The Business Situation

By the Office of Business Economics

WITH final demand for the Nation's output strong, business activity moved ahead to a new high at the end of the second quarter. Aggregate output, employment, and income were little changed in July, with a pattern of demand which was more mixed than earlier in the year in individual lines of business. Total consumer buying continues high with incomes sustained. New business placed with manufacturers has continued below current sales, and the backlog of unfilled orders has been lowered.

New business record

Consumer income—the major broad monthly indicator of business—in July was at an annual rate of \$407 billion, starting off the third quarter somewhat above the June figure and \$3 billion above the record second quarter figure of \$404 billion. Wages and salaries in July were up from June, while changes elsewhere in personal income were small and largely offsetting.

The second quarter value of gross national output—analyzed in detail in a following section—rose to the record annual rate of \$505 billion as a result of a further gain of \$9 billion—2 percent—in final purchases. This gain was principally in real volume. It was partially offset by tapered investment in inventories.

Accumulation of business stocks has been on a diminishing scale with supply-demand conditions better balanced, and rising costs under conditions of intensified competition are being reflected in reduced profit margins. Markdowns were made in some prices—notably those on consumer durable goods—in order to move the existing supplies of merchandise.

Business borrowing for inventory and other working capital purposes, which had risen steadily through the first half-year, gave way in July to substantial net loan liquidation at the larger city banks. The focus of these loan repayments was in metal working firms, although other manufacturers also reduced their borrowing.

The reserve authorities have moved recently in a series of steps to increase the availability of credit. These ac-

tions embraced: (a) reducing the discount rate; (b) open market purchases of government securities to improve the reserve position of the member banks; and (c) a change in effective reserve requirements so as to permit more intensive use of member bank cash holdings and thereby increase the availability of credit.

Final purchases higher

Consumer purchasing in early summer has been well sustained. The pattern of buying, however, has been mixed. Service expenditures are up, nondurable goods purchasing is steady, while sales of durables lag. July sales of new cars were lower than in the same period of last year and were at a seasonally adjusted rate below earlier months of this year.

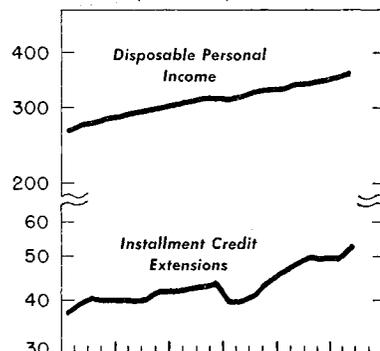

Business investment in plant and equipment is moving ahead imparting strength to some lines of machinery and equipment. Housing investment, which dropped substantially in late 1959, has risen somewhat since last April. Housing starts were steady in the second quarter, at a rate one-sixth below a year ago, and these largely determine current and near-term activity rates on the site.

Government buying is continuing on the upgrade largely reflecting the advance of State and local outlays. The July impetus to Federal expenditures came from the pay raise for civilian workers recently authorized by Congress. The Federal budget picture for the current fiscal year is not yet definitely established pending the completion of the Congressional schedule which was resumed in early August. Its impact upon the economy will be reviewed when action is complete.

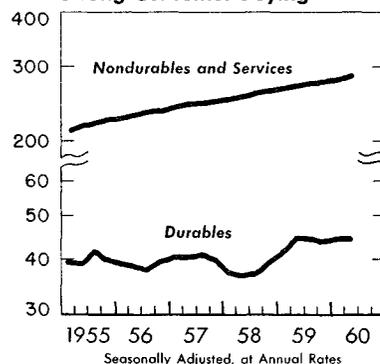

CONSUMER INCOME AND PURCHASING

Steady Rise in Income and Higher Borrowing in First Half . .

Have Been Accompanied by Strong Consumer Buying

Seasonally Adjusted, at Annual Rates
Data: FRB & OBE
U. S. Department of Commerce, Office of Business Economics 60-8-1

Durable goods output lower

Durable goods production in early summer was off from the spring pace, and about 5 percent below the high achieved around the turn of the year when steel mills and auto assemblers were going all out to make up for the interrupted work schedules in the strike period. Steel output was cut back from a weekly rate of 1,750 thousand tons in mid-June to 1,550 thousand tons in mid-July. This compares with a high of over 2,700 thousand tons last January. Over the past month the operating rate has held steady at close to 55 percent of capacity following the almost steady spring and early summer downtrend.

Auto assemblers have meanwhile begun the changeover to production for the new model year and widespread plant shutdowns have meant sharply lowered output. July factory shipments of new cars came to 430,000, compared with a second quarter rate of just over 600,000, and a year-ago pace of 550,000.

Elsewhere in manufacturing, production has been generally well maintained. Machinery output in June was even with the earlier 1960 pace. Among nondurable goods lines, the prevailing pattern was one of operations close to or surpassing previous highs.

Foreign trade improved

Net foreign demand continued to advance in the second quarter, contributing to the rise in total national output. The more favorable trade balance has come almost entirely from the substantial gain in exports, with imports up by only a small amount from the first quarter. The export rise came importantly in the flow of industrial materials—such as copper and steel mill products—and in aircraft.

While the favorable trade balance was again up sharply from the first to the second quarter, our total balance of payments did not show further improvement. The expansion in the merchandise balance was apparently offset by a corresponding rise in capital outflows and in other international payments.

The net payments balance in the second quarter, as a result of these

divergent movements, was about the same as in the preceding quarter, or close to a \$3 billion annual rate. The second quarter balance represents a substantial betterment from the second quarter of last year when a high of \$4.8 billion (annual rate) payments balance was recorded. The adverse balance resulted in a further drain upon our resources.

Financial moves

Costs of borrowing continued to ease through mid-summer with the markets for U.S. Treasury issues evidencing the most pronounced drift. The 3-month bill rate dropped to nearly 2 percent in early August, the lowest since the fall of 1958. With improvement in long-term bond prices also continuing, the Treasury floated a \$2 billion, 8-year issue at 3½ percent, the first bond issue sold below the 4¼ percent ceiling since

Industrials are close to the winter lows and below a year ago. In view of the reduced volume of borrowed funds involved in stock purchasing and easing financial tendencies, the Federal Reserve in late July lowered cash margin requirements from 90 percent to 70 percent of stock prices.

The more recent action in freeing some member bank cash reserves provides the basis for a substantial increase in the money supply and will become effective beginning later this month at a time when there is normally a seasonal increase in the demand for bank funds.

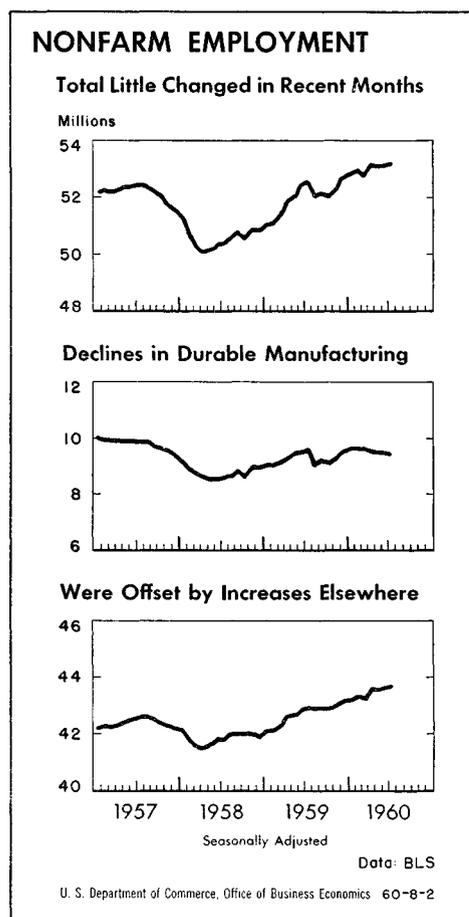

Employment little changed

July witnessed the usual seasonal dip in the number of employees on non-farm payrolls as schools closed and vacation shutdowns affected manufacturing activities. At a seasonally adjusted rate of nearly 53½ million, employment was little changed from the average for the second quarter and was more than one-half of a million above a year ago, which was the high point prior to the interrupted work schedules of last summer.

Recent employment patterns are shown in the accompanying chart. With the exception of durable goods manufacturing industries, employment has been virtually stable or on a moderately upward tilt since the early part of the year. The decline in durables since last February was more than matched by gains in nondurable goods manufacturing, trade, construction, services and State and local governments.

Average hours worked lower

The average length of workweek is lower than at the turn of the year or compared with a year ago. In both of those earlier periods the workweek was being extended in durable goods factories in the face of threatened or existing dislocations in supplies. However, during the spring, average hours worked tended to hold steady or to be extended somewhat, after allowing for seasonal influences. Basic wage rates have continued to move higher, serving to lift the payroll totals. In July, the work schedule in manufacturing averaged close to 40 hours a week, a half-hour less than the year before.

early 1959. The market demand for the new security was well in excess of the final allotment.

Stock prices continued an erratic course with a downward tendency.

1960 Model Autos Record Good Year

Buying Patterns Change

THE 1960 model domestic automobiles are ending their run in August with an aggregate output of about 6 million cars. Production, plus imports during the period, approximated 6.6 million units, a volume exceeded only by the 7.2 million in the record model year 1955. As compared to 1959, the 1960 model run was 8 percent higher, while the number of imports was apparently reduced slightly.

Rise in sales

Dealers' sales of domestic new cars in the April-June quarter were running at a seasonally adjusted annual rate of about 6¼ million, somewhat above the first quarter; sales totaled 5½ million units in calendar year 1959. In July sales fell well below the second quarter rate, after seasonal adjustment,

partly due to the large amount of "bonus" selling concentrated in June.

Dealers' stocks of new domestic cars were close to 1 million units at the beginning of August after fluctuating within a narrow range since March. This volume was about 100,000—or 10 percent—above a year earlier.

Foreign car registrations in the second quarter of 1960 were at a seasonally adjusted annual rate of about 500,000 cars, compared to rates of about 600,000 cars in the preceding four quarters. This marked the first reduction in import demand since such cars became an important factor in the domestic market.

Several major influences account for the more favorable sales performance of the 1960 domestic cars. Foremost was the improved general business with

the accompanying higher consumer purchasing power. With progressively higher income in each month of the model year, consumers supplemented their purchasing power through the use of a large volume of auto installment credit, readily available on terms not much different from those prevailing last year. Automobile paper outstanding at mid-year totaled \$17¼ billion—some \$2¼ billion higher than a year earlier. The proportions of new cars bought on credit in most months this year exceeded those in the corresponding months of 1959; almost 63 percent of all new car sales in 1959 were partly financed by credit.

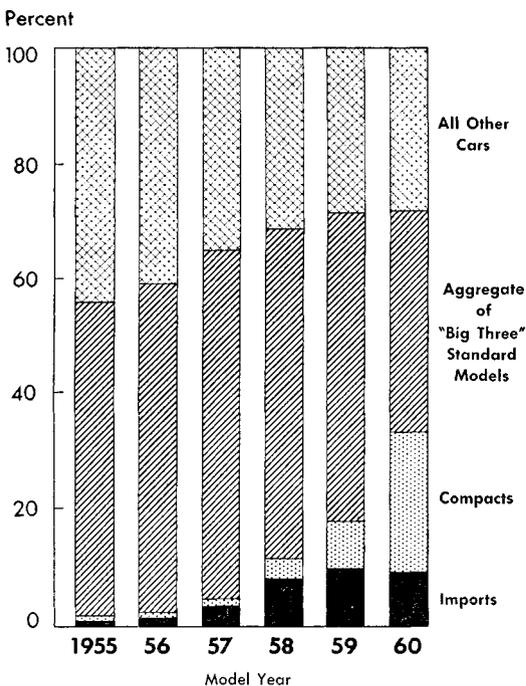

The immediate acceptance of the new compact cars, as reflected in the rapid sales growth of these smaller vehicles, was also of prime importance.

Average price lower

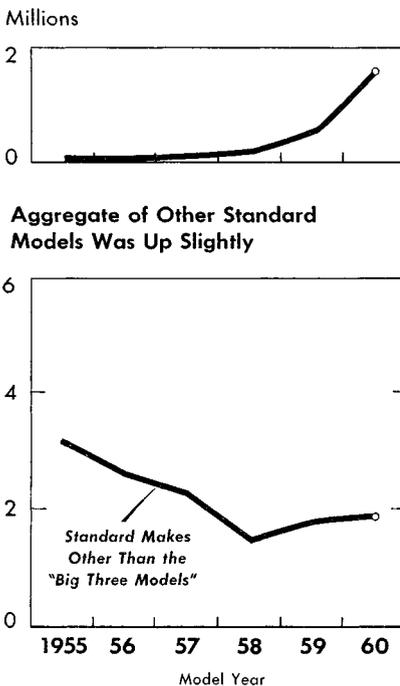

These lower-priced cars resulted in some lowering of average costs to the consumer. At the time of introduction, the factory-suggested retail list prices of the 1960 standard models were

Imports Showed No Further Growth

○ 1960 estimated

little changed from comparable 1959 models—the first time in many years that such prices had not been raised. In the later months of the 1960 model year, the Consumer Price Index, which measures net prices, i.e., after cash discount or overallowance on trade-in, fell somewhat below those of a year earlier.

The average unit retail price of new cars fell even more as the lower-priced (and on the average less-equipped) compacts assumed greater importance in the sales-mix. Average unit prices fell about 5 percent from the first half of 1959 to the first half of this year. This reduction offset about one-half of the rise in the volume of domestic sales so that dollar expenditures for new cars in the first half of 1960 were about 5 percent above the corresponding period of last year.

Compacts' share up to one-fourth

A major highlight of the 1960 model year is the exceptionally rapid consumer acceptance of the "compact" cars which accounted for one-fourth of the output. Some 17 percent of the market represented the compacts introduced in 1960 for the first time. The four newcomers accounted for about one million cars, which raised total compact car production to almost 1.6 million units. Two of these smaller-sized cars have moved up to a position behind the two best sellers of the standard models.

In the 1955 and 1956 model years, only about 2 percent of the U.S. auto market was going to the smaller and compact cars, which consisted of one domestic car and many foreign makes. In these comparisons, the annual figures for imports conform with domestic car model years. In 1957, imports more than doubled, boosting the small car share to 4½ percent. With imports increasing again in 1958 and the domestic smaller car doing correspondingly well, the combined proportion for the model year amounted to 11½ percent. The large 1958 absolute gains, it should be noted, occurred in a sharply reduced aggregate market.

By the 1959 model year, the domestic production of the smaller passenger vehicles had risen to 500 thousand cars. With imports up to 600 thousand units, the combined total accounted for 18

percent of U.S. sales in the model year 1959.

The steady increase in popularity of foreign cars and of the smaller and lower-priced domestic makes meant a less favorable sales picture for the standard models, and brought domestic producers into the compact market on an increasingly wide scale. As noted

Table 1.—Domestic Production and Imports of New Automobiles, Model Years 1957–60

Source: Ward's Automotive Reports and U.S. Department of Commerce.

above, the 1960 model production of compacts rose to 1.6 million cars—about one-fourth of the entire market, and triple the 1959 compact volume.

In the 1960 model year the compact-import combination accounted for one-third of the market, with the sharply increased penetration from the 1959 model year attributable entirely to the compacts. Less than a year ago imports exceeded the domestically produced compacts, which are generally larger with more optional equipment than are the major imported cars. In the April-June quarter of this year compacts outsold imports nearly three to one, and were moving ahead while imports had turned downward.

As a result of the highly favorable sales, plans have been announced to introduce four new models of the smaller type, bringing the total to 10, or almost one-half the domestic lines to be produced in the 1961 model year.

Standard model decline

The accompanying chart presents a comparison of the distribution of new model passenger car production and of imports in the corresponding periods of the model years 1955 through 1960. The increasing proportion of the domes-

tic compacts and foreign makes stands out. The chart also shows a breakdown of the combined output of standard model cars between the "Big Three" and others.

From the model year 1955 to 1957, the three largest volume domestically produced cars extended their share of the new automobile market from 54 to 60 percent. This increase, as well as the inroads made by imports, reduced the output proportion of the larger American cars from 44 percent to 35 percent. This ratio continued to decline through 1959, and then was maintained this year. It may be seen from another panel of the chart, however, that unit output of these cars rose in both 1959 and 1960.

Starting with the 1958 models, the relative share of the "Big Three" began to fall, moderately through 1959 and sharply in 1960, when the proportion was down to 39 percent. There was an absolute decline in their combined total of 700 thousand cars from 1959. It should be noted, however, that one newly styled car brought out in this size and price class under a standard name has been a market feature in 1960.

The sharp rise in compact production in 1960 was thus apparently mostly at the expense of their bigger "brothers" next in line. The data further suggest that with one notable exception internal competition along with consumer preferences had evidently resulted in the compacts taking sales from their own companies' standard-size cars.

Shifts in the imported car market

Total foreign car registrations in the first 6 months of the calendar year 1960 were 3 percent below the corresponding period in 1959. Particularly hit by the increasing domestic competition were the makes imported from overseas plants of domestic manufacturers and marketed by their dealers in the United States. For the four leading makes of this type declines ranged from 17 percent to 54 percent; in total these registrations were about one-third less. Sizable declines were also shown for a few products of major foreign manufacturers.

On the other hand, the two most popular imported cars of really small size and large economy of operation, showed gains in the first half of 1960 of about 50 percent and 10 percent

over the corresponding months of 1959. As a result, registrations of all makes produced by foreign manufacturers were 7 percent above January-June 1959.

the distorting effects of last summer's steel strike, the GNP data in the accompanying text table and in the adjacent chart show clearly the important shifts that have occurred as the cyclical rise has matured. The market areas that rebounded most vigorously during the recovery of 1958 and early 1959 have played a much less important part in the more recent increase of activity. The types of demand which showed little buoyancy in the earlier period, by contrast, have moved up.

Consumer durables, new housing, and defense expenditures have held even or

National Income and Product: Rise Extended in Second 1960 Quarter

NATIONAL product in the second quarter mirrored a continuing rise in final purchases for consumption, fixed investment and exports, in part offset by a slowing of inventory accumulation from the abnormally high first-quarter pace. The GNP at \$505 billion was up close to \$4 billion from the opening quarter of the year, at annual rates, with about half the increase due to a rise in physical volume and the remainder to price advances.

Inventories of steel and its end-products having been rapidly rebuilt during the winter, demand declined

for this part of industrial output. The rise of total output tapered following the sharp spurt in the opening months of the year (see chart). The growth of national and personal income moderated, but both these series rose to new highs along with the GNP. The flow of personal income expanded in each month of the quarter, though the increase was less in June than in the earlier spring months.

Gross National Product

Outstanding among the developments of the spring quarter was the \$10 billion gain in final purchases, one of the sharpest recorded in several years. This imparted a strong tone to the major part of business markets.

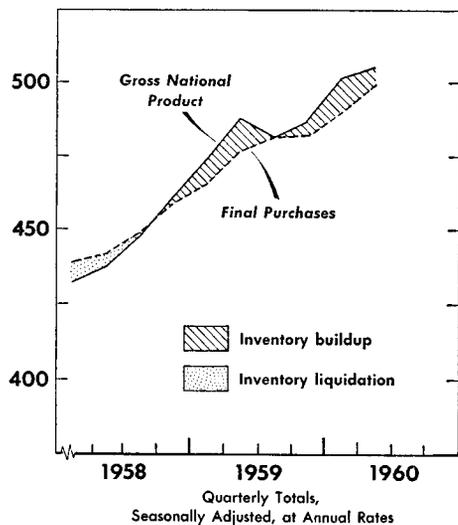

The latest phase of the business upswing, like the earlier recovery period, has featured a sustained growth in personal consumption of nondurables and services. A similar uptrend in purchases of State and local governments has accompanied the rise in the requirements for public services. These segments of the market for the national output together absorb well over half the total. Their strength in recent years has mirrored the progressive advance in living standards as well as the growth and movement of population and the cumulative rise in the supply of residential housing.

With the pattern of final demand in other markets now largely freed from

Billion \$ Change at Annual Rate

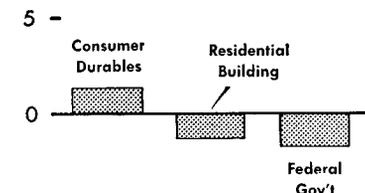

Consumer Buying and Nonfederal Public Services Continue To Expand

Personal Consumption Expenditures (excluding durables)

While Other Areas Which Contributed Heavily to the 1958-59 Rise Show Little Further Strength

Seasonally Adjusted, at Annual Rates

declined this year. Consumer purchases of durable goods registered no significant advance in the spring and, though bolstered by some spillover of automotive demand from late 1959, first-half buying was not much higher this year than last. Residential construction outlays through June, showing little change from one month to the next, were less than in the same period of 1959. Federal Government purchases were off fractionally from the first quarter to the second, and for the half-year were below 1959 in both the defense and nondefense categories.

Final Purchases of GNP: Shifting Pattern of Cyclical Advance

	First-half to first-half change in seasonally adjusted annual rate (billions of dollars)			
	1959-60	1958-59	1955-56	1954-55
Business fixed investment and net exports.....	8	-1½	7½	2
Consumer durables, residential construction and Federal purchases.....	-1½	14½	-1	6½
Personal consumption excluding durables, and State and local purchases.....	17½	18	17½	12½
Total final purchases.....	24	31	24	21

These three markets together accounted for close to half the aggregate rise in final purchases from early 1958 through mid-1959. They have since registered a decline of nearly \$2 billion, at an annual rate.

The check to expansion in these areas has been substantially offset by the recovery achieved since early last year in business fixed investment and in exports. Moving up in the first quarter and again in the spring, these demands have so far contributed \$8 billion more to the annual rate of GNP this year than last. Up through the first half of 1959, by contrast, the recovery in fixed investment had been very limited and net exports had declined with high imports and lowered sales abroad.

The text table compares the developments of 1959-60 with those of the earlier recovery period, and shows that a similar shift in the Nation's markets developed at a similar stage of the 1954-56 upswing.

Consumer demand high

Consumption expenditures neared a \$330 billion annual rate in the spring, the \$5½ billion increase absorbing the larger part of the growth in disposable personal income. More than half of the increase in spending represented gains in the real volume of consumption, though rising prices played a considerable part in some cases.

Over half the advance in purchasing was in nondurables, where substantially higher food and clothing expenditures occurred along with stepped-up purchases of gas and oil and other items.

The rise in food amounted to \$2 billion at annual rates—the largest increase in several years. Like the rise of early 1958, that recorded last spring was due partly to an upward adjustment in prices which was also reflected in an advance in farm income. The severe late winter weather was a factor in the food price movement, bringing about a more-than-seasonal advance in the cost of fresh fruits and vegetables and temporarily reinforcing the firmer market tone which has lately appeared in meat. Food prices seem to have reached a high early in the spring quarter after a 3-month rise, overall, and to have held about even since if allowance is made for seasonal variation.

Clothing and shoe purchases registered a \$½-billion increase for the second quarter, with prices up and good pre-Easter sales following the slack business of late winter. Apparel sales dipped after Easter, but were again running high in the early summer.

Expenditures for durable goods held about even with the first quarter in total, automotive outlays continuing to move up while the contraction in sales of furniture and especially of large household appliances was extended. Auto sales approached an alltime high in dollar volume. At \$19 billion, consumer purchases were back to the pre-strike peak annual rate of a year earlier, and only \$½ billion below the second quarter of 1955, the best spring quarter on record.

Reflecting the interaction of price movements and model preferences, the dollars spent for new autos this spring bought more units than did the same

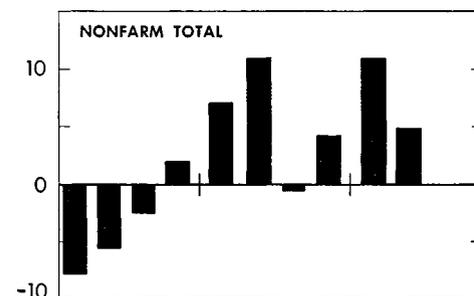

expenditures last year, though substantially fewer than in 1955. Prices for comparable models have risen during the last 5 years, but the average per unit has fallen with the growth in popularity of the smaller and less expensive domestic compact and imported cars. These developments are analyzed on page 3 of this *Survey*.

Durable household goods outlays have been falling back this year toward the plateau they maintained from late 1955 through most of 1958. During this 3-year period quarterly sales of furniture and appliances ranged between \$17 billion and \$17½ billion, at annual rates. With the rapid upswing in residential building and in disposable income, consumer buying of durable household goods rose thereafter to reach \$19 billion in each of the last three quarters of 1959. The decline since the turn of the year has amounted to around \$½ billion. These swings in sales have been in physical volume; price movements have generally been quite small, though in the most recent months prices of large appliances have

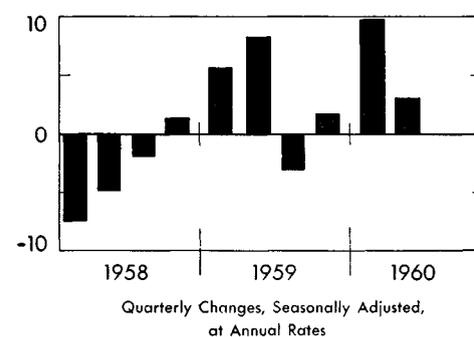

INVENTORY CHANGES IN THE GNP

Wide Swings in Rate of Inventory-Building

Billion Dollars

Center in Durable Goods Lines

weakened as sales tapered, inventories rose and it became necessary to accelerate merchandising efforts.

Investment trends mixed

Residential construction activity was reported substantially unchanged for the spring quarter. Business fixed investment was up somewhat, as equipment spending held even or advanced in nearly all major industries. The spurt in inventory accumulation which accounted for more than \$11 billion of the first-quarter annual rate of GNP subsided, but stocking still absorbed about 1 percent of total output.

Outlays for residential construction have shown signs of leveling off recently, at an annual rate down \$2 billion, or close to 10 percent, from the alltime peak reached a year ago. Not much new strength is yet apparent, however, in the course of reported starts or of applications for government loan backing.

Capital market conditions have eased considerably since the turn of the year; yields on long-term Treasury bonds, for example, have moved down about half a percentage point. The competitive

position of conventional mortgages in particular has improved accordingly, with some favorable effects apparent on activity. Investor demand for government-backed mortgages with their statutory interest rate ceilings, however, continues restricted; open market discounts on FHA home mortgages have declined only fractionally since the turn of the year.

Business investment purchases of construction and durable equipment continue as a strong element in the economy, registering a gain on the order of \$2 billion in the second quarter. Following a like increase in the opening quarter of the year, this brought fixed investment outlays for the first half to a rate \$5 billion or over 10 percent above the same period of 1959.

Nearly all of the industries distinguished in the OBE-SEC Plant and Equipment Survey report higher outlays so far this year by comparison with either the first-half or yearend rates of 1959. Investment has been stepped up most sharply in primary metals and other durable goods groups. Chemicals and textile manufacturing have registered the largest of the gains

which have characterized most non-durables industries. Advances in air and rail transportation and in communication have also been substantial.

Inventory buildup slows

The temporary spurt in production to refill the inventory pipelines was over in a relatively short period and markets no longer feel demand pressures from this source. The increase in inventories, at a \$5 billion annual rate, was considerably less than in the first quarter, but was about the same as the accumulation during 1959. The slowing rate of accumulation is traceable for the most part to the major steel-using industries and to durable goods distributors—the same groups that had required heavy restocking. In durables manufacturing, the value of stocks held has shown little change in recent months apart from the continued expansion in primary metals. In trade, dealers' stocks of autos have continued to rise on a seasonally adjusted basis, but at a rate far under that of the first quarter.

Inventory changes elsewhere continued mixed and generally limited. Holdings of food and beverage produ-

cers moved up in book value, while the first-quarter rise in textile inventories slowed.

Export demand stronger

The most recent improvement in our foreign merchandise trade balance contributed to the second quarter increase in GNP. At an annual rate of \$2 billion, net exports for this period were the highest since late 1957. A series of advances since the postwar low was recorded in the spring quarter of 1959 have stemmed primarily from expansion in merchandise exports while imports have remained on a high plateau.

The increase in our sales abroad has been due in part to rising prosperity in industrial nations of Western Europe and Japan, which has given a firm tone to demand for a number of our manufactured goods as well as for certain industrial materials. Cotton has also benefited from special circumstances which resulted in an unusually high movement in the first half of 1960, and steel exports have moved ahead with the growing supply.

Government purchases up

Government purchases of goods and services advanced \$1 billion to a second-quarter rate of \$98½ billion, as the upward trend in State and local outlays continued. Federal purchases are little changed.

State and local buying approached an annual rate of \$47 billion, as against \$44 billion a year earlier. The expansion has been mostly in payrolls, which are now about equally divided between school and nonschool activities. State and local demand for new construction, which gives rise to over one-fourth of all purchases by these governments, has been fairly stable for the past year.

Federal buying held approximately even in the spring, after moderate declines—mostly in defense spending—in the two preceding quarters. Total Federal purchases so far in 1960 have been down more than \$1 billion from last year's second-half annual rate. This decline more than offset the small increases noted recently in transfer payments and other non-GNP expenditures.

Federal revenues, by contrast, increased rapidly around the turn of the

year, on the accrual basis used in the national income accounts. The post-strike advance in business raised corporate profits and other taxable flows abruptly at that time; and increases in social security tax rates also added to receipts.

The Federal fiscal position accordingly shifted from a deficit for the second half of calendar 1959 to a substantial surplus for the first half of 1960; and the Government thus wound up the fiscal year with a surplus of about \$2 billion on national income account. The surplus recorded in the administrative budget, which excludes social security transactions and differs from the national income concept in various other ways, was about \$1 billion.

National Income

Nonfarm national income rose again with the continued advance in production, though at a lower rate as industrial output reflected the fading of inventory needs. The \$4½ billion rise in wages and salaries was less than the first-quarter advance.

The fragmentary information at hand on corporate profits indicates that there has been some decline following the upswing recorded last winter as margins were reduced. This adverse move in profits had no immediate effect on the flow of purchasing power to consumers, as dividend payments were maintained.

Earnings of farm proprietors recorded some improvement in the second quarter.

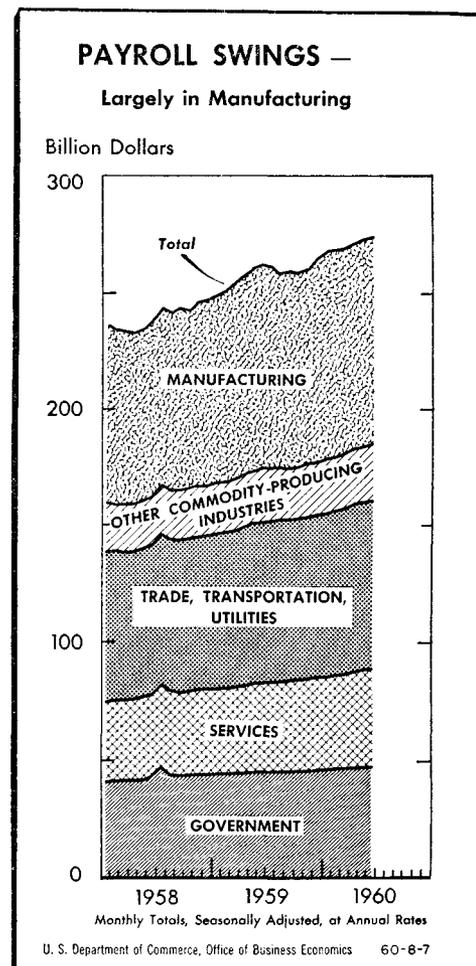

Personal income, bolstered by the gains in farm and payroll components, rose from a \$396 billion rate in the first quarter to \$404 billion in the second. This important business indicator matched the rate of increase in the preceding quarter, continuing to give an impetus to expanded consumer buying.

The upsurge in activity around the turn of the year had carried income to a record \$414½ billion annual rate for the January-March period. This was \$12 billion above the preceding quarter, and \$9 billion beyond the previous high a year ago last spring.

From the fourth quarter to the first, employee earnings were up \$8½ billion. The rise in compensation of employees, though not quite proportionate to the gain in total national income, was one of the largest recorded in any recent quarter. The sharpness of the increase was due mainly to the rebound of auto, steel and transportation payrolls; the statutory advance, effective January 1, in the rate of OASI contributions also played a part.

Corporate profits provided \$2½ billion of the first-quarter expansion. Movements were mixed among other types of income. Earnings of nonfarm proprietors rose, as did net interest, but these increases were partly offset by a further fall in farmers' income.

Neither of the major elements in the first-quarter spurt of employee earnings continued into the spring, and the rise of national income slowed in this period despite a turnaround in farm income and widespread strength in payrolls outside durable goods manufacturing.

Manufacturing upswing checked

Manufacturing payrolls in the second quarter responded to declining activity in the metals and transportation equipment industries, decreases in which offset the effects of higher employment and earnings in most of the nondurables groups.

Primary metals employment and hours have been cut back from month to month since February. In aircraft plants, wage payments continued to reflect the 3-year tapering in employment. Automotive payrolls were also down somewhat, following the first-quarter bulge, but remained above the year-earlier totals.

Outside manufacturing, all major industry divisions reported payroll gains from the first quarter. These were generally on the order of 1 to 3 percent, and involved increased employment as well as higher hourly earnings.

Employment in trade and construction, in particular, improved markedly as building activity and consumer buying recovered from the effects of the bad weather of late February and March. Government employee earnings were up \$1 billion, or 2 percent; State and local employment continued to grow, and Federal payrolls were swelled by the hiring of approximately 180,000 temporary employees to help take the decennial Census of 1960.

Other second-quarter changes

Most other major types of earnings contributed to the rise in national in-

come in the second quarter, though corporate profits were an important exception. Farmers' income benefited from an improved volume of marketings, and from higher prices for some products. The spring rise carried net income for the first 6 months of the year to a seasonally adjusted annual rate above \$11 billion, about the same as in the second half of 1959.

Earnings of nonfarm business and professional proprietors touched a \$40-billion rate in the second quarter, reflecting the continued prosperity of the trade, construction, and service lines in which unincorporated enterprises are most common; and the uptrend of interest income was extended with a \$½-billion advance to \$18½ billion for the quarter.

(Tables continued on page 24)

General Rise in State Income in 1959

Most States Show Advances Ranging Up to One-tenth

THE flow of income to individuals rose to new highs in nearly every State in 1959 under the impetus of expanding demand forces.

Nationally, personal income totaled \$381 billion in 1959, a rise of \$23 billion, or 6 percent, over 1958. Among States, relative changes varied from a gain of one-tenth to a loss of one-tenth. By regions, percentage increases were broadly similar throughout most parts of the country. With consumer prices up about 1 percent from 1958 these advances were in the main increases in real purchasing power.

Moderate and comparatively uniform advances in income from most

industrial sources more than offset the geographically concentrated effect of the major steel strike that began shortly after mid-1959, and the more widespread results of the downturn in farm income. The dollar volume of nonfarm income was a record last year, with the increase over 1958 amounting to 4 percent or more in every State.

Increases in aggregate current-dollar purchasing power were closely associated with the economic size of the regions. Consumer incomes in the Midwest, Great Lakes, Far West, and Southeast—the four largest regions—climbed between \$4 billion and \$6 billion each. In the Southwest and

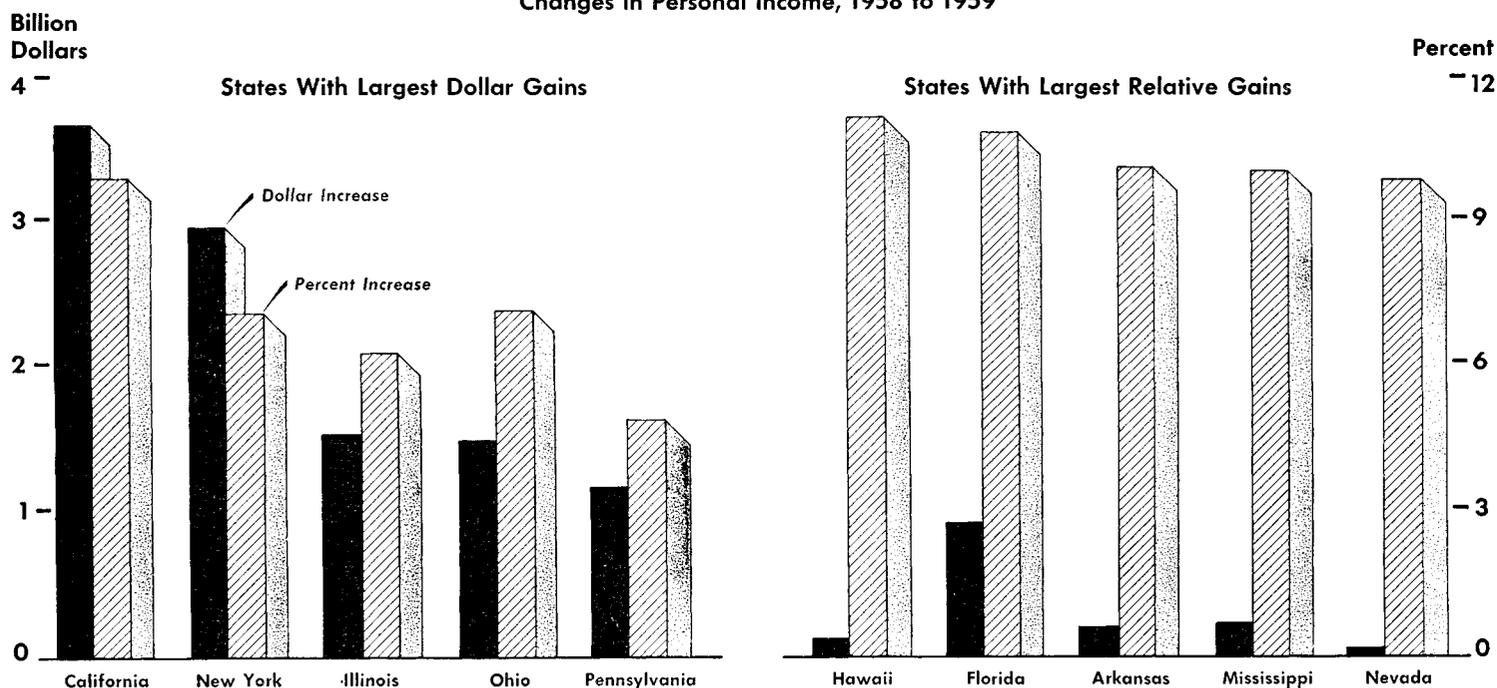

New England States, consumer markets were up \$1½ billion, while in the Plains and Rocky Mountain areas, the rise was \$¾ billion and \$½ billion, respectively.

Largest regional rates of income gain in 1959 were in the Far West (9 percent) and Southeast (7 percent). In the first, the increase was geographically pervasive with all except one State experiencing appreciably better-than-average income growth and with most income sources contributing to this

NOTE.—The estimates of personal income by States were prepared by Edwin J. Coleman, James M. Lazard, Dorothy Anne Fisher, Edward A. Trott, Jr., and Charles L. Saccardo.

WHERE MARKETS EXPANDED MOST

Changes in Personal Income, 1958 to 1959

record. In the Southeast, there was less uniformity. Seven States expanded at a faster rate than the national pace; one matched it; and four fell short.

In New England, the Mideast, Great Lakes, and Southwest, regional income gains from 1958 to 1959 held to the 6-percent average noted for the country as a whole. In the first three regions, a large part of the advance reflected the sharp rebound of the manufacturing industry from the 1957-58 cyclical setback. In the Southwest, incomes from most industrial sources rose at rates that conformed approximately to the national experience.

In the Plains and Rocky Mountain States—major agricultural regions—sizeable declines in farm income limited the rise in aggregate income to 3 percent and 5 percent, respectively. In both regions, income from nonfarm sources rose at rates matching those in the Nation as a whole.

State Variations

Among individual States, the degree of income improvement differed appreciably. Wide variations in size of markets (States) make it relevant to measure economic growth in both absolute and percentage terms. Differences in the two gauges appear in the accompanying chart. The percentage changes for all States and regions are shown in table I. Figures from which dollar changes may be computed are given in table 1.

Largest dollar expansion

For the fourth consecutive year, the largest income rise—in dollars—was in California (\$3,652 million). Top gains also occurred in New York (\$2,946 million), Illinois (\$1,504 million), Ohio (\$1,452 million), and Pennsylvania (\$1,143 million). Together, these five States account for almost half of the \$23-billion nationwide rise in consumer incomes last year.

New York's 1958-59 relative expansion was only fractionally larger than that in the Nation. However, this approximately "average" growth rate in conjunction with an economic base embracing one-eighth of the Nation's total economy yielded an income incre-

ment that was second in size only to that in California.

The expansion in Ohio, Illinois, and Pennsylvania also reflects the action of continued growth, as well as recovery from the 1957-58 recession which had a primary impact on these three industrial States. In each, a rebound in manufacturing wages and salaries sparked last year's upturn.

Largest relative gains

Measured by percentage change, the largest advances among the States in 1959 were in the south and west. Percentage increases in Florida, Arkansas, Mississippi, Nevada, and California and Hawaii were 10 percent or a little better.

California is the only State classified in the top group in both absolute and relative size of market expansion.

Florida misses this special category by only a small margin. The large gains scored in these two States in 1959 were broadly based, with income from nearly every major source advancing. The 1959 experiences thus represent extensions of above-average economic records. Both over the long span since 1929, as well as in the more current

postwar period, Florida ranks number one in the Nation with regard to relative gain while California stands fifth.

In Hawaii, stepped-up economic activity was widespread with outstanding increases in construction and services, both of which have benefited especially from the current boom in tourism as well as from the large population

growth.

Largest gains in Arkansas and Mississippi came from farm income and stemmed from an unusually large cotton crop. Nonfarm flows in these two States moved much the same as in the country as a whole.

In Nevada, increases were general, and particularly strong upward move-

ments were registered in the important trade and services industries.

In contrast to the moderate, but clear, upturn characterizing economic conditions throughout most of the country, there was little buoyancy in the income flow in a number of States. There were declines from 1958 to 1959 of about one-tenth in North Dakota and South Dakota; a slight reduction (2 percent) in Montana; and little change in Kansas and Nebraska. In each of these five States, the prime dampening influence was an unusually large drop (from one-fourth to one-half) in farm income.

Per capita incomes

In the country as a whole, per capita personal income (total income divided by total population) amounted to \$2,166 in 1959—about \$100 more than the \$2,067 recorded in the preceding year. Most of this rise represented an improvement in real per capita buying power, with average prices up about 1 percent.

Average incomes were highest in Delaware (\$2,946), District of Columbia (\$2,943), Connecticut (\$2,817), Nevada (\$2,745), New York (\$2,736), California (\$2,661), Illinois (\$2,610),

New Jersey (\$2,608), and Massachusetts (\$2,444).

These nine States also ranked highest in per capita in 1929. In that year, however, average incomes of their residents were half again as high as the national figure. By 1959, the margin had been reduced to one-fourth.

Conversely, eight of the nine States with the lowest incomes in 1959 were also among the lowest nine in 1929. In that year, their average incomes were less than half that in the remainder of the country. During three decades of economic growth, this group of States raised their per capita income to within one-third of the national average.

These comparisons highlight the fact that a striking facet of economic growth in this country has been the continuing narrowing of geographic differentials in income levels.

Flow of disposable income

State estimates of disposable income—personal income less personal tax and nontax payments are presented in table III for selected years 1955–59. The availability of individual income tax data from the Internal Revenue Service on an earlier schedule has made it feasible for the first time to prepare estimates of disposable income on as current a basis as those of total income. Heretofore a 2-year lag has been necessary.

These figures represent the best measure of consumer purchasing power available on a geographic basis. They are intended primarily for use by market analysts and others concerned with the actual dollar volume of consumer purchasing power in the various geographic markets.

Comparison of the percent distribution of total income in 1959 shown in table I with that of disposable income in table III indicates the close similarity between the two measures. The percentage share of the Nation's disposable income received by residents of the various States in 1959 differed from the share of personal income by less than 1 percent in 33 States, and by less than 2 percent in an additional 8 States. The largest differences were in Delaware and Mississippi—the States with highest and lowest average incomes. The share of disposable income received in Dela-

ware was 6 percent lower than that of personal income. In Mississippi, the share of disposable income was 4½ percent higher than the share of personal income.

Developments in 1959

Numerous factors underlie individual State variations in the rates of change in personal income from one year to another. The brief review that follows covers some of the principal industrial developments that affected State income movements last year. In that connection, reference is made to table II which shows percent changes in income from major industries.

In interpreting income changes from 1958 to 1959, two facts should be noted. The year 1958 was marked by both recession and recovery; and throughout the down phase of the business cycle, consumer incomes, though affected, were well maintained. In the country as a whole and in all but five States, personal income, despite the recession, was higher in 1958 than in 1957. The impact of recession, recovery, and further cyclical expansion is blurred in the annual measures of personal income presented in this report.

Manufacturing expands

Earnings of persons engaged in manufacturing formed the most expansionary element of the economic advance in 1959. For the country as a whole, this industry accounted for \$8 billion of the \$23 billion rise in total income. In every region, an increased volume of factory earnings was the largest contributor to the upturn in individual income last year. In the heavily industrial Great Lakes States, nearly two-thirds of the total advance occurred in the manufacturing division.

The 1957-58 recession had focused most directly on the manufacturing economy of the New England, Midwest, and Great Lakes Regions, with the last named bearing the brunt of the decline. Conversely, factory activity in the other five regions had been reduced least.

Recovery rates in the industrialized sections of the country did not differ greatly from those in other areas. From the economic low point reached in

the second quarter of 1958, the pace of manufacturing activity in the Great Lakes, Mideast, and New England States paralleled that in the south and west, and in the second half of last year the upward movement in the industrial regions was blunted by the direct and indirect effects of the steel strike. The pattern of these developments is clearly evident from the accompanying chart.

The course of factory activity in each individual region of this heterogeneous industrial complex was fairly similar. Two differences may be pointed out. The decline was a little steeper and recovery a little faster in the Great Lakes where durable goods manufac-

ture stems from the presence of a strong secular growth trend.

Two exceptions to relatively uniform regional expansion in factory payrolls in 1959 were the less-than-average increases in the Mideast and Southwest. The lag in the former was due to the particularly heavy impact of the steel strike on Pennsylvania's primary metals industry; in the Southwest it reflects the lack of a pickup in 1959 in two of that Region's most important types of manufacturing—nonautomotive transportation equipment and products of petroleum and coal.

The following tabulation summarizes regional manufacturing expansion since 1957. Most noticeable is the net gain made by the less industrialized regions over the full course of the business cycle.

State changes in manufacturing

On a State basis, outstanding relative gains in manufacturing were scored in Florida and Arizona where the percentage increases in factory earnings from 1958 to 1959 were almost double that for the Nation. Although the volume of manufactures in these two States is still small, they rank among the top States in rate of postwar manufacturing growth.

Smallest gains among individual States from 1958 to 1959 were the 4 percent increases in individual incomes from manufacturing in Delaware, Kansas, and Louisiana, and the 3 percent advance in Montana. In each, the change mirrored developments (generally national in scope) in a single industry that dominated the State's industrial structure. In Delaware, it was chemicals; in Kansas, nonautomotive transportation equipment; in Louisiana, products of petroleum and coal; and in Montana, primary metals.

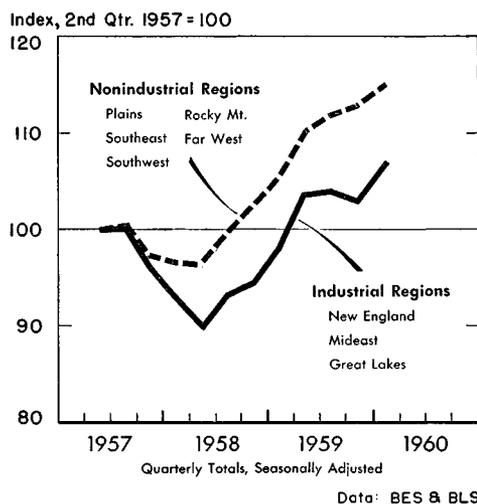

Government income up

Government payments to individuals were a major element bolstering consumer income and demand during the down-phase of the production cycle in 1957-58. In the recovery of last year, payments from Federal sources continued to rise but at a lesser rate than incomes from other sources.

Unemployment insurance benefits, which had increased by \$2¼ billion in 1958, declined under the stimulus of

MANUFACTURING PAYROLLS

During Recession, Recovery, and Steel Strike Periods Fluctuations Were Larger in Industrial Centers

U. S. Department of Commerce, Office of Business Economics

60-8-9

tures are most heavily concentrated; and in New England, there was no statistically measurable effect of the steel strike on the rate of recovery.

Growth in less industrialized areas

As seen from the chart, factory payrolls in the south and west, showed small evidence of the recession. At their low point in 1958, they were within 4 percent of their prerecession high and by the end of that year had more than recovered all losses sustained in the cyclical downturn. The favorable experience of the manufacturing industry in the five southern and western regions reflects the comparative absence of durable goods in their industrial structure, plus the momentum

Percent Change in Manufacturing Wages and Salaries

economic recovery. Disbursements dropped \$1½ billion in 1959. Secondly, Federal payrolls, both military and civilian, advanced 3 percent from 1958 to 1959, a rate approximately one-third as large as the increase in private nonfarm earnings under the impetus of cyclical recovery.

In broad fashion, Federal payroll changes were comparatively uniform among States and regions and hence provided a fairly even and partial offset to the increased flow of earnings from private employment. Such differences as did occur were mainly random in terms of geographic pattern and involved the expansion or contraction of a specific Federal activity or installation.

The decline in UI benefits was concentrated in the more industrialized States where the impact of the recession had been most severe. In Michigan, for example, UI benefits fell from a total of \$375 million in 1958 to a little less than \$150 million in 1959—and total income paid out by government declined 4 percent. Restricted by the drop in UI benefits, income from government rose least in the Great Lakes, New England, and Midwest States last year. In the other five regions, government payments to individuals were up a uniform 6 percent.

Disbursements from State and local governments tended to conform roughly with the moderate gains that characterized most private nonfarm income sources. In States where the 1958-59 change in government income from non-Federal sources diverged appreciably from the national figure, the underlying factor was usually attributable to the expansion in educational payrolls. In 15 States, wages and salaries in

public education in 1959 ranged between one-tenth and one-fifth larger than in 1958.

An exception to the foregoing generalization was the 2-percent decline in income from State and local governments in West Virginia. This reduction reflected the contrast between the disbursement of \$13 million in veterans' bonuses by the State in 1958 and the one-half million dollars disbursed in 1959.

Other nonfarm industries

The smallest advance in any major nonfarm income source last year was recorded in the mining industry. Out of the 11 States where mining constitutes a sizable proportion of aggregate income, there were declines in 6 and only small increases (2 percent) in 2 others. Wyoming was the sole large mineral-producing State to register a significant increase, and here a 13-percent advance in earnings of persons engaged in mining added considerable buoyancy to the total income flow.

There were continued declines in mining in the important coal-producing States of West Virginia, Pennsylvania, and Kentucky. These three States supply about half the bituminous coal used by the manufacturing industry in New England, the Midwest, and Great Lakes Regions. Although part of last year's unfavorable experience was an indirect effect of the steel strike, the more basic factor is the secular decline that characterizes the course of earnings in the bituminous mining industry. Over the postwar period, earnings in this industry in Pennsylvania, West Virginia, and Kentucky declined from a billion and one-half dollars in 1948 to less than one billion in 1959.

In most States, changes in income from trade and service and other distributive lines were in rough conformity with changes in the basic commodity-producing industries of the State. Outstanding relative gains in trade and service activities occurred in States where population growth has been exceptionally large and where tourist spending constitutes an above-average source of income.

Farm income declines

Agriculture income—the sum of farm wages, supplementary labor income,

and the net income of farm proprietors—was the most volatile of the major income flows last year. This volatility in conjunction with wide regional variations in the importance of agriculture as an income source gave developments in this industry special weight in altering the geographic distribution of income in 1959.

The influence of farm income is demonstrated by the fact that in eight of the nine States where personal income rose least (or actually declined) from 1958 to 1959 the experience is traceable directly to agriculture. Similarly, spurts of roughly one-fourth in income from farming provided primary impetus for the gains in overall income registered in two of the six States with top-ranking relative income gains last year.

In the country as a whole, farm income, moving counter-cyclically for the second successive year, dipped one-eighth from 1958 to 1959. This was the only major industrial division of the economy to record a decline. In the main, the smaller net return to farmers reflected lower prices for farm products, rising production costs, and the elimination of the Acreage Reserve Program (which had paid \$700 million to farmers in 1958) from the Soil Bank.

Largely because of the geographic concentration of American agriculture by type of farming, the foregoing national developments had uneven effect on the total income flow. Farm income changes in individual States, as contrasted with the 13-percent national decline, ranged from advances of one-fourth in several important farm States to reductions of more than 50 percent. In nine States, the decline was one-fourth or more.

On a regional basis, farm income exerted greatest influence in the Plains States. Here, nonfarm incomes rose 7 percent, a relative advance that matched that in the Nation. A fall off of more than one-fourth in farm income, however, held the overall income increase to 3 percent, lowest of the regional rates and only half the average for all States.

In addition to a decline of more than \$100 million in payments from Government and a general increase in production expenses, income from meat ani-

PERSONAL INCOME IN ALASKA

With the incorporation of estimates of personal income in Alaska into the tables of this report, OBE's series on the geographic distribution of income covers all of the 50 States and the District of Columbia. The basic table for Alaska, prepared after an extensive field survey, may be found on page 22. Highlights of the State's income structure are listed below.

Personal income received by residents of Alaska in 1959 amounted to \$556 million, an advance of 6 percent over the 1958 total of \$527 million and a rate of gain the same as that for the Nation.

Per capita income in the State amounted to \$2,550 last year, one-fifth higher than the national average of \$2,166, and ninth highest among all States.

Individual income in Alaska in 1959 was three-fourths again as high as its 1950 total of

\$319 million, a rate of growth moderately higher than the rise of more than two-thirds in the country as a whole. With rough allowance for the advance in consumer prices in Alaska since 1950, total purchasing power of individuals in real terms has risen about two-fifths over this period.

Of Alaska's 1959 income total, \$281 million, or one-half, was paid to residents by private industry; \$239 million, or 43 percent, by the Federal Government; and \$37 million, or 7 percent, by State and local governments.

This information is taken from OBE's forthcoming report on Alaska's income structure and economy. Printed copies of the report which is now in press, will be available from the U.S. Government Printing Office and the U.S. Department of Commerce Field Offices, at the addresses listed on the inside of the front cover.

mals fell in the Plains Region as hog prices declined below those in the previous year. Also, crop production was down substantially in the Dakotas and was off moderately in Kansas and Nebraska as wheat yields turned down in response to less favorable weather and a higher incidence of disease.

In the Rocky Mountain States, second among the agricultural regions, smaller yields of wheat and barley in Montana and reduced cash receipts from most farm products in Wyoming limited the 1958-59 gain in total personal income to 5 percent, second lowest regional rate of growth in the country.

In the Southeast, as elsewhere, a smaller volume of Government payments to farmers tended to reduce farm income in 1959. However, with the discontinuance of the Acreage Reserve Program of the Soil Bank, cotton acreage planted jumped more than one-fourth. With yields holding

close to the records set in 1958, the value of the cotton crop was up correspondingly. Most cotton-producing States shared in this favorable situation, but in a number, the rise simply limited the decline characterizing other types of farming. In Arkansas and Mississippi, in particular, the value of cotton lint and seed produced in 1959 added more than \$100 million to gross farm income in each State, and both scored top-ranking advances in aggregate income.

A State-by-State evaluation of the influence of changes in farm income on the overall income flow is best made through a comparison of the columns in table II showing 1958-59 changes in total and in nonfarm income.

Technical Note

This article serves to update through 1959 the tables in our bulletin, *Personal Income By States Since 1929*. In addi-

tion, revisions of estimates previously published for the years 1957-58 are presented in detail, while estimates of total and per capita income in 1954-56 are reprinted for convenience of the users. Detailed breakdowns of aggregate income for those 3 years may be found in the August 1959 SURVEY OF CURRENT BUSINESS.

This report, for the first time, covers all 50 States and the District of Columbia. However, figures for Alaska and Hawaii have not been included in the national totals.

Table 3, which in previous reports showed Census Bureau estimates of population by States, has been omitted as that Bureau has not yet adjusted its provisional population estimates, published annually over the past decade, to take account of results now becoming available from the 1960 Census of Population. In order to derive estimates of per capita income that would reflect the most accurate population figures pres-

ently available, OBE undertook to adjust the Census Bureau's provisional State population figures to accord with the preliminary count obtained in the 1960 Census of Population. Differences between the two sets of data in

1960 were spread back over the preliminary series. The resulting State figures were used to derive the per capita income series shown in table 2. Because the revisions were of minor magnitude for most States, estimates of

per capita income have not been revised for years prior to 1954.

The Personal Income supplement to the SURVEY OF CURRENT BUSINESS is available from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C., or from the U.S. Department of Commerce Field Offices at \$1.50 per copy. It contains a detailed annual record of the income flows in each State since 1929. The text of the report provides explanations of the concept, statistical derivation, and reliability of the estimates, as well as an analysis of geographic income shifts over the period.

The revisions for 1957 and 1958 were made primarily to adjust the individual components of the State series to new national estimates. Also, the revised figures take account of State distributions of data for 1957 and 1958 that became available during the past year.

In definition, the U.S. totals in the State series are the same as those in national personal income with one exception. The State series excludes (and the national series includes) the income disbursed by the Federal Government to its civilian and military personnel outside the continental United States.

There is also a statistical difference between the two sets of estimates. Revisions introduced into the national totals for the years 1946-55 have not been incorporated fully into the State figures. Changes for the years 1946-53 appeared too minor to warrant the extensive amount of detailed work that would have been required to adjust the State distributions of the industrial and type-of-income components to the new national totals. In order to minimize the break in comparability between the revised State income distributions for 1954 (accomplished in 1958) and those retained for 1953, the United States totals of certain components for 1954 and 1955 were adjusted to effect a smooth transition between the revised and unrevised figures.

Footnotes to Table 63:

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASI program.
2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest and transfer payments.
3. Equals total personal income less farm income and government income disbursements.

Footnotes to Table 70:

1. Consists of wage and salary disbursements, other labor income, and proprietors' income.
2. Does not include earnings of military personnel.
3. Less than \$500,000.

(Continued from page 9)

Monthly BUSINESS STATISTICS

THE STATISTICS here are a continuation of the data published in the 1959 edition of BUSINESS STATISTICS, biennial Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.25) contains monthly (or quarterly) data for the years 1955 through 1958 and monthly averages for all years back to 1929 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1955. Series added or significantly revised since publication of the 1959 BUSINESS STATISTICS are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1958 issued too late for inclusion in the aforementioned volume appear in the monthly SURVEY beginning with the July 1959 issue. Except as otherwise stated, the terms "unadjusted" and "adjusted" refer to adjustment for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959						1960

¹ Revised. ² Revisions prior to June 1960 are as follows (1947-49=100): 1958—November, 152.2; December, 152.1; January—May 1960—152.3; 152.3; 152.8; 152.7; 153.8.
³ Indexes based on 1935-39=100 are as follows: Measured by—wholesale prices, 43.7 (July); consumer prices, 47.3 (June).
⁴ Data from Bureau of the Census on new basis reflecting the revised, higher level of housing starts and including Alaska and Hawaii are as follows (mil. dol.): June and July 1960 (unadj.)—Total new construction, 5,037; 5,182; total private, 3,535; 3,660; private residential, 2,076; 2,151; total public, 1,502; 1,522; June and July 1960 (seas. adj.)—Total new construction, 4,633; 4,627; total private, 3,318; 3,334; private residential, 1,914; 1,919; total public, 1,315; 1,293; June and July 1959 (unadj.)—Total new construction, 5,263; 5,408; total private, 3,629; 3,792; private residential, 2,274; 2,372; total public, 1,634; 1,616; June and July 1959 (seas. adj.)—Total new construction, 4,826; 4,813; total private, 3,398; 3,439; private residential, 2,100; 2,118; total public, 1,428; 1,374.
⁵ See corresponding note on p. 8-6.
⁶ Includes data not shown separately.
⁷ Revised beginning with data for September 1955; unpublished revisions (prior to November 1958) will be shown later.
⁸ Revisions for January-September 1958 are shown in the November 1959 issue of "Construction Activity" report of Bureau of the Census.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

† Revised. ‡ Preliminary. § See note marked "§". ¶ See note marked "¶". Ⓢ Revised beginning August 1959 to include data for Hawaii. Ⓣ Revised for a number of months in recent years to reflect up-dating of seasonal factors; revisions prior to April 1959 will be shown later. Ⓤ Estimates for Alaska and Hawaii are included effective with February 1959 and August 1959, respectively; preliminary estimate of civilian population in Alaska (Jan. 1, 1959), 153,000 persons and in Hawaii (Sept. 1, 1959), 603,000 persons. Revisions for February 1957-August 1958 are shown in the November 1959 Survey (bottom p. S-11). Ⓥ For 1947-59 figures, reflecting adjustments of 1947-56 data to new definitions adopted January 1957 and use of revised factors in computing the seasonally adjusted unemployment rates, see pp. 22 and 23 of the April 1960 Survey.

Ⓦ Data beginning January 1960 include figures for Alaska and Hawaii; January 1960 estimates for these States (thous.): Noninstitutional population, 500; civilian labor force, 282; employed persons, 266; nonagricultural employment, 229. Estimates for agricultural employment and unemployment can be regarded as comparable with pre-1960 data.

Ⓧ Total employment in U.S., including Alaska and Hawaii (thous.): 1960—May, 53,195; June, 53,535; July, 53,171.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959						1960						
	June	July	August	September	October	November	December	January	February	March	April	May	June

♂ Revised. ♀ Preliminary.

♂ Except ordinance, machinery, and transportation equipment.

♀ Includes data for industries not shown separately.

§ Revised series (first shown in September 1959 SURVEY); data beginning January 1958 are calculated on a different basis and are not strictly comparable with published figures through December 1957.

§ Derived by assuming that overtime hours are paid at the rate of time and one-half.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

† Revised. ‡ Preliminary. § Includes operations under Federal employees' program.

¶ Includes data not shown separately. § Rates as of August 1, 1960; common labor, \$2.734; skilled labor, \$4.063; equipment operators, \$3.695.

|| Beginning with the October 1959 SURVEY, data are revised to include operations in Alaska and Hawaii; figures for State programs are also revised to exclude Federal employees' program (shown separately below) except as noted. Total insured unemployment includes the UCV program (not shown separately) through Jan. 31, 1960 (expiration date).

⊙ Rate of covered employment expresses average insured unemployment in each month as a percentage of average covered employment for the most recent 12-month period for which data are available (the lag for covered employment data may range from 6 to 8 months).

*New series. Data relate to persons eligible for compensation under the Ex-Servicemen's Unemployment Compensation Act of 1958 (effective Oct. 27, 1958).

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959						1960

[†] Revised. ^g Preliminary. [†] Revised effective September 1959 to reflect exclusion of loans to nonbank financial institutions.

* New series (from Board of Governors of Federal Reserve System); for back data, see *Federal Reserve Bulletin*.

^c Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles. ^g Includes data not shown separately.

[†] Revised series, reflecting change in coverage and format. Figures through 1958 on old basis appear in the 1959 edition of BUSINESS STATISTICS; January-June 1959 figures, in September 1959 SURVEY.

^g For demand deposits, the term "adjusted" denotes exclusion of interbank and U.S. Government deposits and of cash items reported as in process of collection; for loans, exclusion of loans to banks (domestic commercial banks only, beginning July 1959) and deduction of valuation reserves (individual loan items are gross, i.e., before deduction of valuation reserves).

[§] For bond yields, see p. S-20.

[†] Data are as of end of consecutive 4-week periods ending in month indicated, except June figure which is as of June 30 (end of fiscal year).

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

† Revised. ‡ Preliminary. § Includes revisions not distributed by regions. ¶ See footnote "†" for p. S-17.
 § Insurance written includes data for Alaska beginning 1957 and for Hawaii beginning 1958; revised figures for 1958-April 1959 (including these States) will be shown later. Payments to policyholders, etc., include data for Alaska beginning January 1959 and for Hawaii beginning September 1959. § Or increase in earmarked gold (—).
 ♀ Includes data for the following countries not shown separately: Mexico; Brazil; Colombia; Chile (except for October 1959); Nicaragua; Australia; and India.
 ¶ The term "adjusted" denotes exclusion of interbank and U.S. Government deposits; for demand deposits, also exclusion of cash items reported as in process of collection.
 Ⓢ Revised series, replacing unadjusted rates shown prior to the February 1960 Survey and incorporating two major changes. See the January 1960 Federal Reserve Bulletin for details and data back to January 1959.
 Ⓢ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.
 Ⓢ Effective with the July 1959 Survey, estimates are based on the latest revised (1957) Standard Industrial Classification Manual and, for most industries, are not comparable with previously published data. Comparable data for 1st quarter of 1958 are available upon request.
 * Revisions for 1st and 2d quarters 1958 and 1st quarter 1959 (mil. dol.): Premium income, total—2,666.8; 2,531.3; 2,783.9; annuities, 340.9; 255.8; 334.6.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

† Revised. † Revisions for 1st-4th quarters 1958; 419; 351; 359; 391.

§ See corresponding note on p. S-18. † Revisions for January-March 1959 will be shown later. † Includes data not shown separately.

§ Data include bonds of the International Bank for Reconstruction and Development not shown separately; these bonds are included in computing the average price of all listed bonds.

† Number of bonds represent number currently used; the change in the number does not affect the continuity of series.

† Prices are derived from average yields on basis of an assumed 3 percent 20-year bond.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

⊕ Revised. ¶ Preliminary. † Less than \$50,000. ‡ Includes carryovers of approximately \$15 million from May and June; appropriate amounts are included in components.

⊙ Revisions for 1958-1st quarter 1959 appear on p. 14 ff. of the June 1960 SURVEY.

Δ Adjusted for balance-of-payments purposes, mainly for valuation, coverage, and timing. ⊙ Excludes military expenditures.

⊙ Revisions for January 1958-January 1959 will be shown later.

⊙ Excludes "special category" shipments and all commodities exported under foreign-aid programs as Department of Defense controlled cargo.

¶ Data include shipments (military and economic aid) under the Mutual Security Program. Total MSP military shipments (including, since early 1956, also "consumables and construction" shipments) are as follows (mil. dol): June 1959-June 1960, respectively—75.6; 114.6; 97.1; 79.7; 83.7; 102.2; 105.2; 77.7; 78.9; 117.2; 114.7; 94.0; 100.0.

Δ Excludes "special category" shipments. ¶ Includes countries not shown separately.

‡ Revised. † Reflects revised definitions of visits; comparison of January 1960 figure (on old basis) with data for January 1959 shows an increase of roughly 15 percent.
 ‡ Revised series (first shown in October 1959 SURVEY), reflecting change in comparison base period; monthly data for 1953-July 1958 are available upon request.
 § Beginning with the October 1959 SURVEY, the figures include visits to Mount McKinley, Alaska and Hawaii National Park, Hawaii. Comparable data for earlier periods will be shown later. ¶ Includes data not shown separately. † Revisions for 1957 and 1958 appear on p. 24 of the April 1960 SURVEY.
 ‡ Data (except for alcohol) are reported on basis of 100-percent content of the specified material unless otherwise indicated.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

‡ Revised. ⊞ Preliminary. † Data beginning March 1960 are not comparable with those for earlier periods because of reclassification of some companies from small to large. §States represented are: North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Arkansas, Louisiana, Texas, Oklahoma. According to quarterly reports from Virginia, consumption in that State is as follows (thous. short tons): 1959—January—March, 316; April—June, 303; July—September, 69; October—December, 73; 1960—January—March, 222. ♀ Includes data not shown separately. † Revisions for January 1958—April 1959 will be shown later. ⊞ Data prior to 1959 exclude protective coatings. † Electric-power production revisions for 1958 appear on p. 20 of the January 1960 SURVEY. Manufactured and mixed gas revisions for 1st and 2d quarters of 1958 are available upon request.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

¹ Revised. ² Preliminary.
³ Alaska included beginning January 1959.
⁴ Totals include data not shown separately. Revisions for 1952-58 for total sales and total revenue (for 1st and 2d quarters of 1958 for other items; see footnote) are on p. 24 of the April 1960 SURVEY.

⁵ Data beginning July 1959 exclude production of wines and vermouth; for July 1958-June 1959, such production totaled 43,600 gal.
⁶ Revisions for the indicated items and for the periods specified are available upon request as follows: Butter and cheese (total and American)—January 1957-July 1958; condensed and evaporated milk—January-July 1958; dry whole milk—January 1952-December 1955 and January-July 1958; nonfat dry milk—January 1954-July 1958; fluid milk used in manufactured dairy products—January 1956-August 1959; fluid milk price—June 1958-February 1959.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

Table with columns for years 1959 (June-December) and 1960 (January-July)

FOOD AND KINDRED PRODUCTS; TOBACCO—Continued

Main data table with columns for products (e.g., Apples, Citrus fruits, Potatoes, Grain and Grain Products, Corn, Oats, Rice, Rye, Wheat) and rows for production, receipts, stocks, and prices.

Revised, Preliminary, December 1 estimate of 1959 crop, August 1 estimate of 1960 crop, Old crop only, new grain not reported until beginning of new crop year, Scattered revisions for 1958-January 1959 for exports of indicated grain series will be shown later, Excludes a small amount of pearl barley, Data beginning January 1959 are on 17-percent moisture basis, prior thereto, on basis of varying moisture content, Bags of 100 lb., The total includes wheat owned by Commodity Credit Corporation and stored off farms in its own steel and wooden bins, such data are not included in the breakdown of stocks, Data for March, June, September, and December are not strictly comparable with those for other months, largely because of somewhat smaller coverage of the quarterly reports.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

* Revised. † Preliminary. ‡ Beginning April 1960, data include Government Services Administration stocks and are not comparable with those for earlier periods.
^oBags of 132.276 lb. † Revisions for January 1956-March 1959 for confectionery will be shown later; those for January-November 1958 for fats and oils appear in Census report, "Fats and Oils, 1958" (Series M28-1-08). ‡ Includes data not shown separately. § Price for New York and northeastern New Jersey.
* New series; comparable data prior to December 1958 not available, except for corn oil which may be obtained from Census reports. △ For data on lard see p. S-28.
¶ Consumption data exclude quantities used in refining. ⊙ Consumption figures exclude data for cod, cod-liver, and other liver oils, and stocks include only the quantities of these oils held by producing firms. ⊕ Production of refined oils covers once-refined oils (alkali refined).

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

† Revised. ‡ Preliminary. § Reflects inventory adjustment. ¶ Including blast furnace production of ferroalloys. Ⓞ Revisions (thous. tons): Jan. 1959—receipts, 3,158; consumption, 9,832; total stocks, 67,673; furnace yards, 53,140; Dec. 31, 1958—total stocks, 72,895; furnace yards, 59,813.

† Revised (beginning in the February 1960 SURVEY) to include certain metal manufactures classified by the industry as steel mill products but formerly omitted from the total shown here; see note marked "††". ‡ Includes data not shown separately.

* New series (from Bureau of the Census). Data beginning January 1959 revised (in the April 1960 SURVEY) to include exports of secondary tinplate. Revisions for 1958 for total and steel mill products exports and imports are shown in the March 1960 SURVEY (bottom p. S-32). Ⓞ Revisions for January 1958-May 1959 are available upon request.

† Scattered revisions for 1957-58 are available upon request.

‡ For 1960, percent of capacity is calculated on annual capacity as of January 1, 1960, of 148,570,970 tons of steel; for 1959, as of January 1, 1959 (147,633,670 tons).

§ Represents the weighted average of consumers' buying prices (including brokerage), delivered, at following markets: Pittsburgh district, Chicago, Philadelphia, Birmingham, and San Francisco. Ⓞ Excludes shipments of food cans of the pressure-packing type; such types are included in total shipments.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS

† Revised. ‡ Preliminary. ¹ Shipments of coal and wood stoves are included with liquid fuel types. ² Estimated backlog for metal-cutting tools only.

³ Represents 5-weeks' production. ⁴ Data are for month shown. ⁵ Revised 1st quarter 1959: \$241,700,000.

△ Beginning January 1959, industry estimates are based on revised inflating factors and are not strictly comparable with earlier data.

⊙ Includes data for built-in gas-fired oven-broiler units; shipments of cooking tops (for use with the ovens), not included in figures above, totaled 27,000 units (4-burner equivalent) in April 1960.

⊕ Revisions for 1955 are in the April 1960 SURVEY. ⊖ Includes data not shown separately.

† Revisions for gas heating stoves (January 1958-May 1959) and warm-air furnaces (January 1957-May 1959) are available upon request.

* New series (from Board of Governors of the Federal Reserve System); monthly data for 1947-1958 are available upon request.

⊙ Data exclude sales of combination washer-dryer machines; such sales (including exports) totaled 9,800 units in June 1960.

§ Radio production comprises home, portable battery, automobile, and clock models; television sets include combination models. Data for June, September, and December 1959 and March and June 1960 cover 5 weeks; all other months, 4 weeks.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959						1960

† Revised. ¶ Preliminary. † Includes data not shown separately. † Includes nonmarketable catalyst coke.
 † Revisions for 1958 will be shown later as follows: Oil wells completed (August and September); domestic demand—jet fuel (February–September); lubricants (January–August); for all other indicated items (January–September).
 † Data for Alaska and Hawaii are included as part of domestic supply and demand beginning with January 1959 and January 1960, respectively; appropriate amounts for these States are reflected in data for all series affected. Data beginning 1960 for jet fuel and kerosene are not comparable with earlier data because jet fuel for use in commercial aircraft is now classified with kerosene; formerly, this product was reported primarily as "jet." † See last sentence of note "†." †

‡ Revisions for January–May 19

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959						1960

¹ Revised. ² Preliminary. ³ Corrected. ⁴ May data exclude estimates for tissue and miscellaneous papers. ⁵ Data for months noted cover 5 weeks; other months, 4 weeks. Beginning January 1960, data are based on a new definition of a book and are not entirely comparable with those for earlier periods. ⁶ Motorcycle tires are included beginning January 1960. ⁷ Data exclude estimates for "tissue paper." ⁸ As reported by publishers accounting for about 75.5 percent of total newsprint consumption in 1958. ⁹ Minor revisions for January 1957-March 1959 will be shown later.

Unless otherwise stated, statistics through 1958 and descriptive notes are shown in the 1959 edition of BUSINESS STATISTICS	1959							1960

* Revised. † Preliminary.

‡ In addition to unfilled orders reported by equipment manufacturers, railroad company shops reported unfilled orders for 10 cars (March-November 1959); shipments of these cars were made in December 1959. § Figures for one State are incomplete.

♂ Data cover complete units, chassis, and bodies.

△ Revisions for 1957 (except for detachable van bodies) are available upon request.

○ New registrations in Alaska and in Hawaii are included effective with data for January 1959 and January 1960, respectively.

‡ Scattered revisions for motor vehicle exports and imports (1958) and for freight car new orders (1955-58) are available upon request.

§ Excludes railroad-owned private refrigerator cars.

INDEX TO MONTHLY BUSINESS STATISTICS, Pages S1-S40

SECTIONS

General:

Business indicators	1-5
Commodity prices	6, 7
Construction and real estate	7, 8
Domestic trade	9-11
Employment and population	11-15
Finance	16-20
International transactions of the U.S.	21, 22
Transportation and communications	23, 24

Industry:

Chemicals and allied products	24, 25
Electric power and gas	25, 26
Food and kindred products; tobacco	26-30
Leather and products	30, 31
Lumber and manufactures	31
Metals and manufactures	32-34
Petroleum, coal, and products	35, 36
Pulp, paper, and printing	36, 37
Rubber and rubber products	37
Stone, clay, and glass products	38
Textile products	38-40
Transportation equipment	40

PERSONAL INCOME

BY STATES

SINCE 1929

- ★ FIRST COMPREHENSIVE ACCOUNT OF THE WIDELY USED STATE INCOME SERIES
- ★ PERSONAL INCOME BY STATE, BY TYPE, AND BY INDUSTRY—SINCE 1929
- ★ ANALYSIS OF GEOGRAPHIC INCOME CHANGES • PROCEDURES AND DEFINITIONS

THIS 1957 VOLUME—229 pages, quarto, illustrated, \$1.50—is available from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., as well as at all Field Offices of the U. S. Department of Commerce.
