Business Indicators

1923 - 25 = 100

Business Situation Summarized

WHILE the trend of business activity has recently been downward, resistance to the decline has been evident in many lines with the result that the recession from the spring peak has been moderate. Output of manufacturing industries increased by the usual seasonal amount during April, although the index of industrial production declined because of the sharp drop in the mineral production index.

Available weekly data for May do not indicate a change in the trend. Automobile output has been curtailed; steel ingot production has declined further; cotton cloth production has continued near the lower level reached at the end of April, and lumber production has been reduced by labor difficulties in the Pacific coast area. Electric power output has shown little change during May on a seasonal adjusted basis.

Several important industries reported gains in April. Among these were the automobile, tobacco manufacturing, leather and shoe, plate glass, cement, and machine tool industries. There was a further substantial drop in iron and steel production. In the textile industry, production of cotton and silk goods declined as did rayon shipments, but operations in the woolen industry continued at a high rate.

Employment increased slightly in April, according to the Bureau of Labor Statistics data, due largely to the seasonal rise in employment in retail stores. Factory employment was the same in April as in March, while pay rolls were slightly larger. Distribution series, with some important exceptions, have declined since March. The drop in freight-car loadings is explained largely by the curtailment of coal production and the decline in miscellaneous freight carried. The recession in the index of department-store sales followed a rise of about the same proportions in March, while the drop in the seasonally adjusted index of passenger car sales terminated the rapid rise experienced in the first quarter. Rural general merchandise sales have continued to improve.

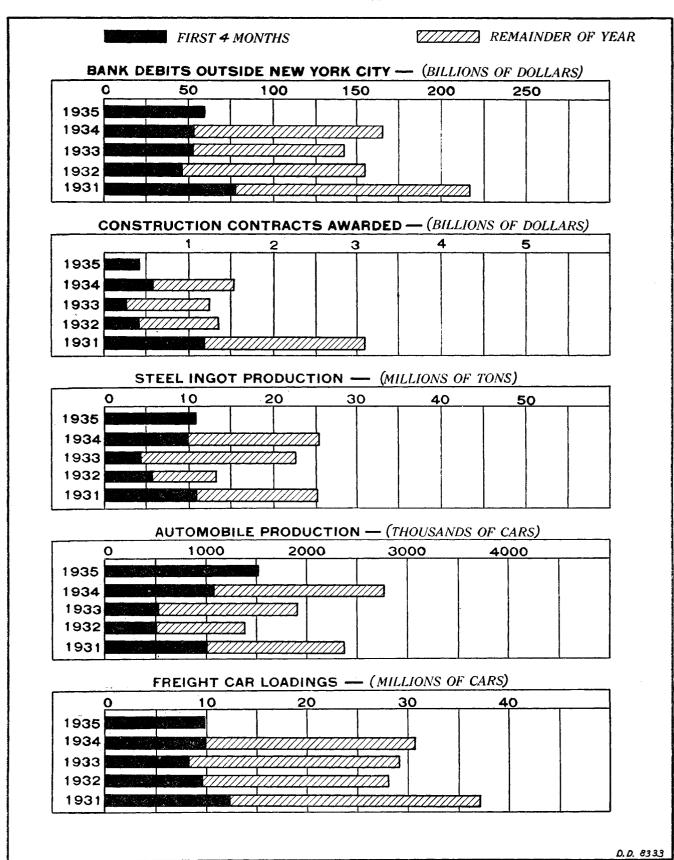

Further gains in residential construction occurred during April and the first half of May. The value of all contracts awarded for April was higher than in March but was lower than a year ago as the amount of public works contracts declined.

Security prices have improved during May, the stock index advancing to the highest point in nearly a year. The bond price index has been steady throughout the month, at the higher level reached in April. New security issues in April, made up largely of bonds issued for refunding purposes, were the highest since April 1931. During May the volume has not been large. The heavy gold inflow and disbursements by the Treasury have resulted in a further growth of member bank balances held at the Reserve banks. As of May 16, these reserves amounted to \$4,822,000,000, about double the reserve requirements. Member bank credit outstanding has shown only minor changes in recent weeks.

Comparison of Principal Data, 1931-35

Commodity Prices

THOLESALE commodity prices, as measured by the index of the Bureau of Labor Statistics, remained practically unchanged during the 4 weeks ended May 18 at the recovery high of approximately 80 percent of the 1926 level. The price index of each of the 10 groups of commodities has changed very slightly during the past 4 weeks, with the exception of the index of food prices which fell from a high of 85.4 percent of the 1926 level in the week ended April 27 to 83.8 percent in the week ended May 18. Hides and leather prices advanced one-half point during this period to 88.4 percent of the 1926 prices, the high for this series since the week ended May 19, 1934. The index of this group is currently the highest of the 10 group indexes relative to 1926 prices, being 3.1 points above the next highest index, that of metals and metal products, and 8.4 points above the combined index.

Retail food prices have changed but little on the average during the 4 weeks ended May 7. From April 9 to May 7 there was, however, considerable change in the prices of some of the 6 groups that compose the index. The prices of meats, eggs, and fruits and vegetables increased, respectively, 2.3, 9, and 1.8 percent, and the prices of dairy products decreased 4.4 percent. The prices of cereals and miscellaneous products were

practically unchanged. The combined index on May 7 was 15 percent higher than on May 8, 1934, 33 percent higher than on May 15, 1933.

Retail prices of department store articles on May 1 were unchanged from the level of the preceding month, according to the Fairchild index. The May 1 quotations were 3.5 percent below those of a year ago. The prices of piece goods declined 1.6 percent from April 1 to May 1, but this was offset by slight advances in home furnishings, men's apparel, and infants' wear.

The cost of living of wage earners, as reported by the National Industrial Conference Board, rose 1 percent during April. The advance was occasioned by increases in the cost of food and rent. The index is currently 6.1 percent higher than a year ago and 16 percent higher than in April 1933, the low point during the depression.

Farm prices in mid-May were lower than a month earlier. In April, the Department of Agriculture's index recovered the loss of March, advancing to 111 percent of the prewar average. Since the middle of April, prices of cotton, fruits, poultry products, and certain grades of livestock have advanced, while grains, dairy products, truck crops, and the lower grades of cattle have declined.

¹Revised. See p. 20 of the November 1934 issue.

Middle of month.

Domestic Trade

RETAIL sales during April and the first half of May were less satisfactory than in March. The adjusted indexes, which make allowance for the usual seasonal movement and Easter influences where the latter affect sales, generally turned downward in April. The dollar volume of sales, however, has continued in excess of a year ago and for individual lines, such as automobiles, the gains over 1934 have been very substantial.

In the general merchandise field, sales in rural areas have recorded further improvement. The Bureau's index of rural retail sales, which is based on the mailorder figures of three companies and the sales of a large group of chain units operating in small towns and rural areas, rose to 101 percent of the 1929-31 average in April, which is the largest volume of sales on a seasonally adjusted basis since June 1930. Compared with a year ago, sales were up 37 percent; for the 4 months they were 21 percent above 1934. The March-April sales gain was largest relatively in the East, the increase of 11.5 percent for this area comparing with a 7-percent gain for all regions combined. Sales in the South were slightly lower than in March, but this region reported the largest gain over a year ago, both for April and the past 4 months.

The increase in department store sales in April fell short of the estimated seasonal amount, the adjusted index dropping back to the approximate level of January. Sales were 12 percent higher than in 1934, the increase being influenced by the late date of Easter

which came in March a year ago, and the additional working day this year. After adjustment for these factors, sales were about the same as in 1934. For the 4 months sales were up 3 percent.

Variety store sales have followed a similar trend, the April drop in the adjusted index canceling the rise of the preceding month. Chain-grocery sales showed about the usual seasonal rise.

New passenger car sales, adjusted for seasonal variation, declined from 94.5 percent of the 1923–25 average in March to 78.5 in April. This latter figure was considerably higher than in April 1934, and for the 4 months of 1935 sales were 52 percent above a year ago. May business has continued relatively high, although the recession as compared with April appears likely to exceed the estimated seasonal drop of about 6 percent.

Advertising effort has expanded during the spring by more than usual for this period, thus affording another indication of a more aggressive effort to expand business this year. Newspaper linage in April was the largest for this month since 1931. Other forms of advertising have shown a similar trend.

Business failures have again turned downward, following the contraseasonal increase in April when failures exceeded the total in the comparable period of the preceding year for the first time since 1932. Liabilities involved in commercial failures in April were less than in March and considerably lower than a year ago. The decline in failures during May again brought the total below the corresponding 1934 figures.

¹Corrected to average daily basis.

² Adjusted for seasonal variation.

³ End of month.

^{*} See note on p. 26 of the Nov. 1934 issue.

Employment

EMPLOYMENT in manufacturing industries remained unchanged from March to April, according to the Bureau of Labor Statistics. April employment was also unchanged from a year ago. Pay rolls were 0.1 percent higher than in March and 5.2 percent higher than in 1934. Of the 90 manufacturing industries surveyed, 49 reported gains in employment from March to April and 50 reported increased pay rolls.

As the seasonal adjustment factors for March and April average about the same, the adjusted employment index changed only fractionally. Seven of the fourteen group indexes declined after adjustment for seasonal variation, while the other seven advanced.

Employment in the durable goods industries increased in April for the fifth consecutive month, the increase over March amounting to 1.1 percent. Of the 46 industries of this type, employment increases were reported for 30 and decreases for 16. All except 1 of the 7 major groups classified as durable goods industries showed increases, and for the first time in 5 months the automobile industry failed to contribute materially to this gain.

Among the 44 nondurable goods industries, 19 reported increases in employment and 25 decreases. The net decline for the entire group over the month period was 0.8 percent.

Despite the increases in employment in durable goods industries in recent months, the level of employment in this group remains much lower than in the nondurable goods industries. The April index for the durable goods industries was 71.6 percent of the

1923-25 average, while the nondurable goods index stood at 94.

Among the more important industries for which more than seasonal gains in employment were reported were electric- and steam-car building (13 percent); engines, turbines, and tractors (7.3 percent); and stoves (6.1 percent). The carpet and rug, and paint and varnish industries reported gains of 5 percent and 4.8 percent, respectively, which were counter to the usual seasonal movement. Increases among industries allied to the building construction industry were more or less seasonal.

Among important industries showing more than seasonal declines in employment in April were the rubber boot and shoe industry (13 percent), silk and rayon (7.2 percent), and woolen and worsted goods (5.9 percent). The 7.3 percent decline in employment in the fertilizer industry was contraseasonal. Despite the curtailment of operations in the cotton cloth industry, the employment decline was only slightly more than seasonal.

The quarrying and nonmetallic mining industry made the largest gain (12 percent) among the 17 nonmanufacturing industries surveyed. The gains reported for building construction (11 percent), dyeing and cleaning (10 percent), and retail trade (4.2 percent) were largely seasonal. The increase in employment in the retail trade field approximated the change for all industries covered by the monthly survey. A large decline in employment was reported for the bituminous coal mining industry.

Finance

FINANCIAL markets have improved markedly since the middle of March, stock market averages rising to the highest level reached in almost a year. While the upward movement has extended to all sections of the market, the industrial and public-utility shares have made the most consistent gains. In the final week of May, average prices tended to decline. The movement was selective, however, with public utility stocks as a group resisting the downward trend.

The persistence of extremely low interest rates has been one of the factors affecting the quotations for listed securities since the amount of new capital raised by publicly offered issues has remained relatively low. During April, the amount of new capital obtained by public offerings of securities dropped to \$90,000,000 after having exceeded \$100,000,000 in March. The total volume of refunding issues (\$413,299,000) was the largest monthly total reported by the Commercial and Financial Chronicle since its compilation was started in 1919. Corporate issues, however, made up less than one-third of the total. During May the volume of new issues has declined.

On May 15 the payment of one-fourth of 1 percent interest on time deposits, payable within 6 months from date of deposit, was discontinued by the member banks of the New York Clearing House Association. At the same time, the Association took action whereby savings banks no longer receive any interest on either demand or time deposit accounts carried with its members.

With its own refunding operations largely completed, the Treasury has turned to the outstanding guaranteed issues and called for redemption on July 1 the 4-percent bonds of the Home Owners Loan Corporation. In exchange therefor, 1½-percent 4-year tax-exempt guaranteed bonds were offered.

The weekly statements of the reporting member banks do not reveal any expansion in the volume of credit outstanding in the form of loans. The amount of loans reported in the middle of May was below the corresponding figure in 1934, while "all other" loans were within \$50,000,000 of the low for the year and were about the same as a year ago.

Conditions in foreign-exchange markets continued unsettled with the remaining "gold bloc" countries experiencing further difficulties. The French franc, the principal gold currency, has been weakened by the flow of capital abroad and domestic hoarding. The movement of gold to the United States has again assumed large proportions. With the exception of the gold imports of January of this year, the April inflow was the largest for any month since March 1934.

In an effort to aid the silver-money countries of the world, the Treasury has prohibited the importation of foreign silver coins. This was designed to stop the flow to the United States of silver coins which had become more valuable as bullion than as coin and were, therefore, exported to the United States.

One of the major developments of the month affecting Government finance was the passage by both Houses of Congress of the bill providing for the immediate payment of the World-War adjusted compensation certificates by an issue of Treasury notes. This bill was vetoed by the President on May 20 and the veto was sustained by the Senate on May 23.

Foreign Trade

IMPORTS exceeded exports during April for the first time since August 1933. Trade in both directions declined during the month, the 4-percent reduction in imports being only slightly more than the usual seasonal recession while the 11 percent drop in exports was about double the estimated seasonal decline. The drop in exports extended to all groups, although it was somewhat larger relatively in agricultural products than in nonagricultural commodities.

Tobacco exports in April were the smallest in quantity for any month since 1918. Other agricultural exports such as meats, lard, and fruits, as well as refined sugar also dropped to decidedly lower levels during April. On the other hand, the marked recession in raw cotton which was a feature of the exports in other recent months was checked; the quantity exported in April was approximately the same as in March.

Among the nonagricultural commodities, exports of automobiles, iron and steel-mill products, gasoline, chemicals and related products, machinery, lumber, and manufactures of wood, cotton, paper, and rubber all showed declines in comparison with the preceding month. Exports of only a few leading commodities, including crude petroleum, copper, and electric refrigerators were considerably larger, the exports of the last-named article being the highest on record.

For the 4 months ending April the value of finished manufactures increased 13 percent, in comparison with the similar period of 1934. Exports of agricultural

commodities declined and the value of total exports was 2 percent smaller. Exports of semimanufactures and finished manufactures increased approximately 4 and 13 percent, respectively, in quantity during the January-April period, in comparison with 1934, while crude materials, crude foodstuffs, and manufactured foodstuffs showed declines of 25, 49, and 32 percent, respectively.

The decline in the value of imports in April was due primarily to smaller purchases of leading raw materials and foodstuffs, and to a recession in imports of some of the competitive agricultural products; principally corn, oats, rye, sunflower-seed oil, cottonseed oil, and flaxseed. Imports of butter and barley rose sharply, the April figures being slightly larger than the totals for the entire first quarter of 1935.

Changes in import trade during April did not alter the general trends indicated by the first quarter's figures. The quantity of imports for consumption for the elapsed 4 months of 1935 increased about 17 percent in comparison with the same period of 1934, while the increase in value was 21 percent. Agricultural products have shown the most noteworthy expansion in quantity. Imports of alcoholic beverages, which became an important factor in the import trade during 1934, immediately after the reopening of the American market to foreign wines and liquors, was approximately one-fourth smaller in value in the period January-April 1935 than in the same period of 1934.

² General imports through December 1933; imports for consumption in 1934 and 1935.

8 Monthly average.

Real Estate and Construction

EVIDENCES of improved conditions in the real estate and building field are apparent in several directions. The gradual improvement in rents continues and surveys of space occupancies indicate a shrinkage in the number of vacancies. Some improvement is also reported in the office building field, although the situation here is relatively less favorable than in the residential field. Government efforts to stimulate the flow of credit in the real estate market are showing results not only in the availability of credit but in the reduction of the costs of financing. Quotations on real estate securities outstanding have moved upward.

Contracts awarded for residential construction increased in April, after adjustment for the usual seasonal variation, although the actual volume of such work was still low. The value of April residential contracts let was about twice as large as the corresponding total in either 1933 or 1934; it was, however, much less than half of the total for April 1931. The construction of new residential buildings showed an even larger increase over 1934 than the F. W. Dodge statistics for all types of residential work, according to the permit data, compiled by the Bureau of Labor Statistics, which recorded an increase in value of 123 percent. Additions, alterations, and repair work was valued at 47 percent more than in 1934.

With the many uncertainties surrounding the public utility situation, the relatively small volume of new construction of this type is readily explainable. Contracts let for such work so far during 1935 have been little more than half of the 1934 total. Public works awards in April were in smaller volume than in March but were equal to the average for the first 4 months of the year. Work under the new public works program has not yet been started on a broad scale, and has not influenced the contract totals to an appreciable degree. Actual construction activity on public works projects is higher than a year ago.

The value of nonresidential contracts awards in April was less than in March but was higher than in April 1934. Since this classification includes a large volume of publicly-financed work, the trend is influenced to an important degree by the allocation of funds under the public works program.

Suppliers of building materials have enjoyed a larger volume of business this spring than in 1934. The improved trend has been pronounced in lines affected by residential construction. Cement shipments so far this year have been less than a year ago; lumber shipments, on the other hand, are up 25 percent over 1934. The improvement has been reflected in the better financial showing of the leading concerns in the building supply field.

Construction costs have undergone very little change so far this year. Rents are increasing slowly and the disparity between the rise in building costs and rents from the depression lows is still large.

Transportation

THE Supreme Court decision declaring the Railway Pension Act unconstitutional was the principal event of the past month affecting the railway industry. This action will have an immediate effect on the financial position of certain roads which had made provision for their potential liability under the act. The Association of American Railroads estimates that the decision relieved the railroads of the payment of \$60,000,000 this year and increasing amounts which would be required under the act in succeeding years. This sum would be in addition to what is being paid voluntarily under prevailing pension arrangements. In 1934, the railroads expended \$35,000,000 for pension purposes.

Relief from the pension obligation, together with the freight rate increases which were granted by the Interstate Commerce Commission and which went into effect in April, should tend to strengthen the financial position of the industry which is still contending with a low volume of traffic. While there has been some improvement in passenger business so far during 1935, the volume of freight traffic has been below a year ago. As a result of this trend and the higher operating costs, net revenue from railway operations has been less than in 1934. During the first quarter, when more than one-third of the roads failed to earn fixed charges and taxes, the net railway operating income of the class I carriers was 25 percent less than in 1934. A somewhat better financial show-

ing is anticipated for April, but the returns for this month will be affected by the contraseasonal drop in loadings.

The decline in loadings in April resulted mainly from the curtailment of coal shipments following the heavy movement in the first quarter when consumers were stocking coal in preparation for a shut-down of the mines on April 1 which did not materialize. The adjusted indexes of both miscellaneous and 1. c. l. freight declined, the former showing a decrease of 4.3 percent. The movement of grain, grain products, livestock, and ore was higher, after allowance for seasonal changes.

The movement of carloadings during the first 3 weeks of May does not indicate any marked change in daily average loadings for that month as compared with April; a decline is usual for this period. Loadings for the 3 weeks ended May 18 were 5 percent below a year ago.

The delivery of new passenger equipment to various railroads throughout the country has focused increasing public attention on the efforts to stimulate passenger travel. The large railway equipment orders of last year, however, have not been repeated during 1935; new equipment placed on order this year has made a relatively small total. Equipment shops, however, are more active than a year ago and both employment and pay rolls in the industry are higher than in 1934.

Automobiles and Rubber

AUTOMOBILE production has dropped below the April peak, following the same seasonal pattern as in 1934. An important factor in the decline was the strike in several plants of one of the leading low-priced producers which temporarily cut the assemblies of this company by about two-thirds. While this dispute was settled rather promptly, the subsequent expansion of assembly operation has been slow. Other companies have readjusted their schedules downward, including the leading producer whose output has been cut by a change from a 6- to a 5-day week. Production for May is estimated by Cram's at about 425,000 cars and trucks in the United States and Canada, compared with 501,837 in April. United States April production amounted to 477,716 units.

Production has continued through May to exceed last year's total by a considerable margin. In the first 4 months of the year United States production was 1,536,066, or 42 percent more than in 1934 and the highest output since 1929. Recent monthly gains in production have been slightly in excess of the usual seasonal gains, the adjusted index having advanced 6 points from January to April. The significant factor, however, is the high rate of production rather than the moderate change in the adjusted index.

Retail sales of cars have been in relatively large volume in May, although the spring peak of sales, after allowance for seasonal factors, was reached in March. Excepting a few makes, dealers have caught up with accumulated orders carried over into the second quarter. With the high rate of new car sales, the disposal of trade-ins has been a problem confronting the retail dealers.

The index of domestic sales of new passenger cars in April increased by less than the usual seasonal amount, the adjusted index dropping to 78.5 percent of the 1929-31 average from 94.5 in March. Sales were, nevertheless, 32 percent higher than a year ago and for the 4 months were up 52 percent. Sales of trucks have also shown substantial gains over a year ago. Export demand has remained strong.

While rubber manufacturers have benefited from the high level of automobile production, conditions in this industry contrast rather sharply with those in the automotive field. New equipment sales have recorded sharp gains, but total sales have been relatively low due to the trend of replacement sales. For the first quarter, domestic shipments of tires were only 5 percent larger than in 1934, despite the 47 percent increase in automobile production. The quarterly survey of April 1 revealed that stocks of tires in the hands of distributors were less than a year ago; stocks in the hands of manufacturers, however, are relatively high and in excess of last year's total. Some improvement has been reported in the retail price structure, but conditions are still unsettled. Crude prices have advanced.

Forest Products

NEW orders and shipments of lumber improved during April; in May there was a marked decline influenced by the suspension of operations on the West coast due to the strike. Both orders and shipments have exceeded production which was maintained at a steady pace until the early part of May. The disparity between new orders, shipments, and production in the week ended May 18 was large, orders exceeding output by 50 percent and shipments exceeding the cut by 25 percent.

For the first 20 weeks of 1935, the industry reported an increase of more than one-fifth as compared with 1934 in both orders and shipments. While it is possible that part of this increase may have resulted from the increased stocks at retail yards, there has been a substantial increase in the consumption of lumber. The only available series of retail dealers' operations—those for the Kansas City and Minneapolis Federal Reserve districts—show a decline in stocks as of the end of April in comparison with a year ago.

According to a recent report of the Timber Conservation Board, revised lumber consumption for 1934 was placed at 15,467,000,000 feet, the highest total since 1931. Estimated consumption for the first 6 months of 1935 was placed at 8,368,000,000 feet and if the improvement of the first half of the year continues through the balance of the year, consumption will be from 10 to 15 percent above 1934.

Although manufacturers' stocks of lumber have decreased approximately 300,000,000 feet since January 1, 1935, the Board recommended a further reduction of 900,000,000 feet. Until a further substantial improvement in demand occurs, the Board considers it inadvisable to maintain stocks at more than 35 percent above the ratio of stocks to consumption in 1929. This figure was suggested for the industry as a whole and exception was made for various regions and species.

Production in the paper industry during April was at about the same rate as in March, but operations have receded slightly during May. During the 4 months ended April, production was at the rate of 70 percent of capacity, or well above the level of a year ago. By the week of May 25, production had receded to 67 percent of capacity.

Paperboard production during April was about 10 percent less than in March, the rate of operations dropping from 67 to 61 percent of capacity. In the middle of May the rate dropped temporarily to 59 percent. The output of paperboard has continued in excess of the corresponding period of 1934.

Newsprint production in both the United States and Canada increased in April. For the year to date the output of United States and Canadian mills amounted to 1,109,997 tons, the largest production for this period since 1931. Shipments also increased in April.

Iron and Steel

ACTIVITY in the iron and steel industry was at a slightly lower rate in May than in April, this movement contrasting with the trend a year ago when production was rising to meet the demands of consumers who were accumulating stocks in anticipation of the expected price increases for the third quarter. This year purchases are apparently going into consumption rather than into stock as code prices generally have been reaffirmed for the third quarter and consumers continue to purchase cautiously.

The settlement of labor difficulties in the automobile industry has resulted in the release of steel orders, but a large immediate volume of orders is not in prospect as the peak of automobile assemblies for the year seems to have been definitely passed. Miscellaneous consumers continue to be important sources of orders. Tractor manufacturers are reported to be producing at a high rate and to have a large volume of orders on hand. Output of tin plate mills has approached the record levels of 1929, according to trade reports. Orders from the railroad industry have continued in small volume.

Production of steel ingots in April was 8 percent below March on both a total and a daily average basis. Output for the first 4 months of the year of 11,013,306 tons was 12 percent above 1934 and was the highest for this period since 1930.

Pig iron produced in April totaled 1,663,000 tons, 6 percent below the output in March. On May 1 there were 97 furnaces in blast producing at a daily rate of

53,600 tons as compared with 98 stacks producing at a rate of 57,300 tons on April 1.

Shipments of finished steel by the leading producer declined 11 percent from March to April after increasing for 5 consecutive months. Shipments dropped below the 1934 level; in the first quarter they were substantially higher. Shipments of steel sheets by independent manufacturers dropped 13 percent in April.

The report of the machine tool industry for April was relatively optimistic, based on the trend of orders and the anticipation of important business in the near future. The index of new orders for April at 65.6 percent of the 1926 shipments was the highest for the past several years, with the exception of last December. Domestic orders, however, were larger in April than in December.

The American Iron and Steel Institute reports that for the first quarter of the year the output of steel products for sale, by members operating under the code, amounted to 6,662,000 tons as compared with 5,201,000 tons in the first quarter of 1934. This increase, amounting to 28 percent, was not uniformly distributed among all products. The output of strip and sheets was up by 33 percent and 42 percent, respectively. Production of bars, pipe and tubes, and plates increased about 30 percent each. The depressed state of the market for the heavier products is revealed by the increase of only 11 percent in heavy structural shapes and by a decline of 30 percent in the tonnage of rails rolled.

Textile Industries

THE seasonally adjusted index of textile production, computed by the Federal Reserve Board, remained unchanged from March to April at 98 percent of the 1923–25 average. Wide declines were reported for the cotton and silk textile industries, while the output of woolen producers continued at a high level. Production of rayon was also lower in April. Weekly statistics of cotton cloth production for the 3 weeks ended May 25 indicate that production has continued around the lower level reached at the end of April.

General curtailment of production under the authorization of N. R. A. resulted in a sharp drop in the output of both gray goods and finished cotton cloth during April. The output of the former dropped about 13 percent and the yardage of cloth printed and dyed declined 13 percent and 2 percent, respectively. During the 4 weeks ended May 25, average weekly production of gray goods amounted to 106,000,000 yards as against 110,000,000 in the preceding 4 weeks, and 127,000,000 yards during March. Cotton spinning activity in April was also lower than in March, as well as considerably below the rate in April 1934. Mill consumption of raw cotton for the month was the lowest April consumption since 1922, with the exception of the year 1932.

The adverse conditions with which the industry has had to contend have given rise to many suggestions of remedial action. This subject is discussed in the special article in this issue beginning on page 16.

Production of silk goods turned downward during the early part of April, the curtailment movement being reflected in the operations of weavers as well as in the throwing industry. Production of silk by concerns reporting to the Code Authority for the Throwing Industry in the 4 weeks ended April 27 amounted to about 20,000 bales, compared with 26,000 bales in the preceding 4-week reporting period. Production of rayon by the same producers showed a similar decline. In the silk-weaving industry, the April figures record a drop of 3.5 percent in the number of looms operated and a 4 percent decline in the average number of weekly hours run per loom.

The manufacture of woolen and worsted goods was relatively high during April. Machine activity of combs and of worsted spindles increased during the month, while loom activity declined. Weaving operations in the carpet and rug industry increased about 12 percent as compared with March. The table below indicates the high rate of operations in comparison with the same month of other recent years.

Current reports on rayon shipments indicate a substantial improvement during May, the demand being stimulated by the reduction in yarn prices. Rayon deliveries in April were only about half as large as in January, after allowance for the usual seasonal variation, and were also less than in April 1934. The cumulative total of deliveries for the first 4 months of the year, however, were 9 percent higher than in 1934.

Current Trends in the Cotton Industry

By Edward T. Pickard, Chief, Textile Division

The position of cotton in the economic scheme of the United States hardly needs emphasis. The number of persons deriving a livelihood in the production and distribution of cotton, the importance of the fiber in our export trade, and its utilization as the raw material of one of our leading manufacturing industries make cotton perhaps the most significant agricultural commodity that the country produces.

The value of the cotton crop is the major determining factor in the purchasing power of the population in the Southern States. In 1934, the total value of lint produced amounted to \$612,802,000 and the value of cottonseed to \$154,970,000, making a total of \$767,772,000. In former years the value of cotton produced reached much higher figures; in 1928, the combined value of lint and seed was \$1,529,000,000 and, in 1929, it was \$1,445,000,000.

United States Share of World Cotton Production Below Pre-War Average

The average annual cotton crop, excluding linters, for the 5 years prior to 1934 was 14,380,000 bales. The 1926 crop, amounting to 17,977,000 bales, was the largest ever produced in the United States, and the smallest crop during the past 39 years was in 1921 when the ravages of the boll weevil cut the production to 7,954,000 bales.

During the 5-year period ended with the cotton season 1933-34 the annual output of American cotton was 56 percent of the world total, whereas during the 5 years preceding the World War it was 62 percent of the world total. This has been brought about mainly by an increase in production in other countries. Although recent production in the United States has been about 10 percent above that of the pre-war period, production outside of the United States has been about 45 percent above the pre-war level. The American crop of 1934, which amounted to 9,472,000 bales as a result of curtailed acreage and adverse crop conditions, was only about 43 percent of the world crop. This was the first time since the Civil War that the United States output was less than half of the world total.

Foreign Markets Take More Than Half of Production

Shipments of raw cotton to foreign countries represented 57 percent of the American crop during the past 10 years. The export market for our staple is, therefore, of relatively greater importance than is the domestic market and, since cotton is our premier cash crop, the connection between the purchasing power of the South and conditions in the cotton goods markets of the world is obvious.

While changes in our cotton exports in 1934, resulting partly from the exchange regulations and other

instrumentalities of nationalistic economic policies in Europe and, perhaps, to some extent also from some features of our cotton-control program, have not crystallized into a definite trend, they have been marked in the past year. A variety of factors have undoubtedly influenced this movement. Shipments declined from 8,353,000 bales in the calendar year 1933 to 5,753,000 bales in 1934, a decrease of 2,600,000 bales or 31 percent. For the first 4 months of 1935, shipments totaled 1,497,000 bales against 2,304,000 bales for the corresponding months of 1934. The actual consumption of American cotton in foreign countries was not so low as indicated by the export figures, inasmuch as substantial quantities of American cotton were withdrawn from local stocks.

Table 1.—Exports of Cotton From the United States

Reduced shipments to Germany in 1934 and the first 4 months of 1935 may be accounted for chiefly by the stringent limitation of dollar exchange for cotton purchases. In the case of the United Kingdom, some American cotton has been replaced by Brazilian cotton which has been imported in much larger volume than heretofore, owing to the record cotton crops in Brazil; Indian cotton was also used to a greater extent. In France and Italy the decline is to be accounted for, in the main, by rather unfavorable conditions in the cotton manufacturing industry, while Japan imported larger quantities of Indian cotton as a result of the Indo-Japanese agreement and lower relative prices for that cotton.

Cotton exports represent the largest single item in the merchandise exports of the United States. During the past 10 years the value of cotton exports varied from 13 percent (1930) to 24 percent (1933) of the total value of all merchandise exported.

Cotton Consumption in the United States

During the 5 years ended July 31, 1934, United States consumption of domestic cotton averaged about 5,500,000 bales annually and in the preceding 5 years, about 6,500,000 bales annually. During the past 10 years the maximum consumption was 6,881,000 bales in the crop year 1926–27 and the minimum consumption was 4,744,000 bales in 1931–32.

The bulk of the cotton used by the cotton manufacturing industry of the United States goes to mills in the cotton growing States which take about three-fourths of the total, the rest being consumed mainly in the New England States.

Comparing the 5-year period 1929-30 to 1933-34 with the preceding 5 years, consumption of American cotton outside of the United States declined from an average of 8,260,000 to 7,500,000 bales, whereas the consumption of other cotton increased from 9,690,000 to about 11,000,000 bales. It is interesting that, in spite of the depression, consumption of all cotton outside of the United States increased from 17,950,000 bales during the period 1924-25 to 1928-29 to 18,500,000 bales during the past 5 seasons, while consumption in the United States showed a considerable decline. This can be partially accounted for by the more stable demand for cotton goods in foreign countries, owing to the fact that in these countries cotton goods represent mainly articles of wearing apparel, the purchases of which are generally on a hand-to-mouth basis by consumers with relatively small reserve purchasing power. In the United States, on the other hand, cotton is used to a considerable extent for industrial purposes.

Cotton Prices More Than Doubled From Depression Low

Cotton is a world commodity and its price is sensitive to world economic forces that affect demand, as well as to climatic and other factors that affect supply. Quotations for American cotton represent the price for Middling Upland %-inch cotton and prices for the numerous other grades and staples are determined by differentials above or below this basic price. The average monthly price of cotton at New Orleans ranged, in the past 10 years, from about 26 cents in March 1925 to 5 cents in June 1932. The highest average price for the cotton season during this period was 24 cents in 1924–25 and the lowest was 6 cents in 1931–32. In 1932–33 the price was over 7 cents

and in 1933-34 it was about 11 cents. Current quotations are between 11 and 12 cents.

Government Aid to Cotton Growers

Although cotton prices are among the most sensitive commodity prices, adjustment of production to world demand is not easy, owing to the large number of growers, uncontrollable climatic conditions and the seasonal nature of farm operations. As a result, the cotton farmer frequently faces very low prices which cause a demand for government relief. This is true not only in the United States but in other countries as well. In Egypt, for example, the government frequently comes to the aid of the cotton farmer by market operations or loans to growers. The United States Federal Farm Board, formed in 1929, extended loans to cotton cooperatives in order to enable them to hold cotton for more favorable prices.

The agricultural adjustment program, begun in 1933, is a more comprehensive system of assistance to cotton growers as well as to producers of other farm products. The purpose is to control the volume of cotton production through agreements with individual growers in order to maintain a profitable income for the farmers. With the inducement of rental or benefit payments, the Secretary of Agriculture in the summer of 1933 secured agreements from more than 1,000,000 cotton growers (who planted more than 38,000,000 acres in the years 1928-32) to plow under more than 10,000,000 acres of the cotton and to reduce plantings in 1934 by 40 percent from the base acreage. The curtailment program for 1935 provides for a 25 percent reduction in acreage. In order to insure that the crop would not exceed the limits desired, the Bankhead bill which provides a tax on ginnings above a certain quota was enacted into law in April 1943 and became effective for the 1934-35 season.

The rental and benefit payments to the cotton growers from the beginning of the program in August 1933 to the end of February 1935 totaled \$221,182,000.

Table 2.—Trend of Major Cotton Industry Statistics, 1925-34

Note.—Data assembled by the Association of Cotton Textile Merchants of New York from Bureau of the Census reports and information obtained through the courtesy of machinery manufacturers. Cloth production for the noncensus or even years has been estimated to correspond to spindle-hour activity during the preceding census years.

¹ Spindles in place at beginning of 1935, 30,889,484,

The funds for these benefit payments are obtained from a processing tax of 4.2 cents per pound on raw cotton purchased by cotton mills. For the above period the tax collected aggregated \$210,447,000, including \$60,000,000 of floor taxes, \$11,683,000 compensatory taxes, and \$556,000 ginning taxes.

Cotton Manufacturing in the United States

Conditions in the cotton manufacturing industry are far from satisfactory. The situation in April 1935 resulted in the appointment of a Cabinet committee by the President to investigate and study the whole problem. For more than 2 weeks manufacturers, merchants, and officials for the cotton manufacturing States appeared before the committee and presented their analysis of the adverse factors with which the industry has had to contend and to suggest remedial action.

Some of the more important subjects and recommendations presented for discussion were: Discontinuation of the processing tax as a method of securing funds necessary for benefit payments to cotton farmers; recovery of export markets for cotton products through governmental financial assistance; curtailment of cotton goods imports which in bleached fabrics for the first quarter of 1935 were stated to represent a considerable percentage of the domestic production of competitive types; elimination of wage differentials between New England and the South for the purpose of easing the competitive situation; adjustment of the capital structure; age and efficiency of machinery; and merchandizing and marketing practices.

It is not possible to discuss the points of view presented on these different matters, except to suggest that it was quite evident that from the standpoint of consumption of products, employment, and the financial position of the industry, serious consideration is justified. Sifting the so-called emergency problems from those of long-range fundamental character is, of course, essential before remedial measures may be formulated.

Trend of Operations Over a Decade

In considering the current situation, the accompanying table assembled by the Association of Cotton Textile Merchants of New York, presenting the trend of the major statistics of the cotton manufacturing industry, is illuminating. The salient points indicated in this table are the decrease in spindles, in cloth production, and in foreign sales of cotton cloth. The number of spindles in place has declined progressively since 1925. By the end of 1934, the decline in spindles amounted to 7,010,000, or 18 percent of the number in place in 1925. Annual cloth production for the 5 years 1930–34 averaged 7,067,000,000 square yards, compared with 8,235,000,000 yards in the preceding 5-year period, an average annual loss of 1,168,000,000 yards.

Foreign Trade in Cotton Cloth

Exports of cotton goods, although representing only about 6 percent of domestic production during the last decade, have always been regarded as an essential part of the market.

The loss of export trade in cotton cloth in recent years is attributable mainly to keen foreign price competition combined with reduced demand for cotton piece goods in many important consuming markets and to a more limited extent to the development of local cotton manufacturing industries in former export markets.

The trend of United States export trade in cotton goods during recent years is shown in the following table:

Table 3.—United States Exports of Cotton Cloth, Duck, and Tire Fabrics

Imports of cotton cloth are comparatively small in relation to domestic production, as may be seen by reference to table 2. Imports for consumption in 1934 of countable cotton cloths totaled 41,535,000 square yards valued at \$6,736,000, or about the same as in 1933. Imports from Japan rose rapidly in the first quarter of 1935 and this increase was one of the concerns which led to Government action in appointing the Cabinet committee previously mentioned. Details of the import trade, by countries, are presented in the accompanying table.

Table 4.—United States Imports of Countable Cotton Cloths 1

General imports prior to 1934; imports for consumption in 1934.
 Imports for consumption (from all countries) in 1933 amounted to 40,129,000 square yards valued at \$6,024,000, or slightly less than general imports.

NOTE.—"General imports" comprise imported articles entered at the customhouses for immediate consumption and imported articles entered for warehouse. "Imports for consumption" comprise imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption.

Computed by the Tubize Chatillon Corporation, Business Research Division. This series known as "rayon deliveries" represents the shipments of rayon yarn by American producers, plus imports for consumption, less exports of domestic rayon yarn. For purposes of this index, rayon is defined as that rayon made by the viscose, cuprammonium, and nitrocellulose processes. Acetate rayon, which has made up an increasing percentage of the total in recent years, is not included in this series. Based on annual surveys, acetate rayon comprised the following percentages of the total production: 1925, 3.2; 1926, 4.2; 1927, 6.3; 1929, 6.2; 1929, 6.8; 1930, 7.7; 1931, 10.0; 1932, 13.5; 1933, 17.3; and 1934, 19.0. The index is based on a 100 percent sample of the field covered. The data are reduced to a daily average basis and expressed as a percent of the 1923-25 daily average figures, in accordance with the Federal Reserve Board's method of calculating and basing index numbers. The index then is adjusted for the usual seasonal variation. Due to the rapid fluctuations of the adjusted indexes, they were smoothed out by running a moving average on them with an average of 3 months centered at the middle month. The annual averages are figured on the basis of unadjusted indices. For further details on the method of constructing the indices, refer to the September 1934 issue of Textile Organon, published by the Tubize Chatillon Corporation, 2 Park Avenue, New York City.

PRODUCTION OF LEATHER¹

[In thousands of skins]

Compiled by the Tanner's Council of America and represent a revision of the data that appeared on p. 19 of the June 1933 issue of the Survey of Current Business for the years 1925 to 1932, and also of the monthly figures subsequent to December 1932 that appeared in the monthly issues. Revisions were caused by a recheck of the figures by the Tanner's Council. The monthly data for the years 1922, 1923, and 1924 are shown for the first time.

¹ Compiled by the United States Department of Commerce, Bureau of the Census. These series represent a summary of identical plants beginning January 1934. Comparable data are not available prior to that date. The number of plants represented are as follows: Common brick, 437; vitrified paving brick, 90; and hollow building tile, 193. The estimated coverage of these industries based on the Census of Manufactures for 1933 is: Common brick, 54 percent; hollow building tile, 49 percent; and for vitrified paving brick, 82 percent. These concerns hold a higher percentage of the total stocks than is indicated by the production ratios. Stocks of vitrified paving brick as reported monthly are excessive, due apparently to the inclusion of "other paving brick" which are reported separately in the annual census. The Bureau of the Census also publishes an identical series for face brick, based on reports from 260 plants, but it is not shown in the Survey since the trend is approximately the same as for the face brick series reported by the American Face Brick Association.

Computed by the Federal Reserve Board, Division of Research and Statistics. The data represent a revision of the adjusted indexes for the period 1929 to date caused by a new series of seasonal indexes for these years being computed; other figures are shown as previously published with the exception of minor revisions being made in a few instances. The daily average sales are computed on the basis of the number of working days, with an extra one-third of a day added to each 5-Saturday month; allowance is made for the number of Sundays in each month and for 6 holidays; New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas For a description of this index see the Federal Reserve Bulletin for April 1929, pp. 236-242, or request the revised statement available at the Division of Research and Statistics of the Federal Reserve Board. Adjustments for the effects of changes in the date of Easter are the same as heretofore.

[§] Statistics cover 91 cities since Jan. 10, 1934, and 90 eities before; 1 city was added to the series in order to off-set the effect of 1 member bank which ceased reporting. † Revised series. See p. 19 of the January 1935 issue.

• Aggregate price of 1 pound each of 31 commodities.

[†] Weekly average, 1928-30=100. ‡ Daily average.
• Index revised. See weekly supplement of June 1, 1933, for explanation.

Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. A special supplement was included in the April 1935 issue, pages 57 to 72, inclusive. This supplement gave the monthly averages of all series for the years 1932, 1933, and 1934.

Data subsequent to April will be found in the Weekly Supplement to the Survey.

Revised.

Revised.

Preliminary.

New series. See pp. 16-19 of the May 1934 issue, cash income for marketings of agricultural products and p. 19 of the December 1932 issue, Fairchild price index.

Data for May 15, 1935: Total 108, chickens and eggs 110, cotton and cottonseed 105, dairy products 108, fruits 98, grains 112, meat animals 118, truck crops 127, miscellaneous 89.

Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks—revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from July 1933-June 1934. See p. 23 of the September 1934 issue.

The data on retail prices of food until Aug. 15, 1933, were reported as of the 15th of each month. From then on the prices have been reported every 2 weaks. The monthly figures for months subsequent to August 1933 represent the figure nearest to the 15th of the month.

Ionthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

Data discontinued by the reporting source.

New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. First Home Loan Bank loan data were issued for December 1932. See special note below on foreclosures. † Revised series. See p. 20 of the October 1933 issue, Magazine lineage.

§ Index as of May 1, 1935, 194.1.

Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States; having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933, 200,003. Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.

Revised.

* New series. For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Comparable data of H. L. Green Co., Inc., sales prior to July 1933 not available. For earlier data on automobiles see p. 19 of the April 1934 issue and variety store sales p. 18 of the March 1934 issue. Data prior to October 1933 on collections not published. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. New series on air mail not available prior to May 1934. Series on basis of weight carried was published in the Survey for the period February 1925 to December 1933. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note that the combined index of department store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve banks. For districts not marked by an asterisk the series are as published in the 1932 Annual Supplement and subsequent issues.

† Revised series. For revisions refer to the indicated pages of the monthly issues as follows: Apparel sales index of Chain Store Age, p. 26, October 1933. Combined index of department store sales in the Chicago Federal Reserve district see p. 19 of the April 1935 issue.

• New York Evening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1933. See the 1932 annual supplement and monthly issues prior to December 1934.

• Monthly data from July 1933 through Feb. 1934 will be shown in a subsequent issue.

• This series is shown on p. 20 from 1919 to date.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935	ļ				1934						1935

Revised.

* New series. For earlier data on factory employment unadjusted in detail, see pp. 16 to 18, inclusive, of the June 1934 issue. See pp. 16 and 19 of the July 1934 issue for factory employment adjusted total and in detail, and unadjusted total. See p. 20 of the December 1934 issue for rural general merchandise sales. For earlier data on department-store sales see, p. 20 of the February 1935 issue, except for Chicago. Note that adjusted indexes are not available for the Federal Reserve districts not shown. Note also that the combined index (adjusted) is computed by the Federal Reserve Board and the district adjusted indexes are computed by the Federal Reserve banks
† Data for Chicago department-store sales completely revised, see p. 19 of the April 1935 issue.

The adjusted index of department store sales (total value) has been revised by the Federal Reserve Board for the years 1929 through 1934. Revised indexes not shown above appear on p. 20 of this issue.

[•] Revised.

• Revised.

• For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Hours of work, p. 20, October 1932; pay rolls, Baltimore, p. 18, December 1932; pay rolls, Chicago, p. 20, June 1933; pay rolls, Milwaukee, p. 18, December 1932; pay rolls, New York, p. 20, June 1933; pay rolls, Philadelphia, p. 18, January 1934; pay rolls, Maryland and Massachusetts, p. 18, December 1932. Data on factory pay-roll indexes, by classes shown on p. 18 of June 1934 issue. See also p. 19, July 1934.

† Revised series. For revisions on the following subjects, refer to the indicated pages of the monthly issues as follows: pay rolls, Pennsylvania, Delaware, New Jersey, and Philadelphia, p. 19, September 1933; for revisions of years 1930-34 for these series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; pay rolls, Massachusetts, for 1931, p. 19, August 1933. Hours of work per week in factories revised for 1933, see p. 20 of the July 1934 issue. For labor turnover, see p. 20 of the April 1935 issue.

§ Data revised. Revisions will be shown in a subsequent issue.

• Data revised for the years 1932 34, inclusive. Revisions prior to March 1934 will appear in a subsequent issue.

• Data revised for 1934. See pp. 29 and 56 of the May 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

³ Not available. a Revised. ‡ Joint-stock land banks in liquidation. These figures will no longer be reported.

* New series. For earlier data on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls, banks, brokerage houses, etc., p. 19, June 1933; pay rolls in dyeing and cleaning establishments and laundriss, p. 19, June 1933; factory weekly earnings, p. 20, October 1932; factory hourly earnings, p. 18, December 1932; weekly earnings, Massachusetts, p. 18, December 1932; construction wage rates, p. 19, September 1933. Earlier data on additional series of agricultural loans outstanding will be shown in a subsequent issue.

† Revised series. Por revisions on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls of banks, brokerage houses, etc., for 1932, p. 29, January 1934; Massachusetts weekly earnings for 1931, p. 19, August 1933 issue; pay rolls in laundries and dyeing and cleaning establishments, p. 20, August 1934; factory weekly and hourly earnings revised for 1933, p. 20 of the July 1934 issue. Certain classes of loans included in figures shown through May 1934 have been reclassified by FCA and removed from the agricultural loan category. For revised data on pay rolls in wholesale and retail trade for 1929-34, inclusive, see p. 20 of the March 1935 issue.

classified by FCA and removed from the agricultural loan category. For revised data on pay rolls in wholesale and the state projects; as on only Federal-aid projects before this time.

Beginning with March 1932 method of computing rates was changed. Since this date, data are based on Federal aid and state projects; as on only Federal-aid projects before this time.

¶ Increase in wage rates during M irch 1934 was due to provisions of title I, sec. 204, p.ir. 2, item C of the National Recovery Act, which required State highway departments to fix minimum wage scales.

§ Construction wage rates as of May 1, 1935, common labor, \$0.523; skilled labor, \$1.08.

♠ Breakdown of figure shown in issues up to November 1934

• Date revised for years 1932-34, inclusive. Revisions prior to March 1934 will appear in a subsequent issue.

♂ Data for 1934 revised. See pp 30 and 56 of the May 1935 issue.

Revised.

Quotation based on paper peso Dec. 10, 1933, instead of gold peso as formerly.

New series superseding old series which covered the physical movement only.

Revised series. For earlier data see p. 18 and 20 of the July 1933 issue, insurance written and admitted assets; p. 18 of the June 1933 issue, premium collections, and p. 19 of the July 1934 issue, corporation profits.

Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output. The series previously presented in the Survey covered the principal producing countries which produced the following percentages of the world total: 1928, 87.9; 1929, 87.1; 1930, 85.5; 1931, 82.9; 1932, 75.5; and 1933, 77.5.

Revised. Has included since July 1934 other than Farm loan issues for which Treasury has acted as fiscal agent.

New series. For earlier data see p. 20 of the August 1933 issue, Reconstruction Finance Corporation excepting the item "other loans" which appears first in December 1934 issue and p. 20 of the June 1933 issue, U. S. Government bond prices.

Reconstruction Finance Corporation data have been revised for the year ended June 1934. Revised figures for period October 1933-June 1934 was shown on p. 33 of the Dec. 1934 issue shown; July-September 1933 revised figures have not been published. Figures subsequent to June 1934 are preliminary. Revised series for July 1931-February 1933 appeared on pp. 19 and 33 of the April 1933 issue (domestic bond prices).

This excludes relief grants to States by the R. F. C. under the Emergency Relief Act of 1933 upon certification of grants by the Federal Emergency Relief Administrator. During 1934 these amounted to \$499,650,000 on Jan. 31, Feb. 28, Mar. 31, and Apr. 30, \$509,000,000 disbursed for relief purposes under Emergency Appropriation Act of 1935, and \$10,000,000 purchase of stock in R. F. C. Mortgage Co. and \$12,500,000 for preferred stock subscription in export-import banks.

For 1934 includes \$2,800,000,000 exceptions, \$2,233,252 for March, \$3,409,051 for April, \$298,805 for May \$123,447 for June, \$272,163 for July, \$268,204 for August, \$134,843 for September, \$173,702 for October, \$116,585 for November. \$132,296 for December. For 1935 includes \$123,639 for January, \$68,241 for February, \$157,316 for March and \$157, 326 for April representing the increment resulting from reduction in weight of gold dollar.

The figure for expenditures includes \$2,000,000 occommended to hard the present of the period May 1932 are comparable with this series. Comparable figures for the period May 1932 to March 1933 are on p. 33 of the monthly issues, from June 1934 to November 1934. Later data are shown in monthly numbers.

^{*} New series. Earlier data on value of imports for consumption will be shown in a subsequent issue.
* Revised.

† Revised series. For earlier data see p. 19 of the August 1933 issue.

Beginning with January 1934, import data represent imports for consumption and are not comparable with earlier figures, which consist of general imports

See explanation on p. 9 of the March 1934 issue.

† Data for June and September 1934, are for 5 weeks; other months 4 weeks,

† Data revised for 1933. See p. 20 of the October 1934 issue.

Monthly statistics through December 1931,	1935					1934						1935

*Revised. *Preliminary.

*New series. Data on airplane travel covers scheduled airlines operating in United States. For data on passengers carried for period of 1926 to 1933 and passenger-miles flown from 1930 to 1933, see p. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933, see p. 19 of the January 1935 issue. For data on miles flown and express carried from 1926 through 1933, see p. 19 of the January 1935 issue. For alcohol withdrawn tax paid, see p. 20 of the April 1935 issue. New series of telephones as compiled by Federal Communications Commission. Data supersede those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of \$250,000; present series covers only those campanies with operating revenues in excess of \$250,000 which have interstate lines. In December 1933 operating revenues of these companies were 97.7 percent of the total of the companies previously reporting.

*Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue.

*Data revised from August 1914 excluding vessels under 300 tons. Revisions not shown above will appear in a subsequent issue.

Ionthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934					ļ	1935

^{*} New series. For earlier data see p. 20 of the April 1933 issue (crude methanol) and p. 19 of January 1934 issue (explosives).

* Figures revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue (or earlier data.

* See footnote on p. 35 of this issue. Monthly revisions for 1933 are shown on p. 20 of the October 1934 issue.

† Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer and imports of vegetable oils; for 1933 revisions on exports see p. 20 of the September 1934 issue; for revised data for crude methanol production for 1933, see p. 36 of the May 1934 issue; quarterly data oils fats and byproducts, for the years 1932 and 1933 also revised. See p. 19 of the March 1935 issue.

* Texas only. Louisiana produced 23 percent of United States production in 1933.

* The refined equivalent of crude production is approximately 82 percent.

Dec. 1 estimate.

* Por earlier data on lard compound price see p. 18 of the January 1934 issue. Data not available for cellulose products prior to January 1933.

† Revised series. For year ended July 1932 see p. 20 of the February 1933 issue, and year ended July 1934 see p. 38 of the November 1934 issue, revisions for each month of 1933 were shown when monthly data for 1934 became available, cottonseed, and for the year of 1932 see p. 37 of the June 1933 issue, exports of cottonseed cake and meal. Data revised for 1933; see p. 19 of the September 1934 issue; quarterly data on oils, fats, and byproducts shown on this page for the years 1932 and 1933 also revised. See p. 19 of the March 1935 issue.

§ Since March 1932, detailed figures are not strictly comparable owing to changes in firms reporting.

§ Since March 1932 of the October 1934 issue. Data revised for 1933; see p. 20 of the October 1934 issue.

^{*} Revised.

* New series. For earlier data see p. 19 of the May issue, manufactured and natural gas, and p. 19 of the June 1933 issue, butter consumption. Beverage figures are from the U. S. Bureau of Internal Revenue monthly data on distilled spirits available beginning July 1933 and on fermented malt liquors, April 1933. Data on consumption of rectified spirits. as indicated by the sale of stamps. Earlier data not published.

† For revised data for electric-power production for 1932 see pp. 38 not 56 of the May 1933 issue; for 1933 see p. 38 of the May 1934 issue; 1934 data also revised. Revisions not shown above will appear in a subsequent issue. Manufactured and natural gas revisions for years 1929-34, inclusive, are shown on pp. 19 and 20 of the May 1935 issue; for butter production for 1931 see p. 20 of the January 1933 issue; for 1932 and 1933 butter consumption and 1933 butter production see p. 19 of the March 1935 issue. Data consumption of distilled spirits revised to include brandy tax paid direct from fruit distilleries. For revisions see p. 39 of the March 1935 issue. Data consumption of rectified spirits glures plus ethyl alcohol withdrawn tax paid (see p. 36) equals Bureau of Internal Revenue total of distilled spirits withdrawn tax paid.

¶ Revised series. Data revised beginning with January 1933. See p. 39 of the April 1935 issue. Revisions for 1933 will be shown in a subsequent issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

* Revised.

* Dec. I estimate.

* Prices not available.

* Prices not available.

* New series. For earlier data see p. 20 of the November 1932 issue, barley, receipts of milk in Greater New York, p. 20 of the August 1934 issue. Since the division of no. 2 barley by the Department of Agriculture into straight and making grades as of July 1, 1934, prices for each grade have been reported separately.

† Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of condensed and evaporated milk, p. 20, January 1933. For earlier data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39, November 1933. For 1932 and 1933 revisions on cheese consumption and 1933 revisions on production of cheese, condensed and evaporated milk, p. 39, November 1933. For 1932 and 1933 revisions on cheese consumption and 1933 revisions on production of cheese, condensed and evaporated milk, p. 39, November 1933. For 1932 and 1933, car-lot shipments of apples, citrus fruits, onlines, and potatoes, see p. 20, January 1935 issue. For 1932 exports of rice, p. 39, June 1933. For revised figures on 1933 exports of grains (total barley, corn, and rice by months), see p. 2 of September 1934 issue.

* See footnote on p. 35 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue.

* Bulk evaporated milk not included since December 1931.

* Represents the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

Revised. Note major correction in data on imports of sugar from Cuba June-November 1934.
 Now series. For earlier data, see p. 20 of the August 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 not available on imports of refined sugar from the Philippine Islands.
 † For revised data for 1932 on sugar meltings and stocks, see p. 41 of the May 1933 issue. For 1932 revisions of sugar imports and exports, see p. 41 of the June 1933 issue. For revisions of exports in 1933, see p. 20 of the September 1934 issue. Revised data on shipments and stocks of refined sugar at 2 ports will be shown in a subsequent issue Change resulted from a reduction in the number of reporting refineries.
 # See footnote on p. 35 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.

 Total not available.
 Covernment slaughter not included, see p. 44.

^{*}Revised. *Preliminary. †Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933—data revised for 1933. See p. 20 of the September 1934 issue; 1932 final revision of anthracite and bituminous coal production, p. 42, January 1934. Bituminous coal production revised for 1933 and 1934. Revisions not shown in the May 1935 issue will appear in a subsequent issue; anthracite shipments for 1932, p. 42, December 1933; consumption of bituminous coal by electric power plants for 1932, p. 42, May 1933; for 1933, p. 42 May 1934. Data also revised for 1934. Revision not shown above will appear in a subsequent issue; beehive and byproducts coke for 1932, p. 43 of December 1933 issue and for 1933 revisions ep. 43, July 1934. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932. See footnote on p. 36 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.

‡ Price converted to short-ton basis. Data prior to November 1931 not published.

* Dec. 1 estimate.

* Dec. 1 estimate.

Beginning with August 1934 certain anthracite stocks were included which had not been covered in previous reports. The original figure for the end of August 1934 was 2,023,120 tons; revised for the month was, as shown, 2,197,411 tons.

a Revised.													

Revised.

New series. For earlier data see p. 20 of the February 1933 issue, production and stocks of residual fuel oil and gas oil and distillate fuels, and p. 19 of the June 1933 issue, leather.

Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Consumption of gas and fuel oils in electric-power plants for 1932, p. 43, May 1934. Data for 1934 also revised. Revisions not shown above will appear in a subsequent issue; production of residual fuel oils and gas oil and distillate fuels, stocks of residual fuel oil east of California, consumption of gasoline, production of gasoline at natural gas plants and refineries, stocks of gasoline at refineries, consumption of kerosene and lubricating oil, and production of asphalt for 1932, p. 56, November 1933; retail distribution gasoline in 41 States for 1932, p. 43, May 1933, for 1933, p. 43, May 1934; production of cattle and sheep and lamb hides, p. 44, April 1934; imports of total hides and skins and exports upper leather for 1932, p. 43, June 1933.

See footnote on p. 35 of this issue. Imports also revised for 1933. See p. 20 of the September 1934 issue.

Data revised for 1933. See p. 20 of the Sanuary 1935 issue.

Data revised for 1933. See p. 20 of the January 1935 issue.

Data on production of sheep and lamb and goat and kid leathers, from 1927-34 have been revised. For revisions not shown on p. 44 of the April 1935 issue see p. 19 of this issue.

Relief slaughter not included. For the period June 1934-February 1935 these totaled, cattle, 3,505,607; calves, 1,411,666; and sheep, 1,355,431.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

Revised.

New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. For earlier data on leather stocks, see p. 19 of the January 1935 issue. New series on leather gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1934 are not available. These data are not comparable with figures through January 1934 previously shown in the Survey.

Sata revised for 1932, see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber.

Data for March, June, August, and November 1934 and January 1935 are for 5 weeks; other months, 4 weeks.

Data for 1933. See p. 20 of the September 1934 issue.

Data for 1934 revised. See p. 45 of the March 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935	
ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	April	April	May	June	July	August	Septem- ber	October	Novem- ber	Decem- ber	January	Febru- ary	March

^{*} Temporarily discontinued.

* New series. Earlier data on furniture activity, all districts, prior to April 1933 not published. For imports of iron and steel, see p. 20 of the November 1932 issue; for eastings, p. 20 of the April 1933 issue. New series on iron and steel composite price are shown on p. 19 of the January 1935 issue.

\$ Data revised for 1932. For revisions, see p. 45, exports of southern pine lumber and timber, and p. 45, iron and steel, of the June 1933 issue. Data revised for 1933; see p. 20 of the September 1934 issue.

† Revised. Data prior to April 1933 not published.

‡ Beginning with January 1934 the report includes all known operators. Prior to this time approximately 89 percent of the listed capacity was included

Imports from Cuba not included.

See footnote on p. 35 of this issue. Data revised for 1933; see p. 20 of the October 1934 issue.

¶ Data for March, June, August, and November 1934 and January 1935 are for 5 weeks; other months, 4 weeks.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935	,

^{*}New series. For earlier data, see p. 20 of the January 1933 issue wholesale price of plumbing and heating equipment. Figures on convection-type radiators prior to January 1932 not published.

In equivalent direct radiation.

Revised series. For earlier data on bathroom accessories see p. 20 of the October 1933 issue, and for range boilers see p. 20 of the July 1934 issue.

The data for 1933 revised; see p. 47 of the August 1934 issue. For 1932 revisions, see p. 46 of the July 1933 issue.

New series; see footnote on p. 20 of the October 1934 issue.

Revised series. Data revised starting January 1934 issue.

Revised series. Data revised starting January 1933, see p. 47 of the April 1935 issue; revisions for 1933 will be shown in a subsequent issue.

Steel casting series revised January 1935 by the increase of the number of companies from 164 to 180; comparable data not completed for 1934 and earlier years. Figures for 164 companies in January 1935 were new orders, total 31,816, percent of capacity 20.3; new orders, railway specialties, 6,835; production, total, 28,519, percent of capacity 18.2, production, railway specialties 6,052.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

Revised.

New series; for earlier data, see p. 20 of the December 1932 issue.

Revised series; for earlier data on new orders for electrical goods see p. 19 of the August 1933 issue.

Present series on water systems now cover 52 companies. Data revised beginning January 1933. See p. 49 of the December 1934 issue.

Data on exports revised for 1933; see p. 20 of the September 1934 issue.

Data on exports revised for revisions see p. 48 of the June 1933 issue, exports of refined and total imports of copper. For 1932 revisions on zinc, see p. 49 of the January 1934 issue, for 1934 revisions see p. 49 of the February 1935 issue.

See footnote on p. 35 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue.

Discontinued.

Revised series on domestic pumps and water systems starting January 1934; see p. 49 of the April 1935 issue. New series on water-softening apparatus revised starting January 1933. Revisions for 1933 will be shown in a subsequent issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

^{*} Revised.

* New series. For earlier data on hand-type vacuum cleaners see p. 20 of the August 1934 issue. Data prior to October 1931 not published on brass, plumbing fixtures. Wood pulp figures based on reports to the Pulp Executive Authority by 172 mills, representing 94 percent of the total U. S. pulp industry. Figures available for the year 1934 only. Data not exactly comparable with figures previously shown. See footnote on p. 56 of the April 1935 issue for the complete 1934 wood pulp figures.

† Revised series. For earlier data see pp. 18, 19, and 20 of the November 1933 issue for chemical, mechanical wood pulp, and total paper; p. 49 of the June 1933 issue for themical wood pulp imports; and p. 19 of the December 1933 issue for book paper.

See footnote on p. 35 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.

Beginning with January 1934 figures have been compiled by the Code Authority of the Ingot Brass and Bronze Industry. The figures are more complete than those on deliveries previously shown. Shipments of the concerns formerly reporting contribute about 80-85 percent of the total for the present series.

{The Code Authority for the Paper Industry is expected to shortly resume publication of some of these paper figures.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

^{*} Revised. * Discontinued.

† Revised series. For earlier data see pp. 19 and 20 of the December 1933 issue for writing, wrapping, and other grades of paper; for 1932 revisions, p. 50 of the June 1933 issue for crude rubber imports; and for 1932 revisions, p. 50 of the May 1933 issue for world and United States stocks. Data on consumption of rubber for tires revised for 1932, 1933, and 1934. For revisions see p. 51 of the August 1934 issue. Earlier data on consumption and stocks of waste paper at mills will be shown in a subsequent issue.

§ The Bureau of the Census has changed the title of the "Boxboard" report to "Paper board" since data actually cover all board of .012 of an inch or more in thickness reported by the cooperating manufacturers. The difference between this series and the paper board data on production and shipments given at the top of the page (marked with a """) is that the latter are based on sample data supplied by the American Paper and Pulp Association which have been ratioed up to a total for the industry, using the annual complete census data of the Bureau of the Census. Figures given on production, operations, and new and unfilled orders are for 94 identical manufacturers; shipments and finished stocks are for 78 manufacturers, and consumption and stocks of waste paper for 82 manufacturers.

‡ Data for 1934 are estimated to represent approximately 97 percent of the industry; data are estimated to cover 79 percent of the industry for 1929-33, inclusive, and 75 to 80 percent prior to 1929.

[†] Data for 1934 are estimated to represent approximately 97 percent of the industry, data are estimated to cover to 1929.

**See footnote on p. 35 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.

* New series. See p. 19 of the December 1933 issue for the complete paper-board series. New series on paper board shipping boxes compiled by the Container Code Authority, Chicago, Ill., from all members of the industry of record beginning in January 1934. The volume of companies not reporting each month is estimated by the Code Authority, so as to keep the series comparable. The solid fiber figures are complete as reported. Prior to January 1934 data covering this industry were compiled by the Paper Board Industries Association.

**These data will be shown in revised form in next month's issue.

* Revised.

* Now series. Earlier data not published on rubber heels and soles prior to December 1932, and on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production.

§ See p. 20 for new series on production and shipments of common brick, paving brick and hollow building tile.

‡ Adjusted for degrading and year-end physical inventories.

† Revised data for 1933 represent total production for the United States.

‡ Series on glass containers are not comparable for 1934 and earlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the year of 1933 amounted to 33,055,706 compared with 23,511,933 for the 39 firms reporting a year ago. Comparable statistics on shipments for the companies, now reporting by years, from 1932 to date were as follows (in gross): 1923, 1943,016; 1929, 33,755,939; 1930, 31,933, 31,141,505; 1932, 26,947,199, and 1933, 33,043,747. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series. Data beginning January 1934 revised see p. 52 of the May 1935 issue.

• In October 1933 4 new companies were included in the report and 1 additional company in January 1934. Since that month, the coverage of the industry is 100 percent. For preceding periods the coverage varied but was about 80 percent. Overlapping figures are available for October 1933. See the October 1934 issue for October 1933 data for the smaller number of firms.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

* Revised. * As of Dec 13. * As of Jan. 16. * Preliminary.

* New series. For earlier data on gypsum, see p. 20 of the January 1933 issue; the new series on hosiery compiled by the Hosiery Code Authority and are estimated to represent 95 percent of the industry. The revised data on hosiery presented in the October 1934 issue are based on a check of the data previously reported, made by the Code Authority. Data on cotton cloth finishing are from the National Association of Finishers of Textile Fabrics and cover practically all the industry; comparable figures are not available prior to December 1933; the production statistics are prorated from data for 4-week periods stocks are as reported at end of each 4-week periods.

* For revisions for crop years 1931-32, 1932-33, and 1933-34, see p. 52 of the October 1933 issue, p. 52 of the September 1933 issue, and p. 53 of the October 1934 issue, respectively.

† For revisions of cotton consumption, domestic stocks and spindle activity for crop year 1931-32, see p. 20 of the February 1933 issue, for crop year 1932-33, see pp. 52 and 53 of the November 1933 issue, for crop year 1933-34, see p. 53 of the October 1934 issue. Data on hosiery revised by the Code Authority; revised data for the months of 1932 revisions see p. 53 of the June 1933 issue; for 1933 revisions see p. 20 of the September 1934 issue.

* For 1932 revisions see p. 53 of the June 1933 issue; for 1933 revisions see p. 20 of the October 1934 issue.

* Stocks at end of 4-week periods through June 16. July figures are averages for July 14 and Aug. 11. August figure as of Sept. 8. Subsequent data or succeeding 4-week periods.

* Discontinued by reporting source.

*Revised. # See footnote on p. 35 of this issue. Discontinued. Preliminary.

*Since July 1934 report has been on a weekly basis. Data for September and December 1934 and March 1935 are for 5 weeks; other months, 4 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry.

*For 1932 revisions see pp. 53 and 54 of the June 1933 issue, and for 1933 revisions see p. 20 of the October 1934 issue.

*Compiled by the Silk Code Authority (The National Federation of Textiles, Inc.) and represent the percentage of operations based on an 80-hour week (2 shifts of 40 hours each). Data are not comparable with the series previously shown in the Survey which were based on a smaller sample and computed on the basis of a 48-hour week.

*New series. Silk spindle activity, compiled by Silk Throwing Code Authority; not comparable with spinning data previously shown. For earlier data on silk plece goods (stock-carrying mills only) see p. 19 of the April 1935 issue, excepting for yardage on looms, which is shown on p. 20 of the August 1934 issue. Wool stock series began in June 1934.

*Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed normal (currently based on the single-shift performance over the 5-year period 1928-32). The current data represent practically complete coverage of the industry. No allowance for holidays in Jan. 1934, Jan. 1935, and Dec. 1934. Conversion will be made for earlier months (since effective date of code) at a later date.

**Foreign receipts for year 1934 are compiled by U. S. Department of Agriculture and are not comparable with data carried through December 1933. This results in a total figure which also is

fonthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

Revised.

Revised.

New series. For earlier data see p. 20 of the February 1934 issue for total shipments, accessories and parts, and registrations of new commercial cars.
† Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; and p. 55 of the June 1933 issue for 1932 exports of locomotives. Data on automobiles revised for 1933. See p. 55 of the August 1934 issue. For revised data for 1934 not shown above see p. 56 of this issue.
† Index of sales of new passenger cars is shown on p. 26 of this issue.
† Data revised for 1932. See p. 54 of the June 1933 issue. Data revised for 1933. See p. 20 of the September 1934 issue.

Taxicabs are included in figures for passenger cars, beginning January 1934 in order to avoid disclosure of individual companies.
¶ United States and Canadian dealers, plus overseas shipment.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1935					1934						1935

RETAIL CREDIT SURVEY, 1934

Market Research Series No. 3

73 Pages, Paper Bound, Price 10 Cents

For the past four years the Bureau of Foreign and Domestic Commerce at the request of, and in cooperation with, the National Retail Credit Association, has published a semiannual study of retail credit conditions.

The present report, the first to be issued giving yearly figures, represents a continuation and expansion of the previous surveys.

Whereas the former studies included only 6 lines of retail business and represented but 29 cities, the present study includes 12 lines of retail business in 79 different cities. These 12 lines are:

AUTOMOBILES COAL AND WOOD FURNITURE FOODSTUFFS HEATING AND PLUMBING SHOES MEN'S CLOTHING JEWELRY

DEPARTMENT STORES HARDWARE LUMBER AND BUILDING WOMEN'S CLOTHING

The present report reveals considerable improvement in retail credit conditions during 1934. The report's four major sections are summarized below:

Kinds and Extent of Credit: The data on the kinds and extent of credit business have been broken down by stores adhering to either a strictly cash and open credit policy, cash and installment policy, or a combination of both. Such a breakdown permits a comparison of types of credit, thereby indicating trends that are unique for each group.

Returns and Allowances: Returns and allowances percentages (including repossessions on installment sales) for the year 1934 decreased slightly from those of the year 1933.

Collection Percentages: Collection percentages, computed by dividing the collections made during a given month by the balance outstanding as of the first of the month, showed a marked increase for the year 1934 in the open-account category (regular charge accounts), and an appreciable increase in the installment-account group.

Bad-Debt Losses: The average bad-debt losses on open-credit accounts and installment-credit accounts show marked decreases for the year 1934 when compared with 1933.

Copies of the above publication may be obtained from the Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce, Washington, D. C., or any district office of the Bureau located in principal cities.
