SUMMARY FOR AUGUST.

In spite of the serious dislocation caused by the coal and railroad strikes there was no significant recession of business activity during August. It is true that the shortage of fuel was partially responsible for the marked decline in the production of iron and steel. On the other hand, there was a large increase in the activity of many industries compared with July. The mill consumption of both cotton and silk was the largest for any month in the past two years. New high records for recent years were made in the production of many other commodities, including flooring, cement, copper, paper-box containers, gasoline, etc.

With all of the important labor difficulties adjusted for the time being, business is now making still greater progress. The rapidity with which this improvement is taking place may be judged partly from the freightcar situation. At the middle of September car loadings totaled 945,919 for the week, the largest ever recorded at this time of the year. The net available surplus of idle freight cars, which a few months ago amounted to hundreds of thousands of cars, has completely disappeared, and in its place there is an increasing shortage of cars beyond those available to supply the demand.

For the present it appears that the ability of the railroads to handle the increasing traffic is likely to

18170-22-1

be a limiting factor in our industrial movements. It is conceded that the output of bituminous coal is at present limited only by the amount of transportation which can be supplied. This, coupled with the heavy season of crop movements and the demand for building materials and for both raw and finished products of all kinds, will clearly put our transportation system to a severe test within the next few weeks.

The building industry continued to gain in August in spite of higher prices and increasing difficulties in securing material. Contracts let in the first eight months of this year were 71 per cent greater in volume than for the same period last year.

Activity on the New York Stock Exchange was greater than in July, but still less than in either of the three preceding months. Prices of both industrial and railroad stocks advanced.

August bond sales were also larger, although Liberty-Victory issues were less active. The prices of all classes of bonds continued to rise.

The level of wholesale prices in August showed no significant change, although this result in the total was brought about by marked declines in farm products, foods, etc., which were offset by corresponding increases in metals, coal, building materials, and similar products.

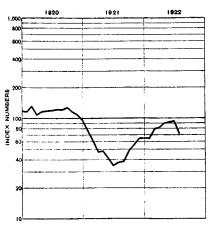

BUSINESS INDICATORS.

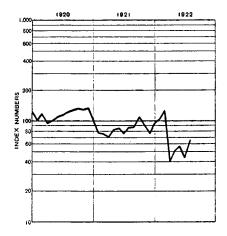

(1913 monthly average-100. See explanation on inside front cover.)

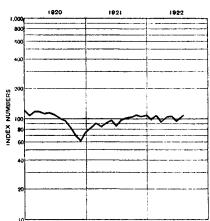

PIG-IRON PRODUCTION.

BITUMINOUS COAL PRODUCTION.

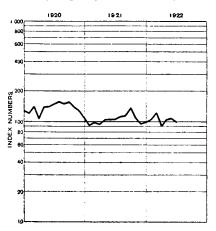

COTTON CONSUMPTION.

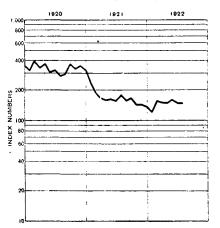

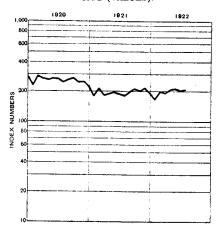

NET FREIGHT TON-MILES.

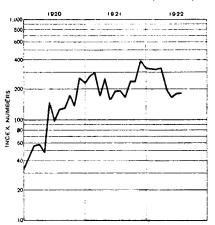

EXPORTS (VALUES).

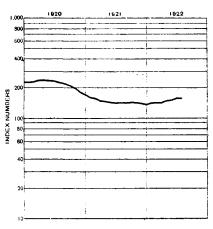

BANK CLEARINGS OUTSIDE NEW YORK CITY (VALUES).

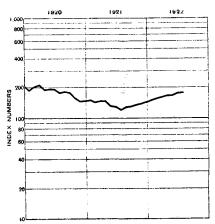

DEFAULTED LIABILITIES (VALUES).

WHOLESALE PRICES.

PRICE OF 25 INDUSTRIAL STOCKS.

BUSINESS INDICATORS.

The following table gives comparative index numbers for a selected list of important business movements. It is believed that this table will prove useful, because it separates out from the large mass of material a comparatively small number of items which are often regarded as indicative of business in general.

The table has been divided into two parts, the first containing those items for which index numbers can be calculated, using 1913 as a base. The second part contains items for which comparable data back to 1913 are not available. This latter group of index numbers is calculated by letting the 1919 monthly average equal 100. Care should therefore be exercised in comparing the absolute value of the two sets of data. In either group, however, the upward or downward trend of the index numbers, compared to previous months, does reflect the present tendency in each item and will give a basis for business judgment.

¹ Monthly prices are for the 15th of the month indicated.

* Based on the total computed production reported by 5 associations. Includes southern pine, Douglas fir, western pine, North Carolina pine, and Michigan hard and soft woods. The total production of these associations in 1919 was equal to 11,190,000,000 board feet, compared with a total lumber production for the country of 34,552,000,000 board feet reported by the census.

SEASONAL MOVEMENT OF COLD-STORAGE HOLDINGS.

The movements of many of the commodities reported in this bulletin are distinctly seasonal. This is particularly true of cold-storage holdings and makes it difficult to obtain a true interpretation of their trends from index numbers alone. The above diagrams have been prepared to assist in comparing recent months with the average seasonal variation. The heavy solid line in each diagram represents the five-year average from 1916 to 1920 for each month. The broken lines represent the index numbers on the same base for the months of 1920, 1921, and 1922.

It will be noted that the movement of case eggs in 1922 showed a smaller amount than usual in storage during the first months of the year and yet greater than was the case for the same period of 1921 but, since March, stocks have been larger than is normal for the corresponding months and, from June on, even exceeded the large stocks for the same months of 1921, a high year. The cold-storage holdings of eggs on August 1 of this year, at which time they are normally at the maximum, were about 40 per cent greater than the five-year average and almost 35 per cent greater than the holdings on August 1, 1921.

With regard to stocks of creamery butter, the early months of 1922 showed only slight variations from normal but, since August, movement into storage has not been as heavy as in previous years, with the result that, on the 1st of September, the time of maximum stocks, the index number was 199, compared with the normal for this time of the year of 214.

BUSINESS CONDITIONS IN AUGUST.

The following pages present a review, by principal industries, of the more important statistics shown in the table on the Trend of Business Movements on page 24. Summaries of production, stocks, sales, and price changes are also given.

PRODUCTION.

Productive activity made a good recovery in August after the slump experienced in July. This movement was influenced by the better demand for goods and generally increased prices. Shortage of fuel continued to retard the production of metals.

Out of 43 commodities for which August production figures are available on a 1919 base, there were 32 increases over July and only 9 decreases, while 2 index numbers remained the same. Of the 9 decreases reported, 3 occurred in the metals group. New high records since 1919 were made in August in the output of oak flooring, maple flooring, newsprint paper, cigarettes, corrugated paper boxes, and electric power, while July production (the latest available) of gasoline and of fuel oil also made new high marks. Production of copper and of cement made new high records since monthly production figures were started in these commodities in January, 1921.

Compared with a year ago, 37 commodities showed an increased output, while only 6 declined. The declines were in the coal and food groups, with the exception of shipbuilding and face brick production. Comparison with the 1919 average shows 28 increases and 15 decreases; the principal increases occurred in building materials and building equipment, while coal, coke, and metals furnished the chief declines.

COURSE OF PRODUCTION SINCE 1919.

COMPARISON OF AUGUST PRODUCTION WITH PRE-WAR.

(Relative Production 1913=100.)

STOCKS.

In spite of increasing production in August, the stocks of most commodities continued to decline, indicating a demand in excess of production and forecasting a further increase in industrial activity. Of 36 commodities for which figures on stocks at the end of August are now available, there were 13 increases and 21 decreases, with 2 commodities unchanged. 9

Almost all the construction materials and metals showed substantial decreases, the increases being largely confined to the seasonal cold-storage holdings in the foodstuff group.

COURSE OF COMMODITY STOCKS SINCE 1919.

New low records since the end of 1919 were made in raw cotton, merchant pig iron, zinc, rice, and coffee, while stocks of petroleum made a new high record. Compared with a year ago, there were 27 decreases as against only 7 increases and 2 unchanged. Outside of large increases in stocks of petroleum, sugar, and tin, the increases were confined to the cold-storage holdings of dairy products and poultry.

SALES.

The approach toward a settlement of the labor difficulties in the latter part of August undoubtedly helped to stimulate the volume of sales during that month. Although comparable data are lacking for a great many industries, the accompanying table gives relative figures on the sales of 18 individual commodities, as well as a comparison of distribution movements and the sales of services and securities.

Of the 14 individual commodities for which August figures are available, 8 showed an increase in sales volume over July, while 6 declined. In July only 2 of these 14 commodities increased, compared with June.

Compared with a year ago only one of the 14 commodifies shows a smaller volume of sales in August, 1922. Eight of these commodifies show sales greater than the average for the year 1919.

Other movements, including postal receipts, magazine advertising, and the sales of stocks and bonds, increased compared with the preceding month.

PRICES.

For the first time since last January, prices on the whole failed to make a significant rise compared with the preceding month. Both the wholesale index of the Department of Labor and Bradstreet's index registered no change in August compared with July, while Dun's index declined one point. There were marked increases in the prices of fuels, metals, and building materials, but these were offest by declines in other groups, particularly farm products and foods. The decline in the price of farm products was particularly marked. The price index number of farm crops as compiled by the Department of Agriculture fell from 118 in July to 114 in August and the live stock index dropped from 119 to 112 in the same period.

The regrouping of the Department of Labor prices by the Federal Reserve Board shows that notwithstanding the decline in farm products there was an actual although slight increase in the average prices of raw materials in August. Producers' goods remained unchanged, while consumers' goods declined. The weighted index for all commodities remained unchanged at 155 compared with 142 in August last year and 138 at the low point reached in January.

The retail food index of the Department of Labor declined from 142 in July to 139 in August, which marked the same low point for this index as reached last March.

The prices of individual commodities as given in the table and chart on pages 4 and 5 show clearly the declines which occurred in the groups of farm products and foods. Metals, building materials, and coal all showed significant increases. Of the 60 commodities for which comparisons are given, 27 showed decreases, 24 increased, and 9 remained the same as in July. The largest increase for any of the commodities listed was shown by pig iron which rose 23.9 per cent, followed by bituminous coal with an increase of 23.3 per cent. The greatest decline in the price of any commodity quoted occurred in petroleum which registered a drop of 35 per cent during the month.

TEXTILES.

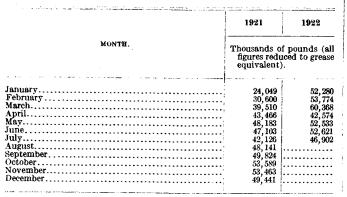

Imports of wool in August continued heavy, partly due, no doubt, to the anticipated increase in tariff rates.

The activity of woolen and worsted machinery showed a slight increase over July. Carpet and rug looms showed a big increase in activity compared to a year ago. Other classes of looms were not so active as last year. Little change occurred in the prices of wool or of woolen manufactures during August.

Unfortunately, comparable figures on the consumption of wool by textile mills have not been available for recent months. This has been due to the fact that a few companies, particularly the American Woolen Co., have not furnished their figures. This latter company forms such a large proportion of the industry that it is impossible to compare figures for present months, excluding the American Woolen Co., with figures for earlier months or years in which their figures were included. Unable to secure the voluntary cooperation of this company the Bureau of the Census has compiled reports for recent months excluding this firm and one or two minor companies whose reports have not been received. These reports have now been extended back through the months of 1921 on a comparable basis by omitting the estimated consumption of the American Woolen Co. and one or two others. These figures are shown in the following table, which gives the trend of the industry for the past 20 months.

WOOL CONSUMPTION.

[Excluding American Woolen Co. and a few smaller firms.]

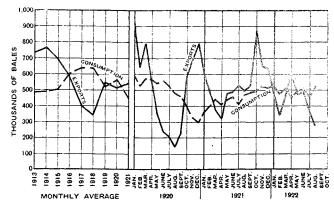

During the past month the Department of Commerce and the Department of Agriculture issued a joint report on the stocks of wool in the hands of dealers and manufacturers on June 30, 1922. This is the first report on wool stocks issued since that for the quarter ending September 30, 1921. The total stocks on June 30, 1922, of wool in and afloat to the United States and including tops and noils was 479,151,184 pounds, grease equivalent. Of this amount 54.8 per cent was foreign wool and 45.2 per cent of domestic origin. Of the total amount 201,-225,406 pounds, grease equivalent, were in the hands of dealers, the remainder being held by manufacturers. On June 30, 1921, the total stocks of wool reported by dealers and manufacturers was 443,326,000 pounds, grease equivalent.

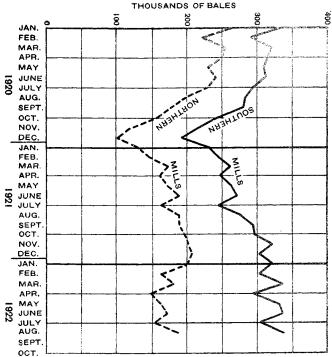

The report for June 30, 1922, is based on returns from 380 dealers and 622 manufacturers. The totals were exclusive of stocks held by 12 dealers and 5 manufacturers who did not report. The American Woolen Co., which failed to report, is the only one whose figures would seriously affect the totals.

Consumption of cotton by textile mills in August showed a large increase over July. The total consumption last month amounted to 527,404 bales, which has not been exceeded in any month since January, 1920. The total consumption of cotton during the first eight months of 1922 has amounted to 3,954,413 bales, or approximately 16 per cent more than was consumed during the corresponding months of 1921. Exports of cotton in August amounted to only 273,308 bales, or the lowest figure recorded in more than twoyears. Exports during the present calendar year have been about 8 per cent less than during the same period last year. Imports of cotton in August showed an increase over the two preceding months, although the total of 14,480 bales is far below our monthly average imports. Imports so far this year have exceeded the corresponding movement last year by approximately 74 per cent.

EXPORTS AND CONSUMPTION OF COTTON.

COTTON CONSUMPTION IN NORTHERN AND SOUTHERN MILLS.

Stocks of cotton in mills continued to decline during August. Warehouse stocks, on the other hand, increased slightly for the month, showing the effect of the new crop movement. Stocks in both positions at the end of August amounted to 2,575,000 bales, compared to 4,470,000 bales in storage at the same time a year ago.

Exports of cotton cloth amounted to 50,068,000 square yards in August, compared to 60,238,000 square

yards in July. Exports of cloth for the first eight months of this year have been about 20 per cent larger than during the same period of 1921. There was an increase in the number of active cotton spindles in August and a still greater increase in active spindle hours. Prices of both cotton and cotton goods showed no significant changes during August.

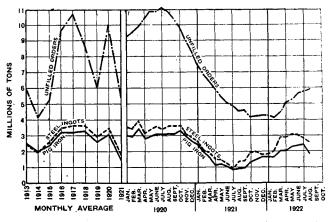

In the manufactured field there were marked increases in the production and shipments of knit underwear in August, compared with July, although new orders received were less than in the preceding month. Unfilled orders on hand at the end of August were approximately double what they were a year ago. There was also an increase in the production of fine cotton goods by New England manufacturers and a large increase in the sales movement of these goods compared with July.

Consumption of raw silk for the month of August amounted to 34,772 bales, an increase of nearly 40 per cent over the consumption in July. As a matter of fact, the consumption in August, as indicated by warehouse withdrawals, is the largest for any month since these figures have been compiled. Stocks of raw silk also increased during August, with a total of 32,515 bales on hand at the end of the month. This is a larger stock than has been reported on hand at any time since the close of 1920. The price of raw silk rose slightly in the New York market during August.

METALS.

The movement of iron ore on the Sault Ste. Marie Canal during August totaled 8,937,000 tons or approximately the same as in July, but more than double the movement in August of last year. During the five months in which the canal has been open to traffic, the iron ore movement has been 42 per cent greater than in the corresponding months of last year. Pig iron production showed a decrease of nearly 25 per cent, compared with July. The total production was 1,816,000 tons. Even this reduced figure was nearly double the production in August, 1921. The production of steel ingots declined from 2,843,000 tons in July to 2,532,000 tons in August. In August last year the ingot output was 1,301,000 tons. In the eight months of 1922 ingot production has been 66 per cent greater than in the same period of last year. The movement of merchant pig iron, as reflected by the association reports, also showed a marked decline in August, compared with earlier months. On the other hand, unfilled orders of United States Steel Corporation continued to increase at about the same rate as in preceding months. Unfilled orders on hand at the end of August totaled 5,950,000 tons, which is about 3 per cent greater than in July. A year ago unfilled orders totaled 4,532,000 tons, and at their recent low point in November, 1921, amounted to 4,251,000 tons. Foundry production, as reported by the Ohio Foundrymen's Association, increased nearly 23 per cent in activity during August.

PRODUCTION OF PIG IRON AND STEEL INGOTS, AND UNITED STATES STBEL CORPORATION'S UNFILLED ORDERS.

Exports of iron and steel showed a further decline during August. Exports, so far this year, have amounted to 1,229,000 tons, or nearly 30 per cent less than in the same period of 1921.

The prices of all iron and steel products showed an increase during August. The largest increase took place in pig iron prices. The composite figure, as compiled by the "Iron Age," showed a rise of 13 per cent over July.

Production, shipments, and sales of sheets increased during August, while unfilled orders and unsold stocks both declined. Sales of structural steel also increased during August, compared with July. The tonnage booked during the past month was equivalent to 65.2 per cent of the shop capacity.

Figures compiled by the Department of Commerce from 125 identical fabricators for each of the last five months indicate the recent trend in this industry. The total shop capacity reported by the 125 firms was equal to 208,245 tons per month. The actual sales were reported as follows:

FABRICATED STRUCTURAL STEEL SALES, 1922 BY MONTHS.

[Reported by 125 firms with a capacity of 208,245 tons per month.]

MONTH.	Tonnage booked.	Per cent of capacity.
April. May	181,947 165,272	87. 79.
JuneJuly	149, 907 129, 160	72. 62.
August	135, 843	65.

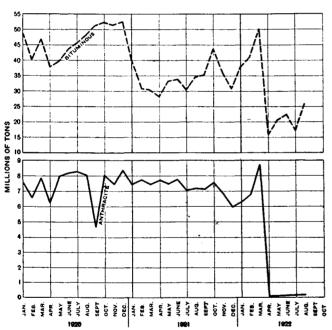

Copper production in August totaled 101,188,000 pounds, which is an increase of 11 per cent over July. This is by far the largest production for any month during the past two years. Copper production during the eight months of this year has exceeded the output of the corresponding period in 1921 by 51 per cent. Exports of copper were slightly less in August than in July, but the total of 62,612,000 pounds, compares favorably with other recent months. The production of zinc in August declined slightly, while there was a large drop in stocks on hand. Stocks at the end of August amounted to only 43,250,000 pounds; which is the lowest reported for any month for several years. There was a marked increase in shipments of zinc from St. Louis, although the receipts at that city declined. Receipts and shipments of lead at St. Louis both showed marked increases during August.

The prices of all nonferrous metals were slightly higher in August than in July. The largest increase occurred in the price of zinc, which rose approximately 10 per cent.

FUELS.

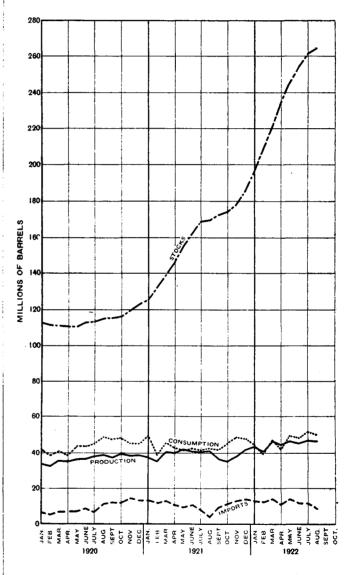

The output of bituminous coal in August amounted to 22,328,000 tons, an increase of 31 per cent over the July production. The settlement of the bituminous strike occurred so late in August that it produced very little effect on the month's production. During September bituminous production has been running between nine and ten million tons per week.

COAL PRODUCTION.

The total production of bituminous coal for the first eight months of 1922 amounts to 226,665,000 tons, or 13.4 per cent less than the production during the same months in 1921. The August production of anthracite coal amounted to 161,000 tons, compared to 116,000 tons in July, and 7,459,000 tons in August last year. Since the settlement of the anthracite strike in the early part of September production has again returned to approximately 2,000,000 tons per week. The total anthracite production for the eight months of 1922 is 63 per cent below the production in the same period of last year. The production of beehive coke increased in August compared with preceding months, while the output of byproduct coke showed a marked decline. The total coke production from both sources amounted to 2,936,000 tons in July, and 2,332,000 tons in August. The total coke production so far this year is about 30 per cent greater than a year ago. Exports of both bituminous and anthracite coal were slightly larger in August than in July, but in both months the tonnage was comparatively small. Exports of coal so far this year are about 70 per cent less than a year ago. Prices of both coal and coke continued to increase during August.

PRODUCTION, CONSUMPTION, IMPORTS, AND STOCKS OF PETROLEUM.

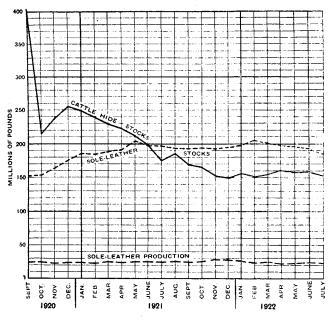

The consumption of domestic and imported petroleum for the month of August totaled 50,817,000 barrels, thus establishing another new record in this industry. The production of crude petroleum was slightly less in August than in July, but the total of 46,295,000 barrels is still nearly 6,000,000 above the

output for the corresponding month last year. Domestic production in August was about 4,700,000 barrels less than consumption. However, imports of crude, amounting to 8,800,000 barrels, more than made up the difference, so that stocks continued to increase. At the end of August stocks of crude oil totaled 264,780,000 barrels, the largest on record, and equivalent to more than five months' consumption at the high rates shown in the last two months. A further marked decline appeared in the price of crude oil during August. According to quotations on Kansas-Oklahoma crude, the price in July averaged \$1.93 per barrel, and in August \$1.25, a decline of about 35 per cent.

New records were established for the production and consumption of gasoline during the month of July, which are the latest figures available. Gasoline production totaled 569,711,000 gallons, compared to 525,941,000 gallons in June. Consumption in July totaled 556,112,000 gallons, an increase of 60,000,000 gallons over the previous high record attained in June. Stocks of gasoline at the end of July amounted to 772,909,000 gallons, a decline of about 9 per cent during the month. Gasoline stocks at the end of July were about 120,000,000 gallons below the peak reached at the end of April.

The production of kerosene during July amounted to 192,924,000 gallons, compared to 173,650,000 gallons in June. Stock increases amounted to 7,000,000 gallons during the month. The production of gas and fuel oil increased about 56,000,000 gallons in July compared with June, and there was a further increase in stocks on hand. The production of lubricating oil also increased during July, but stocks remained practically stationary.

STOCKS OF CATTLE HIDES (PACKER) AND PRODUCTION AND STOCKS OF LEATHER (SOLE AND BELTING).

PAPER AND PULP.

The production of newsprint paper increased more than 10 per cent in August compared with July. The total of 133,236 tons is the largest output recorded for any month in the past three years. Shipments also increased over 9 per cent, amounting to 134,490 tons, thus establishing a new record for this movement in recent years. Stocks of newsprint increased from 231,833 tons at the end of July to 260,111 tons at the end of August. Stocks of newsprint are now the largest they have been at any time since the end of April, 1921. This increase was chiefly due to larger stocks in the hands of publishers and in transit to publishers. The stocks at the mills were less in August than in July. The consumption of newsprint showed a slight decline in August compared to July. August prices showed a tendency to be slightly higher than those in the preceding month.

Paper purchased by printers showed an increase in July over June, and was at practically the same level reached in May. Printing activities showed a marked decline compared with recent months, and was on practically the same level as in July a year ago.

A further marked increase occurred in the production of material for paper-box containers, both corrugated and solid fiber board. Machinery activity in the corrugated board industry was 72 per cent of normal during August, compared to 65 per cent in July and 47 per cent in August of last year. The production of corrugated board in the eight months of this year is more than double the output in the corresponding months of last year. The production of solid fiber board so far this year has been about 30 per cent greater than a year ago.

AUTOMOBILES.

The production of automobiles and trucks showed a significant increase in August after the decline recorded in July. The total production of passenger cars amounted to 246,941, an increase of 10 per cent over the July production, but considerably smaller than the 263,027 produced in June. August truck production totaled 24,064 machines, compared to 21,357 in July, and the maximum monthly ouptut reached in June of 25,984.

Value	26, 991 \$6, 438, 706	59, 122 \$16, 161, 623	54.3 60.2

Figures compiled by the Department of Commerce in connection with the 1921 census of manufacturers show a very marked decrease in the production of motorcycles compared with 1919. The following table gives a few important comparisons. A more detailed statement may be obtained from the Bureau of the Census.

A similar tabulation for the aircraft industry shows that in 1921 there were 19 establishments which reported a total value of all products as \$6,616,988, compared with 31 establishments and a total value of products of \$14,372,643 in 1919. The following table gives a comparison of the more important figures:

AIRCRAFT	INDUSTRY.

	1921	1919
Total, value	\$5,616,988	\$14, 372, 643

The combined output of all establishments was approximately 27.6 per cent of the maximum capacity, based upon a demand requiring full running time. The percentage of output of individual establishments ranged from 5 to 75 per cent of their maximum capacity.

A preliminary report from the Census on the typewriter industry in 1921 indicates that there was a decrease of about 21 per cent in the value of the products compared with 1919. The following table gives some of the more important figures from this report.

TYPEWRITERS AND SUPPLIES.

	1921	1919	Per cent of de- crease.
Number of establishments	74 15, 105 \$17, 739, 607 41, 621, 047	88 18,074 \$21,079,171 52,737,661	15. 9 16. 4 15. 8 21. 1

The returns indicate that the combined output of all establishments in this industry was only approximately 54.5 per cent of the maximum capacity, based upon a demand requiring full running time. The percentage of output for individual establishments ranged from 20 to 90 per cent of their maximum capacity.

The results of the 1921 census of the bicycle industry shows a decrease of 61 per cent in the value of products, compared with 1919. The following table gives some of the more important figures from the preliminary announcement on this industry.

THE BICYCLE INDUSTRY.

	1921	1919	Per cent of de- crease. ¹
Number of establishments Persons engaged	24 2, 102	31 5,789	63.7

All other products, including repairs, value.	1, 394, 621	7,623,383	81.7

¹ A plus sign (+) denotes increase.

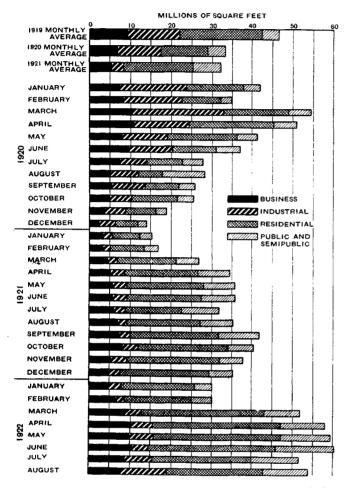

The returns indicate that the combined output of all establishments in this industry was only approximately 38 per cent of the maximum capacity, based upon a demand requiring full running time. The percentage of output for individual establishments ranged from 20 to 90 per cent of their maximum capacity.

BUILDING OPERATIONS.

The cost of building construction as measured by the various cost index numbers continued to rise during August. The cost of building materials to contractors, as reported to the Department of Commerce from some 30 cities, showed continued substantial increases. The index number for the cost of material in a six-room frame house increased from 181 in July to 189 in August; for a six-room brick house the index in material cost rose from 184 in July to 193 in August. In both instances the average for 1913 is taken as 100. Concrete factory cost, according to the index compiled by the Aberthaw Construction Co., rose from 174 at the end of July to 190 at the end of August. Increases in the price of both materials and labor were responsible for this rise of over 9 per cent during the month.

Contracts awarded for building construction in the 27 northeastern states increased in the amount of floor space in August, compared with July. The totals for the last three months were 60,526,000 square feet in June, 51,705,000 square feet in July, and 54,019,000 square feet in August. The chief increases in August occurred in industrial buildings and social and recreational buildings. There was a slight decline in the amount of floor space in the contracts for residential buildings during August, although this latter class still constitutes nearly 45 per cent of the total floor space of all buildings. In spite of the increase in floor space noted above, the total value of contracts awarded in August was only \$322,007,000, compared to \$350,081,000 in July. This decrease in the total cost of buildings contracted for, in spite of increase in square feet, indicates a cheaper type of construction during August, although, as pointed out above, the cost of both building material and labor rose during the month.

For the eight months of 1922 contracts awarded in the territory covered have totaled 396,314,000 square feet valued at \$2,368,710,000. Compared with the same period of 1921, these figures represent an increase of 70.8 per cent in floor space and 57.9 per cent in value. Considering the year to date, the largest increase has occurred in industrial buildings, with residential buildings occupying second place.

Fire losses in August totaled \$21,580,000, a decrease of 41 per cent, compared with the very high figure shown in July. Fire losses so far this year have been 12 per cent greater than in the same months of 1921.

BUILDING MATERIAL.

There was further increase in the production of most species of lumber during the month of August. Production of Douglas fir showed a very slight decline, while the northern pine lumber output was 20 per cent less than in July. There was also a slight decline in production of North Carolina pine. In most instances shipments were considerably heavier in August than in July, while stocks showed a tendency to decline. On the other hand, there were increases in the mill stocks of southern pine during August. The price of lumber continued to increase during August. According to the quotations shown on Douglas fir, this species increased \$2 per thousand feet during the month. Production, shipments, and orders received for both oak and maple flooring showed a marked increase during August. Stocks on hand and unfilled orders at the end of the month increased in the case of oak flooring but declined in the maple flooring industry. The production of oak flooring for the eight months of this year is more than double the output of 1921. During the same period, maple flooring production has increased 43 per cent.

A preliminary report from the Bureau of the Census, Department of Commerce, prepared in cooperation with the Forest Service, United States Department of Agriculture, shows that the lumber cut of 710 large sawmills in 1921 was 4.2 per cent less than the cut of the same mills in 1919. The total cut of the 710 mills in 1919 was 13,929,697,000 board feet, and in 1921 it was 13,351,595,000 board feet, a decrease of 578,102,000 board feet.

The 710 mills included in this report represented about 40 per cent of the total lumber cut in the United States in 1919. These mills are located in 33 states and consequently reflect conditions in practically all important lumber regions of the country.

It is of particular interest to note that mills in the principal southern pine producing states show increases while those in the north and west generally show decreases, but since the cut of these large mills, considered as a whole, decreased but slightly from 1919 to 1921, it appears reasonable to assume that the total lumber cut for 1921 did not differ greatly from that reported for 1919.

The production and shipments of clay fire brick increased in August, compared with July. There was a decline, however, in the case of silica brick. The production of cement in August totaled 11,664,000 barrels, making another new record for this industry. Shipments also increased, while stocks showed a further seasonal decline.

In the sanitary enamel ware industry, shipments in August increased over July, while stocks and new orders received declined. The output of this industry has in some instances been more than double the production during the same months of last year. Another large increase also occurred for the orders received for sanitary pottery during August. These were approximately 33 per cent greater than orders received during July.

NAVAL STORES.

Net receipts of both turpentine and rosin at the three principal ports were greater in August than in July. Stocks of turpentine increased nearly 57 per cent during the month, although stocks on hand are still only about one-half as great as a year ago.

Stocks of rosin showed an increase of 7 per cent during August, making the total amount on hand approximately the same as in August last year. The total production of turpentine so far this year has been 8 per cent less than in the same months of 1921. During the same period rosin production has shown an increase of 41 per cent over the 1921 figures.

CEREALS.

Exports of wheat and flour in August were equivalent to 38,964,000 bushels of grain, an increase of more than 100 per cent over July. This increase is due very largely to the seasonal effect of the new crop movement. In August last year exports of wheat and flour totaled 66,963,000 bushels. Exports in the eight months of this year have totaled 141,120,000 bushels, which is about 44 per cent less than the exports during the same months of 1921. Receipts and shipments of wheat at the principal markets showed large seasonal increases during August. The visible supply also increased about 9 per cent during the month. In every instance the movement this year is less than the corresponding month a year ago. The decline in price which continued during August is no doubt responsible for the smaller movement of wheat this year. The price of wheat in Chicago declined about 8 per cent during August, while the price of flour decreased approximately 10 per cent.

Exports of corn, including meal, amounted to 12,325,000 bushels in August, compared to 14,395,000 bushels in July. Exports of corn for the eight months ending with August have been more than 50 per cent greater than in the corresponding months of last year. Receipts and shipments of corn at the principal markets showed further seasonal declines during August. The grind of corn by starch and glucose manufacturers amounted to 5,650,000 bushels in August, which is the largest for any month since March of this year. The price of contract grades No. 2 corn at Chicago declined about 2 cents a bushel during August.

In connection with the manufacture of corn sirup (glucose) and starch the Department of Commerce has issued a preliminary statement from the 1921 census of manufactures showing a decline in value of products of 57 per cent, compared with 1919.

The returns indicate that the combined output of all establishments in this industry was only approximately 47 per cent of the maximum capacity, based upon a demand requiring full running time. The percentage of output for individual establishments ranged from 10 to 100 per cent of their maximum capacity.

CORN SIRUP (GLUCOSE) AND STARCH.

	1921	1919

Sirup, gallons	31, 478, 190	45, 198, 630

Exports of oats, including meal, showed a marked decline in August compared with the high points reached in June and July. On the other hand, exports of this cereal are still well above the average. Exports for the eight months of 1922 have totaled 22,887,000 bushels, or more than 300 per cent greater than the exports in the same months of last year. There was a marked increase in the exports of rye, including flour, during August, compared with July, but at 4,623,000 bushels, this movement is not as large as in the months of May and June. There was a slight decline in the August exports of barley.

The exports of all cereals, including flour and meal as grain, were equivalent to 60,284,000 bushels in August, compared to 43,438,000 bushels in July, and 90,323,000 bushels in August a year ago. Measured in this way, our cereal exports so far this year are about 10 per cent less than in the same period of 1921.

MEATS.

Receipts, shipments, and slaughter of both cattle and hogs showed marked seasonal increases over the low point reached in July. In every instance the movement this year was considerably heavier than in the corresponding months of last year. The increase in the shipment of stocker and feeder animals is of considerable significance. For the eight months of this year this movement has exceeded the corresponding period of last year by 35 per cent in the case of cattle and 19 per cent in the case of hogs. Exports of beef products totaled 13,751,000 pounds in August, which is about 10 per cent less than in July. Exports of beef so far this year are about 8 per cent less than a year ago. Cold-storage holdings of beef at the 1st of September totaled 48,225,000 pounds, compared to 67,337,000 pounds at the same time last year. Prices of cattle at Chicago showed a significant increase during August.

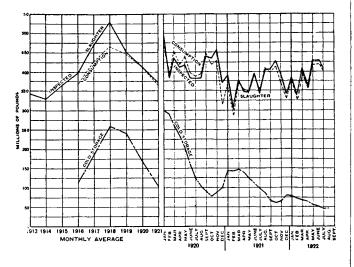

Exports of pork products in August amounted to 127,667,000 pounds, a decrease of 4.3 per cent over

17

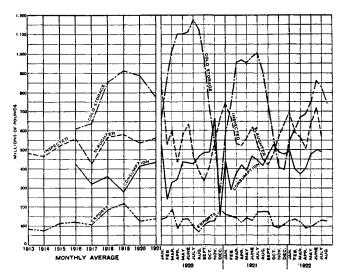

13170---22-----3

July exports. Pork exports so far this year are 19 per cent less than in corresponding months of 1921. There was a further decline in cold-storage holdings of pork products, bringing the total to 138,255,000 pounds. There was another marked decline in the Chicago price of hogs, but the price of fresh pork continued to increase.

INSPECTED SLAUGHTER, CONSUMPTION, AND COLD-STORAGE Holdings of Beef Products.

INSPECTED SLAUGHTER, CONSUMPTION, EXPORTS, AND COLD-STORAGE HOLDINGS OF PORK PRODUCTS.

Receipts and shipments of sheep and lambs showed further increases in August compared with the movement in recent months. These movements, however, are not as large as in the corresponding months of last year. Cold-storage holdings of lamb and mutton showed slight increases in August, while prices of both sheep and lambs in Chicago declined.

Receipts of poultry in the principal markets and coldstorage holdings at the 1st of September both showed significant decreases compared with the month before.

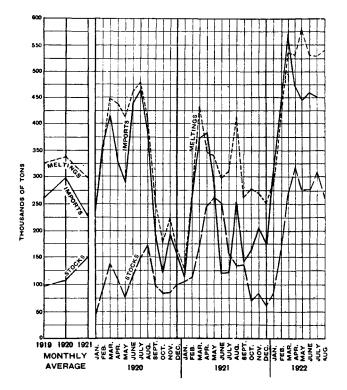

OTHER FOODSTUFFS.

Receipts of butter, cheese, and eggs at principal markets each showed marked seasonal declines in August compared with July. Cold-storage holdings of creamery butter and American cheese each increased in August and were considerably above the holdings a year ago. Storage holdings of case eggs reached their maximum as usual on August 1 with a total of 10,161,000 cases or nearly 3,000,000 cases more than at the same time a year ago. (See diagrams on p. 6.) The average wholesale price of butter at the principal markets showed a slight decline in August. The price of cheese remained unchanged.

Exports of condensed and evaporated milk increased in August, compared with the low point reached in July. Total exports amounted to 11,-247,000 pounds.

Meltings of raw sugar in August totaled 540,024 tons, compared to 530,334 tons in July and 414,545 tons in August last year. The total for the first eight months in 1922 have exceeded meltings in the same period in 1921 by 56 per cent. Stocks of raw sugar in hands of refiners declined approximately 15 per cent during August. Stocks of raw sugar at Cuban ports totaled 460,987 tons in August, compared with 650,164 tons in July. A slight seasonal increase occurred in the movements of the Louisiana crop in August. Total receipts for the month month amounted to 3,939,000 tons.

IMPORTS, MELTINGS, AND STOCKS OF RAW SUGAR.

The Department of Commerce has issued the first of a series of monthly reports on the production and stocks of sugar based on returns to the Bureau of the Census. This report, which covers the month of July, is as follows:

PRODUCTION AND STOCKS OF SUGAR.

SUGAR REFINERIES.—The quantity of sugar refined during July (including reports received from all refineries in the United States except Arbuckle Bros., of New York), amounted to 500,116 short tons.

Sales of granulated sugar by refiners during the month amounted to 492,634 tons, of which quantity 432,417 tons were for domestic consumption and 60,217 tons for export. Refiners' stocks of granulated sugar at the beginning of the month amounted to 127,070 short tons, as compared with 95,889 tons at the end of the month.

Raw sugar received by refineries during the month comprised 561,538 tons of imported sugar and 1,433 tons of domestic raw sugar, while 538,328 tons of raw sugar were used for refining. Stocks of raw sugar held by refiners increased from 300,163 tons on July 1 to 324,763 tons on July 31.

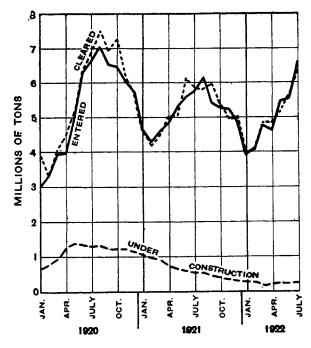

CANE-SUGAR FACTORIES.—Since but few of the cane-sugar factories were in operation during July the production was small, amounting to only 4,447 short tons. The stocks of all kinds of sugar held by cane-sugar manufacturers on July 1 amounted to 12,407 short tons, as compared with 10,660 tons on July 31.

BEET-SUGAR FACTORIES.—No beet sugar was manufactured during July, 1922, but the stocks held by beet-sugar manufacturers were reduced by sales and by deliveries on previous sales from 149,786 short tons on July 1, to 88,289 tons on July 31. Practically the entire stocks were granulated sugar.

WATER TRANSPORTATION.

Traffic through the Panama Canal in July showed a very marked increase compared with June. The total cargo traffic amounted to 1,211,000 tons, and is the largest reported for any single month since the canal has been in operation. The increase in July traffic compared to June was largely due to the greater tonnage carried in British vessels.

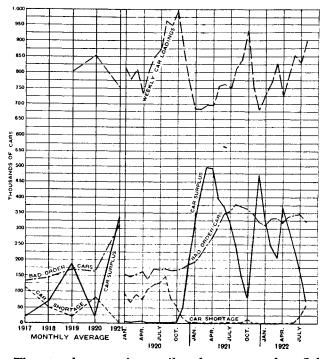

Traffic through the Sault Ste. Marie Canal amounted to 10,286,000 tons in August, or only a very slight increase above the July figures. The August traffic was nearly 3,000,000 tons greater than the tonnage carried in the corresponding month last year, but in August, 1920, the total tonnage going through this canal was 12,425,000.

RAILROAD TRANSPORTATION.

There was a continued improvement in the railroad freight situation through August. The weekly average car movement for the month was 895,591, which was a net increase of 8 per cent over the preceding month, and 10 per cent greater than in August last year. Since the close of August there has been a still further increase in the amount of freight loadings. The report for the week ending September 16 shows 945,919 cars loaded, which was in excess of any similar period this year, and in 1921 was exceeded only twice during the month of October. A few weeks ago the railroads reported a large number of surplus idle freight cars. At the end of August this year only 70,455 surplus cars were reported, compared to 174,927, at the end of July, and 246,740 cars at the end of August last year. On the other hand, a real shortage of cars has developed, and in recent weeks the number of cars requested by shippers which could not be furnished by the railroads was greater than the number of idle cars reported.

SHORTAGE, SURPLUS, BAD-ORDER, AND TOTAL LOADINGS OF FREIGHT CARS.

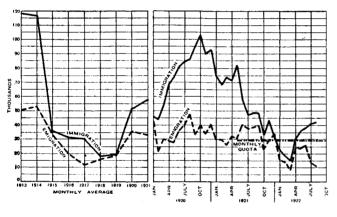

The total operating railroad revenue for July amounted to \$443,183,000, a decline of about \$30,-000,000 compared with June. This decrease all occurred in the freight revenue, and was, no doubt, partly accounted for by the decrease in freight rates which went into effect July 1. Railroad operating expenses in July were \$243,726,000, a decline of about \$20,000,000 below the preceding month. The net operating income for July was \$69,239,000 compared to \$76,594,000 in the preceding month, and \$69,324,000 in July last year. The total net operating income for the first seven months of this year for class 1 roads amounts to \$418,271,000, which represents an increase of 94.8 per cent over the corresponding periods of 1921.

LABOR.

There was a further increase in the number of workers employed in both New York and Wisconsin factories. Average weekly earnings in Wisconsin and the total factory pay roll in both New York and Wisconsin showed significant increases. Unemployment in Pennsylvania continued to decrease. The total number of workers seeking positions through all State and municipal agencies in August of this year was 82,790, compared to 282,125 in August last year. Immigration showed a further small increase in August, while emigration continued to decline.

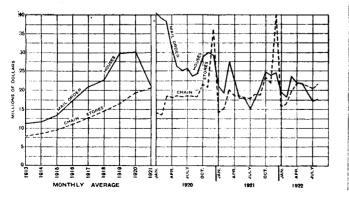

IMMIGRATION, EMIGRATION AND IMMIGRATION QUOTA.

DISTRIBUTION MOVEMENT.

The combined sales of the two large mail-or-er houses showed a slight increase in August, although the volume of sales was much smaller than in May or June. Chain store sales also increased in August, the only exception being chain shoe stores, which showed a further seasonal decline.

Department store sales increased over the low point reached in July, but are still considerably below those of the early summer months.

Magazine advertising for the month of September showed an increase of nearly 20 per cent over the preceding month. Newspaper advertising for August was slightly less than in July, but greater than at this time a year ago. There was also a marked increase in postal receipts during August. The total, amounting to \$21,372,000, was about \$2,000,000 greater than the receipts in August last year.

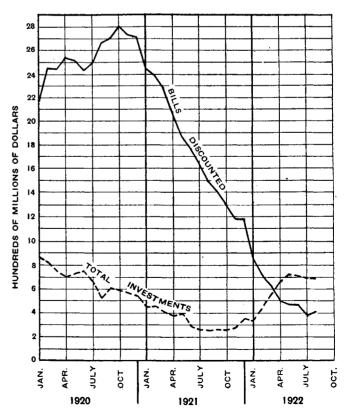

PUBLIC FINANCE.

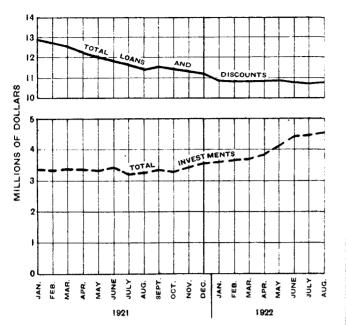

The total interest-bearing debt of the United States showed a slight increase in August. Both customs receipts and total ordinary receipts were considerably larger than in the preceding month. Disbursements in August were on practically the same level as in July. Total disbursements for the first eight months of 1922 have been about 33 per cent less than the disbursements in the same period of 1921. The amount of money in circulation showed a slight increase in August for the first time in several months.

BANKING AND FINANCE.

Debits to individual bank accounts declined both in New York City and outside during the month of August. A part of this, no doubt, is due to seasonal influences and a part to the contraction of business caused by labor difficulties. Both debits and bank clearings were considerably higher than in the corresponding month last year.

BILLS DISCOUNTED AND TOTAL INVESTMENTS OF FEDERAL RESERVE BANKS.

LOANS AND DISCOUNTS AND TOTAL INVESTMENTS OF FEDERAL Reserve Member Banks.

Bills discounted by the Federal reserve banks showed a slight increase in August. The amount of discounted paper held by the reserve banks has been decreasing steadily for the past two years. This is the first indication of a turn in the opposite direction. There was no significant change in other Federal reserve bank movements during August. The reserve ratio remained unchanged at 79.2.

Federal reserve member bank loans and discounts showed a very slight increase in August, while member bank investments continued to increase at a more rapid rate. Interest rates, both for call and time loans, rose slightly during August.

Savings bank statistics from seven Federal reserve districts showed that deposits increased in four districts, declined slightly in one (Philadelphia), and in two districts showed no change. There was a further slight decline in United States postal savings.

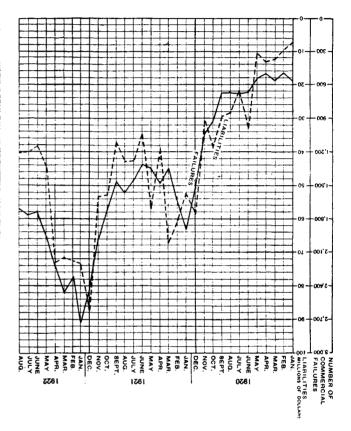

LIFE INSURANCE.

Reports compiled by the principal life insurance companies showed a decrease of 5.7 per cent in the amount of new insurance written in August compared with July. The total insurance written by these companies, which represent about 77 per cent of the total insurance outstanding, has amounted to \$4,167,775,000 in the first eight months of this year. This is an increase of more than 9 per cent over the new business written in the corresponding part of 1921. The largest increase has occurred in group insurance, which for the eight months is 114 per cent greater than a year ago.

BUSINESS FINANCES.

The number of failures reported for August was 1,714, which is a slight decline compared with June and July. Liabilities, however, were slightly greater in August than in the two preceding months. Although in number, failures are considerably above what they were in the corresponding months last year, they are very much less both in number and in liabilities than at the beginning of 1922.

Number of Business Failures and Amount of Defaulted Liabilities.

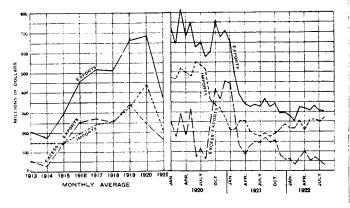

Dividend and interest payments in August showed a marked increase over the low point reached in July. Total payments amounted to \$242,075,000. Dividend and interest payments for the first eight months of this year have been only four-tenths of 1 per cent greater than in the same period in 1921. New capital issues showed a further decline in August and are the lowest for any month since February.

There was a further increase in the price of both industrial and railroad stocks on the New York Exchange. The increase during the month of August was roughly about 5 per cent. Total sales of stock in August amounted to 17,850,000 shares, or 2,700,000 shares more than in July, and some 7,000,000 shares more than in August last year. Sales of stock in the New York Exchange for the eight months of 1922 are more than 50 per cent greater than in the same months of last year. Bond sales also showed a marked increase over the preceding month, although Liberty-Victory issues were less active. The total sales of miscellaneous bonds in August amounted to \$222,863,000, compared with sales of only \$100,-246,000 in August last year. Sales of miscellaneous bonds for the eight months of 1922 are 121 per cent greater than the sales in the same eight months of 1921. Bond prices continued to rise. The combined index for price and yield of 40 representative bonds showed an increase of 2 per cent for the month.

Receipts of gold at the mint showed a marked increase over any recent month. The Rand output was also the largest since the labor disturbances some months ago. Imports of gold showed a marked decline in August compared to July. Silver production in August amounted to 5,562,000 fine ounces, which is an increase of 28 per cent over the July production and is the largest for any month for more than a year. August imports and exports of silver were considerably less than in the preceding months. The price of silver both at New York and at London declined.

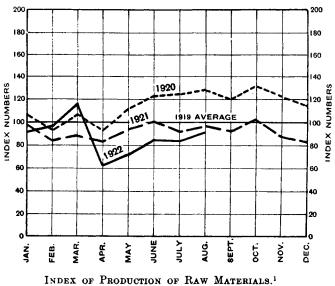

IMPORTS AND EXPORTS OF THE UNITED STATES.

INDEXES OF PRODUCTION AND MARKETING.

In recent numbers of the Survey there have been published detailed discussions of certain index numbers of production and marketing dealing particularly with raw materials. The following tables give the recent figures for each of these index numbers, compared with the corresponding months of 1921. The methods of compiling these indices and the weighting factors used are discussed in detail in the issues of the Survey referred to.

[Relative production 1919-100.]

	19	21		195	22

TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures, designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

- July, 1922.-This column gives the July figures corresponding to those for August shown in the next column-in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending June 30, 192
- August, 1922.-In this column are given the figures covering the month of August, or, as in the case of stocks, etc., the situation on August 31 or September 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter end-ing July 31 or the condition on that date. Where this column is left blank, no figures for August were available at the time of going to press (October 7).
- Corresponding month, July or August, 1921.—The figures in this column present the situation exactly a year previous to those in the "August, 1922," column (that is, generally August, 1921), but where no figures were available for August, 1922, the July, 1921, figures have been inserted in this column for comparison with the July, 1922, figures. In the case of quarterly figures, this column
- shows the corresponding quarter of 1921.
 Cumulative total through latest month.—These columns set forth, for those items that can properly be cumulated, the cumulative total for the first eight months of the calendar years 1921 and 1922, respectively, except where the August, 1922, figures are lacking, in which case the cumulative total for seven months in each year is given.
 Percentage increase (+) or decrease (-) cumulative 1922 from 1921.—This column shows the per cent by which the cumulated total for the first eight months of 1922 is greater (+) or less (-) than the total for the corresponding period of 1921.
- Base year or period.-For purposes of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921 and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen
- Index numbers.—In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919, to equal 100. If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100. The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next
- Percentage increase (+) or decrease (-) August from July.—The last column shows the per cent increase or decrease of the figure for the last month compared with the preceding month.

⁴ Six months' average, July to December, inclusive. ⁴ Ten months' average, March to December, inclusive. ⁵ Very large percentage increase. ^a Revised. ^a These figures are recomputed to a normal capacity of the industry, previously estimated at 180,000 tons, in order to make them comparable with figures shown in the August "Survey" (No. 12). The plant capacity as shown by the Census Bureau summary of reporting firms is considerably higher, being 208,245 tons for 125 firm reporting in August.

Index numbers calculated from data collected by Federal Reserve Banks of the respective districts showing percentage changes from month to month. The percentage changes reported by Federal Reserve Banks have been converted into index numbers showing the same corresponding percentage increase or decrease. Twelve months' average. August, 1920, to July, 1921, inclusive.

WHOLESALE PRICES.

¹ First eight columns give the revised wholesale price index numbers of the U.S. Department of Labor, Bureau of Labor Statistics, as reclassified by the Federal Reserve Board into the groupings as shown. The weights are the same as those used by the Bureau of Labor Statistics and the total of all commodities is therefore the same as the revised Department of Labor index. Dun's and Bradstreet's index numbers are calculated as of the first of each month, but really refer to prices in the preceding month; the index numbers have been calculated to a 1913 base from the actual figures as published in these journals. Bradstreet's index is the sum of prices per pound of the commodities, while Dun's is weighted by the amount "annually consumed by each inhabitant."

DIVIDEND PAYMENTS, 1913-1921.

¹ From New York Journal of Commerce. Total interest payments may be obtained by subtracting total dividend payments from total interest and dividend payments, data of which we epublished in the September number of the SURVEY (No. 13), p. 51. Data for 1922 will be shown in the November SURVEY (No. 15), and current monthly figures will be continued thereafter. ³ Includes bank dividends not separately shown.

1 This table on the monthly wheat flour production in the United States has been compiled by Mr. A. L. Russell of Russell's Commercial News, formerly statistician for the United States Grain Corporation. Figures for the years 1914, 1915, and 1916 are based on reports made to the milling division of the United States Food Administration prorated to 100 per cent. The Census Bureau's total for 1914 was used as a check for that year. Figures for the first six months of 1917 are commercial figures raised to 100 per cent of capacity. Figures for the crop year 1917-18 are taken from reports to the milling division of the Food Administration. These reports are also prorated so as to cover 100 percent of the rated capacity of the industry. For the crop years 1918-19 and 1919-20 the figures are those reported to the United States Grain Corporation. These reports, made on a weekly basis, have been prorated to even calendar months. Since July 1, 1920, the figures are based on computations made by Russell's Commercial News.
