced type.]

${ }^{1}$ Folding paper boxes and labels from the Association of Folding Rox and Label Manufacturers; said to represent approximately 60 per cent for the folding box industry and 75 per cent for the label industry. Rope paper sacks from Rope Paper Sack Manufacturers' A ssociation, said to represent approximateiy 95 per cent of the indurstry.
2 Twelve months' average, July, $^{2} 921$, to June, 1922. Numerical data not furnished by the association.

## WOOD PULP.

Table 34.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.
From Government sources. ${ }^{1}$
[Base year in bold-faced type.]

${ }^{1}$ Imports from U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce; all other data from Federal Trade Commission, except production for 1914 and 1916 from U.S. Department of Agriculiure, Forest Service.
${ }_{3}^{2}$ Import figures converted from long to short tons to agree with production and stocks
${ }_{4}$ Covers first 21 days only, during which period the old tariff law was in effect.

${ }^{3}$ Actual figures reported by about 20 mins each month to the Caifornia white and from the Northern Pine Manufacturers' Association, and includes reports from some 24 mills, both member and nommember, located chiefly in ${ }^{4}$ Northe

## PINE LUMBER.

Table 42.-NUMERICAL DATA.
From Government and non-Government sources.
[Base year in bold-faced type; index numbers on opposite page.]

See footnotes on opposite page also.
${ }^{5}$ Data computed from reports on actual production and shipments as furnished by the North Carolina Pine Association, Inc., for mills varying in number from 31 to 56 The computed figures given are obtained by first determining for a given month the per cent which the actual production is of the normal production of the identical mills reporting. This per cent is then applied to an arbitrary figure of $70,000,000$ board feet which represents the approx imate monthly average normal production of the mills which reported in 1919. A similar per cent of actual shipments to normal production is applied to the same figure to obtain the computed shipment figures. The resulting figures represent a computed production as of identical mills for each month. The figures are of the same order of magnitude as the actual reported production and ship6 Data from the rather wide varia
6 Data from $U$. $S$. Department of Labor, Bureau of Labor Statistics and represent average weekly prices for the month. The 1913 monthly average on which the index
numbers are based, is $\$ 23.04$ per thousand feet.

## LUMBER-MISCELLANEOUS SPECIES.

Table 43.-INDEX NUMBERS.
From Government and non-Government sources.
[Base year in bold-faced type; numerical data on opposite page.]

${ }^{1}$ The figures of production and shipments of Douglas fir were obtained by applying the percentage figures of actual production and shipments to normal production of reporting mills as supplied by the West Coast Lumbermen's Association to the actual production of 124 mills for May, 1920. The production in that month was 447,654,540 board feet.
${ }_{8}$ Data from U. S. Department of Labor, Bureau of Labor Statistics, and represent average weekly prices for the month. number of mills varies from 35 to 62 , but 44 is the highest number reporting since the beginning of 1920 .
${ }^{\dagger}$ Compiled by the Northern Hemlock and Hardwood Manufacturers' A ssociation, representing chiefly Wisconsin and upper Michigan mills, from actual reports of from 60 to 75 mills each month.

## LUMBER-MISCELLANEOUS SPECIES.

Table 44.-NUMERICAL DATA.
From Government and non-Government sources.
[Base year in bold-faced type; index numbers on opposite pase.]

See footnotes on opposite page also.
5 The California Redwood A ssociation has furnished to the Bureau of the Census the figures in the actual production, shipments, and orders receipted by 7 identical mills for each month of 1918, 1919, and 1920. These 7 mills represent 40 per cent of the capacity of all 1 isted mills for these years. For the first 4 months of 1921 reports were furnished from 10 mills representing $56 \%$ per cent of the capacity of all listed mills. For the remaining months of 1921 and for 1922 reports are available from 11 mills representing 71 per cent of the totallisted capacity. The actual average monthly production of the 7 reporting mills for 1918 was $14,984,000$ feet. On the basis of 40 per cent capacity of the 1918 average monthly production of all mills is computed as $37,460,000$ feet. Regarding this as normal production, there has been computed the probable production of the total red wood capacity based on the proportion which the capacity of the reporting mills bears to

6 Figures in this column represent the total cut of 10 species of umber-yellow pine, Douglas fir, hemlock, western pine, maple, redwood, birch, beech, white fir and sugar pine-representing over 70 per cent of the total cut of lumber in the United States. Annual figures for 1913 and 1914 are from actual reports to the $U$. $S$. Department of A friculture, Forest Service, and from 1915 through 1920 are computed on the basis of actual reports to the Forest Service. Monthly figures for 1920 are obtained by prorating the cut of each species as reported by the ascociations whose figures are carried in these columns to the Forest Service totals. For subsequent months prorating is done on an approximate a verage for the vears 1917 to 1920.
${ }_{7}$ Exports of lumber are from $V, S$. Department of Commerce, Bureau of Foreign and Domestic Commerce.

## SANITARY WARE.

Table 50.-NUMERICAL DATA.
From commercial and trade sources.
[Base year in bold-faced type; index numbers on opposite page.]

${ }^{1}$ Data furnished by the Enameled Sanitary Ware Manufacturers' A ssociation and said to represent approximately 98 per cent of the total output in the United States. The Association explains that orders shipped are the best current index of the industry. Orders received are likely to pyramid during periods of great activity to be followed by cancellations if the demand drops off. Stocks always increase during the winter and spring months because more efficient work at the enameling ovens can be done in cold weather and manufacturers operate at maximum capacity as long as they can finance operations and find storage capacity for the products. ${ }^{2}$ Data furnished by Sanitary Potters' A 830 ciation and include the following articles, with percentages of total orders in 1920 . Siphon jets 6.5 per cent, washdowns 54 per cent, reverse traps 4.3 per cent, small tanks 27.7 per cent, large tanks 5.2 per cent, and lavatories (not reported prior to July, 1920 ) 2.3 per cent.

## VEGETABLE AND FISH OILS.

Table 58.-NUMERICAL DATA.
From Government sources. ${ }^{1}$
[Base year in bold-faced type; index numbers on opposite page.]

${ }^{1}$ The figures given on pages 102,103 , and 104 represent the movement of certain more important vegetable and animal fats and oils, as reported quarterly hy the Bureau of the Census, Department of Commerce. The data cover factory production, factory consumption, and factory and warehouse stocks. The stock figures refer to the amount on hand at the end of each period.

## VEGETABLE OILS.

## Table 59.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.

Based on data from Government sources.
[Base years in bold-faced type.]

${ }^{1}$ Except shipments of linseed oil and cake and meal from Minneapolis Chamber of Commrece. The sources of the other data are: Imports and exports of vegetable oils from the U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cottonseed oil from the U.S. Department of Commerce, Bureau of the Census; and Oleomargarine production and consumption from the U.S. Treasury Department, Bureau of Internal Revenue.
${ }^{2}$ Includes cottonseed, corn, and linseed oils.
${ }^{3}$ These figures are for fiscal years beginning July 1.
4 The following oils areincluded: Chinese nut, cocoa butter, coconut, cottonseed, olive (inedible), olive (edible), palm, palm kernel, peanut, rapeseed, soys bean. Where certain of these are reported in gallons, they have been converted into pounds, allowing $7 \boldsymbol{3}$ pounds per gallon.
o Covers first 21 days only, during which period the old tariff law was in effect.

## CROP PRODUCTION.

1 Wheat flour production, consumption, and stocks reported by U.S. Grain Corporation, prior to July, 1920, later months from Russell's Commercial News; Visible supply of wheat and corn from Bradstreet's; Receipts and shipments of wheat and corn and receipts and visible supply (at nearest week to end of month) of oats, compiled by Chicago Board of Trade, from the Price Current-Grain Reporter; receipts of barley and rye compiled from reports of commercial organizations by Federal Reserve Board; grindings of corn by the wet process in the manufacture of cornstarch, glucose, etc., compiled by the American Manufacturers Association of Products from Corn and comprises the entire production of the United States.
tion tonsumption calculated from production, stocks, imports, and exports. Stocks represent flour in all positions, calculated from actual reports bearing a known relation to total stocks.
${ }^{3}$ Aggregate stocks in United States and Canada east of the Rocky Mountains, on nearest Saturday to end of the month.
4 At principal primary markets.
${ }^{6}$ For monthly production figures since January, 1914, see page 47 in the October, 1922 (No. 14) issue of the Survey.

[^23]

[^28]COFFEE AND TEA.
Table 76.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.
Based on data from Government and non-Government sources. ${ }^{1}$
[Base year in bold-faced type.]

${ }^{1}$ Data on coffee except imports received from the New York Coffee and Sugar Exchange, Inc., Imports of coffee and tea from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.
2 Represents total receipts at Rio and Santos.
a Represents total receipts at Rio and Santos.
4 Represents total clearances from Rio, Santos, Victoria, and Bahia.
s A bag of coffee averages 132 pounds.

- Given as of the lst day of the month.
${ }^{7}$ Covers first 21 days only, during which period the old tariff law was in effect.

See footnotes on opposite page also.
${ }^{3}$ Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.
${ }^{4}$ The Internal Revenue reports the number of large cigars, i. e., those weighing over three pounds per thousand, and the number of small cigars weighing less than the above amount. Likewise they report the number of large and stall cigarettes, the former weighing more than three pounds per thousand. Large cigars and small cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.
${ }^{5}$ Yearly figures on crop production represent the latest revised estimates as reported by the U. S. Department of Agriculture, Bureau of Agricultural Economics. The monthly figures for 1920 and 1921 are the current monthly estimates of total production.
© Partly estimated. Kentucky sales for first half year not a vailable and are estimated as equal to the sum of the sales in the other States, which is approximately the
normal proportion of Kentucky sales to the total.

${ }_{8}^{2}$ Represents tonnage of cargo carried by commorcial vessels. Yearly figures refer to fiscal years ending June 30.
4 The index of cean freight rates represents rates to 7 ports in the I nited Kingdom and a total of 17 ports for all of Europe. The index numbers are weighted by the geometric means of these rates. The weights include the relative importance of each port and also the relative importance of the 5 principal products-grain, provisions, cotton, cottonseed oil, and sack flour.

${ }^{1}$ Index numbers calculated from data collected by Federal Reserve Banks of the respective districts showing percentage changes from month to month. The percentage changes reported by Federal Reserve Banks have been converted into index numbers showing the same corresponding fercentage increase or decrease.
${ }^{2}$ 'Twelve months' average, August, 1920, to July, 1921, inclusive.

## RETAIL TRADE.

Table 89.-INDEX NUMBERS.
Based on data from commercial and trade sources. ${ }^{1}$
[Base year in bold-faced type; numerical data on opposite page.]

See footnote on opposite page.

## RETAIL TRADE.

Table 90.-NUMERICAL DATA.
From commercial and trade sources. ${ }^{1}$
[Base year in bold-faced type; index numbers on opposite page.]

1 This table is submitted in response to a demand for publication of the figures of sales of individual stores, which have been compiled from published reports. These figures represent money values of sales. On account of the tremendous increase in $J$. C. Penney Co. sales, this store is not included in our total of 10 -eent store sales given on page 134. Data on American Wholesale Corporation placed here for convenjence.

## RETAIL SALES.

Table 91.—INDEX NUMBERS.
Based on data from Government sources. ${ }^{1}$

1 Compiled by the Federal Reserve Board, Division of A nalysis and Research. Index numbers are based upon dollar values
3 With the exception of the 4 music chains which operate only locally through the West, these data include the larger mindividual chain-store systems, which in the aggregatecover practically the entire country. Approximately 10,000 unit stores are represented by the 16 grocery chains: 1,665 unit stores by the 4 five and ten cent chains; 352 unitstores by the 7 drug store chains; 2,250 unit stores by the 3 cigar chains; 210 unit stores by the 5 shoe chains; and 50 unit stores by the 4 music chains.

In calculating bases estimates are made for sales of stores in the Minneapolis and Dallas districts for the months of 1919 for which there are no reports.

## DEPARTMENT STORE STOCKS.

1 Index numbers calculated from data collected by the Federal Reserve Board in cooperation with the National Retail Dry Goods Association from about 300 department stores, showing percentage changes from month to month. The Federal Reserve Board states that the original material wasin dollar amounts, except in districts 3 , 4 , 8 , and stores, showing percentage changes from month to month. The Federal Reserve Board states that the original material was in dollar amounts, except in districts 3 , 4 , 8 , and centage changes reported by the Federal Reserve Board have been converted into index numbers which show the same corresponding percentage increase or decrease.

${ }^{1}$ Compiled by the National Industrial Conference Board, and represent retail prices on the first day of the month, except food, which is the retail food index of the U. S. Bureau of Labor Statistics for the 15th of the preceding month. Beginning with March, 1922 , all prices shown are as of the 15th of the month indicated. The index is weighted aceording to the estimated consumption of
average wage earners before the war, on the following basis: Food 43.1 per cent, shelter 17.7 per cent, clothing 13.2 per cent, fue average wage earners before the war, on the following basis: Food 43.1 per cent, shelter 17.7 per cent, clothing 13.2 per cent, fue and light 5.6 per cent, sundries 20.4 per cent.

## PRICES.

Table 99.-INDEX NUMBERS.

## Based on data from Government sources. ${ }^{1}$

[Base year in bold-faced type.]

${ }^{1}$ Wholesale prices and retail food prices from the U. S. Department of Labor, Bureau of Labor Statistics; farm prices from the U. S. Department of Agriculture, Bureaus of Agricultural ELconomics.
${ }_{2}$ The revised wholesale price index number of the U. S. Department of Labor, Bureau of Labor Statistics, is based on quotations of 404 commodities. These commodities are arranged in 9 groups as given in the table. In computing this index, the price of each commodity is weighted by multiplying it by the estimated quantity of that article marketed in the census year 1919.
the larger cities as of the index of compiled by the Bureau of Labor Statitics represents the changes in the price of 22 articles of foods as reported by retail dealers in 51 of
4 As of the 15 th of each month. Farm prices of crops represent the relative average prices to farmers of the 10 leading crops.

1 Figures for Debits to individual accounts, condition of Federal Reserve Banks, and condition of reporting member banks are from the Federal Reserve Board; Bank clearings from Bradstrects; Interest rates in New York market from the Commercial and Financial Chronicle.
${ }^{2}$ Debits of banks in about 150 of the larger clearing-house centers, covering weekly totals, the first and last weeks of the month being prorated.
${ }^{3}$ Condition as of last Wednesday of the month. Prior to April, 1921 , figures are of last Friday of month.
${ }^{4}$ Includes reports from more than 800 banks in the leading cities in the United States on condition as of last Wednesday of month. Prior to April, 1921, figures are as of last Friday of month.

6 Prior to March, 1921, net deposits were used in calculating reserve ratios.

## BUSINESS EARNINGS.

Table 111.-NUMERICAL DATA.
From commerical and trade sources. ${ }^{1}$
[Base year in bold-faced type; index numbers on opposite page.]

${ }^{1}$ Except telephone earnings, which are combined reports of 10 largest telephone companies, and telegraph earnings, which are combined reports of the Western Union and Postal Telegraph Companies, as reported to the Interstate Commerce Commission. Business failures are from Dun's Review; Dividend and interest payments, New capital issues, and New incorporations from the New York Journal of Commerce.

Represents the value of the authorized capital of new enterprises incorporated in the principal eastern states.
${ }^{2}$ Monthly data for the period 1913-1921 will be found in the October SURVEY (No. 14), page 46 .
total dividend payk dividends not separately shown for those months where such payments are reported. The total interest payments may be obtained by subtracting total dividend payments from total interest and dividend payments, monthly data of which for the period 1913 -1921 were published in the September SURVEY (No. 13),
p. 51 . It is to be $n$ oted that the total dividend and interest payments for July, 1918 , should be stated as $\$ 333,011,000$, instead of $\$ 633,011,000$. p. 51 . It is to be $n$ oted that the total dividend and interest payments for July, 1918 , should be stated as $\$ 333,011,000$, instead of $\$ 633,011,000$.

## CORPORATION STOCKHOLDERS.

Table 112.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.
Data from commercial and trade sources. ${ }^{1}$
[Base year in bold-faced type.]

1 These data showing the growth of stockholders in three prominent companies-a railroad, a public utility, and an industrial-have been furnished direct by the respective companies and represent the number of holders of common stock on their books at the end of each quarter, i. e., December figures are for Dec. 31 or Jan. 1 . a Dec. 31 figures; other quarters of 1915 not available.

## CREDIT CONDITIONS.

${ }^{1}$ Compiled by the Credit Clearing House from reports to it by manufacturers and wholesalars on items of credit facts from their ledgers concerning merchants or jobbers to whom they sell. The numerical data given above show the percentage which the number of items reported relating to orders or to creation of indebtedness bears to the total number or transactions reported. As one transaction may cover bin ordill and payments win usual on trade conditions. The year 1916 is taken as a base, as it is believed to be more nearly normat than 1919, in which orders and pasments were unusuails large and For boundaries of districts see page 159.

${ }^{1}$ Compiled by the $\boldsymbol{U} . S$. Department of Commerce, Bureau of Foreign and Domestic Commerce, and represent exports, including reexports, of merchandise only. Values are those at time of exportation in the ports of the United States whence exported, except reexports from bonded warehouses, which are expressed in their import value. ${ }^{2}$ Total for year 1917 is $\$ 3,275$. No figures for 1918 .

## GOLD AND SILVER.

Table 122.-(A) INDEX NUMBERS AND (B) NUMERICAL DATA.

## From Government and non-Government sources. ${ }^{1}$

[Base year in bold-faced type.]

1 Imports and exports of gold and silver are from the $U$. S. Department of Commerce, Bureau of Foreion and Domestic Commerce; Domestic receipts of unrefined gold production of silver by mines of Cnited States from A merican Bureau of Metal Stotistics except annual figures previous to 1921 , which are from It \& Department of Interio Geological Survey.

${ }^{1}$ Compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce, from official sources. Figures for France include lignite (averaging 66,000 tons per month in 1913). Beginning 1919, Alsace-Lorraine (averaging 203,000 tons monthly in 1919 and 264,000 tons in 1920) is included with France instead of with Germany and beginning 1920 the Saar district ( 784,000 tons per month) is similarly transferred. Upper Silesia, whose disorders were responsible for the curtailment of German production in May, 1921, was included as a whole with Germany until June, 1922 , since which time only the part of Upper Silesia allotted to Germany is included.
${ }^{2}$ One metric ton is equivalent to 2,204.6 pounds.
${ }^{2}$ Five weeks period; other months cover four weaks.

## INDEX-Continued.

Page numbers refer to data in detailed tables (pp. 48 to 182) only. Items in the table on "Trend of Business Movements" (pp. 25 to 47) and in the text are arranged in groups which should make reference easy without the necessity of an index. Note that only the page containing the index number tables is given here. Where the numerical data for these items are in a separate table, they will always be found on the page opposite the index numbers.

[^0]:    c Includes Woolworth, Kresge, McCrory, and Kress only.
    ${ }^{15}$ Cumulative for period, January to October, inclusive.

[^1]:    ${ }^{15}$ Cumulative for peried January to Oetober, inclusive.

[^2]:    ${ }^{1}$ Receipts of wool at Boston compiled by Boston Chamber of Commerce; Imports from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; consumption and quarterly stocks from U. S. Department of Agriculture, Bureau of Agricultural Economics, until April, 1922, beginning with April, 1922, compiled by $U$. $S$.
    Department of Comme-ce. Bureau of the Census.
    ${ }_{2}$ These figures have been revised to include only comparable reports each month and thus do not contain the figures for the American Woolen Company and a few small firms, for which estimates had been made in previous compilations. Stocks include wool, tops and noils.
    ${ }^{3}$ A verage of the last two quarters of 1920 .
    ${ }^{4}$ A verage of the first three quarters of 1921.
    ${ }^{5}$ Includes U.S. Government stocks.
    ${ }_{6}^{5}$ Covers first 21 days only, during which period the old tariff law was in effect.

[^3]:    Except exports of cotton cloth from the U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The figures for knit underwear are secured from the Knit-Goods Manufacturers of A merica: those relating to fine cotton goods from the Fine Cotton Goods Exchange.

    2 These figures are for fiscal years: others are for calendar years.
    ${ }^{8}$ Includes duck and other cloth, bleached, unbleached, and colored. Beginning with January, 1921, the figures are reported in square yards instead of linear yards, which probably makes the figures slightly smaller than when given in linear yards.
    4 Reported by 24 identical mills in the New Bedford district, representing about 50 per cent of this industry in New England and from 20 to 30 per cent throughout the United States.
    ${ }_{5}^{5}$ Calculated rrom reports in percentage of capacity, based on a normal production of 900,000 dozen per month. Reports on production cover from 50 to 60 mills, while for other items the reports cover from 30 to 40 mills.

    - Average for last six months of year.
    ${ }^{9}$ Nine months' average, April to December.

[^4]:    ${ }^{1}$ Prices of cotton and wool to the producer on the 1st and 15 th of each month, respectively, are weighted averages of prices received by producers throughout the United States for all grades of cotton and wool as compiled by the $U$. S. Department of Agriculture, Bureau of Agricultural Economic. All other prices are averages of weekly quotations compiled by the U. S. Department of Labor, Bureau of Labor Statistics, except wool prices from compilation by U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.
    ${ }_{2}$ The prices of cotton and wool to the producer represent a composite of all grades as they come from the farms. The market prices, especially in the case of wool. are quoted on a specific grade above the average and includes handiing and transportation charges.

[^5]:    ${ }^{1}$ Iron ore movement from the $U . S$. War Department, Engineer Corps; figures for pig-iron production (anthracite and coke, not including charcoal iron) furnished by the Iron Age; merchant pig iron by the American Pig Iron Association; Ohio foundry iron by Ohio State Foundrymen's A ssociation; wholesale prices, average of weekly quotations, from $\boldsymbol{U}$. S. Department of Labor, Bureau of Labor Statitics, except composite pig iron, which is compiled by the American Metal Market.
    Stano allowance made for seasonal variation in computing these index numbers. The figures represent about 85 per cent of the total iron ore production of the United States.
    ${ }^{3}$ Relative to 11 months' average, February-December, 1921.
    ${ }^{4}$ Represents percentages of actual to normal melt of gray iron foundries in Ohio. Prior to September, reports represent the month beginning with the 15 th day of the calendar month. September figures are for the period Sept. 15 to 30 only . Subsequent figures are for calendar months.

    - Relative to 10 months' average, March-December, 1921.

    No. 2 foundry valley; No. 2 price compled by the American Metal Market is the average price of 10 tons of iron distributed as follows: One ton each of Bessemer Valley; No. 2 foundry valley; No. 2 X foundry at Philadelphia and at Buffalo; No. 2 foundry at Clevelend and at Chicago; two tons each of basic valley and No. 2 Southern foundry, Cincinnati.

[^6]:    See footnotes on opposite page also.

[^7]:    ${ }^{1}$ India-rubber imports from U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce; wholesale prices, average weekly, from U.S. Department of Labor, Bureau of Labor Statistics; automobile shipments from National Automobile Chamber of Commerce; automobile production from U. S. Department of Commerce, Bureau of the Census.
    : Total of membership of the National Automobile Chamber of Commerce, to which are added reports from outside manufacturers, representing practically complete production. Annusl ligures represent complete production as compiled by National A utomobile Chamber of Commerce.
    d Covers first 21 days only, during which period the old tariff law was in effect.

[^8]:    1 Data furnished by the Rubber A ssociation of A merica. The number of firms has increased from 36 in November, 1920 , to a maximum of 66 in 1922 . It is stated by the Rubber A ssociation that this variation in the number of firms does not change the totals to any great degree, except for the omission of the Firestone Tire Company, beginning in September, 1921.

[^9]:    ${ }^{1}$ Data from U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce.
    2 Data from U. S. Department of Labor, Bureau of Labor Statistics, represent average monthly prices.
    Includes calf and kip, goat and kid, grain and finished splits.
    4 Represent five-year (1909-1913) monthly average imports for total hides and skins, total goatskins and total sheepskins. Calfskins and cattle hides based on four-year average, 1910-1913.

    5 Covers first 21 days only, during which period the old tariff law was in effect.

[^10]:    ${ }^{1}$ Except printing activity from United Typothefae of A merica and printing purchases and sales from American Writing Paper Company. Other data from the Federal Trade Commission, except imports and exports from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.
    ${ }_{2}$ Prior to Sept. 1, 1916, includes only paper valued at not above 2.5 cents per pound; from Sept. 1, 1916, to Apr. 24 , 1920 , not above 5 cents per pound, and from Apr. 24, 1920, to date not above 8 cents per pound.

    2 Reported by about 660 of the principal publishers.
    4 Printing activity based on productive hours reported by plants in 52 cities in 30 states, each department being weighted for the combined index number.
    5 Purchases of printing paper and sales of printed product by about 350 concerns, doing from 20 to 25 per cent of the total commercial printing business of the country.
    As the paper industry was abnormal in 1919, index numbers based on that year are not regarded as true indices; therefore 1918 was taken as a base.
    ${ }^{7}$ Covers first 21 days only, during which period the old tariff law was in effect.

[^11]:    ${ }^{1}$ Data compiled by the F. W. Dodge Co., covering small towns and rural districts as well as large cities. Prior to May, 1921, these figures covered 25 northeastern states and the District of Columbia. The states are those north and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee, and Virginia, together with portions of eastern Kansas and Nebraska. Beginning May, 1921, North Carolina and South Carolina were added to the list, but this addition is stated to have little effect upon the total.
    ${ }^{2}$ Estimates made by the F. W. Dodge Co.

[^12]:    1 Data compiled by the $F$. W. Dodge Co. covering small towns and rural districts as well as large eities, except fire losses in the Tnited states and Canada, included here forconvenience, compiled by the New York Journal of Conn:nerce. Prior to May, 1921 , the building figures covered 25 northeastern states and the District of Columbia. Thestates are those horth and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee, and Virginia, toeether with portions of eastern Karsas and Nebraska. Beginning May, 1921, North Carolina a and south Carolina were added to the list, but this addition is stated to have little effect upon the total. ${ }_{8}$ Grand totalincludes military and naral buildiugs and miscellaneous, in addition to the groups listed in this and the preceding talle (p. 83 ).

[^13]:    ${ }^{1}$ Except building material price indices, from the U. S. Department of Commerce, Burcau of Stondards, Dirision of Building and Housing and Burcau. of the Census, which is based on prices paid for material by contractors in some 60 cities of the United States. The prices are weighted by the relative importance of each commodity in the constraction of a six-room house.
    in the constraction of a six-room house. ${ }_{2}$ This index number, furnished through the courtesy of the Aberthaw Construction Co., is designed to show the relative changes in the cost of constructing a standard concrete factory building. The company believes that the year 1914 gives a normal base and that July, 1920, with an index number of 260 , represented the peak of building costs.
    , The construction cost index, computed by the Engineering News Record, is based upon the costs of steel (structural shapes, Pittsburgh base), cement (f. o. b. Chicago, axiusive of bags), lumber (southern pine, New York base), and the rates paid common labor in the steel industry. The prices are weighted on the basis of the total produc tion of steel, cement, and lumber, and the total supply of common labor.
    ${ }^{4}$ Compiled by the George A. Fuller Company, reffecting wages and material costs in New York City, originally on a 1909 relative base and converted to a 1913 base. These costs are based on buildings actually constructed by this company, as follows: Hotel building, built in 1913-14, high-grade, containing 11,500,000 cubic feet; loft office building, built in 1909 , contaming $3,647,000$ cubic feet: subdivided office building, built in 1909 , containing $8,070,000 \mathrm{cubic}$ feet
    ${ }^{5}$ Compiled by the Engineering News-Record, on the basis of contracts let as reported by this publication and its construction cost index number, based on 1913 costs.
    7 wo-mont areme, Matil and
    Data from National Botle Afanufacturers Association, based on reports of identical firms representing approximately 90 per cent of the capacity of the industry. normal capacity of 6,000 turns.
    9 Data from the $O p t i c a l$ Mfanufacturers A ssociation, representing about 60 per cent of the industry.
    10 Twelve months' average, May, 1921-April, 1922.

[^14]:    I Data on Michigan hardwoods (chiefly maple, birch, basswood, and beech) are actual figures reported by about 40 mills each month to the Michigan Hardwood Manuracturers' $A$ ssociation. The number of mills varies from 35 to 62 , but 44 is the highest number reporting since the beginning of 1920.

    2 Quarterly average.
    ${ }^{3}$ Ten months' a verage.
    ${ }^{4}$ Compiled by the Northern Hemlock and Hardwood Manufacturers' A ssociation, representing chiefly Wisconsin and upper Michigan mills. These figures represent actual reports from 60 to 75 mills each month. The hardwoods cut are mostly maple, birch, and beech.
    ${ }^{\circ}$ Compiled by A merican Walnut Manufacturers' A ssociation from reports of identical frms representing from 50 to 60 per cent of the walnut lumber industry.

[^15]:    ${ }^{\text {I }}$ Data on maple flooring (including also birch and beech) are from reports of 20 identical mills to the Maple Flooring Manufacturers' A ssociation, said to represent sbout 70 per cent of the industry; data on oak flooring from reports of the Oak Flooring Manufacturers' A ssociation, by 25 mills, said to represent about 90 per cent or the total oak flooring industry; receipts and stocks at end of month of turpentine and rosin at Jacksonville, Savannah, and Pensacola compiled from reports of Savannah Board of Trade, Jacksonvilie Chamber of Commerce, Pensacola Chamber of Commerce, and the Naval Stores Review.
    ${ }^{2}$ Monthly averages for years refer to seasons beginning April 1 .

[^16]:    ${ }^{1}$ Data on cement is from the U.S. Department of the Interior, Geological Survey, except prices, which are average of weekly prices reported by the U. S. Department of Labor, Bureau of Labor Statistics: data on abrasives compiled by the Abrasive Paper and Cloth Manufacturets' Exchange.
    ${ }^{2}$ Yearly figures represent stocks at end of year, not an average of monthly stocks, except for 1921.
    : Data compiled by the Abrasive Paper and Cloth Manufacturers' Exchange estimated to represent 90 per cent of the industry. The totals given include the sales of garnet, emery, fint, and artificial (silicon, carbide, and aluminous oxide) paper, cloth, and combinations. Figures are stated in equivalent reams, 9 by 11 inches in size. The data submitted show that in 1919 the total domestic sales were made up of the following approximate percentages: Garnet 39 , emery 8 , fint 32 , and artificial 20 per cent.

[^17]:    Except cottonseed stocks at mills from U.S. Department of Commerce, Bureau of the Census. Data on flaxseed from the Northwestern Miller.
    ${ }_{3}^{2}$ Monthly figures are totals of weekly figures with first and last weeks of month prorated.
    ${ }^{3}$ Stocks at end of week nearest the end of the month.
    Index number less than 1.

[^18]:    ${ }^{1}$ Compiled from reports of the National Wood Chemical A ssoiation to which are added reports from the principal nonmember firms. Total reports for each month vary from firms with a capacity of 3,200 cords to 4,500 cords daily; all months are therefore prorated to a daily capacity of 4,500 cords, representing about 90 per cent of the industry, on the basis of capacity reporting each month.

    2 August, 1914.
    ${ }^{2}$ Compiled from weekly wholesale quotations of 35 drugs and pharmaceutical chemicals by the Oil, Paint, and Drug Reporter.
    ${ }_{4}^{4}$ Compiled from weekly wholessle quotations of 20 essential oils by the Oil, Paint, and Drug Reporter.
    ${ }^{5}$ Compiled from weekly wholesale quotations of 40 crude botanical drugs by the Oil, Paint, and Drug Reporter.
    ${ }^{6}$ The chemical price index from Chemical and Metallurgical Eninineering includes quotations on 25 commodities selected on the basis of their importance as representing both qualitatively and quantitatively the principal branches of the chemical industry. These prices are weighted on the basis of total production plus total imports in the year 1919. The figures are averages of weekly prices.

    T Wholesale average monthly price of sulphuric acid from United States Department of Labor, Bureau of Labor Statistics.

[^19]:    1 Yearly figures represent the latest revised estimates of total production for the year as reported by the $U$. S. Department of Agriculture, Bureau of Agricultural Economics.

    2 June figures for total grains include corn as estimated on July 1.

[^20]:    ${ }^{1}$ From U. S. Department of Labor, Bureau of Labor Statistics, averages of weekly quotations.

[^21]:    ${ }^{1}$ Except receipts of hay at 11 principal markets, which are compiled from weekly reports to the Hay Trade Journal; other data compiled by U.S. Department of Agriculture, Bureau of Agricultural Economics.
    ${ }^{2}$ Oranges, lemons, and grapefruit.
    3 As of 1st of the month.

[^22]:    1 Data from U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce.
    ${ }^{2}$ Barley flour converted at 5.5 bushels to the barrel.
    Corn mealconverted at 4 bushels to the barrel.

[^23]:    15566-22-8

[^24]:    ${ }^{1}$ Exports reported by the U. S. Department of Commerce, Burcau of Forcign and Domestic Commerce; cold-storage holdings from the U. S. Department of Agriculture, Bureau of Agricultural Economics: production of beef and pork from animals slaughtered under Federal inspection reported by the U. S. Department of A griculture, Bureau of Agricultural Economics: production of beef and pork from anmals siaughtered under rederal inspection reported by the
    Bureau of A nimal Industry. Apparent consumption has been computed from the inspected slaughter plus imports less exports and the change in storage holdings. Wholesale prices are average for the month from U. S. Department of Labor, Burcau of Labor Staistics.
    2 Cold-storage holdings are distinctly seasonal. No allowance for this has been made in calculating index numbers. Figures represent storage holdings on the first day of each month.
    ${ }_{3}$ Total dressed weight slaughtered under Federal inspection, including veal with beef. The slaughter under Federal inspection, according te census figures in 1919, amounted to 68 per cent of the total number of animals slaughtered in the United States in the case of hogs and 82 per cent in the case of beef and 91 per cent for lamb.

    4 Includes meat produced under Federalinspection only.
    ${ }^{6}$ Includes bacon, ham, shoulders, lard, neutrallard, and canned, fresh, and pickled pork.
    ${ }^{6}$ Includes fresh, canned, pickled, and cured beef, and oleo oil and tallow
    $?$ Includes beef, frozen, cured, and in process of cure.
    o Includes pork, frozen, dry salt, and pickled, both cured and in process of cure, and lard.

    - Frozen lamb and mutton.

[^25]:    1 Milk receipts at Greater New York from the Milk Reporter; at Philadelphia from the Philadelphia Milk Exchange up to Jan. 1, 1922, current figures from the Interstate Milk Producers A ssociation; receipts at Boston from Massachusetts Department of Public Utilities; milk production in Minneapolis-st. Paul district from Twin City Milk Producers A ssociation; exports of condensed milk from U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce; production and stocks of condensed milk and production of ice cream from U. S. Department of A griculture, Bureau of A gricultural Economics; milk deli vered to milk plants from the Dairymen's League Cooperative $A$ ssociation, estimated to represent from 60 to 75 per cent of the milk handled in the association's territory, covering all New York State and parts of Pennsylvania, New Jersey, Connecticut, Massachusetts, and Vermont.

[^26]:    ${ }_{3}$ Receipts of milk, excluding cream, in the metropolitan area around New York City, including many large cities in New Jersey.
    Receipts of milk, including cream and condensed milk by railroad, trolley, and auto truck; figures for April and May, 1922 , do not include auto truck receipts, which amount to about $1,000,000$ quarts.
    ${ }_{5}^{4}$ Receipts of milk by rail, including cream.
    ${ }^{5}$ Production of whole milk by members of the Twin City Milk A ssociation, including most of the area within a 40 -mile radius of Minneapolis and St. Paul.
    1 Production compiled by months but issued quarterly; figures not available at time of going to press.
    1 Include bulk goods also and are given as of the first day of the month.

[^27]:    ${ }^{1}$ Data from U.S. Department of A griculture, Bureat of Agricultural Economics.
    ${ }_{2}$ Boston, New York, Philadelphia, Chicago, and San Francisco. Total of weekly figures with first and last weeks of month prorated.
    ${ }^{3}$ Includes whole milk, part skim, and full skim.
    ${ }_{5}^{4}$ Holdings on first day of month.
    ${ }^{5}$ Production compiled by months but issued quarterly; figures not available at time of going to press.

    - Average of weekly prices of creamery butter, 92 score, at Boston, New York, Philadelphia, Chicago, and San Francisco.

    1 A verage of weekly prices of American cheese, No. 1 fresh twins, at Boston, New York, Wisconsin, Chicago, and San Francisco.

[^28]:    ${ }^{1}$ Receipts, shipments and stocks at mills from Rice Millers' A ssociation, comprising movement of the whole rice erop exceept California rice. Shipments of rice through New Orleans compiled by New Orleans Board of Trade. Stocks of foreign rice in warehouses and imports and exports from U.S. Department of Commerce, Bureau of Foreion and Domestcc Commerce, atata for rough rice being reduced to the equivalent clean rice at 162 pounds of rough to 100 pounds of clean.
    ${ }_{2}$ Rough rice barrels of 162 pounds are equivalent to clean rice pockets of 100 pounds each.
    covers first 21 days only, during which period the old tariff law was in effect.

[^29]:    About two-thirds of this traffic is through the Erie Canal and one-third through the Champlain Canal. Figures for 1913 to 1921 represent monthly averages for seven months, during which the canals are usually open.

    Net ton represents 100 cubic feet internal carrying capacity after prescribed allowances for crew and engine space.
    Jenuary, 1920.

[^30]:    Data from the A merican Railway Association.
    2 At end of month, exclusive of Canadian roads. The Association reports the number of freight cars which are idle (surplus) and also the number of requests for cars which can not be filled (shortage). The difference between these two figures represents the net freight-car situation for the country as a whole. The car shortages can not ordinarily be filled from the idle cars because of the uneven geographical distribution of the latter.
    ${ }^{3}$ Includes other classes than groups listed.
    ${ }^{4}$ Total includes coke shipments in addition to commodity groups listed.
    ${ }^{6}$ Index number less than 1 . . of repairs.

[^31]:    ${ }^{1}$ Data on revenues and expenses, from the Interstate Commerce Commission, represent Class I roads, those having annual operating revenues in excess of $\$ 1,000,000$; data on ton-mile and passenger-mile operation are from the Bureau of Railway Economics; Pullman passenger traffic furnished by The Pullman Co.: express earningsare reports of the American Railway Express Co. to the Interstate Commerce Commission, to which are added reports of the Southeastern Express Co. from the time of its organization in May, 1921.
    have Net rairway operating income includes net operating revenue (equal to the difference between total operating revenue and total operating expenses) from which there
    hsve been deducted railway tax accruals, uncollectible railway revenues, equipment and joint facility rents.
    Fiscel year ending June 30, of year indica ted.
    ${ }^{4}$ These figures are from Interstate Commerce Commission reports.
    ${ }^{6}$ Deficit.

[^32]:    ${ }^{1}$ Except postal receipts in 50 selected cities reported by the $U$. S. Post Office Department. Mail-order and chain-store sales are reported directly by the companies or compiled from the Commercial and Financial Chronicle; magazine adrertising as reported by Printers' Ink; newspaper advertising compiled by New York Evening Post.
    ${ }^{2}$ Includes Sears, Roebuck \& Co. and Montgomery Ward \& Co. (details for each store shown on page 125).
    ${ }^{3}$ Includes F. W. Woolworth \& Co., S. S. Rresge Co., McCrory, and S. H. Kress \& Co. (details for each store shown on page 125).
    These figures represent the number of lines of advertising carried by the leading magazines dated for the month noted.

    - Compiledfrom 22identical cities: New York, Chicago, Philadelphia, Detroit, Clereland, St. Louis, Boston, Baltimore, Los Angeles, Buffalo, San Franclsco, Milwaukee Washington, Cincinnati, New Orleans, Minneapolis, Indianapolis, Columbus, Louisville, St. Paul, Birmingham, and Houston. For the fears 1916 to 1918 , norer orts were available for Boston, Louisville, Houston, and Columbus. The totals for those years were computedf rom the actual reports of the 18 other cities, allowing 13.85 per cent of the total to the four missing cities, the average ratio of those cities to the totalin the subsequent years.

[^33]:    1 Compiled from weekly reports to the $U . S$. Department of Labor, Employment Service, by state and municipal employment agencies. Eastern states included in the report are Connecticut, District of Columbia, Massachusetts, New Jersey, New York, and Rhode Island (Delaware, Maryland, and Pennsylvania, now reporting, are excluded to show true comparison). Central states are Ilinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, California, Colorado, Idaho, Oregon, and Washington; Montana is included beginning with March, its figures being so small as not to affect the total.

    2 One week in July estimated for South Dakota.
    : One week in Aurust estimated for Iowa and Michigan
    First two weeks in July estimated for Arkansas.
    One wreek in August estimated for Iowa and Michigan.

    - First two weeks in July estimated for Washington.

    4 Month of September for South Dakota and one week for Iowa estimated.

[^34]:    1 Data on New York state factories furnished by the New York Department of Labor; Wisconsin factories by the Wisconsin Industrial Commission, Number on pay roll, U.S.factories, from U.S. Department of Labor, Employment Service: Unemployment in Pennsylvania, estimated as of the first of the month on the basis of reliable statistics, by the Pennsylvania Department of Labor and Indusiry, Bureau of Employment: Immigration and emigration statistics from CU. S. Department of Labor, Bureau of Immigration.

    Figures represent reports from 1,648 firms in New York state employing more than one-third of the factory workers in the state.
    Inormation is from 1,428 factories, usually employing over 500 workers each.
    Includes total admitted, both immigrants and nonimmigrants.
    ${ }_{6}$ Includes total departed, both emigrants and nonemigrants.
    ${ }^{6}$ Nine months' average, March-December.

[^35]:    ${ }^{1}$ First eight columns give the revised wholesale price index numbers of the $U$. $S$. Department of Labor, Bureau of Labor Statistics, as reclassified by the Federal Reserve Board into the groupings as shown. The weights are the same as those used by the Bureau of Labor statisticz and the total of all commodities is therefore the same as the revised Department of Labor index. Dun's and Bradstret's index numbers are calculated as of the first of each month. but really refer to prices in the preceding month, the index numbers have been calculated to a 1913 base from the actual figures as published in these journals. Bradstrect's index is the sum of prices per pound of the commodities, while Dun's is weighted by the smount "annually consumed by each inhsbitant."

[^36]:    ${ }^{1}$ Data in the first three columns are original compilations of the Federal Reserve Board constructed for the purpose of international price comparisons; basic prices are obtained from trade journals and private firms and weighted according to the 1913 volume imported and exported, respectively, for "imported goods" and "exported goods." The total index number includes also goods produced, weighted by production in 1913, and goods consumed, weighted by consumption in 1913.
    ${ }^{2}$ Compiled by the London Economist; quotations on 44 commodities, mostly raw materials, unweighted.
    ${ }_{4}^{3}$ Compiled by British Government Board of Trade quotations on 150 commodities.
    ${ }^{4}$ Compiled by Bulletin de la Statistique Generale of the French Ministry of Labor and Social Welfare; quotations on 45 commodities, mostly raw materials, unweighted. ${ }^{5}$ Compiled by Prof, Bachi: quotations on 38 commodites until 1920 , thereafter 76 commodities.
    ${ }^{6}$ Compiled by the Federal Reserve Board on the same basis as their United States index for international price comparison. Detailed descriptions of these index numbers may be found in the following numbers of the Federal Reserve Bulletin: United Kingdom, February, 1922, pp. 147-153; Canada, July, 1922, pp. 801-s06; France, August, 1922, pp. 922-929; Japan, September, 1922, pp. 1052-1059.
    ${ }^{8}$ Coppide mide 47 quotations.
    ${ }^{8}$ Compiled by Neue Zuricher Zeitung as of the first of each month; quotations on 71 commodities.
    ${ }^{9}$ Compiled by the Canadian Department of Labor; quotations on 272 commodities, unweighted.
    ${ }^{11}$ Compilied by the Australian Commonvealth's Bureau of Census and Statistics; quotations on 92 commodities, weighted ly consumption.
    ${ }_{52}$ Compiled by the Indian Department of Statistics; quotations on 75 commodities.

[^37]:    I Compiled by the Association of Life Insurance Presidents. The data represent only new business that has been paid for, exclusive of revivals, increases, and dividend
    ditions. The 40 companies whase new business is included in this table had in force 77.1 per cent of the total legal reserve life insurance outstanding in the United additions. The 40 companies whase new business is included in this table had in force 77.1 per cent of the total legal reserve life insurance outstanding in the United States as of Dec. 31, 1920.

[^38]:    1 Bond price index and sales from Dow, Jones \& Co.; municipal bond yields and new issues from The Bond Buyer; and stock prices and sales from the Annalist.
    ${ }^{2}$ Prices are averages, as taken at the end of each week, of the closing prices for these stocks on New York Stock Exchange.
    ${ }^{8}$ These indices are combined from the yields of the average prices of the bonds for each day of the month, the average yields for the 10 bonds of each class being capitalized at 4 per cent to give the index.
    ${ }^{4}$ A verage market yield of bonds of 20 large cities at the first of each month.
    ${ }^{5}$ Sales by states and municipalities of new bond issues.

[^39]:    ${ }^{1}$ Compiled by the Credit Clearing House from reports to it by manufacturers and wholesalers on items of credit facts from their ledgers concerning merchants or joblers
    to whom they sell. The numerical data given above show the percentage which the number of payment items reported bears to the total number of transactions reported.
    The commodities covered by these transactions are largely textile. The year 1916 is taken as a base, as payments were abnormally high in 1919
    ${ }^{2}$ California, Oregon, and Washington.
    Arizona, New Mexico, Colorado, Utah, Nevada, Idaho, and Wyoming.

    - Montana, North and South Dakota, Minnesota, and Wisconsin
    - Kansas, Nebraska, Iowa, Missouri, Jllinois, Indiana, Kentucky, and Ohio
    - Texas, Oklahoma, Arkansas Louisiana, Mississippi, Mlabama, Tennessee, Georgia, Florida, North amd South Carolina
    ${ }^{7}$ States east of and including Pennsylvania, West Virginia, and Virginia.

[^40]:    Daily averages of noon rates for cable transtera reported to the Treasury daily by the New York Federal Reserve Bank. Average figures for the years 1914 to 1918, inclusive, where given, are weekly averages of commercial quotations from the $A$ nnalist.
    ${ }^{2}$ Parity established October, 1920. Prior to that, par value of the rupee was 32.44 cents.
    ${ }^{3}$ The foreign exchange index number recently computed by the Feedral Reserve Board is based upon the average rates of exchange for 17 countries, Germany excluded, and is here substituted for the weighted geometric average previously publ shed. The index represents the tries and is based on the total volume of imports and exports of merchandise, gold, and silver from and to each country for the preceding twelve months. The countries used in computing the index are Belgium, Denmark, England, France, Itahy, Netherlands, Norway, Spain, Sweden, Switzerland, Canada, Argentina, Brazil, Chile, China, India, and Japan. The method of computation and the reasons for the ehange are explained in detail in the Federal Reserve Bulletin for October, 1922 , page 1260 .

    4 Average value of the paper peso in 1913 .

[^41]:    Compiled by the U.S.Department of Commerce, Bureau of Forcign and Domestic Commerce, and represent imports of merchandise only. Up to and including May, 1921, import values represented "actual market value or wholesale price at the time of exportation to the United States, in the principal markets of the country from whence exported, including the value of all containers and coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchant
    dise in condition, packed ready for shipment to the United States." (Tariff act of 1913.). Beginning with June, 1921 , the import values are either the actual foreign market value, as defined above, or "the export value, including any export tax imposed by the country of exportation," whichever is higher. (Emergency tarff act of May 27,1921 .) 2 Figures for September, 1922 , include only the first 21 days of September, during which the old tariff law was in force.

[^42]:    ${ }^{1}$ Compiled from British official reports by the U.S. Department of Commerce, Bureau of Foreign and Domestic Comzrerce
    ${ }^{2}$ Figures include exports and reexports.
    ${ }^{2}$ Figures for years 1913-1919, inclusive, are in linear yards.
    1 Less than 1 per cent.
    Note.-See p. - for exchange rate on pound sterling.

[^43]:    ${ }^{1}$ Compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce, from official reports, except zinc stocks in United Kingdom, and zinc production in Belgium reported by A merican Bureau of Metal Statistics; iron and steel production in United Kingdom reported by British Federation of Iron and Steel Manu facturers; Canadian production by Department of Trade and Commerce, Dominion Bureau of Statistics.

    2 Index number less than 1.
    ${ }^{3}$ Average for 9 months, April-December.
    4 A verage for 9 months, April-Decen
    4 A long ton contains 2,240 pounds.
    ${ }_{5}$ A metric ton is equivalent to $2,204.6$ pounds.
    $15566^{\circ}$ - $22-12$

[^44]:    ${ }^{1}$ Compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce, from official sources. Canadian figures furnished direct by Dominion Depart ment of Lebour, Employment Service of Canada. The figures, except in the case of British compulsory insurance, which relate to the operations of the Government labor bureau, represent the percentage of trade-union members employed. They have been converted, by inverting, from the original figures showing percentage unemployed.

    2 December.
    3 Average of
    ${ }^{3}$ Average of quarters, March, June, September, and December.
    ${ }^{5}$ The report for December covers $6,075,755$ organized workers of whom only 97,687 or 1.6 per cent were unemployed.

[^45]:    1 Shipments of wheat, corn, and oats as reported in the Northwestern Miller. Shipments and visible supply of flaxseed as reported in the Oil, Paint, and Drug Reporter.
    Visible supply of wheat and corn in chief ports reported by Modern Miller.
    Monthly figures are totals of weekly figures with first and last week of month prorated.
    2 At end of week nearest end of the month.
    ${ }^{4}$ Ten-month average.

[^46]:    1 Java and Madura
    2 Acreage about half of normal: Summer crop only given.
    : About same as last year.

    - 1922 acreage 296,500 compared with 286,400 acres in 1921.
    *Data compiled by U.S. Department of Agriculture, Bureau of Agricultural Economics, and corrected monthly in accordance with latest avallable Information received by that department or by the Department of Commerce, Bureau of Foreign and Domestic Commerce. Countries are placed in the order in which crops are harvested.
