the BUSINESS SITUATION

GNP rose \$28½ billion in the first quarter, as the economy recovered from the effects of the fourth quarter auto strike, and the rate of increase in the price deflator slowed somewhat. Residential construction and State-local government purchases contributed significantly to GNP growth, but there was no change in consumer demand for goods other than autos or in Federal purchases.

sumers and to business (in which case the transaction is counted in the business fixed investment component of gross product); some of the production gain went into the rebuilding of motor vehicle inventories. Apart from the surge in auto buying, consumer purchases of goods were about unchanged in the first quarter, though purchases of services grew in line with the recent trend. Business fixed investment seems to have strengthened slightly, apart from the effects of the auto strike, but the rate of inventory investment declined further from the already low fourth quarter pace. The decline occurred despite the rebuilding of motor vehicle inventories and a buildup of steel in anticipation of a strike this summer. Some of the swing may have resulted from a fourth quarter backup in the stocks of suppliers to the auto industry, followed by liquidation in the first quarter.

PRELIMINARY estimates of first quarter gross national product show an increase from the fourth quarter of \$28½ billion at a seasonally adjusted annual rate. A very large rise—which this certainly is—was of course to be expected in the wake of the auto strike. The strike cut deeply into production in the fourth quarter, and the makeup of at least a part of that loss swelled production in the first quarter.

It is very difficult to estimate what production would have been in the past two quarters had there been no auto strike. One thing that can be said with certainty is that a strike-caused shift of production was responsible for a substantial part of the large first quarter rise in GNP. Also, it is very unlikely that all of the lost production was made up in the first quarter; therefore, total national output in the two quarters together was probably less than it would have been had there been no strike.

Much of the large first quarter production gain was accounted for by a surge in sales of motor vehicles to con-

sumers and to business (in which case the transaction is counted in the business fixed investment component of gross product); some of the production gain went into the rebuilding of motor vehicle inventories. Apart from the surge in auto buying, consumer purchases of goods were about unchanged in the first quarter, though purchases of services grew in line with the recent trend. Business fixed investment seems to have strengthened slightly, apart from the effects of the auto strike, but the rate of inventory investment declined further from the already low fourth quarter pace. The decline occurred despite the rebuilding of motor vehicle inventories and a buildup of steel in anticipation of a strike this summer. Some of the swing may have resulted from a fourth quarter backup in the stocks of suppliers to the auto industry, followed by liquidation in the first quarter.

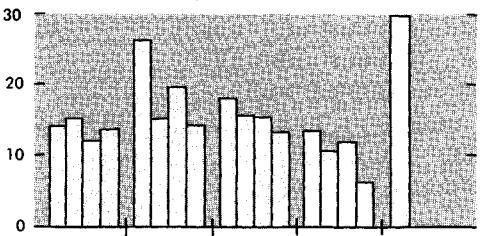

Federal purchases were unchanged, as a moderate further decline in the defense area was offset by a net increase in other categories. Total Federal purchases would have dropped substantially had it not been for an increase in

military and civilian pay at the start of the year. That action boosted the level of Federal spending about \$2½ billion at an annual rate.

Real GNP and the price deflator

Real product increased a substantial 6½ percent, after having dropped 4 percent in the fourth quarter. The implicit price deflator increased at an annual rate of 5¼ percent, compared with a rise of almost 6 percent in the fourth quarter. The Federal pay raise contributed significantly to the first quarter increase in the total GNP deflator; the deflator for private GNP, which is unaffected by the raise, increased at a rate of 4½ percent in the first quarter compared with 5¾ percent in the fourth.

The implicit deflator is a price measure based on shifting weights that reflect changes in the composition of GNP, and it was affected substantially by the recent swing in motor vehicle production. Motor vehicles have a much lower price index, on a 1958 base, than the average for all other goods and services. The large weight for motor vehicles in the first quarter held down the deflator for that period, while the low weight for motor vehicles in the fourth quarter had the opposite effect. An alternative measure of price change for private GNP, with fixed weights based on the fourth quarter composition, increased at a rate of 4¾ percent in the first quarter, down from a rate of just over 5 percent in the fourth quarter.

Average GNP change

It is obvious that the auto strike caused serious distortions in the national income and product data for the past two quarters. A simple and unsophisticated way to reduce this distortion is to average the changes in GNP and its components in the two affected quarters. Such averaging simply smoothes the data, and is not a serious approach to estimating how the economy would have behaved had there been no strike. The results are shown in table 1.

Table 1.—Changes in GNP and Components

[Billions of dollars, seasonally adjusted at annual rate]

	1970-I	1970-II	1970-III	Average 1970-IV, 1971-I
Gross national product.....	7.8	11.6	14.4	16.4
Auto and parts consumption.....	-3.4	1.7	-.2	2.6

State-local purchases.....	3.2	1.3	3.7	3.8
Real GNP (\$1958).....	-5.4	1.1	2.5	2.1

Consumption spending on autos and parts dropped \$6 billion in the fourth quarter and rose more than \$11 billion in the first. The table therefore shows an average \$2.6 billion quarterly gain. Total GNP increased an average \$16½ billion per quarter in the latest two quarters, compared with \$14½ billion in the third quarter and \$11½ billion in the second. The strong recovery in residential construction stands out as far and away the most striking recent change from the pattern of last year's first three quarters. The inventory accumulation figures also show a decided shift. Tentative estimates indicate a first quarter decline of more than \$1 billion in the rate of accumulation, following a somewhat larger decline in the fourth quarter. Anticipation of the auto strike and the strike itself caused a great deal of churning in inventories. Thus, even when more complete first quarter data are available it will not be clear whether business has in fact recently adopted a policy of inventory restraint.

Income and consumption in the first quarter

Personal income (at an annual rate) rose \$6 billion in March, double the February gain. Employment was about unchanged but wages and salaries rose because of increases in hours worked and in hourly earnings. Manufacturing payrolls rose slightly after a small decline in February and payrolls in other industries were also generally stronger

than in February. In line with the pattern of recent months, transfer income registered another large increase in March.

For the quarter as a whole, personal income was up \$18 billion from the fourth quarter, a very substantial gain. The increase would have been even larger except for the fact that personal contributions for social insurance, which are deducted in the calculation of personal income, were boosted close to \$2 billion as the result of a January increase in the social security tax rate.

One factor contributing to the large size of the personal income gain was the January increase in Federal pay, which boosted the income level about \$2½ billion. Apart from that raise, government wages and salaries (Federal, State, and local) rose \$1½ billion, somewhat more than the recent trend. Recovery from the effects of the auto strike also figured in the large first quarter income gain; wages and salaries in manufacturing increased \$4½ billion after dropping \$4 billion in the fourth quarter, while the increase in other private wages and salaries was \$6¾ billion, compared with \$4¾ billion in the fourth quarter. Social insurance benefits grew quite substantially for a quarter in which benefit rates were unchanged, and there were large increases in veterans benefits and in the residual category of transfer income, which consists mainly of welfare payments.

The first quarter increase in disposable income was \$17- $\frac{1}{4}$ billion, nearly as large as the increase in pretax personal income. Tax payments to State and local governments increased but payments to the Federal Government dropped slightly as the result of a tax cut on January 1. The cut, amounting to about \$3 billion at an annual rate, resulted from various changes provided for by the Tax Reform Act of 1969, including liberalized treatment of single persons and an increase in the standard deduction.

Because the first quarter gain in disposable income was large, the saving rate remained high despite the post-strike surge in consumption spending. Saving was 7.2 percent of disposable income in the first quarter, compared with 7.4 percent in the fourth and a slightly higher figure in the preceding 6 months.

The surge in auto buying accounted for most of the first quarter growth in goods consumption. There was little change in aggregate spending on other durables or on nondurables. Weekly retail sales data suggest that there may have been a strengthening of nondurables sales toward the end of the quarter, but the evidence is tentative. In this regard, it is relevant to note that the findings of recent consumer sentiment surveys seem to reflect some improvement in attitudes, which could lead to an increase in consumers' propensity to spend.

Labor markets

The two indicators of aggregate employment, the household survey and employees on nonagricultural payrolls, were unchanged in March. Both measures have been oscillating within a narrow range since last summer with no apparent trend, and both remain well below their peak reached last March.

The civilian labor force increased slightly from February to March on a seasonally adjusted basis. The unemployment rate edged up and returned to 6 percent, the January figure. This key indicator has been fluctuating within a range of 0.4 percentage point since last November.

Estimates for the first quarter indicate that the average level of employment in durable goods manufacturing was 50,000 higher than in the last quarter of 1970. Mirroring the recovery from the auto strike, employment in transportation equipment manufacturing increased approximately 170,000 from the fourth quarter to the first, but this increase was largely offset by decreases in other durable goods industries.

Chart 2 shows the course of payroll employment since 1965. The recent contraction in economic activity has not affected the rising trend in employment by State and local government. From the first quarter of 1965 to the first quarter of 1971, their payrolls increased 36 percent which is almost three times the growth rate of Federal civilian employment in the same period. Local governments employ about 57 percent of all persons on government payrolls, but State employment has risen more rapidly in the past 6 years. Since the first quarter of 1965, the number of State workers has grown 42 percent while local government employment has grown 33 percent. It is interesting to note that the Federal Government now employs fewer civilians than either State government or local government.

Over the past 6 years, employment in the service producing industries (excluding government) grew 24 percent or at an annual rate of 3½ percent. Within the service industries, the most rapid growth has occurred in medical and other health services where employment has increased by over 55 percent. Employment in this subgroup grew more than 6 percent from February 1970 to February 1971, a period in which total employment in the service producing industries, excluding government, grew less than 2 percent.

Employment in contract construction has shown little growth since the first quarter of 1965. The recent recovery in construction has not been reflected in payroll employment in the contract construction industry. This may be due to the difficulties of matching construction activity and employment industrially. Employment growth

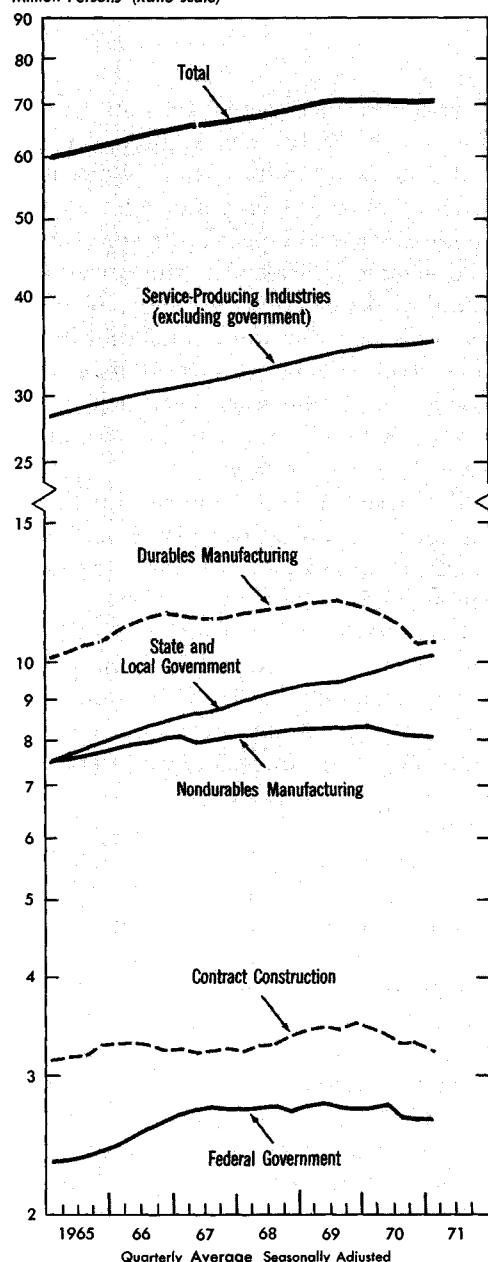

in nondurable goods manufacturing has been quite weak throughout the entire 6-year period. Even before the recent downturn in economic activity, it was growing at less than 2 percent annually.

Employment in durables manufacturing grew at an annual rate of close to 7 percent between the first quarter

CHART 2

Data: BLS

of 1965 and the fourth quarter of 1966. There was a small reduction in the next three quarters, during which the 1966-67 slowdown occurred. Growth then resumed, though at a slower pace,

with the peak reached in the third quarter of 1969. As a result of the economic downturn and the auto strike, employment in the last quarter of 1970 fell to its lowest level since 1965.

the first year and an average of about 9 percent a year over the life of the contract. In its third "inflation alert," the Council characterized this settlement as clearly in excess of any realistic assessment of long-term productivity growth.

The economic issues involved in the upcoming negotiations are not only of the utmost importance for the mills and the union, but they also have an important bearing on the state of the economy at large. The economy's recovery would be setback by a prolonged strike in this key industry. Moreover, whether there is a strike or not, the

Developments in the Steel Industry

THE current 3-year labor contract in the steel industry will expire July 31, and users are building inventories as a hedge against a strike and against announced and anticipated price increases. The economic stakes in the upcoming round of negotiations are high for both the mills and the union, and the threat of a strike appears more serious now than at any time since 1959, when the steelworkers last struck and the mills were shut for 116 days.

The steel mills are approaching this summer's negotiations in a difficult financial condition. The industry is of course highly sensitive to cyclical developments and has been hard hit by the recent contraction in economic activity. Demand for steel products has been weakened by retrenchment in military procurement, capital spending, and consumer durables purchases. Steel production has been trending downward since mid-1969—plummeting last October and November during the strike at GM—and profits have been severely squeezed. The after-tax profits of primary iron and steel manufacturers amounted to less than \$700 million in 1970, a drop of more than 40 percent from the average \$1 1/4 billion in 1968 and 1969. After-tax profits per dollar of sales (i.e. profit margins) amounted to only 2 1/2 cents last year, down sharply from 4 1/2 cents in both 1968 and 1969.

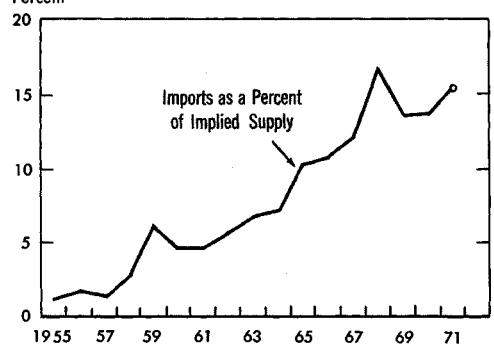

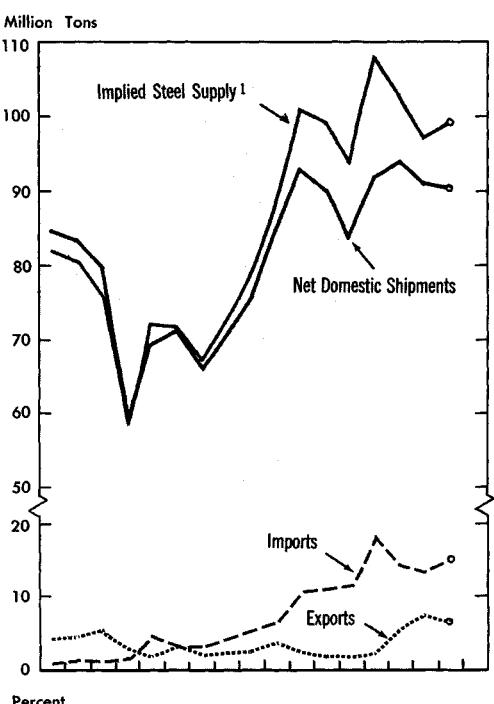

In addition to current financial problems, the industry's vulnerability to foreign competition will also have an im-

portant bearing on the position that the mills take in the coming negotiations. Over the past decade, rising production costs have led to increases in steel prices, and this has resulted in a pronounced increase in imports to the U.S. Indeed, in the past 3 years, imports averaged 15 million tons or about 16 percent of domestic shipments. The extent to which labor costs increase and the extent to which this increase is passed through to higher prices, will importantly affect the competitive relationship between domestic and foreign producers.

On the other side of the forthcoming negotiations, the union membership feels strongly that for years their settlements have been soon outpaced by the gains won by other unions. In 1965, the steel contract was the last major settlement that was fairly close to the 3.2 percent "guidepost"; in 1968, the union was the last to adhere to the pattern of 6 percent settlements. The steelworkers are also acutely aware of the fact that the gains won in their last contract have been eroded by inflation. Moreover, they are very conscious of the very large settlements won recently by other major unions, and of the agreement just reached between their own union and major container manufacturers. The negotiations with the container industry typically foreshadow the demands the United Steelworkers will make on the steel companies in the summer. The Council of Economic Advisers has estimated the increase won in those negotiations at 13 percent in

CHART 3

Steel Supply

1. Implied supply equals net shipments from domestic mills plus net imports.

2. Average of January and February at an annual rate, not seasonally adjusted.

Data: AISI & Census

outcome of the negotiations can have serious implications for steel product prices, prices in general, and the competitive position of the U.S. steel industry in world trade.

Steel production

Production of raw steel has been on a steady rise since the turn of the year. In late March and early April it reached about 2.9 million tons per week, almost 25 percent above the average in the closing months of last year when production was depressed by the GM strike. Though the recent rate of production about matched the peak reached in the spring of 1968—the last period of strike hedging—the volume of raw steel output in the first 15 weeks of this year trailed that in the comparable period of 1968 by about 4 percent or 1.6 million tons. This probably reflects the fact that, in contrast to 1968, steel consumption was relatively weak (even aside from the impact of the auto strike) as this round of stockpiling began.

Shipments of finished steel from the mills are also lagging a little behind the pace set in other recent periods of strike hedging. Shipments of finished steel—which account for about 85 percent of the Nation's steel supply—amounted to 7½ million tons in both January and February, almost one half million tons behind shipments in the same months of both 1965 and 1968. Expressed in annual rate terms, the recent shipments pace appears to be roughly equal last year's volume (chart 3). To judge from weekly production figures, however, shipments probably showed a sizable increase in March and the industry in fact expects to ship a record 65 million tons in the first 7 months of 1971 (63 million tons were shipped in the first 7 months of 1968). If this expectation is realized, monthly shipments will rise steeply to a volume of about 10 million tons in May, June, and July. Thus far, the industry has been able to accommodate strike-hedge demands in an orderly fashion, but producing and shipping 10 million tons for 3 consecutive months will surely create transportation shortages (par-

ticularly rail car shortages) and probably strain rolling mill capacity.

Imports

Steel imports amounted to 1½ million tons in both January and February, the largest volume ever for those months. Strike-hedge demand will be stimulating imports for some months to come, and demands for foreign steel will of course be buoyed even more if there is a strike. In any case, the voluntary quotas on steel exports to the United States, agreed to in 1968 and expiring at the end of this year, will clearly have more of an impact on foreign producers this year than in the past two years.

The share of steel imports in the U.S. steel supply has increased substantially since the steel strike of 1959. Foreign competition greatly intensified during the 1960's and steel imports rose sharply, particularly in the periods when domestic demands were inflated by strike hedging. Imports reached a peak of 18 million tons during 1968 and net imports (imports minus exports) accounted for 14½ percent of the U.S. steel supply that year. The share had been about 10 percent in the two preceding years, and the 1968 surge intensified the interest of domestic producers in import controls. Late in 1968, the threat of controls led to the adoption of voluntary quotas by which foreign suppliers in Japan and the European Coal and Steel Community (Italy, France, West Germany, Belgium-Luxembourg, and the Netherlands) agreed to limit their exports to the United States for a 3-year period.

Imports of steel fell off in 1969 and 1970, but this was apparently less a result of the voluntary quotas than of the strengthening of foreign steel demands associated with economic expansion in Western Europe and the weakening of demands in the United States. With steel demands currently softening abroad and intensifying in the United States, this is no longer the case. It should also be noted that even though the voluntary tonnage quotas have not been exceeded, there has been growing dissatisfaction with the agreements on

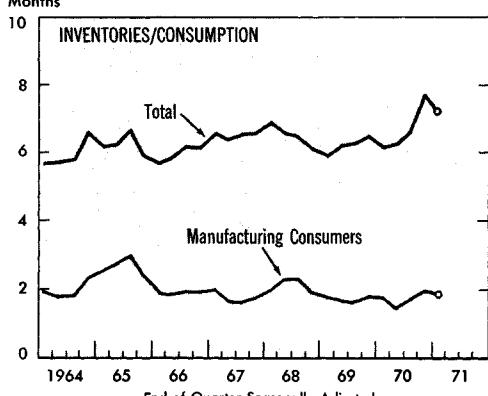

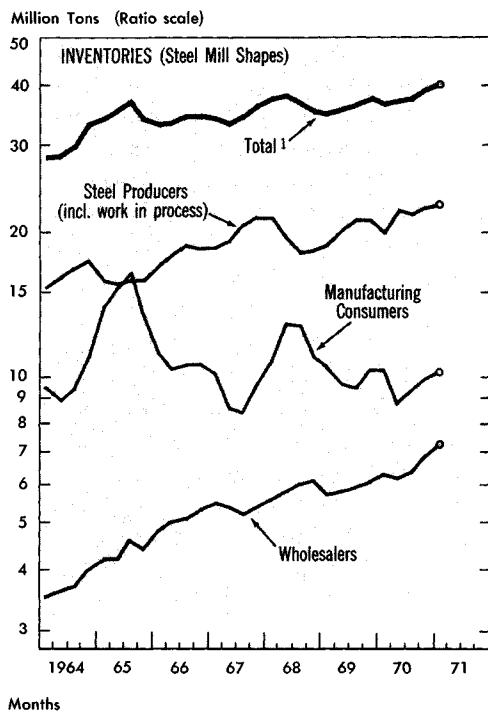

the part of domestic producers of specialty steels—stainless and tool. These producers fault the agreements on the grounds that they emphasize tonnage restrictions and do not pay enough attention to product mix, i.e., the composition of steel imports. The specialty producers claim that the product mix has shifted in the direction of higher quality imports, and that this has cut seriously into the market for their products.

Steel consumption

After about a year and a half of generally sluggish demand, steel con-

CHART 4

Steel Inventories

71-4-4

sumption was strengthening somewhat in the opening months of this year as a result of the rebound in auto production and the recovery in construction activity. Steel use by manufacturing firms, which account for perhaps as much as three-fourths of total consumption, averaged 5.6 million tons (seasonally adjusted) in the 3 months ending in February; this was up from an average 4.9 million tons in the strike-affected months of September, October, and November, but still below the 6 million ton average in the 3 months ending last August.

Almost all of the recent strengthening in manufacturing consumption reflected the rebound in motor vehicle production. In part, this reflects the fact that use in the container industry was depressed by the recent month-long strike of the United Steelworkers. For the aggregate of all other manufacturing industries, steel consumption was on the rise in the 3 months ending in February, but averaged about the same as in the months from September through November and was well below the rate in the months preceding the auto strike.

Reliable data are lacking for steel consumption by nonmanufacturing industries, but indications are that it was picking up in the latter part of last year and early this year. This is probably due in large part to the strong recovery in the construction industry that has been underway since the summer of last year.

Inventories

Though increased use in auto manufacturing and construction are mainly responsible for much of the recent strengthening of steel consumption, most of the increase in steel buying reflects an inventory buildup that is now well underway (chart 4). The total stocks held by producing mills, manufacturing consumers, and wholesalers have been rising since early last summer and reached a record level of $40\frac{1}{2}$ million tons (seasonally adjusted) in February. This was almost 4 million tons above the level of last July, and represented about the same volume of stockpiling as occurred in the comparable months of 1967-68. However, the slack in steel use results in inventories now standing much higher relative to consumption than was the case in earlier periods of strike hedging (bottom panel chart 4).

Through early last summer, manufacturing industries were liquidating steel inventories in response to weakness in demand. Since then, manufacturers have been accumulating inventories, and from last July through February, stocks increased $1\frac{3}{4}$ million tons to $10\frac{1}{4}$ million tons, seasonally adjusted. Though this is less than the accumulation that occurred in the comparable months 3 years ago, manufacturers' stocks hold roughly the same relation-

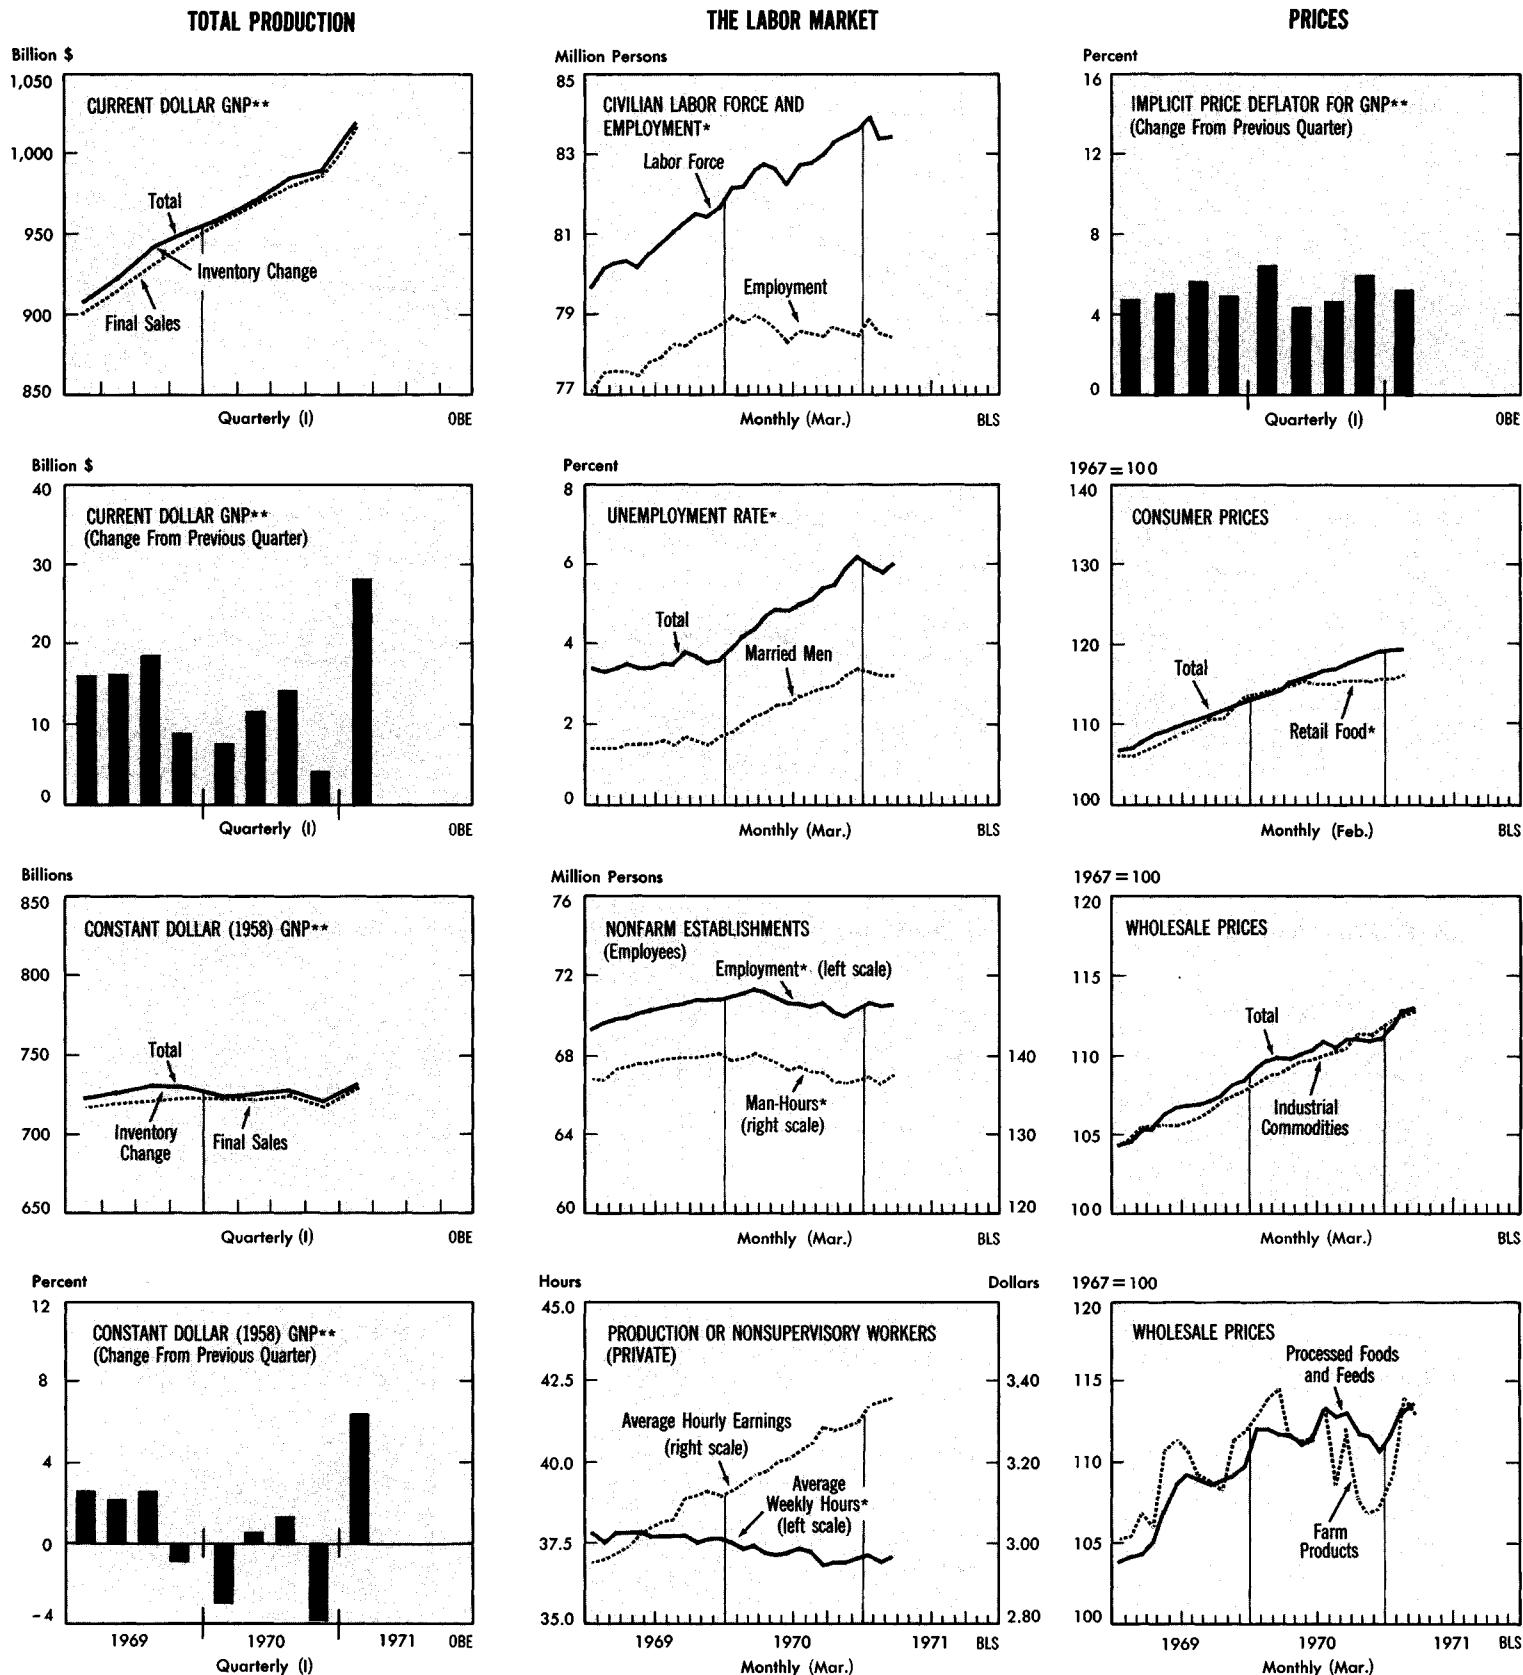

ship to consumption as they did during that earlier period.

The recent behavior of the stocks of both steel wholesalers and steel producers differs somewhat from that in the preceding period of strike hedging. Wholesalers, who are major steel suppliers for the construction and extractive industries as well as for some manufacturing firms, have sharply stepped-up their accumulation since early last summer, and stocks have increased 1 million tons to $7\frac{1}{4}$ million tons. Three years ago, wholesaler accumulation began only toward the close of 1967 and by February 1968 had amounted to a little more than $\frac{1}{4}$ million tons. In part, the earlier and stronger stockpiling in the current period may reflect a rise in wholesalers' sales associated with recovery in construction activity.

On the other hand, steel mills seem less willing to accumulate inventories than has been the case in other strike-hedge periods. Mill inventories behave quite differently from user inventories during such periods because the mills stockpile in anticipation of increased buying by consumers. Thus, mill stocks typically build more rapidly and peak much earlier than do user stocks. To date, however, the mills have added little to inventories; an unwillingness to build and carry large inventories is probably related to the serious financial hardships that currently afflict this industry.

CHART 5

- In first quarter: GNP up \$28½ billion, in large part reflecting the rebound from the auto strike
- Real output increased 6½ percent at an annual rate; the GNP deflator rose 5 ¼ percent
- In March the unemployment rate edged up to 6 percent; nonfarm payroll employment was about unchanged

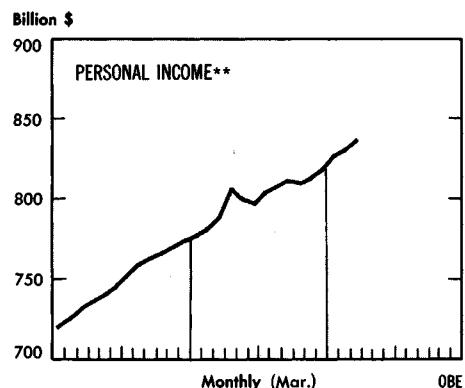

* Seasonally Adjusted ** Seasonally Adjusted at Annual Rates

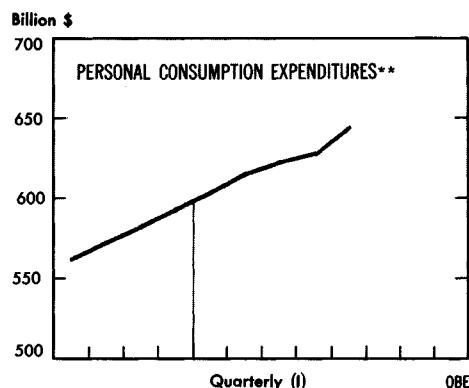

U.S. Department of Commerce, Office of Business Economics

- Personal income increased \$6 billion in March
- In first quarter: Consumer spending rose \$17 3/4 billion; durable goods spending buoyed by auto purchases
- Business fixed investment increased \$3 3/4 billion; residential investment up \$3 1/4 billion

Table 19.—Gross National Product: Change From Preceding Period

1970 GNP by Major Industry

The Nation's industries in 1970 generally experienced shrinkage or sluggish growth in real output, increases in prices and costs, and a narrowing of profit margins. Output of the goods-producing industries declined while output of the service-type industries grew relatively slowly.

DECLINES or sluggish gains in output, increases in prices and costs, and a narrowing of profit margins characterized the Nation's industries in 1970. Real GNP was down 0.4 percent from 1969, reflecting declines in the output of the goods-producing industries and below normal gains in the service-type industries. The GNP price deflator rose more in 1970 than in 1969 (5.3 percent compared with 4.7 percent) as acceleration in the rate of price increase in government, manufacturing, services, and transportation outweighed deceleration in trade, agriculture, and the utilities:

Preliminary estimates of 1970 gross national product by industry of origin, in current and constant prices, appear in table 1. Gross product originating in an industry, its value added, may be measured as the difference between the value of an industry's total output and the cost of materials and business services purchased by the industry. The same total may also be calculated by summing the industry's payments to the factors of production (employee compensation, profits, etc.) and its non-factor production costs (depreciation, etc.). The sum of the gross products of all industries is equal to the Nation's total output of goods and services, or GNP.

Changes in real output

The commodity producing industries—manufacturing, agriculture, forestry and fisheries, mining, and contract construction—account for about 40 percent of the Nation's real output of goods and services. The aggregate output of these industries last year was down 2.9 percent from the 1969 level. Manufacturing production showed the largest decrease, 3.7 percent, primarily reflecting sharp reductions in the durable goods industries. Durables were particularly hard hit by the contraction in economic activity, being affected by the cutbacks in defense production, declines in construction, retrenchment in consumer buying, and the leveling in capital investment. The General Motors strike also cut into durables production.

Output in the construction industry declined in 1970 as a result of the credit restraints imposed in 1969 and the continuing climb in costs. Nonresidential building declined throughout the year but there was an upturn in homebuilding in the latter half of the year as credit conditions became easier.

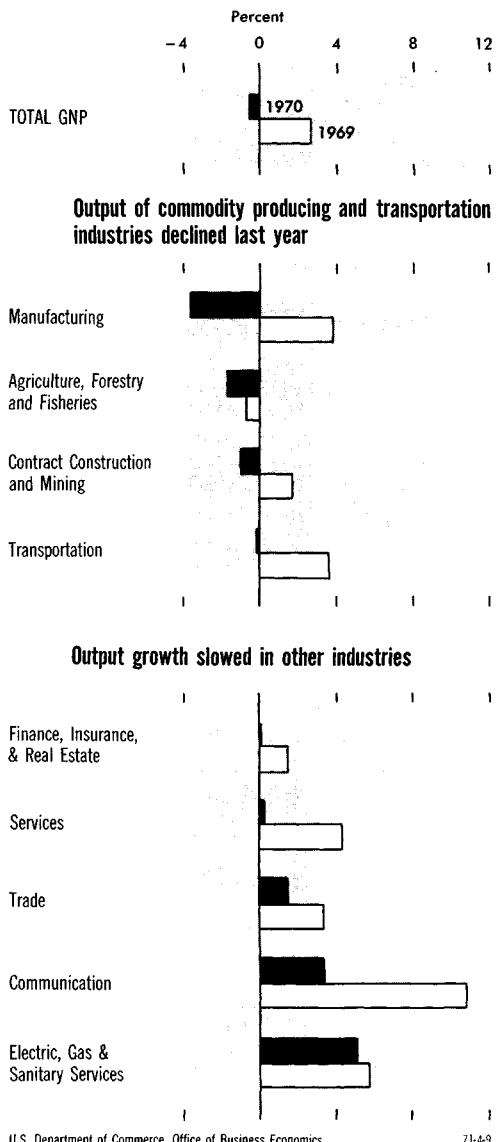

Farm output declined moderately for the third consecutive year as declines in crop production outweighed increases in livestock output.

The slackening of demand for goods in 1970 contributed to the sharp reduction in the growth of the trade industries' output (i.e., value added); the gain was 1.6 percent in 1970, down from 3.4 percent in 1969 and an average 4.8 percent in 1965-68. Expansion of the air transport industry's output turned sluggish last year and freight volume carried by rail and truck declined. Consequently, total transportation output

remained unchanged after 8 years of relatively rapid growth. The weakness of output and the drive to cut costs in other segments of the economy damped growth in the communication and serv-

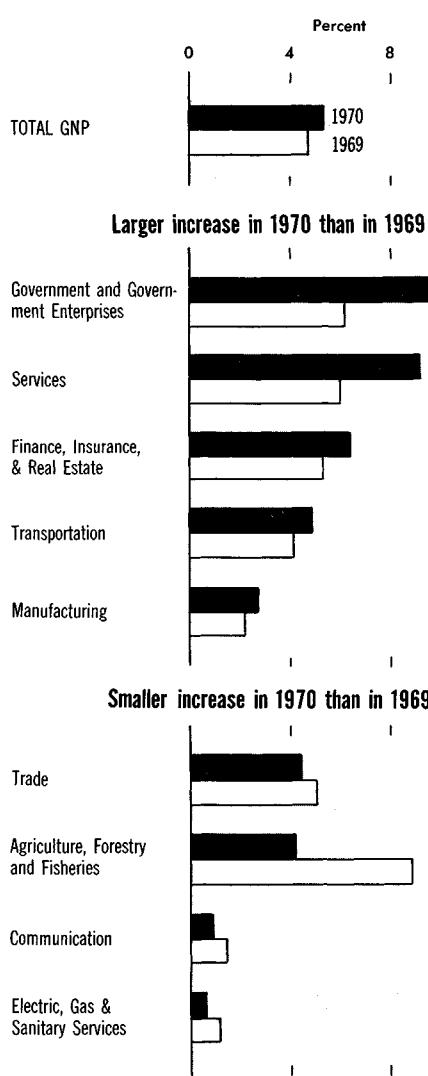

CHART 9

Percent Change in Real Product

ice industries where expansion had been vigorous during the sixties. The communication industry recorded its smallest gain in more than a decade—3.4 percent in 1970 compared with more than 8 percent annually since 1961—largely, because of a slowdown in the growth of the telephone industry. There was essentially no change in the aggregate output in the services industries in 1970. Continuing gains in the output of medical and health services, auto repair, and other consumer-oriented services were offset by declines in industries offering services to businesses, such as advertising and employment agencies.

CHART 10
Percent Change in Implicit Price Deflators

Price changes

The GNP price deflator rose 5.3 percent in 1970, the largest annual advance since 1951. The increase was 4.7 percent in 1969 and averaged 3.3 percent from 1965 to 1968 (table 3). The deflator increased an average of only 1.5 percent per year from 1961 to 1965, the 4-year period of sharp output growth and essentially stable prices preceding the major U.S. buildup in Vietnam.

In 1970, as in 1969, there was an increase in the implicit price deflator for every major industry, ranging from a low of 0.6 percent for the electric and gas industry to a high of 9.5 percent for government. The increase in the government deflator was due to increases in the average compensation per employee at the Federal, State, and local levels. It should be noted that under GNP conventions, it is assumed that the productivity of general government employees does not change.

An industry's contribution to the increase in the overall price deflator depends not only on the size of its own price advance but also on its weight, i.e., its contribution to total real output. The rate of price advance accelerated in 1970 in 5 of the 6 largest industries shown in table 3, trade being the exception. The rate of price increase decelerated in the smaller industries—agriculture, utilities, and communications—but these small industries plus trade together account for only about one-fourth of real GNP.

The 1970 increase in the government deflator was so sharp that it accounted for 1.2 percentage points of the 5.3 percent in the GNP deflator, even though government accounted for less than 10 percent of total output. Trade and services each accounted for another 1.1 points of the increase. Finance, insurance, and real estate contributed about 1.0 points, while the composite of

agriculture, construction, transportation, communication, and utilities added another 0.9 points. Price changes in mining and in manufacturing were considerably below the average for the economy as a whole and thus held down the rate of increase in the overall deflator.

In the past decade, the deflator for the private nonfarm business sector of the economy has risen less sharply than the deflator for the entire economy. Within this business sector, the deflator for the manufacturing industries has advanced less rapidly than that for the nonmanufacturing industries. During the second half of the 1960's, the deflator for manufacturing increased at a steady rate of slightly over 2 percent a year, but the increase in the deflator for nonmanufacturing industries accelerated sharply. In 1970, the picture changed somewhat; the manufacturing deflator rose 2.7 percent, compared with 2.2 percent in 1969, whereas the nonmanufacturing price increase of 5.5 percent was only slightly more than the 1969 rise of 5.2 percent.

Unit costs and profits

Profits per unit of output in most industries declined sharply from 1969 to 1970, as unit costs increased more rapidly than prices. While the deflator for the private nonfarm business sector increased 4.7 percent, unit labor costs rose 6.0 percent and other unit costs increased by about 10 percent. Consequently, profits per unit of output declined about 5 percent from 1969 to 1970.

Unit labor costs continued to advance sharply in all industries in 1970, as higher employee compensation was only slightly offset by gains in productivity. However, the unit cost increase slowed somewhat in trade and in the finance, insurance, and real estate group. This resulted in a deceleration in the rise of unit labor costs for nonmanufacturing business as a whole, while unit labor costs were accelerating in manufacturing. In contrast, during the 1960's, unit labor costs in manufacturing increased much less rapidly than in nonmanufacturing.

1. Compound annual rate of change from initial to terminal year.

Business firms were confronted in 1970 by higher interest rates, increasing charges for depreciation, and higher indirect business taxes. Most of these are overhead costs and they rose sharply per unit of output as output slackened. Such costs in 1970 rose about 10 percent in both manufacturing and non-manufacturing, compared with increases of 1.8 and 5.3 percent, respectively, in 1969.

Within the private sector, profit margins in the transportation industries narrowed the most. Unit costs in these industries rose not only because of substantial increases in cost and reduced volume of goods carried but also because their prices, subject to government regulation, tend to lag behind changes in costs. The public utilities, which are also under government regulation, were similarly affected. In manufacturing, profit margins declined because manufacturers, faced with declining demand, were unable to increase prices to cover increased costs. The only exceptions to the pattern of reduction in profits per unit of output were in the finance, insurance, and real estate group and the

State and Regional Income in 1970

Regional income changes in the fourth quarter ranged from a small decline in the Great Lakes to relatively large increases in the Mideast and Southeast. For 1970 as a whole, preliminary estimates show regional gains in personal income ranging from 5½ percent in the Great Lakes to 9 percent in the Rocky Mountains.

REGIONAL income changes in the fourth quarter of 1970 ranged from a small decline in the Great Lakes to relatively large increases in the Mideast and Southeast. Nationally, manufacturing payrolls declined slightly as a result of the auto strike, and farm income dropped sharply as a result of lower livestock prices.

Personal income nationally rose 7 percent from 1969 to 1970, with regional gains ranging from 5½ percent in the Great Lakes to 9 percent in the Rocky Mountain region. Income rose in every State except North Dakota, although the increases in two or three others were smaller than the national rise in consumer prices. On a per capita basis, real personal income rose in most States last year.

Table 1 shows annual total and per capita State income for recent years. The per capita figures back to 1960

NOTE.—The estimates of State personal income were prepared in the Regional Economics Division by Marian Sacks, Q. Francis Dallavalle, Gordon Lester, Jr., and Steven Johnson.

have been revised to reflect preliminary population data from the 1970 Census. Percent change in earnings from 1969 to 1970 is given in table 2 and quarterly State personal income totals in table 3.

Fourth quarter income changes

Personal income nationally increased 0.75 percent from the third to fourth quarter of 1970. The increases were about 1.5 percent in the Mideast and Southeast and close to that in the Far West. At the other end of the scale, there was a small decline in the Great Lakes and increases of less than one-half of 1 percent in the Southwest, New England, Plains, and Rocky Mountain regions.

Large increases in government and construction payrolls were the major factors in the Mideast region's above-average income gain. In addition, payrolls in most other industries showed slightly stronger gains in the region than in the Nation.

The Southeast's above-average income gain centered in the private nonfarm sector, as government payrolls rose less strongly in the region than in the Nation and farm income declined at about twice the national rate. Mining and construction payrolls increased much more strongly in the region than in the Nation, and manufacturing payrolls rose slightly in the region but declined nationally. The above-average increases in income from these basic industries induced above-average increases in the region's service-type industries.

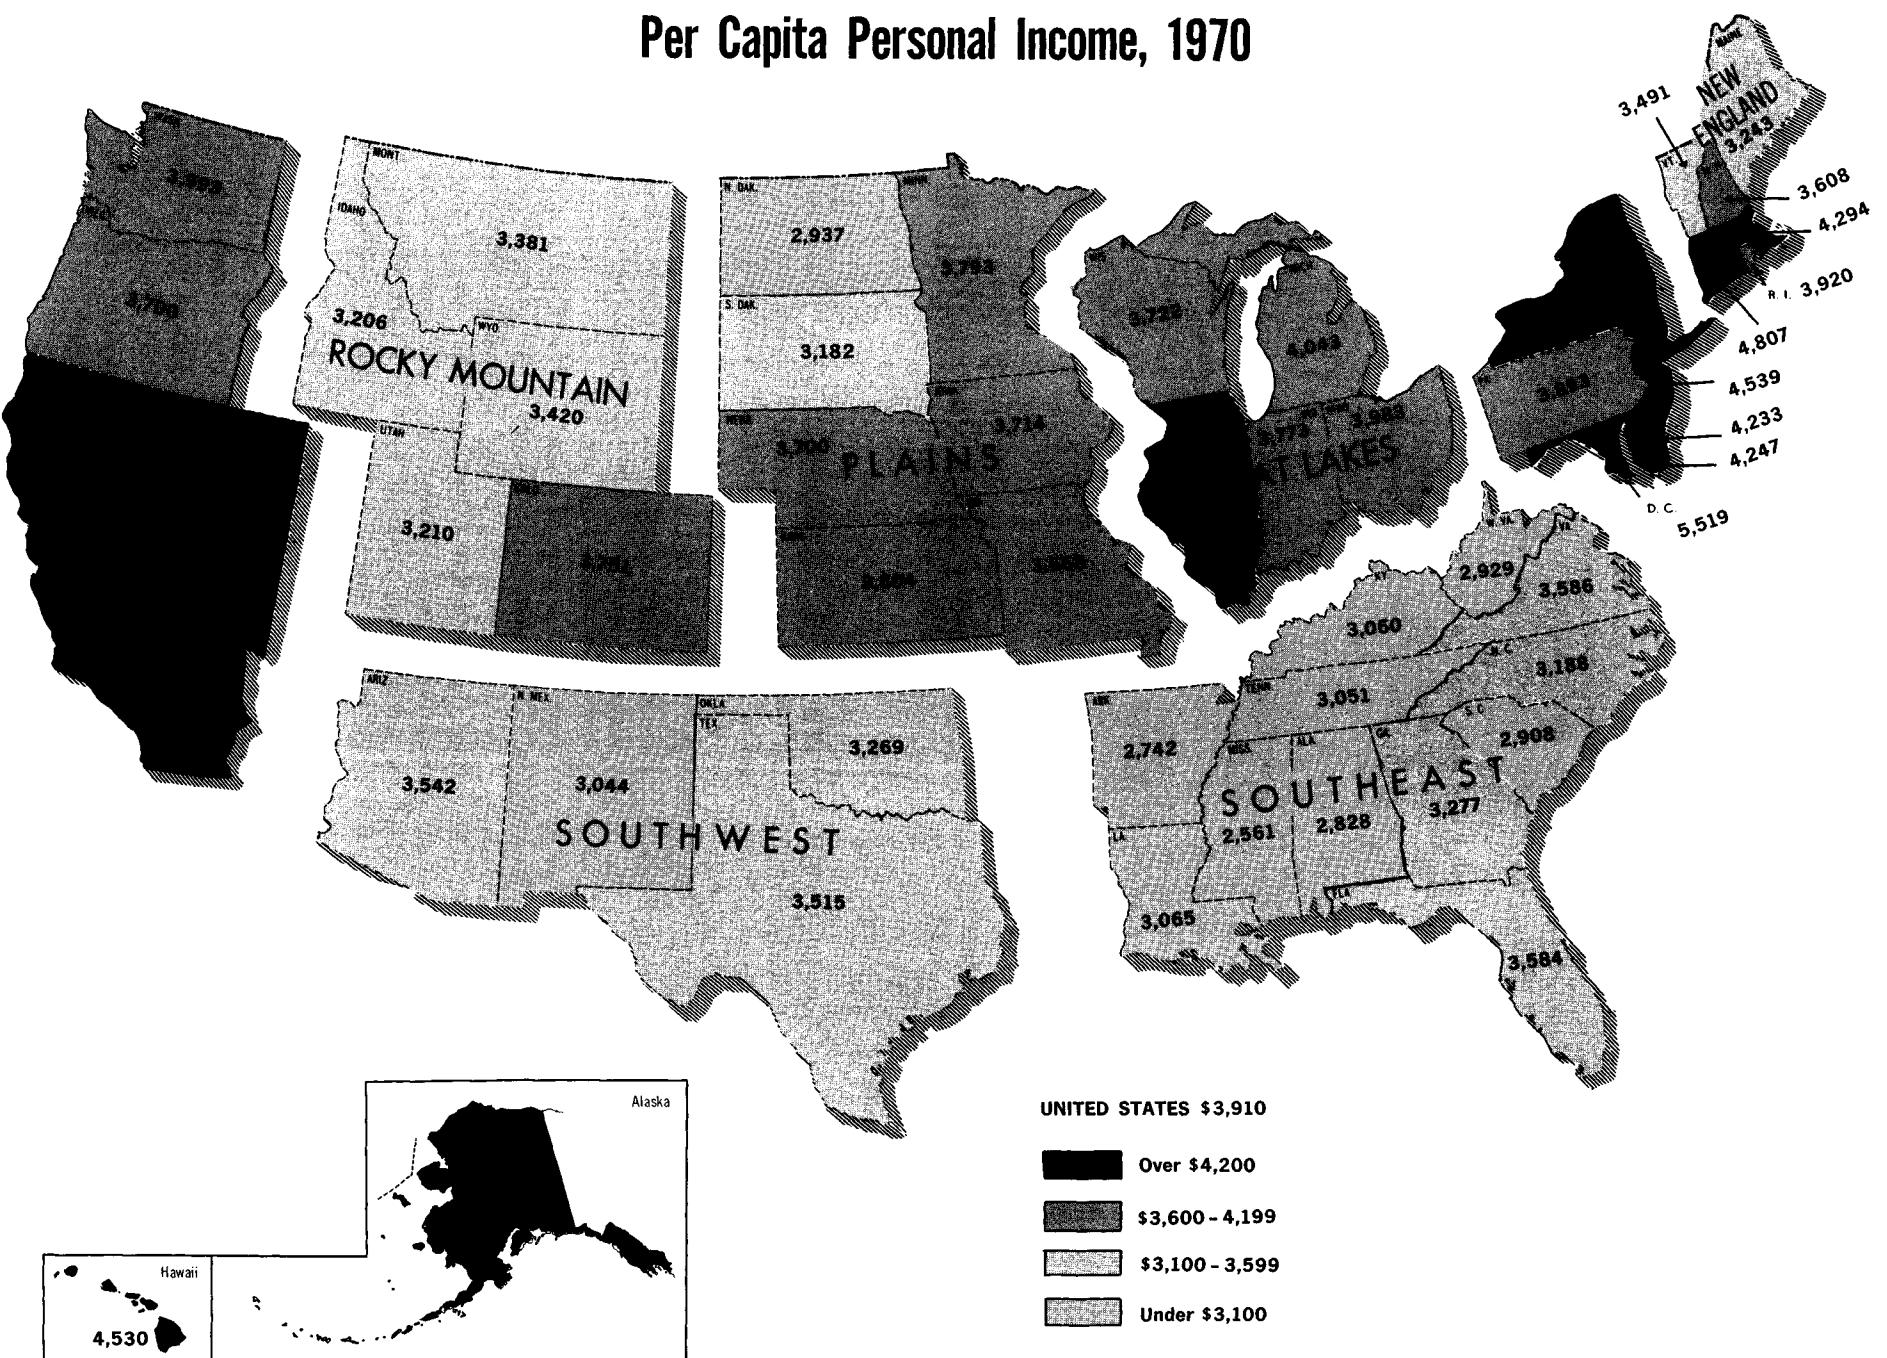

In the Far West, most major income components scored fourth quarter gains

at rates about equal to the national averages. The major exception was manufacturing payrolls which declined 2½ percent nationally but less than 1 percent in the Far West. This below-average decline, together with the relatively low weight of factory payrolls in the economy of the Far West, was the principal factor in the region's above-average income gain. Washington was the only State in the Far West where manufacturing payrolls rose in the fourth quarter of 1970. The increase followed three successive quarters of large declines in manufacturing payrolls in that State.

Personal income in the Great Lakes region declined one-half of 1 percent in the fourth quarter, reflecting the effects of the auto strike. Manufacturing payrolls were off nearly 7 percent for the region as a whole, with State declines ranging from 2½ percent in Illinois to 13 percent in Michigan. Total personal income was off substantially in Michigan and Ohio, unchanged in Indiana, and up slightly in Illinois and Wisconsin.

In the other four regions—New England, Plains, Southwest, and Rocky Mountain—income increased at rates well below the national average. In each region, an income decline in a single State—Massachusetts, Iowa, New Mexico, and Colorado—was the principal factor limiting the gain for the entire region. In most other States in these regions, income growth was at least as strong as the national average.

Per Capita Personal Income, 1970

Regional Income Developments in 1970

THE regional pattern of personal income change for 1970 as a whole differed from that of the fourth quarter. Personal income rose 7 percent nationally from 1969 to 1970, and gains of 5 percent or more were registered in all eight regions, in 46 States, and the District of Columbia.

The strongest gains occurred in the Rocky Mountain (9 percent), Southwest (8½ percent), and Southeast (8 percent) regions. In each, farming and manufacturing provided the major impetus. Income from both of these major industries increased faster in these three regions than in any other, with one exception: the largest increase in farm income (11 percent) occurred in New England. However, because farm income accounts for less than 1 percent of total income in New England, this strong increase, though of great importance to its recipients, had a comparatively small effect on the region's total income.

Nationally, Federal civilian payrolls rose faster in 1970 than most other major income sources. In the Southeast and Southwest, Federal payrolls are a very important income source and they contributed to the strong income growth in the two regions. This was true despite the fact that the growth of Federal civilian pay in the two regions was in fact slightly slower than the national gain.

On a State basis, the income increases in the Rocky Mountain, Southwest, and Southeast regions, were broadly based. Seventeen of the 21 States in the three regions scored income increases stronger than the national average. Especially noteworthy were the large increases in income from coal mining in Virginia, West Virginia, and Kentucky.

Personal income in the Great Lakes region rose 5¼ percent last year, the smallest regional increase in the Nation. The main factor limiting the income rise in this region was a decline in man-

ufacturing payrolls, centered in Michigan and Ohio. Increased unemployment insurance benefits provided some offset. Nevertheless, income from the various service-type industries generally showed below-average gains as a result of the slack in manufacturing.

The Plains States scored the second smallest regional income increase last year. Here a moderate decline (3½ percent) in farm income was primarily responsible. Especially large reductions in farm income in North Dakota and Nebraska caused a decline in total personal income in the former State and severely limited the rise in the latter.

Personal income in the remaining

regions—New England, the Mideast, and Far West—rose at rates slightly above the national average. Income from most industrial sources expanded at rates close to, or a little above, the national average.

Most individual States conformed to the general regional patterns of income change in 1970. However, several exceptions warrant mention. In New England, Vermont scored a relatively large gain in total income with an expansion in recreation activities a main factor. In the Mideast, income in Maryland and the District of Columbia rose at well-above-average rates, with government payrolls providing the primary stimulus. In the Far West, the most noteworthy development was the relatively small (4½ percent) income rise in Washington. This stemmed from a decline of nearly 10 percent in earnings from manufacturing and the relatively small size of the gains in the State's service-type industries.

Per Capita Personal Income

PER CAPITA income was higher in 1970 than in 1969 in every State except North Dakota. The national advance was 5¾ percent with top gains, close to 10 percent, in the District of Columbia, Alaska, Mississippi, Hawaii, Montana, and West Virginia. At the other extreme, per capita income was up 3 percent or less in Delaware, Indiana, Washington, Michigan, and North Dakota.

The implicit price deflator for personal consumption expenditures increased 4¾ percent last year. If that increase is taken as a measure of consumer price change, then real per capita income in the Nation advanced about 1 percent and the per capita income gain in 36 States exceeded the price rise. In eight others, the income advance was about the same as the price change, while real income apparently fell in the remaining six States.

The accompanying map highlights some features of State per capita in-

come. The range from the highest to the lowest is over \$2,000—from \$4,807 in Connecticut to \$2,561 in Mississippi. States with high per capita incomes are concentrated in the Northeast and Far West and those with low income are mainly in the Southeast.

The income differentials among States have been narrowing. Over the past decade, the Southeast's relative position improved reflecting the fact that nine of the 10 States with largest per capita income growth from 1960 to 1970 were in that region. The other three Southeastern States were 13th, 14th and 15th in the growth ranking. Over the decade, per capita income in the region rose from 73 percent of the national figure to 81 percent, while per capita income in the 10 States with highest incomes moved from a position 22 percent above the national figure to a position 17 percent above it.

^p Preliminary. ^r Revised.

NOTE.—The per capita estimates were computed from a population series prepared by the Bureau of the Census that was adjusted to the 1970 Census of Population count. The population estimates are provisional and subject to change when the Bureau of the Census revises its intercensal State estimates for the 1960 decade. Detail may not add to totals because of rounding.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1969 edition of **BUSINESS STATISTICS**, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$3.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1965 through 1968 (1958-68 for major quarterly series), annually, 1939-68; for selected series, monthly or quarterly, 1947-68 (where available). Series added or significantly revised after the 1969 **BUSINESS STATISTICS** went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1968 issued too late for inclusion in the 1969 volume appear in the monthly SURVEY beginning with the September 1969 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1969 edition of **BUSINESS STATISTICS**; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 189-90. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1970	1968				1969				1970				1971

¹ Revised. ² Preliminary. ³ Number of carriers filing complete reports for the year. ⁴ Preliminary estimate by Association of American Railroads. ⁵ For 5 weeks. ⁶ Annual total reflects revisions not distributed to the monthly or quarterly data. ⁷ After extraordinary items. ⁸ Beginning Jan. 1971, includes low purity oxygen; comparable Dec. 1970 figure, 26,394 mil. cu. ft.

[†] Revised monthly data (1957-69) are available. [‡] Indexes are directly comparable for the identical quarter of each year (and from year to year). [§] Beginning with 1st quarter 1969 reporting period, motor carriers are designated class 1 if they have annual gross operating revenues of \$1 million or over. [¶] Includes data not shown separately. ^{||} Revisions for 1967 available upon request.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1969	1970	1970												1971

¹ Revised. ² Reported annual total; revisions not allocated to the months. ³ Data cover 5 weeks; other months, 4 weeks. ⁴ Ginnings to Dec. 13. ⁵ Ginnings to Jan. 16.

⁶ Crop for the year 1969. ⁷ Crop for the year 1970. ⁸ Includes data not shown separately.

⁹ Effective Aug. 1969 SURVEY, data (1964-Apr. 1969) reflect adjustments to new benchmarks; see Bureau of Census reports: Woven Fabrics (1964-68), Series M22A-Supplement and (Jan.-Apr. 1969), M22A (69) 1-4 Supplement.

^Δ Stocks (owned by weaving mills and billed and held for others) exclude bedsheets, toweling, and blanketeting, and billed and held stocks of denims.

[¶] Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheets, toweling, and blanketeting.

[¶] Total ginnings to end of month indicated, except as noted.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS

Commodity prices.....	7-9
Construction and real estate.....	9, 10
Domestic trade.....	11, 12
 Labor force, employment, and earnings.....	13-16
Finance.....	16-21
Foreign trade of the United States.....	21-23
Transportation and communications.....	23, 24

Industry:

Chemicals and allied products.....	24, 25
Electric power and gas.....	25, 26
Food and kindred products; tobacco.....	26-30
Leather and products.....	30
 Lumber and products.....	31
Metals and manufactures.....	31-34
Petroleum, coal, and products.....	34-36
Pulp, paper, and paper products.....	36, 37
 Rubber and rubber products.....	37
Stone, clay, and glass products.....	38
Textile products.....	38-40
Transportation equipment.....	40

INDIVIDUAL SERIES

Advertising.....	11, 16
Aerospace vehicles.....	40
Agricultural loans.....	16
Air carrier operations.....	23
Aircraft and parts.....	4, 6, 7, 40
Alcohol, denatured and ethyl.....	25
Alcoholic beverages.....	11, 26
Aluminum.....	33
Apparel.....	1, 3, 4, 8, 9, 11-15, 40
Asphalt and tar products.....	35, 36
Automobiles, etc.....	1, 3-6, 8, 9, 11, 12, 19, 22, 23, 40
 Balance of international payments.....	2, 3
Banking.....	16, 17
Barley.....	27
Battery shipments.....	34
Beef and veal.....	28
Beverages.....	4, 8, 11, 22, 23, 26
Blast furnaces, steel works, etc.....	5-7
Bonds, outstanding, issued, prices, sales, yields.....	18-20
Brass and bronze.....	33
Brick.....	38
Broker's balances.....	20
Building and construction materials.....	6, 7, 9, 10, 31, 36, 38
Building costs.....	10
Building permits.....	10
Business incorporations (new), failures.....	7
Business sales and inventories.....	5
Butter.....	26
 Cattle and calves.....	28
Cement and concrete products.....	9, 10, 38
Cereal and bakery products.....	8
Chain-store sales, firms with 11 or more stores.....	12
Cheese.....	26
Chemicals.....	4-6, 8, 13-15, 19, 22-25
Cigarettes and cigars.....	30
Clay products.....	9, 38
Coal.....	4, 8, 22, 34, 35
Cocos.....	23, 29
Coffee.....	23, 29
Coke.....	35
Communication.....	2, 20, 24
Confectionery, sales.....	29
 Construction:	
Contracts.....	10
Costs.....	10
Employment, unemployment, hours, earnings.....	13-15
Fixed investment, structures.....	1
Highways and roads.....	9, 10
Housing starts.....	10
Materials output indexes.....	10
New construction put in place.....	9
Consumer credit.....	17, 18
Consumer expenditures.....	1
Consumer goods output, index.....	3, 4
Consumer price index.....	8
Copper.....	33
Corn.....	27
Cost of living (see Consumer price index).....	8

BUSINESS STATISTICS

1969 Biennial Edition

THE SEVENTEENTH VOLUME in a series of statistical supplements to the monthly SURVEY OF CURRENT BUSINESS, the new edition provides, for the past thirty years, historical data for approximately 2,500 series.

For most series, annual data are presented back to 1939. Quarterly statistics back to 1958 are shown for those series ordinarily published on a quarterly basis, and monthly data back to 1965 are given for monthly series. Also included in the volume is an appendix providing monthly or quarterly data back to 1947 for 350 of the more important economic series. Color keyed explanatory notes to the time series define terms, give sources of data, and describe the methods of compilation used.

Price, \$3.00. Orders may be placed with the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or with any Field Office of the

U.S. DEPARTMENT OF COMMERCE
