THE *Business*  
SITUATION

By the Office of Business Economics

ECONOMIC activity expanded further in September, stimulated by continued large civilian demands and a growing volume of defense ordering.

Industrial production continued to rise, as the heavy-goods industries stepped up operations generally. There were indications, however, that increases in output were becoming more difficult to obtain and involved higher costs which were being translated into higher prices. On the demand side the pressure on prices was also maintained as purchasing power was increased by rising incomes and by credit expansion.

The flow of supplies was sufficiently large, however, to permit distributors to rebuild inventories which had been depleted during the summer buying rush, although manufacturers continued to reduce their stocks of finished goods. Manufacturers' sales in dollars were more than one-fourth higher than a year earlier, but the volume did not match new orders so that backlogs mounted.

*Rising incomes accompany heavy buying*

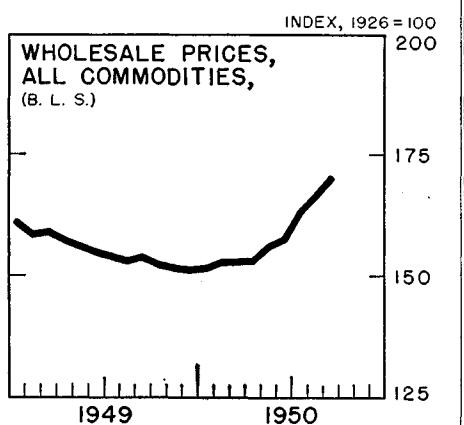

The quick succession of economic developments in recent months has speeded up the usual interactions between the demand forces, on the one hand, and the factors affecting supplies and costs on the other. As a consequence, apparently sporadic events have had substantial and lasting influences. Thus, the wave of forward buying immediately following the Korean clash had many of the earmarks of a temporary flurry, as exemplified by panic buying of a few such commodities as sheets, sugar, and coffee.

Although there has been a let up in this type of buying, demand in general has remained high. For the more durable goods such as major household appliances, television, and automobiles, buying has continued with little slackening. Because purchases of these products are typically made by consumers only once in several years, forward buying has not led to a quick "catching up" as in the case of nondurable goods.

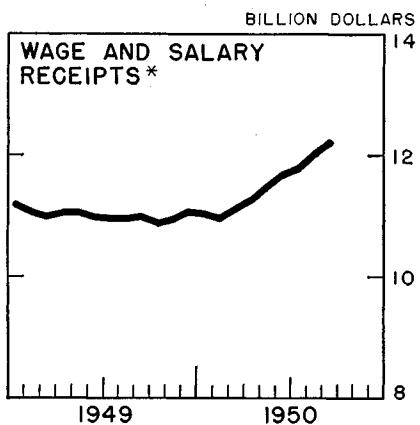

Although some of the motives for the heavy buying in July were temporary, subsequent expansion of income contributed to the virtual maintenance of sales in August and September. In the first 2 months of the third quarter, personal income rose more than \$6 billion at an annual rate. Comparison between income and retail buying in the third quarter is shown in chart 2. For the nondurable-goods stores, sales have risen only moderately in relation to disposable income, following the gradual decline of the past 2 years, whereas durable-goods store sales have risen more rapidly, constituting an unusually high proportion of income.

A comparable expansion has also taken place in nonconsumer spending. Business expenditures for plant and equipment have been stepped up, and new expansion programs

have been announced in some of the basic industries. The spurt in business capital expansion during the third quarter is reflected in a rise in unfilled orders for producers' equipment (upper left panel of chart 3).

### Credit expansion spurs control program

With profits at record levels, corporations have been able not only to pay higher dividends but also to retain a record volume of current earnings to finance their expanded capital requirements. In addition, however, business has increased sharply its demand for borrowed funds. In the third quarter alone commercial, industrial and agricultural loans at leading city banks increased by over \$2 billion—or \$6 billion at a seasonally adjusted annual rate. This compares with a rise of \$400 million in the preceding 12-month period, and \$3.3 billion during 1947, the year of greatest postwar expansion. The rise in business loans was especially pronounced in September amounting to \$1 billion, as compared with a rise of \$400 million in September 1949.

**Chart 2.—Retail Sales as a Percentage of Disposable Personal Income<sup>1</sup>**

<sup>1</sup> Percentages for 1948-50 are based upon quarterly totals, seasonally adjusted, at annual rates.

Source of data: U. S. Department of Commerce, Office of Business Economics.

At the consumer level the picture is similar. Individuals added about \$1.3 billion to their short-term indebtedness in the 2 months following the outbreak of hostilities in Korea—equivalent to a seasonally adjusted annual rate of \$7.5 billion. This compares with a rate of advance only about a fourth as great in the similar months of 1949 and 1948. The recent acceleration in borrowing has been largely related to increased purchases of automobiles and other consumer durables, but charge accounts were also stepped up substantially in the past few months.

Borrowing to finance the purchase of housing differs principally from short-term credit in that it has shown a stronger upward surge throughout the year. Such financing has reached record proportions as shown in the bottom panel of the accompanying chart. The seasonally adjusted annual rate of increase in outstanding residential mortgage debt of consumers in the second quarter of 1950 amounted to \$6 billion, far above either the net change last year or the record value of net new indebtedness in 1948. New mortgage recordings showed a further advance in the third quarter prior to the adoption of new restrictions on housing credit which are discussed below.

### Liquid assets declining

Currently buoyant demand is also being stimulated by reductions in savings accounts and in holdings of U. S. savings bonds. Throughout the greater part of the postwar period, there was a moderate and steady increase in these assets, but as may be seen from the middle panel of the chart, this trend was reversed in recent months. In the third quarter of this year, total time deposits at all banks were reduced by a little less than \$1 billion, or about \$3.5 billion on an annual rate basis. There was no change during the same months of 1949 and a reduction of less than \$100 million in 1948.

The rise in redemptions of Series E savings bonds since mid-year, together with some decline in sales, has resulted in an excess of redemptions over sales amounting to \$280 million in the third quarter, as shown in the middle panel of the chart. By contrast, there was a net excess of sales of \$130 million in corresponding months of 1949 and of \$76 million in the similar period of 1948.

The total of (1) the reduction in time deposits, (2) the excess of redemptions over sales of E bonds, and (3) the increase in consumer debt amounts to over \$10 billion, at an annual rate, available for spending out of noncurrent income in the third quarter—about 5 times as much as in the corresponding quarter of 1949. In addition, consumer mortgage debt increased by an annual rate of more than \$6 billion in the third quarter of the year as compared with \$4 billion a year ago.

### Residential borrowing further restricted

This extraordinary expansion in purchasing power in addition to the rise in income has been considerably faster than the expansion in production. Initially the surge in demand was met by a shift from inventory building in the second quarter to a sharp drop in July and by a rise in prices that has continued to the present time. A series of measures is being placed in operation which will curtail civilian demand and free resources for defense production. These include higher individual and corporate tax rates which were described in the September SURVEY and control of both consumer and mortgage debt.

Further credit restrictions on residential housing, effective as of October 11, 1950, were announced by the Federal Reserve Board and the Federal Housing Administrator. These new regulations, implementing the Defense Production Act of 1950, are applicable to one- and two-family houses and include new construction financed outside of the Government programs as well as both new and used units financed under the Veterans' Administration and the Federal Housing Administration. These controls are intended to reduce the construction of new dwelling units in 1951 by about one-third of the 1.3 million units estimated for 1950.

The required down payments range from 10 percent for houses priced up to \$5,000 to 50 percent for those priced at \$24,500 or more. Veterans' preference in financing will be maintained under the new regulation by generally requiring a down payment which is lower by 10 percentage points in the price range between \$6,000 and \$12,000, narrowing to 5 points lower for higher priced houses and for those less than \$6,000.

The effect of the new regulations may be illustrated for a \$10,000 house. Before July 19, such a house could have been purchased by a veteran without a down payment whereas under the new restrictions, a down payment of \$1,300 is required. For nonveteran FHA financing, the comparable requirements were \$1,250 before July 19 and \$2,300 at the present time.

Amortization periods for nonveteran purchasing are restricted to 20-year periods except for houses costing \$7,000 or less for which payments may be scheduled for 25 years.

Veteran purchasing is subject to the same limitations except that periods up to 30 years may be obtained under certain circumstances.

### *Output expands sharply*

Industrial production continued upward in the third quarter of 1950 as the pressure of over-all demand quickly absorbed the larger supplies. The rate of output in September and early October was the highest since June 1945, when the economy was producing for all-out war. Raw materials as well as finished goods were produced in record volume. Despite the expansion in the flow of materials, supplies did not

expand in output of machinery, railroad equipment, aircraft, and shipbuilding. Moreover, capacity operations were maintained in the steel industry. With steel continuing to flow in large quantities to the automobile industry, assemblies of passenger cars and trucks in United States plants were maintained at approximately the same high daily rate as in the two previous months.

### *Nondurables output at new peak*

Production in the nondurable-goods sector was relatively stable throughout the first half of the year before advancing sharply to a new peak in the third quarter. A large part of the gain reflected a much higher scale of operations in textile mills and further increases in output of crude and refined petroleum products, industrial chemicals, rubber products, and paperboard. In other soft-goods lines, such as food, shoes, and tobacco, changes in output were confined within narrow limits.

### *Raw material supplies in record volume*

An important feature of the production situation when the third quarter began was the number of major raw materials industries operating at virtual capacity rates. They include iron and steel, some of the nonferrous metals, cement, rayon, paperboard, and certain industrial chemicals. For these products, then, the increase in supplies over the April-June period has been limited.

Steel output has been holding relatively steady at approximately capacity levels since June with September operations edging slightly higher than in August. As a result of a gradual advance, the scheduled rate in the second week of October reached a record high of 101.6 percent of rated capacity now in excess of 100 million tons of steel ingots and castings annually. Production during the month of September again totaled well over 8 million tons, bringing total output for the first 9 months of the year to about 71½ million tons. Continuance of the September rate of output in the current quarter would mean total production of around 96 million tons for the full year, the highest on record and more than 6 million above 1944, the previous peak year.

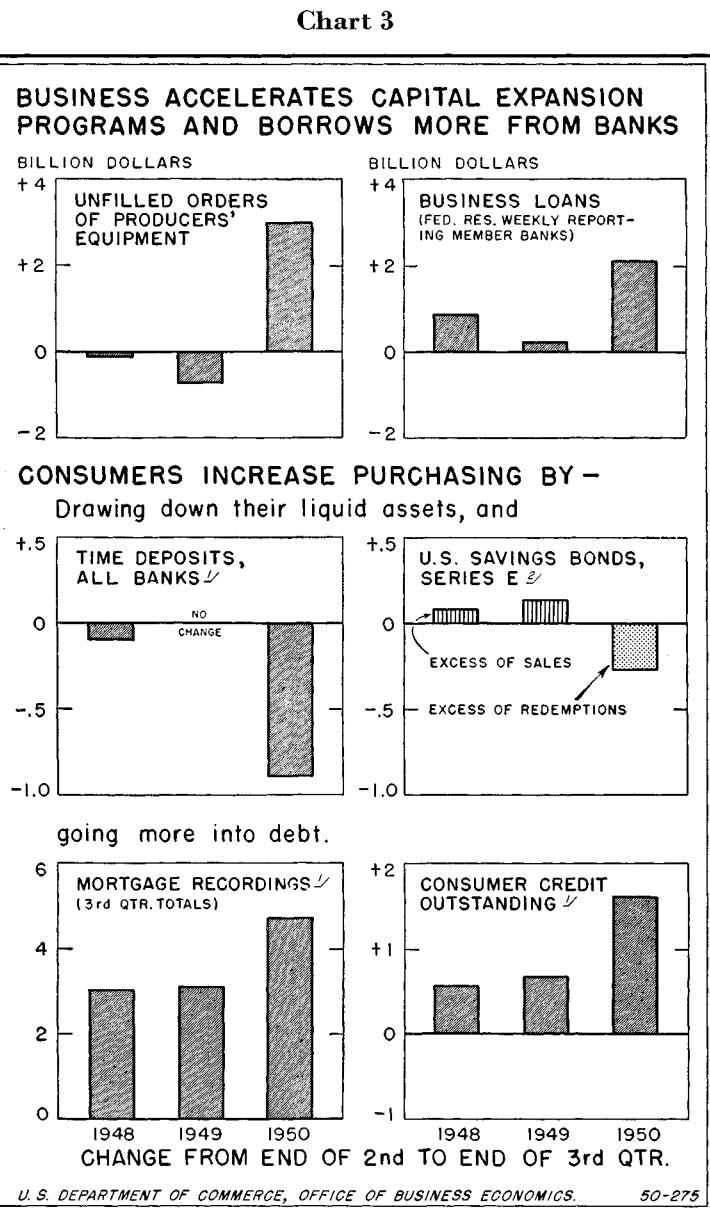

### *Large expansion in steel capacity*

Chart 4 shows the production rate and the growth in steel making facilities over the past decade, together with the present expansion program planned by the industry. Completion of the modernization and construction program as now scheduled would raise the rated capacity from 100.6 million tons on July 1, 1950, to about 110 million at the end of 1952, an addition of 9.4 million, or an average increase of close to 4 million per year. This compared with an annual average increase of 2.8 million tons in the 5-year war period from 1940-44 and 2.7 million from 1947 through 1949.

Despite the continued improvement in over-all material supplies, current private and military demands have been in excess of supply. Military demand to date has been moderate, however, as work on war orders has not yet been undertaken in sufficient volume to cut appreciably into the flow of materials to industries producing finished goods for the civilian economy. With defense work scheduled to be stepped up, the Government has taken steps to insure adequate supplies for military production by establishing priorities and allocations over the distribution of materials in tight supply and by restricting the consumption of rubber for civilian use.

### *Record volume of finished goods*

Output of finished goods rose sharply from the second to the third quarter and accounted for a significant part of the gain in total industrial production during this period. In

<sup>1</sup> Data for the third quarter of 1950 are based upon estimates of the U. S. Department of Commerce, Office of Business Economics.

<sup>2</sup> Change represents total sales less redemptions in the third quarter of each year.

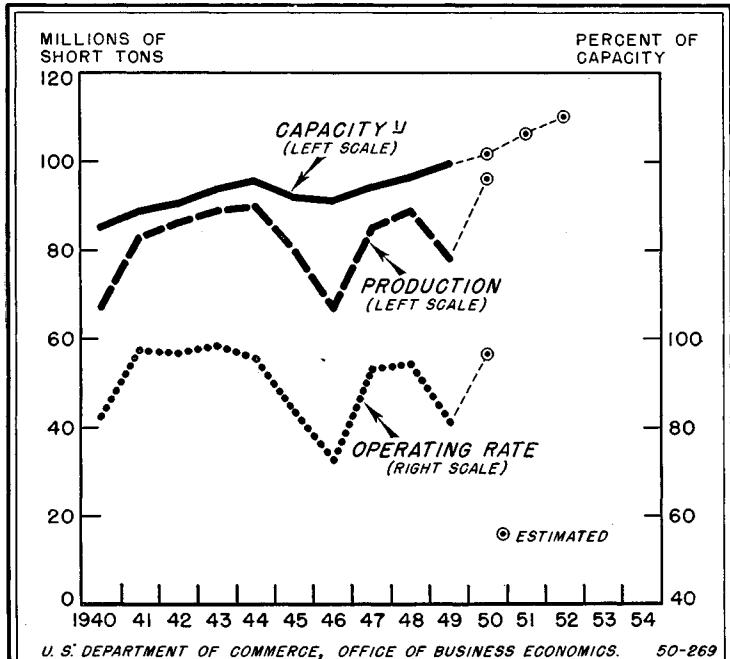

Sources of data: Unfilled orders, U. S. Department of Commerce, Office of Business Economics; business loans, time deposits, and consumer credit, Board of Governors of the Federal Reserve System; U. S. Savings Bonds, U. S. Treasury Department; and mortgage recordings, Home Loan Bank Board (see also footnote 1).

keep pace with the increased demand. Although stocks of raw materials held by manufacturers showed some rise, the volume of working stocks has not kept pace with the expansion in operating rates.

Both durable and nondurable manufacturing expanded. The rise in durable-goods output was marked by further ex-

nondurable manufacturing, substantial increases in output also occurred for such consumer products as clothing, refined petroleum products, and rubber tires. A part of the increase in the flow of finished goods from manufacturers represented the drawing down of shipping stocks. In July and August the book value of finished-goods stocks declined \$1 billion. During July retailers' stocks were also reduced, but in

**Chart 4.—Capacity and Production of Steel Ingots and Steel for Castings**

<sup>1</sup> Represents end of year capacity except for 1940-42, which is an average of January 1 and July 1.

Sources of data: American Iron and Steel Institute except for 1950-52 which are estimates of the U. S. Department of Commerce, Office of Business Economics.

August the rise in manufacturers' shipments made possible some restocking of distributors' shelves.

The intensity of demand at manufacturers' levels is indicated by the rapid rise in new as well as unfilled orders. New orders rose one-fifth between July and August and were about 50 percent higher than a year earlier. Unfilled orders at the end of August were one-third higher than at the end of June and 50 percent higher than in August of 1949. In the important machinery industry, unfilled orders represented nearly 3-months' shipments at the August rate.

### Industrial prices higher

Wholesale prices leveled off during September and declined slightly at the end of the month as a result of seasonal declines in agricultural prices. The most important of these reductions was in hog prices which fell from a high of more than \$25 per hundredweight in late August to less than \$20 in early October as the spring pig crop moved to market in larger volume than in the corresponding period of last year. Although there were scattered reductions in other foods, there was no general decline. At retail, food prices rose an average of 1.4 percent during the last 2 weeks in September, following a smaller advance in the first half of the month.

Industrial prices continued to rise in September and early October, however, with advances in raw materials as well as in semifinished and manufactured products. In the 4 weeks ending October 3, the Bureau of Labor Statistics' index of prices other than farm products and foods rose 2 percent, which was somewhat more than that occurring during the preceding month. The chief new development was a rise in the metals and metal products group, with most of the change in nonferrous metals but there have been some recent increases in steel prices. Textile prices also rose more rapidly than in earlier months, averaging 7 percent higher at the beginning of October than a month earlier. The sustained advance in chemical and building materials was extended, although price declines were reported in lower grades of softwoods.

## National Income and Corporate Profits in the Second Quarter of 1950

CORPORATE profits, which had averaged one-fifth less in 1949 than in the previous year, rose sharply—with the marked advance in national income and product—to a new high in the second quarter of 1950, according to preliminary estimates of the Office of Business Economics. Second-quarter profits before taxes amounted to \$9.3 billion, up one-fourth from the \$7.3 billion in the first quarter, which, in turn had registered a small advance over 1949 levels.

The relative increase in seasonally adjusted profits was about the same as that in unadjusted totals. The correction for seasonal variations had only a minor effect on the all-industry totals, the adjustments by industries tending to be offsetting in the aggregate. At seasonally adjusted annual rates, profits before taxes advanced from \$29.2 billion in the first quarter of 1950 to \$37.4 billion in the second.

The rise in profits of one-fourth was associated with an 8 percent increase in corporate sales, implying a substantial increase in the profit margin on sales. On a before-tax basis, the estimated profit-sales ratio rose from 7½ to 9 percent.

### Profits after taxes

On an after-tax basis, profits increased from \$4.3 billion in the first quarter of 1950 to \$5.6 billion in the second, bettering slightly the earlier postwar peak reached in the third quarter of 1948. These estimates allow for the increase

in tax rates applicable against 1950 corporation income under the new tax law.

The relative movement of profits after taxes since the end of the war has tended to parallel that of profits before taxes, but at a level approximately three-fifths as high, reflecting an effective combined Federal and State profits tax rate close to 40 percent. Beginning with the first quarter of 1950, however, the effective tax rate in these estimates has been stepped up by approximately 3 percentage points.

The subsequent discussion will be in terms of profits on a before-tax basis.

### Inventory profits and losses

In interpreting changes in corporate profits in recent periods, it is helpful also to examine corporate profits adjusted for inventory valuation; that is, as the profits share is carried in the national income accounts.

The effect of the inventory valuation adjustment is to charge inventories used up in production to cost of goods sold on the basis of current replacement cost rather than "book" (original) cost. The predominant corporate practice is to charge inventories to cost of sales in terms of prior-period prices rather than current replacement prices. When replacement costs are higher than book costs, as in periods of rising prices, an "inventory profit" arises. Conversely, when replacement costs are lower—in periods of declining prices—

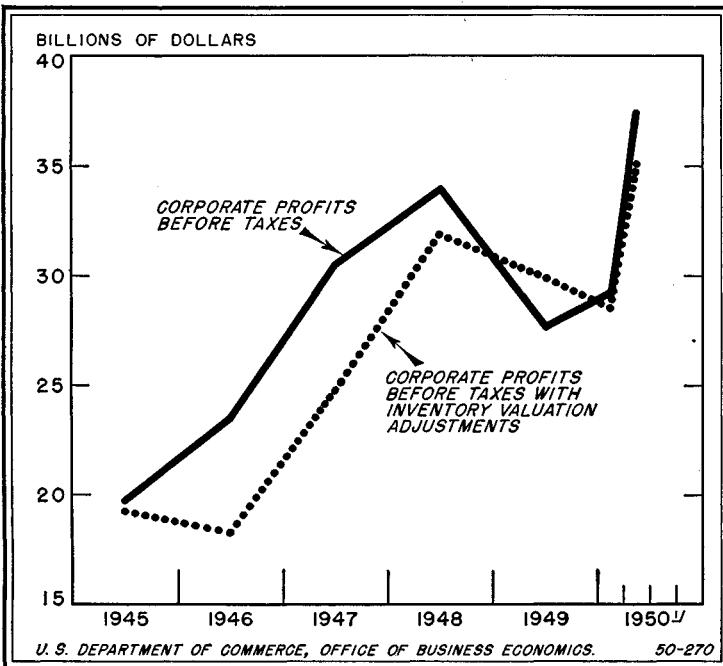

an "inventory loss" is included in the reported "book" profit data.

Because of the large increase in corporate profits in the second quarter, the effect of eliminating inventory profits and losses is somewhat obscured. Percentage-wise, both profit series advanced sharply. However, the rise in the adjusted series, at annual rates, is smaller by 1½ billions. This represents the increase in inventory profits between the quarters.

The recent-period importance of inventory profits and losses becomes more apparent when second quarter profits are compared with profits in 1949. The second-quarter annual rate of profits before taxes was one-third above the 1949 total; however, if inventory profits and losses are eliminated, the relative increase over 1949 is cut in half. In dollar terms, the increase is reduced from almost \$10 billion to a little more than \$5 billion, at seasonally adjusted annual rates.

The striking difference in the behavior of the profit series including the inventory valuation adjustment resulted from the presence of substantial inventory losses in 1949 associated with the price declines, and substantial inventory profits in the second quarter of this year brought about by price rises.

**Chart 5.—Corporate Profits Before Taxes, With and Without Inventory Valuation Adjustment**

<sup>1</sup> Quarterly totals, seasonally adjusted, at annual rates.

Source of data: U. S. Department of Commerce, Office of Business Economics.

The effect of the exclusion of inventory profits and losses during recent periods is shown in chart 5, where profits before taxes are given on both bases. It will be noted that the two series were of very similar magnitude in 1945, when price controls were still in effect and price movements were, accordingly, minor. There followed a period of rapid price rise culminating in 1948. During this period profits before taxes remained higher than the series including the inventory valuation adjustment.

By 1949 the positions of the two series were reversed with the adjusted one being higher, reflecting a decline in prices. The recurrence of price rises in 1950 has brought another reversal of position, and profits before taxes are again higher than when computed with the inventory valuation adjustment.

## Second-Quarter Profits by Industry

Most of the broad industrial groups for which data are presented in table 1 participated in the first-to-second quarter profit rise. Relative increases were better than average in transportation, mining, and manufacturing. In transportation, where profits doubled, roughly half the increase was seasonal in character. It was due principally to the experience of the railroad industry, where first quarter profits had been adversely affected by the February work stoppage in the coal mines. In this industry, as well as in mining, seasonally adjusted profits in the second quarter were substantially higher than in 1949—reflecting higher profit margins—but about one-fifth below the 1948 peak.

The minor decline in profits recorded for communications and public utilities was seasonal; on a seasonally adjusted basis profits in this industrial group rose appreciably. Profits in wholesale and retail trade, which dominate the remaining group of industries, were up substantially from the first quarter. An important element of the expansion in retail trade was the marked improvement in department store profit margins.

### Profits of manufacturing subgroups

Although most of the industry subgroups participated in the \$1.2 billion, or 30 percent increase in profits before taxes in corporate manufacturing, there were variations in the rates of advance. Earnings in the durable-goods group of industries, which accounted for slightly more than half of manufacturing profits in the first quarter, increased two-fifths, while in the nondurable sector the rise was only one-sixth. The disparity in rates of increase is reduced only moderately when adjustment is made for seasonal variations.

The relatively favorable position of durable-goods manufacturing profits holds in a comparison of earnings in the second quarter with those in 1948. The second-quarter annual rates were one-third above 1948, as against a decline of one-tenth in the nondurable industries.

Leading the upward movement of earnings in durable-goods manufactures from the first to the second quarter were the lumber, furniture, iron and steel, and automobile industries, in all of which profits were up 50 percent or more on a seasonally adjusted basis. Earnings in the lumber and furniture industries have been buoyed by the recent upsurge in construction activity but had been markedly affected by the 1949 recession, and in the second quarter were still slightly below their postwar highs. Metal producing and fabricating companies reported earnings in the recent quarter which surpassed 1948 levels.

In the stone, clay, and glass group, also directly affected by construction, seasonally adjusted profits in the second quarter exceeded previous records by a wide margin. This industry was not among the top gainers over the first quarter as its advance over the reduced 1949 level had taken place a quarter earlier. Profit margins in the stone, clay, and glass group are also currently far in excess of 1948.

In the case of the automobile industry, profits and sales have been climbing steadily ever since auto manufacturers reconverted their plants to peacetime production, without any noticeable slackening in 1949. Concurrent with the rise in sales volume has been a persistent rise in the ratio of profits to sales.

Within the nondurable group of manufacturing industries, second-quarter increases of between one-third and one-half were attained in rubber, petroleum, leather, chemicals, and apparel. Of these five industries, however, the 1948 level was surpassed only in rubber and chemicals.

Profits in the food group were up only moderately. Profits of tobacco companies showed little change, having maintained a rather steady level of income since 1948.

**Table 1.—Corporate Profits Before and After Taxes and Corporate Sales: 1948 and 1949 Quarterly Averages, 1949 by Quarters, and First and Second Quarters of 1950<sup>1</sup>**

Industry group	[Millions of dollars]

<sup>1</sup> Annual corporate profits and sales estimates by major industrial groups for the years 1942 through 1949 were published in the SURVEY OF CURRENT BUSINESS for July 1950, pp. 17, 18, 23. For similar data for the years 1929 through 1941, consult the National Income Supplement to the SURVEY for July 1947, pp. 30-32, 41. Concepts and methodology have been described in the Trend of Corporate Profits, 1929-45, in the April 1946 SURVEY, pp. 11-12. The principal change made since that statement was prepared has been to adjust for tax credits arising from the carry-back of unused excess-profits tax credits and net operating losses; that is, these tax credits were added back to profits after taxes in those years to which the tax credits were carried back.

Only one of the manufacturing subdivisions—printing and publishing—clearly showed a decline in the second quarter. This represented a continuation of a downtrend that began in 1947.

### Profit Rates

Frequent reference has been made above to profit margins on sales. These are useful indicators of changes in the profit rates of a particular industry or group of industries over time. However, they severely underestimate the profits share of the net value of goods and services originating in corporate business because of the duplication involved in aggregate sales.

This difficulty could be overcome best if estimates were available for the part of the gross national product originating in corporate business so as to provide an unduplicated count of the value of corporate production. Unfortunately such estimates are not yet available on a systematic basis.

However, an equally useful measure is available in national income originating in corporate business. This measure of corporate business activity differs from the value of corporate production principally in that depreciation charges and taxes and fees to Government other than corporation income taxes are excluded from the total. Defined directly in terms of its components, it is the sum of the three income shares originating in the corporate sector—compensation of employees, profits, and interest.

Table 2 presents for selected periods a percentage distribution of the income originating in corporations. The absolute level of these percentages provides a better measure of the magnitude of the profit share than can be obtained from inspection of profit margins on sales.

The profits share, measured in the national income accounts before profits taxes and with inventory valuation adjustment, has been absorbing about one-quarter of the total in recent years. Virtually all of the remaining three-quarters goes to compensation of employees, since the interest component has dwindled to relative insignificance in the terms of this comparison.

The profits share in the second quarter increased beyond

<sup>2</sup> Total profits for all industries include the adjustment for the net flow from abroad of dividends and branch profits.

<sup>3</sup> Consist of lumber and timber, furniture, stone-clay-glass, iron and steel, nonferrous metals, machinery (except electrical), electrical machinery, transportation equipment (except automobiles), automobiles, and miscellaneous.

<sup>4</sup> Consist of food, tobacco, textiles, apparel, paper, printing and publishing, chemicals, petroleum, rubber, and leather.

<sup>5</sup> Consist of agriculture, forestry, and fisheries; contract construction; wholesale and retail trade; finance, insurance, and real estate; services; and the international balance adjustment.

the postwar high reached in 1948, and was close to the all-time peak reached in 1943, when profits before taxes including inventory valuation adjustment accounted for 27 percent of corporate income originating.

The profits share in prosperous postwar periods, as may be seen in table 2, is somewhat higher if the inventory valuation adjustment is not made, and somewhat lower in the recession year of 1949.

### National Income

The availability of corporate profits estimates makes possible the completion of the national income and product statistics for the second quarter which were presented without this component in table 4 of the August SURVEY. Second quarter estimates of national income by distributive shares at seasonally adjusted annual rates may be found on page S-1 of this issue.

National income in the second quarter was at the seasonally adjusted annual rate of \$229 billion. This represents an

increase of 5 percent from the \$217.2 billion recorded for the first quarter. The second quarter rate was close to the postwar high reached in the fourth quarter of 1948.

The corporate profits component of national income—computed by adding to profits before taxes the inventory valuation adjustment in order to secure a measure of earnings from current production—accounted for more than half of the \$12-billion increase, at annual rates, in national

income from the first to second quarters, although profits represented only about one-eighth of the national income in the first 3 months of this year.

Profits had also contributed substantially to the decline from the fourth quarter of 1948 to the same quarter of 1949, accounting for about one-third of the \$17-billion drop at annual rates.

## Trends in Employee Compensation

Roughly two-thirds of the \$19 billion advance in total personal income, at an annual rate, from August 1949 to August 1950 resulted from the expansion in nonfarm private payrolls. During 1950, wage and salary payments in private nonagricultural industries increased rapidly, reaching a high in August of \$122.4 billion at annual rates, compared with \$110.1 billion in the same month of 1949. The \$12.3 billion dollar advance approximately equaled the largest rise—made in 1948—registered in any postwar year for the same 12-month period, as shown in table 3. The analysis which follows evaluates the significance of the several factors contributing to the rise in private nonfarm employee compensation, including the effect of changes in employment, in hours worked and in wage rates.

### Employment rise important factor

During the 12-month period ending in August 1950, \$5.1 billion or about 40 percent of the increase in private nonfarm employee income shown in chart 6, was attributable to greater employment, while \$2.4 billion of the increase, or 20 percent, resulted from lengthening of hours worked. Advances in basic wage rates accounted for the bulk of the remainder, with the shift in employment to higher paying industries, job upgrading, and related factors of lesser significance.<sup>1</sup>

The greater importance of increases in employment and longer hours is in contrast with earlier periods of advancing income in the postwar years, when change in wage rates was the dominant influence. During 1946-47, higher wage rates accounted for nearly all of the increase in pay rolls, while in 1947-48, about three-fourths of the advance was accounted for by this factor. In the decline in employee compensation during 1949, wage rates increased slightly, although not sufficiently to offset the decline in income resulting from decreases in employment and in hours worked.

In the manufacturing sector, for which data on the influence of the various factors on pay rolls are available on a comparable basis, employee compensation increased \$7 billion at annual rates from August 1949 to August 1950. Of this advance, one-half resulted from increased employment, one-fourth from longer hours, and the remaining fourth reflected increased straight-time earnings and other factors.

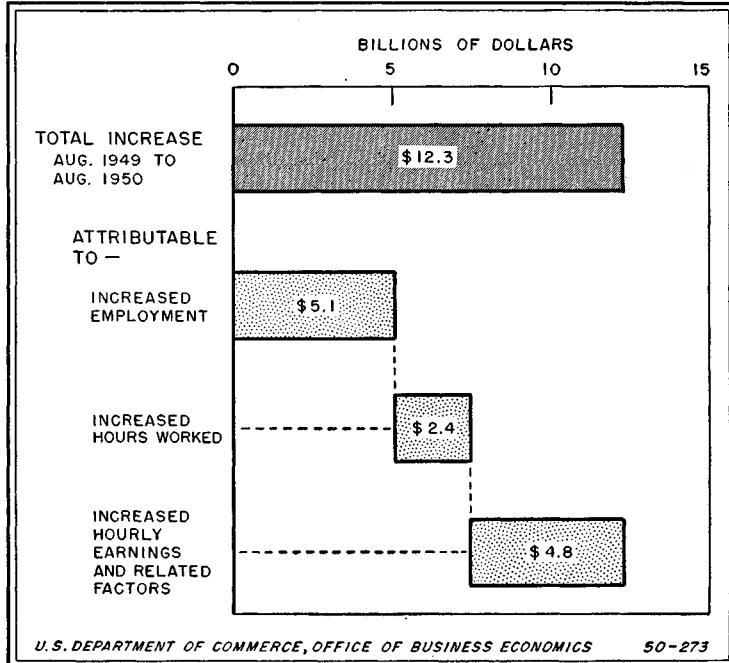

### Areas of increased employment

The total number of nonfarm employees rose 2 million between August 1949 and August 1950, reaching 44.9 million or about the same as the peak reached in 1948. The employment rise was particularly sharp from the 1950 February employment low—which was partly affected by the coal strike—amounting to 3.3 million through August. The rate of increase for this 6-month period was exceeded only by the 3.6 million advance between February and August of 1941, aside from the recovery following the strike period in 1946.

The major area of advance developed in manufacturing industries, as shown in table 4, where the number of wage

earners in August rose by 1.3 million from the same month last year. The sharpest increases were made in durable-goods industries, particularly in the primary metals, machinery and transportation sectors, which had declined rapidly during the 1949 adjustment period. With the exception of the nonelectric machinery and textile industries, employment in all other manufacturing groups had approximated or surpassed levels prevailing in August 1948—the previous peak for that month in the postwar period.

**Chart 6.—Factors Contributing to the Increase in Wage and Salary Payments, Private Nonagricultural Industries, August 1949 to August 1950**

U.S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS 50-273

Source of data: U. S. Department of Commerce, Office of Business Economics.

The rise in employment to a new peak has been reflected in a tightening in the labor market. Unemployment has been cut about in half since the beginning of the year, and in a number of the large industrial areas a shortage of some types of skilled workers has developed. This has resulted in a sharp decline in layoffs in manufacturing industries from 1.8 per thousand in August 1949 to 0.7 in August 1950, which is about as low as the layoff rate during the peak demand for labor in the war period. At the same time, the expansion in employment opportunities has stimulated the search for higher paying or more desirable jobs. The "quit" rate has risen well above that prevailing at any time since the summer of 1948.

Nonmanufacturing employment, which had declined only slightly during the 1949 adjustment period, advanced almost 700,000 during the year ending in August primarily due to increased activity in the construction industry and in trade. This advance brought total nonmanufacturing

<sup>1</sup> For a further description of methods of calculation of the various factors contributing to changes in income of private nonfarm employees see SURVEY, November 1948, pp. 7-10.

employment roughly half a million above the postwar peak for that month.

### *Increased influence of lengthened workweek*

One-fifth of the rise in private nonfarm-employee income resulted from the lengthening of the workweek—reflected in a rise from an average hours worked from 41.8 in August 1949 to 42.3 in August 1950. During earlier postwar years, the influence of the workweek on rising employee income was either negligible or negative. The increased importance of hours worked reflects the recovery from the moderately low level to which the workweek had fallen in 1949.

<sup>1</sup> Changes calculated from unrounded data.

Source: U. S. Department of Commerce, Office of Business Economics, based on data of U. S. Department of Labor, Bureau of Labor Statistics.

Most of the rise in hours worked resulted from advances in the manufacturing industries. This rise accounted for about one-fourth of the increased worker income in these industries over the past year, somewhat larger than the one-fifth contributed from this factor in total nonfarm private employee income.

The downward drift in average hours worked in manufacturing during most of the postwar period was halted in January, coinciding with the beginning of the accelerated rise in manufacturing activity. An increase of 1.5 hours since that month brought hours worked to 41.2 in August 1950, the highest level since 1945, although this remains about 4 hours below the wartime peak for August 1944 of 45.2 hours.

### SURVEY OF CURRENT BUSINESS

For the 12-month period, the increase in hours worked in manufacturing was equivalent to the addition of 760,000 workers. The rise in hours was especially sharp in durable-goods manufacturing, as shown in the following tabulation:

	Average work week in—			(Average hours per week)
	Total manufacturing	Durable goods manufacturing	Nondurable goods manufacturing	
August 1948	40.1	40.6	39.5	
August 1949	39.1	39.3	38.9	
August 1950	41.2	41.7	40.6	

### *Changes in average hourly earnings*

Increases in basic wage rates and other related factors—which as noted earlier accounted for 40 percent of the increased nonfarm private payrolls over the past year—do not take into account the effect of recent wage advances. However, through August 1950 the rise in basic wage rates over the past year already had been reflected in an advance of 4.5 percent in hourly earnings—which includes premium pay for overtime—compared with 3 percent in the preceding year. Although previous patterns of wage rate changes in the postwar period indicate a clustering of new wage settlements in the spring, resulting in a declining rate of change during the remaining part of the year, advances in hourly earnings have accelerated since May, particularly in manufacturing industries. Widespread new wage awards in August and September when made effective imply a further quickening in the rate of increase. The data presented in table 5 show changes in average hourly earnings in manufacturing industries from August 1949 to August 1950, and from the 1939 average to August 1950. Between August 1949 and August 1950, hourly earnings for all manufacturing industries increased 4.6 percent compared with an advance of 2.5 percent in the consumers' price index. For the entire period since 1939, the real gain in hourly earnings is measured by the relation of the increase of 131 percent in current dollar hourly earnings and 74 percent in consumers' prices. Workers in durable-goods industries scored a relatively larger gain in hourly earnings since 1939 than nondurable-goods workers, as shown in table 5.

(Continued on page 16)

# Public and Private Debt in 1949

IN 1949 there was a further rise in the outstanding volume of public and private indebtedness. Despite the downward adjustment in income and production which took place during the first half of 1949, the debt totals and service charges of private business appear to have remained comparatively low in relation to the level of business activity. Nonfarm businesses, in the aggregate, continued to use a relatively small volume of long-term obligations to finance their investment requirements, and actually lowered their short-term liabilities with the lessened need for external financing to hold a reduced volume of inventories. The largest change in the private debt totals stemmed from the sizeable increase in individual debt represented by residential mortgages and consumer credit. Farm indebtedness also rose. There was a moderate upturn in Federal debt and a continued expansion in State and local government debt.

The expansion of net public and private debt in 1949 was at a lesser rate than in the preceding 2 years. The total amounted to \$442 billion on December 31, 1949—an increase of 2½ percent during the year as compared to increases of 3½ percent in 1948 and 4½ percent in 1947. A summary view of trends in the structure of net debt over the past 34 years is given in chart 1. The major developments in 1949 are depicted in chart 2.

The over-all rise in net debt during 1949—\$11½ billion—was composed of \$4 billion in net public obligations and \$7½ billion in private indebtedness. The increase in net public debt was about evenly divided between the Federal and the State and local governments. The increases represented 1 percent of the total Federal debt outstanding, and 12 percent of State and local government debt.

Within the private sector of the economy, all major components of debt except corporate short-term liabilities increased during the year. At the end of 1949, net private debt aggregated \$206 billion, an amount representing 46½ percent of total net outstandings. This relationship was about the same as in 1948, but may be compared with 35 percent in 1945.

## Federal debt turns upward

At the end of December 1949, Federal Government and agency net debt—debt owed by the Federal Government to all economic entities except itself—amounted to \$218½ billion, a rise of \$2 billion for the year. This upturn followed a period of Federal debt reduction which began in February 1946 and carried through April 1949. Because of cash deficits incurred during the first 6 months of 1950, there was a further increase in Federal net debt in this period. On June 30, 1950, the net debt of the Federal Government proper (excluding Federal agencies) aggregated \$219½ billion, an increase of \$1¾ billion in 6 months. Complete data for Federal Government agencies for the first half of this year are not yet available.

The year's advance of \$2 billion in the indebtedness of State and local governments was mainly concentrated in the obligations of local governments. It was incurred largely to finance expenditures for highways, school facilities, and public utilities. There was also a small increase in State flotations of World War II veterans' bonus issues.

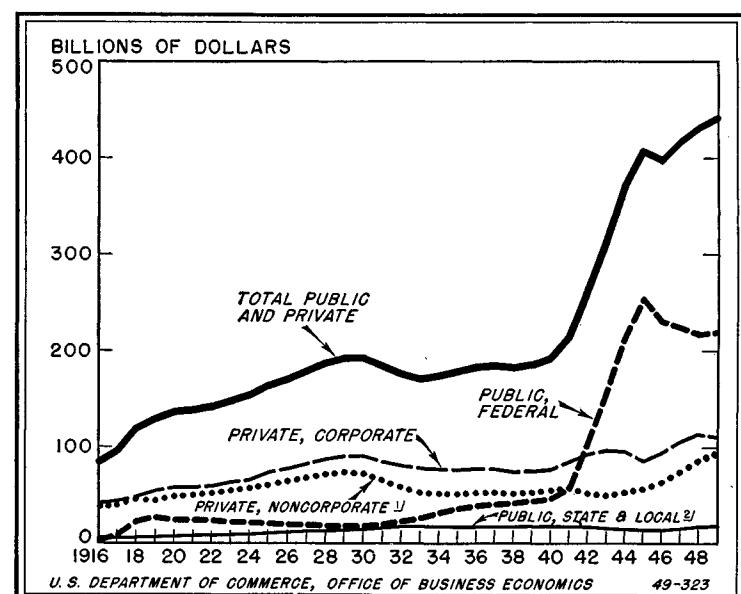

NOTE.—Mr. Bonnell is a member of the National Income Division, Office of Business Economics.

In aggregate, the 1949 increase in total private debt was of moderate proportion—slightly under 4 percent. However, diversity in movement and rates of change characterized the individual components. This was related to the business adjustment and stabilization following the inflationary influences of the earlier postwar period.

## Decrease of corporate debt

The total net debt of business corporations amounted to \$112 billion on December 31, 1949—\$2 billion less than at the end of the previous year. A reduction in corporate short-term liabilities accounted for all of this decrease, offsetting a further rise in long-term indebtedness.

Chart 1.—Net Public and Private Debt, by Major Components, End of Calendar Year

<sup>1</sup> Data represent individual and noncorporate private debt.

<sup>2</sup> Data are for June 30 of each year.

Source of data: U. S. Department of Commerce, Office of Business Economics, based upon data from various governmental and private agencies.

The 1949 rise in corporate net long-term debt was limited to \$3½ billion in comparison with an increment of nearly \$5 billion in the preceding year. This decreased use of external long-term debt financing reflected chiefly smaller outlays for plant and equipment, which receded slightly from the 1948 high.

Net corporate short-term liabilities, on the other hand, were lowered \$5½ billion during 1949. The explanation of this drop lies mainly in decreased needs for external financing to hold inventories. (A secondary factor was lower reserves for Federal and State income taxes, accompanying the reduction in book profits.) Business corporations cut down their inventory accounts by about \$4½ billion during 1949. In 1948, \$5 billion had been added to inventories (book value) and in 1947, over \$7 billion.

At the end of the year, corporations in the aggregate were in an extremely favorable financial position. Net working

capital had increased and there was a marked improvement in liquidity ratios.

### Nonfarm mortgage expansion continues

In 1949, as in the preceding 2 years, the largest absolute increase of any major private debt category was recorded in the noncorporate (nonfarm) mortgage area. The rise in 1949 was \$5.2 billion, in comparison with expansions averaging \$6.2 billion in the three preceding years. The steady postwar increase in this form of debt carried the total from \$28 billion at the end of 1945 to \$51½ billion at the close of last year.

The volume of new construction activity in the areas covered by this type of indebtedness was essentially stable from 1948 to 1949. This accounted for the somewhat lower net addition to mortgages outstanding during 1949. However, factors tending to enlarge the rate of growth were operative, such as a liberalization of credit policies on the part of private lending institutions and Government insuring agencies. Other possible expansive influences may have been a higher rate of turn-over of existing structures, and a lower volume of mortgage repayments in excess of contractual obligations.

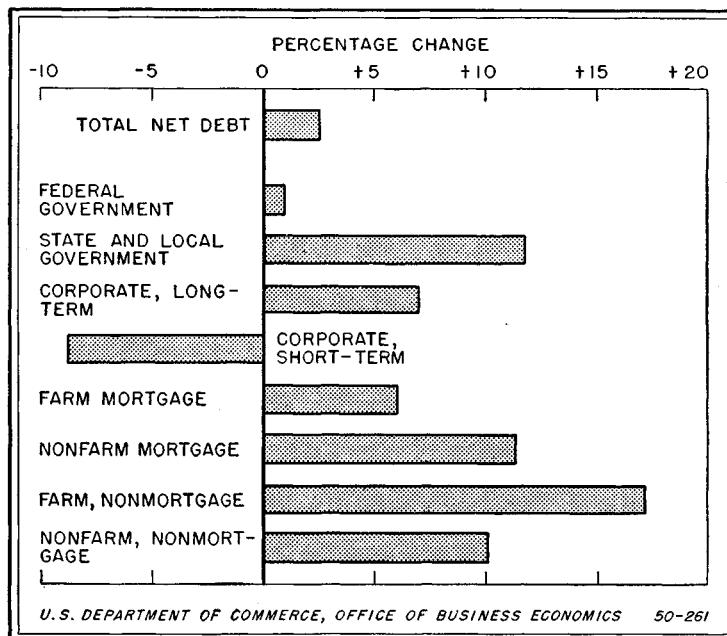

Under the terms of the Defense Production Act of 1950, the President has been given control powers in the mortgage market for new construction. As noted in the review of the business situation earlier in this issue, the comprehensive regulations have recently been announced.

### Farm debt rise accelerated

Farm mortgage debt continued to expand during 1949, at a rate higher than in the 1946-48 period. As further evidence of the upward movement, every State showed an increase in 1949, whereas in the immediately preceding years, the increase in the total had been the result of divergent geographic experience.

In spite of last year's contraction in agricultural income, there was no indication of a significant rise in the number of defaulted loans. However, lower 1949 incomes were prob-

**Chart 2.—Percentage Changes in Net Public and Private Debt, 1948 to 1949<sup>1</sup>**

<sup>1</sup> Percentage changes are based upon data for end of calendar year except for State and local government, which are for June 30.

Source of data: U. S. Department of Commerce, Office of Business Economics.

ably the primary cause of the lower volume of turn-over in farm land. Farm sales at increasing prices had contributed to the increase in outstanding mortgage debt in earlier post-war years. In 1949, a decreased number of these sales at lower prices must have had a dampening effect on the new mortgage level. Considering the stable volume of mortgages made or recorded, the rise in outstandings in 1949, at a quickening pace, must have been primarily caused by lower dollar amounts of mortgage repayments.

Non-real-estate credit to farmers and farmers' cooperative organizations (labeled "Farm nonmortgage" in the tables) also underwent a sharp increase in the year ending December 31, 1949. However, in examining this component of the net debt total, it is advisable to separate Commodity Credit Corporation loans and guarantees, which are not debt in the usual sense. The loans are nonrecourse in form and arise from price-support activity of the Government. The transaction is essentially a sale when the loan is not redeemed.

Excluding CCC loans and guarantees, farm non-real-estate credit totaled \$4½ billion on December 31, 1949, about 13 percent above the amount outstanding a year earlier. The increase in the three prior years had averaged about 20 percent. The diminished rate of increase in farm nonmortgage credit may indicate that farm demand for capital equipment and other improvements has been restricted by reduced incomes. However, there may have been, also, an increased use of farm mortgage loans to finance equipment expenditures and to refund existing short-term credit.

Noncorporate business and individual borrowings for commercial, financial and consumer purposes increased during 1949 to a total of \$30½ billion at the end of the year. The year's advance of nearly \$3 billion was less than that recorded in 1947 and 1948, in both absolute and percentage terms. Within this major category, there were again divergent movements.

### Noncorporate commercial debt reduced

Business decisions to reduce inventories had been a major factor in the 1949 adjustment. In the noncorporate, non-farm, sector there was a drop of nearly \$1½ billion in inventory book values. Reduced requirements for credit to hold inventories account for the downturn in the commercial (nonfarm) category (table 7). This series represents only commercial and industrial loans by banks to noncorporate business enterprises. Trade payables carried on the books of noncorporate business firms are not included because of the lack of basic data; however, available evidence indicates an even greater contraction in that category than in bank loans.

### Expansion of security loans

As part of the general program to ease credit restrictions early in 1949, the Federal Reserve Board relaxed the market controls imposed in Regulations T and U, which relate to the use of credit to purchase or carry securities. Margin requirements on listed stocks were reduced from 75 to 50 percent. There followed a moderate increase in bank and brokers' loans for this purpose. At the end of 1949, these loans amounted to \$3½ billion—up more than \$½ billion from December 31, 1948, but still at a relatively low level.

Policy loans and premium notes against life insurance cash values also expanded during the year, but maintained a low ratio to total policy reserves. The increase was not such as to evidence a growing amount of distress borrowing. This series includes only loans by life insurance carriers and is included under the "financial" category in table 7, together with the security credit mentioned above.

### Consumers' debt rises

Consumer debt—the remaining segment of noncorporate business and individual debt—is related to such factors as the amount of current income, the preceding debt level, existing inventories of consumers' goods, the volume of liquid assets, and anticipated income and price movements. Also, there is a long-term growth factor resulting from price changes, population increase, and lessening social pressures against the incurrence of indebtedness. The major factor contributing to the further growth of consumer credit during 1949, as in previous postwar years, was undoubtedly the expanding flow of durable goods to consumers.

On December 31, 1949, total consumer credit amounted to nearly \$19 billion, up \$2½ billion from the end of 1948. This total represented 10 percent of the year's disposable personal income (personal income after personal taxes and other payments to Government), compared to 8.7 percent at the end of 1948. By the end of June 1950, consumer credit had advanced to \$19.7 billion, but the relationship to disposable personal income remained stable at 10 percent. As may be seen in chart 3, where this is shown graphically,

total consumer credit in June did not seem to be unusually high (the relationship was well over 10 percent in six of the prewar years—1936 through 1941). This was especially true if the long-term growth trend is taken into account.

Installment credit, the most volatile component of the consumer credit total, was still below the immediate prewar relationship to income in June 1950, but had risen very sharply in the preceding 6 months. Pursuant to the Defense Production Act of 1950, regulation of installment credit was reimposed. Under the provisions of Regulation W, the Federal Reserve Board resumed its control of this form of credit on September 18, 1950.

### Debt and interest payments

The foregoing discussion has been confined to a description of recent major changes in the debt structure. Table 2 traces the growth in gross public and private debt over the past 20 years. Particularly noteworthy is that the expansion in total debt—from \$214 billion in 1929 to \$513 billion at the end of 1949—was not accompanied by a similar rise in gross interest payments. Interest payments were \$13 billion in 1929 and \$14½ billion in 1949. (See table 37, SUPPLEMENT TO SURVEY OF CURRENT BUSINESS, July 1947, and table 37, SURVEY, July 1950.) The computed average rates of interest are 6.0 percent for 1929 and 2.8 percent for 1949. Because of lack of complete comparability between the debt and interest series, these percentages are subject to some error, but the fact of a halving of interest rates in this period has been of major significance in investment and in the comparative ability to carry debt.

Primarily responsible for this drop was the general decline in market interest rates. The changed composition of gross debt between 1929 and 1949—in particular the substantially higher proportion of public debt—was a contributing factor, but of much less importance.

### Revised Series

Estimates for 1916 through 1935 as published in this article are identical with those presented in the October 1949 SURVEY. Estimates for 1936 through 1948, as published in the October 1949 SURVEY, have been revised in the present article because of revisions in the Bureau of Agricultural Economics series for non-real-estate debt of farmers and farmers' cooperative organizations (1936–48), and the incorporation of other basic data, particularly for the corporate business sector, for more recent years.

The statistical bases for the present estimates are in general similar to those used in the past. These have been explained in articles in the September 1945 and July 1944 issues of the SURVEY and in the special bulletin, "Indebtedness in the United States, 1929–41" (Department of Commerce, Economic Series No. 21, U. S. Government Printing Office, 1942).<sup>1</sup> In the September 1946 and September 1947 articles modifications of former procedures were noted.

### Gross and net debt concepts

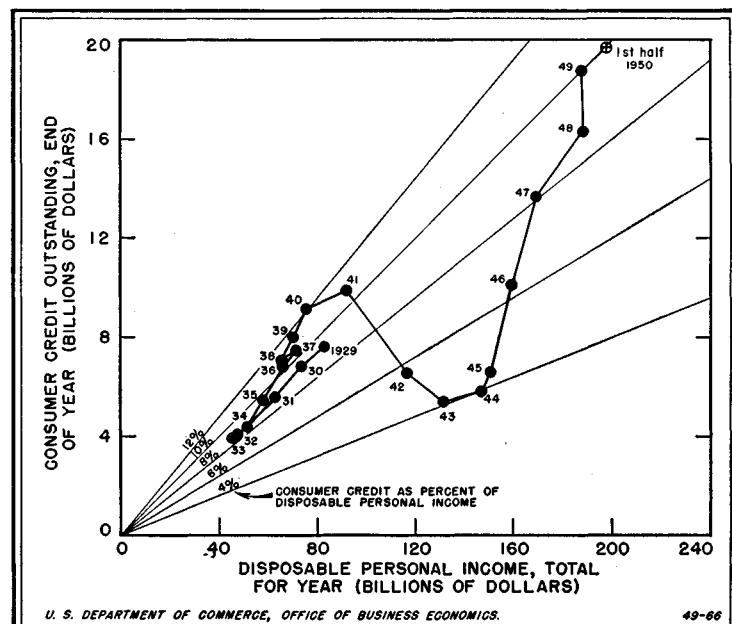

Net public and private debt outstanding is a comprehensive aggregate of the indebtedness of borrowers after elimination of certain types of duplicating governmental and corporate debt. This measure of indebtedness provides a more significant indication of trends in the debt structure than does gross debt, since the effects of nominal changes in financial practices and organization are largely removed.

To obtain net figures, gross debt is adjusted for specific types of duplications pertaining to the following sectors of

the economy: (1) the Federal Government and its corporations and agencies generally; (2) State and local governments, which are treated as a single entity; and (3) within the corporate area, those affiliated but legally distinct corporations which operate under a single management. In the noncorporate private area, data are gross throughout with no adjustments for duplications.

The net debt concept, then, depends upon the definitions employed in measuring gross and duplicating debt. Gross debt, as defined in this study, consists of all classes of legal indebtedness except the following: (1) the deposit liability of banks and the amount of bank notes in circulation; (2) the value of outstanding policies and annuities of life insurance carriers; (3) the short-term debts among individuals and unincorporated nonfinancial business firms; and (4) the nominal debt of corporations, such as bonds which are authorized but unissued, or outstanding but reacquired.

Chart 3.—Consumer Credit Related to Disposable Personal Income<sup>1</sup>

<sup>1</sup> Data plotted for first half of 1950 are as follows: consumer credit outstanding, June 1950; disposable personal income, first two quarters of 1950, seasonally adjusted, at annual rate.

Sources of data: Consumer credit, Board of Governors of the Federal Reserve System; disposable personal income, U. S. Department of Commerce, Office of Business Economics.

Duplicating debt may best be described with reference to the sectors mentioned above. Within the Federal Government and its corporations and agencies, duplicating debt consists of Federal holdings of Federal obligations. Within the State and local government area, State and local government securities held in sinking, trust, or investment funds by either the issuer or other entities within the sector are considered duplicating debt and eliminated. In the private corporate area, duplicating debt is defined as owed to other members of an affiliated system.

Thus, to arrive at net debt, each sector except the noncorporate is adjusted to a net basis by certain consolidations within the sector. A summation of the consolidated estimates for each sector yields the total for net public and private debt.

The net debt concept for each of the four sectors can be summarized as follows: Federal Government net debt is that owed to all other sectors of the economy except the Federal Government proper and its corporations and agencies; State and local government net debt is that owed to all other economic entities except State and local governments;

<sup>1</sup> Copies of this bulletin are available from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.; price, 15 cents.

that among individuals and unincorporated nonfinancial business firms. Data showing adjustments for duplication involved in passing from gross to net debt are given in detail in tables 3, 4, and 5.

## Trends in Employee Compensation

(Continued from page 8)

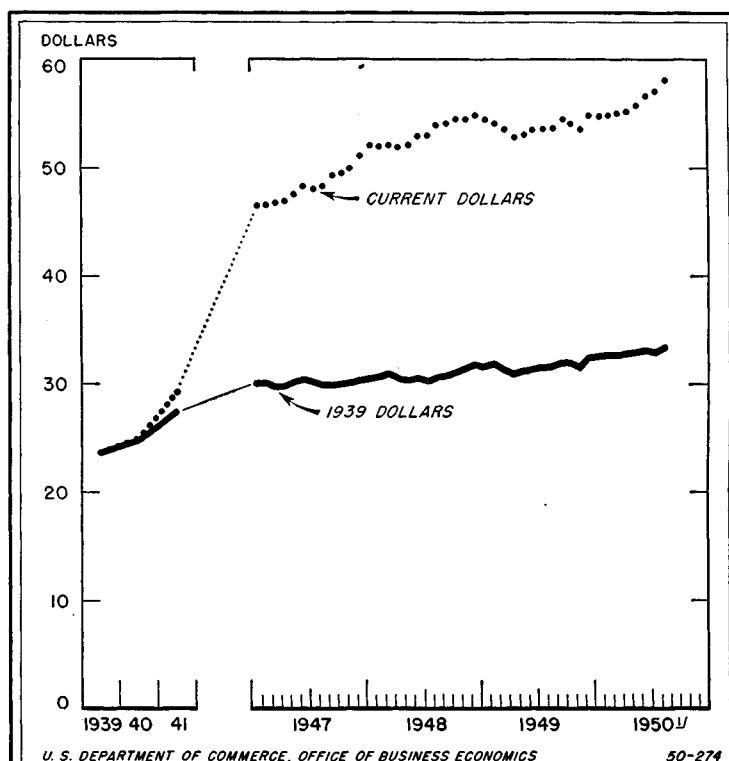

More complete data by industrial division is available on changes in wage rates over the past year, as shown in table 6. For the most part, the higher paying durable-goods industries scored the largest gains, as in lumber and wood products and stone, clay and glass products. However, large advances were made in some nondurable-goods sectors such as tobacco manufactures, chemicals, and leather and leather products. In some groups, the increase was not as large as the advance in consumer prices.

### Change in weekly earnings

Due to increased hours worked, advances in hourly rates and shifts to higher paying industries, weekly earnings in manufacturing rose to a peak of \$60 in August 1950, compared to \$55 in the same month a year ago, and \$56 during the previous 1948 high. The change in weekly earnings—plus allowances for social security and income taxes—in current and real terms is shown in chart 7. Over the past year, the net spendable average weekly earnings for a worker with three dependents rose 8.5 percent, compared with the 2.5 percent increase in consumer prices—resulting in an advance in real terms of 6 percent.

The chart also reveals the change in weekly earnings both in current and real dollars when viewed against the prewar background. In August 1950, weekly earnings in current dollars had more than doubled since prewar. The advance in real terms was substantially less, as shown in the chart, although earnings exceeded the increase in consumer prices since prewar.

Chart 7.—Net Spendable Average Weekly Earnings of Workers With Three Dependents

## New or Revised STATISTICAL SERIES

### Revision of Manufacturers' Sales, Orders and Inventories

The estimates of manufacturers' sales, orders and inventories prepared by the Office of Business Economics are revised annually to take into account new comprehensive information as it becomes available. The present revision utilizes new benchmark data for 1947. Sales and inventory aggregates for that year were compiled by the Bureau of Internal Revenue from corporate tax returns, while corresponding information for unincorporated firms was derived from individual income tax returns.

Because the most recent noncorporate data available prior to this revision pertained to 1945, the present revision goes back through 1946. Monthly estimates in 1946 and 1947 and monthly and annual figures since 1947 are based on sales and inventory data reported by a sample of manufacturing companies. Previously published figures from 1939 to 1945 are unchanged.

There are no benchmark data on new and unfilled orders. However, these estimates have also been revised, since under the method of estimation they are affected by any alteration in the sales figures.

The estimates of retail and wholesale sales and inventories, which usually are revised at the same time as the manufacturing series, have not been changed this year. The trade estimates will be revised as soon as the final figures of the 1948 Census of Business become available. Thus, the new figures on total business sales and inventories allow for changes only in the manufacturing segment (see table 1).

#### Sources of error in the estimates

The need for annual revision of the manufacturing series, as has been explained in earlier descriptions of the method of estimation, arises from the availability each year of the latest benchmark data from the Bureau of Internal Revenue.<sup>1</sup> Viewed statistically, the annual projections from the latest benchmarks are intended as estimates of the benchmarks which will become available subsequently.

There are three sources of discrepancy between the estimates based on the reporting sample and the actual compiled figures on sales or inventories (1) the sample may not be completely representative with respect to changes in sales and inventories; (2) the data reported by a company in the sample may differ from the corresponding figures reported by the same firm to the Bureau of Internal Revenue; and (3) information for estimating the effect on sales and inventories of business births and deaths or of changes in industrial classification may be unavailable or incomplete.

The divergence between the movements of the sample and of the entire group of firms which it represents is partly a matter of chance and partly bias. This bias is probably unavoidable within conceivable limits on the expense of maintaining the sample, since even the availability within the individual firm of information on monthly changes in sales and

inventories is likely to be correlated with the direction of the change, at least part of the time. For example, in a period when inventories have been growing more rapidly than sales, the accumulation may tend to be stopped sooner among firms which maintain monthly inventory records. Again, size of firm is clearly a factor in the firm's willingness to supply information when available, and changes in sales and inventories are correlated with size of firm at least part of the time.

It is important to realize, moreover, that even were monthly reports to be submitted by every manufacturing firm in the country, it would still not be possible to determine from them the precise annual changes in manufacturers' sales and inventories as compiled by the Bureau of Internal Revenue. There are many reasons why the sum of 12 months of sales as currently reported may differ from the year of sales as reported in a tax return, so that the year-to-year changes derived on the two bases may not be the same. An obvious source of difference is a fiscal tax year other than the calendar year. Differences in the degree of consolidation, in the inclusion of foreign transactions, and inevitable discrepancies between an unaudited preliminary figure and a final audited one are further examples, among others that could be cited.

Finally, business population changes take place from year to year which are difficult or impossible to measure on a sample basis. Although estimates of the number of entrants to and withdrawals from the business population are available, as well as some data on their average sales and inventories, only crude adjustments for the effect of these population changes are possible. Moreover, changes in a company's industry as classified by the Bureau of Internal Revenue occur from time to time, and there is no satisfactory way of allowing for these in projecting the OBE estimates.

#### Size of the Revision

The utilization of the 1947 tax data indicated that manufacturers' sales for 1947 were estimated too high by 7 percent. This involved a moderate correction to the corporate total, and a substantial adjustment to the noncorporate.

While inadequacy of the noncorporate sample may well have contributed to the size of the noncorporate revision, examination of the data makes it clear that population changes were of greater importance. Between 1945—the year of the preceding compilation of noncorporate firms—and 1947, an unprecedented number of new manufacturing firms had come into existence, the majority of them unincorporated. Also, a very substantial number of previously noncorporate concerns had incorporated during this period. The estimated adjustment to sales for such changes was based on quite skimpy information on the average size of the companies involved, and this adjustment turned out to be too large.

The revisions in the new orders figures were about as large as in sales, since the computation of the new orders is directly affected by a change in sales. The inventory revisions were smaller than the sales adjustments, mainly because the noncorporate inventory estimates were closer than in the case of sales. However, interrelationships among sales, inventories and orders remain largely unchanged by the revisions.

# Monthly BUSINESS STATISTICS

**T**HE DATA here are a continuation of the statistics published in the 1949 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$1.25) contains monthly data for the years 1945 to 1948, and monthly averages for earlier years back to 1935 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1945. Series added or revised since publication of the 1949 Supplement are indicated by an asterisk (\*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The terms "unadjusted" and "adjusted" used to designate index numbers and dollar values refer to adjustment of monthly figures for seasonal variation.

**Monthly averages for 1949 are shown in the March 1950 issue of the Survey of Current Business. Data subsequent to August 1950 for selected series will be found in the Weekly Supplement to the Survey.**

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1949					1950						
	August	September	October	November	December	January	February	March	April	May	June	July

## GENERAL BUSINESS INDICATORS

NATIONAL INCOME AND PRODUCT†	August	September	October	November	December	January	February	March	April	May	June	July	August
Seasonally adjusted quarterly totals at annual rates:													
National income, total..... bil. of dol.	216.7					214.2				217.2			229.0
Compensation of employees, total..... do.	140.0					140.2				142.3			147.6
Wages and salaries, total..... do.	133.6					133.6				135.2			140.2
Private..... do.	113.0					112.7				114.3			119.2
Military..... do.	4.3					4.6				4.5			4.5
Government civilian..... do.	16.3					16.4				16.4			16.5
Supplements to wages and salaries..... do.	6.4					6.6				7.1			7.4
Proprietors' and rental income, total <sup>‡</sup> ..... do.	40.1					40.7				41.5			41.3
Business and professional <sup>‡</sup> ..... do.	20.7					20.6				21.4			22.3
Farm..... do.	12.2					12.8				12.8			11.8
Rental income of persons..... do.	7.2					7.3				7.3			7.2
Corporate profits and inventory valuation adjustment, total..... bil. of dol.	31.8					28.4				28.4			35.0
Corporate profits before tax, total..... do.	28.2					27.6				29.2			37.4
Corporate profits tax liability..... do.	10.8					10.6				12.0			15.1
Corporate profits after tax..... do.	17.3					16.9				17.2			22.2
Inventory valuation adjustment..... do.	3.7					3.8				3.7			-2.3
Net interest..... do.	4.8					4.8				5.0			5.0
Gross national product, total..... do.	254.4					253.8				262.5			269.9
Personal consumption expenditures, total..... do.	179.0					180.6				182.4			184.5
Durable goods..... do.	24.7					25.3				26.9			26.7

<sup>†</sup>Revised. <sup>‡</sup>Estimates for July-September 1950, based on anticipated capital expenditures of business; for October-December data, see p. 6 of the September 1950 SURVEY.

<sup>§</sup>Revised series. Quarterly estimates of national income, gross national product, and personal income and monthly estimates of personal income have been revised beginning 1946; see pp. 28-35 of the July 1950 SURVEY for the revised figures.

<sup>¶</sup>Includes inventory valuation adjustment.

<sup>§</sup>Personal saving is excess of disposable income over personal consumption expenditures shown as a component of gross national product above.

Unless otherwise stated, statistics through  
1948 and descriptive notes are shown in the  
1949 Statistical Supplement to the Survey

<sup>†</sup> Revised.

<sup>†</sup> Revised series. Beginning with the February 1950 SURVEY data have been revised (effective back to 1910) to reflect changes prescribed in the Agricultural Acts of 1948 and 1949; revisions for 1910-48 are shown on p. 36 of July 1950 SURVEY

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

<sup>1</sup> Revised. <sup>2</sup> Data include some contracts awarded in prior months but not reported.

<sup>3</sup> For actual wholesale prices of individual commodities, see respective commodities. <sup>4</sup> See note marked "4" on p. S-5.

<sup>5</sup> Revised series. Data cover items not previously included; annual data beginning 1915 and monthly data beginning 1939 are available in the "Statistical Supplement" to the May 1950 Construction and Construction Materials Report.

<sup>6</sup> Data for September and December 1949 and March, June, and August 1950 are for 5 weeks; other months, 4 weeks.

<sup>7</sup> Data for August and November 1949 and March, May, and August 1950 are for 5 weeks; other months, 4 weeks.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

<sup>†</sup> Revised.

<sup>‡</sup> Comparable data on magazine advertising cost (Publishers' Information Bureau, Inc.) are available back to January 1948 only. Beginning with the October 1949 SURVEY, five new components are shown (marked with "\$"); the total of the two components "household equipment, etc." and "household furnishings" covers all items formerly included in "electric household equipment" and "housefurnishings, etc." Revised data for January 1948-July 1949 are available upon request. <sup>§</sup> See note marked "§" above.

<sup>†</sup> Revised series. Estimates of personal consumption expenditures have been revised beginning 1946; revised figures for the grand total and for total durable and nondurable goods and services are shown as a component of gross national product on p. 31 of the July 1950 SURVEY; revised figures through the first quarter of 1949 for the subgroups will be shown later.

Dollar estimates of sales for all types of retail stores and for chain stores and mail-order houses have been revised for various periods back to 1943 and revisions from August 1948 forward are shown beginning with the October 1949 SURVEY; specific periods for which the series have been revised are as stated in the notes below. Monthly data for 1946-48 for both sales and inventories of all types of retail stores (unadjusted and adjusted series) appear on pp. 21-23 of the October 1949 SURVEY. Data prior to 1946 and unpublished revisions are available upon request. <sup>§</sup> Revised beginning 1943. <sup>¶</sup> Revised beginning 1948.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

<sup>†</sup> Revised. <sup>‡</sup> Preliminary.

<sup>†</sup> Revised series. Beginning with the October 1949 SURVEY, the indicated series on employment, payrolls, and hours and earnings have been revised to incorporate three major changes: (1) adoption of the current Standard Industrial Classification for manufacturing industries; (2) reclassification of reporting establishments on the basis of major postwar product or activity; (3) adjustment to 1947 bench-mark levels and a revision in estimating production-worker employment. Published revisions are as follows: Employees in nonagricultural establishments by major groups—unadjusted series on p. 24 of the November 1949 SURVEY, adjusted series on p. 22 of the May 1950 issue; production workers in manufacturing (total and durable-goods industries), pp. 17 and 24 of the September 1950 SURVEY; production workers in nondurable-goods industries are shown on pp. 23-24 of this issue of the SURVEY. Unpublished revisions will be shown later.

<sup>‡</sup> Revisions for August 1948-June 1949 are shown in note at bottom of p. S-11 of the September 1950 SURVEY.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

\*Revised. <sup>1</sup>Compiled by the U. S. Department of Commerce, Bureau of the Census.

\*New series. Data for stocks of oleomargarine are compiled by the U. S. Department of Commerce, Bureau of the Census; figures prior to August 1949 will be shown later. The data for production of synthetic plastics and resin materials, compiled by the U. S. Tariff Commission beginning July 1948, are essentially comparable with the series for shipments and consumption (reported by the Bureau of the Census) previously shown here, except for inventory changes (which tend to balance out over a short period) and the inclusion of reports from a few additional companies. Data for alkyd resins and rosin modifications are not available prior to 1949.

†Revisions for January-July 1949 for electric-power production and for the first two quarters of 1949 for the gas series will be shown later.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

† Revised. <sup>1</sup> December 1 estimate. <sup>2</sup> September 1 estimate. <sup>3</sup> No quotation.

†Revised series. Data for rough rice, included in rice exports and stocks, have been revised using a new conversion factor supplied by the U. S. Department of Agriculture; unpublished revisions for exports (1933-July 1948) and those for stocks (prior to August 1949) are available upon request. Revised data for January 1947-July 1948 for wheat-flour production and grindings will be published later.

○ Data formerly shown in thousands of barrels of 162 pounds.

○ The total includes wheat owned by the Commodity Credit Corporation and stored off farms in its own steel and wooden bins; such data are not included in the breakdown of stocks.

§ Based on a 5-day week (formerly on a 6-day week); data for January-June 1949 are shown on p. S-28 of the September 1950 SURVEY.

Unless otherwise stated, statistics through  
1948 and descriptive notes are shown in the  
1949 Statistical Supplement to the Survey

† Revised.

<sup>1</sup> Comparability of data is slightly affected in October 1949 and April 1950 by substitutions in reporting companies. Prices on new basis for September 1949 are \$8.618 (mine run) and \$9.300 (prepared sizes); for March 1950, \$8,916 (mine run).

<sup>2</sup> New basis. Beginning January 1950, coverage was increased to include one East Coast terminal not previously reporting; comparable December 1949 figure, 75,435,000 barrels.

<sup>3</sup> Includes stocks of heavy crude in California.

<sup>4</sup> Revised series. Beginning in the July 1950 SURVEY, the following price series have been substituted for those previously shown: Crude petroleum, 36°-36.9° gravity (former series, 33°-33.9°); distillate fuel oil, New York Harbor, No. 2 fuel, bulk lots, f. o. b. refineries or terminals, excl. all fees and taxes (former series, Pennsylvania, 36°-40° gravity); lubricating oil, bright stock, conventional, 150-160 viscosity D, 0-10 pour point, midcontinent, excl. all fees and taxes (former series, cylinder, Pennsylvania). Beginning in the April 1950 SURVEY, prices for kerosene (N. Y. Harbor, No. 1 fuel, f. o. b. refineries or terminals, excl. all fees and taxes) replace those for water white, Pennsylvania. Kerosene prices beginning 1935 are shown on p. 24 of the August 1950 SURVEY; data beginning 1935 for all other series will be available later.

\* New series. Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Prices are for bulk lots, excluding all fees and taxes (Oklahoma, group 3).

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

<sup>1</sup> Revised. <sup>2</sup> Nominal price.

<sup>3</sup> Beginning 1950, data for the third month of each quarter cover a 5-week period and for other months, 4 weeks; prior to 1950, calendar months are represented; stock data and number of active spindles are for end of period covered.

<sup>4</sup> Scattered monthly revisions beginning 1944 (to incorporate new quotations for two constructions previously included at OPA ceiling prices) are available upon request.

<sup>5</sup> Substituted series. See note marked "c" at bottom of p. S-39 of the July 1950 SURVEY.

<sup>6</sup> Data for September and December 1949, and March and June 1950 are for 5 weeks; other months, 4 weeks.

## SURVEY OF CURRENT BUSINESS

October 1950

Unless otherwise stated, statistics through  
1948 and descriptive notes are shown in the  
1949 Statistical Supplement to the Survey

1949

August September October November December

• A BASIC TOOL FOR BUSINESSMEN  
ECONOMISTS, AND STATISTICIANS ENGAGING  
IN CURRENT BUSINESS ANALYSIS  
OR RESEARCH IN BUSINESS AND RELATED  
ECONOMIC PROBLEMS

## 1949 Statistical Supplement

### • • • *the statistical reference for current business analysis*

More than 2,600 series of commercial and governmental statistics for the business world are included in the 1949 Statistical Supplement presented by the Office of Business Economics as the historical record of series now appearing monthly in the SURVEY OF CURRENT BUSINESS.

### • • • *designed for quick and efficient research*

The Supplement provides monthly data from January 1945 through December 1948 and annual averages of monthly data from 1935 through 1948, *plus* complete annotations for meaningful use.

### • • • *complete coverage*

*Business indexes on income payments, farm marketings, industrial production, orders, shipments, inventories; statistics on construction, advertising, postal receipts, domestic trade, employment, wages, pay rolls, banking, commercial failures, life insurance, foreign exchange, corporation profits, public finance, securities and commodity markets; authoritative figures on exports, imports, transportation and communications, commodities, and many other classifications for business use.*

### • • • *explanatory notes*

Complete descriptions and explanations of the data covered in the tables and in the monthly SURVEY OF CURRENT BUSINESS, providing the reader with information essential to the proper use of the data—definitions of the statistical units employed, methods by which they are collected, adequacy of samples. In addition, the notes direct the reader to sources of monthly and annual data prior to January 1945 and call attention to changes in the nature of the data affecting their comparability. Exact sources are listed.
