## SUMMARY OF CHANGES IN STATISTICAL SERIES SINCE PUBLICATION OF THE 1932 ANNUAL SUPPLEMENT

For convenience there is listed below a tabulation of the changes which have been made in the past 2 years. If back data have been presented for the new series, a reference to the monthly issues in which such statistics appeared may be found in the footnotes which are included on pages 22 to 56 , inclusive.

## NEW SERIES ADDED <br> DECEMBER 1932

Auto accessories and parts, composite index of shipments.
Canadian statistics, electric-power production index. Chain-store sales index (Chain Store Age)
Civil service employment, United State
Department-store sales, Philadelphia.
Factory employment, Baltimore, Milwaukee, Mary land, and Massachusetts.
Factory pay rolls, Ealtimore, Milwaukee, Philadelphis, Maryland, and Massachusetts.
Fairchild retail price index.
Gas cil and distillates, production and stocks.
Gypsum, imports, production and shipments.
Hourly earnings, factory (National Industrial Conference Board).
Illuminating glassware, new orders, production,
hipments and stock
Net gold imports, including gold released from ear-
Pyroxylin rods, sheets and tubes, production and shipments.
Plumbers' brass, shipments.
Plumbing fixtures, wholesale price.
Residual fuel oil, production and stocks.
Rubber heels and soles, total slipments.
Tin consumption in the manufacture of tin and terneplate.
Tin and terneplate production.
Trade union members employed, by groups.
World prices, foodstuffs and raw materials.
JUNE 1933
Airplane travel, passengers carried, passenger milea flown.
Bond prices, United States Government (Standard
Building costs all types (American Appraisal Co.).
Employment, miscellaneous-Federal and State highways, construction and maintenance.
Face brick, machine production
Factory pay rolls, New York and Chicago.
Farm products, price indexes of dairy and poultry products.
Household furniture, plant operations, all districts.
Lard compound, wholesale price, tierces, Chicago
Lard, refined, wholesale price, tierces, Chicago.
Leather production (Tanners' Council).
Nonmanufacturing employment-baniks, brokerage houses, etc.; dyeing and cleaning; and laundries. onouses etc dyeing and cleaning: and laundries.
Rope paper sacks, shipments.

## DECEMBER 1933

Cellulose plastic products, production and shipments of nitrocellulose and cellulose acetate sheets, rods, and tubes
Construction wage rates (E.N.R.).
Highway construction under the National Industrial Recovery Act.
Home Loan Bank, loans outstanding.
H. L. Green Co., Inc., stores and sales.

Paper board, production and shipments.
Pittsburgh employment index.
Pittsburgh pay-roll index.
Purchasing power of the dollar.
econstruction Finance Corporation, loans outstanding.
United States Steel Corporation, shipments of fnished products.

## JUNE 1934

Agricultural loans outstanding (six series).
Agricultural products, cash income received from marketings of
Beverages:
Fermented malt iquors:
Production, consumption, and stocks.
Distilied spirits:
Froduction, consumption, and stocks in bonded
warehouses.
Cotton cloth (bleached, dyei, and printed), production and stocks.
Factory employment (Bureau of Labor Statistics). Factory pay rolls (Eureati of Labor Statistics).
Imports for consumption
Index of new-passenger-car sales
Indexes of variety-store sales (new index).
Milk, receipts, Greater New Yorik.
Registrations, commercial truck.
Silk machinery activity (Silk Cocle Authority). Sugar, refined, imports and receipts from Hawaii and Paerto Rico.
Vacuum cleaners (hand type), shipments.
JULY 1934
Hosiery (Hosiery Code Authority).
Restaurant, total sales and stores (three chains).
Silk spindles (machine activity), Code Administra-
tion Committee for the Throwing Industry.

## SERTES DROPPED

## DECEMEER 1932

Applicants at employment agencies, Western States. Binders' board, production
Construction volume (A.G.C.)
Copper:
Production, all series.
Shipments, domestic, refined.
Stocks (North and South America), blister and refined.
Enameled sanitary ware, baths, lavatories, sinks, miscellaneous, all series.
Enameled sheet-metal ware, shipments.
Factory operations, proportion full time worked,
miscellaneous group.
Galvanized sheet-metal ware, all series.
Gas and fuel oil, production and stocks (combined series).
Glass containers, unfilied orders.
Hlluminating glassware, orders, production, ship-
ments, and stocks.
Industrial production indexes: Copper (mined), z. metals, nonferrous.

Iron and steel, boilers (round and square) and
radiators, new orders.
Leather, sole and belting, production, stocks, alf
series.
Lumber, walnut, orders, production, shipments, and stocks.
At crud, stocks
At crude plants.
Milk, condensed and evaporated, total exports, production, and stocks.
Nevsprint, production, percent of capacity.
Paints, varnish and lacquer products, unclassified
sales, 315 establishments.
Pine, North Carolina, production and shipments.
Pine-oil stocks.
Plumbing fixtures, wholessle price (six pieces).
Porcelain, nail Enobs, tubes, shipments.
Stock indexes, world copper stocks.
Stokers,
orders.

## JUNE 1933

Bond prices, domestic, United States Liberty (New York Trust Co.)
Brick, face, production (brick drawn from kilns)
Building costs, by types of construction (American Appraisal Co.).
Cotton textiles, production, shipments, stocks, etc.
Farm products price index of dairy and poultry
products (combined index).
Glass containers, net new orders
Gold, held under earmark for foreign account.
Gours of work per week in factories, nominal or
full-time week (National Industrial
full-time week (National Industrial Confer-
ence Board).
achellan 5- and 10 -cent stores (sales and stores)
Rope paper saciss, shipments.
Unempioyment, applicants, at employment agencies.
Wool-machinery activity, sets of cards.

## DECEMEER 1933

Animal glues, production and stocks.
Building cost index of electric light and power construction (Richey).
Building material costs, frame and brick house.
Castings, gray iron, orders, production, receipts, and stocks.
Explosives, production, shipments and stocks.
Fabricated structural steel, orders and shipmenta
with percent of capacity.
Federal-aid highway, work approved for construc-
for new construction (new work now paid for by
funds appropriated under N.R.A.).
F. W. Grand, stores and sales (merged with H. L.

Green Co., Inc.).
Hoists, electric, orders and shipments.
Index, new orders.
Index, unfilled orders.
Illuminating glassware, percent of full operation of orders, production, and shipments. Isaac Silver \& Bros., stor
H. L. Green Co., Inc.).
H. L. Green Co., Inc.).

Plumbers' woodwork, orders, shipments, and atocks.
Pyroxylin products, production and shipments of
sheets, rods, and tubes.
United States Steel Corporation, unfilled order.
Yarn, carded sales, all series.

## JUNE 1934

Bank suspensions.
Bank suspensions.
Cotton cloth finishing.
Delinquent accounts, electrical trade.
Factory employment (adjusted and unadjusted)
Federal Reserve Board.
Factory operations, proportion of full time worked.
Factory pay-roll indexes (Federal Reserve Board)
Highway construction under the Federal Highway
Act.
Index.es of five-and-ten (variety) stores sales (old index).
Marketings, forest products.
Nonmanufacturing employment, canning and pre-
serving. serving.
Paper, stocks, all grades, book paper, writing paper
wrapping paper, and all other grades of paper.
Restaurant sales and stores operated
Childs Co.
J. R. Thompson Co.

Waldorf System
Rope paper sacks.
Rope paper sacks.
Sugar, Cuban, raw, receipts at ports and exports.
Silk machinery activity (Silk Association of
an America).
wa America).
Wood-pulp stocks.
JULY 1934
Hosiery, Census Bureau series.

## Business Indicators

1923-25=100

## Business Situation Summarized

BUSINESS activity during May was only mod－ erately changed from the level reached in April． Industrial production was slightly higher after adjust－ ment for seasonal variations；freight－car loadings im－ proved；retail－store sales in general showed a seasonal increase；exports declined，while imports increased con－ trary to the usual seasonal trend；and the adjusted index of construction contracts awarded dropped sharply．

During June，productive activity tended to slacken， but the trend of the weekly indicators is inconclusive as to whether the decline has been in excess of the usual seasonal change．Steel－mill activity did not show the usual decrease until the final week of the month，when the ingot rate fell precipitously；electric－ power production was higher after adjustment； cotton－mill activity was curtailed；automobile and lumber production declined．

A major factor in the rise in manufacturing produc－ tion in May was the increase in steel output．In－ creases were also reported for the food products， cement，and electric power industries．Operations in the textile industry declined，partly due to seasonal in－ fluences and to the general restriction of production in the silk industry．The adjusted index of automobile production fell off by about 8 percent．In the mineral industries，production increased by approximately the usual seasonal amount．

Factory employment and pay－roll data for May reveal minor changes as compared with April．The
adjusted index of factory employment rose 0.2 of a point above the April figure，with 9 of the 14 groups showing increases．Factory pay rolls declined 0.3 per－ cent．Increases in both employment and pay rolls pre－ dominated among the nonmanufacturing industries．

Distribution series for May do not indicate a pro－ nounced trend for the month．The expansion in freight－car loadings was well distributed over the various groups，and the adjusted index recovered about half of the loss of the preceding month．While sales through some types of retail stores increased more than seasonally，sales of automobiles declined．
As the volume of new construction contracts award－ ed changed only slightly in May and June，the adjusted index dropped sharply．Privately financed contracts increased 12 percent in May as compared with April， but publicly financed construction fell off 5 percent．

As a result of the marked rise in the prices of farm products and foods，the Bureau of Labor Statistics＇ wholesale price index in the week of June 16 rose to 74．6，a new high for the year．Stock prices have moved irregularly in recent weeks，with no marked change in the＂averages．＂The strength in listed－ bond quotations has had little influence on the capital market；flotations of new issues remain in small vol－ ume．Member－bank loans and investments have undergone only minor changes；the trend of loans to customers continues downward．Excess reserves of the member banks，after reaching $\$ 1,800,000,000$ in early June，declined in the week of the 20th．

## Comparison of Principal Data, 1930-34

BANK DEBITS OUTSIDE NEW YORK CITY - (BILLIONS OF DOLLARS)

CONSTRUCTION CONTRACTS AWARDED - (BILLIONS OF DOLLARS)

STEEL INGOT PRODUCTION - (MILLIONS OF TONS)

AUTOMOBILE PRODUCTION - (THOUSANDS OF CARS)

FREIGHT CAR LOADINGS - (MILLIONS OF CARS)

## Commodity Prices

WHOLESALE prices rose in the week of June 16 to the highest point reached in more than 3 years，the index of the Bureau of Labor Statistics made up of 784 commodities or price series advancing to 74.6 ，on the basis of 1926 prices as 100 ．This rise in the general index resulted from the advance in prices of farm products and foods which were influenced by the prevailing drought conditions．Farm products rose 3 points in the 1 week and foods 2.6 points，from levels which had been reached by fractional advances during the preceding 4 weeks．

The index of the prices of commodities other than farm products and food，at 78．9，was unchanged for the week under consideration and was the same as the index for May．This index has been practically un－ changed since the week of January 13．The index of the prices of farm products for the week of June 16， at 63.7 was 6.9 percent above the index for the month of May，but was still considerably below that of non－ farm products and foods，relative to 1926 levels．

The trend of Moody＇s spot commodity price index， made up of the prices of 15 sensitive commodities which have an international market，has been consistently up－ ward since the 1st of May．On that date it stood at 132.4 and on June 19 it reached 142．3，the high for the year．The high point in 1933 was 148.9 and the low 78．7．

Retail prices，excluding foods，as measured by the Fairchild index，moved slightly lower on the average for the second successive month．The drop in April
was the first recorded by the index since the early part． of 1933．The decline during April and May was 0.6 and 0.5 points，respectively．The index， 88.9 for May， on a base of 100 for December 1930，compares with 70.4 for May last year and with the depression low of 69.4 for the preceding month of 1933 ．Despite the declines for these 2 months，the index is 28 percent above the 1933 low．Price declines during May were recorded for 12 of the 26 items comprising the index， 7 items showed an increase and 7 were unchanged in price．Declines were most marked in the women＇s apparel group，in which 4 of the 6 items deched and 1 remained unchanged．

Food and housing were the only items in the Na－ tional Industrial Conference Board＇s index of the cost of living of wage earners to show an increase from April to May．The advance in each of these items was 0.8 percent．The cost of coal decreased 1.5 percent and women＇s clothing， 0.1 percent．Men＇s clothing，gas and electricity，and sundries were unchanged．The weighted average of all items in this computation ad－ vanced 0.3 percent during the month．

The index of farm prices for May presented in the accompanying table represents a condition as of the 15 th of the month and hence does not reflect the im－ provement of recent weeks．The June 15 index will show an increase as prices of grains，hay，cotton，and meat animals have all advanced during the past month． Prices of dairy products remained unchanged．

## Domestic Trade

MODERATE gains in sales during May as compared with April were reported for most fields of trade activity. No pronounced trend was in evidence; in some cases the gains were in excess of the usual seasonal rise, while for other lines of trade the increases were less than usual for the month. In the first half of June, sales of department stores in New York City, exclusive of liquor sales, were slightly lower than a year ago; total sales were 1.7 percent higher.

The increase in the dollar volume of departmentstore sales during May was equal to the expected seasonal rise, and as a result the adjusted index remained unchanged at 77 percent of the 1923-25 average. Department-store sales in May were 15 percent above the same month of last year, while sales during the first 5 months of the current year were 20 percent above the same period a year ago. The May comparisons with a year ago varied among the Federal Reserve districts from a gain of 1 percent in the San Francisco district to increases of 24 percent in both the Cleveland and St. Louis areas. For the first 5 months of the year sales in the New York district were only 11 percent higher than a year ago, while in the two southern districts the increases were 37 and 32 percent, respectively, for the same periods.

Sales of chain grocery stores increased 0.8 percent in May over April, compared with a slight decline on the average in several preceding years. Variety-store sales on a daily average basis wore 9.6 percent higher in May than in April and were 16 percent above a year ago. After allowing for the usual seasonal trend
for the month, the index increased 4 percent. The dollar volume of new passenger automobile sales in May recorded a decrease of 12 percent as compared with the preceding month, but an increase of about onethird over the same month a year ago, and of about one-half over May 1932.
Rural sales of general merchandise, which increased 6.5 percent from April to May, were one-fourth higher than a year ago. This was as large a relative gain as in the first 4 months of the year and, coupled with the gain in department-store sales in districts which are predominantly rural, suggest that sales in farming areas are continuing to show wider gains over a year ago than similar sales in industrial areas.
The gain in freight-car loadings of merchandise in less-than-carload lots in May brought the index to the level of a year ago. The fluctuations in this index during the past year have been limited to a narrow range, the peak exceeding the low point by only 11 percent. The number of commercial failures in May was lower than in any month since October 1920, and the number and liabilities of failures during the first 5 months of this year were each less than hali the total of the same period a year ago. Both liabilities and the number of failures have risen slightly during the first half of June.
Total newspaper advertising, as compiled by Media Records, Inc., increased 4.3 percent from April to May and was higher for the latter month than for the same month of the 2 preceding years. The most pronounced gains were in the retail and automotive fields.

DOMESTIC TRADE STATISTICS

## Employment

EMPLOYMENT and pay rolls in manufacturing industries in May were only slightly changed from the April totals. The factory employment index of the Bureau of Labor Statistics increased 0.1 percent. for the month, while the factory pay-roll index declined 0.3 percent. After adjustment for the usual seasonal variation, the factory employment index advanced from 82.2 percent of the 1923-25 average to 82.4 percent. The small pay-roll decline in May marked the first interruption of the upward trend which has been in evidence since the first of the year. The May employment index was 32 percent above the same month a year ago and was higher than for any month since November 1930. The pay-roll index in May was 57 percent higher than a year ago.

Of the 90 manufacturing industries for which indexes are available, employment gains were recorded in 48 industries and pay-roll increases in 51 industries from April to May. Employment in 11 industries and pay rolls in 21 industries increased 5 percent or more during the month. Seasonal influences were largely responsible for employment declines of 38 percent in the fertilizer industry and 20 percent in the cottonseed-oil, cake, and meal industry. Labor disturbances were partially responsible for a 23 -percent employment drop in the typewriter industry.

After adjustment for seasonal variations, 9 of the 14 group indexes of factory employment increased. Declines were recorded for the chemical, rubber, textiles, tobacco manufacturing, and transportation equipment industries.

Of the 15 nonmanufacturing industries surveyed by the Bureau of Labor Statistics, only two reported de-
creases in employment and three decreases in pay rolls for May as compared with April. Both employment and pay rolls declined during the month in the metalliferous mining and hotel industries, due to strikes in the former industry and the seasonal shutdown of winter hotels in the latter industry. In the quarrying and nonmetallic mining industry, employment rose 11 percent and pay rolls increased 17 percent. Employment and pay-roll gains of 10 and 12 percent, respectively, in building construction, excluding Public Works Administration projects, were seasonal in character. Substantial gains were also shown for both anthracite and bituminous coal mining and the dyeing and cleaning industries.

The Federal Emergency Relief Administration reports a fractional decline in the number of families receiving relief in May as compared with April, as indicated by data from 141 cities and urban counties representing 60 percent of the total urban population of the country. During this period relief expenditures in these same areas increased 12 percent. This gain in disbursements is explained as partially due to the higher costs of the emergency works program as compared with the cost of direct relief. The number of persons employed on the Emergency Relief Administration work projects increased steadily from 737,560 in the week of April 12 to 975,523 in the week of June 14. Over 11 millions of dollars were paid these workers during the latter week, and to date over 104 millions of dollars have been paid in wages on Emergency Relief Administration work projects. Total C.W.A. advances since December through the end of May totaled nearly 822 millions of dollars.

## Finance

FINANCIAL markets during the past month have been relatively inactive, with but slight alterations of previously prevailing trends. Interest has been largely centered in the legislative program of the Federal Government. Of particular importance was the enactment of the following acts toward the close of the Seventy-third Congress: The Securities Exchange Act, which provides for the regulation of securities exchanges; the Corporate Bankruptcy Act, permitting corporations to reorganize with the consent of a majority of the creditors; the extension until July 1, 1935, of the temporary plan for bank deposit insurance and the increase in the insurable limit of individual deposits from $\$ 2,500$ to $\$ 5,000$; and the Silver Purchase Act.

Stock prices reached new low levels for the year during May, but in the early weeks of June quotations worked moderately higher. During the entire period the turn-over on the stock exchange was very low, as evidenced by several full sessions in which the sales were lower than in a decade. Among the factors exercising a favorable influence on prices were the data released on corporation profits in the first quarter of 1934. The compilation of the New York Federal Reserve Bank, covering approximately 500 concerns, showed the highest first quarter total since 1931. Profits were 175 percent larger than in 1933 and 40 percent above 1932. Industrial and mercantile concerns reporting a net loss in excess of $\$ 18,000,000$ a year ago reported a net income of $\$ 95,000,000$ in the first 3 months of 1934.

The bond market has also been comparatively dull. In general, the more speculative issues moved in sym-
pathy with stocks. High-grade bonds have enjoyed a strong demand, and quotations on United States Treasury issues reached the highest levels since the middle of 1931. The tone of the market was unaffected by the announcement that on June 15 the public debt had passed the former high record of approximately $\$ 26,600,000,000$ reached in August 1919. The total as of the later date was slightly in excess of $\$ 27,000,000,000$.

Owing to the small flow of funds into the long-term capital market and the consequent demand for shortterm investments, money rates have continued exceptionally easy. During all of May the volume of open-market commercial paper coming into the market remained very low, while rates on this class of paper fell to 1 percent. Yields on short-term Treasury issues also showed further declines.

The large volume of idle member bank funds is reflected in excess reserves aggregating approximately $\$ 1,675,000,000$ in the week ended June 20. Loans and investments of the reporting member banks have continued to decline. In the 6 weeks ended June 13 investment holdings of the banks were reduced by $\$ 33,000,000$, while the loans outstanding dropped by about the same amount.

No important changes occurred during the period in the volume of Federal Reserve bank credit outstanding. A slight drop in total bills discounted and in United States Government securities holdings was reported. Open-market bill holdings remained virtually negligible. Bankers' acceptances outstanding continued to decline, while money in circulation and gold movements showed no significant changes.

FINANCIAL STATISTICS

## Foreign Trade

UNITED States exports declined 11 percent in value during May while imports increased 6 percent. The usual seasonal changes in May are a decline of 1 percent in exports and a reduction of 6 percent in imports. On an adjusted basis the value of exports dropped below that of the 3 preceding months to 45 percent of the 1923-25 average, or to approximately the level in January. Imports, after allowance for seasonal variations, increased from 42 percent of the 1923-25 average to 47 percent and reached the highest level since last September. Exports, including reexports and general imports, were valued at $\$ 160,207,000$ and $\$ 154,647,000$, respectively, and exports of United States merchandise and imports for consumption, at $\$ 157,171,000$ and $\$ 146,866,000$, respectively.

Each of the 11 leading groups of export commodities, except edible animal products and the group of miscellaneous articles, were smaller in value than in April, although half the reduction in the value of total exports was due to smaller shipments of unmanufactured cotton and refined mineral oils. The decline in exports of cotton was largely a seasonal movement and smaller exports of furs, fruits, and tobacco also reflected seasonal infiuences. Wheat exports decreased from $3,576,000$ bushels in April to $1,456,000$ bushesl in May.

Finished manufactured exports declined 9 percent in value as compared with April, which represented the first recession shown for this group since January. The value of machinery exports dropped below that of the 2 preceding months but continued well above the
corresponding periods of the 2 preceding years. Exports of automobiles, including parts and accessories, decreased about $\$ 800,000$ in value as compared with April but were two and three-fourths times greater than in the same month of either 1933 or 1932 and about two-fifths larger than in May 1931. Among the leading commodity exports iron and steel-mill products, coal, crude sulphur, and industrial chemicals increased in value during May. Exports of meats and lards also showed substantial gains in quantity, which resulted in a slight increase in May exports of manufactured foods. Each of the other economic classes of exports declined in value during May.

Incoming shipments of a wide range of commodities were larger in May than in April. Especially notable was the increase in cane-sugar imports from the Philippine Islands from $448,171,000$ pounds, valued at $\$ 12,858,000$, in April to $560,250,000$ pounds, valued at $\$ 15,622,000$, in May. Imports of cane sugar from the Philippines and the Virgin Islands in the 5 months ending May have totaled $1,740,755,000$ pounds in comparison with $424,906,000$ pounds imported from foreign countries during the same period of 1933.

The value of crude rubber showed a further substantial increase during May, in large part the result of the upward movement in prices. Imports of coffee and unmanufactured wool fell off considerably.

Prices of goods entering into United States foreign trade continue to show, on the average, relatively small variation. Since the first of the year, both export and import prices have advanced about 3 percent.

EXPORTS AND IMPORTS

${ }^{1}$ Adjusted for seasonal variation.
${ }^{2}$ General imports through December 1933; imports for consumption in 1934.
; Monthly average.

## Real Estate and Construction

CONSTRUCTION contracts awarded in the first half of June, amounting to $\$ 63,000,000$, fell slightly below the average level of awards reported in May, when adjusted to a daily average basis for comparative purposes. The decline was the result of smaller contracts for projects other than residential building. An increase of one-third occurred in the amount of residential awards. The daily average value of such undertakings reached the highest level since December 1931.

Failing to reflect fully the usual seasonal increase, the value of construction contracts awarded during May showed only a slight expansion over April. Total awards amounted to $\$ 134,000,000$, an increase of 2 percent over the preceding month and of 74 percent over the contracts reported a year ago. The slight gain over April was due to larger contract totals for residential and nonresidential building, which showed increases of 10 and 36 percent, respectively. Publicworks and utility contracts declined 19 percent. Total awards in the first $51 / 2$ months of the year, aggregating $\$ 790,000,000$, were more than twice as large as the comparable total reported in the corresponding period of 1933.

According to data compiled by the F. W. Dodge Corporation, May contracts for publicly financed work amounted to $\$ 71,600,000$. While this was 5 percent less than the April total, it indicated that public funds continue to finance well over half of the total awards. Contracts for privately financed building in May reached $\$ 62,900,000$, an increase of 12 percent over April and a 17 percent increase as compared with May 1933. The gain in this class of contracts in May, however, was entirely due to the inclusion in the
month's total of one large building project in the New York metropolitan area. Private contracts awarded during the first 5 months of the year aggregated $\$ 232,000,000$, an increase of 18 percent over the relatively small total in the same months of 1933.

Residential building for the year through May showed a gain of 23 percent over last year, but remained 25 percent below the total reported in the same period of 1932. In May the value of residential contracts was slightly higher than in the preceding month but for the first time since October fell behind the corresponding monthly total of the preceding year.

Among the final acts of the Seventy-third Congress was the passage on June 18 of the National Housing Act, the provisions of which were briefly outlined in the June issue. As enacted, the provisions were substantially unchanged from those incorporated into the original bill. The measure is expected to provide relief from some of the deterrents to construction activity, and coincident with its passage tentative plans were suggested for reducing the costs of building, which appear to be one of the potent factors contributing to the present state of inactivity in private building.

Real estate foreclosures reported so far in 1934 have remained relatively high, although some improvement has occurred when comparisons are made with a year ago. In communities comprising 54 percent of the population of the country, farm, commercial, and home foreclosures during the first 5 months of the year numbered 79,200 , a decline of 11 percent from the 88,900 reported a year ago, but they were nearly three times as large as the average for the year 1926.

BUILDING MATERIALS, CONSTRUGTION, AND REAL ESTATE

## Transportation

LOADINGS of freight during May increased to approximately the figure for March, following the sharp decline in April. The increase for the month was greater than the usual seasonal advance for this period. The adjusted index of the Federal Reserve Board rose 2 points to 64, on the base of the monthly average for $1923-25$ equal to 100 . This is 8 points above the similar index for May a year ago, but is slightly below the index in July of last year and March of this year. Daily average loadings during the first 23 days of June were slightly less than in May.

The broad base of the May increase in freight movements is indicated by the fact that after adjustments for the usual seasonal change, the index for every one of the eight groups of freight increased during the month. Ore loadings for May were almost three times the loadings for April and for May a year ago.

Total loadings for the 24 weeks of the year through June 16 amounted to $14,133,887$ cars. The comparable figure a year ago was $2,000,000$ less and, in 1932, $1,000,000$ less.

Shipments through the Sault Ste. Marie canal were 65 percent above shipments for last May and were more than three and one-half times the shipments in May 1932. This increase resulted mainly from heavy shipments of ore and a substantial increase in the coal tonnage handled.

Total operating revenue of class I railroads for April, according to the Bureau of Railway Economics, was 18 percent above April 1933, but 10 percent below the figure for March 1934. Net railway operating income
for the first 5 months of 1934 was equivalent to an annual rate of return of about $2 \frac{1}{2}$ percent of the property investment of the roads. This compares with a rate of 1.06 percent in the same period of 1933. Despite this improved showing, 35 class I carriers have failed to earn their interest and fixed charges so far this year. Preliminary data indicate a substantial increase in gross and net operating revenues for May, due to the upward trend of freight traffic. The first 51 roads to report for May showed an increase of 9.3 percent in gross revenues and an increase of 28 percent in net operating income as compared with April.
The upward trend of revenues and the financial assistance rendered by the Government continue to be reflected in an increase in orders for equipment, materials, and supplies. Available data indicate that during the first 5 months of the current year such orders approximated $\$ 225,000,000$, exclusive of expenditures for fuel and P.W.A. allotments not yet spent, according to the Railway Age. Last year similar purchases did not exceed $\$ 95,000,000$. Including fuel, purchases amounted to approximately $\$ 300,000,000$, or twice the expenditures a year ago. These equipment orders have been reflected in a substantial gain in employment and pay rolls in the equipment manufacturing industry.

The number of employees of class I railroads, excluding switching and terminal companies, increased by more than 31,000 from the middle of April to the middle of May. The May figure is the highest reached since May 1932.

## RAIL AND WATER TRAFFIC

## Automobiles and Rubber

$\mathbf{P}$RODUCTION of automobiles has moved downward since April in reflection of the declining trend of retail sales of cars. Following the general reduction in passenger-car prices in the early part of June, some improvement in retail sales was reported, with the result that production picked up slightly in the second week of the month. Total production during June is expected to show a reduction below the May total, but a sizeable increase over June 1933. Indicated production of the United States for the first half of 1934 is approximately $1,700,000$ units, or about 71 percent in excess of the total for the corresponding period of 1933 .

A slight revision in the United States production data for the year 1933, and the first 4 months of 1934, has been made. A complete record of the revised data may be found on page 55. The drop in May 1934 output from the revised April total amounted to 23,000 units, or 6.5 percent. The seasonally adjusted index of the Federal Reserve Board dropped by 8 percent. The recession in truck production was somewhat greater relatively than in passenger cars.

Domestic sales of new passenger automobiles have been irregular in recent weeks. May sales were about 10 percent less than in April, although they were about one-third higher than in 1933. After adjustment for seasonal variation, the index was 5 percent below the April figure.
The number of employees in the automobile industry in May was about the same as in April, although the declining trend in production was reflected in a
drop of 6.5 percent in pay rolls. The number at work at the spring production peak in April was considerably more than double the total a year earlier, and was in excess of any monthly total since June 1929. Pay rolls in May were the highest, with the exception of April 1934, since September 1929.

Production in the rubber industry declined during May. However, domestic consumption of crude rubber represented the heaviest May consumption since 1929. The recession in activity was mainly in tire-and-tube and boot-and-shoe manufacturing, the other branches of the industry showing little change from the preceding month.

Curtailed production of automobile tires and tubes and an increase in shipments resulted in a reduction in manufacturers' stocks which had been built up over a period of months. Preliminary statistics indicate a gain in shipments of casings in May, as compared with April, of about 20 percent, while production fell off by about 7 percent. As shipments of tires for original equipment followed the declining trend of automobile production, the increase in the total was the result of the sharp increase in domestic sales for replacement purposes and sales for export. Stocks of casings at the end of May, amounting to $10,800,000$, were about 800,000 less than a month earlier.
Crude rubber stocks rose by about 1 percent during May, due to the increase in United States stocks and stocks afloat. World stocks bave increased by 10 percent in the past year notwithstanding the improved trend of consumption.

## Forest Products

LUMBER production during May was at the same rate as in April. In the first half of June, however, it declined partly in reflection of labor difficulties on the Pacific coast, but also on account of the falling off in new orders, which were substantially less than the cut. Lumber shipments were below production for each week of May and the first two weeks in June, resulting in a further increase in mill stocks. Stocks held by approximately 1,750 mills increased 5 percent between the period April 28 and June 9.

The Lumber Code Authority has set the production quota for the third quarter of the year at $3,845,000,000$ feet. This represents a reduction of 15.5 percent from the established production for the current quarter. Of the total, softwoods were reduced by 13.2 percent and hardwoods by 25 percent as compared with the current quarter. In announcing the quota, the Code Authority stated that "the severe curtailment of production * * * is partly due to the fact that production totals have been consistently kept above the probabilities of consumption since the Lumber Code became effective, last August, on the theory that every reasonable effort should be made to encourage production, employment, and sales. The result * * * has been some increase in inventories since the code went into effect, while the expected revival of building has not yet come."

Employment in the lumber and allied products industry again increased during May, reaching a high point for the year. It was 3.2 percent greater than in April and 35 percent ligher than in May 1933. Pay rolls also were greater than during April and at
34.6 percent of the 1923-25 average were the highest since October 1933.

Car loadings of forest products for the 4 weeks ended May 26, amounted to 100,579 cars, which was 20 percent higher than the same period in 1933. Estimated loadings of lumber, totaling 41,206 cars, were also well above the 1933 level.

Wholesale prices of lumber declined fractionally on the average during May, although the index was approximately 44 percent higher than in May 1933 and May 1932.

Conditions in the naval-stores market remuined quiet during May. Receipts of gum turpentine and rosin at Savannah, Jacksonville, and Pensacola continued to show seasonal increases, with gains also being made in port accumulations. Production and stocks of steam distilled wood naval stores showed mixed trends. Production of turpentine and rosin declined slightly from the preceding month while stocks moved upward. Wholesale prices of naval stores declined slightly during the month.

Employment in the paper and pulp industry increased further during May. Pay rolls, which declined slightly, were 36 percent higher than during May 1933. Production of newsprint increased seasonally as compared with April, and the total produced was the largest May output since 1931. Stocks at United States mills were lower. Canadian production of newsprint was the largest since November 1929. Stocks of newsprint at Canadian mills, aggregating 42,459 tons at the end of May, were greater than April but were slightly less than May a year ago. Prices remained steady.

## Iron and Steel Industry

$\mathrm{A}^{\mathrm{P}}$FTER a slight recession late in May, activity in the iron and steel industry again turned upward and in the early part of June steel mills were operating at the highest level of the year. This contraseasonal expansion in output was partly attributed by the trade to the desire to forestall possible strike interruptions and to specifying against expiring second quarter contracts on the part of consumers. According to trade estimates, the rate of operations during June averaged close to the officially reported rate of 58 percent in May. In June 1933 the operating rate was at 46 percent. Tin plate mills were particularly active. The demand for this product has been heavy since the first of the year, and in recent weeks activity at the mills has been holding around 75 percent of capacity.

Steel mill activity during May was only slightly lower than the peak level reported last summer. Reflecting the broad advance in general operations during a period when the industry usually experiences a recession in activity, the Federal Reserve Board's adjusted index of production rose 8 points to 85 percent of the 1923-25 average monthly level. With the exception of last July, output was at the highest rate since August 1930.
Employment and pay rolls in the industry have followed the upward trend of production. The relative gain in pay rolls in May was more marked than in employment. The number of wage earners employed in steel works and rolling mills increased 5 percent during May, while the advance in wage payments amounted to 11 percent. The number employed dur-
ing this period was approximately half again as large as a year ago, while pay rolls were considerably more than twice as high.

Pig-iron production in May exceeded $2,000,000$ tons for the first month since April 1931. On a daily a verage basis, the gain over April amounted to 14 percent and almost twice as many furnaces were in blast as during May 1933. The tonnage of pig iron produced in the first 5 months of the year was two and a half times as large as in the corresponding period of 1933. As in the case of pig iron, the upward trend in steel production has been continuous since last November. For the first 5 months of this year the average rate of operations has been 47 percent of capacity, as against 23 percent in the same period of last year.

Steel shipments of the United States Steel Corporation during May totaled 745,000 tons, the largest volume for any month in 3 years. The 16 percent increase over April was ascribed partially to the deliveries against previously placed contracts, as no perceptible increase has been apparent in actual consumption and some of the major consumers, the automobile industry, for example, have needed less steel currently due to declining production.

The downward tendency which had prevailed in steel scrap prices, from March to the early part of June, has been arrested and prices have recently moved slightly higher. Quotations for most finished iron and steel products have continued unchanged in recent weeks at the higher prices which were announced in April.

## Textile Industries

$\mathbf{A}^{c}$CTIVITY in the textile industries has tended downward during May and June．The complete shut－down which was in effect in the silk industry for 1 week in May resulted in a substantial curtailment of output and a reduction in surplus stocks．Other branches of the industry which did not resort to similar action in May reported a declining trend in both pro－ duction and new orders．A general curtailment of operations in the cotton－textile industry became effec－ tive on June 4.

Slackening in demand has had some effect on whole－ sale price quotations，but price recessions up to the middle of June have been moderate．The composite index of textile products receded 1 point to 72.5 percent of the 1926 average in the $\overline{5}$－week period ended June 16.
Raw－cotton consumption，per working day， amounted to 19,614 bales in May，compared with 20,791 bales in April，and 23,277 bales in May 1932. While consumption in May was considerably less than in the corresponding month a year ago，otherwise it was the largest May total since 1929．Spindles were operated at 98.2 percent of single－shift capacity during May，a reduction of 6 percent as compared with the preceding month．Operations in the weaving indus－ try were maintained at a relatively high level， although production in May was less than in each of the 3 preceding months．Shipments and sales were off more sharply than production，being equiv－ alent to $85{ }_{s}{ }^{\prime}$ percent and 58 percent，respectively，of the output．Stocks rose rapidly and at the end of

May were equivalent to more than 10 weeks＇sales at the May rate of incoming business．

While consumption of raw silk was slightly higher in May than in April，the seasonally adjusted index declined．Spindle activity dropped sharply．Twist－ ing spindles，which were operated at 49 percent of capacity in April，dropped to 32 percent in May． 5－B spindles were operated at 46 percent of capacity in April and at 39 percent in May．The curtailment of weaving operations resulted in a 22 －percent drop in the production of stock－carrying mills in the latter half of May as compared with the first 15 days of the month， and a drop of 54 percent as compared with a year ago． In the first half of May，output was 9.1 percent lower than in the preceding semimonthly period and 30 percent below a year ago．Stocks on hand were reduced by 8 percent between the 15 th and the 31st．

Raw wool consumption underwent a further shrink－ age in May，the decline as compared with April amounting to 6 percent，but machinery activity was only slightly changed．Combing and worsted spindle activity increased，while woolen spindle hours were the same as in April．Weaving output was higher，wide loom activity advancing from 55 to 58 percent of capac－ ity，and carpet and rug looms from 39 to 43 percent．

On page 53 of this issue may be found a new series on production，shipments，and stocks of hosiery． These data are compiled by the Hosiery Code Author－ ity and represent mills having about 95 percent of the output of the industry．

TEXTILE STATISTICS

${ }^{1}$ See footnote on p. 16.
${ }^{2}$ Compiled by the Cleveland Chamber of Commerce from reports of 100 concerns. The index of employment hos heretotore been based on the number employed in January 1921 as 100 , but has now been adjusted to a $1923-25$ base in order to conform to the base period adopted by the Bureau of Labor Statistics for the United States indexes. These data represent unweighted indexes which have not been adjusted for seasonal variations or to the trend of the Federal biennial census of manufactures. The number
of employees included in the base period is 76,285 . About 10 percent of the employees are in public atilities. The halance are in manufacturing and represent about 40 percent of the total employed in manufacturing industries.
${ }^{3}$ Compied by the Federal Reserve Bank of New York and supersedes data shown on pp. 90 and 91 of the 1932 Annumal Supplement and p. 34 of the June i934 issue of the Survey of Current Business. The data shown above on public utilities represent the net earingss of 58 public-utility corporations (exclusive of telephone and railroad companies) which take the place of the former table of the earnings of 63 public utilities for the period 1928 to date. The revision nade in the public-utility group made necessary a revision in the grand total.

${ }^{1}$ Compiled by the National Industrial Conference Board and represents minor revisions in the data for the year 1933 that formerly appeared in the Survey of Current Business. Tbese revisions were caused by the inclusion of additional reports that were received subsequent to the computation of the monthly data for the year 1933 .

1 Compiled by the U. S. Department of Commerce, JBureau of the Census. The data shown above are based on the reports of 18 identical manufacturers, the value of whose output represents more than os parcent of the total for the industry. The daily productive eapacity of these uanufacturers has been reported to the Euraz as \& 282 boilers. The statisties fornierly showe in the survey were based on reports of 16 manufactures whose cutput consituted 90 percent of the total for the industry.

1 Compiled by the Machine Tool Builderst Associotion, and constitat e an adjustment of the comprehencive data currently being collected and the series previously pre-
sented to form a continuous series. In making the adjustment, the whole curve was raised to bring it into line with the 1926 shipments base. This was done by dividing the old index through by a constant actor which represented the averago relationship for the new and old index numbers for all the companies which had reported continuously over the 15 -year period. The factor used was 180.3 .

The association received renorts from 50 to 60 companies for the years 1919-27, 60 to 89 companies for the years $1928-33$, and beginning with January 1934 from 163 companies. Since January 1934 data nave been gathered from the machine-tool industry as a whole and also from the forging machinery group which represents less than slight. It is expected that revised indexes on unfiled orders and shipments will also be compiled.

3 Staistics covered 9 eities since Jan. 10,1934 , and 00 cities befors; 1 city twas adde: to the series in order to offiset ihe effect of i member bank which ceased reporting.
Conparable figures not available prior to 1932.

## Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1934 | 1933 |  |  |  |  |  |  |  | 1934 |  |  |  |

a Revised.
${ }^{6}$ Quotation based on paper peso instead of gold peso as formerly. Forner equivalent to 44 percent of latter. See note on $p$. 56 of the Mar. 1934 issue
New seties superseding ord series which covered the physical movement only. For earijer data see p. 20 of December 1932 issues, net gold imports.
$\dagger$ Revised series. For earlier data see pp. 18 and 20 of the July 1933 issue, insurance written and admitted assets; p. 18 of the June 1933 issue, premium collections, and
p. 19 of this issue, corporation profts.
\# Par values of foreign currencies as given on pp. 86 and 87 of 1932 annual supplement were changed with the reduction in gold content of the United States dollar.
Or exports (-).
${ }_{m}{ }^{2}$ Deficision of Treasury and Federal Reserve to omit gold coin from circulation figures as of Jan. 31, at which time it was carried as $\$ 287,000$, 000 , is not reflected in the January total, which is the daily average figure for the month. Large increase in February total resulted from revaluation of the dollar to 59.06 percent of its former gold content.

## : Revised.

* New series. For earlier data see p. 20 of the August 1033 issue, Reconstruction Finance Corporstion and p. 20 of the June 1933 issua, U.S. Government bond prices. 8 This excludes the amount outstanding of $\$ 33,914,726$ on Jan. $31, \$ 478,243,891$ on Feb. 28, $\$ 486,686,553$ on Mar. $31, \$ 486,717,731$ on Apr. 30, and $\$ 487,63,731$ on May 31,1934, lincludes $\$ 2,808,221$, 138 for February, $\$ 2,233,252$ for March, $\$ 009,051$ for April, and $\$ 298,868$ for May, representing the increment resulting from reduction in weight of gold dollar.

The figure for expenditures includes $\$ 2,000,000,000$ exchange stabilization chargeable against increment in gold.
$\sigma^{3}$ Series revised to include cmergency expenditures. Figures as shown in Survey for months prior to May 1932 are comparable with this series. Comparable figures beginning May 1932 are as follows: 1932, May, $\$ 470,444,000 ;$ June, $\$ 683,121,000 ;$ July, $\$ 497,661,000 ;$ Augast, $\$ 372,767,000 ;$ September, $\$ 280,639,090 ;$;ctober, $\$ 455,692,000 ;$ November, $\$ 282,080,000$; December, $\$ 38,866,000 ; 1933$, January, $\$ 359,509,000$; February, $\$ 360,341,000 ;$ March, $\$ 430,475,000$.

$\dagger$ Revised series. For earlier data see p. 19 of the A pril 1933 issue.
Data revised for 1932 . See p. 34 of the March 1933 issue for most revisions. Other revisicis for tive year 1932 were shown on p. 34 of the April, May, December, 1683 , and January 2934 issues

* New series. For earlier data see p. 20 of the November 1932 issue, barley. Data on receipts of milk in Greater New York will be shown in a subsequent isste. Milk receipts cover receipts of fresh whole mailk by rail and truck. Figures compiled by Department of Agriculture and are available to January 1930. Old series included whole milk, buttermilk, skim milk, and cottage cheess. Old series also included all milk hauled by 1 railroad, not all of which was delivered to New York.
$\dagger$ Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of total and Arnertcan whole-milk cheese, and production of condensed and evaporated milk, p. 20, January 1933. For earlier data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1032 data on production of factory and American whole-milk cheeso, production of condensed and evaporated milk, p . 39 , September 1933. For subsequent revisions for 1932 on production of evaporated milk, p. 39, November 1933. For 1933, car-iot shipments of apples, citrus fruits, onions, and potatoes, p. 39, April 1934. For 1932 exports of rice, p. 39, June 1933.
\# See footnote on p. 35 of this issue.
8 Bulk evaporated milk not included since December 1931.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1934 | 1933 |  |  |  |  |  |  |  | 1934 |  |  |  |

## - Revised.

$\dagger$ Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933; 1932 fnal revision of anthracite and bituminous coal production, p. 42, January 1934; anthracite shipments for 1932, p. 42, December 1933; consumption of bituminous coal by electric power plants, p. 42, Mar. 1,663, Apr. 1,652. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932 , p. 56 , November 1933.
${ }^{6}$ Statistics here given as of August 31 and subsequent months are not comparable with the figures for earlier months because of revisions and transfers from one kind of storage to another as a result of the new form of report to the Petroleum Administrative Board. The Bureau of Mines has not found it possible to reconcile these figures and will report them hencetorth to compare with the August data. The Aug. 31 fgures on the old basis are on p. 42 of the November 1933 issue.

- New basis, as of Dec. 31, ceased by 1,089,000 barrels being classified as fuel oil.
\# See footnote on p .35 of this issue.
$\ddagger$ Price converted to short-ton basis.
- Dec. 1 estimate.

| Monthly statistics through December 1831, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1934 | 1933 |  |  |  |  |  |  |  | 1934 |  |  |  |

LEATHER AND PRODUCTS

New series. For earlier data see p. 20 of the February 1933 issue, production of residual fuel oil and gas oil and distillate fuels, and p. 19 of the June 1933 issue, leather. May 1933, for 1933 revisions, p. 43 May 1934; production of residual fuel noils and gas oil and line, production of gasoline at natural gas plants and refineries, stocks of gasoline at refineries, consumption of kerosene and lubricating oil, and production of asphalt for line, production of gasoline at natural gas plants and reineries, stocks of gasember 1933; retail distribution gasoline in 41 States for 1932, p. 43, May 1933, for 1933, p. 43, May 1934; production of cattle and sheep and lamb bides, p. 44, April 1934; imports of total hides and skins and upper leather for 1932, p. 43, June 1933.
c Beginning Aug. 31, fgures reported on the new basis, caused by transfer of 414,000 barrels from gas-oil and fuel-oil stocks.
: New basis caused by transfer of 243,000 barrels from bulk terminai stocks and approximately 93,000 barrels transferred from refinery stocks.
' New basis resulting from transfer of finished stocks to unfinished stocks and addition of stocks not previously reported.
\# See footnote on p. 35 of this issue.

* New series. Earlier data on furniture activity, all districts, not published. For imports of iron and steel see p. 20 of the November 1932 issue, for castings, p. 20
§ Data revised for 1932 . For revisions see pp. 44 and 45, lumber and p. 45, iron and steel, of the June 1933 issue.
$\dagger$ Revised. Earlier data not published.
Beginning with January 1934 the report includes all known operators. Prior to this time approximately 89 percent of the listed capacity was included.
\# Imports from Cuba not included.
\# See footnote on p. 35 of this issue.
- Revised.

${ }^{a}$ Revised.

* New series. Earlier data not published, rubber heels and soles and illuminating glassware; for earlier data see p. 20 of the June 1933 issue, face brick, machine production.

5 Census Bureau has comparative summaries for 2 months only on structural clay products. Series not comparable over 13 -month period.
Adjusted for degrading and year-end physical inventories.
Revised data for 1933 represent total prodaction for the United States.
\#Series on glass containers are not comparable for 1934 and earlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the first 4 months of 1933 amounted to $9,048,882$ compared with $6,549,130$ for the 31 firms reporting a year ago. The revised shipment figure for March 1933 given in May 1934 issue should be ignored since it represented the figure for 44 companies.

$\ddagger$ Index of sales of new passenger cars is on p. 26 .
$\dagger$ Compiled by the Silk Code Authority (The National Federation of Tertiles, Inc.) and represent the parcentage of operations based on an 80 -hour week ( 2 shifts of 40 hours each). Data are not comparable with the series previously shown in the Survey which were based on a smailer sample and which were computed on the basis of a 48 -hour week. The code authority expects to adjust the old series to a comparable basis, when opportunity affords.
${ }^{\text {* }}$ Three weeks ended Apries. Compiled by silk Throwing Code Authority; not comparable with spinning data previously shown.

## INDEX TO MONTHLY BUSINESS STATISTICS

## UNITED STATES FOREIGN TRADE 81 CHARTS

- The Bureau of Foreign and Domestic Commerce has just completed a set of 81 charts showing the month-to-month fluctuations in United States foreign trade during the period January 1928 to March 1934. These charts were prepared primarily for the use of Government offices, but a limited number are being made available, at the cost of reproduction, to individuals and private agencies.

Complete set of 81 charts (sample shown above), size $103 / 4$ by $161 / 2$ inches may be secured for

Send check or money order to
Bureau of Foreign and Domestic Commerce
Washington, D.C.

[^0]:    ${ }^{1}$ Adjusted for seasonal variations.

[^1]:    1 Computed by the Federal Reserve Board from original data compiled by the United States Department of Labor，Bureau of Labor Statistics．A ixief description

[^2]:    ${ }^{4}$ Revised.
    8 Data revised for 1932. For revisions see pp. 53 and 54 of the June 1933 issue.
