## Business Situation Summarized

WHEN comparison is made with the initial 6 months of 1935 , a vailable statistics reveal a broad improvement in economic conditions in the United States during the opening half of 1936. Industrial production has advanced 11 percent, mainly by reason of the gradual extension of recovery in the durable goods industries; retail sales are estimated to have increased some 10 percent; freight traffic is up 9 percent; cash farm income is about 11 percent larger; the volume of unemployment has been materially reduced; and the construction industry, in which recovery bas been slow, has made material progress this year. The extent to which this further recovery has narrowed the gap between existing conditions and those prevailing in 1929 is partially indicated by the accompanying table.

In June, business activity was at or very close to the highest point reached in the recovery period. While employment data for the month are not yet available, it appears on the basis of returns through May that the number of persons at work (exclusive of employees on emergency work projects) reached the largest total in more than $4 \frac{1}{2}$ years. The contraseasonal rise in factory employment and pay rolls from April to May was accompanied by a further slight rise in the seasonally adjusted index of manufacturing production. The expansion in the iron and steel industry was a major factor in the April-May change. A seasonal slackening on June 20.

MONTHLY BUSINESS INDEXES

${ }^{2}$ Adjusted for seasonal variation.
I From marketings of farm oroducts.
has been evident in a number of major industries; in the automobile industry the June recession has apparently exceeded the usual seasonal decline but steel production remained high.
The most pronounced recent gains have been in the field of retail trade. May returns reveal a marked increase in the volume of sales through retail stores, and preliminary reports for June indicate that these have been maintained or extended during the current month. While possibly influenced by the volume of Government expenditures, the sales increases are based largely on the gradual rise in consumer income and the willingness to spend more freely, the latter situation being evidenced particularly by the volume of sales of products of the type which are generally sold on the basis of deferred payments.

Stock prices have moved higher during the month while both corporate and Government bonds have been firm. Private capital financing increased, but it was overshadowed by the huge Treasury operations incident to the June 15 financing. The public debt reached a peak at approximately $\$ 34,000,000,000$. The new tax bill, carrying provisions which will result in a large increase in taxes on corporations and inaugurating the taxation of undistributed corporate surpluses, was enacted by Congress just before the close of the session

## Graphic Comparison of Principal Data

# Commodity Prices 

THE downward trend of the general wholesale trends．Moody＇s index of 15 commodities，for example， price level which extended from January to the which had fallen from 172 in the latter part of April middle of May has been checked，and prices have moved moderately higher during recent weeks．The major factor in this movement has been the reversal of the trend of prices of farm products and foods，which had previously been moving steadily lower．Recent price changes in these latter groups have been in－ fluenced by the deterioration in crop prospects as a result of unfavorable weather．Other influences work－ ing against price declines are the increased demands accompanying the relatively favorable business trends， the large issue of bonds to veterans，and the cash dis－ bursements connected therewith．
The recovery in prices in the latter part of May was not sufficiently large to prevent the Bureau of Labor Statistics monthly wholesale price index from declin－ ing further．The recession in this index from April to May was 1.4 percent，or about half of the total drop experienced in the 5 months January to May．The index reached a low of 78.1 in the week ended May 16 ， and subsequently recovered to 78.7 in the week ended June 20.
The more volatile price indexes have naturally ex－ perienced a rather wide swing with the recent shifting
to 163 at the end of May，has since recovered to 168. Wheat has moved up about 10 cents a bushel，and other grains have also risen；hog prices have advanced； and cotton has gone above 12 cents a pound．
Further price increases in farm products are ex－ pected by the Bureau of Agricultural Economics．Pro－ ducts for which seasonal or other price advances are expected－wheat，corn，eggs，hogs，and high－grade steers－are in the aggregate considerably more im－ portant in the Bureau＇s index of farm prices than are the fewer products－lambs，potatoes，poultry，and low－grade steers－for which price declines are indicated．
Despite the declines in wholesale prices in May，the cost of living rose 0.4 percent，according to the index of the National Industrial Conference Board．The rise was due to substantial increases in retail food prices and in rents，the latter having advanced 1.6 percent from April to May．Prices of clothing，coal， and sundries declined．
Fairchild＇s index of retail prices of department－store articles remained unchanged in May；in fact，for the first time it has held at the same figure for 3 consecu－ tive months．

${ }^{1}$ Revised．Bee p． 20 of the November 1934 issue．

## Domestic Trade

IMPROVEMENT in retail sales has been widespread in recent weeks. Reports for May reveal substantial gains in sales through retail stores, and these have been extended further during June. While the "bonus" payment, involving the distribution to veterans of more than $11 / 2$ billion dollars in bonds convertible into cash, has undoubtedly been a factor, the expansion is based also on the further rise in consumer income derived from current production.

Retail sales so far during 1935, on the basis of the available monthly statistics, are estimated to have exceeded those of a year ago by about 10 percent. If this rate of gain continues through the latter half of the year it would mean a total volume of sales through retail stores in 1936 of about $\$ 35,900,000,000$. This compares with a figure of $\$ 25,037,000,000$ for the year 1933, the depression low.

In May, department-store sales increased contrary to the usual seasonal movement. The adjusted index rose to 88 , equaling the figure for March which was the highest reported since August 1931. The best record for the April-May period (on a seasonally adjusted basis) was in the Richmond district, with the middlewestern districts as a group showing the next best gains. The increases in the eastern districts were moderate, while declines were shown for the two southern districts of Atlanta and Dallas and the west coast area.
For the 5 -month period January-May, the percentage gains in department-store sales in the various
reserve districts over those of a year ago were remarkably uniform. Eight out of the 12 districts reported a gain of 9 percent, 3 reported increases of 10 percent, and 1 a gain of 13 percent. On the basis of the extent of recovery from the depression low, however, there is still a considerable disparity. Sales in the Boston, New York, and St. Louis areas have recovered from 30-40 percent of the loss experienced during the depression; in Philadelphia, Chicago, and San Francisco, the recovery has been between 40 and 50 percent; in CleveIand, Kansas City, Minneapolis, and Dallas, it has been between 50 and 60 percent; in Atlanta the recovery has been nearly 70 percent; and in Richmond, due partly to the unusually sharp gain in May, 85 percent of the loss had been regained.

The department-store figures reflect the trend of sales in the larger cities. The Bureau's index of sales of general merchandise in rural areas, however, reveals an improvement in the nonurban regions also. The seasonally adjusted index rose 3 percent from April to May, and for the January-May period sales were 10.5 percent ahead of a year ago. This gain is only slightly larger than the increase of 9 percent reported for the department stores. Sales of general merchandise in rural areas have more than doubled in comparison with the depression low, while sales of reporting department stores have increased 54 percent on the same basis of comparison.

## Employment

BASED on data collected from more than 135,000 manufacturing and nonmanufacturing establishments, the Bureau of Labor Statistics estimates that over 91,000 more workers were employed in mid-May than in mid-April in the industries covered by their monthly surveys, and that weekly pay rolls were $\$ 6,900,000$ larger. This was the third consecutive monthly gain in the number at work in these industries, but the increases have not yet sufficed to restore employment in the reporting industries to the level of last December when the number at work was increased, as usual, by the large number of temporary jobs in retail stores. If, however, account is taken of employment changes since December in agricultural workers and certain others not covered by the Bureau's statistics, there can be no doubt that the number employed in May attained a new peak for the recovery period.
In the manufacturing industries, employment in May increased 0.6 percent over April instead of declining as is customary at this season of the year. The number at work in factories was larger than at any time since October 1930, on a seasonally adjusted basis.
The difference between employment in the durable and nondurable goods industries, as related to the 1923-25 average, has lessened in recent months. Continuing the irregular upward trend which has been
in evidence for the last 18 months, the index of employment for the durable-goods industries in May reached 79.1, a gain of 1.9 percent over April, and the highest monthly figure since October 1930, while the index of employment in the nondurable goods industries receded 0.5 percent to 92.6 . A year ago, these indexes were 71.4 and 91.8 , respectively.

Of the 90 manufacturing industries surveyed regularly by the Bureau, 51 showed employment gains in May as compared with April, while for 65, pay rolls were larger. Numerous employment gains of a seasonal character were reported, including those in the industries allied to building construction. Contraseasonal gains were experienced in the blast furnacesteel works-rolling mill industry ( 2.9 percent) and in furniture plants ( 1.2 percent).
Among the 16 nonmanufacturing industries from which data are regularly collected, 12 reported increased employment in May as compared with April. Seasonal gains took place in employment in private building construction, quarrying, dyeing and cleaning, and laundries. The 5.7 -percent rise in the number at work in metal mines was an extension of the increases reported in each of the past 10 months. Employment in retail-trade establishments was about the same as in April, when the number of workers was augmented in response to spring and Easter shopping.

## STATISTICS OF EMPLOYMENT, PAY ROLLS, AND WAGES

| Year and month | Factory employment and pay rolls |  |  | Nonmanufacturing employment and pay rolls (Department of Labor) |  |  |  |  |  |  |  |  |  | TradeUnion members em-ployed ployed | Wages |  |  |

## Finance

OVERSHADOWING other developments of the month were the Treasury operations, resulting in a cash and paper turn-over on June 15 which was probably the largest in peace-time history. The turn-over, according to a Treasury announcement, approached $\$ 6,000,000,000$ and included receipts on account of the cash subscriptions to the $23 / 4$ percent 1951-54 bonds and the $13 / 8$ percent notes amounting to $\$ 1,106,000,000$; the retirement of maturing notes aggregating $\$ 1,025,000,000$ and the issuance of new securities in exchange; and the issuance to veterans of bonds with a face value of approximately $\$ 1,600,000,000$.

The activity of the Treasury was reflected by the usual changes in items in the statements of the Federal Reserve banks and of the reporting member banks. Member-bank balances showed increases during May and early June due to gold imports and expenditures by the Treasury of its deposits with the Federal Reserve banks. The mid-June financing, which added over $\$ 1,000,000,000$ to the Treasury's holdings of cash, the income-tax payments, and the cashing of the veterans' bonus checks were mainly accountable for the sharp drop in excess reserves of member banks. The Treasury's holdings of cash and deposits with the Federal Reserve banks rose $\$ 964,000,000$ in the week following the financing, while the total of money in circulation rose $\$ 111,000,000$. The latter was due in large measure to the bonus payments.

As a result of the subscriptions to the Treasury's offering, the combined statement of the weekly reporting member banks showed a sharp increase in the holdings of United States Government obligations.

Holdings of other securities increased $\$ 62,000,000$ in the week ended June 17. From the middle of May to the middle of June "other" loans, which are mostly business loans, rose $\$ 49,000,000$. During the same period the combined effect of increased security loans, commercial loans, and investments in Government and other securities was to increase the total volume of loans and investments by $\$ 839,000,000$.

Private financing was also undertaken in considerable volume during June. No change is apparent in the market for new issues; in general, the securities offered have been absorbed by investors, despite the low coupon rates. The recent issues are largely for the purpose of refunding existing obligations.

Prices of listed securities have displayed a firm tone during June. Some of the more sensitive stock price indexes have advanced to a high for the recovery period, although Standard Statistics' index of 419 stocks as of June 24 was still somewhat under the peak established in April at the climax of a year-long advance. The market has been stimulated by the improvement in business during the second quarter, which will be reflected in the earnings statements made available in July and August. Numerous dividend increases have been announced, causing Moody's index of dividend rates to continue its steady upward movement. The volume of trading in stock has remained low throughout the month.

Bond trading has also been in relatively small volume in June, with representative bond indexes tending to move slightly higher.

## Foreign Trade

EXPORTS increased 4 percent from April to May, contrary to the usual seasonal trend, while imports receded 6 percent, or approximately the estimated seasonal change. These shifts resulted in a net merchandise export balance of $\$ 9,556,000$, the first reported since January. In April, the excess of imports amounted to $\$ 10,160,000$ and in May 1935, the import balance was $\$ 5,074,000$.

Allowing for normal seasonal influence, exports reached 56 percent of the 1923-25 average in May, the highest level attained since May 1931 with the single exception of last November. Imports, after seasonal allowance, were 58 percent of the 1923-25 average, unchanged from the preceding month.

Although increases in exports in May over those of a year ago were chiefly distributed among the nonagricultural products, agricultural exports were approximately $\$ 5,000,000$ larger in value. Raw cotton shipments increased $3 \frac{1}{2}$ million dollars while fruits and miscellaneous agricultural products, such as oilseeds, refined sugar, and vegetable oils, increased approximately 2 million dollars. Exports of meats, animal fats, and grains showed some increase compared with the preceding month, but they were smaller in value than in May a year ago. Unmanufactured tobacco exports were slightly larger in quantity but smaller in value than in May 1935.

Nonagricultural exports were valued at 32 million dollars more than in May 1935. Exports of refined mineral oils and of metals and metal manufactures, each increased approximately 5 million dollars. Machinery exports, including electrical apparatus and agricultural implements, increased about 8 million dollars, while automobile exports, including parts and accessories, increased 4 million dollars. Widespread gains among the other major groups of export commodities (many of considerable size) account for the 10 -million dollar increase in all other nonagricultural commodities combined.
The increase in imports for consumption, as compared with May a year ago, was approximately 22 million dollars. Nonagricultural imports increased approximately 14 million dollars, agricultural raw materials increased about 8 million dollars, sugar and related products about 6 million dollars, beverages about 1 million dollars, while grain, feeds, dairy products, and animal fats, declined nearly 5 million dollars. In May, for the first time this year, vegetable oil and oilseed imports were smaller in value than in the corresponding month of last year. Meat imports continued to be slightly larger in value than in 1935.

During the first 5 months of the year imports of nonagricultural products increased 18 percent and imports of agricultural products increased 14 percent.

EXPORTS AND IMPORTS

[^1]: General imports through December 1933; imports for consumption thereafter.

# Real Estate and Construction 

THE improvement in the construction industry this 1933 , the percentage without work was 72 and, of the spring has resulted in a drop in the percentage of unemployed members of the building trade unions from 52 percent of the total at the midwinter seasonal low to 34 percent in May, and probably to a smaller percentage in June. The May figure indicates the highest level of employment among union building workers since 1929 , a rather surprising fact when consideration is given to the much lower volume of building operations this year than in the earlier period. Nevertheless, at the seasonal high in 1930, sample data of the American Federation of Labor show that 37 percent of the total membership of the building trade unions were unemployed, or 3 percent more than were idle in May of this year. It is also interesting to note that in 1928, the peak year of building operations (see the article in the April 1936 issue of the Survex), the number reported as unemployed averaged 27 percent of the total membership and in May 1928 the figure was 25 percent.

No doubt the number of persons employed part time represents a larger proportion of the total at present than in these earlier periods, but the American Federation of Labor statistics do not separate the part- and full-time workers prior to 1931. In May 1936, 35 percent of the total membership were on full time and 31 percent on part time. At the depression low in March in its monthly bulletin.

## BUILDING MATERIALS, CONSTRUCTION, AND REAL ESTATE

28 percent with jobs, half were working part time.
The F. W. Dodge Corporation statistics on construction contracts indicate that awards during May were less than in April, with both publicly financed and privately financed contracts declining. For residential construction, however, there was a further increase in the value of awards, due mainly to the increase in the apartment classification.

Reports on the real-estate market indicate continued improvement in rental and vacancies. These reports receive some verification from the increase in house rents. The National Industrial Conference Board index of rents has risen nearly 4 points since last December (from 73.4 to 77.1 ); this is the widest advance made in a similar period since the index turned upward in 1934.

The statistics on the lending activities of the building and loan associations for April provide some interesting comparisons. Of the total mortgage loans on 1 - to 4 -family homes by all reporting associations in the United States 25 percent were for construction, 31 percent for home purchase, 35 percent for refinancing, and 9 percent for repairs and reconditioning.

Detailed statistics, by States, have been compiled by the Home Owners Loan Corporation and published by the Home Owners L
in its monthly bulletin.

## Transportation

ONE of the significant developments of the month was the decision of the Interstate Commerce Commission extending the emergency freight surcharges, with some downward revisions, until the end of 1936. According to present estimates, the reductions will not seriously affect the probable revenues to be derived from the surcharges, excepting possibly those of some of the eastern roads with a heavy volume of coal traffic. In extending the emergency rates for 6 months only the Commission stated: "* * * that the emergency charges played a part in diverting considerable traffic from the rail carriers we think is established by the record * * * to grant the applicant's petition and permit continuance of the charges indefinitely would no doubt bring about considerable additional diversion * * *." The Commission further observed that "** * * it should be definitely understood that we adhere to the view that general rate increases, particularly for indefinite duration, are an inadequate and dangerous method of meeting current problems of the railroads. The extension is permitted only because other and more permanent avenues of improvement in the railroad situation, principally for causes beyond applicant's control, have not had time enough as yet to operate effectually."

Freight traffic continues to gain but slowly. The rise during the first 3 weeks of June has been in line with the usual seasonal change; the seasonal adjusted only 1,479 cars.

# Automobiles and Rubber 

WHILE the trend of automobile production is downard and may be expected to continue in this direction through the third quarter, June production will record a very considerable gain over the June 1935 total. In fact, if present estimates of a total production of 430,000 units are borne out, the current month's production will be the best June total on record, save that reported for June 1929. Production has held very steady around 100,000 units a week throughout the month with shifts by individual manufacturers largely canceling out with little net effect on the total. The estimated June figure would mean a moderate reduction in the seasonally adjusted index of production for this month.
These manufacturing shifts by individual producers have been made to adjust production to current sales as trade reports indicate that production and retail deliveries are closely alined. Final data for May reveal that sales in that month were higher than indicated by the preliminary registration data. R. L. Polk \& Co. twice revised upward its May registration total as more complete returns from rural areas were received. Based on complete reports, registrations of new passenger vehicles amounted to 392,750 units, which was slightly below the April figure, but constitutes the highest May figure reported since 1929.

To what extent the payment of the adjusted service certificates held by World-War veterans has con-
tributed to the recent sales results, it is, of course, impossible to determine, particularly at this early date. That the industry expects to benefit very materially as a result of this transaction is very evident from the comments in the trade press, and such purchases may very well cushion the summer decline in sales.
Total United States production of automobiles for the first half of the year will not fall far short of $2 \frac{1}{2}$ million vehicles, or nearly double the total produced in the full year 1932. The increase over the first half of 1935 is about 10 percent. The production of commercial cars, trucks, and road tractors during the same period established a record for the first half of the year.

Judging by the statistics of crude consumption, activity in the rubber-manufacturing industry in May was maintained close to the high level reached in the preceding month. In view of the disturbed labor conditions in the industry, it is possible that part of the output may be going into manufacturers' stocks, but current data or inventories are not available. In April, stocks of pneumatic casings were about $2,000,000$ less than at the end of April 1935. A year ago, however, stocks had been built up to an unusually high figure. Stocks of crude rubber, both in the United States and abroad, have been reduced very materially since the middle of 1935 .

## Iron and Steel

PRICE advances have again operated to increase temporarily the volume of steel output. Orders placed in anticipation of higher third-quarter prices have, with other factors, been sufficient to cause a gradual increase during June in the weekly rate of ingot production. Output for the month may be the largest for the recovery period and second-quarter production will probably be the best for any 3 -month period since the early part of 1930 . The price factor may operate as a stimulating influence in July since deliveries against orders placed at prevailing prices will not be completed in June.

While the continued expansion in production at a time when consumption by the major steel consumerthe automobile industry-is declining may be attributed in part to the influence noted above, it is a fact worthy of particular note that consumption of steel in many industries is being maintained or actually increasing. The machinery and electrical equipment industries, for example, are using more steel. The index of foundry equipment orders rose to 165 in May $(1922-24=100)$, a figure 65 percent above that of a year ago and the largest volume of orders received since 1930, excepting the unusual month of March 1931. In 1932 these orders had dropped to less than one-fifth of the average in the base period. Machine-tool orders show a similar large gain over those of a year ago, but

May orders from domestic concerns were lower than in April, when new business spurted sharply. The May decline was offset in part by a gain in foreign business. Orders for woodworking machinery have also increased markedly this year, although the recovery in this industry has not been so marked as in many other machinery lines.

The available monthly data on other steel consuming industries of similar type all record substantial gains this year. Orders for fabricated steel plate, fabricated structural steel, track work, electric cranes, and mechanical stokers have all increased very markedly, thus providing additional evidence of the gradual spread of recovery through the "capital goods" industries. At the same time the steel requirements of the industries producing durable consumers' goods, such as domestic oil burners, domestic refrigerators, and vacuum cleaners, have also tended upward.
The steel ingot rate in May was higher than indicated by the weekly estimates, daily output moving up to 70.91 percent of capacity, against 69.09 in April. Thus, the estimated daily output for the secondquarter is at the rate of 70 percent of capacity, or 89 percent of the daily average production in 1929. The seasonally adjusted index of production may be expected to rise sharply for June, since the usual seasonal movement at this period is downward.

# Expansion in the National Income Continued in 1935 

By Robert R. Nathan, Chief, Income Section, Division of Economic Research

LARGER income in each of the 12 major industrial divisions into which the industries of the Nation have been classified served to increase the total national income produced to 53 billion dollars in 1935, or 4.6 billion dollars more than in 1934, and to increase the national income paid out 3.4 billion dollars to a total of 53.6 billion dollars in 1935. The substantially larger rise in income produced than in income paid out led to a reduction in negative business savings ${ }^{1}$ from 1.8 billion dollars in 1934 to 0.6 billion dollars in 1935. In each industrial division the 1935 gain in income produced was larger than in income paid out. Except for slight declines in interest and in work relief wages, each type of income payment recorded an increase over that of 1934. Per capita incomes also increased appreciably in 1935. For some industries and types of payment the gains in 1935 were not so large as in 1934, but the improvement was more widespread in 1935 than in the preceding year.

## Nature of the Estimates.

Estimates presented in the following tables have been prepared by the Department of Commerce as a continuation of the work initiated in this field of inquiry several years ago in response to a Senate resolution requesting a study of the national income. ${ }^{2}$ The basic concepts and scope of the estimates included herein are substantially unchanged from those followed in preparing previous estimates. Available space does not permit a comprehensive discussion of the concepts involved in the estimates, but a brief review of the definitions will help to clarify the meaning of the terms used for those who have not read the earlier publications.
The "national income produced" may be defined briefly as the net value of goods and services produced in any one year, and represents the value of all commodities produced and services rendered, less the value of the stock of goods in the form of raw materials and capital equipment which has been consumed in the processes of production. In the production of these goods and the rendering of these services, the individuals of the Nation contribute productive efforts or

[^3]services in the form of labor, management, and the furnishing of capital. The payments to, or receipts by, individuals in the form of wages, salaries, interest, dividends, entrepreneurial withdrawals, and net rents and royalties for these services comprise what is termed the "national income paid out." If the income produced in any one year is in excess of the income paid out, then the business enterprises have retained a portion of the net product and this excess is termed "business savings", or, more precisely, "positive business savings." If, on the other hand, the income produced is smaller than the income paid out, then the business enterprises of the Nation have maintained income payments by drawing upon their capital and

Figure 1.-National Income Produced and Paid Out.
surplus and these drafts are termed "negative business savings." Both income paid out and positive or negative business savings are estimated directly, whereas income produced is determined by adding positive savings to, or deducting negative savings from, income paid out.
In the earlier publications the term "business losses" was used instead of "negative business savings" and the change was made after considerable thought and consultation, because of the misleading nature of the former term. While the new term is not entirely satisfactory, it will better serve the present needs than did the earlier one. ${ }^{3}$ The estimates of positive and negative business savings should not be confused with figures of profits or losses of business enterprise as

[^4]ordinarily used, since the former represent the residual gate income payments declined to 44.9 billion dollars after the disbursement of dividends by corporations, and entrepreneurial withdrawals by unincorporated enterprises, whereas the latter is commonly regarded as the amount available for dividends or withdrawals. It is well to note further that the actual estimates of positive or negative savings are deficient for the purpose of adequately measuring the accumulations of, or drafts upon, capital and surplus from current operations. This is because of the limitations inherent in data based upon the inconsistent and variable accounting practices which are followed by different business establishments, and also because basic data from business income statements do not yield entirely satisfactory figures for use in a study of the national income. Moreover, the lack of basic data precludes the making of satisfactory estimates of business savings of individuals, and hence these estimates are subject to much wider margins of error than are the estimates of corporate savings.

## Income Produced and Paid Out Nearly Balance in 1935.

In 1935, for the third consecutive year, the national income produced recorded a substantial gain. The net value of goods and services produced increased from 48.4 billion dollars in 1934 to 53.0 billion dollars in 1935, a gain of 10 percent. The 1935 estimate, as shown in table 1, compares with 39.5 billion dollars in the low year of 1932 and 81.0 billion dollars in 1929. The gain of 13.4 billion dollars, or 34 percent, from 1932 to 1935 is equal to approximately one-third of the drop which occurred from 1929 to 1932. Despite this gain, the 1935 total is still more than one-third below the 1929 level, although the real income is much higher relative to 1929 because of the decline in prices which will be discussed later.

| Business savings of individuals. |  |  |  |  |  |  |  |
| Income paid out.-.----------- | 100.0 | 92.8 | 78.5 | 61.5 | 57.2 | 63.8 | 68.1 |
| Bureau of Labor Statistics |  |  |  |  |  |  |  |
| cost of living index-------- | 100.0 | 97.9 | 89.5 | 80.8 | 76.2 | 78.7 | 81.1 |
| Bureau of Labor Statistics wholesale price index. | 100.0 | 90.7 | 76.6 | 68.0 | 69.2 | 78.6 | 83.9 |

The 3.4 -billion-dollar rise in the national income paid out in 1935 brought the total to 68 percent of the 1929 total. From a peak of 78.6 billion dollars in 1929, aggre-
in 1933. From 1933 to 1935 income paid out increased by 8.6 billion dollars, or 19 percent. Thus, more than one-fourth of the decline from 1929 to 1933 has been regained through the subsequent rise. If work relief wages are eliminated from the estimates, the increase from 1933 to 1935 has been approximately 8 billion dollars.

Of particular significance is the marked decline which has taken place since 1932 in negative business savings. The year 1929 was the last in which income produced was larger than income paid out. In each year subsequent to 1929 the income disbursed has exceeded the income produced. The estimated negative savings of approximately two-thirds of a billion dollars in 1935 are about one-third as large as in 1934; they are less than 8 percent as large as in 1932; and they are the lowest of any year of the depression. In 1932 only 82 percent of the national income paid out came from the income produced by the business enterprises of the Nation, the remaining 18 percent representing negative business savings. In 1935 the income produced equaled nearly 99 percent of the income paid out. Although part of this sharp reduction in negative business savings since 1932 is due to the increased valuation of inventories as a result of the advance in prices, nevertheless the change reflects not only the basic improvement which has occurred during that period but also serves to indicate an early return to the point where the business establishments of the country will, as an aggregate, be able not only to pay dividends but also to enjoy positive business savings.
The estimates of corporate savings and business savings of individual entrepreneurs are shown separately in table I because of the variation both in the methods of preparing the estimates and in their probable degree of accuracy. Although both series are subject to serious limitations because of the nature of the basic data, nevertheless the bases for the estimates of business savings of individuals are much less satisfactory than are those for the estimates of corporate savings. The estimates for unincorporated establishments are influenced largely by data on agriculture, a field of activity in which the lack of information necessitates the use of many questionable assumptions.

## Price Changes Influence Income Fluctuations.

Variations in the dollar volume of the national income are highly significant in measuring the cyclical movements of the economic activities of the Nation. More important, however, is a measure of the physical volume of goods and services produced, since changes in real income more satisfactorily serve to indicate the nature and extent of changes in the productivity of the national economy and the amount of product distributed. There is, however, no common unit for combining all of the various types of goods and services produced
other than the monetary unit; and, unfortunately, there are no price series which are adequate for converting the dollar volume of the national income into the physical volume. The Bureau of Labor Statistics indexes of wholesale prices and of the cost of living are not suitable for adjusting the income totals for price variations. The wholesale price series is no doubt too sensitive for adjustment purposes, since it represents only commodity prices and takes no account of the prices for different types of service, whereas the national income produced consists of both goods and services. To properly convert the dollar volume of all goods and services produced to their physical volume a series of representative price indexes for each type or group of commodity or service would be needed. The cost-ofliving index, another that is sometimes used for want of a better measure, refers only to urban wage earners and therefore has serious limitations for use in adjusting for price fluctuation the total income paid out. In order to provide a satisfactory base for determining changes in the real purchasing power of income received by individuals, the cost-of-living index would have to be representative of the whole population. Fully recognizing the shortcomings of these indexes, they may nevertheless be used to indicate very roughly the influence of price changes upon the national income.

It is evident from the figures shown in table 1 that there was a marked contraction in the quantity of goods and services produced and distributed in 1932 as compared with 1929, and a substantial increase thereafter.

## Fluctuations in Types of Payments.

The compensation of all employees rose more than 7 percent in 1935, whereas total dividends and interest payments increased 2 percent. Income receipts of employees in 1935 were 70 percent as large as in 1929, while bondholders and stockholders in 1935 received 65 percent as much as in 1929. From the low in 1933 to 1935 the compensation of employees increased 23 percent and property income rose 5 percent. Entrepreneurial withdrawals rose 8 percent in 1935, and were 70 percent as large as in 1929 . Preliminary data indicate an increase of approximately 10 percent from 1934 to 1935 in net rents and royalties.

In those industries for which salaries and wages can be segregated, the greater rise in wages than in salaries in 1935 further reduced the disparity in the movement of these two series which had accumulated during the declining phase of the cycle. Wages increased 13 percent in 1935 in these industries (manufacturing, mining, construction, steam railroads, Pullman, railway express, and water transportation), while salaries increased 5 percent. The decline from 1929 to 1932 was 59 percent in aggregate wages and 40 percent in aggregate salaries. From 1932 to 1935 wage payments rose 45 percent, while salary payments in 1935 were but slightly
higher than in 1932; as a result, these two series bore approximately the same relationship to each other in 1935 as in 1929. The trend of neither wages nor salaries in the selected industries can be used as representative of the trend of either wages or salaries in all industries, since the effects of the depression were more pronounced in those industries wherein salaries and wages can be segregated than in the other industries.

| Table 2.-National Income Paid Out by Types of Payment |

| Item |

1 Includes mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation
${ }_{2}$ Ineludes pay rolls and maintenance of Civilian Conservation Corps enrollees and pay rolls of Civil Works Administration, Federal Emergency Relief Administration and Works Progress Administration work projects plus administrative pay rolls outside of Washington.

3 Includes also net balance of international flow of property incomes.
Work relief wages declined from 1,389 million dollars in 1934 to 1,313 million dollars in 1935. This drop occurred because the increase in the compensation of employees in the Civilian Conservation Corps and on the Federal Emergency Relief Administration work projects and the pay of employees on the new Works Progress Administration projects were not sufficiently large to offset the pay rolls of the Civil Works Administration, which exceeded half a billion dollars during the early months of 1934, and which ceased entirely when the program was discontinued before the middle of that year.

Dividends rose 11 percent in 1935, but the total disbursements of this type of payment to individuals in 1935 were only 47 percent as much as in 1929. From the low in 1933, dividend payments have risen nearly 30 percent. Interest payments continued to decline in 1935 for the fifth consecutive year. Although the 1935 figure marked the low point for the period covered, it was only 13 percent below that of 1929 , thus revealing the marked stability in this type of income payment relative to the other types. The refunding of securities at lower interest rates and the continued defaults on
long-term obligations led to the moderate decline in interest payments in 1935.
Employees' Share of Total Income at New Peak.
Of the total national income paid out in 1935, more than 67 percent was distributed as compensation for

Figure 2.-Percentages Distribution of Income Paid Out, by Type of Payment.
labor services in the form of salaries, wages, and other labor payments. This proportion compares with 65.5 percent in 1929 and with 64 percent in 1932. Even when work relief wages are excluded entirely from the income estimates, the share of employees was larger in 1935 than in any other year covered by this study. There is no way in which the compensation of all employees can be classified as between wage earners and salaried workers and officers of corporations, nor between groups of employees according to sizes of income, so that it is not possible to evaluate the changes which have taken place for each employee group. However, from 1929 to 1933 the decline in the compensation of corporation officers as shown in Statistics of Income, 1933, closely paralleled the decline in the compensation of all other employees.
The proportion of total income paid out in the form of interest and dividends declined to a new low in 1935 at 13.6 percent as compared with 14.3 percent in 1929 and a peak of 16.5 percent in 1932. In 1935, dividends
increased slightly in relative importance and interest declined. Net rents and royalties improved relatively in 1935, but remained considerably below the 1929 proportion. Work relief wages accounted for 2.5 percent of the total income paid out in 1935 and for 2.8 percent in the preceding year.

${ }^{1}$ Includes pay rolls and maintenance of Civilian Conservation Corps enrollees and pay rolis of Civil Works Administration, Federal Emergency Relief Administration, and Works Progress Administration work projects plus administrative pay rolls outside of Washington.
${ }_{2}$ Includes also net balance of international flow of property incomes.
Construction and Manufacturing Show Largest Gains in Income Produced.

Income produced was larger in 1935 than in 1934 for each of the 12 major industrial groups into which the data have been classified. Gains of 10 percent or more occurred in the construction, manufacturing, finance, agriculture, and service industries. Although the gains tended to be relatively larger in those industries which had suffered the greatest declines, nevertheless the net declines from 1929 to 1935 varied considerably from one group to another. In 1935, relative to 1929, income produced ranged from 30 percent in the construction and 47 percent in the mining industry to 72 percent in the communications industry and 74 percent in the electric light and power and manufactured-gas industry. From the low point in 1932, income produced in agriculture more than doubled, and regained more than half of the previous decline. In manufacturing, also, the net value of products more than doubled from 1932 to 1935, recovering 42 percent of the drop from 1929 to 1932.
For Government service it is not possible to estimate business savings, and therefore it has been assumed that income paid out is equal to income producedthat is, that the value of services rendered by all governmental agencies is equal to income payments made by these agencies. Including work relief wages, gov-ernment-income disbursements were 27 percent higher in 1935 than in 1929. If work relief wages are excluded, the increase for this period was 8 percent. Except for a slight decline in 1932, total income paid out by all governmental organizations has increased steadily since 1929. In 1935, work relief wages accounted for approximately 15 percent of the total income paid out by governmental agencies.
As a percentage of the total, agriculture's share of the national income produced reached a new high in

[^5]1935 at 9.1 percent, as compared with 8.9 percent in 1929 and 5.9 percent in 1932. Manufacturing accounted for 23.8 percent of the total in 1929, 14.2 percent in

Figure 3.-Percentage Distribution of Income Produced by Industrial Divisions.

1932, and 21.4 percent in 1935. The contribution of government service rose from 8.4 percent in 1929 to 18.1 percent in 1933, and declined thereafter to 16.3

percent in 1935. For most industries the changes from 1934 to 1935 tended to bring them more in line with their 1929 relative positions.

All Industrial Divisions Disbursed More Income in 1935.
Total income payments in each industry were larger in 1935 than in 1934, with the gains varying from a fractional rise in the electric light and power industry to an increase of more than one-fourth in the construction industry. Despite the large percentage change in 1935, income paid out in that year by the construction industry was only slightly more than one-third of that paid in 1929. For all other industrial divisions, income disbursements in 1935 were more than one-half as large as in 1929, and in 5 of the 12 groups payments in 1935 varied from approximately two-thirds to five-sixths of the 1929 levels. Both the electric light and power and manufactured-gas and the communications industries paid out in 1935 over five-sixths as much as in 1929. The 1935 changes tended to reduce the disparities which had previously existed as a result primarily of the variations in the rates of decline from 1929 to 1933.

## Per Capita Incomes.

Estimates have been prepared of the number of employees in each year for the purpose of determining the trends of per capita incomes. Wherever data permitted, the employees have been converted to their full-time equivalent number, so that the comparisons of per-capita incomes from industry to industry and from year to year would more closely approximate the true variation in rates of annual earnings. As a result
of these adjustments, which in many instances must be based upon dubious assumptions, the figures have only limited use in reflecting employment changes, and, as indicated above, are not computed for that purpose. Per-capita incomes are determined by dividing the number of employees as shown in table 6 into the aggregate salaries and wages as shown in table 2. The number of entrepreneurs, including both employers and self-employed individuals, is not shown in table 6, but there is evidence to indicate that their number has varied from 9.5 million to 10 million during the period under review.

| Bureau of Labor Statistics cost of living index | 100.0 | 97.9 | 89.5 | 80.8 | 76. 2 | 78.7 | 82.1 |

[^6] full-time equivalent numbers for industries in which data permit such adjustments. ${ }^{2}$ Does not include employers and self-employed persons, such as farmers, merchants, independent professional practioners, etc.
${ }_{3}$ Includes mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation.

In interpreting the per-capita income figures it is most important to note that they do not represent the average incomes of all employable persons, or even the average income of those who worked at any time during the year. Rather, they approximate the average earnings of employees engaged throughout the
year. The average income of full-time employees dropped from $\$ 1,466$ in 1929 to $\$ 1,097$ in 1933, a decline of 25 percent. From 1933 to 1935 the average rose to $\$ 1,201$, thus increasing 9 percent and recovering 28 percent of the previous decline. The trend of the index of per-capita earnings of all employees and the trend of the Bureau of Labor Statistics cost-of-living index were very similar. In most years the indexes were within one point of each other, and in no year were they more than two points apart. The figures suggest that the real purchasing power of those who continued in full-time employment throughout the depression did not vary greatly. It is likely, however, that the trend in the annual rate of pay varied considerably from one industry to another and from one income level to another, so that such broad generalizations in reference to the purchasing power of all employees must be subjected to numerous qualifications.

The amplitude of the fluctuation in per capita wages appears to be considerably larger than the amplitude of the variations in per capita salaries. From 1929 to 1933 average wages in the industries for which salaries and wages could be segregated declined 34 percent, while average salaries declined only 21 percent. During the next 2 years per capita wages increased substantially while per capita salaries varied but slightly, and as a result the disparity between the trends of these two series was reduced materially. Average salaries generally declined less than did the cost of living, and average wages dropped more than did living costs. It is necessary to point out that the trends in either the number of per capita incomes of the salaried employees or wage earners in the selected industries are not typical of all salaried employees or all wage earners. It is obvious from the figures and index numbers in table 6 that the employees in the selected industries suffered more severely than did the employees in the other industries.

## Estimates for 1934 and 1935 are Preliminary.

The estimates for the 2 latest years are subject to revision when the tabulations based on corporation income tax returns are completed, and data are made available from the 1935 Censuses of Manufactures, Agriculture, and Business.
Furthermore, because of revisions in the Federal income tax laws eliminating consolidated returns for 1934 and subsequent years for all industries, excepting railroads, it will probably be necessary to revise some of the earlier estimates derived from these sources.

## Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk ( ${ }^{*}$ ) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Note, however, that many revisions have occurred since the last Annual Supplement was published. A special supplement was included in the April 1935 issue, pages 57 to 72 , inclusive. This supplement gave the monthly averages of all current series for the years 1932, 1933, and 1934.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for seasonal variation.

Data subsequent to May will be found in the Weekly Supplement to the Survey.

- Revised.
*New Series. See pp. 16-19 of the May 1934 issue, casb income for marketings of agricultural products, p. 19 of the December 1932 issue, Fairchild's price index, and pp. 10 and 20 of the March 1933 issue, quantity marketings.
§ Data for June 15, 1936: Total 107, ehickens and eggs 103, cotton and cottonseed 96, dairy products 106, fruits 115, grains 87 , meat animals 120, truck crops 99 , iscellaneous 120 .
$\dagger$ Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks-revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from January 1933-
June 1935. For revisions see p. 19 of the September 1935 issue. World stocks-total revised for period 1920-1935, see p. 20 of the May 1936 issue.
Monthly retail prices of coal were discontinued with the month of August 1935. Subsequent to that date the price will be shown quarterly.
T This series has been completely revised. Revised indexes for months not shown in the December 1935 issue will appear in a subsequent issue. Index computed every 2 weeks: monthly index is figure taken nearest the middle of the month; prior to Aug. 15, 1933, index computed once a month.
$\triangle$ See foot noote on p. 24 marked, " $\delta$ ".

${ }^{n}$ Revised.

* New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1833 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. For Home Loan Bank loans outstanding for period December 1932-January 1936 see $p$. 19 of the Aprill 1936 issue.
 Ink indexes from January 1922 to May 1934 appear on p. 19 of July 1935 issue. Data prior to May 1934 on "all other" radio and magazine adverting not pabished. See special note below on foreclosures. Data on $H$. O. L. C. loans outstanding for period September 1933-January 1936 are shown on p. 19 of the Aprine
$\dagger$ Revised series. See p. 20 of the October 1933 issue, magazine lineage. For revised data on magazine advertising cost for the years 1933 and 1934 , see p .19 of the February 1936 issue.

Index as of June 1, 1936, 2046 .
© Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States, having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65, 857 ; 1932, 210,821; and 1933 209,003. Data were not compiled for other years. Months subsequent to Septeraber 1934 were computed by means of a link relative to keep series comparable since the fagures for these months are from a slightly different number of communities.
\#These series represent a break-down of the combined total shown in the Surver previous to September 1933. For earlier data see p. 20 of the September 1933 issue.
\# Months of May, August, and October 1935; January and April 1936 include 5 weeks; other months include 4 weeks.
$\ddagger$ For the period October 1933-February 1935, inter-bank loans that were formerly inaluded have been removed.
A Data for 1935 revised. See p. 25 of the May 1936 issue.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1982 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

- Revised.
* New series. For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Data of H. L. Green Co., Inc., prior to July 1933 will be shown in a subsequent issue. For earlier data on automobiles see p. 19 of the April 1934 issue and variety-store sales, p. 18 of the March 1934 issue. Data prior to October 1933 on prior to May 1934 ished. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. Series on air mail not available prior Revised 1934 . Series on basis of weight carried was published in the Survey for the period February 1926 to December 1933.
nex ex and grocery index of Chain Store Age were revised for period January 1932 through August 1934 . See footnote on p. 26 of the November 1934 issue.
T Monthly data from January 1932 through June 1935 are on page 20 of the July 1935 issue.
-The New York Evening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1934. See the 1932 annual supplement and monthly issues prior to December 1934.

A Data for 1935 revised. See p. 26 of the May 1936 issue.
多 Chain Store Age combined index for the period $1932-3$. included 18 companies. Beginning 1936 it was increased to 20 caused by the addition of 1 apparel and 1 shoe
company.

## ${ }^{a}$ Revised.

- New series. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note that the combined index of department-store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve banks. For districts not marked with an asterisk the series are as published in the 1932 Annual Supplement and subsequent issues. See $p$. 20 of the December 1934 issue for rural sales for period January 1929 to October 1934. For earlier data on factory employment unadjusted in detail, see p. 16 of the June 1934 issue. See p. 19 of the July 1934 issue
for factory employment unadjusted total. Data on employment in the durable and nondurable goods groups for the period January 1923 -June 1935 were shown on p. 19 of for factory employment unadjusted total. Data on employment in the durable and non
the August 1035 issue.
$\dagger$ Revised series. See p. 19 of the April 1935 issue, department-store sales, Chicago.
- The adjusted index of department-store sales (total value) was revised by the Federal Reserve Board for the years 1929 through 1934. Revised indexes for this period were shown on p. 20 of the June 1935 issue.
\& Data have been revised for the period January 1933-September 1935. Revisions not shown in the November 1935 issue appeared on p. 16 of the january 1936 issue.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

- Revis ed.
*Newseries. For earlier data on the following subjects, refer to the indicated pages of the monthly issues. New series on "Brokers' Loans" for the period January
(1929-December 1935 are shown on p. 19 of the March 1936 issue. For new series on bank rates to customers see p. 19 of the March 1836 issue. For new series on interest rates of Federal land banks see p. 20 of the April 1935 issue. Data on excess reserves for the period Sept. 1, 1931-A pril 1936 are shown on p. 20 of this issue. See footnote below on break-down of Investments and total loans. These 3 series represent a break-down of the investment total. Monthly data previous to October 1934 not available. Data on acceptances and commercial paper, on real estate, to banks and other loans represent a break-down of the "All other" loans total which was published prior to Oct. 1. 1935.
\$Figures subsequent to December 1933 represent gold certificates on hand and due from Treasury, plus redemption fund.
date are not comparable with those for earlier periods. Data for months August by the "Banking Act of 1935" approved Aug. 23, 1035 . Consequently figures since that date are not comparable with those for earlier periods. Data for months August 1934-August 1835 were incorrectly shown in the October 1935 issue.
for November 1935, in the main represent a continuation of the 101 city series published prior to the These series, according to a statement in the Federal Reserve Bulletin for November 1935, in the main, represent a continuation of the 101 city series published prior to the bank holiday. It is pointed out that although the banking crisis and subsequent developments affected these series considerably, the data reflect the course of banking developments during the disturbed period. Data on 101 cities were last shown in the May 1933 Survey for February 1933. Figures on the new basis not shown above will appear in a subsequent issue.
oclassifications have been changed and revised data prepared beginning with January 1934. These data are shown on p. 20 of the May 1936 issue.

| Monthly statistios through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

$\ddagger$ See footnote on p. 32 marked " $\delta$ "."
$\dagger$ Revised series. For earlier data see pp. 18, 10, and 20 of the July 1933 issue, insurance written and admitted assets; p. 18 of the June 1933 issue, premium collections. The nominal official gold value of the Chilean peso was changed from 3 pence gold to $1 / 2$ pence gold as of Jan. 2 , 1935.
\# Par values of foreign currencies as given on pp. 86 and 87 of the 1932 annual supplement were changed with the reduction in gold content of the United States dollar. - Quotation based on paper peso since Dec. 10, 1933 , instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 56 of the March 1934

AThe figures for "other" bonds and stocks held (book value) for the months of January and February 1934 shown as 611 and 616 million dollars, respectively, in the
anthly issues from May 1934 to April 1935 should read 514 for January and 518 for February. wonthly issues from May 1934 to April 1935 should read 514 for January and 518 for February.

| Monthly statistics through December 1931， together with explanatory footnotes and refer－ ences to the sources of the data，may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

－Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output．The series for the period January 1928 －August 1934 presented In the SURVEY covered the principal producing countries which produced the following percentages of the world total：1928， $87.9 ; 1929,87.1 ; 1930,85.5 ; 1931,82.0 ; 1932,75.5$ ； and $1933,77.5$ ． for the period May 1932 to March 1933 are on p． 33 of the June 1934 issue．Later data are shown in monthly issues．
－The item of $\$ 333,245,378$ carried by the Treasury as a credit under the trust funds for May 1935 represents a transfer of that amount from the general fund to the trust funds．Amount represents deposits of governmental agencies for which Treasury has been acting as fiscal agent．

IFor 1934 includes $\$ 2,808,221,138$ for February，$\$ 2,233,252$ for March，$\$ 409,052$ for April，$\$ 298,868$ for May，$\$ 213,447$ for June，$\$ 272,163$ for July，$\$ 268,204$ for August，$\$ 134,843$ for September，$\$ 173,702$ for October，$\$ 116,585$ for November，$\$ 132,296$ for December．For 1935 includes $\$ 123.039$ for January，$\$ 68,241$ for February，$\$ 157,326$ for March，$\$ 89,144$ for April，$\$ 96,103$ for May，$\$ 105,773$ for June，$\$ 65,219$ for July，$\$ 62,055$ for August，$\$ 62,936$ for September，$\$ 56,256$ for October，$\$ 65,780$ for November，and $\$ 70,889$ for December． For 1936 include $\$ 60,222$ for January，$\$ 43,460$ for February，$\$ 58,427$ for March，$\$ 155,254$ for April and $\$ 42,102$ for May，representing the increment resulting from reduction in
weight of the gold dollar． transfers，and sales of radios，see p． 20 of the Feb． 1936 issue．For new series on sales of produce（future delivery），see $p$ ． 19 of the April 1936 issue．

8 These figures exclude the following amounts，$\$ 499,650,000$ relief grants to States under the Emergency Relief Act of 1933 ，$\$ 500,000,000$ under the provisions of the Emer－ gency Appropriation Act of 1935 approved June 19，1934，$\$ 500,000,000$ under the provisions of the Emergency Relief Act of 1935 approved Apr． 8 ， 1935 and other allocations to Federal agencies．
$\dagger$ Revised series．All series of corporation profits revised for period 1928－35．Revisions not in the June 1936 Survey will appear in a subsequent issue．The data of the Reconstruction Finance Corporation has been revised to include the statistics of certain loaning agencies of the Corporation not included heretofore and for revisions natie in recent audits．Revised data for February $1932-J u n e 1935$ ，inclusive，are shown on $p$ ． 20 of August 1935 issue．The data have been recently revised again，revisions nut

${ }^{4}$ Revised. Neries. For earlier data see p. 20 of the August 1934 issue, yield on United States domestic long term bonds (all issues except those due or callable within 8 years) for years $1926-34$; for data for years $1919-25$ see p. 20 of the November 1935 issue. Series on stock sales on all registered exchanges and on the New York Stock Exchanga as compiled by the Securities and Exchange Commission for the period October 1934-February 1936 are shown on p. 20 of the April 1936 issue. For quantity exports adjusted for seasonal variation for the period July 1914-August 1935 see p. 18 of the October 1935 issue.

For earlier data on yield of domestic and municipal bonds see pp. 19 and 33 of the April 1933 issue.
$\ddagger$ The difference in the figures covering the volume of stock sales on the New York Stock Exchange since April 1935 is due to stopped and odd lot sales being included in the figures of the Securities and Exchange Comraission. These are excluded in the figures reported by the New York Times.

## CHEMICALS AND ALLIED PRODUCTS

*New series. For earlier data see p. 20 of the April 1935 issue (alcohol withdrawn tax paid), p. 20 of the A pril 1933 issue (crude methanol). This series for production
revised for 1934 and 1935. Revisions not shown above will be published in a subsequent issue.
$\dagger$ Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer; for 1933 revisions on exports see p. 29 of the September 1934 issure;
for 1934 revisions seep. 19 of the December 1935 issue; for revised data for crude methanol for the years 1920-October 1933 see p. 19 of the January 1934 issue

- The refined equivalent of crude production is approximately 82 percent.
- Texas only. Louisiana produced 23 percent of the United States production in 1933, 16 percent in 1934, and 23 percent in 1935

F Fignres since January 1922 revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue.
\#See footnote on p. 37 of this issue. Monthly revisions for 1933 are shown on $p .20$ of the October 1934 issue: for 1934 revisions see $p$. 20 of the December 193 issue.

: Revised.
 be shown in a subsequent issue.

+ For revised data for electric-power production for 1932 see pp. 38 and 56 of the May 1933 issue; for 1933 see $p$. 38 of the May 1934 issue; 1934 and 1935 data also revised. Revisions not shown in the June 1935 issue and in the May 1936 issue will appear in a subsequent number. Manufactured and natural-gas statistics for the years $1929-35$ have been revised. Revised data on manufactured gas are shown on p. 20 of the June 1936 issue. Data for the natural gas series superseded by current statistics appeared
on p. 20 of the May 1935 issue and in monthly numbers through May 1936 . Revisions back to 1929 will appear in a subsequent issue.
§ For revised data on paint, varnish and lacquer products for the years on "total" for $1928-35$ and "unclassified" for years $1932-35$ see $p$. 20 of the November 1935 issue.

| Monthly statistics through December 1981, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

a Revised.
§Bulk evaporated milk not included since December 1931.
New series. Beverage figures are compiledby theU. S. Treasury, Alcohol Tax Unit. Monthly data on distilled spirits available beginning July 1933 and on fermented malt liquors, April 1933. For earlier data for receipts of milk in Greater New York see p. 20 of the August 1934 issue. See p. 19 of the June 1933 issue for butter consumption. Data on consumption of rectified spirits are as indicated by the sale of stamps. Data prior to April 1933 not published
\#See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue
$\dagger$ Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of total and American whole-milk cheese, and production of condensed and evaporated milk, p. 20, January 1933 . For earler data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, A pril 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39 , September 1933 . For subsequent revisions for 1932 on production of evaporated milk, p. 39 , November 1933 . For 1932 and 1933 revisions on butter and cheese consumption and 1933 revisions on production of butter, cheese, condensed and evaporated milk, see p. 19 of the March 1935 issue. For 1934 revisions on production of butter, cheese, condens ed and evaporated milk, and apparent consumption of butter and cheese see p. ions of the November 1935 issue. For final revision for 1933 , car-lot shipments of apples, citrus ruits, onions, and potatios, see p. 20, January 1935 issue, and for 1934 revisions see $p$. 20 of the Nover to include brandy tax paid direct from fruit distileries. For revisions see p. 39 of the March 1935 issue.
revise tonsumption of distilled spirits (withdrawn tax paid) plus brandy tax paid direct from fruit distillers plus ethyl alcohol withdrawn tax paid (see p. 39) equals Bureau of Internal Revenue total of distilled spirits withdrawa tax paid.

- June 1 estimate
$f$ Dec. 1 estimate.
${ }^{1}$ No quotation.
a Brewer's rice not included
* New series. For earlier data, see p. 20 of the November 1932 issue rye and barley receipts and rye stocks; and p. 20 of the June 1935 issue, wholesale price of wheat

No. 1 Dark Northern Spring, Minneapolis. Since the division of no. 2 barley by the Department of Agriculture into straight and malting grades as of July 1 , 1934 , prices for each grade have been reported separately.
$\dagger$ Data revised. For revisions of wheat fiour, production and consumption (Russell's) from July 1931 to December 1932, see p. 19 of the August 1933 issue. For revised data on exports for 1932 see p. 39 of the June 1933 issue for 1933, p. 20 of the September 1934 issue, and for 1934, p. 19 of the December 1935 issue.

- Represents the visible supply east of the Rocky Mountains as reported by Dun \& Bradstreet.
\# See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue, and for 1931, revisions p. 20 of the December 1935 issue.

${ }^{1}$ Data for 234 manufacturers not available for these months. Figures shown are computed by means of the month-to-month percentage change indicated by the current Census Bureau report for 228 identical concerns.
IRaw stocks in all hands as shown above include all hides from Government animals slaughtered under Federal inspection. Hides from cattle allotted to State relief agencies and which were not killed under Federal inspection are not included unless they have already moved into sight. It is obvious, therefore, that a quantity of hides from noninspected slaughter held by State Relief Agencies constitutes an invisible addition to the visible supplies shown above.
of the June 1035 issue. the June 1335 issue
and lambs, relief siaughter only affected the data for the months of September to December 1934 . the June 1935 issue for the figures, excluding relief slaughter. For sheep and lambs, reliee siaughter only affected the data for the months of September to December 1934.

Data revised for 1933 . See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.
See footnote on p. 37 of this issue. Imports revised for 1933 , see p. 20 of the October 1934 issue, for 1934 revisions see p. 20 of the December 1935 issue.
on gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce Bureau of the Census able. These data are not comparable with data through January 1934 previousiy shown. New series on wholesale price of women's shoes pegan tanuary 1934 are not availshown above will appear in a subsequent issue.
$\dagger$ Revised series. For earlier data refer to the indicated pages of the monthiy issues. Production of cattle, sheep, and lamb leather for 1932 and 1933 , p .44 , April 1934. Production of cattle hides revised for 1935, p. 47 of the April 1936 issue. Imports of total hides and skins for 1932, exports of upper leather for 1932, p. 43, June 1933. Production of asphalt for 1932 and consumption of kerosene and lubricating oil, for 1932 , see p. 56 of the November 1933 issue.
Data revised for 1933 . See p. 20 of the September 1394 issue; for 1934 revisions see p. 19 of the December 1935 issue.

- Revised.

1 Data temporarily discontinued.

* New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. See special footnote below on lumber production, shipments, and stocks.
$\dagger$ Data revised for 1932 , see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber. Boot and shoe production for 1034 , p. 45 , March 1935 issue, for $1935 ~$ revision see p. 48 of the March 1936 issue.
- New series on lumber production, shipments, and stocks compiled by National Lumber Manufacturers' Association and represent an estimate of the total lumber cut based on monthly reports received from regional associations covering between 80 and 90 percent of the total cut in 1934 and 70 to 80 percent in 1935 . No comparable cutures are arailable prior to January 1934.

ISeries have been revised for period January 1934-October 1935. These are shown on p. 20 of the February 1836 issue.
ISeries have been revised for period Jannary 1934 - October 1935 . These are shown on p. 20 of the February 1836 issue.
8 Data revised for 1932 . For revisions of exports of Southern pine lumber and timber, see p. 45 of the June 1933 issue. Data revised for 1933 , see p. 20 of the September isue. For 1984 revisions see p. 19 of the Decerober 1935 issue.
© New series covering these items will be shown in a subsequent issue:

* Revised. series. Data on furniture activity, all districts, prior to April 1933 not published. For imports of iron and steel, see p. 20 of the November 1932 issue; for malleable castings, p. 20 of the April 1933 issue. New series on iron and steel composite price was shown on p. 19 of the January 1935 issue.

8 For 1932, 1933 , and 1934 revisions, see p. 45 of the June 1933 issue, p. 20 of the September 1834 issue, and p. 19 of the December 1935 issue, respectively.
$\dagger$ Revised. Data prior to April 1933 not published on plant operations. For range boilers, see p. 20 of the July 1934 lssue.

- Imports from Cuba not included
\# See footnote on p. 37 of this issue. For 1933 and 1934 revisions, see p. 20 of the October 1934 issue and p. 20 of the December 1935 issue, respectivaly.
I Distribution of unfilled orders of deliveries of 30 days or less and deliveries of more than 30 days bas been discontinued by the reporting source.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1952 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

## METALS AND MANUFACTURES-Continued

- Revised.
* Revised. January 1933 issue; for steel castings, p. 20 of the October 1934 issue; and for United States Steel Corporation shipments, see p. Is of the January 1934 issue. $\ddagger$ In equivalent direct radiation.
${ }_{1933}$ † Revised series. For earlier data on bathroom accessories see p. 20 of the October 1933 issue. Data on vitreous china plumbing fixtures rerised beginning January 1033, see p. 47 of the April 1935 issue; revisions for 1933 will be shown in a subsequent issue.
Figures foe casting series revised January 1935 by the increase of the number of companies fron 164 to 180 ; comparable data not completed for 1934 and earlier years. Figures for 164 companies in January 1935 were new orders, total 31,816 , percent of capacity 20.3; new orders, railway specislties, 6,835 ; production, total 23,519 ; percent
of capacity $18.2 ;$ production, railway specialies 6,052 .

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

- Revised.

Since January 1934 the figures are more complete than those on deliveries previously shown. Shipments of the concerns formerly reporting contribute about $80-85$ percent of the total for the present series

A These series have covered a varying number of companies for period covered in survey; percentage of industry coverage not known. Reports have been froon 12 mpanies since January 1934.

In September 19353 firms discontinued reporting; data of 3 firms of equal size were added, thereby maintaining the comparability of the series.
f Revised series. See p. 49 of the June 1033 issue for 1932 chemical wood pulp imports. Data on total paper for 1934 revised. Fevisions for months not shown in the August 1935 issue will appear in a subsequent issue.

* New saries. Data prior to October 1931 not published on plumbing brass.
\# See footnote on p. 37, of this issue. Date for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.
§ The figures on paper (including total, fine, and wrapping) are as reported by the American Paper and Puip Association, except book paper, the data on which are ciation through December 1933. The present classification of the association diflers from that previously used by them, as well as from the Bureau of the Census classification. In addition to the classes shown, the association also reports on printing paper (including uncoated book), boards, paperboard, and newsprint. The first two of these classifications are not used in the SURvEx, while the Burean of the Census report is used for paperboard and the Newsprint Service Bureau's report for newsprint (the latter series is identics! with that reported by the association). The ratio of the production reported by the association, the Newsprint Service Bureau, and the Bureau of the Census (monthy report on paperboard) to the annual fgures reported by the Bureau of the Census for 1934 follow: Total paper, 87.4 percent; fine paper, 76.1 percent; wrapping, 109.7 percent (present classification of association is much broader than is Census or earlier association classification); paperboard, b8 percent of all paper. board, but 81 percent of the more comparable classifications of container board and boxboard; book paper, uncoated, 95 percent and coated 100 percent (book paper estimates are by association since the data cannot be checked with Census data); and newsprint, 97 percent. Figures for the first 5 months of 1934 on book paper are not available. Data are available for the other series for the months of January to April 1934. These figures will be shown in a subsequent issue.
i See footnote marked "A" on p. 60 of the March 1936 issue.

1 Discontinued by reporting source.
a Revised.
$\dagger$ New series. Earlier data not published on total shipments of rubber heels and rubber soles prior to December 1932.
† Revised series. Data on consumption of rubber for tires and tubes revised for 1932, 1933, and 1934. See p. 51 of the August 1934 issue. Revised data from September 1930-December 1934-rubber world stocks, world afloat, and afloat to the United States appear on p. 20 of the July 1935 issue; for 1932 revisions for United States stocks, see p. 50 of the May 1933 issue. See p. 50 of the June 1933 issue for crude rubber imports.

1035 than in earlier years.

| Monthly statistics through December 1981, together with explanatory footnotes and refer: ences to the sources of the data, may be found In the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

STONE, CLAY, AND GLASS PRODUCTS

* New series. Earlier data not published on illuminating glassware prior to July 1932 (except production and per cent of capacity); for oarlier data see p. 20 of the June
1933 issue, face brick, machine production. Series on common and vitrified paring brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For 1933 issue, face brick, machine production. Series on common and vitrified paring brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For oarlier data on gypsum see p. 20 of the January 1933 issue.
$\ddagger$ Adjusted for degrading and year-end physices inventories
$\dagger$ Data on plate glass represent the total output of the industry. Complete figures for the months of 1932 were shown on p. 52 of the March 1033 issue, for 2033 on p. 52 of the March 1934 issue, and for 1934 revisions $p .56$ of the March 1936 issue.
\#Monthly series on glass, containers for 1934 and 1935 are not comparable with those of earlier years due to increase of number of firms reporting to 44 . Shipments of the 44 firms for the year of 1933 amounted to 33,048 , 747 , compared with $23,511,963$ for the 30 firms reporting for the same year. Comparable statistics on shipments for the companies, now reporting by years, from 1928 to 1933, inclusive, were as follows (in gross): 1928, 31,943,016; 1929, 33,765,896; 1930, 31,905,933; 1931, 31,413,508; 1932, 26,947,949; of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the pew series. Data for 1934 revised, see p. 52 of the May 1935 issue; for 1935 revisions see p. 56 of the June 1936 issue.

| Monthly statistics through December 1981, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

TEXTILE PRODUCTS

p. 19 of the September 1935 issue. Data on cotton cloth finishing are from the National Association of Finishers of Textile Fabrics and cover practically all the industry, comparable fgares are not available prior to December 1933; the production statistics are prorated from data for 4-week periods; stocks are reported at end of each 4-week period. Data on cotton yarn, southern spinning from January 1933-April 1934 will be shown in a subsequent issue. Rajon deliveries from January 1923 -April 1935 were shown on p. 19 of the June 1935 issue; these data are compiled by Textile Organon.

IFor revisions for crop years 1931-32, 1932-33, 1933-34, and 1934-35, see p. 52 of the October 1933 issue, p. 52 of the September 1933 issue, p. 53 of the October 1934 issue, and p. 57 of the October 1935 issue, respectively.
if For revisions of cotton consumption, domestic stocks, and spindle activity for crop years 1931-32, 1932-33, 1933-34, and 1934-35, see p. 20 of the February 1933 issue,
p. 52 and 53 of the November 1933 issue, p. 53 of the October 1934 issue, and p. 57 of the October 1935 issue, respectively.

For 1932 revisions see p. 53 of the June 1933 issue; for 1933 revisions see p. 20 of the September 1934 issue; 1934 revisions are shown on p. 19 of the December 1935 issue.
\# See footnote on p. 37 of this issue. Data revised for 1933 ; see p. 20 of the October 1934 issue; data also revised for 1834 , see $p$. 20 of the December 1935 issue.
Stocks at end of 4-week periods through June 16. July figures are averages for July 14 and Aug. 11. August figure as of Sept. 8 . Subsequent data at the end of succeeding 4-week periods.
$\ddagger$ For 1932 revisions see p. 53 of the June 1033 issue, for 1033 revisions see p. 20 of the October 1034 issue, and for 1934 revisions see $p$. 20 of the December 1935 issue.
This series has been superseded by a new series which excludes stocks held at Milan, London, Canton, and Shanghai. Monthly data from January $1922-J u n e$. 1936
are shown in this issue, p. 20 .

${ }^{\circ}$ Since July 1934 report has been on a weekly basis. Data for September and December 1934 and March, June, September, and December 1935, and January and April 1936 are for 5 weeks; other months, 4 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry; earlier figures incomplete.
${ }^{*}$ New series. Wool stock series began in June 1934. See p. 20 of the July 1935 issue for earlier data and explanation of new wool consumption series.

- Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed normal (currently based on the single-shift performance over the 5 -jear period 1928-32). The current data represent practically complete coverage of the industry. Since December 1934 no allowance has been made for holidays.
AForeign receipts beginning January 1934 are compiled by U. S. Department of Agriculture and are not comparable with data carried through December 1833. This results in a total figure which also is not comparable with earlier data.
The Compiled by the Bureau of the Census and repiesent stocks of raw wool held by all dealers, topmakers, and manufacturers who usually hold significant stocks of wool. The figures for the 3 quarters of 1934 have heen revised to include the "grade not stated."
$\ddagger$ Grease equivalent of shorn wool, plus actual weight of pulled wool. Conversions are based on totals; scoured wool is multiplied by 2 and pulled wool by 133. Includes clothing and carpet wools. See note on apparel class wool on $p .20$ of the July 1935 issue. As this grease series will probably be dropped in tavor of the more accurate scoured series, it is suggested that those who wish to keep series going have their names placed on Bureau of the Census mailing list for the monthly wool consumption report, from which can be computed the present data, using formula given.

For 1932 revisions see p. 53 of the June 1933 issue, for 1933 revisions see p. 20 of the October 1934 issue, and for 1934 see p. 20 of the December 1935 issue.
o Data revised for 1932, see p. 54 of the June 1933 issue. Data revised for 1933, see p. 20 of the September 1934 issue; and for 1934, p. 19 of the December 1935 issue.
$\uparrow$ Data for 1935 revised (airplanes). For revisions see p. 58 of the April 1936 issue. Fur sales revised for 1935. Revision for January, 1,851.
OOf the 282 identical organizations reporting originally 8 discontinued financing in January, 2 in February, 2 in March, 5 in June, 1 in July, 2 in August, 1 in September, 1 in October, and 2 in December, 1934

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  | 1936 |  |  |  |

# Consumer Market Data Handbook 

## Market Research Series No. 15 : 50 cents

The "Consumer Market Data Handbook" is more than a valuable source book of statistics: it is in effect a Nation-wide survey of the markets for consumer goods. Results of the original counts of governmental and private organizations, costing millions of dollars, have been combined here, important percentage and per capita relatiouships have been worked out, and the whole assembled in a manner selected by experienced sales and research men as being the easiest to use in making practical application of market data.

Copies of the "Consumer Market Data Handbook" are obtainable from the Bureau of Foreign and Domestic Commerce directly, or through any of the District and Cooperative Offices located in principal cities throughout the country. Remittance in full should accompany all ordere. This publication is NOT available from the Superintendent of Documeute.

Market Research Sources: Domestic Commerce Series No. 55 (1936 Edition): 25 cents. Tells who is carrying on market research; what their activities in this field cover; where the results of their research can be obtained. Material grouped in five major classifications: Federal government (including emergency agencies); State governments; Colleges, universities, and foundations; Publishers of books and periodicals; Commercial organizations, trade associations, etc. Covers sources of data on all selling, distribution, and marketing problems. Of essential value to all businessmen engaged in marketing activities, and to economists, students, and teachers of marketing subjects.

[^11]
[^0]:    1 Adjusted for seasonal variation.
    2 National Industrial Conference Board.
    ${ }^{3}$ Beginning 1935 data compiled from Public Works projects, prior years from Federal aid and State projects.

[^1]:    ${ }^{1}$ Adjusted for seasonal variations.

[^2]:    ${ }^{1}$ Adjusted for seasonal variations. 'Covers varying percentage of industry, see note on p. 85 . I Includes taxicabs, see footnote on p. $59 . \quad 14$ months' average.

[^3]:    ${ }^{1}$ Note discussion on terminology and definition. The terms "positive business savings", and "negative business savings" have been adopted to replace the terms "business savings" and "business losses" used in previous reports.
    ${ }^{2}$ To date, the series of publications resulting from this work includes National Income, 1929-32, S. Doc. 124, 73d Cong., 2d sess. (now out of print), and articles in the January 1935, August 1935, and November 1935 issues of the Survey of Current Business. A new volume entitled "National Income in the United States, 1929-35", which is now at the Government Printing Office, presents the income estimates in the same complete detail as shown in the Senate document, and also contains discussions of the concepts, scope, limitations, and sources and methods of the estimates. This volume will be ready for distribution by the Superintendent of Documents within the next few weeks, and an anoouncement of its availability and the price will be carried in a subsequent issue of the Survey of Current Business.

[^4]:    ${ }^{3}$ Further consideration is being given to the clarification of the concepts of income and to the questions of terminology in this field by the National Conference on Wealth and Income, a group composed of representatives from universities, private research organizations, and Government research agencies interested in the field of income. Proposals relating to concepts and terminology will be made and discussed at the next meeting of the conference early in 1937.

[^5]:    77024-36-3

[^6]:    1 The estimates of the number employed are averages for the year and represent

[^7]:    ${ }^{1}$ Compiled by the U．S．Department of Commerce，Bureau of the Census．The data shown above represent a revision of the figures previously shown in the Survey of Current Business．The occa－ materially revised the statistics of total production and sales but do not affect those shown for pro－ materion for own use which is published in conjunction with the other data for the convenienca of the users of the statistics．The data represent the sales or production for use of 39 manufacturers． the users of the statistics．The data represent the sales or production for use of 39 manulacturers．
    Of the establishments referred to 25 report sales only，$\theta$（includiug several important railroad sys－ tems）report the consumption of their own production of the metal，and 5 report both sales and consumption of metal produced by them．The manufacturers whose data are included in these statistics produced approximately 84 percent of the total value of the output in the industry， according to the Census of Manufactures for 1933.

[^8]:    1 Compiled by the Board of Governors of the Federal Reserve System and represent end of month figures covering actual reserves held by Federal Reserve banks in excess of the statutory requirements． Although the month－end figures bagan in september 1931，monthly Averages are available beginning January 1929 ．These are shown

[^9]:    a Revised. \# Includes tonnage in both upper and lower Mississippi River. Revised figures prior to December 1934 will be shown in subsequent issue.
    $\dagger$ Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue. For revisions on Panama Canal from August 1914 to June 1935 , see p. 19 of the September 1935 issue.
    New series. Data on airplane travel covers scheduled air lines operating in United States. For data on passengers carried for period of 1926 to 1033 and passenger-miles flown from 1930 to 1933 , see $p$. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933 , see p. 19 of the January 1935 issue. New series on telephones as compiled by Federal Communications Commission. Data supersede those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of $\$ 250,000$; present series for 1934 and 1935 are for 57 carriers representing about 95 percent of all carriers according to the 1932 census, based on revenues for all companies. Beginning January 1936 , data are for 62 carriers representing about 90 percent. Revised data for 62 companies $\$ 54312000$. message tolls revenus, January $\$$ net operating income, January $\$ 15,467,000$, February $\$ 14,316,000$, March $\$ 15,882,000$; stations in service, end of month, January 14,246,000, February $14,285,000$, March $14,334,040$.

    - This figure covers room revenue only

    I Data for June, August, November 1935 and February and May 1936 are for 5 weeks; other months, 4 weeks.

[^10]:    "Revised.
    $\dagger$ Revised series. Data for period January 1933-January 1934, inclusive, on consumption and stocks of waste paper at mills will be shown in a subsequent issue. Sales books, new orders, have been revised beginning January 1935 to include the statistics of 2 members not included heretofore. The data now represent 90 percent of all the sales books sold in the United States. For 1935 revisions see p. 54 of the May 1936 issue. Revised data for 1935 not shown above, January 13,727 , February 13,895.
    § The Bureau of the Census has changed the title of the "Boxboard" report to "Paperboard" since data actually cover all board of . 0012 of an inch or more in thickness reported by the cooperating manufacturers. Figures given on production and new and unfilled orders are for 94 identical manufacturers; and consumption and stocks of waste paper for 82 manufacturers. Estimated coverage is given in footnote marked § on p. 53.

    * New series. New series on paperboard shipping boxes compiled by the National Container Association, Chicago, Ill., from reports from all members of the industry of
    record beginning in January 1934 . The volume of companies not reporting each month is estimated bs the association so as to keep the series comparable. Prior to fanuary 1934 data covering this industry were compiled by the Paper Board Industries A scociation. See forme the massociation, so as to keep the series comparable. Prior to fanpeper.
    \# See footnote on p. 37 of this issue; data for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of th f Decembe 11935 issue.

[^11]:    Copies of "Market Research Sources" are available frow the Superintendent of Documents, Government Printing Offee, Washington, D. C.., or Lhe District Offices of the Bureau of Foreign and Domestic Commerce located in prineipal cities.
