SUMMARY FOR NOVEMBER.

The greater industrial and commercial activity so clearly shown in October was continued and in many instances further increased in November. Both production and distribution were well maintained during the month in spite of the usual tendency to decline at this season of the year. In not less than ten basic materials, November production records were the highest for any month since 1920. These include such commodities as pig iron, steel ingots, cotton goods, woolen goods, coke, zinc, locomotives, clay fire brick, upper leather, kerosene, etc.

Distribution movements were well sustained, although slight declines from the October level were recorded in wholesale trade and in some retail lines. Mail-order sales increased. Preliminary figures indicate that the holiday trade was of record proportions.

The iron and steel industry continued its upward movement, although the unfilled orders on the United States Steel Corporation books declined slightly for the first time since last February. This was largely due to increased production and better transportation, which made it possible to catch up on deliveries.

The transportation situation has continued to improve, although the railroads are still receiving requests for more than 100,000 cars a day which they can not fill. Car loadings have declined somewhat from the recent peak, although they are more than 25 per cent greater than a year ago. Coal production has maintained the level established in October with a total output of from 12 to 13 million tons per week of bituminous and anthracite.

The usual decline in building construction failed to materialize in November, and the total floor space of contracts awarded was actually larger than in October. Contracts awarded during the first eleven months of this year are 52 per cent greater in floor space than those awarded in the corresponding months of last year.

Employment figures continued to show gains both in the number employed and in the total volume of the pay roll. According to the United States Employment Service there are now more jobs registered than there are workers, whereas a year ago there were approximately two workers registered for every job.

Prices on the whole showed further increases in November. The Department of Labor wholesale index rose from 154 to 156, or the highest for any month since February, 1921. The retail food index rose to 145 making a new high record for this year. One of the most significant movements has been the increase in the price of farm products and their improvement in relative purchasing power during the past two months.

A further increase occurred in our November export trade. Total exports rose to \$383,000,000, the largest for any month since March, 1921, and \$12,000,000 larger than in October, 1922.

BUSINESS INDICATORS.

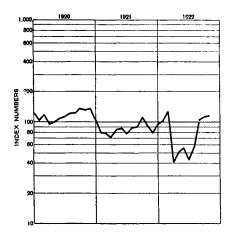

[1913 monthly average=100. See explanation on inside front cover.]

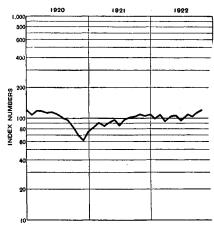

PIG-IRON PRODUCTION.

BITUMINOUS COAL PRODUCTION.

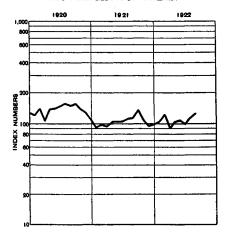

COTTON CONSUMPTION.

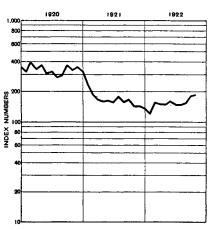

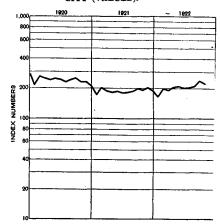

NET FREIGHT TON-MILES.

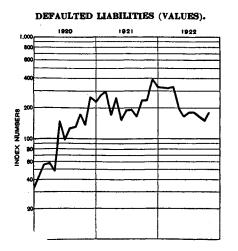

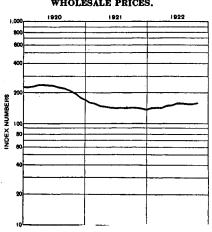

BANK CLEARINGS OUTSIDE NEW YORK CITY (VALUES).

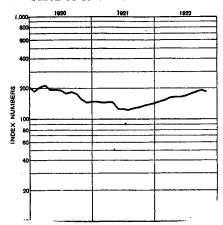

PRICE OF 25 INDUSTRIAL STOCKS.

BUSINESS INDICATORS.

The following table gives comparative index numbers for a selected list of important business movements. It is believed that this table will prove useful, because it separates out from the large mass of material a comparatively small number of items which are often regarded as indicative of business in general.

The table has been divided into two parts, the first containing those items for which index numbers can be calculated, using 1913 as a base. The second part contains items for which comparable data back to 1913 are not available. This latter group of index numbers is calculated by letting the 1919 monthly average equal 100. Care should therefore be exercised in comparing the absolute value of the two sets of data. In either group, however, the upward or downward trend of the index numbers, compared to previous months, does reflect the present tendency in each item and will give a basis for business judgment.

*Monthly statistics on these movements since January, 1913, or as far back as available, are given on pages 47-49 of the December Survey (No. 16). ¹ Monthly prices are for the 15th of the month indicated. ² Based on the total computed production reported by 5 associations. Includes southern pine, Douglas fir, western pine, North Carolina pine, and Michigan hard and soft woods. The total production of these associations in 1919 was equal to 11,190,000,000 board feet, compared with a total lumber production for the country of 34,552,000.000 board feet reported by the census. ³ Less than 1.

COMPARISON OF WHOLESALE PRICE INDEX NUMBERS.

BUSINESS CONDITIONS IN NOVEMBER.

The following pages contain a review by principal industries of the more important statistics shown in the table on the "Trend of business movements" (p. 29). Summaries of production, stocks, sales, and price changes are given also.

PRODUCTION.

Productive activity was well maintained in November. Out of 46 commodities for which production figures on a 1919 base are now available, there were 19 increases over October and 24 decreases, with three unchanged. The seasonal decline in lumber production accounted for most of the excess decreases. New high production records since the end of 1920 were made by pig iron, steel ingots, cotton goods, woolens, coke, electric power, zinc, locomotives, clay fire brick, petroleum, kerosene, and upper leather, while coke, electric power, and petroleum made new high marks since 1919.

Compared with a year ago, production increased for 41 commodities, as against only five decreases, occuring in sole leather, Michigan softwood lumber, solid fiber paper boxes, face brick, and glass bottles.

Compared with the 1919 average, 31 commodities were higher in November, 1922, and 15 were lower; this was a somewhat lower proportion of increases than occurred in October.

¹ Since No ² Less thar		, 1921.				1 As	represe	ented by	y tax-paid withdrawals. months of 1919.		7	Septer	nber, 1	922.			·

On the basis of 11 months' figures the production of manufactured commodities was considerably greater in 1922 than in 1921. Textile mills were about 20 per cent more active than in 1921, the iron and steel industry increased its output from 60 to 70 per cent over 1921, nonferrous metals from 50 to 95 per cent, petroleum 15 per cent, coke 40 per cent, paper 20 to

30 per cent, rubber 40 per cent, automobiles 50 per

cent, building construction 50 per cent, lumber 35

per cent, brick 50 per cent, cement 15 per cent, leather 20 per cent, sugar 45 per cent, and meats about 5 per cent. Agricultural receipts were in general higher than in 1921. The only declines of outstanding importance were 7 per cent in bituminous coal and 47 per cent in anthracite.

The following table shows the production record and a few related movements of business conditions for the first 11 months of 1921 and 1922:

In connection with a comparison of productive activity, it is of interest to note the figures on per cent of full-time capacity operations and relative employment for 47 industries for which advance reports of the 1921 census of manufactures are now available. The following table gives the facts regarding these industries as to the average output in per cent of capacity and in many cases the capacity percentage of the most active and least active firms of the industry; it also shows the maximum and minimum months of employment and the relation which the minimum month bears to the maximum month:

COURSE OF PRODUCTION SINCE 1919.

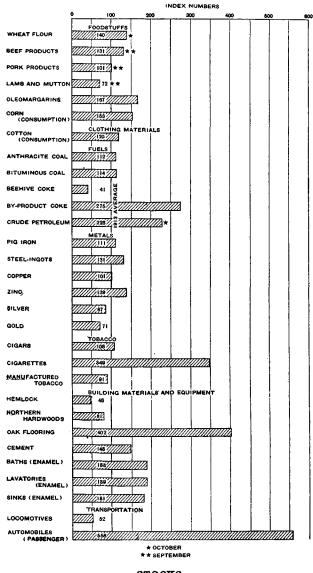

(Relative monthlyproduction 1919=100.)

26481-23-2

COMPARISON OF NOVEMBER PRODUCTION WITH PRE-WAR.

(Relative monthly production 1919-100.)

STOCKS.

Stocks continued to accumulate in November. Of 36 commodities for which figures relative to 1919 are available, there were 22 increases, 13 decreases, and 1 unchanged. Outside of the food commodities, whose movement is distinctly seasonal, increases occurred in 13 cases and decreases in 6 cases. Compared with a year ago there were 12 increases and 24 decreases. The increases occurred mainly in the foodstuff group, while building material stocks were almost all lower.

SALES.

Demand for goods continued to increase in November in spite of the usual seasonal relapse from the high October sales. Out of 12 individual commodities for which November figures are available, 8 had larger sales than in October and 4 had smaller sales. Distribution sales were also larger, except in chain stores. Sales of securities were considerably less in October, but life insurance sales increased.

Compared with November, 1921, all individual commodities except structural steel and maple flooring increased their sales. Distribution sales were considerably above a year ago, as were all securities except bonds.

¹ Items based on value. ² Relative proportion of orders to total transactions.

PRICES.

Crop prices to farmers rose 7 per cent from October 15 to November 15, and reached a point 18 per cent above the pre-war average, a mark that has only once been exceeded since February, 1921. Live-stock prices, however, declined to a point only 5 per cent above pre-war and the lowest point since January, 1922.

Wholesale prices rose 1 per cent in November to 56 per cent above the pre-war average, according to the compilation of the Department of Labor. This is the highest price level since February, 1921. Increases took place in all groups except fuels and metals. The Federal Reserve Board's regrouping of this index number shows the increase to have been chiefly in consumers' goods. The decline in animal and mineral products was overcome by a rise of 9 per cent in agricultural products, which now at 160 exceed the average of all commodities at 156 for the first time since last May, and except for April and May, have never before exceeded the all commodity average since September, 1920. Dun's and Bradstreet's index numbers increased by 1 and by 3 per cent, respectively, during November.

Retail food prices rose 1.4 per cent in November and were 45 per cent above 1913, the highest attained since December, 1921. The cost of living as compiled by the National Industrial Conference Board increased slightly, due to rises in food, shelter, and clothing, while fuel and sundries declined.

In contrast to the decline in the Federal Reserve Board's index for the United States, foreign index numbers rose, only slightly in Great Britain and India, but about 4 per cent in France and Switzerland.

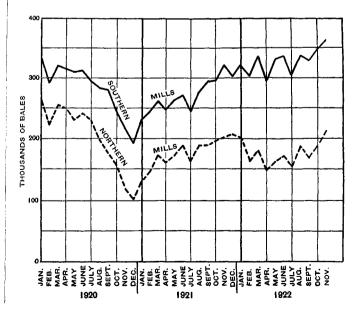

The prices of individual commodities shown in the diagram and table on pages 4 and 5 reveal that the declines in farmers' prices occurred only in live stock and potatoes, while cotton seed with an increase of 26 per cent again led the advances. The market price of farm products showed only one decline—in hogs—while pork had the only important decrease in the food group. In the clothing group, silk and hides and leather alone showed weakness, while in the fuels group the decline of 27 per cent in coke was the only change. Among the metals, iron and steel declined, but nonferrous metals tended to rise. Building materials declined, but rubber advanced.

The greatest relative increases in wholesale prices occurred in sheep, dress goods, rubber, cotton, and rye, with the greatest declines in pork, coke, hogs, and pig iron.

TEXTILES.

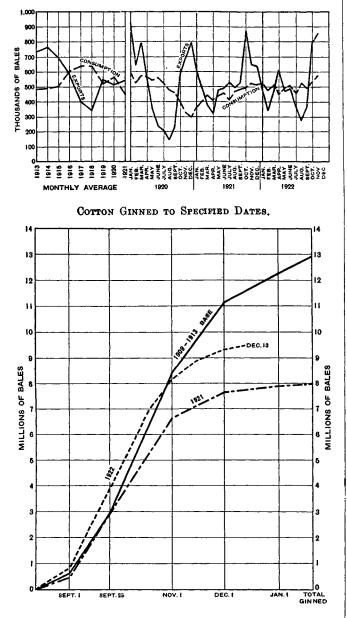

Wool consumption for November reached 63,000,000 pounds in grease equivalent, another new high record since the end of 1920, and about 20 per cent larger than a year ago. Receipts at Boston increased 50 per cent over October, due to the doubling of foreign wool receipts. Activity of woolen machinery increased considerably in November, with combs averaging over 116 per cent of active hours, due to overtime. Prices of raw wool increased slightly and further increases occurred in yarns and finished goods.

COTTON CONSUMPTION IN NORTHERN AND SOUTHERN MILLS.

Cotton consumption reached a total of 577,561 bales in November, a new high record since October, 1917 More spindles were active than at any time since July, 1920, and spindle activity was by far the greatest reported since these statistics were first collected in August, 1921. Mill stocks of cotton increased, but stocks at warehouses declined: the world visible supply was larger than a month before but showed a decrease from November, 1921. Exports of raw cotton reached 858,337 bales, the largest with one exception since January, 1920. Prices of raw cotton, yarns, and finished products continued to rise.

Production of fine cotton goods made a large increase in November but sales made a seasonal decline, though double the November sales in 1921.

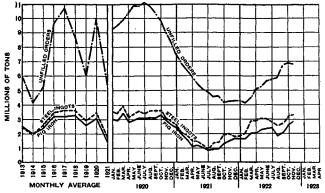

Production and orders of knit underwear declined slightly in November, shipments increased but were still less than production, and unfilled orders made a slight decline.

Silk consumption, as compiled by the association, declined slightly, while stocks again increased. The price of raw silk declined.

IRON AND STEEL.

The movement of iron ore declined seasonally, but was much heavier than in November, 1921. Further increases occurred in the output of pig iron and steel ingots—the former at 2,850,000 tons being the largest since November, 1920, and the latter at 3,303,000 tons, exceeding all months since October, 1920. Production, sales and shipments of merchant pig iron increased over October; stocks continued the accumulation started in October but at a greater rate, while unfilled orders continued to decline to the lowest point on record. Unfilled orders of the United States Steel Corporation made the first decline since the low point of February, 1921. Prices of iron and steel declined generally in November, with pig iron especially weak.

PRODUCTION OF PIG IRON AND STEEL INGOTS AND UNFILLED ORDERS OF U. S. STEEL CORPORATION.

Production of steel sheets showed a slight decline from the high October record, but shipments were the highest since 1919. Sales and unfilled orders rose to the highest point since June.

Shipments of locomotives increased in November and were the largest since April, 1921; over 90 per cent went to domestic railroads. Unfilled orders for locomotives mounted to the highest point since July, 1920, with an even larger percentage for domestic railroads. Freight car orders were the largest since last May.

Sales of fabricated structural steel made a seasonal decline. The tonnage booked during the month was equivalent to 46.8 per cent of shop capacity. The following figures compiled by the Bureau of the Census of the Department of Commerce show the total tonnage booked since April by 140 identical firms with a revised capacity of 211,310 tons per month, equivalent to 223,685 tons as previously rated. The total present capacity of fabricated structural steel shops is placed at 250,000 tons per month.

FABRICATED STRUCTURAL STEEL SALES.

(Reported by 140 firms with a capacity of 211,310 tons per month.)

MONTH.	Tonnage booked.	Per cent of shop capacity.
April	193,520 173,588	91.5 82.1
une. uly.	154, 770 143, 907	73. 2 68. 0
August. September	137, 485	69.3 65.0
October November		57. 46.

¹ Increased percentages over previous reports for past months due to revision of capacities.

A considerable increase in the capacity of the structural steel fabricating shops of the United States since 1913 is shown in a special survey made by the Department of Commerce. A preliminary report, based on data received from 143 firms with a total revised capacity rating of 208,440 tons per month, shows an increase since 1913 of 45,025 tons in monthly capacity, or about 22 per cent.

The following table shows the total monthly capacity for each year as reported by the above firms, representing about 83 per cent of the present estimated capacity of the United States, and the increase over the preceding year and over 1913:

MONTHLY CAPACITY OF FABRICATED STRUCTURAL STEEL SHOPS EACH YEAR.

(Reported by 143 firms with a capacity of 208,440 tons per month.)

YEAR.	Total monthly capacity.	Increase over pre- vious year.	Increase over 1913.
1913	163, 415 164, 265 166, 500 170, 900 175, 935 185, 060 188, 800 194, 675 197, 575 208, 440	850 2, 235 4, 400 5, 035 9, 125 3, 740 5, 875 2, 900 10, 865	850 3, 085 7, 485 12, 520 21, 645 25, 385 31, 260 34, 160 45, 025

The increase noted in the year 1922 was largely due to the entrance of shipbuilding concerns into the fabrication of structural steel. The capacity of structural steel shops is quite elastic in that, when not busy on structural steel, a shop is often used for tank work, railroad cars, shipbuilding, etc., and, similarly, structural work may be turned out in tank shops, shipbuilding plants, etc. The capacity figures given in the report refer to that portion of the fabricating capacity that is usually used for structural work; it is capable of expansion or contraction.

The capacity as reported for this survey was defined as the amount of structural steel work that actually could be turned out running single turn on the character and class of structural work that the plant ordinarily secures. Structural work was considered for this purpose as all work using structural shapes.

NONFERROUS METALS.

Copper production declined slightly from the October record and the price of electrolytic copper fell fractionally in November, but since then has recovered to the highest level since 1920.

Zinc production increased slightly, making a new high mark since June, 1920. Stocks made the first rise in a steady decline since July, 1921. Receipts and shipments at St. Louis declined. The price of slab zinc increased.

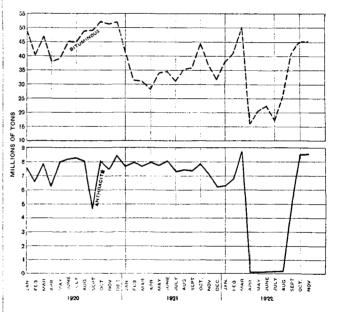

Stocks of tin declined but the price rose.

Receipts and shipments of lead at St. Louis were less than in October; the price of lead made a considerable advance.

FUELS.

Coal production in November was about the same as in October, with bituminous slightly higher and anthracite slightly lower. Production of both beehive and by-product coke increased and was the largest coke output since the beginning of 1921. Exports of coal and coke showed little change from October, but were considerably greater than in November, 1921. Coal prices remained fairly stationary, but the price of coke fell more than 25 per cent.

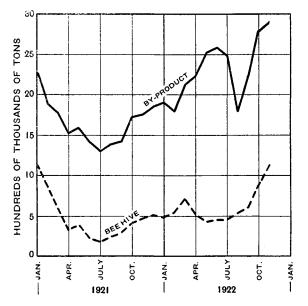

COAL PRODUCTION.

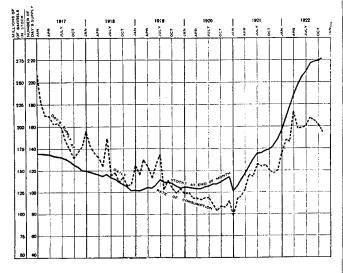

Crude petroleum production was practically the same as in October, while stocks and consumption both increased slightly and made new high records. Imports into the United States and shipments from Mexico both declined slightly.

Gasoline production figures for October, the latest issued, showed an increase almost to the high record of last July. Domestic consumption made a seasonal decline, while stocks increased. Production of kerosene oil, gas and fuel oil, and lubricating oil increased, the former reaching the highest mark since the end of 1919. Stocks of these products increased, except kerosene. Gas and fuel-oil stocks were the largest ever recorded. Exports for November declined slightly.

PRODUCTION OF BEEHIVE AND BY-PRODUCT COKE.

STOCKS OF PETROLEUM AS REPORTED AND AS TRANSLATED INTO DAYS' SUPPLY.

PAPER.

Newsprint production and shipments declined slightly in November, but exceeded the 1921 figures by over 20 per cent. Total stocks of newsprint increased slightly, due to the rise in transit stocks, while publishers' stocks declined. Consumption by publishers showed a slight decline. Prices of newsprint advanced.

Production of corrugated paper boxes increased in November over both October, 1922, and November, 1921, but solid fiber box output declined from both months. Rope paper sack shipments increased.

Printing activity and sales increased in October, but paper purchases declined. Purchases, sales, and activity were all from 10 to 15 per cent greater than in October, 1921.

AUTOMOBILES.

Automobile production in November amounted to 214,631 passenger cars and 21,223 trucks, a slight decline from October in both classes, which may be ascribed to seasonal conditions. Production of both classes was more than double the November, 1921, production. Shipments of automobiles showed a similar decline.

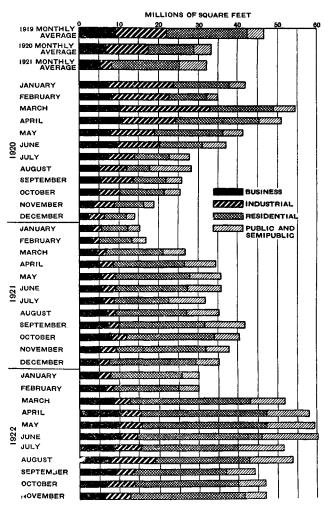

GLASS AND OPTICAL GOODS.

The production of glass bottles increased over the October output but showed a decline from November, 1921. Orders, production and shipments of illuminating glassware continued their steady increase through November, all making new high records since these statistics were started in May, 1921. Sales and unfilled orders of spectacle frames and mountings also continued to increase, with sales the largest since June, 1920, and unfilled orders the largest since December, 1920.

BUILDING CONSTRUCTION.

The cost of building construction in November showed further slight increases, according to most of the index numbers available.

VOLUME OF BUILDING CONTRACTS AWARDED, BY CLASSES.

The cost of constructing a standard concrete factory, as computed by the Aberthaw Company, has shown no change during the last three months. This index number stands at 192, compared with 153 in November last year and 100 in 1914.

Contracts awarded for building construction in the 27 northeastern States showed a slight decline in money value, but the square feet of floor space in November was slightly greater than in October, in spite of an expected seasonal decline. This increase was due to the larger volume of residential building, which was greater both in floor space and in value than in October. The most significant decline in value occurred in contracts awarded for public works and utilities, for which floor space figures can not be given.

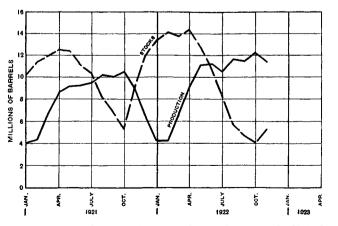

The total contracts awarded during the first eleven months of this year are valued at \$3,137,706,000, and represent 12,480,000 square feet of floor space. Both of these figures set new high records for the construction industry and are from 45 to 52 per cent greater than for the corresponding period of 1921.

Fire losses in November totaled \$30,776,000, or nearly \$10,000,000 less than the exceptionally high record in October. Fire losses for the eleven months of this year total \$363,464,000, which is nearly 20 per cent greater than for the same months of 1921.

BUILDING MATERIALS.

Lumber production in November declined slightly, as is to be expected at this time of the year. Shipments also were slightly less than in October, but for nearly every species both of these movements were far in excess of those of a year ago.

The production and shipments of oak and maple flooring showed but little change from October. The production of oak flooring as reported by the association for the 11 months of this year was 91 per cent greater than in the corresponding months of last year. In the same period the production of maple flooring increased 39 per cent.

The production of clay fire brick increased slightly in November, while the output of silica brick and face

brick both declined. Shipments in each case declined, while, with the exception of face brick, stocks were larger.

Cement production and shipments showed a seasonal decline, while stocks rose slightly from the low point reached in October. The price remained unchanged.

For the most part shipments of enameled sanitary ware were slightly smaller than in October, but orders received and stocks tended to increase. Stocks are considerably smaller than a year ago, but orders and shipments are much larger.

NAVAL STORES AND VEGETABLE OILS.

Turpentine receipts made a small increase over October and over November, 1921, but rosin receipts continued to show large increases over the 1921 movement, which was held back from the ports. Stocks of both commodities rose in a seasonal movement. Turpentine stocks were considerably smaller than a year ago, but rosin stocks increased.

Exports of vegetable oils increased over 150 per cent in November and were the largest since June, 1921. Cottonseed-oil production increased and exceeded the November, 1921, output. Stocks of both cottonseed and cottonseed oil, with seasonal increases, were higher than a year ago. The price of cottonseed oil increased slightly.

Flaxseed receipts in the Northwest were higher in November than a year ago, but shipments were less. Stocks declined from November, 1921. October shipments of linseed oil and linseed-oil cake from Minneapolis were larger than in 1921.

CEREALS, VEGETABLES, AND FRUITS.

The final official estimate of the 1922 wheat crop by the Department of Agriculture, 856,217,000 bushels, showed a large increase over previous reports and an increase of over 41,000,000 bushels over the 1921 crop. Receipts and shipments of wheat in November were considerably above the corresponding 1921 figures, but the visible supply was slightly smaller. Exports of wheat and flour in November were the smallest since last June. Prices of both wheat and flour continued to rise.

The final corn-crop estimate of 2,891,000,000 bushels was little changed from earlier reports, and was 238,000,000 bushels less than the large 1921 crop. Receipts and shipments of corn in November exceeded the 1921 figures, but the visible supply was about one-third less. Exports were the lowest since November, 1921. Grindings of corn declined, but exceeded those made a year ago. The price of corn again advanced.

The following tables, prepared from figures supplied by the American Manufacturers' Association of Products from Corn shows the distribution of corn sirup (glucose) and starch by manufacturers who made almost the entire production of these products in the United States.

DISTRIBUTION OF CORN SIRUP (GLUCOSE).

(In pounds.)

Miscellaneous	9, 632, 639	14,904,012	20, 682, 872	24,452,140
Total for domestic				
consumption	464, 646, 124	546, 381, 418	539,739,875	294, 891, 603
Exported	234,754,114	124,808,313	265,048,100	190,838,26
Total distribution	699, 400, 238	671, 189, 731	804,787,975	485,729,87

The final figure on the oats crop of 1,215,496,000 bushels was slightly less than previous estimates, but an increase of 137,000,000 bushels over the 1921 crop. Receipts in November more than doubled the November, 1921, receipts, but the visible supply was only half as large as a year ago. Exports declined slightly, but were far in excess of last year's. The price of oats continued to rise.

The barley crop of 186,110,000 bushels as finally estimated was a decline from previous estimates but an increase of 31,000,000 bushels over the 1921 crop. November exports of barley declined, but the price continued to rise.

The final rye estimate of 95,497,000 bushels was a considerable rise over previous estimates and indicates the largest rye crop ever harvested in the United States. Exports of rye and rye flour in November were more than double the October exports. The price of rye made a considerable advance. Total grain production of 5,244,026,000 bushels in 1922 compares with 5,178,436,000 bushels in 1921, with good increases in every crop except corn. Total grain exports in November declined from October but were considerably higher than a year ago. Car loadings of grains and grain products were larger than in October and almost 50 per cent larger than in November, 1921.

The final rice crop figures of 41,965,000 bushels show an increase of over 4,000,000 bushels from 1921.

Both receipts at mills and shipments of clean rice in November were far in excess of the 1921 figures, and domestic stocks were almost double.

The final apple production of 203,628,000 bushels was more than double the 1921 crop. Cold-storage holdings of apples in November were larger than a year ago. Car-lot shipments of apples, white potatoes, and onions were all considerably larger than in November, 1921.

MEATS AND DAIRY PRODUCTS.

Cattle movement and slaughter in November declined from October, but was considerably larger than in November, 1921. Exports of beef products increased and were the largest since last July. Coldstorage holdings of beef were 20 per cent greater than a year ago. The price of cattle advanced but beef remained stationary.

Hog movement and slaughter made a seasonal advance in November and exceeded the 1921 corresponding figures by a wide margin. Exports of pork products declined slightly from October, but exceeded the corresponding month of 1921. Cold-storage holdings were more than 13 per cent greater than a year ago. Prices of both hogs and pork made sharp declines.

Sheep movement and slaughter also declined seasonally, but exceeded the November, 1921, figures, except for slaughter. Cold-storage holdings increased but were only half as large as a year ago. Prices of sheep advanced.

The fish catch made a seasonal decline in November but was considerably larger than a year ago. Coldstorage holdings, however, were smaller. Receipts of poultry increased seasonally, but were less than in November, 1921. Cold-storage holdings were also smaller than a year ago.

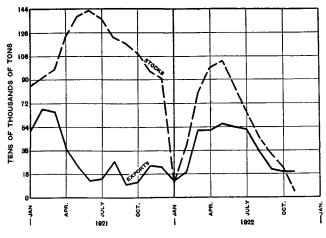

Receipts of butter, cheese, and eggs were larger than a year ago, with a seasonal decline in November. Cold-storage holdings also declined, with creamery butter holdings considerably less than a year ago. but cheese and eggs higher. Prices of butter and cheese increased.

Milk production in the Minneapolis district was about the same as in October, but exceeded a year ago. Exports of condensed milk declined in November.

SUGAR.

Receipts of the domestic cane crop in November were about the same as in 1921. Meltings of raw sugar increased over 1921, but stocks were less. Exports of refined sugar were almost three times as large as in October. Prices increased slightly. Receipts in Cuba declined, but exports continued high and stocks in Cuba declined to the lowest point since the armistice.

STOCKS OF RAW SUGAR IN CUBA AND SUGAR EXPORTS FROM CUBA.

PRODUCTION AND STOCKS OF SUGAR.

(All figures in short tons of 2,000 pounds.)

Beginning with July, 1922, the Bureau of the Census has undertaken to compile monthly reports on the production and stocks of sugar, including refiners, cane sugar and beet sugar factories. The accompanying table gives the more important figures from these reports for the four months covered, some of the figures on stocks being revised since previous publication. These reports are practically complete for 26481-23-3 the industry, with the exception of the refiners, where Arbuckle Bros., and the Federal Sugar Refining Co. failed to report. The latter company did report in July but not in subsequent months.

COFFEE.

The world visible supply of coffee declined in November but the United States supply rose. Both were considerably lower than a year ago. Receipts in Brazil declined slightly and clearances were considerably less than in October but about the same as a year ago.

TOBACCO.

Consumption of cigars and manufactured tobacco, as shown by the tax-paid withdrawals, declined in November, but cigarette consumption increased slightly. Exports of both unmanufactured tobacco and cigarettes declined considerably and sales at loose-leaf warehouses made a sharp drop. The price of Burley tobacco remained unchanged.

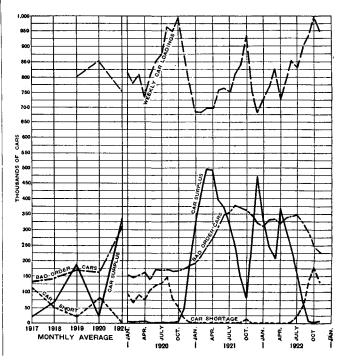

WATER TRANSPORTATION.

Traffic on both the Sault Ste. Marie Canal and on the Erie and other New York State canals was very large for November. Panama Canal traffic in October made a new high record by a considerable margin, both American and British vessels showing record performances. Ocean freight rates rose in November after a series of declines.

RAILROAD TRANSPORTATION.

Freight-car loadings made a seasonal decline in November but were far above November, 1921. Coal

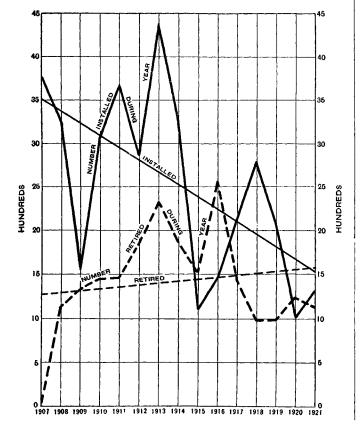

SHORTAGE, SURPLUS, BAD-ORDER, AND TOTAL LOADINGS OF FREIGHT CARS.

loadings increased slightly over October, while the chief declines were in ore and merchandise. Car shortage was reduced in November to about the same situation as prevailed in September; this reduction was principally in box cars. Car surplus increased somewhat.

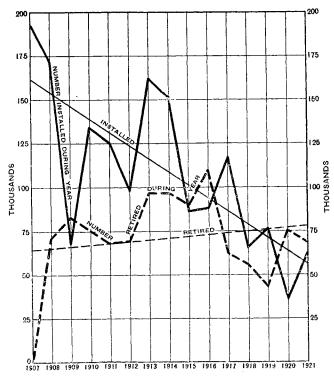

Railroad financial operations for October, the latest issued, showed the largest freight revenue since November, 1920, and a seasonal decline in passenger revenue. Operating expense was the highest since January, 1921, and net operating income of \$85,000,000 in October was the best since October, 1921. Tonmile receipts for September were the lowest since August, 1920. October Pullman traffic showed a seasonal decline but was considerably larger than a year ago.

The two accompanying diagrams drawn from statistics furnished by the Interstate Commerce Commission show the trend of the railroad equipment situation over the last 15 years. During this period there has been a marked decline in the number of engines and freight cars installed on Class 1 roads. During the same period the number of engines and cars retired has tended to increase, leaving the net supply smaller than in the pre-war period. In order to show the trends of these movements over the periods as a whole the best fitting straight lines have been plotted in addition to the yearly figures.

LOCOMOTIVES INSTALLED AND RETIRED EACH YEAR.

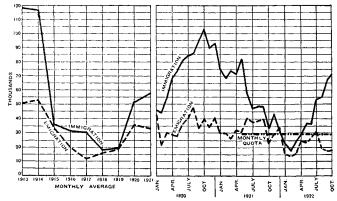

FREIGHT CARS INSTALLED AND RETIRED EACH YEAR.

LABOR.

Substantial increases in employment and pay-roll total were reported in November in both New York and Wisconsin, with an increase of from 15 to 20 per cent in number employed over a year ago. Unemployment in Pennsylvania was still further reduced. Jobs reported open again exceeded workers registered at state and municipal employment agencies in October.

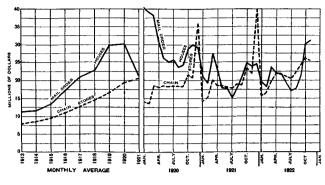

IMM GRATION, EMIGRATION, AND IMMIGRATION QUOTA.

DISTRIBUTION MOVEMENT.

Sales of mail-order houses again increased to a new high point since March, 1920. Chain-store sales declined slightly in November, and wholesale billings, as represented by the American Wholesale Cooperation, were seasonally lower, but slightly higher than in November, 1921. Magazine advertising declined slightly, and postal receipts, with a slight increase over October, made a new record for any month outside of the December holiday mailings.

SALES OF MAIL-ORDER HOUSES AND CHAIN STORES.

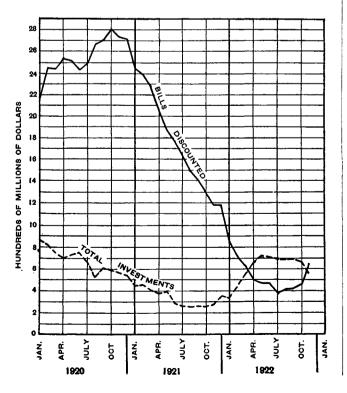

PUBLIC FINANCE.

Further reduction was made in the outstanding Government debt in November through the retirement of Liberty and Victory bonds. Customs receipts increased over October. Total ordinary receipts and disbursements of the Government declined, with receipts larger than disbursements. The money in circulation continued to increase.

BANKING AND FINANCE.

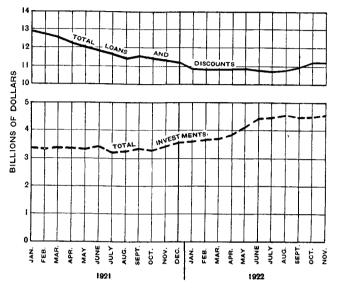

Debits to individual accounts and bank clearings, both in New York City and outside, declined. Federal Reserve discounts and note circulation both were the highest since the early part of 1922. The reserve ratio declined to the lowest at the end of any month this year. Member bank loans and deposits declined, but

BILLS DISCOUNTED AND TOTAL INVESTMENTS OF FEDERAL RESERVE BANKS.

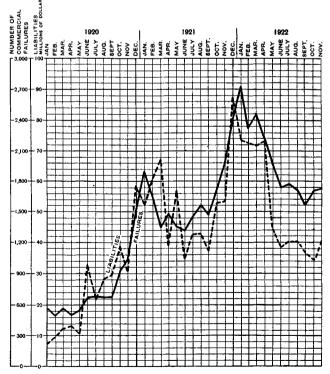

investments increased. Interest rates were almost unchanged.

Total new life insurance business for November reached \$531,852,000, the largest since last June. The number of policies represented was slightly less than in October, due to the decline in industrial policies. Industrial insurance was also the only class to decline in amount of new insurance.

LOANS AND DISCOUNTS AND TOTAL INVESTMENTS OF FEDERAL RESERVE MEMBER BANKS.

NUMBER OF BUSINESS FAILURES AND AMOUNT OF DEFAULTED LIABILITIES.

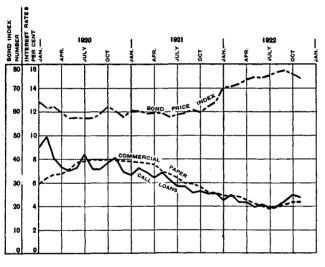

The number of business failures again increased, and the defaulted liabilities rose to over \$40,000,000 in November. New capital issues of corporations increased from the low October total, but new municipal

and state loans declined. New incorporations were the largest since last May, and over twice the amount of the November, 1921, incorporations.

Telephone and telegraph operating revenues and income for October, the latest figures available, all made increases over September and large increases over October, 1921.

Credit condition statistics of the jobbing trade in November showed increases in the proportion of orders and payments, with indebtedness practically stationary.

Sales of stocks and corporation bonds were both about 20 per cent less than in October, but Liberty-Victory bonds showed a falling off of 45 per cent in transactions on the New York Stock Exchange. Prices of railroad stocks declined 7 per cent and industrials declined 4 per cent, while bonds declined, on the average, 2 per cent, the principal exception being second-grade rails, with a 4 per cent decline.

INTEREST RATES AND BOND PRICE INDEX.

GOLD AND SILVER.

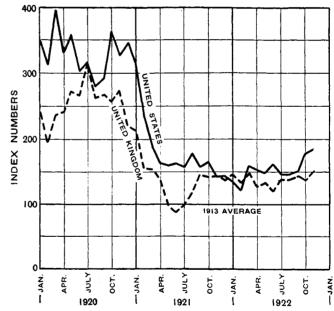

Gold output at the Rand mines declined slightly in November, and both domestic gold receipts and imports were 12 per cent below October's. Exports also declined from the relatively high mark attained in October. Exports exceeded imports by almost \$15,000,000. Silver production continued to decline. Both imports and exports made large increases over October. Exports of silver exceeded imports for the first time since May, and were the largest since February.

FOREIGN EXCHANGE AND TRADE.

Outside of the continued drop in the German mark, exchanges did not show much change in November. The chief declines, outside of Germany, were in French and Belgian francs and the Chilean peso, the latter falling 9 per cent and the two former 7 per cent, while Italian lire, with a 7 per cent gain, and Brazilian milreis, with 5 per cent, featured the advances. Sterling continued to advance. The index of foreign exchange prepared by the Federal Reserve Board remained stationary.

Exports for November, totaling \$383,000,000, were the largest since March, 1921. No import figures are as yet available since the new tariff law went into effect on September 22, owing to the inability of the Bureau of Customs Statistics of the Treasury Department to supply them on account of the many changes in classification of imports.

Comparison of Total Exports from United States and United Kingdom.

INDEX NUMBERS OF PRODUCTION AND MARKETING.

In recent numbers of the Survey there have been published detailed discussions of certain index numbers of production and marketing dealing particularly with raw materials. The following tables give the recent figures for each of these index numbers, compared with the corresponding months of 1921. The methods of compiling these indices and the weighting factors used are discussed in detail in the issues of the Survey referred to.

MONTHLY INDEX OF MANUFACTURING PRODUCTION.

For several months past, index numbers showing the relative monthly production of raw materials in the United States have been published currently in the "Survey of Current Business." It is now possible to extend our index numbers of production to cover manufactured goods also on a large range of industries, taking in about 40 per cent of the value of manufactured goods in the United States in 1919.

In compiling this series of index numbers, we have in general taken the data from those published regularly as part of the "Survey of Current Business," recalculated, where necessary, to a 1919 base. The index is formed by weighting each product arithmetically by the value added to it in the process of manufacture in 1919, as reported by the Bureau of the Census in the Census of Manufactures. Production in 1919 is taken as 100 in calculating relative figures.

SOURCES OF MATERIAL.

The following explains the composition of each individual series of data:

Meats.—This series consists of the aggregate total amount, dressed weight, of beef, veal, pork and mutton products produced in inspected slaughterhouses, as compiled by the United States Department of Agriculture, Bureau of Animal Industry. These figures represented 68 per cent of the hogs, 82 per cent of the cattle and calves and 91 per cent of the sheep and lambs slaughtered throughout the United States in 1919.

Wheat flour.—This series consists of the total wheat flour production as reported to the United States Grain Corporation prior to July, 1920, and from that date as compiled by Russell's Commercial News on the basis of reports from mills bearing a known relation to the total.

Sugar.—This series consists of the meltings of raw into refined sugar at refineries situated at the seven principal sugar-importing ports (Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and

San Francisco), as compiled weekly by the Statistical Sugar Trade Journal, the odd days of the month being prorated. These figures represent practically the entire meltings of sugar in the United States.

Butter, cheese, condensed milk, and ice cream .----These series are taken from production figures compiled by the United States Department of Agriculture, Bureau of Agricultural Economics, and represent practically the entire production of these commodities in the United States as shown in the Census of Manufactures for 1919, the figures being butter 94 per cent, cheese 91 per cent, condensed milk 100 per cent. No quantity figures were published for ice cream in the Census of Manufactures.

Glucose and starch.—This series consists of the grindings of corn by the wet process in the manufacture of cornstarch, glucose, etc., as compiled by the American Manufacturers' Association of Products from Corn. The figures for 1919 agree almost exactly with those given for the consumption of corn in this industry by the Census of Manufactures for that year.

Rice .- This series consists of the shipments of cleaned rice from the mills of Louisiana, Texas, and Arkansas, as compiled by the Rice Millers' Association and representing practically the entire rice milled in the United States outside of California. These data represented 69 per cent of the total millings in 1919 as shown by the Census of Manufactures.

Oleomargarine.-This series consists of the production of olemargarine as compiled by the United States Treasury Department, Bureau of Internal Revenue, and represents total production in the United States.

Cotton.—This series consists of the consumption of cotton, excluding linters, in all textile mills as reported by the United States Department of Commerce, Bureau of the Census.

Wool.—This series, beginning with January, 1921, consists of the consumption of wool in textile mills compiled by the United States Department of Commerce, Bureau of the Census, and represents about 80

per cent of the total wool consumed in textile mills of this country. From January, 1921, through March, 1922, these reports were made to the United States Department of Agriculture, Bureau of Markets, and from April, 1922, to the Bureau of the Census. Prior to January, 1921, this series consists of figures compiled by the United States Department of Agriculture, and partly estimated by them to cover the entire wool consumption of the United States. These figures have been prorated down to 80 per cent to agree with the subsequent actual reports of the Bureau of the Census.

Pig iron.—This series consists of the production of pig iron, not including charcoal iron, as reported by the "Iron Age" and represents practically the total production, as compared with the 1919 Census of Manufactures.

Steel ingots.—This series consists of the production of steel ingots as reported monthly to the American Iron and Steel Institute, by 30 mills producing 84.2 per cent of the total output in 1920, and 87.5 per cent in 1921. The figures are prorated to 100 per cent for each year, the 1922 figures being prorated on the 1921 percentage basis.

Locomotives.—This series consists of the shipments of locomotives from the principal locomotive plants as reported to the United States Department of Commerce, Bureau of the Census, and represented 82 per cent of the steam locomotives produced in the United States in 1919 as reported by the Census of Manufactures.

Lumber.—This series consists of the total production of 10 species of lumber—yellow pine, western yellow pine, sugar pine, white fir, Douglas fir, redwood, and hemlock among the softwoods, and maple, birch, and beech among the hardwoods-representing 70 per cent of the lumber cut of the United States and compiled from original reports from the following associations: Southern Pine Association, North Carolina Pine Association, Western Pine Manufacturers' Association, California White and Sugar Pine Manufacturers' Association, West Coast Lumbermen's Association, California Redwood Association, Northern Hemlock and Hardwood Manufacturers' Association and Michigan Hardwood Manufacturing Association. This index is the same as that used for logs in the index of forestry production; the details of its construction may be found on page 19 of the August, 1922, issue (No. 12) of the "Survey of Current Business."

Flooring.—This series consists of the total aggregate production of oak flooring and maple, birch, and beech flooring as reported, respectively, by the Oak Flooring Manufacturers' Association and the Maple Flooring Manufacturers' Association and estimated to represent about 90 and 70 per cent of their respective industries.

Sole leather.—This series consists of the production of sole leather reported by the Tanners' Council prior to July, 1922, and representing reports of its members, constituting about 80 per cent of the industry, and estimates to make the industry complete. Beginning with July, 1922, these data are from reports to the United States Department of Commerce, Bureau of the Census, representing complete production.

Wood pulp.—This series consists of the production of wood pulp as reported by the Federal Trade Commission, representing practically the entire production of the United States.

Paper.—This series consists of the total aggregate amount of paper produced as reported by the Federal Trade Commission, representing practically the entire production of the United States.

Book and job printing.—This series consists of the tonnage of printing paper purchases compiled by the American Writing Paper Co. from 350 concerns, doing from 20 to 25 per cent of the total commercial printing business of the country.

Newspaper printing.—This series consists of the consumption of newsprint paper by about 660 of the principal publishers, as compiled by the Federal Trade Commission, calculated to represent about 85 per cent of the consumption of newsprint in the United States.

Coke.—This series consists of the aggregate production of beehive and by-product coke as reported by the United States Department of the Interior, Geological Survey, except for the year 1920, when the index is based on beehive coke only, as by-product coke figures are not available on a monthly basis prior to January, 1921. As the annual index for beehive coke for 1920 is only 7 per cent lower than the combined index of both kinds of coke for that year, the actual figures have been increased by seven percentage points for each month of that year and thus should represent the total coke production fairly accurately.

Cottonseed oil.—This series consists of the production of cottonseed oil, as compiled by the United States Department of Commerce, Bureau of the Census, representing practically complete production.

Refined petroleum.—This series consists of the aggregate production of the important products of petroleum refining—gasoline, kerosene, lubricating oils, and gas and fuel oils—as compiled by the United States Department of the Interior, Bureau of Mines, representing practically complete production.

Turpentine and rosin.—This series consists of a weighted index of the turpentine and of the rosin receipts at the three ports of Savannah, Jacksonville, and Pensacola as reported by the Savannah Board of Trade, Jacksonville Chamber of Commerce, and Pensacola Chamber of Commerce. Turpentine and rosin are weighted by their approximate relative value as shown by the 1919 Census of Manufactures, turpentine being weighted at 2 and rosin at 3. These data represent about 60 per cent of the turpentine and rosin produced from gum. **Brick.**—This series consists of the aggregate production of clay fire, silica, and face brick as reported by the Refractories Manufacturers' Association for the first two classes and the American Face Brick Association for the latter class. These data represent 67 per cent of the total output of these classes of brick, according to the 1919 Census of Manufactures, but only 18.3 per cent of all brick produced in the United States, as common brick and vitrified brick are not included in the monthly statistics.

Glass.—This series consists of the production of glass bottles as reported by the National Bottle Manufacturers' Association, estimated to represent 90 per cent of the bottle industry, which in turn produced over 25 per cent of the total value of glass products in 1919, according to the Census of Manufactures.

Copper.—This series consists of the smelter production of copper compiled by the American Bureau of Metal Statistics, except for 1920, where the Engineering and Mining Journal's estimates have been taken and prorated to the annual figures as given by the United States Department of the Interior, Geological Survey. To the production figures have been added the copper content of imports. The 1919 production base is from the Geological Survey.

Zinc.—This series consists of the total primary zinc production as reported by the American Zinc Institute, representing practically the United States total.

Enamel ware.—This series consists of the aggregate shipments of enamel baths, lavatories, sinks and miscellaneous ware as reported by the Enameled Sanitary Ware Manufacturers' Association, estimated to represent 98 per cent of the total output of sanitary enamel ware in the United States.

Manufactured tobacco, cigars, and cigarettes.— These series consist of the tax-paid withdrawals, respectively, of manufactured tobacco and snuff, large cigars and small cigarettes, as reported by the United States Treasury Department, Bureau of Internal Revenue, representing practically the total production of these items.

Shipbuilding.—This series consists of the output of ships officially numbered by the United States Department of Commerce, Bureau of Navigation.

WEIGHTING FACTORS.

The various series of index numbers are weighted by the approximate relative value added by the process of manufacture, according to the Census of Manufactures for the year 1919. In the case of wood pulp and paper, the figures as given in the Census reports had to be recalculated by deducting from the value added to paper the estimated value added to wood pulp consumed in making paper where the wood pulp was also made in the same factory.

The following table gives the weights used for each series, the approximate percentage which the series bears to the total production of the industry, the actual value added by manufacture for each of these series, the calculated value added by manufacture represented by the actual series taken and the number of separate commodities making up each series:

		Ap- proxi- mate per cent	MANUF. 19	DDED BY ACTURE, 19 of dolls.).	Num- ber of sep-

SUPPLEMENTAL INDEX.

In addition to the above commodities, there are certain other commodities for which figures are obtainable on a 1919 base, but not running back to January, 1920. These could not, on this account, be used in the regular index. There has been prepared, however, a supplemental index using these commodities, beginning with January, 1921, although this index is not strictly accurate, because not complete, until November, 1921. The additional commodities included in the supplemental index are given below:

		Ap- proxi- mate per cent	MANUF.	DDED BY ACTURE, 019 of dolls.).	Num- ber of sep-
:	Weight used.	of in- dustry repro- sented in series.	Indus- tries in series.	Percent- age of indus- try rep- resented in series.	arate com- modi- ties in series.
Boots and shoes Cement. Lead. Automobiles. Rubber tires.	22 5 1 40 27	100 100 80 100 80	440 96 17 809 544	440 96 14 809 435	$\begin{array}{c}1\\1\\1\\2\\3\end{array}$
Total	95		1,784	1,784	8

The sources of the supplemental data are as follows: **Boots and shoes.**—This series consists of the production of boots and shoes (except rubber) compiled by the United States Department of Commerce, Bureau of the Census, beginning in November, 1921, and representing practically complete production.

Lead.—This series consists of the mine production of lead reported, beginning January, 1921, by the membership of the American Bureau of Metal Statistics, prorated to the yearly figures of the United States Department of the Interior, Geological Survey.

Automobiles.—This series consists of the aggregate of passenger automobiles and trucks produced, beginning July, 1921, as compiled by the United States Department of Commerce, Bureau of the Census, from reports by the National Automobile Chamber of Commerce and outside firms, representing almost complete production.

Cement.—This series consists of the production of Portland cement as compiled by the United States Department of the Interior, Geological Survey, beginning January, 1921, and representing practically complete production.

Rubber tires.—This series consists of the consumption of rubber in the production of rubber tires as compiled by the Rubber Association of America. The production of the manufacturers reporting these figures represented 80 per cent of the automobile pneumatic tires, 85 per cent of the automobile inner tubes and 72 per cent of the solid tires produced in the United States in 1921, in comparison with the Census

26481-23-4

of Manufactures. The 1919 base is taken by applying to the 1921 figures of the association the percentage change shown by the Census of Manufactures from 1919 to 1921 on automobile casings, automobile tubes, and total solid tires, these percentages being weighted by the relative value of these products. The figures prior to September, 1921, are not exactly comparable with the later figures, owing to the omission of one important company beginning on that date.

GROUPING.

The following table summarizes the representation of the various groups of industries according to the classification of the Census of Manufactures:

	NUMB COMMO	ER OF DITIES.	MANU	UE ADDED FACTURE ons of dol	, 1919	Per- centage
	Regu- lar.	Sup- ple- men- tal.	Total for group.	Indus- tries in regular series.	Indus- tries in supple- mental series.	of group repre- sented in total series.
Foodstuffs. Textiles Iron and steel. Lumber. Leather. Paper and printing. Liquors. Chemicals. Stone, clay, and glass. Metals, except iron and steel. Tobacco. Vehicles. Pairmod area in charge.	$ \begin{array}{c} 2 \\ 3 \\ 12 \\ 1 \\ 9 \\ 0 \end{array} $	$egin{array}{c} 0 \\ 0 \\ 0 \\ 0 \\ 1 \\ 0 \\ 0 \\ 1 \\ 1 \\ 0 \\ 2 \\ 0 \end{array}$	2, 327 3, 834 4, 588 1, 710 896 1, 706 381 1, 863 677 850 529 1, 561	$\begin{array}{c} 1,081\\ 1,355\\ 1,405\\ 1,117\\ 282\\ 1,332\\ 0\\ 602\\ 312\\ 179\\ 529\\ 0\\ 0\\ 0\end{array}$	0 0 440 0 96 17 0 809	46 35 31 65 83 78 0 32 60 23 100 52 0
Railroad repair shops Miscellaneous		3	806 3, 313	813	0 544	41
Total	62	8	25,042	9,007	1,906	44

It will be seen from the above that with the inclusion of the supplementary items, a fairly representative series has been obtained for each group, with the total averaging 44 per cent of the entire industrial output. The only groups not represented are liquors, the smallest group and one of declining importance, and railroad repair shops, where no quantity production figures are possible.

RESULTS.

The present index of manufacturing, taking in as it does 70 different commodities and representing 44 per cent of the manufacturing output of the United States, is believed to be considerably more representative than previously published monthly index numbers. In general it may be said to fall in with the general trend of other indices of manufacturing, with this important difference—that the fluctuations are not as great. This is, no doubt, due to the greater number of industries included, thus giving the index a greater balance. Comparing it with the indices of manufacture constructed by the Federal Reserve Board and by the Harvard Economic Service for the months of 1920 and 1921, the figures of this index fall between the other two indices 75 per cent of the time. The maximum point of production in 1920 was in March, with an increase of 12 per cent over the 1919 average. The minimum point of production in the depression occurred in February, 1921, with the output 26 per cent below the 1919 average, closely followed by the July, 1921, output, which was 25.6 per cent below 1919. Since July, 1921, there has been a gradual increase until the 1919 average was surpassed in May, 1922. June, 1922, made a high point, 3 per cent above the 1919 average on the identical index and 12 per cent above when the supplementary items are included. June seems to be a high production month each year, and throughout a majority of the industries.

INDEX OF MANUFACTURING PRODUCTION. (Monthly average production 1919=100.)

In this connection, it is interesting to note the seasonal variations in production. This is graphically shown on the chart herewith, on the basis of three years' experience. January is a high month; February is low, due to the small number of working days; but March is usually slightly higher than January. In April a drop occurs, with a rise in May and a further rise in June. July shows a considerable falling off, August a slight recovery and September at about the same mark as August. It is quite significant that up to September, each month has shown the same tendency relative to the preceding month in each of the past three years. After September, on the basis of 1920 and 1921 figures only, October has shown an increase, November a decline and December a further decline. The high points of manufacturing activity are thus due in January, March, June, and October.

Looking at the individual groups, it can be seen that by May, 1922, all groups except leather and shipbuilding exceeded the 1919 average and have kept above ever since, except for the slight seasonal declines in textiles in July and in iron and steel from July through September. Leather in October had practically reached the 1919 par, while shipbuilding can not be expected to do so on account of the inflated production in that industry in 1919.

TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures, designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

- October; 1922 .- This column gives the October figures corresponding to those for November shown in the next column--in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending September 30, 1922.
- November, 1922.-In this column are given the figures covering the month of November, or, as in the case of stocks, etc., the situation on November 30 or December 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter ending September 30 or the condition on that date. Where this column is left blank, no figures for November were available at the time of going to press (January 7).
- Corresponding month, October or November, 1921.—The figures in this column present the situation exactly a year previous to those in the "November, 1922," column (that is, generally November, 1921), but where no figures are available for November, 1922, the October, 1921, figures have been inserted in this column for comparison with the October, 1922, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1921. Cumulative total through latest month.—These columns set forth, for those items that can properly be cumulated, the cumulative total
- for the first eleven months of the calendar years 1921 and 1922, respectively, except where the November, 1922, figures are lacking, in which case the cumulative total for ten months in each year is given. Percentage increase (+) or decrease (-) cumulative, 1923 from 1921.—This column shows the percent by which the cumulated total for the first eleven months of 1922 is greater (+) or less (-) than the total for the corresponding period of 1921.
- Base year or period.—For purposes of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no pre-war figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921 and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen.
- Index numbers.-In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919, to equal 100. If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100. The difference between 100 and any index be greater than 100. If the converse is true the index number will be less than 100. The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next. Percentage increase (+) or decrease (-) November from October.—The last column shows the per cent increase or decrease of the figure
- for the last month compared with the preceding month.

NOTE.—Because of the confusion resulting from the new tariff schedules, the Bureau of Customs Statistics, Treasury Department, has not been able to compile the import figures for either October or November. All import figures are therefore omitted from this number of the Survey.

² Six months' average, July to December, inclusive. ^b These figures are recomputed to a normal capacity of the industry previously estimated at 180,000 tons, in order to make them comparable with figures compiled by the Structural Steel Society prior to April, 1922. The plant capacity, as shown by the Census Bureau summary of reporting firms, since April, is considerably higher, being 211,610 tons for 140 identical firms reporting.

• Not directly comparable with monthly figures prior to July, 1922, shown in the November "Survey" (No. 15). The index numbers have been computed by chain relatives and take account of the percentage variation rather than the absolute variation in the figures, and hence show the trend of the movement irrespective of the change in the number of firms reporting.

¹ Data on internal revenue and candy sales from U.S. Treasury Department, Bureau of Internal Revenue; Railway employment from the Bureau of Railway Economics; ² Data represent taxes collected under the Revenue Acts of 1918 and 1921. For taxes on theater and cabaret admissions the rate of tax is "1 cent for each 10 cents or fraction thereof of the amount paid for admission" payable by the person paying such admission. Data shown for theater taxes for 1922 (Revenue Act of 1921) reflect a Slight change from the act of 1918, i.e., "where the amount paid for admission is 10 cents or less, no tax shall be paid." Automobiles and motorcycles "including tires, inner tubes, parts, and accessories therefor sold on or in connection therewith") the rate is 5 per cent and payable by the manufacturer. For taxes on automobile trucks and automobile wagons ("including tires, etc., sold on or in connection therewith") the rate is 5 per cent and payable by the manufacturer. Sories and parts sold to any person other than a manufacturer (of automobiles)" the rate is 5 per cent and payable by the manufacturer. ³ Computed on the basis of a 5 per cent excise tax prior to January, 1922, and since January, 1922, on the basis of a 3 per cent tax (Revenue Act of 1921). ⁴ These indices are for the first week in each month as published in "Lumber" and represent a combined weighted average for the respective species of lumber. ⁵ Six months' average, July to December, inclusive. ⁴ Average for the quarter beginning with month for which figures are shown.
