## SURVEY

OF

# CURRENT BUSINESS 

UNITED STATES
DEPARTMENT OF COMMERCE bureau of foreign and domestic commerce WASHINGTON

## EXPLANATORY

The Survey of Current Business is designed to present each month the available statistical measurements of economic activity, together with the necessary analytical comment, which will enable readers to obtain a comprehensive picture of the business situation. Certain of the more important series are presented in graphic form so that the trend of the major indicators can be readily determined. In order to get the monthly statistics to subscribers more quickly, and to bring the material up to date with current weekly statistics, a 4-page supplement is furnished each week as part of the threefold service of the Survey. Libraries should note that all of the statistcs presented in the weekly supplement are not republished in the monthly numbers. It is important, therefore, that these supplements be preserved and bound with the monthly issues if the entire record is to be complete.

Over 2,100 series of data, gathered from more than 200 organizations, are presented regularly each month. Most of the statistics are not compiled by the Survey, but represent a careful selection of material available from all sources. The chief function of this publication is to bring together in usable form the statistics which, if published at all, are scattered in hundreds of different publications and reports, and to aid in the proper analysis and interpretation of the figures. The Survey of Current Business compiles the indexes of domestic and world stocks, new and unfilled orders, agricultural, livestock, and forest products marketings, foreign trade, five and ten cent store sales, and department store sales by districts.

## SOURCES OF DATA

The sources and inclusiveness of the data in the table "Monthly Business Statistics" will be found either in the explanatory footnotes covering each series in the 1932 Annual Supplement to the Survey, or on the indicated pages of the monthly issues. These latter refer to new material added since the 1932 Annual Supplement was published. The data given in these footnotes should always be kept in mind when utilizing the statistics carried in each monthly number. Sources of the weekly statistics are given on page 20 of the July, 1932, issue of the Survey, and in somewhat more detail on page 4 of the August 4, 1932, issue of the Weekly Supplement to the Survey.

## HISTORICAL DATA

In the 1932 Annual Supplement to the Survey of Current Business, the statistical series presented currently are carried back on a monthly basis to 1923, and on a yearly basis to 1913, where available. The statistics therein have been carefully reviewed and revised and supersede those carried in the 1931 Annual Supplement as well as those in the semiannual numbers issued prior
to 1931. The December issue contained the first major revision of material since the 1932 supplement was issued. A list of the series dropped, as well as of the new data added, may be found on page 56 of this issue. Earlier data for the new series, if published, may be found on the indicated pages of the monthly numbers.

Monthly data prior to 1923 will be found in the early issues of the Survey and, in the Record Book of Business Statistics, data on textiles, metals and machinery, fuels, automobiles, and rubber are carried back to 1909 on a monthly basis, where available. These record books should not be used for data later than 1922, and the monthly data should be checked against the annual averages given in the 1932 Annual Supplement to assure the continuity of the series and to obtain any necessary corrections. The three parts of the Record Book may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 10 cents each, or 30 cents for the set.

## INDEX NUMBERS

To facilitate comparisons of the movement of important series over a period of time, index numbers have been used in numerous instances throughout the Survey. In brief, these index numbers simply express the current movement with relation to a fixed baseusually the monthly average of the years 1923-1925. The construction of these index numbers is described in brief in the annual supplement.

## SEASONAL ADJUSTMENT OF INDEXES

Seasonal variations are found in most economic series for which monthly statistics are obtainable. Consumption and production of commodities, foreign trade, retail trade, employment, construction, railroad freight traffic, and many other types of data are marked by seasonal swings repeated with minor variations year after year. These are definitely periodic in character within a 12 -month period. In cases where an adjustment is noted for a series carried in the Survey, the index has been corrected for the number of working or business days in the various months, and then adjusted for seasonal variation. The index figures thereby become comparable throughout the series.

## METHODS OF USE

Methods of using and interpreting current business statistics have been collected by the Department of Commerce from many business concerns and are described in a booklet entitled "How to Use Current Business Statistics," together with methods of collecting statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 15 cents per copy.

## Business Indicators

1923-1925=100

## Business Situation Summarized

DURING November and the first three weeks of December, there was a slowing down of productive activity, but the recession has been largely seasonal in character. Retail trade, after falling off in November, has been stimulated by the holiday trade during the current month, but statistics are lacking to measure the extent of the current forward movement. In the preceding three years the decline in business activity during the final quarter of the year was more rapid than the usual seasonal movement, whereas this year business during this period has tended to follow a more normal trend.
Industrial production declined by slightly more than the estimated seasonal amount in November, according to the preliminary figure based on data available at this time, due to the falling off in manufacturing operations. Among the latter industries declines were general, automobile output being an outstanding exception. The decline in the adjusted index was the result of lower production in those lines which were mainly responsible for the fall rise, viz., textiles, leather manufactures, and food processing. However, activity in the first two industries remained in November above the level of a year ago. For the mineral extraction industries the decline in output resulted from the reduction in iron ore shipments and anthracite production, together with a slight reduction for petroleum. The adjusted index of mineral output was unchanged from the October level.

After three months of expansion, the number employed declined in November and there was a somewhat larger reduction in pay rolls. For the major industrial groups covered in the monthly surveys, the declines amounted to 1 per cent and 3.1 per cent, respectively. Factory employment, however, decreased by less than the usual seasonal amount.

Distribution of merchandise by the railroads declined in November and in the first half of December, but the seasonally adjusted index was approximately unchanged during this period. The heavier movement of coal was largely responsible for the maintenance of traffic. Both exports and imports were lower in November than in October, but the adjusted indexes have been steady during the latter half of 1932 , following the previous extended decline after 1929.

Wholesale prices continued reactionary in November and the first half of December, and the weekly index of the Department of Labor has recently receded below the level of last June.

The financial situation has been without significant developments, aside from the problem of the payment of December installment on Government debts owed the United States. As a result of the payment of a major part of this installment in gold, and further receipts of the metal from other sources, our gold holdings are currently close to the total held at the end of 1931, despite the large loss in the first half of the year.

MONTHLY BUSINESS INDEXES

${ }^{1}$ Adjusted for number of working days.
${ }^{2}$ Adjusted for seasonal variation.

## Comparison of Principal Data, 1928 to 1932

## Commodity Prices

Commodity prices showed further recessions in No－ vember and the first half of December．After averag－ ing 0.8 per cent lower in November than in October wholesale prices declined 0.9 per cent from December 3 to 17，reaching the lowest level since 1911．Farm prices likewise dropped and averaged 3.6 per cent lower in mid－November than in mid－October and，ac－ cording to information reaching the Department of Agriculture，declined slightly further from November 15 to December 15 ．

Wholesale commodity prices declined nearly 1 per cent from October to November．Prices of farm prod－ ucts declined fractionally due to a 6.9 per cent drop in livestock and poultry and a 3.5 per cent decline in prices of grains，which slightly more than offeet a 3.5 per cent rise in other farm products．There was a slight rise in food prices，the 3 to 3.5 per cent advance in butter，cheese，milk，and miscellaneous food articles and the fractionally higher levels of fruits and vege－ tables more than offsetting a 4.8 per cent decrease in meat prices and a 2.2 per cent drop in prices of cereal products．Hides and leather products fell 1.9 per cent as a result of lower price levels of most types of these groods．Lower levels of clothing，cotton goods，silk and rayon，woolen and worsted goods caused the textile group to fall 2 per cent．Fractional or no changes occurred in the other groups of commodities despite
changes of over 1 per cent in a few of the other sub－ groups．Coke prices declined 1.4 per cent，drugs and pharmaceuticals 1.6 per cent，mixed fertilizers 1.4 per cent，crude rubber 1.4 per cent，and cattle feed fell 4.4 per cent．Prices of petroleum products advanced 1.7 per cent from October to November．

Food retail prices averaged 1 per cent lower on No－ vember 15 than on October 15．Prices of sliced ham， potatoes，round steak，and pork chops dropped 6 to 7 per cent．Other meats，lard，and flour fell 2 to 5 per cent．Advances were shown in the prices of eggs，but－ ter，and canned peas．

Fairchild＇s index of retail prices of department store articles as of December 1 reached a new low for the current depression，the composite index averaging 1 per cent lower than on November 1．Women＇s wear－ ing apparel fell the most， 1.5 per cent．Piece goods， men＇s apparel，infants＇wear，and home furnishings dcclined fractionally．

Prices received by farmers at local farm markets declined still further in November and at the middle of the month averaged 3.6 per cent lower than on the corresponding date in October．Fruits and vegetables， meat animals，grains，and cotton and cottonseed fell 3.4 to 7.9 per cent．Prices of poultry products ad－ ranced 13 per cent for the fifth consecutive increase，but the rise in dairy products was terminated．

## Domestic Trade

Retail and wholesale trade was lower in November than in October, and only part of the decline was attributable to seasonal causes. During the first half of December, retail trade failed to show its customary vigor, except in a few individual lines. Last year the December increase over the preceding month was not much below the normal expansion. Certain lines of retail trade are reported to be doing relatively well, but buyers are exercising greater discrimination. Wholesale trade continues spotty, but the volume has declined.

The recession in department store sales in November was contrary to the usual movement for the month, and the adjusted index receded sharply to the lowest point reached during the depression. The index at 65 per cent of the 1923-1925 average was 22 per cent below a year ago. For the 11 months of the year sales dropped 22 per cent below the corresponding period of 1931. Since the retail price index of department store items dropped only 17 per cent during this period, there has been an actual shrinkage in the volume of sales through these stores. The declines, by Federal reserve districts, were fairly uniform, although the drop in the San Francisco district was well above the average, and the Richmond district was again below the average following the adverse movement of the October figures.

Sales through other retail channels for which statistics are available declined during November. The
combined sales of 20 chain-store companies were below the October level, although holding above the totals for the months immediately preceding October. The index which is based on the daily average sales for the corresponding month of the three preceding years, again declined. Mail order and store sales of the two leading mail-order companies dropped by a smaller percentage than in the same month of 1931.

Loadings of l. c. l. merchandise declined in November and the adjusted index dropped back to the level of August. Such loadings failed to expand to any appreciable extent in the fall and continue about 18 per cent below a year ago.

Commercial failures in November dropped to the smallest figure of the year and were again lower than in 1931. Liabilities involved were slightly higher than in October, but otherwise were the lowest since August, 1931.

Postal receipts were slightly less than in October, but exceeding the figure for the same month of the preceding year. While this is a reflection mainly of the increased postal rates, the decline in receipts from October to November was slight, whereas a year ago there was a pronounced decline.

Magazine advertising linage again increased in November, but was 22 per cent below a year ago. A year ago, linage declined between October and November. Radio advertising expenditures were also slightly higher than in October.

## Employment

After expanding gradually during the preceding three months, the number at work in November underwent some contraction. This decline was the result of seasonal influences which tend to retard production toward the year-end and usually cause a reduction in the number at work as well as a drop in pay-roll disbursements. In the three preceding years the decline in employment was greater than normal reflecting the readjustments of productive activity then in progress. This year the losses have been in accordance with the usual experience at this period of the year, and have followed the trend of general business activity which has been steady after allowing for temporary factors.

The 17 major industrial groups reporting to the Bureau of Labor Statistics showed a decrease of 1 per cent in employment and of 3.1 per cent in pay rolls. Part of the decline in the pay roll totals may be ascribed to the observance of election day and Armistice Day in certain sections of the country. Four of the 17 groups reported gains in employment during the month-the metalliferous mining, bituminous mining, retail trade, and electric railway groups-but in only the first two were larger pay rolls reported. The employment gains, however, were not pronounced, the increase of 4.7 per cent for the metalliferous group being the largest. The other 13 groups reported decreases in both employment and pay rolls but for five of them the decreases were less than 1 per cent.

Anthracite mining was seasonally lower than in October, which found reflection mainly in the drop in
pay rolls. The downward trend of both employment and pay rolls in the utilities groups continued during the month. The decrease in earnings in the retail trade group reflects the decline in sales during the month, but the actual change was slight. The decline for the wholesale trade group was somewhat larger than in the retail field, and was accompanied by a decrease in employment as well. The building construction group reported decreases of 7.8 per cent in employment and of 9.7 in pay rolls despite the continuance of contract awards at approximately the October level. The canning and preserving industry, with declines of over one-third, reported the largest relative losses, but these were the result of the seasonal slackening in the industry.
Employment in the manufacturing industries was lower than in October, but the adjusted index of the Federal Reserve Board was slightly higher than in the preceding month. Of the 89 manufacturing industries covered, 43 reported increased employment and 28 reported larger pay rolls. The increases were only partly the result of the demand for holiday merchandise such as glassware, clocks, men's furnishings, hosiery, etc. Some of the heavier lines, viz, agricultural implements, machine tools, and plumbers' supplies also revealed increased employment and larger pay rolls. For all manufacturing industries pay rolls declined 3.9 per cent in November, and for the 11 months of 1932 averaged 32 per cent below the corresponding period a year ago.

STATISTICS OF EMPLOYMENT, PAY ROLLS, AND WAGES

## Finance-Credit and Banking

THE banking and credit situation showed no significant change during November and the first half of December. There were virtually no net change in the volume of outstanding bank credit. At the same time, however, bank deposits increased and the flow of funds into the banks has placed financial institutions in an increasingly favorable position to meet any demands for sound financing.
The seasonal recession in business during November was reflected in the sharp drop in bank debits. Debits outside New York City showed a comparatively smaller decline than those in New York, the latter being no doubt influenced by the relative inactivity of the security markets. The monthly figures in both cases fell to new low levels for the year. However, seasonal activity during December has lifted recent weekly figures to a higher level.
Federal reserve credit outstanding showed a further decline during November. Holdings of United States Government securities remained virtually stationary during the month, bills bought in the open market continued at exceptionally low levels, while bills discounted were the smallest of the year. At the same time gold reserves increased and member bank borrowings were somewhat reduced. During the first half of December there were no important departures from this trend.
Money in circulation was only slightly changed during the period under review. On the whole, however, the tendency has been upward, the increase after the first week of December likely reflecting early
holiday demands. Monetary gold stocks were steadily increasing during the entire period, and thus added to the liquidity of bank portfolios. The surplus of funds accounted for a record low rate on bankers' acceptances during the second week of December while another recent ameliorative factor has been the decline in the number of bank failures.

Gold imports and releases from earmark during November accounted for a net increase of $\$ 70,000,000$ in the country's gold holdings. The rate of inflow was accelerated immediately after the middle of December as a result of the first movements of the $\$ 95,550,000$ earmarked in London for the payment of the British share of the Government debts due the United States on December 15. The weakening of European exchanges late in November, after the renewal of discussions pertaining to intergovernmental debts, was accompanied by a gold inflow and releases from earmark. Since the reversal of the gold export movement in June the addition to the country's gold stock has amounted to over $\$ 500,000,000$.

The retirement of $\$ 600,000,000$ in Treasury notes on December 15 required the use of Federal reserve credit in the form of a Treasury overdraft. The flow of this credit into the market caused excess reserves of member banks to reach levels even higher than those at the end of November. In addition to the large volume of commercial bank reserves reported, the balances held to the credit of postal savings depositors reached a new monthly high figure with total deposits approaching $\$ 900,000,000$.

## Finance-Security and Money Markets

Stock prices during November were irregular but, in general, they showed less of a downward tendency than during the preceding month. The turnover of shares fell to the low levels of May, June, and July, but prices showed a degree of firmness not evident during the midsummer period. After sharp declines during the opening days of the month quotations strengthened and made periodic daily gains until the middle of the month after which prices generally drifted downward. This weakness carried over into December after the opening week of which all classes of issues fluctuated within comparatively narrow limits owing apparently to the general business uncertainty and the temporarily confused intergovernmental debt situation.

After experiencing declines early in November, bond prices began to show irregular tendencies. Foreign government bonds showed pronounced weakness periodically. On the other hand, United States Government issues remained strong during the whole period under review. During the first half of December, prices in general receded, although United States Government bonds continued active. With a lowering of money rates, high-grade bond issues rose to the highest levels of the year. Low-grade issues gave way more readily to unfavorable earnings reports and to the uncertainty of the immediate business outlook. With the approach of the midmonth Treasury financing date, tax-exempt issues became particularly strong. For the period reviewed, especially November, total transactions remained on a somewhat lower level than during October.

Total brokers' loans made to members of the New York Stock Exchange increased during November over those of October. Those made by member banks reporting to the New York Federal Reserve Bank showed a slight decline although increases after the end of the month carried the total, within two weeks, above the volume of the earlier month. Call loan rates remained uniformly at 1 per cent during the entire period, the lowest rate over so long a period in 24 years. Time loan rates on short maturities fell as low as one-half of 1 per cent, while rates on four to six month commercial paper ruled at $1 / \frac{1}{2}$ per cent or slightly above.

New capital financing in November fell to the lowest monthly level of the year. During the second week of December, several large State and municipal issues were placed on the market but new corporate financing remained extremely low. Total dividend payments during November showed a decline of almost 50 per cent from those of the corresponding month in 1931, whereas interest payments were actually above those of the previous November.

The arerage dividend rate per share again declined after holding steady for two months. Third quarter earnings figures for about 300 industrial and mercantile concerns available to date show that gross earnings for this period were exceeded by expenses and fixed charges, a net loss due largely to the low rate of operations in certain basic industries such as steel and motors.

## FOREIGN TRADE

UNITED States foreign trade during November showed about the normal seasonal reduction. Exports of raw cotton, leaf tobacco, and fruits decreased about $\$ 8,000,000$ in value, while wheat exports, which totaled only $\$ 2,000,000$, increased slightly. Exports, exclusive of these agricultural products, fell off as compared with October to about the same total as in September, whereas in other recent years the value in November dropped lower than in September as well as in October. Imports, adjusted for seasonal influences, continued at the same level as in the two months immediately preceding. The index stood about 20 per cent higher than the low for the year, while the export index was 3 per cent higher.
Merchandise exports in November exceeded imports by $\$ 35,000,000$ in comparison with a total of $\$ 48$,000,000 in October and $\$ 44,000,000$ in the corresponding period of 1931. Gold shipments to foreign countries were again negligible while imports of gold amounted to $\$ 21,756,000$. Imports also continued heavy in December.
Exports of unmanufactured cotton in November amounted to $540,618,000$ pounds, slightly less than in October and about 5 per cent less than in the corresponding period of 1931. For the 11 months ended November, however, quantity exports of cotton were 40 per cent greater than in the corresponding period of 1931 and were larger than in the corresponding period of any year since 1927. Cotton cloth exports increased
as compared with the shipments in October but dropped below those of November, 1931. For the elapsed 11-month period they were in excess of those in the same period of last year. Crude petroleum exports fell to the lowest level for any month so far this year, and leather, iron, and steel manufactures, copper, motor trucks, and machinery showed declines as compared with October. Exports of gasoline, lubricating oil, automobile casings, and radio receiving sets increased. Shipments of accounting machines were larger than in any month since October, 1931. Demand for American aircraft has increased considerably and the value of exports in the first 11 months of 1932 was almost double that of the same period of 1931.

Declines in the value of imports during November were confined to a relatively small number of commodities. Crude rubber, cane sugar, tin, and mineral oils showed moderate decreases, but the value of raw silk, tea, burlaps, hides and skins, unmanufactured wool, flax manufactures, paper base stocks, newsprint, and leather was larger. Imports of hides and skins totaled $21,766,000$ pounds, the largest amount in any month since October, 1931. Notwithstanding this latest monthly increase, the total for the elapsed period of 1932 was 32 per cent lower than in the corresponding period of 1931. The value of coffee and cocoa imports dropped slightly during November as a result of lower unit prices, despite a slight increase in the quantity imported.

## Real Estate and Construction

CONTRARY to the usual movement in November, construction activity, on a daily average basis, showed a slight increase over the October level. The gain, however, was not maintained during the current month. A sharp drop in undertakings was reported during the first half of December, and the probability of further curtailment over the holidays indicated a decline in the final totals for the month.

The Federal Reserve Board's adjusted index, based on a 3 -months' moving average of values centered on November and including a prorated estimate for reduced operations in December, declined a point from the October figure. Last year a drop of 11 per cent occurred between these two months. A slight decrease in the total value of awards in November was accompanied by a small advance in measurable footage. The combined value of contracts in the Middle Atlantic States, the Pittsburgh, New York City, and southeast territories accounted for more than half the total value of all lettings in 37 States, according to F. W. Dodge Corporation's statistics.

Public works and utility awards made up over 50 per cent of the value of all contracts. In the same month a year ago they were 14 per cent less. Not since August, 1931, has the measurable footage of these contracts reached so large a total while in No-
vember last year the footage was just half as much. On the other hand, residential contracts for the month made the poorest record in years, both the value and measurable footage falling well under the average monthly showing so far this year.
Production and shipments of building materials dropped during the month. The drastic decrease of 44 per cent in oak flooring shipments placed that figure below any monthly total in more than 10 years. Maple flooring shipments declined 6.4 per cent, which compared favorably with the 8.2 per cent drop of last November. New orders for fabricated structural steel also declined during the month.
Although the Engineering News-Record's index of construction costs declined a point after consecutive advances since the low point of last June, the figure remained slightly above the monthly average for the first 11 months of the year. The index of brick house material prices increased a point from the revised figure for October, while that for frame house materials remained unchanged. Both have fallen approximately 6 per cent from last November.

The amount of long-term real estate bonds floated so far this year has been negligible, and none have been publicly offered to finance new construction since last April.

## BUILDING MATERIALS, CONSTRUCTION, AND REAL ESTATE

## Transportation

TRANSPORTATION statistics reveal the usual seasonal recession in traffic, but after allowance for this factor the movement has changed but slightly since October. Freight-car loadings have followed the seasonal curve, and the adjusted index has held to the higher level of the preceding two months. The unadjusted index of the Federal Reserve Board, which is based on the daily average movement, fell off in November after reaching the usual seasonal peak in October, but the adjusted index was unchanged.

While all classes of freight, except coke, recorded declines in loadings in November, coal shipments held up very well and were largely responsible for the relatively favorable trend of the total shipments. Loadings of this class of freight were in larger volume than in November, 1931, but all other classes were below a year ago. Miscellaneous freight and the l. c. l. shipments were sharply lower, and for the latter the drop was in excess of the usual seasonal movement with the result that the adjusted index dropped back to 68, thus canceling the slight rise of the preceding two months. The failure of this index to rise in the fall foreshadowed the decline of retail trade in November.
The improvernent in traffic in October was reflected in an expansion of revenues of the carriers. Operating revenues were the largest for any month of 1932, and net operating income scored a further sharp advance and was only slightly under the total for October, 1931. The operating statements have been progressively better since July, and the improvement in net has
been the result not only of the traffic gains but of the continued rigid control of expenditures. A part of the reduction in expenditures has been the result of the curtailment of maintenance outlays, part of which are deferred. For the first 10 months of the year the net operating income of the Class I carriers represented an annual rate of return of 1.16 per cent on their property investment.

Action was recently taken by the carriers to secure an extension of the temporary rate increases which expire next March, and an agreement was reached in the latter part of December extending the wage adjustment for an additional nine-month period after January 31. Emergency revenues derived from the rate increases up to November 30 amounted to $\$ 46,219,630$, which was slightly more than the $\$ 5,000,000$ per month which it was estimated the rate increase would yield. Loans authorized or outstanding from this fund are reported by the Railroad Credit Corporation at the end of November at $\$ 38,004,000$.

No changes of significance have occurred in the equipment branch. The Class I carriers reported 621,631 surplus freight cars in good repair and immediately available for service at the end of November. This total is below a year ago, but is still relatively high in comparison with periods of more normal traffic.

Traffic on inland waterways was hampered by the cold weather experienced in November and the movement was well below October.

## Automobiles and Rubber

EXPANSION in production schedules in preparation for the 1933 showings characterized the automotive industry during November and December. The Federal Reserve Board's adjusted index of output for November climbed 12 points and was only 12 per cent below the figure for last July and 19 per cent under that for November, 1931. The increased activity in Canadian operations which began in October tapered off in November when approximately twice as many units were produced as in the same month last year. The sharp upturn in total units produced wiped out a third of the loss occurring in the low month of October, whereas in November a year ago a decline of 14 per cent took place during these two months. Reflecting the increased activity, the Federal Reserve Board's adjusted index of employment showed a gain of 22 per cent over the October level; the unadjusted index of pay rolls advanced 19 per cent.

Production of new models was stepped up still further in the first half of December and it is expected the totals for the month, despite holiday interferences, will exceed the November levels.

Passenger car production gained 34 per cent over October and comprised 78 per cent of the output of all units during the month. Production of these cars was approximately the same as a year ago. Taxicab output, which has fluctuated widely during the year, was much larger than the negligible number produced in October. The monthly average production so far
during the current year was 83 per cent under the corresponding figure for 1931. Output of trucks declined to the lowest monthly showing in more than 10 years. Total production in November was 12 per cent below October, and 38 per cent below the monthly average showing for the first 11 months of the year.

Running contrary to the prevailing upward trend in production was a more than seasonal decline in sales, according to R. L. Polk \& Co.'s estimates on the basis of registration returns. The lag in buying was attributed in part to postponement of orders until after the appearance of the new year-end models. Declining steadily from the peak of last June, new passenger car registrations in November fell 31 per cent below the October showing and touched the lowest monthly level reported in many years. Whereas $1,830,587$ new passenger cars were registered in the first 11 months of 1931, the total for same period this year was only about $1,050,000$, a decline of 43 per cent.

Production and shipments of pneumatic tires during November decreased from the levels of the preceding month. While stocks were larger at the end of November as compared to October 31, they were below last November inventories. Domestic consumption of crude rubber advanced slightly over the October total and was only 4.6 per cent below the tonnage used in November, 1931. Employment in the rubber products industry, according to the adjusted index, advanced 4.9 per cent over October.

## Chemical Industries

TRADE in chemicals was sluggish in November, with highly irregular developments in various sections of the industry. The gradual expansion of producers' operations that took place from July to October was checked by uncertainty in the industries upon which the chemical trade depends for a large part of its market, particularly the textile and leather groups which played a prominent part in the earlier improvement. The automobile and fertilizer-mixing groups have started to come in as a stabilizing influence for the winter.

Much of the November slackness was due to the near approach of the year-end inventory taking period, in anticipation of which buyers have been limiting inquiries to quantities necessary to supply immediate needs. The tendency to hand-to-mouth buying was also strengthened by general business uncertainty. At the same time contracts for 1933 supplies were being concluded for the most part at unchanged or only slightly lower prices, and this had a strong immediate sustaining influence. The contract prices for soda ash and ammonia caustic soda were advanced a dollar per ton, this being the first rise in quotations for these products since the World War. This development gave a firm tone to prices in the entire heary chemicals group, with the exception of tin crystals and tartaric acid, the quotations for the former product
having declined as a result of lower prices for the basic metal.

Employment in the chemical industry increased slightly in November, while pay rolls remained about the same as in October. The rayon industry did not meet with the check experienced by other important textile lines in November, employment and pay rolls in this sector having both increased somewhat. Employment in the explosives group showed the greatest increase, over 4 per cent, while the paint and varnish industry made the poorest showing, with a slight decline. For the whole industry, employment in November was 9 per cent less than a year ago, as compared with a decline of 13 per cent for all manufacturing industries.
The market for alcohol in November was dominated by the demand from dealers stocking up in anticipation of the antifreeze demand. Scheduled prices remained unchanged throughout the month.

Naval-stores trade was quiet during November, with purchasing confined to comparatively small lots to fill immediate needs. Wood rosin production declined somewhat from the recent high peak reached in the month preceding, while output of wood turpentine increased to a new high point for this year. Navalstores prices held fairly firm through the early part of the month, but declined rather sharply thereafter.

## CHEMICAL STATISTICS

1 Adjusted for seasonal variation,

## Farm and Food Products

T${ }^{4}$ HE December 1 estimates of crop production for the year 1932, reveal that the yield of crops raised for sale was substantially lower and that for crops raised for feeding purposes substantially higher than in either of the past two years. Lower yields were indicated for wheat, tobacco and rice, the leading cash crops.

Activity in the food processing industry declined 7 per cent below October and was 9 per cent below a year ago. A fractional decline in employment in the industry occurred, after allowance for seasonal factors. Wage payments also declined to the lowest point of the year.

Receipts of wheat at primary markets declined seasonally during November and were lower than a year ago. Shipments on the other hand showed an increase of 2 per cent over October. Stocks in the United States declined seasonally but Canadian stocks reached a new high level for the year, and, as compared with a year ago, were considerably larger. Movements of other bread grains, following the usual custom at this period of the year showed declines in receipts, shipments, and stocks. Shipments of rice to mills in New Orleans registered an appreciable gain over October, but werelower than the same month a year ago. Average wholesale prices of grains, without exception, reached the lowest levels for the year to date.

Fruit and vegetable shipments to consuming centers showed a general, although seasonal, decline in November, citrus fruit shipments being an exception.

Receipts and shipments of cattle and calves at primary markets were lower than in October, showing declines also from a year ago. Cold-storage holdings of beef products at the end of November were the largest since April, 1932. Prices of live cattle and beef were off slightly from their quotations of a month ago. The hog movement showed a seasonal upturn during the month of November. Slaughterings of hogs were also higher while holdings in cold storage showed a slight shrinkage from a month ago. Pork prices declined. Due to off season conditions, the movement of sheep and lambs to markets was generally dull and as a result prices rose perceptibly.

The out-of-storage movement of butter during November was double that of a year ago. Stocks at the end of November were $5,034,000$ pounds below those of November 30, 1931, and below the 5 -year average by $42,015,000$ pounds. Holdings in storage of case eggs were reduced by $1,024,000$ cases while stocks of frozen eggs were well below normal. Receipts of poultry at principal markets during November showed a marked seasonal upturn affecting the cold-storage holdings, which were the highest since November, 1931.

## FOODSTUFFS STATISTICS

## Forest Products

DURING November, the lumber industry marked time at a very low level, with otherwise no expecially favorable and no unusually adverse developments. The customary decline in demand during the late fall was anticipated and provided for by a long previous curtailment of production and reduction of existing stocks. Interest at present centers on programs for next spring when the usual seasonal upswing of demand by the construction industry may afford an opportunity for exercising more aggressive policies.
Lumber production during November declined more than seasonally to one of the lowest levels so far experienced, with operations for the industry as a whole at about 20 per cent of normal. Southern pine production made the best comparative showing, with operations at 35 per cent of normal, while western pine held at about 16 and hardwoods at about 17 per cent, respectively. Production of lumber as a whole was about a fifth less than in November a year ago. There was a small pick-up in activity in the early part of December, but this was not sustained.

Throughout November production was maintained below the rate of shipments, and stocks on hand were still further reduced. Shipments and new orders during the month each exceeded output by the comfortable margin of 16 per cent.

Carloadings of forest products declined seasonally in November after the gradual increase which took place over the three previous months. The number of cars loaded in November was a fourth less than in this month a year ago and off more than half as compared with two years ago.

After the sharp increase of production of southern pine in October came a recession, but this was sufficiently moderate so that November output was still above the monthly volume registered from June to September of this year. It was also only 11 per cent less than at this time a year ago. New orders for southern pine dropped by one-third in November to equal the former record low point for the year reached in July. Unfilled orders also declined by a third to a volume off 20 per cent as compared with this time a year ago and were less than half of those on hand in November, 1930.

Douglas fir production declined in November for the second consecutive month to a volume a fourth less than output a year ago and less than half as compared with November two years ago. Both new and unfilled orders also declined.

During the first 10 months of 1932 lumber exports have declined slightly more than a third as compared with this period of 1931. At the same time imports have declined to a greater extent, about 45 per cent.

FOREST PRODUCTS STATISTICS

## Iron and Steel Industry

OPERATIONS in the iron and steel industry during the first half of December displayed the listlessness usually apparent at this season. With most orders in small lots and the prospects of curtailment over the holiday season, December totals are expected to show further declines.

After allowing for seasonal factors, the production index for November showed no change. While the total output of steel ingots receded from the level of the previous month, the decline was not greater than seasonal. Pig-iron output, computed on a daily average basis, advanced slightly, but the tonnage for the month, which had one less working day, was 2 per cent under the amount produced in October and 15 per cent below the monthly average production so far this year. The adjusted index of employment made the third consecutive increase, whereas pay rolls reacted fractionally after gaining in September and October.

Steel operations in November declined a point to 18 per cent of capacity. The monthly average rate of output for the first 11 months of the year was just half that for the similar period of 1931. With the exception of October, however, November output was larger than any total since May. The decline from October was 5 per cent. Despite fairly wellsustained automotive steel requirements which helped
to offset the downward seasonal movement of December, the decline was accelerated in the latter part of the current month.

For the third consecutive month, an added number of blast furnaces were in operation, and while pig-iron output was 43 per cent below the tonnage reported in November a year ago, the total was 100,000 tons above the record low showing for last August. Production so far this year fell below half the tonnage reported in the similar period of 1931.

A 29,000 -ton drop in the United States Steel Corporation's November backlog wiped out the increase of the three previous months and placed unfilled tonnage at the end of the month only slightly above the all-time low of last July. In November a year ago the volume was one-third again as large. A decline of 186,000 tons from the previous month occurred at that time.

Prices were under pressure. The composite figure for iron and steel, which has remained firm during the past three months, dropped during November. The price of steel billets continued to resist change. Finished steel declined fractionally, while steel scrap was off 6.5 per cent from the monthly average price for the year. Decreased demand and reduction of inventories brought further price recessions during December.

## Textile Industry

$A^{s}$was the case in October further slight recessions occurred in the textile industry in November, after the substantial gains in August and September. The Federal Reserve Board's seasonally adjusted index of textile production was 7 per cent lower in November than in the preceding month, although the November output was 3 per cent larger than in the corresponding month last year as well as close to the output in November, 1930. Employment in the middle of November was 2.3 per cent less than at the corresponding date in October, and pay rolls were 9 per cent less, according to data compiled by the Bureau of Labor Statistics. Wholesale prices of textiles also declined in November and the first half of December, reflecting recessions in most types of textile products.

Raw cotton consumption in November totaled 19,754 running bales per working day, 1.3 per cent more than in October, but the increase was less than the usual seasonal rise. Total consumption in cottongrowing States was 421,499 bales in November compared with 355,347 bales in November, 1931, and consumption in New England States was 67,913 running bales compared with 56,106 running bales.
Weekly production of 300 classifications or constructions of carded cotton cloth, which represent the major portion of the output of these fabrics, averaged $62,-$ 264,000 yards, a slight decline from the preceding month, but the second largest output since April, 1930, and an increase of 8 per cent over the corresponding month of last year. Weekly sales of these goods in-
creased 37 per cent from October to November and in the latter month represented 82 per cent of production. Shipments per week decreased 13 per cent to equal only 87 per cent of production. The larger shipments than sales reduced unfilled orders 3 per cent which at the end of November represented about five and one-half weeks output at the current rate of production.

Wholesale prices of cotton goods declined 4.6 per cent to the lowest level reached since August. Compared with a year ago prices in November were 8 per cent lower.

November raw wool consumption decreased 8 per cent but was 10 per cent larger than November, 1931. Activity of woolen spindles was 18 per cent less in November than in the preceding month and activity of worsted spindles was 21 per cent less. Although there was some decrease in the use of carpet and rug and in wide looms, activity of narrow looms was slightly lower than in October. Use of cards and combs decreased 18 per cent.

Wholesale prices of woolen and worsted goods decreased 2.1 per cent from October to November and in the latter month averaged 14 per cent lower than in November, 1931.

Raw silk deliveries to American mills in November were 18 per cent smaller than in the preceding month and also 13 per cent smaller than in November, 1931. Wholesale prices of silk and rayon averaged 4.2 per cent lower in November than in October, receding to the August level.

${ }^{1}$ Compiled by A. S. Richey, Worcester Polytechnic Institute, and supersedes the series previously carried in the Survey. The index represents construction costs for electric light and power construction and is a weighted average of the items entering into the total construction costs, including conductors, electrical and mechanical equipment, labor, structures, and a number of miscellaneous items. The adjustment factors used in the old series to compensate for the time lag in those series where exact data tended to deviate from actual experience. As adjusted, the index corresponds to actual experience, both before and after 1929 , as it formerly did during the years preceding that date.

${ }^{1}$ Compiled by the United States Department of Commerce, Bureau of the Census, from reports of 55 identical manufacturers. Of the 55 establishments reporting, 36 manufacture class 1 stokers, 30 manufacture class 2,27 manufacture class 3 , and 42 manufacture class 4 . Class 1 represents the residential type with capacity less than 100 pounds of coal per hour; class 2, stokers for apartment-house and small commercial heating jobs with capacity of 100 to 200 pounds of coal per hour; class 3 , stokers for general commercial heating and small high-pressure steam plants with capacity of 200 to 300 pounds of coal per hour; class 4, large commercial and high-pressure steam plants with
eapacity over 300 pounds of coal per hour. This table supersedes the data formerly shown in the Survey of Current Business which covered only large mechanical stokers.

## Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December, 1931, for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

| Monthly data, through December, 1931, together with explanatory footnotes, may be found in the 1932 Annual Supplement to the Survey | 1932 | 1931 |  | 1932 |  |  |  |  |  |  |  |  |  |

## Released-the 1932 edition of

## Statistical Abstract of the United States

This is a recognized companion book to the SURVEY, since it annually clarifies, compiles, and compares detailed figures for practically every important commercial, economic, and social development and enterprise in the United States-area and population, manufacturing, agriculture, fisheries, forests and forest products, mining and products, foreign commerce, finance, money and banking, transportation, prices, electric and other power, postal and communication services, public lands and parks, Army and Navy, civil service, education, irrigation and drainage.

This, the fifty-fourth number of the ABSTRACT, contains 826 pages, including Index and contents-buckram bound, price $\$ 1.25$

How many - were exported to - in 1931?
Ask the question for any commodity, any country! The answer is in Foreign Commerce and Navigation
of the United States -- catevani 19312

Contains complete official figures for every commodity in the 1931 trade of the United States with every foreign country, including comparative classifications by economic classes; tables for the number and tonnage of vessels entered and cleared in 1931 foreign trade, by customs districts, nationality, countries; and data for the foreign trade in merchandise, gold, and silver, by months; imports of free and dutiable articles and duty collected; trade of the customs districts of Alaska, Hawaii, and Puerto Rico with foreign countries; shipments of Canadian in-transit grains and preparations; and imports of tropical and subtropical products. A feature of this edition is the inclusion of data for the trade of the United States with the world, by countries and articles, 1930 and 1931-published every other year.

872 pages, quarto size, buckram bound-13 detailed, 28 summary tables- $\mathbf{\$ 2 . 2 5}$

For sale by the Superintendent of Documents, United States Government Printing Office, Washington, D. C., or any district office of the United States Department of Commerce

[^0]:    Subscription price of the Survey of Current Business is $\$ 1.50$ a year, which includes the 12 monthly numbers, the 1932 annual supplement, and the 52 weekly supplements. Single copy price: Monthly, 10 cents; weekly, 5 cents; annual, 40 cents. Foreign subscriptions, 83, including weekly and 1932 annual supplements.
