SURVEY
OF
CURRENT BUSINESS

UNITED STATES
DEPARTMENT OF COMMERCE
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
WASHINGTON

How to use

CURRENT BUSINESS STATISTICS

explained for the business man in nontechnical language with 283 specific examples and 7 charts

Published by the United States Department of Commerce

CHAPTER TITLES AND CONTENTS

I—The problem and its solution

Results of use of statistics	Controlling the business cycle
Development of statistics	Results of statistical control
Need of census data	Budgeting
History of statistics	Difficulties in forecasting

II—How the figures are used

Specific examples of the uses of business statistics, gathered from actual experience, are presented here, classified under 30 industries and businesses.

III—How to interpret the figures

Production	Unshipped orders
Capacity	Inquiries
Employment	Salemen's calls
Shipments	Prices
Consumption of materials	Imports
Material stock	Exports
Finished stock	Statistics of material markets
Orders accepted	Statistics of distribution markets
Cancellations	General business statistics

IV—How to collect current statistics

What to gather	Publicity
Period covered	Mode of presentation
Preparing the form	Graphic charts
Collecting the data	Improving the reports
Compilation	Joint collection by Census Bureau
Price statistics	Meeting objections to reporting

PUBLICATION FOR EVERY BUSINESS MAN

*ADJUSTMENT FOR NUMBER OF WORKING DAYS AND SEASONAL VARIATION

Business Situation Summarized

GENERAL business activity continued its decline of greater than seasonal proportions during June, a tendency, however, which became less marked during the first two weeks of July. The adjusted index of industrial production for June showed a drop of 3.4 per cent, a change largely accounted for by a recession of 4.4 per cent in the adjusted index of manufacturing output, while the decline in mineral production was only a little more than seasonal. Among manufacturing industries there were relatively sharp recessions in the output of iron and steel and in automobile production, but textile activity was maintained close to seasonal levels and was well above the levels of a year ago.

The recession in business during June was further reflected in a drop of 2.5 per cent in factory employment, after allowing for normal seasonal changes, and in a fall of 5.5 per cent in factory pay rolls which are now 25 per cent below the level of a year ago. The indexes of distribution also tended downward, although the adjusted index of freight-car loadings, after showing a decline of 2.5 per cent during June, has moved consistently upward since the beginning of July.

Department store sales, if adjusted for the number of working days, fell 6.2 per cent in June, but if adjusted also for seasonal variation the decline was only 1.1 per cent. Bank debits outside of New York, after a sharp drop in May, increased nearly three per cent in June and have moved to a higher level since the close of the month.

The unadjusted value of building contracts showed a gain of 9.4 per cent in June. Residential building awards moved contrary to this general trend but public works and utilities construction, although steadily declining from March to May, registered an increase last month of 42 per cent over the May total. Among the more favorable factors during June was the retardation in the rate of decline of wholesale prices which turned into a temporary rise early in July. Security prices also moved ahead over a great part of the month, reflecting favorable sentiment created by the moratorium agreement, but these have reversed their trend since the close of the month.

The January-to-June average of adjusted indexes of industrial production shows a decline of 16.3 per cent as compared with the first half of 1930.

Finance—Credit and Banking

THE credit and banking statistics for June reflected in general the low level of activity which continues to feature the commercial and security markets. Bank debits outside of New York City, which tend to be somewhat irregular on the basis of short-term comparisons, showed a slight increase over the May total but were 21 per cent below the aggregate for June, 1930. The latest figures available show a general downward tendency in total bankers' acceptances outstanding, an increase in reserve bank credit outstanding, a sudden spurt during June in the rate of influx of gold, and a steady flow—although at a retarded rate—of funds into savings bank accounts.

Loans on securities by reporting member banks declined further during June and the first two weeks of July, thus continuing a tendency which set in at the beginning of the year. At the same time "all other" loans showed a slight advance during the same period, although a great part of the increase was due to the purchase of acceptances rather than to new customers' loans. Member bank investments, which have tended upward with the downswing of business, continued throughout June the decline which, in May, had set in from the depression peak of nearly \$8,000,000,000 at the end of April.

Despite the month's net gold imports and releases of gold from earmark the total reserve bank credit outstanding at the end of June was somewhat higher than a month previously. This gain was entirely due to an increase of 11.8 per cent in the reserve bank's portfolio of Government securities, which was only partly offset by the decline in total bills discounted and bills purchased in the open market. The exceptional increase in gold imports was in large part due to the release of gold from earmark for the protection of the German mark. Part of the large inflow was offset by a steady increase throughout June in the total money in circulation induced apparently by renewed banking difficulties in certain areas. Federal reserve notes showed the largest increase in circulation since last December when, however, the usual holiday demand for currency offered a normal explanation for the rise.

The Federal reserve banks' ratio of total gold reserves to total note and deposit liabilities combined stood at the end of June slightly below the level of a month before. Total bankers' acceptances outstanding have been declining steadily since the latter part of 1930. A steady inflow of gold during the first half of the year, together with releases of the metal from earmark, has resulted in a net import since January 1 of approximately \$340,000,000.

Finance—Security and Money Markets

CONDITIONS in the security markets during June were featured by sudden reversals of trend owing to the American proposal for a year's moratorium on war debt and reparations payments. Due to a sharp upturn in prices after the announcement of the debt suspension plan, the rate of decline for the month as a whole was less marked than that of the two preceding months. During the first half of July stock prices, however, lost the greater part of their June gains, while bonds, some groups of which were under periodic pressure during June, held firm and showed little change after the close of the month. The sharp rise in security prices late in June was accompanied by several record daily turnovers of shares for the year with the result that the month's total sales mounted to the highest level since March.

Price indices of stocks listed on the leading European exchanges moved to new low levels for the year and were indicative of the state of uncertainty which prevailed in the financial markets when the German economic situation led suddenly to heavy withdrawals of funds and to a weakening of mark exchange. The decline in stock prices on the Berlin Bourse was

particularly sharp, as indicated by a drop of 16.5 per cent in the month's index.

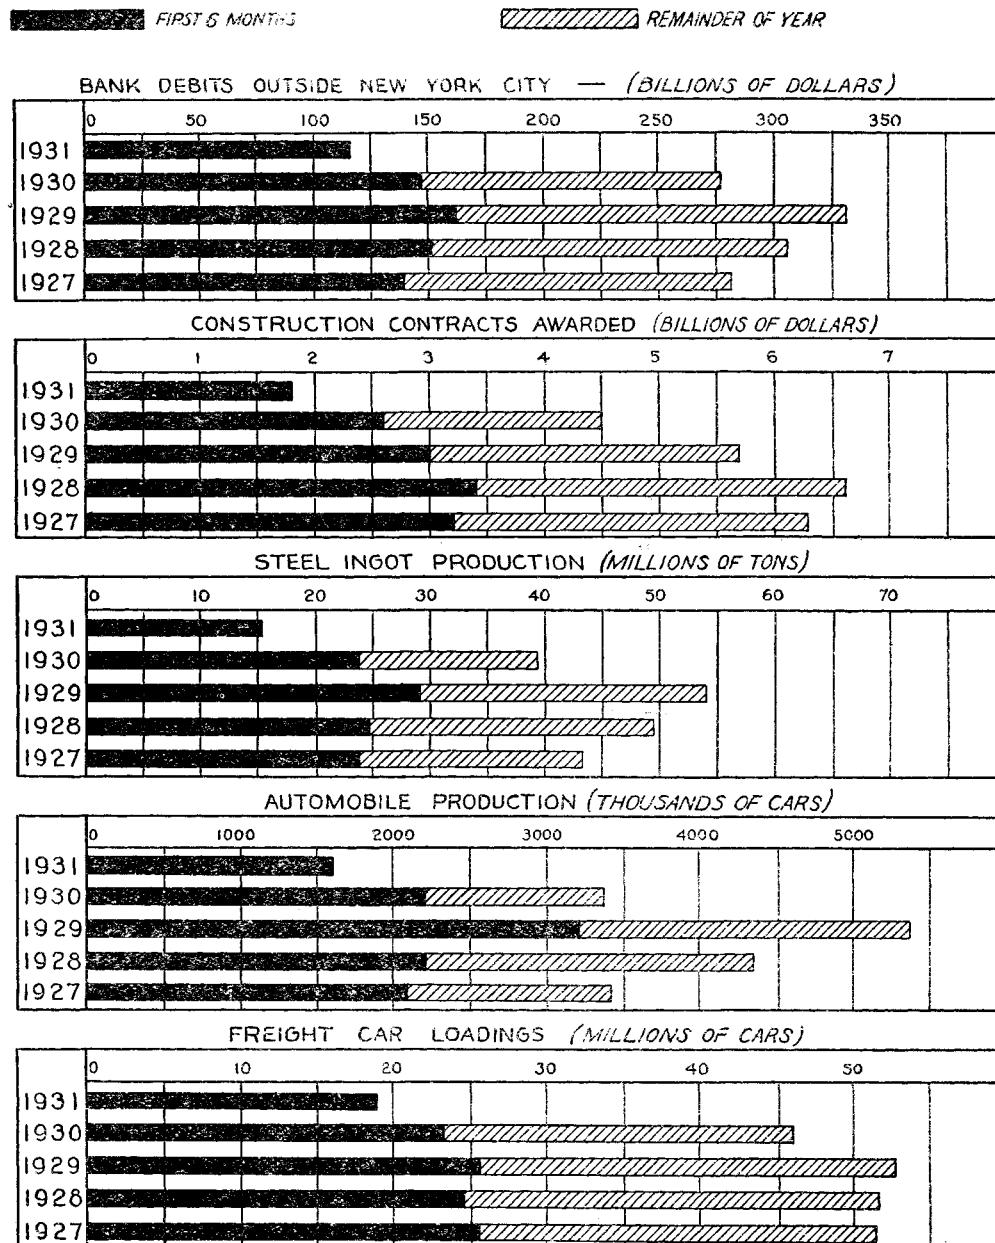

New capital issues during June represented the second lowest monthly total for the year and were 72.7 per cent below the total for June, 1930. Issues of long-term real estate bonds also reached the second lowest monthly total of the year. Although short-time money rates in June reached new low levels for the depression, the market for long-time funds has continued generally unfavorable.

Brokers' loans continued to decline throughout June and at the end of the month loans of this type outstanding stood at new low levels for the depression period. Liquidation has continued since the end of the month. In sharp contrast with the relative position of the two series of statistics on brokers' loans prior to the stock market break of 1929, loans made to members of the New York Stock Exchange from all sources have in recent months fallen below the total loans made by New York reporting member banks to all brokers, whether members of the stock exchange or of the curb exchange, as well as to investment firms which are members of neither of the security exchanges.

1931 in Comparison

Commodity Prices

LOWER levels of commodity prices were registered in June than in May, although the decline was much less than in the preceding month. Prices of commodities at wholesale declined 1.8 per cent from May to June, 1931, to a level 29 per cent lower than in July, 1929, and only a small fraction above that of 1913. Prices of grains and livestock fell 6 per cent and 3.4 per cent, respectively, and as a consequence the index of farm products dropped 2.5 per cent from May to June, 1931, to a level about 9 per cent lower than in 1913. A decline of 4.2 per cent in prices of meats slightly more than offset advances in prices of dairy products and miscellaneous foods, so that the combined index of foods declined less than 1 per cent. Prices of nonfarm products in June were 1.8 per cent lower than in May, only 2.7 per cent higher than in 1913, and at the lowest level reached since October, 1915. Of the 34 subgroup price indexes of nonfarm products, 27 declined from May to June, 1931. Prices of 13 of these declined less than 1 per cent however, 10 declined from 1 to 3 per cent, while prices of petroleum

fell 15 per cent. Hides and skins advanced 4.6 per cent and anthracite coal rose 1.4 per cent. Prices of many industrial materials are now much lower than in 1913.

Farm prices on June 15 averaged 7 per cent lower than on May 15. Drops ranged from 5.5 per cent in prices of dairy products to 12 per cent in prices of cotton and cottonseed. Prices of poultry products advanced 5.2 per cent from May to June, 1931. On June 15, 1931, farm prices were from 9 to 41 per cent lower than before the war, except prices of fruits and vegetables which were 14 per cent higher.

Retail prices of foods declined further in June and on the 15th of the month the index was 2 per cent lower than on May 15. Of the 42 articles of foods on which price quotations are regularly received, 34 articles declined and 3 advanced from May to June, 1931.

The semiannual index of cost of living compiled by the Department of Labor shows that from December, 1930, to June, 1931, the cost of living declined 6.5 per cent on the average.

Employment

EMPLOYMENT in the factories of the country decreased by 2.3 per cent from May to June and was about 15 per cent under June, 1930, according to the seasonally adjusted index of the Federal Reserve Board. The unadjusted volume of wage payments to factory workers declined by slightly more than 6 per cent. Employment in the mining industry as a whole also decreased after seasonal adjustments are made.

Factory employment during the first half of the year averaged about 16 per cent under the same period in 1930 and 23 per cent under 1929. The volume of pay rolls during the first half of the year averaged 25 per cent under 1930 and 34 per cent under 1929.

Rubber products was the only industrial group reporting an increase in employment greater than would normally be expected at this season of the year. Food products was the only other industrial group to register an increase in actual number of employees, but this increase was less than is usually recorded during June. The smallest decrease in employment, after seasonal adjustments are made, was recorded by the automobile industry with a decrease of 0.3 per cent followed by the leather group with a decrease of 0.4 per cent; cement, clay, and glass group, 1.5 per cent; nonferrous metals, 1.8 per cent; paper and printing, 1.8 per cent; lumber, 1.8 per cent; tobacco manufac-

tures, 2.1 per cent; food products, 2.3 per cent; iron and steel, 2.9 per cent; textiles, 3.2 per cent; chemicals group, 3.7 per cent; and machinery, 3.8 per cent. The petroleum branch of the chemicals group reported a decrease of 4.5 per cent in number of employees.

Rubber products and tobacco manufactures were the only two groups to register an increase in volume of pay rolls from May to June, while pay rolls in the food products industry were approximately the same as during May. All groups reported pay rolls materially under those of June, 1930.

Both employment and pay rolls of bituminous coal mines decreased from May, and the same items for anthracite mining also recorded declines. Employment and pay rolls in retail trade during June, as compared with May, held up better than during the same period last year, although on a lower level than at this time last year. Employment of public utility groups showed slight decreases from May to June, but pay rolls of telephone and telegraph companies increased by almost 1 per cent.

The trade unions reported 25 per cent of their members unemployed in June, the same proportion as as reported for April and May. This compares with a 20 per cent unemployment in June, 1930, and 9 per cent in June, 1929.

¹ Adjusted for seasonal variation.

Domestic Trade

THE average daily sales of department stores declined by slightly more than the normal seasonal amount in June so that the seasonally adjusted index of the Federal Reserve Board was less than 1 per cent below that of May. June sales were about 7 per cent below the level of a year ago, while the average of the monthly indexes of sales for the first six months of the year was 7 per cent less than in the corresponding period in 1930. Stocks of goods in department stores showed no change during June, according to the seasonally adjusted index of the Federal Reserve Board, and were 9 per cent smaller than a year ago.

Merchandise freight carloadings showed a normal seasonal decline in June and the adjusted index remained unchanged at a level of about 9 per cent below that of the same month of last year.

The adjusted index of 5-and-10-cent store sales during June (adjusted for seasonal variation) was somewhat less than in the preceding month, but slightly above the same month of last year. The average of the sales volume of these stores during the first six months of 1931 was slightly above that of either of the two preceding years.

Postal receipts in 50 selected commercial cities declined seasonally during June and continued below the level of the corresponding period last year.

The record of commercial failures during June was the most favorable in several months; it was the first month since November, 1930, that the number of failures was less than in the corresponding month of the preceding year. The number of failures in June was the smallest for any month since September, 1930. The total of liabilities during June was less than in the same month of last year, and also slightly less than in May. The number of failures during the first half of 1931 was the largest in history, but the total of liabilities was slightly less than in the first half of 1922. The increase in failures during the first half of 1931 over the same period of last year was principally among small trading concerns—retail dealers; the increase in the number of failures in the trading group was 15 per cent, while the increase in the total of liabilities amounted to 24 per cent.

Magazine advertising showed a seasonal decline during June, and was 20 per cent below the total lineage in the same month last year. Newspaper advertising during June was 9 per cent less than in the preceding month and 10 per cent less than in the corresponding month last year.

Money orders paid have recorded a smaller volume in the first half of 1931 than in the corresponding period last year.

Foreign Trade

DURING June the decline in United States exports of merchandise was slightly greater than seasonal, while the month's imports showed less than the usual seasonal decrease. These changes were thus similar to the trend in our foreign trade during the month immediately preceding. Export indexes, unadjusted for seasonal and adjusted for seasonal, registered respective drops of 8 per cent and 2 per cent, while recorded imports fell off only 3 per cent. Daily average exports totaled \$6,200,000, and imports \$5,800,000.

By comparison with the corresponding month of 1930, the value of exports in June fell off 37 per cent, or in exactly the same proportion as for the entire period from January through May, while imports decreased 31 per cent as contrasted with 37 per cent during the immediately preceding five months' period. These declines were attributable in part to smaller volume of shipments, as well as to marked reductions in prices. Unit values (prices) of practically all major export commodities and of some of the leading import commodities showed further slight recessions from the average in May, and for all commodities were decidedly below the level of the corresponding period of 1930. In quantity, exports of raw cotton, wheat, and apples, in June, 1931, were larger than shipments in June, 1930, but meat products, machinery, automobiles, gasoline,

and copper showed reductions in quantity, as well as in value. Among the imports, our quantity purchases of coffee, raw silk, cane sugar, and crude rubber, increased considerably, and of copper, newsprint, and tin, fell off, as compared with the volume in June, 1930.

For the period January through June, 1931, exports of finished articles showed a larger reduction—41 per cent—in comparison with the corresponding period of last year than did the crude material, semimanufactured, and foodstuffs classes. This large decline in finished manufactures is explained in part by the fact that machinery and gasoline exports, which constitute a considerable fraction of the finished class, continued on a comparatively high level throughout the first half of 1930. The decline in the value of four items—raw cotton (owing entirely to low prices), refined mineral oils, machinery, and automobiles—accounted for more than half of the drop of 37 per cent in the dollar value of total exports.

Owing to the large proportion of crude materials and semimanufactures in import trade, the recession in prices was a greater factor in import than export value decline. These two classes showed respective decreases of 41 per cent and 43 per cent, whereas the reduction in value of total imports amounted to 36 per cent.

¹ Reexports of foreign merchandise during June, 1931, were \$4,280,000.

Transportation

THE movement of freight during June, as reflected by the number of freight-car loadings, decreased more than the usual seasonal amount, so that the seasonally adjusted index of the Federal Reserve Board declined by nearly 3 per cent from May. Loadings during June were 17 per cent under June, 1930, and 29 per cent under June, 1929. During the first half of the year the average monthly loadings were 18 per cent under the same period in 1930 and 25 per cent under the year of 1929.

The movement of merchandise in less-than-carload lots during June was approximately the same as during May, after adjustments are made for the number of business days and seasonal variation. The average monthly merchandise movement by the railroads during the first half of the current year was almost 11 per cent under the same period in 1930 and 15 per cent under 1929. Ore was the only group recording car loadings over those of May, and loadings of all groups of commodities were materially under June last year. During the first half of the year the average monthly loadings of all groups were under those for the same period in 1930, the greatest decrease in

freight car loadings being recorded by the ore group.

The number of idle freight cars has gradually decreased since February, the June surplus being the lowest of the year so far, and 15 per cent under the low of December. But the average number of idle cars is still 29 per cent greater than at this time last year and 174 per cent greater than in 1929. The average freight-car surplus during the first half of the year was 42 per cent greater than for the same period in 1930 and 160 per cent over 1929.

Dividend payments of steam railways during the first half of the year averaged \$41,767,000 monthly compared with \$44,633,000 during the same period in 1930 and \$36,767,000 in 1929.

A seasonal increase in traffic was reported as passing through the Sault Ste. Marie Canal, but the June tonnage was only about one-half that recorded during June last year. The tonnage passing through the New York State Canal and Cape Cod Canal decreased from the May figures, but the average monthly traffic through these canals during the first half of the year exceeded that recorded during the same period in both 1930 and 1929.

¹ Data for January, May, August, and November are for 5 weeks, other months, 4 weeks.

² Daily average basis.

Construction

ALTHOUGH the value of all construction contracts awarded in June was larger than in May, the total number of square feet was smaller. Residential building decreased, but that of public works and utilities increased materially. Production and shipments of several important building materials increased. Prices continued their downward trend.

The number of square feet of all types of building contracts awarded was 10 per cent less in June than in May and the total value 8.4 per cent more, but as compared with a year ago they were 27 and 45 per cent smaller, respectively. During the first half of the year the floor space and value of contracts awarded were 28 and 32 per cent smaller than in the corresponding period in 1930.

Although residential construction contracts were smaller in value and square footage than in May, for the year to date this type of construction was only moderately smaller than in 1930. The value of contracts awarded during June for public works and utilities was 42 per cent larger than in May, and larger

than in any month since June, 1930. The square feet of public works and utility contracts awarded, representing only that part which is measurable on a square foot basis, showed a 5-fold increase from May to June.

Shipments of maple flooring increased for the sixth consecutive month and were 14 per cent larger in June than in May. Production of Portland cement increased for the fourth consecutive month and was 0.8 per cent larger in June than in May. For the year to date cement production has been 21 and 20 per cent less, respectively, than in 1930 and 1929. New orders for fabricated steel increased 16 per cent over those in May, while shipments of common brick increased 1.2 per cent.

The index of construction costs (composed of the prices of structural steel shapes, cement, lumber, and the rates paid common labor) has declined almost continuously since December, 1929, and in June was 1 per cent less than in the previous month. Building material prices for frame and brick houses also declined.

Agriculture

THE physical volume of animal products moving into wholesale channels during June, as represented by the combined index shown in the table, registered a sharp increase over the preceding month, and was above the levels of the same month in either of the two preceding years. The monthly average of these marketings during the first half of 1931 was practically the same as in the corresponding period in 1930.

The Department of Agriculture reports that the June "pig survey" indicates that the pig crop next fall will be about 20 per cent larger than at the same period last year; this reflects an effort to find a market for low-priced corn, if possible. The hog situation at the present time is quite similar to the conditions which prevailed in 1921; the corn-hog ratio at that time was such that it was more profitable to feed corn to hogs, although hog prices were low. The result was that the slaughter from the pig crop of 1922 was 25 per cent larger than in 1921.

Crop movements during June, according to the combined index of that group, showed a decrease from the preceding month, but were somewhat larger than in the same month last year. All of the crop groups, except cotton, moved in larger volume during June than in the same month last year. Vegetables represented the only

group showing increased receipts over the preceding month. Increases over the preceding month were recorded for white potatoes and tomatoes, while sweet potatoes, onions, cabbage, and celery showed decreases. While fruit receipts as a class declined from the preceding month, there were increased shipments of individual commodities, including peaches, grapes, pears, watermelons, and cantaloupes.

The Department of Agriculture's crop report, as of July 1, indicated that the total production of wheat in 1931 would be somewhat above the harvest of last year; the indicated increase is in winter wheat alone, as the prospect for spring wheat was for the second smallest crop in 20 years. The cotton acreage report, as of July 1, indicated a 10 per cent decrease compared with last year. Diggings of early potatoes have shown fairly good yields, while the late potato crop is making good progress. An abundant supply of fruit is indicated, especially peaches and apples.

Stocks of wheat, meats in cold storage, and raw cotton all decreased during June, but were above the volumes of a year ago, with meats showing only a small increase. Compared with a year ago, the indexes show the following increases: Wheat, visible supply, 73 per cent; meats, 6 per cent, and cotton, 37 per cent.

Iron and Steel Industry

ACTIVITY in the iron and steel industry in June fell back to the level of January, but held above the low point of last December. The decline in production for the month was considerably greater than seasonal, and the adjusted index of the Federal Reserve Board was 11 per cent lower than in May and 41 per cent below the level of a year ago. Employment in the industry was further reduced during the month and the index dropped to a new low. The reduction in the index was 3 per cent as compared with May and 19 per cent as compared with June, 1930. The decline in pay rolls was larger owing to more part-time employment, and the index was 11 per cent below May and 8 per cent below the previous low touched last January.

Steel ingot production in June was 17 per cent less than in May, compared with a decline of 14 per cent from May to June last year and of 7 per cent in the same period of 1929. The percentage decline in June was the largest for any one month since November, 1930. June output was 39 per cent below a year ago and was the smallest for the month since 1924.

Production in the first half of 1931 was 35 per cent below last year and was the lowest for the period since 1921, although the output was twice as great as in that year. Operations in the industry averaged 38 per cent of capacity in June, which was the same rate as last December. Actual production, however, was above that month as capacity has been increased this year. Further reduction occurred in July and operations were at the rate of about 32 per cent.

Pig iron production in June was the smallest since February, 1922, and was 18 per cent below May and 44 per cent below a year ago. Production in the first six months was 39 per cent below last year. Only 91 furnaces were in blast at the end of the month, the smallest number since September, 1921.

Prices were somewhat lower in June and the slight improvement of early July was not fully maintained. The composite iron and steel price averaged slightly lower than in May, and was the lowest since November, 1915. Scrap prices declined to a new low average in June, but resistance developed in July and a slight upward reaction resulted.

¹ Adjusted for seasonal variation.

Chemical Industries

OPERATIONS in the chemical industries were curtailed further during June. Employment was sharply reduced during the month and both the unadjusted and adjusted indexes dropped to new lows for the depression. The adjusted index for June was 3.7 per cent below May and 7.2 per cent below January, the high point of the year. Average employment for the first half of the current year was 14 per cent below the same period of 1930.

A similar reduction occurred in the unadjusted index of pay rolls, which declined for the second successive month, following a slight rise in April. The index for June was at the lowest point reached so far in the depression being 5 per cent below May and 20 per cent below June, 1930. Excepting for a few slight gains which were not held, the trend of employment and pay rolls has been downward since early 1930.

Stocks of manufactured goods remain relatively high on the basis of current consumption, although there has been some slight reduction in the index since March. The index for June was about the same as a year ago, but was 8 per cent higher than in June, 1929. Raw-material stocks have been steadily reduced since

the last quarter of 1930, partly owing to seasonal causes, but the index in June was 8 per cent below the same month of both 1929 and 1930.

Production of the major products was generally lower in June, but rosin was an exception to the trend. By-product coke production has declined each month since March, and in June was 13 per cent less than in May. Output in the first six months of 1931 averaged 27 per cent below a year ago. The declines from last year in other products, on the basis of the latest figures, were as follows: Refined arsenic, 46 per cent; super-phosphates, 38 per cent; turpentine, 26 per cent; rosin, 22 per cent; explosives, 18 per cent; and ethyl alcohol, 2.1 per cent.

Fertilizer consumption this year has been about one-fourth less than in 1930 and was the smallest since 1922. Fertilizer imports have declined seasonally from the peak of March. For the first six months imports of potash salts were 41 per cent below a year ago and were 21 per cent less than in the same period of 1929. Nitrate imports have followed the same trend, and imports in the six months were 11 per cent below 1930, and 43 per cent less than in 1929.

Automobiles and Rubber

MANUFACTURING schedules in the automotive industry were sharply reduced in June and the adjusted production index of the Federal Reserve Board dropped 16 per cent below May, the largest monthly recession since last October. Total output in the United States and Canada amounted to 256,000 units, the smallest total since February. June production in the United States and Canada was 22 per cent below the preceding month and 27 per cent below last year, while the six months production was 29 per cent below the first half of 1930. Production so far this year was the smallest for the period since 1922, but was held close to the demand and the inventory situation is regarded as fairly satisfactory. Truck production in June was 9.7 per cent below May and the six months total was 23 per cent below the same period of 1930.

Employment in the automotive industry declined in June, but the contraction was only slightly greater than seasonal. However, pay rolls were substantially reduced, the index dropping 19 per cent below May and 30 per cent below June, 1930.

Automobile exports in June were the smallest for any month of the depression, and the total for the six months was only about half that of last year and one-quarter of the 1929 exports.

Production of pneumatic tires increased in May and the total was the highest since the same month of 1930. May output was 15 per cent greater than in April and was only slightly below May, 1930, while shipments were 10 per cent above April and 4 per cent larger than in the same month of last year. Preliminary date indicates that production was well maintained in June.

Rubber manufacturing was the only major industry to show a gain in employment in June as compared with May. The indexes were at the highest level since last August and were 2 per cent above May. The employment index was 14 per cent lower than last year while the pay roll index was 18 per cent lower.

No reduction was effected in the record world stocks of crude rubber and preliminary figures indicate another slight gain for the end of June. Imports of crude rubber in June were one-third larger than in May and were the largest for any month since January, 1930.

Textile Industry

TEXTILE production during June, according to the seasonally adjusted index of the Federal Reserve Board, was only slightly less than in May and was larger than in any other month during the past year.

Mill consumption of raw cotton was seasonally lower in June as compared with May, but 12 per cent above that of the same month last year. Stocks of raw cotton in mills and warehouses at the end of June showed a seasonal decline from the preceding month, but were considerably above the volumes on hand at the corresponding period, in either of the two preceding years.

Cotton-mill activity during June was above the level of a year ago, while showing a seasonal decline from the preceding month. The same tendencies were exhibited by the total output of 23 groups of textile products. The average weekly production of cotton piece goods during June amounted to 52,000,000 yards as compared with an average of 56,000,000 yards in the preceding month. Shipments during June were in excess of current production, and were also greater than in the preceding month, which was just the oppo-

site of what occurred in 1930. Stocks of textiles on hand at the end of June showed a decline from the preceding month and reached a point which was 38 per cent less than a year ago. Unfilled orders at the end of June were 51 per cent larger than at the same time last year and showed a 33 per cent increase over the preceding month.

Wool receipts at Boston during June showed a seasonal increase over the preceding month, and were only slightly less than in the same month last year. The price of the territory type of fine, staple, scoured wool at Boston showed the usual slight seasonal decrease from May to June, and averaged 18 per cent less than in the same month last year. Manufacture of woolens continued during June at the relatively high level attained during May, while employment in worsteds was slightly above the level of a year ago.

Silk deliveries declined seasonally from May, but the volume for June was 43 per cent greater than in June, 1930.

Rayon prices continued firm throughout June and were 35 per cent less than in the same month last year.

¹ Months do not contain same number of weeks

Food Industries

THE Federal Reserve Board's seasonally adjusted production index for food products manufacturing during June was almost 9 per cent less than in the preceding month and 11 per cent less than in the same month last year. The seasonally adjusted index of employment in food manufacturing during June was also less than in the preceding month or the same month last year. The monthly averages of the indexes of production and employment for the first six months of 1931 were less than for the corresponding period last year.

Wholesale prices of food products during June declined only fractionally but reached a new low which represented a decline of 20 per cent from the same month of last year.

Wheat receipts at primary markets during June were slightly less than in the preceding month, but were 58 per cent greater than in the same month last year. Visible supplies of wheat in the United States at the end of June showed some decrease from the preceding month, but were 74 per cent greater than a year ago. Exports of wheat, including flour, have

been smaller this year than in the corresponding period of 1930. Wheat prices receded during June, after showing two consecutive monthly increases.

Corn receipts in primary markets showed a seasonal increase during June but were 28 per cent less than in the same month last year. The price of No. 3 yellow corn at Chicago showed a small increase during June after a gradual decline since the latter part of 1930.

Cattle receipts at the primary markets showed a slight seasonal decline from May to June; but the receipts during June were somewhat larger than for the same month in either 1930 or 1929. Hog receipts declined seasonally during June, while the total volume was less than a year ago. Meats in cold storage at the end of June showed some decrease from the preceding month, but were slightly larger than in the same month last year.

Raw sugar imports made a seasonal decline during June, and have been less during 1931 than a year ago; coffee imports during the half-year have been larger than last year.

Forest Products

ACIVITY in the forest products industries during June was fair as related to the state of general business. There was a slight seasonal decline as compared with the previous month and general operations were on a reduced but steady basis. Some sections of the industry made progress in efforts to bring supply more nearly into line with demand.

The June rate of operations, as measured by consumption of electricity, dropped 11 per cent from the previous month, which was the high point of the first half of this year; the rate for the latter period was in turn 11 per cent under the 1923-1925 average.

Employment showed a slightly greater than seasonal decline from May, and was one-fourth lower than a year ago. The level of employment in the first half of this year was only a little better than one-half of the 1923-1925 average. Pay rolls reflected the slight seasonal decline in June, the general level being somewhat below one-half of the 1923-1925 average.

June marketings of forest products were encouraging showing less than the usual seasonal decline from May. The June level is 64 per cent of the 1923-1925 average. The marketings of naval stores followed the general trend, the sharp seasonal rise of May being subject to only a slight decline in June. Marketings have held

up comparatively well for the first half of the year, the general index being only about 15 per cent below the same period a year ago and somewhat less as compared with 1929.

Southern pine June production showed the usual seasonal decline from May, the quantity turned out, however, being about 41 per cent less than June a year ago, the latter in turn having shown a similar decline from the production in June, 1929. New orders followed approximately the same trend as production, except that there was not quite as great a decline from May to June. Unfilled orders also declined slightly but seasonally in June. The amount for the first half of the year represents a decline of about 45 per cent from the quantity during the first half of 1930. Hardwoods production in June was only slightly less than in May but was 30 per cent under June, a year ago.

Car loadings of forest products usually drop rather sharply from May to June, the decline for this June being about average. Car loadings for the first six months of the year were between two-thirds and three-fifths of those a year ago and about half of car loadings in the first half of 1929.

Miscellaneous Industries

LEATHER

GREATER than the normal seasonal curtailment in productive operations was recorded by the leather and its products industry during June, but the industry was still operating on a plane about 5 per cent above last year. The average rate of production in this industry during the first half of the year was about 4 per cent under the same period last year and 6 per cent under 1929. Employment decreased during June by a slightly greater amount than would normally be expected.

PAPER AND PRINTING

Employment in the paper and printing group decreased slightly more than normal for the season of the year. Pay rolls declined by 3.4 per cent and were almost 14 per cent under June, 1930. Production of newsprint paper was approximately the same as recorded during May but was about 6 per cent under June last year. During the first half of the year the average monthly production was 13 per cent under the same period in 1930 and 15 per cent under 1929.

NONFERROUS METALS

Production of nonferrous metals during June declined more than the usual seasonal amount, as did also employment and pay rolls. Copper production decreased seasonally during June, and was of proportions 25 per cent under June, 1930. The average monthly copper production during the first half of the year was 29 per cent under the same period in 1930 and 48 per cent under 1929. Lead production and tin deliveries also decreased during June as compared with May.

FUELS

Bituminous coal production increased during June by 851,000 short tons, which was not quite as large an increase as would normally be expected during this month. The June production was about 14 per cent under June, 1930, a reflection of curtailed factory operations. Anthracite production decreased by 9 per cent from May, whereas a 6 per cent decrease is about normal for this period. June production was 11 per cent under June last year.

EXPLANATORY

The Survey of Current Business is designed to present each month a picture of the business situation by setting forth the principal facts regarding the various lines of trade and industry. The figures are very largely those already in existence. The chief function of the Survey is to bring together those data which, if available at all, are scattered in hundreds of different publications. A portion of these data are collected by Government departments, other figures are compiled by technical journals, and still others are reported by trade associations. The Survey of Current Business computes the indexes on total stocks, new orders, agricultural marketings, crop marketings, and unfilled orders based on available data.

SOURCES OF DATA

The sources and inclusiveness of the data appearing in the table "Monthly Business Statistics" will be found noted in the 1931 Annual Supplement to the Survey of Current Business, and the sources of the weekly data are given on page 4 of the February 5, 1931, issue of the Weekly Supplement to The Survey of Current Business.

HISTORICAL DATA

Monthly data on all the various series carried in the Monthly Survey will be found in the 1931 Annual Supplement to the Survey, running back seven years and in some cases eight years. Data previous to that included in the 1931 Annual Supplement will be found in the monthly Surveys prior to 1924.

RELATIVE AND INDEX NUMBERS

To facilitate comparison between different important items and to chart series expressed in different units, relative numbers (often called "index numbers," a term referring more particularly to a special kind of numbers described below) have been calculated. The monthly average for 1923-1925 has usually been used as a base equal to 100.

The relative numbers are computed by allowing the monthly average for the base year to equal 100. If the movement for the current month is greater than the base, the relative number will be greater than 100, and vice versa. The difference between 100 and the relative number will give at once the per cent increase

or decrease compared with the base period. A relative number of 115 means an increase of 15 per cent over the base period, while a relative number of 80 means a decrease of 20 per cent from the base period.

Relative numbers may also be used to indicate approximate percentage increase or decrease in movement from one period to the next. If the relative number at one month is 120 and at the next month is 144, there has been an increase of 20 per cent.

When two or more series of related data are combined by a system of weighting, the resulting series is denominated an index number. An index number, by combining many related series, is designed to show the trend of an entire industry, or for the country as a whole, in a single commodity or industry which the index number covers. Comparisons with the same period in previous years and with other periods are made in the same manner as in the case of relative numbers.

SEASONAL ADJUSTMENTS TO INDEX NUMBERS

Seasonal variations are found in most economic statistics for which monthly values are available. Consumption and production, interest rates, bank clearings, railroad traffic, and many other types of data are marked by seasonal swings repeated with minor variations. These, in so far as they exist at all, are not periodic in character, with a constant period. In cases where an adjustment is noted as being required in the Survey, the index has been based on the number of working or business days in the months and then adjusted for seasonal variations. The index figures thereby become comparable with the same period in previous years.

METHODS OF USE

Methods of using and interpreting index numbers have been collected by the Bureau of the Census of the Department of Commerce from many business sources and are described in a booklet entitled "How to Compute Business Statistics," together with methods of computing statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents.

in month-in

MONTHLY SUMMARY OF FOREIGN COMMERCE OF THE UNITED STATES

foreign-trade returns as early as they can be compiled and printed. appears within 35 days from the end of the month covered by data. follows within a fortnight.

The Table of Contents indicates the scope of this timely release, which also includes comparisons with data one year previous and cumulative figures for the calendar year:

	Page
of domestic merchandise, by articles and principal countries.....	3
Imports of merchandise, by articles and principal countries.....	48
by articles.....	74

	Page
of total exports and imports of merchandise, selected, merchandise in warehouse, gold and silver, tonnage.....	81
Exports and general imports, by economic districts.....	81
General imports of merchandise: cotton.....	82
Districts	84
Imports of gold and silver: cotton.....	85
Districts	85

	Page
Total exports and general imports, by months.....	86
Domestic exports and general imports, by method of carriage.....	86
Exports of foreign merchandise, by articles.....	87
Commerce with noncontiguous territories.....	90
Domestic exports and general imports of cotton (during the cotton year beginning August 1)	90
Monthly average prices of principal articles.....	91
Tonnage of vessels entered and cleared.....	92

the June numbers—which contain figures for the first six-month period of the year as well as the following 11 monthly issues, send \$1.25 to the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., or any district office of the United States Department of Commerce.
