SURVEY of CURRENT BUSINESS

UNITED STATES DEPARTMENT OF COMMERCE BUREAU OF FOREIGN AND DOMESTIC COMMERCE WASHINGTON

SUMMARY OF CHANGES IN STATISTICAL SERIES SINCE PUBLICATION OF THE 1932 ANNUAL SUPPLEMENT

For convenience there is listed below a tabulation of the changes which have been made in the past 2 years, or since the publication of the last annual supplement. If back data have been presented for the new series, a reference to the monthly issues in which such statistics appeared may be found in the footnotes which are included on pages 22 to 56, inclusive.

NEW SERIES ADDED

DECEMBER 1932

Auto accessories and parts, composite index of shipments. Canadian statistics, electric-power production index,

Chain-store sales index (Chain Store Age). Civil service employment, United States.

Convection type radiators, new orders. Department-store sales, Philadelphia.

Factory employment, Baltimore, Milwaukee, Mary-land, and Massachusetts.

Factory pay rolls, Baltimore, Milwaukee, Philadel-phia, Maryland, and Massachusetts.

Fairchild retail price index.

Gas oil and distillates, production and stocks.

Gypsum, imports, production and shipments.

Hourly earnings, factory (National Industrial Conference Board).

Illuminating glassware, new orders, production, shipments and stocks.

Mechanical stokers, new orders.

Net gold imports, including gold released from earmark.

Pyroxylin rods, sheets and tubes, production and shipments.

Plumbers' brass, shioments,

Plumbing fixtures, wholesale price.

Residual fuel oil, production and stocks.

Rubber heels and soles, total shipments.

Tin consumption in the manufacture of tin and terneplate.

Tin and terneplate production.

Trade union members employed, by groups.

Weekly earnings, factory, Massachusetts.

World prices, foodstuffs and raw materials.

TUNE 1933

Airplane travel, passengers carried, passenger miles flown.

Bond prices. United States Government (Standard Statistics)

Building costs, all types (American Appraisa Ço.)

Face brick, machine production.

Factory employment, Chicago.

Factory pay rolls, New York and Chicago. Farm products, price indexes of dairy and poultry products.

Household furniture, plant operations, all districts. Lard compound, wholesale price, tierces, Chicago, Lard, refined, wholesale price, tierces, Chicago. Leather production (Tanners' Council).

Nonmanufacturing employment-banks, brokerage bouses, etc.; dyeing and cleaning; and laundries.

Nonmanufacturing pay rolls-banks, brokerage houses, etc.; dyeing and cleaning; and laundries. Rope paper sacks, shipments.

DECEMBER 1933

Cellulose plastic products, production and ship-ments of nitrocellulose and cellulose acctate sheets, rods, and tubes.

Construction wage rates (E.N.R.).

Highway construction under the National Indus-trial Recovery Act.

Home Loan Bank, leans outstanding.

H. L. Green Co., Inc., stores and sales,

Paper board, production and shipments.

Pittsburgh employment index.

Pittsburgh pay-roll index.

Purchasing power of the dollar.

- Reconstruction Finance Corporation, loans outstanding.
- United States Steel Corporation, shipments of finished products.

JUNE 1934

Agricultural loans outstanding (six series). Agricultural products, cash income received from marketings of.

Beverages:

Fermented malt liquors: Production, consumption, and stocks,

Distilled spirits: Production, consumption, and stocks in bonded

warehouses. Cotton cloth (bleached, dyed, and printed), pro-

duction and stocks Factory employment (Bureau of Labor Statis-tics).

Factory pay rolls (Bureau of Labor Statistics).

Imports for consumption.

Index of new-passenger-car sales

Indexes of variety-store sales (new index).

Milk, receipts, Greater New York,

Registrations, commercial truck.

Silk machinery activity (SIlk Code Authority).

Sugar, refined, imports and receipts from Hawaii and Puerto Rico.

Vacuum cleaners (hand type), shipments.

JULY 1934

Hostery (Hostery Code Authority). Restaurant, total sales and stores (three chains). Silk spindles (machine activity), Code Adminis-tration Committee for the Throwing Industry.

AUGUST 1934

Silk cloth, production, shipments, stocks. Sugar, refined, imports from Cuba and the Philippine Islands

SERIES DROPPED DECEMBER 1932

Applicants at employment agencies, States. Western

Binders' board, production.

Construction volume (A.G.C.).

Conver: Production, all series. Shipments, domestic, refined. Stocks (North and South America), blister and refined.

Employment, miscellaneous—Federal and State Enameled sanitary ware, baths, lavatories, sinks, highways, construction and maintenance, miscellaneous, all series. Enameled sheet-metal ware, shipments.

Factory operations, proportion full time worked, miscellaneous group.

Golvanized sheet-metal ware, all series.

Gas and fuel oil, production and stocks (combined series). Glass containers, unfilled orders.

Hides and skins, stocks, all series.

Illuminating glassware, orders, production, ship-ments, and stocks.

Industrial production indexes: Copper (mined), metals, nonferrous.

Iron and steel, bollers (round and square), and ra-diators, new orders.

Leather, sole and beiting, production, stocks, all series. Leather, upper, production, stocks, all series.

Lumber, walnut, orders, production, shipments, and stocks. Methanol, stocks:

At crude plants.

At remaeries and in transit,

Milk, condensed and evaporated, total exports, production, and stocks.

Newsprint, production, percent of capacity. Paints, varnish and lacquer products, unclassified sales, 315 establishments.

Pine, North Carolina, production and shipments.

Pine-oil stocks.

Plumbing fixtures, wholesale price (six pieces).

Porcelain, nail knobs, tubes, shipments. Stock indexes, world copper stocks,

- Stokers, mechanical, large (see new series), new orders.

JUNE 1933 Bond prices, domestic, United States Liberty (New York Trust Co.).

Brick, face, production (brick drawn from kilns).

Building costs, by types of construction (Ameri-can Appraisal Co.).

Cotton textiles, production, shipments, stocks, etc.

Farm products--price index of dairy and poultry products (combined index).

Hours of work per week in factories, nominal or full-time week (National Industrial Confer-

Business Indicators

1923 - 25 = 100

Business Situation Summarized

BUSINESS activity has developed a firmer tendency in recent weeks after declining over a period of several months. The movement of the weekly statistics points to a gain in October, although not of substantial proportions.

Industrial production during September was unchanged for the second successive month, but declined further after allowance for the usual seasonal increase. Manufacturing output was lower for the month, both actually and after adjustment for seasonal trend. Contributing to the decline in the adjusted index were substantial reductions in the textile and automobile industries and smaller relative losses in the iron and steel, lumber, leather and shoe, and tobacco manufacturing industries. The decline in the rubber tire-tube industry coincided with the usual seasonal movement, while food processing and cement production were higher after adjustment.

Declining manufacturing output in September was accompanied by a contraseasonal decrease in the number of factory employees and a larger relative decline in pay rolls. The textile strike was a principal cause of these reductions, although employment was lower in half of the 90 industries surveyed monthly. Offsetting the decline in purchasing power resulting from this drop in industrial pay rolls was the substantial, though less-than-seasonal, rise in cash income from farm marketings and the continued heavy expenditures of the Federal Government. Retail-store and mail-order sales have been maintained at a relatively favorable level, the gains in September having been particularly pronounced in rural areas. The adjusted index of department stores ales held a large share of the gains which were a feature of the August returns, but the decline in passenger-car sales in September exceeded the usual drop for the month.

Distribution of freight by the railroads expanded seasonally during September, the adjusted index remaining unchanged from the low of the year reached in August. Data for the first 3 weeks of October do not foreshadow a rise in the adjusted index for that month. Changes in our foreign-trade totals for September were largely a reflection of seasonal and special influences and gave no clear indication of a change in the horizontal trend of the adjusted indexes of exports and imports.

Wholesale commodity prices averaged higher in September than in any month since January 1931. The weekly data reveal a slight recession from the September peak, influenced mainly by a reaction in farm and food prices following an unusually rapid rise.

Conditions in financial markets have improved in recent weeks. Bond prices have advanced, while the amount of nonsecurity bank loans outstanding has tended to increase slowly. Excess reserves of the member banks have remained at a high figure. The long-term capital market remains inactive; new capital obtained through this source in September was the smallest total for any month of the depression.

Comparison of Principal Data, 1930-34

D.D.7654

Commodity Prices

WHOLESALE commodity prices, as measured by the Department of Labor's index, have continued to recede from the high for the past 3 years reached in the week ended September 8, when the index stood at 77.8 percent of the 1926 level. The recession during the 6-week period ended October 20, which has lowered the index to 76.2 percent of the 1926 base, resulted largely from the fall in the prices of farm products and foods.

Despite this recent decline, the prices of farm products and foods in the week ended October 20 were approximately 24 percent and 19 percent above their respective levels at the first of January this year. The "all other" group averaged approximately the same in these two periods.

Fairchild's index of retail prices, excluding foods, was unchanged on October 1 from a month earlier at 87.7 percent of the January 1, 1931, prices. Piece goods and home furnishings advanced in price during September, while women's apparel declined, and men's apparel and infants' wear were unchanged.

The cost of living of wage earners advanced during September for the fifth consecutive month, according to the National Industrial Conference Board. Every component of the index advanced during the month, except the price of gas and electricity, which was unchanged. Food prices rose 4.4 percent. The second largest increase was in housing, 0.9 percent. The average of all items rose 1.8 percent, which was the sharpest increase since August 1933.

Farm prices continued to rise between mid-August and mid-September, but have since receded moderately. The index of farm prices presented in the table below has been completely revised by the Department of Agriculture. The new index includes 7 major farm products and 13 commercial truck crops, in addition to the 27 major farm products used in the former series. The principal other changes made are the use of improved price series for dairy products and tobacco, and the shifting of the weights assigned to each commodity from average marketings during the period 1918-23 to the period 1924-29. A table presenting the new figures in detail is presented on page 20.

The changes resulting from the shift from the old to the new series varies from 2 points under in 1915 to 7 points above in 1933. The August 1934 index of 87 on the old series is 96 on the new. The new index does not affect the computation of "parity prices" for individual agricultural commodities as specified by Congress in the Agricultural Adjustment Act. However, the new index does raise the ratio of prices received by farmers to prices paid by them during recent months. On the basis of the new index, the ratio for August 1934 is raised from 71 to 77 and for July from 66 to 71. The ratio for September this year is 81.

INDEXES OF COMMODITY PRICES

Domestic Trade

RETALL store and mail order sales have constituted one of the bright spots in the business picture during recent months. The improved position of the farm population, together with large expenditures of Government funds, have been major sustaining influences at a time when the income from industrial pay rolls has been reduced. Cash income of farmers in September from the marketings of farm products was nearly one-fourth larger than a year ago. Emergency expenditures of the Federal Government for the current fiscal year through October 15 exceeded a billion dollars, compared with a third of a billion in the same period of the fiscal year 1934. More than 40 percent of this year's total has been for the Federal Emergency Relief Administration.

The expansion in retail sales in rural areas has been particularly large. During September such sales showed a much greater-than-seasonal increase and were one-third higher in value than in 1933 and 60 percent larger than in September 1932. For the first 9 months of the year sales were more than one-fourth greater than in the corresponding period of 1933. Price changes influence these year-to-year comparisons to an indeterminate extent but are relatively unimportant in the August-September change.

Sales through department stores in September increased by less than the usual amount following a marked extra seasonal rise in August. Sales were 4 percent in excess of 1933 with all of the Federal Reserve districts, excepting the three in the northeastern section of the country, showing increases. When allowance is made for the extra trading day in September 1933, the increase over last year was 9 percent. An unofficial survey of department store sales in 75 representative cities for the first half of October showed a gain over last year of 8 percent in dollar volume and of about 7 percent in transactions.

Variety store sales were approximately the same in September as in August, after allowance for seasonal variations, while sales through chain grocery stores were higher, partly by reason of price increases. Retail sales of new passenger automobiles declined in September, the seasonally adjusted index receding to 53 percent of the 1929-31 average from 56 in August.

Figures on commercial failures record a steady improvement. Excepting seasonal increases at the year ends, the curve of commercial failures has dropped steadily since the end of 1931, the downward trend being especially evident during 1933. September failures were 15 percent less than in August, the month's total again establishing a new low since 1920. The liabilities involved have followed a similar trend.

Newspaper advertising linage increased during September, according to the Media Record data covering 52 cities. While seasonal factors influenced this movement, the August-September increase was larger than that which occurred last year. The linage was 4 percent higher than in September 1933. The cumulative increase in space over a year ago for the first three quarters amounted to more than 12 percent.

Employment

EMPLOYMENT and pay rolls in the industries surveyed by the Department of Labor declined between the middle of August and the corresponding pay-roll period in September. The recession was attributed primarily to the drop in those divisions of the textile industry affected by the strike which was in progress during the September reporting period. As this strike was terminated on September 22, and output increased in the ensuing weeks, the October employment data will show a more normal relationship between the textile and other groups.

Factory employment declined in September, the recession amounting to 4.7 percent. While the textile strike was a major factor, declines were reported in half of the 90 industries surveyed. Since a rise in factory employment is usual for September the seasonally adjusted index dropped 6.8 percent to 73.9 percent of the 1923–25 average, the lowest figure reported since July 1933. The September decline brought the number employed in manufacturing industries below the level of the corresponding period a year earlier for the first time since May 1933. The September index was 5.4 percent below a year ago.

Increases in employment during September were noted in only 5 of the 14 major groups of manufacturing industries. Other than the 4.1 percent increase for the food and kindred products group, which was influenced by seasonal changes, the gains were slight. In the railroad repair shop and lumber and allied products groups they were less than 1 percent while in the chemical and paper and printing groups the gains amounted to 1.6 percent in each instance. The largest loss—17 percent—was in the textile and allied products group which reflected losses running as high as 48 percent in the woolen and worsted industry, 41 percent in cotton goods, and 21 percent in the silk and rayon industry. Reductions were also pronounced in the transportation equipment group (11 percent), and in the leather and manufactures group (5.9 percent).

Factory pay rolls were 6.8 percent lower than in August and 2 percent less than in September 1933. Compared with August, the drop in the transportation equipment group amounted to 26 percent and for the textile group 16 percent while reductions of from 4 to 12 percent occurred in the iron and steel, machinery, leather and manufactures, and rubber products groups. Increases were reported for 5 groups, the largest being the 3.8 percent gain for food and kindred products.

Among 18 nonmanufacturing industries, increased employment was reported for 7 and pay-roll increases for 6. The largest relative increase in employment was one of 15 percent for the anthracite industry. This was accompanied by a rise of 18 percent in pay rolls. These gains were mainly seasonal, but also reflected the resumption of operations in some mines following the settlement of labor difficulties. The only other important increase was in retail trade, in which 7 percent more employees were added and an additional 5.2 percent in wages paid out.

Finance

DEVELOPMENTS of the current month, while without spectacular features, were in general constructive. The rising trend of bond prices has carried the Dow-Jones index up nearly two points since the first of October; stock prices have been firm and commercial loans have continued to expand slowly.

A feature of recent banking statistics has been the further expansion in bank deposits. In the 4 weeks ended October 17, the net demand deposits of the reporting member banks increased \$422,000,000 to \$13,365,000,000, the latter total representing an increase of 25 percent as compared with a year ago. The large increase in the past year has resulted chiefly from gold imports and Government borrowings, as the trend of the total of outstanding loans has tended to diminish the volume of bank deposits. The expansion of "all other" loans in the past several months, however, suggests a reversal of the trend which was evident over a greater part of the past year.

The trend of business activity is more closely reflected in the turnover of bank deposits than by the change in the deposit total. The monthly figures showed an upward trend in the rate of turnover of deposits in the spring months of 1934, but a subsequent sharp decline carried the figure to a low for the year in the third quarter. Debits in the first half of October indicate some improvement over the September figures.

In its weekly report of the member-bank statistics as of October 17, the Federal Reserve Board made several changes designed to give certain additional tigures which will make possible a more accurate interpretation of current trends. The "all other" loan total has been broken down to show separately the volume of acceptances and commercial paper purchased and the amount of loans on real estate. As of October 17, acceptances and open-market commercial paper represented 9.8 percent and the real estate loans 21 percent of the total formerly reported as "all other" loans.

Only minor changes in the amount of reserve-bank credit outstanding occurred in recent weeks. Member-bank reserve balances, which declined sharply at the beginning of September, have again increased in recent weeks so that by October 17 the total was only moderately below the August average. Excess reserves have fluctuated around 1¾ billion dollars since the latter part of September.

New capital issues in September made up a very small total. Of the \$43,375,000 of securities offered, less than \$5,000,000 represented corporate issues. The volume of new issues continued low during the first 3 weeks of October. An interesting development of the latter month was the offering by a private syndicate of \$50,000,000 of bonds of the Home Owners' Loan Corporation. These bonds are unconditionally guaranteed both as to principal and interest by the Federal Government.

Direct loans to industry by the Federal reserve banks as of October 17 had reached a total of \$4,576,-000. In addition, the banks had made commitments to advance such loans to the amount of \$2,182,000.

FINANCIAL STATISTICS

191 cities.

* Gold coin reported in circulation prior to Jan. 31, 1934, was eliminated from the total as of that date.

Foreign Trade

EXPORTS increased in value in September by somewhat less than the usual seasonal amount, while general imports and total imports for consumption showed increases in value of 10 percent and 28 percent, respectively. The normal seasonal movement of imports in September is slightly downward.

Because our foreign commercial transactions during the past 2 years have been affected to a considerable extent by many special influences, some of a temporary nature, the cumulative totals of foreign trade reflect more accurately the extent of the improvement in trade than do the month-to-month comparisons. In the 9 months ended with September 1934 the value of exports of United States merchandise and of imports for consumption increased 42 percent and 18 percent, respectively, in comparison with the same period of 1933. Exports increased about 16 percent in quantity, while the total volume of imports was about the same.

September was a month in which special influences were particularly important in the trade movement. Imports for consumption were increased by the abnormally heavy movement of Cuban sugar from bonded warehouses after September 3, the effective date of the new reciprocal trade agreement with Cuba. Imports of sugar for consumption from Cuba during this period dropped by 60 percent in comparison with 1933. With September withdrawals of Cuban sugar from warehouses exceeding entries by 592,000 tons, 9-months imports for consumption from Cuba were 1.5 percent higher than in 1933. A number of other commodities were imported in larger quantities in September than in August. Various food products, particularly grains, coffee, cocoa, vegetable oils, beverages, and feedstuffs, unmanufactured tobacco, nursery stock, raw silk, tin, precious stones, and fertilizers were among the important items showing increases.

Agricultural products, which show a seasonal increase at this time of the year, were responsible for the major part of the increase in the value of total exports during September. Raw cotton, leaf tobacco, dried and evaporated fruit, apples, vegetables and preparations, and lard were some of the commodities contributing to this rise.

Finished manufactured exports decreased 7 percent in value from August to September. A reduction in the value of shipments of automobiles, machinery, and apparatus were influential in this decline, although iron and steel manufactures, rubber manufactures, paper manufactures, and refined petroleum products also decreased. Exports of cotton manufactures, which dropped steadily during the summer months, recorded a slight expansion in September.

In comparison with September 1933, crude material exports were smaller in quantity in September 1934. Unmanufactured cotton exports were only about half as large in quantity as last year. Exports of finished manufactures increased 35 percent in value between these two periods, while the gain in value of this class of exports for the first 9 months of 1933, compared with the same period of 1934, was 55 percent.

EXPORTS AND IMPORTS

Real Estate and Construction

CONSTRUCTION contracts awarded, as compiled by the F. W. Dodge Corporation for the 37 States east of the Rocky Mountains, declined during September but increased in the first half of October. September-October contract totals will probably be below a year ago as September 1933 and the ensuing months witnessed the placing of a very large volume of Public Works contracts. Public Works awards reached a peak during this period; in the 3 months November 1933 to January 1934, they were at the rate of a billion and a quarter dollars a year in the 37 States included in the Dodge figures.

Despite the decline in Public Works contracts as compared with a year ago, public funds still continue as the major support of the construction industry. This is evident from the fact that 63 percent of the total awards of \$110,219,000 in September were financed by public funds. The volume of awards so financed was slightly higher than in August while the value of privately financed contracts placed was about one-fifth less than in the preceding month.

Detailed figures for September, by classes of contracts, do not reveal any pronounced variations from the preceding month. Residential awards continued to decline, the September total being the lowest recorded for that month during the depression. Nonresidential awards also declined in September, while the Public Works contracts were slightly higher in value.

These contract figures do not include a considerable volume of work of the nature of alterations and repairs, the type of activity which has been stimulated to a marked degree by the drive sponsored by the Federal Housing Administration. That organization reports that banks representing 75 percent of the total commercial bank resources of the country have accepted contracts of insurance in order to make modernization loans. The Federal Housing Administration further reports that loans for such purposes in the latter part of October were being made at the rate of \$2,500,000 a week.

Some indication of the extent to which modernization activity has increased is provided by the Department of Labor's data on building permits issued in 768 identical cities having a population of 10,000 or more. The permits issued for new buildings show a decline both in number and value as compared with September 1933, but the number of permits issued for additions, alterations, and repairs was 14 percent higher than a year ago and the estimated cost of the work covered by these permits was 27 percent larger. Thus, it is apparent from these September figures that the drive for better housing is making some progress.

An idea of the potential market which exists for buildings, materials, and equipment may be gained by a study of the table presented on pages 16 and 17 of this issue. These facts were gathered from a survey of 64 cities and a discussion of their significance is contained in the article of which this table is a part. Other factors, including the all important question of purchasing power, will control the extent to which this need is translated into an effective demand.

BUILDING MATERIALS, CONSTRUCTION, AND REAL ESTATE

¹ Based on 3-month moving average and adjusted for seasonal variations.

² First of month, Oct. 1, 1934, index, 200.9.

Transportation

FREIGHT-CAR loadings, which expanded by the usual seasonal amount during September, receded during the first half of October after allowance for the seasonal change. The volume of traffic has continued relatively low as is indicated by the fact that loadings in the week ended October 13 amounted to 63.1 percent of the average for this week during the past 15 years. On this basis, the percentage has been lower for only 3 weeks of the current year.

Weekly loadings, which since the week ended July 7 have been below those for the corresponding weeks of 1933, were below the comparable 1932 total in the week ended October 13. Loadings for the 41 weeks of the year, through October 13, were 7.1 percent higher than the comparable period of 1933 and 10.5 percent above that for 1932.

The index of car loadings for September, adjusted for seasonal variation, was unchanged from the low of the year reached in August at 59 percent of the monthly average for the years 1923-25. Of the eight classes of freight indicated in the accompanying table, more-than-seasonal increases occurred in the shipments of coal and coke, and forest products shipments declined less than usual during September. Livestock shipments increased, although the adjusted index dropped 19 percent, following the abnormal rise in August occasioned by the drought.

The financial returns of the carriers have not been as satisfactory in recent months as a year ago. The September traffic statistics indicate little, if any, improvement over the August results. In August, total operating revenues of class I railroads increased over July but were approximately 5 percent below those for August a year ago. Net railway operating income likewise increased over the preceding month but was 35 percent below that for August 1933. For the first 8 months of the year total operating revenues, operating expenses, and net railway operating income were 9.1, 11.3, and 7.1 percent, respectively, above the same period of 1933.

In an effort to solve by concerted action pressing financial and traffic problems, the Association of American Railroads was recently created. The general purpose of this new organization is to "further improve railroad service and maintain the integrity and credit of the industry." This association consolidates the American Railway Association and the Association of Railway Executives.

Of significance with reference to the financial position of the railroads was the decision of Chief Justice Wheat of the Supreme Court of the District of Columbia, handed down on October 24, holding the Railway Pensions Act unconstitutional.

Another event of general interest was the run of the streamlined Union Pacific train from Los Angeles to New York in 57 hours, or 14 hours less than the previous record established in 1906. This train, which is the first streamlined Pullman-equipped train to be operated in this country, is to be placed in the Chicago-Pacific coast service.

Automobiles and Rubber

THE downward trend of both production and sales in the automobile industry has been accelerated during October. The assembly of 1934 models is rapidly drawing to a close, and new models have as yet been introduced by only a few of the smaller manufacturers.

September production was in line with the preliminary estimates. The total number of vehicles produced in the United States (including foreign assemblies from parts made in the United States and reported as complete units) was 168,872, the smallest monthly total since last January. The decline as compared with August was considerably in excess of the usual seasonal recession and the weekly estimates of production for October indicate an extraseasonal drop in this month. The probable output for the month is between 115,000 and 120,000 units, compared with 134,683 in October 1933. While output in September was also below the 1933 total, for the 10 months through October, production will be approximately 40 percent higher than in 1933, and more than twice as large as in the corresponding months of 1932.

Production of trucks has been maintained at a relatively high level through September. The increase in truck output for the first three quarters of the year over the comparable 1933 total amounted to 69 percent while the corresponding gain for passenger cars was 41 percent. Export markets so far during 1933 have absorbed 16 percent of the trucks produced. The ratio of passenger car exports to total production is less than for trucks, although exports of assembled passenger cars was 133 percent higher in the first three quarters of the year than in the corresponding period of 1933. The comparable percentage gain for trucks is 150 percent.

Retail sales of new passenger cars in September were 5.5 percent less than in August after allowance for the usual seasonal decline. The adjusted index has receded 14 points in a 2-month period, after reaching 67 percent of the 1929-31 average in July. Although, as previously indicated, the downward trend of sales has been accelerated during October, a drop of about onefifth is usual for that month.

Continued recession in the rubber manufacturing industry is apparent from the September figures. The reduction in tire and tube manufacturing and other rubber goods (excepting boots and shoes) was substantial. The drop in the shipments of pneumatic casings was much more severe than the drop in output, but as shipments were in excess of the number produced manufacturers' stocks were further reduced. The recent trend of renewal tire sales indicates a total for the year substantially less than the estimates based on the sales figures for the early months of 1934.

Crude rubber prices have declined in recent weeks, influenced to some extent by the weakness of sterling exchange. By the middle of October the New York price had dropped below 14 cents a pound.

AUTOMOBILE AND RUBBER STATISTICS

¹ Adjusted forseasonal variations

* See note on p. 51. September figures are preliminary.

Forest Products

WITH demand for lumber unimproved to any appreciable extent, conditions in the industry have undergone little change in recent weeks. Production was lower in September, after adjustment for the usual seasonal variation, but monthly shifts in output are without especial significance on account of the low volume involved. Even the current rate of output, which is about one-third of the 1923-25 average, is not warranted by the demand for lumber and the available supply. Since May, production has been below a year ago; for the first three-quarters of the year, however, the cut was slightly higher than in 1933.

Gross stocks held by 1,623 mills at the end of September were in excess of 5 billion feet, but total stocks of lumber are much higher than the total for these mills. Stocks of 611 identical mills were 3,739,982,000 feet compared with 3,305,405,000 feet a year ago.

In a recent review of the stock situation, the Lumber Code Authority announced that another drastic reduction in lumber production is contemplated during 1935. In addition to the 22-percent reduction made in the production quotas for the fourth quarter of 1934 from the preceding quarter, it is now proposed to reduce stocks during 1935 by 15 percent. The proposal adopted by the control committee was that stocks of lumber should be reduced in the west coast logging and lumber, southern pine, northern hemlock, northeastern softwood and hardwood divisions by approximately 1,360,000,000 feet. In the opinion of the committee "stocks which are in excess of the proportionate average stocks carried during the year 1929 by not more than approximately 34 percent can be maintained without market demoralization." It is held desirable to adopt a program of gradual stock reductions for 1935 sufficient to reduce divisional stocks to a relationship to shipments which may be expected to maintain reasonably stable markets.

Employment and pay rolls in the lumber and allied products industry showed only a fractional decline in September after adjustment for the usual season d increase. The increase in employment in the furniture and sawmill industries combined was in accord with the seasonal trend. Employment in the millwork and turpentine and rosin industries declined. As compared with 1933, employment was lower in all groups. Wage payments in September were slightly higher than in August, with all groups, excepting millwork, sharing in the larger distribution. September 1934 wage payments were 9.1 percent lower than in the same month of 1933; the largest relative decrease in this period was 16 percent in the furniture industry.

Current statistics are not available on the trend of production in the paper and pulp industry. The number employed in the industry and the volume of wage payments indicate that fluctuations in September were of a minor character in line with the trend of other recent months. Domestic production of newsprint in September continued above the comparable 1933 total.

FOREST PRODUCTS STATISTICS

Adjusted for seasonal variations.

8 months average

Iron and Steel

AFTER reaching a low for the year in the first week of September, the rate of steel ingot production steadily increased through the following weeks of that month. This improvement carried the operating rate only to about 25 percent of capacity, and during the first 3 weeks of October the rate has fluctuated within a narrow range around this figure. For the month of September, output, on a daily average basis, was fractionally lower than in the preceding month, but total production was 8 percent below that for August by reason of the fewer number of working days.

Demand from the major consuming industries has continued on a restricted basis. Releases of tonnage by automobile manufacturers were small during September and October. Volume orders for the new models had not been placed up to mid-October and it is not likely that steel requirements for such purposes will reach a sizable tonnage before December. Orders from the railroads have also been small and reports indicate that the railroads still have on hand unlaid a substantial part of the rail tonnage purchased with the aid of P. W. A. funds.

With little change in the price situation consumers have continued to requisition supplies as needed. Scrap prices, which are usually sensitive to changes in demand, have only recently ceased declining. The continuance of the steel code without changes in price provisions has removed for the present one of the sources of doubt concerning future price trends. Output of pig iron during September was 15 percent less than in August. Only half of the decline is accounted for by the fewer number of working days. The number of furnaces in blast at the end of the month, 62, was the same as at the end of August.

Despite the sharp curtailment of operations in the iron and steel industry during the third quarter of the year, production for the year to date exceeded the comparable 1933 period by 13 percent and the corresponding period of 1932 by 91 percent.

Shipments of steel during September conformed fairly closely to the trend of ingot production, according to the figures of the leading manufacturer. This corporation's September shipments were 2 percent less than in August but were higher on a daily average basis than in the preceding month. Total shipments of this organization during the first three quarters of the year were 15 percent higher than the same period of 1933, or about the same relative increase as was reported for ingot production for the industry as a whole. Shipments of steel sheets declined from August to September by 6.4 percent. New orders in September were 17 percent in excess of the incoming business during August.

Increased business in the machine-tool industry, which was reported in August, failed to carry over into September. Domestic sales were 9 percent lower than in August and foreign sales were lower than during any previous month in the current year.

November 1934

Textile Industries

WITH the termination of the strike on September 22, production in the various textile industries has been on a more normal basis in recent weeks. The increase in production has been gradual since the rate of production prior to the strike was influenced by the desire to increase stocks in anticipation of a partial stoppage of operations.

The seasonally adjusted index of textile production dropped 21 percent in September from the August figure. The decline in the different branches of the industry varied considerably. The reduction in output amounted to about 50 percent in the cotton cloth industry in the week when production was at its low point. The reduction in the woolen industry during the month was also severe, but in the hosiery industry the decline was relatively of minor proportions.

Mill consumption of raw cotton in September was cut to 295,960 bales, a reduction of 30 percent from the August figure and of 41 percent from the September 1933 total. About 71 percent of the spindles in place were active during the month, with operations averaging 54.3 percent of capacity against 76.8 percent in August, a decline of the same proportion as the drop in cotton consumption. Weaving of cotton goods is estimated to have declined by approximately onefourth in September. Stocks of gray goods were reduced during the month but not to an extent sufficient to require immediate replenishment. Curtailment of activity in the silk industry in September was less pronounced in throwing than in weaving operations, due to the sharp increase in the output of silk for knitting. Silk cloth production was substantially lowered during the month, the output of stock-carrying mills being cut to an average of 175 yards per loom in September against 287 yards in August and 331 yards a year ago. As shipments were nearly double the output there was a further reduction in stocks. Stocks at the end of September were still relatively high. Output of commission weavers was halved in September.

Although September data are not available, the Code Authority reports that production of silk hosiery was reduced to only a minor extent by the strike. Manufacturers' stocks were reduced during August after increasing steadily for several months. The number of pairs on hand was the lowest since last March.

While the strike interfered with production in the woolen industry, output was on a restricted basis prior to the break in labor relations and the curtailment did not strengthen the market appreciably. Consequently, mills were reported to be slow in resuming production following the termination of the strike. Machinery activity in September was sharply lower, the reduction varying greatly among the different branches of the industry.

The Real Property Inventory of 1934

By Alanson D. Morehouse, Chief Statistician, Real Property Inventory

CIGNIFICANT information concerning the housing Conditions of the people of the United States has become available with the conclusion of the work of compiling the data gathered in the special survey known as the "real-property inventory." This survey fills a long-felt want, as hitherto detailed housing statistics have not been available. Broadly, the information gathered may be divided into four classes, as follows: Facts concerning residential structures; facts about family units; financial data; and miscellaneous data, mostly pertaining to equipment. The inclusion of the last-named list of questions developed some most interesting facts.

The survey was conducted by the Bureau of Foreign and Domestic Commerce, with the aid of the Bureau of the Census, during the early months of 1934. From 8,000 to 10,000 enumerators were employed in the field work. The project was made possible by funds

Table 1.-Summary of Selected Statistics Collected from 64

Anonales that services as clower (in the services per round) of the service and the service as counted for by those unreported.
 The difference between the sum of the units owned free and mortgaged and 100 percent is accounted for by those unreported.

supplied through the Civil Works Administration and covered 64 cities. Some of the more significant data have been selected and presented in table 1. Certain preliminary data for the individual cities have previously been released in mimeographed form, and complete data, classified separately for each of the 64 cities, is expected to be available in a few months.

The extensive nature of the survey is indicated by the fact that at least one city was selected from each State in the Union. The cities surveyed vary in size from a population of 10,000 to more than 1,000,000, as shown in table 2. The 1930 population of the enumerated cities constituted 14.2 percent of that of all urban areas, or approximately 8 percent of the entire population of the United States. For nearly half of the cities, data were collected for the environs, as well as for the city proper, so that totals were obtained for the metropolitan district, which may be considered a social and economic unit. In the accompanying table, the statistics, where available, are for the metropolitan district. These districts, 31 in number, are indicated in the table by an asterisk (*).

It is important to note that the survey was restricted to family dwelling units, thus excluding hotels, clubs, rooming houses, and summer cottages, and their equipment, together with the persons living in such estab-

Representative Cities in the Real Property Inventory

have been compiled and will be published in the final report of the real-property inventory

The difference between the sum of the rental groups and 100 percent is accounted for by those unreported.
Autos owned by persons enumerated in the real property survey.
Excludes dwelling units for which no data were obtained.

lishments. Since the survey was made in February, the exclusion of summer cottages probably did not result in the omission of many of the families comprising the stable population of the cities covered.

The 1,931,055 residential structures canvassed contain 2,633,135 dwelling units. Sheltered in these homes are about 2,600,000 families that comprise 9,074,783 persons, or an average of 3.5 persons per family. Of the occupied dwellings enumerated, 90.8 percent were inhabited by white families and 9.2 percent by families of other races, principally Negro families.

Urban living conditions as revealed by the survey are far from exemplary. Crowding, lack of modern facilities, and the need of structural repairs are shown to prevail to a most unsatisfactory degree. These conditions may be considered somewhat typical of prevailing conditions, although they have been accentuated by the depression. The data also inferentially confirm other studies in respect to the low income of a large proportion of the urban population.

CROWDING WIDESPREAD

One of the significant features of the inventory is the extent to which crowding of dwellings exists, notwithstanding a high percentage of vacancies in many cities. In some instances, however, crowding is evident where relatively few vacancies were reported, a situation apparently calling for new construction as a remedy.

Three degrees of crowding were distinguished in the survey as "crowded", "overcrowded", and "greatly overcrowded". In the interest of economy of space, these three groups have been combined to obtain the percentage shown in the table. The first of these classes amounted to 15.6 percent of the total occupied dwelling units in the 64 cities, the second to 1.2 percent, and the third to 0.2 percent.

A partial explanation of this crowding is provided by the family data showing that 7 percent of the more than 2½ million families surveyed are classed as "extra" families. Considerable variation in these conditions is evident as between different cities. In Charleston, for example, 40.4 percent of the occupied dwellings were classed as crowded, while in Portland, Oreg., the percentage was 8.1. Cities, other than Charleston, in which crowding was pronounced, included Santa Fe, where 35.5 percent of the occupied dwelling units were crowded: Columbia, 32.4 percent; and Birmingham and Knoxville, 30 percent. In 9 other cities from 25 percent to 30 percent of the occupied dwelling units were reported as crowded. These include Albuquerque, Atlanta, Austin, Greensboro, Jackson, Oklahoma City, Paducah, Salt Lake City, and Wheeling. Cities with less than 10 percent of the dwelling units crowded. in addition to Portland, Oreg., were Lansing, San Diego, Syracuse, and Williamsport.

Among the cities in which the percentage of crowded dwellings is greatly in excess of the percentage of vacancies, Jackson stands out. Only 1.8 percent of the total dwellings in this city were reported as vacant, while 27.2 percent of the occupied dwellings were reported as crowded. In Butte, which had the highest percentage of vacancies (15.9 percent of the dwelling units), 17.9 percent of the occupied dwellings were reported as crowded. For the entire group of cities, vacant dwellings amounted to 7.8 percent of the total number of dwelling units. In 8 of the 64 cities 10 percent or more vacancies were reported.

DWELLING TYPES AND MATERIALS

Single family dwelling units (generally detached) are still most prevalent among the dwelling structures. Of the dwelling units enumerated, 58.4 percent were of this type. The extremes are 86.9 percent for Springfield and 28.9 percent for Portland, Maine. Twofamily houses contained 19 percent of the total dwelling units and apartment buildings 9.4 percent. Row houses accounted for 1.5 percent of the total number of dwelling units, although the percentage reported was as high as 31.5 in Wilmington, Del.

Frame is the predominating type of construction used in the buildings surveyed, with 82 percent of the total number of structures falling under this classification. Brick structures were reported as 10.7 percent of the total. The cities where brick dwellings outnumber wooden structures are Frederick, Hagerstown, Wilmington, Salt Lake City, and Santa Fe.

In St. Paul, Minneapolis, Portland (Oreg.), Phoenix, Sacramento, San Diego, Topeka, Des Moines, Albuquerque, Baton Rouge, Fargo, Boise, Casper, Binghamton, and Lansing stucco-finish houses are second to frame houses in number. In stucco-finish houses, of

used to any appreciable extent for residential building. An arbitrary division of the structures into two age groups—under 20 years and others—as shown in table 1, was necessary because of limitation of space. It so happens that the structures divide almost equally on this basis. A more detailed classification, according to age groups, will be presented in the final reports when published.

RECONDITIONING BADLY NEEDED

The need for repairs and improvements is strikingly indicated by the data assembled. These figures are peculiarly opportune in view of the housing renovation drive undertaken by the Federal Housing Administration. Ignoring the number of structures recorded as requiring only minor repairs, there remains the impressive total of 301,783 structures (15.6 percent of all enumerated structures) in need of major repairs and an additional 43,898, or 2.3 percent, that were reported as unfit for human use. In every section of the country there are noticeable opportunities for replacement, renovation, and modernization of homes.

The living quarters are reported to be divided into 39 percent owner-occupied and 61 percent rented. Less than 40 percent of the former apparently were owned without encumbrances. Without allowance for the fact that data were not gathered in respect to the status of 15 percent of the owner-occupied units, 37.7 percent of the total are listed as being owned free and 48.1 percent as mortgaged.

Rentals charged are of interest since they throw some light on the income of the families surveyed. Of the total number of rental units, about a third rented for less than \$15 per month and only 21 percent for \$30 or more. The highest percentage of low rental payments was in Birmingham, where 79 percent of the rental units commanded payments of less than \$15 a month.

LARGE EQUIPMENT DEFICIENCIES REVEALED

Dwelling equipment is shown to be far from adequate, according to modern standards, a condition not without its bright side in the opportunities presented for building equipment manufactures and those interested in the distribution of such products. More than 30 percent of the dwelling units were without gas for cooking, about one-fourth without a bath tub and/or shower, almost 20 percent without a private indoor water closet, and 10 percent without electricity for lighting. Only 17 percent were provided with mechanical refrigeration.

While only half of the units have furnace or boiler heat, the need for such equipment, obviously, differs in the northern and southern sections of the country. It is interesting to note, however, that in only 5 of the 64 cities were more than 80 percent of the dwelling units supplied with heat from this source. Fargo, N. Dak., which stood at the head of the list in this respect, had 13 percent of its dwelling units without furnace heat. Over half of the dwelling units lacked this equipment in such "northern" cities as Providence, Worcester, Waterbury, and Salt Lake City. In Butte 73 percent relied on other than furnace heat.

Cleveland stood first among these 64 cities in respect to gas for cooking, 94.2 percent of the dwelling units being so supplied. Knoxville was the least well equipped with this utility, having only 17 percent of its dwelling units so provided. Electricity for lighting ranks highest among the modern equipment services.

APPROXIMATELY 50 PERCENT OF FAMILIES HAVE AUTOMOBILES

Data gathered in respect to the possession of passenger automobiles in these urban centers are especially interesting, in view of the prevailing notion that almost every family has an automobile. Unfortunately, data were not collected to show ownership of cars per family but rather in terms of dwelling units. These data show that none of the occupants of practically half of the dwelling units possessed a car. Since 7 percent of the families enumerated were "living-in" with the usual family occupants, the percentage of families possession automobiles differs from the percentage in the table which is a ratio of automobiles to occupied dwelling units. Taking into consideration the extra families, it is probable that at least 50 percent of the families have automobiles. The maximum number of families in the cities covered possessing automobiles could not, on the basis of these data, be in excess of 51.4 percent.

ADDITIONAL DATA IN COMPLETE REPORT

Complete tables of the results of the real property inventory give, in addition to the data presented in this article, information in respect to property values, duration of occupancy, elevator service, vegetable gardens, means and time consumed in going to work, as well as greater details in respect to many of the subjects included in the table published herewith.

Real need for additional space, for repairs, and equipment are very apparent. The facts presented will undoubtedly spur to even greater exertion those business concerns interested in supplying this latent demand, not only in these cities but in others not included in this survey. It must, however, be apparent to all that need alone is not sufficient to provide a market. Adequate housing of American families must wait upon their securing sufficient buying power to make the requisite purchases and/or a return in rental payments which will provide compensation for improved facilities.

¹ Compiled by the United States Department of Agriculture, Bureau of Agricultural Economics. These series represent a revision of the data previously published in the Survey. The principal changes are the use of improved price series for dairy products and tobacco, the addition of the prices of 20 products including a group of truck crops, and the shifting of the weights from the marketings of the 1918-23 period to those of the 1924-29 period. The revised series of index numbers now include 34 major farm products and 13 commercial truck crops, whereas the previous series included only 27 major farm products. A complete description of the index is available in a mimeographed circular of the Department of Agriculture entitled "Index Numbers of Prices Received by Farmers for Farm Products 10 to 1934." This circular may be obtained free upon request to that Department. The revision of the index does not alter in any way the calculation of "parity" prices for individual commodities under the Agricultural Adjustment Act. For 1934 data see p. 23 of this issue.

§ Statistics covered 91 cities since Jan. 10, 1934, and 90 cities before; 1 city was added to the series in order to offset the effect of 1 member bank which ceased reporting, omparable figures not available prior to 1932. † Revised series (scrap now included). Revised data back to 1929 will be presented in a subsequent monthly issue.

Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

† Revised series. For earlier data see p. 19 of the October 1933 issue.
 † For 1933 revisions of the combined index and automobile and steel ingot production indexes see p. 22 of the August 1934 issue.
 • Revised.
 • Preliminary.
 • Discontinued by Electrical World.
 § Series revised. For earlier data see p. 19 of the January 1934 issue. Revisions did not change the combined indexes except for a few months and in these instances by
 a slight amount.
 • Index of automobile and iron and steel production revised for 1933. See p. 22 of the September 1934 issue for a complete record of the revisions.

November 1934

Revised.
New series. For earlier data on the following subjects refer to indicated pages of the monthly issues as follows: Fairchild's Index, p. 19, December 1932; World Prices, p. 20, September 1932; Purchasing Power of the Dollar, p. 18, August 1933. (except farm prices. See the footnote on this series below.)
The data on retail prices of food until Aug. 15 were reported as of the 15th of each month. From then on the prices have been reported every 2 weeks. The monthly figures for months subsequent to August 1933 represent the figure nearest to the 15th of the month.
Index of farm prices have been completely revised. Refer to p. 20 of this issue. The reciprocals of the new series have not been published, except for such months as are presented above.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1934		19	933		ł			1	934

¹ Less than one million. Data shown in thousands appeared in the Oct. 1934 issue. ³ Not available. * New series. For earlier data on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls, banks, brokerage houses, etc., p. 19, June 1933; pay rolls in dyeing and cleaning establishments and laundries, p. 19, June 1933; factory weekly earnings, p. 20, October 1932; factory hourly earnings, p. 18, December 1932; weekly earnings, Massachusetts, p. 18, December 1932; construction wage rates, p. 19, September 1933. Earlier data on additional series of agricultural loans outstanding will be shown in a subsequent issue. * Revised series. For revisions on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls of banks, brokerage houses, etc., for 1932, p. 29, January 1934; Massachusetts weekly earnings for 1931, 1932, and 1933, p. 19, August 1933 issue; pay rolls in laundries and dyeing and cleaning establishments, p. 20, August 1934; factory weekly and hourly earnings revised for 1933. See p. 20 of the July 1934 issue. # Beginning with March 1932 method of computing rates was changed. ¶ Increase in wage rates during March 1934 was due to provisions of title I, sec. 204, par. 2, item C of the National Recovery Act, which required State highway depart-ments to fix minimum wage scales. § Construction wage rates as of October 1, 1934, common labor, \$0.536 skilled labor, \$1.12.

Revised.
Rate changed, Oct. 20, 1933, and Feb. 2, 1934.
New series. Earlier data for Federal Reserve member banks shown on p. 18 of the January 1934 issue. These data cover 90 cities and supersede the previous data for 101 cities. They are available only from January 1932 to date. One additional city has been added in 1934 to offset the dropping of 1 bank which discontinued reporting.
Figures subsequent to December 1933 represent gold certificates on hand and due from U.S. Treasury, plus redemption fund—Federal Reserve notes, \$35,38,000 on Feb. 28, \$32,748,000 on Mar. 31, \$31,400,000 on Apr. 30, \$30,000,000 on May 31, \$25,724,000 on June 30, \$24,056,000 on July 31, \$24,000,000_on_Aug. 31, and \$21,798,000 on Sept. 29, 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1934	0	19	33	- D		1 78. 5.	1	1	934

Revised.
Or exports (-),
Quotation based on paper peso instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 66 of the March 1934 issue.
New series superseding old series which covered the physical movement only. For earlier data see p. 20 of December 1932 issues, net gold imports.
Revised series. For earlier data see pp. 18 and 20 of the July 1933 issue, insurance written and admitted assets; p. 18 of the June 1933 issue, premium collections, and p. 19 of the July 1934 issue, corporation profits.
Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output. The series previously presented in the SUBVEY covered the prival which were stated to produce 85 percent of the total. Actually, however, the percentages varied for the years indicated as follows:
Par values of foreign currencies as given on pp. 86 and 87 of 1932 annual supplement were changed with the reduction in gold content of the United States dollar.
Decision of Treasury and Federal Reserve to omit gold coin from circulation figures as of Jan. 31, at which there it was 6287,000,000, is not reflected in the January total, which is the daily average figure for the month. Large increase in February total resulted from revaluation of the dollar to 59.06 percent of its former gold routent.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1934		19	33					19	34

New series. Earlier data on value of imports for consumption will be shown in a subsequent issue.
Revised series. For earlier data see p. 19 of the August 1933 issue.
Beginning with January 1934 inport data represent imports for consumption and are not comparable with earlier figures which consist of general imports. See explanation on p. 9 of the March 1934 issue.
¶ Data for September and December 1933, March, June, and September 1934 are for 5 weeks; other months 4 weeks.
♂ Data revised for 1933. For months not shown above see p. 20 of the October 1934 issue.

November 1934

Revised.
 Preliminary.
 New series. Covers scheduled airlines operating in United States. See p. 20 of the February 1934 issue for earlier data and p. 20 of the April 1933 issue for methanol.
 Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways; and
 36 of the May 1934 issue for methanol. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue.
 Preparation of report turned over to Federal Communications Commission which has not yet compiled its initial report

Revised.				c. 1 estim					Oct. 1 esti	-			

Revised.
 * Dec. 1 estimate.
 * For earlier data on lard compound price see p. 18 of the January 1933 issue. Data not available for cellulose products prior to January 1933.
 * For earlier data on lard compound price see p. 18 of the January 1933 issue. Data not available for cellulose products prior to January 1933.
 * Revised series. For year ended July 1932 see p. 20 of the February 1933 issue, cottonseed, and for the year of 1932 see p. 37 of the June 1933 issue, exports of cottonseed cake and meal. Data revised for 1933; see p. 19 of the September 1934 issue.
 * Since March 1932, detailed figures are not strictly comparable owing to changes in firms reporting.
 * See feotnote on p. 35 of the October 1934 issue. Data revised for 1933; see p. 20 of the October 1934 issue.
 * Data revised for year ended July 1934. Revisions for first month of fiscal year, August, as given in the October 1934 issue, are as follows: Cottonseed consumption, 235,033; receipts at mills, 236,040; stocks at mills, 221,945. Cottonseed cake and meal production, 107,335; stocks at mills, 177,948; cottonseed oil, crude production, 71,562, stocks, 59,111; cottonseed oil, refined, production, 57,383; stocks, 641,110.

Revised.
New series. For earlier data, see p. 20 of the Aug. 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 not available on refined sugar from Philippine Islands.
† For revisions of exports in 1933, see p. 20 of the Stocks, see p. 41 of the May 1933 issue. For 1932 revisions of sugar imports and exports, see p. 41 of the June 1933 issue.
See footnote on p. 35 of this issue. Data revised for 1933. See p. 20 of the Oct. 1934 issue.

Revised.

Revised.
Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933. Data revised for 1933, for revisions of such months not shown above see p. 20 of the September 1934 issue; 1932 final revision of anthracite and bituminous coal production, p. 42, January 1934; anthracite shipments for 1932, p. 42, December 1933; consumption of bituminous coal by electric power plants, p. 42, May 1933; beehive and byproduct coke for 1932, p. 43, December 1933. Data revised for 1933. Beehive and byproduct coke see p. 43, July 1934. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932, p. 56, November 1933.
Statistics as of Aug. 31, 1933, and subsequeent months are not comparable with the figures for earlier months because of revisions and transfers from one kind of storage to another as a result of the new form of report to the *Petroleum Administrative Board*. The *Bureau of Mines* has not found it possible to reconcile these figures and wills conclude the Aug. 31, figures on the old basis are on p. 42 of the November 1933 issue.
New basis, as of Dec. 31, caused by 1,089,000 barrels being classified as fuel oil # See footnote on p. 35 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.
Poc. 1 estimate.

Revised.
New series. For earlier data, see p. 20 of the November 1932 issue, lumber exports.
Data revised for 1932, see pp. 44 and 45 of the June 1933 issue, exports of Douglas fir lumber and timber.
Data for November 1933, March, June, and August 1934, are for 5 weeks; other months, 4 weeks.
Preliminary.
Data revised for 1933. See p. 20, of the September 1934 issue.
Figure previously carried incorrectly as 33,357.

New series. Earlier data on furniture activity, all districts, no published. For imports of ion and steel, see p. 20 of the November 1932 issue, for castings, p. 20 of the April 1933 issue. New series on iron and steel composite price will be shown in a subsequent issue.
See p. 20, of the September 1934 issue.
Revised. Data prior to April 1933 not published.
t Beginning with January 1934 the report includes all known operators. Prior to this time approximately 89 percent of the listed capacity was included.
See for the Cub not included.
See fortone on p. 35 of this issue. Data revised for 1923; see p. 20 of the October 1934 issue.
Revised.

Revised.
Revised series. For earlier data see pp. 19 and 20 of the December 1933 issue for writing, wrapping, and other grades of paper; for 1932 revisions. p. 50 of the June 1933 issue for crude rubber imports; and for 1932 revision, p. 50 of the May 1933 issue for world and United States stocks. Data on consumption of rubber for tires revised for 1932, 1933, and 1934. For revisions see p. 51 of the Aug. 1934 issue.
§ Earlier data on box board not available, prior to January 1933. Box board production and shipments are included in the paperboard figures through December 1933 since a large part of the paperboard is box board. Certain revisions are being made in box board report. Revised data are expected to be available for the December issue.
§ Data for 1934 are estimated to represent approximately 97 percent of the industry; data are estimated to cover 79 percent of the industry for 1924-33. inclusive, and # See footnote on p. 35 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.
* New series. See p. 19 of the December 1933 issue.

Monthly statistics through December 1981, together with explanatory footnotes and refer-	1934			1933					193	4

New series. Earlier data not published on rubber beels and soles prior to December 1932, and on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production.
Cesus Bureau has comparative summaries for 2 months only on structural clay products. Series not comparable over 13-month period.
Adjusted for degrading and year-end physical inventories.
Revised data for 1933 represent total production for the United States.
Series on glass containers are not comparable for 1934 and ertlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the first 9 months of 1933 amounted to 26,148,936 compared with 17,749,269 for the 30 firms reporting a year area. Comparable statistics on shipments of the companies, now reporting by years, from 1935 to date were as follows (in gross): 1933, 31,943,046, 1929, 33,765,896, 1940, 31,943,049, 1941, 31,443,508; 1942, 26,947,949; and 1943, 33,048,747. Fact, are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Bais of estimating capacity was changed in comparie).
In October 1933 4 new compenses were included in the action are additional company in January, 1934. Since that month, the coverage of the industry is 100 percent. In preceding periods the coverage varied but was about 80 percent. Overlapping figures are available for October 1933. See the October 1934 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1934		19	33			n and the state		19	34

Revised.
Since fully 1934 report has been on a weekly basis. July figure here is for 4 weeks: August 4 weeks and September 5 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100-percent of the wool industry. July and August figures have been revised on this basis.
So that revised for 1932. For revisions see pp. 53 and 54 of the June 1933 issue. Data also revised for 1933; see p. 20 of the October 1934 issue.
See (controt on p. 35 of this issue.
Compiled by the Silk Code Authority (The National Federation of Textiles, Inc.) and represent the percentage of operations based on an 80-hour week (2 shifts of 40 hours each). Data are not comparable with the series previously shown in the Survey which were based on a smaller sample and which were computed on the basis of a 48-hour week. The code authority expects to adjust the old series to a comparable basis, when opportunity affords.
New series. Silk spindle activity, compiled by Silk Throwing Code Authority; not comparable with spinning data previously shown. For earlier data on silk piece goods (stock-carrying mills only) see p. 20 of August 1934 issue.
Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed normal (currently based on the single-shift performance over the 5-year period 1928-32). The current data represent practically complete coverage of the industry.

Revised. Preliminary.
 New series. For earlier data see p. 20 of the February 1934 issue for shipments, accessories and parts, and registrations of new commercial cars.
 † Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; and p. 55 of the June 1933 issue for 1932 exports of locomotives. Data on automobiles revised for 1933. See p. 55 of the August 1934 issue.
 ‡ Index of sales of new passenger cars is on p. 26 of this issue.
 § Data revised for 1932. See p. 54 of the June 1933 issue. Data revised for 1933. See p. 20 of the September 1934 issue.

 Revised.

 A Deficit.
 New series. For earlier data see p. 18 of the February 1933 issue, business indexes, p. 20 of the October 1933 issue, commercial failures, and p. 20 of the February 1934 issue, life-insurance sales.
 A revised series. See p. 55 of the April 1934 issue, construction, and mining, for 1933. Series on common-stock prices revised back to December 1932 as a result of additional stocks being added, for revision see p. 56 of the April 1934 issue.
 Mumber of commodities changed from 502 to 567 beginning with month of January 1934.
 Data revised from January 1932 through July 1933. Revision for 1932 see p. 55 of the November 1933 issue. For final revisions for 1933 see p. 56 of the October 1934 issue.

MARK-DOWNS IN WOMEN'S COAT AND SUIT INDUSTRY

THEIR CAUSE AND CONTROL

Domestic Commerce Series No. 91 Price 10 cents

This study was designed to determine the causes of mark-downs and their effect on distribution costs and net profits in the women's coat and suit industry, and to suggest remedies for the scientific control of mark-downs and distribution costs, thereby contributing to the better coordination of buying, selling, and financing.

Major subjects covered include: The general aspect of mark-downs; returns and cancelations; cash discounts and allowances; consignments and special numbers; sales at mark-downs and cost of doing business; effect of mark-downs on net profits. An appendix covers such subjects as cost methods and mark-up; mark-down control; allocation of expenses.

PREPARING SHIPMENTS TO BRITISH COUNTRIES

DOCUMENTARY REQUIREMENTS AND CUSTOMS REGULATIONS

Trade Promotion Series No. 154 Price 20 cents per copy

This handbook is an effort to bring together in brief form the essentials regarding the documentary requirements and customs regulations of the many and widely dispersed areas constituting the British Empire, for the guidance of the American exporter in preparing his shipments to these areas, so as to minimize the uncertainties at this end and to avoid extra expense and trouble to the customer at the foreign destination.

The essential information here embodied has hitherto been supplied in day-to-day correspondence and otherwise, by the Division of Foreign Tariffs of the Bureau of Foreign and Domestic Commerce. The material has now been reworked and brought up-to-date, and has been considerably amplified in scope. Special attention is given to certain aspects, particularly regarding dutiable value and antidumping provisions, which are most important in British areas.

Copies of the above reports may be obtained from the Superintendent of Documents, Washington, D. C. Remittances should accompany all orders. A discount of 25% is allowed on all orders for 100 or more copies of a single publication to be mailed to one address.
