## the BUSINESS SITUATION

'L HE expansion of aggregate output in late 1972 and early 1973 was clearly above the rate that the economy can sustain, and the subsequent slowdown was generally expected. It was characterized initially by a continuation of rapid expansion in most sectors of the economy and was due mainly to supply limitations in farm and automobile production. A slowdown of auto production would have occurred sometime this year in any event, as an aftermath of the abnormally high demand that had prevailed in late 1972 and early 1973. Practical capacity ceilings were approached in some other industries as well, especially key materials producers, and this limited the scope for continued rapid output growth. Indeed, the need for additional capacity will apparently support a further substantial increase in capital spending in 1974. In the past 2 months, evidence continued to appear confirming the economy's slowdown. Residential construction weakened sharply, and the whole new set of uncertainties caused quite unexpectedly by the Arab oil embargo intensified the weakening of demand for autos.

Sales of new domestic model cars averaged an annual rate of less than 8 % million units in October and November, down from 10 million in the third quarter and a peak 10 ½ million in the first. (However, sales seem to have increased again in early December.) Conspending for other goods, sumer especially other durables, also weakened appreciably after September. Housing starts have been declining since early in the year, but the contraction has been particularly sharp in recent months. Starts averaged 1.7 million units (annual rate) in October and November, 18 percent below the average for the third quarter and slightly more than 30 percent below the first quarter peak, and construction outlays, which lag after starts, have begun to show appreciable declines. The growth of industrial production, as measured by the Federal Reserve index, has been decelerating steadily this year. The index increased only 0.2 percentage point in each of the latest 2 months, October and November, as compared with average monthly increases of 0.4 point in the third quarter and 0.9 point in the first.

There has been evidence recently of an acceleration of business investment in inventories. If this is in fact occurring, it is open to two contrasting interpretations: it may reflect success, at long last, in businessmen's efforts to boost stocks from the extremely low levels to which they had fallen, or it may reflect involuntary accumulation caused by greater-than-expected weakening of final demand. Probably both factors are present.

#### Energy problems and the economy

Energy problems stemming from the embargo have thus far had little impact in the sense of causing output and employment to be different from what they would have been. The likely impacts on output and resource use are yet to come, and their dimensions are by no means clear.

The oil embargo has given a sudden, unexpected acceleration to a problem of energy supply that had been building for some time. Well before the embargo, the United States was experiencing some shortages of oil and gas that reflected existing limits on domestic capacity to produce the raw products and to process them. A rise in the level of energy prices relative to other prices was therefore already underway-the wholesale price index for fuels and power had risen almost 25 percent from December 1972 to October 1973-but the embargo greatly intensified the process. From October to November, the fuels and power price index in-

#### **Survey Price Increase**

The U.S. Government Printing Office has announced a new scale for establishing the public sales prices of all publications sold by the Superintendent of Documents. This has resulted in a further rise in the price of many publications, including the SURVEY OF CURRENT BUSINESS. The public sales program of the Government Printing Office is intended to be self-supporting, with prices set to cover all costs of printing, storing, and distributing publications. Government agencies that prepare publications, as BEA does with the SURVEY, have no direct role in their sale to the public. Neither the cost of printing the public sale copies of the SURVEY nor the revenue from their sale is in BEA's budget, and BEA does not determine the public sale price.

Effective January 1, 1974, the price of a SURVEY subscription, including the weekly statistical supplement, will be \$34.45 per year for domestic mailing and \$43.10 per year for foreign mailing. Single copy price will be \$2.25. Domestic rates apply to Canada, Mexico, and all other countries of Central and South America except Argentina, Brazil, British Honduras, French Guiana, Guyana, and Surinam. Foreign subscribers interested in airmail delivery should ask the Government Printing Office to quote the applicable rate. creased 19 percent. A rise in the relative level of energy prices is necessary for the shortrun allocation of supply and demand, as well as for longer run adjustments. In all probability, the general price level will rise more in 1974 than it otherwise would have.

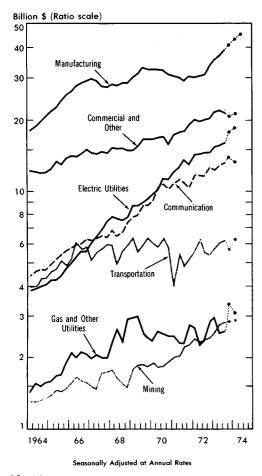

The longrun outlook is clearly for a change in relative prices, making energy a more expensive resource than it has been and changing both the Nation's ways of using it and the amount of investment in producing it. Even if the complete embargo is relatively shortlived, it should speed the processes of adjustment.

The question of greatest public interest now is how much impact there will be on the economy in the short run. The availability of an important resource has been significantly curtailed,

#### **Plant and Equipment Expenditures**

CHART I

73-12-1

Expected

U.S. Department of Commerce, Bureau of Economic Analysis

and so suddenly that alternative supplies cannot fill the gap. There is no unique answer to the question of how far this might curtail total production and employment relative to what they otherwise would have been. The amount of that shortfall depends on the particular configuration of resource use, and of outputs, that is arrived at. Technological capabilities allow many such configurations. The economy's shortfall from "what would have been" will depend on how smoothly it can distribute resources and shape demands to a configuration that maximizes output under the altered conditions. Analysis of the economy in these terms is now the principal concern of economic forecasters and policymakers. The notion of "insulating" the industrial sector, which has been mentioned in various discussions of the shortrun implications of the embargo, connotes an attempt to see that the shortfall of the petroleum supply from "what would have been" is largely absorbed in uses such as space heating and nonessential travel where energy, or a petroleum feedstock, is not required in some fixed proportion to output.

The analytical task currently facing economic forecasters and policymakers is a somewhat unfamiliar one. All economic systems and economic analysis are concerned with allocation in the face of scarcity-not all wants can satisfied. Nevertheless, be policyoriented economic analysis in the modern United States has focused largely on problems associated with too much or too little demand, and on policy aimed at regulating the growth of aggregate demand. Since the 1930's, apart from war periods, much of economic policy analysis has focused on assuring adequate demand growth; the central questions have been over the ultimate effect on national output of policy-related, or purely autonomous, shifts in demand. The current situation requires a very different analytical framework, one that focuses in the short run on the question of how the economy can maximize output and employment in the face of a sharp autonomous shift in the supply of an important input. This calls for a detailed, industry-by-industry, approach, and analysis using the BEA input-output data is proving very useful. Although input-output coefficients are in actuality less rigid than conventional input-output analysis assumes, this approach is nevertheless very useful in exploring the industrial repercussions of alternative distributions of the energy shortfall.

Various estimates have appeared from government and private sources indicating that the embargo will cause real GNP in 1974 to be anywhere from less than 1 percent to as much as 4 or 5 percent less than it otherwise would have been. These estimates reflect different assumptions about the extent of the petroleum shortfall, about how the shortfall will be allocated among users, and about how price changes and nonprice actions will alter the composition of demand. The most optimistic of these estimates reflect essentially complete "insulation" of the industrial sector in the sense already mentioned. In general, the more pessimistic estimates that are appearing seem to assume that aggregate propensities to spend and invest will weaken in the short run and cause reductions in output and employment in addition to those engendered by the initial reduction in supply.

#### **Business Capital Spending**

This fall, before the oil embargo, manufacturers had formulated plans for large increases in capital spending in 1974. Some of the effects of the embargo-uncertainties, quotas, bottlenecks-will probably cause some projects to be postponed and some to be canceled. Other effects, however, may lead to the initiation of investment projects that would not otherwise have been planned. Regardless of the effects of the embargo, the basic need for more capacity that is the motive behind much of the large spending increases planned for 1974 will persist. The plans were reported in surveys taken in a period when the consensus forecast for 1974 already indicated real GNP growth of only 2 to 3 percent, and when manufacturers' expectations for their own sales gains in 1974 were similarly weak. In those circumstances, the motivating force was not to add capacity to meet rapid demand growth next year, but to eliminate present capacity shortages and to prepare for longer run requirements. The problem of energy supply and cost, intensified by the embargo, is unlikely to reduce the need for additional capacity in the longer run; if anything the increase in the cost of energy relative to other costs is likely to augment capital investment for energy exploration and production, obviously, but also to conserve the use of energy per unit of output.

The latest BEA capital spending survey, covering expectations through mid-1974, shows that manufacturers' planned spending in the first half of 1974 is 22 percent above the first half of 1973, with large increases in a wide range of both durables and nondurables industries. Large increases are also expected by railroads and electric utilities but total spending outside manufacturing is expected to be up only 8½ percent from the first half of 1973. Details of the BEA survey are on pages 9-13. These findings are roughly consistent with those of private survevs also conducted in the fall. The McGraw-Hill survey pointed to a 24 percent year-over-year rise in manufacturers' outlays from 1973 to 1974. and a 7 percent rise in aggregate nonmanufacturing outlays. A survey by Lionel D. Edie Company indicated a 19 percent rise for manufacturers and a rise of 7 percent for nonmanufacturing industries.

As of September 30, according to the latest BEA survey, firms holding 51 percent of manufacturing assets expressed a need for more capacity, compared to a figure of 31 percent 2 years earlier (see table on page 11 for details). The rise in this percentage over the last 2 years has been steep for both durables and nondurables manufacturing. The petroleum industry's "need more" figure doubled in the last 2 years, to 70 percent; the figure for primary metals also doubled, to 39 percent.

Serious pressures on manufacturing capacity have been unusually widespread this year. The reasons are numerous. For one thing, cyclical expansions in the world's major industrial economies more or less coincided; at the

same time, the demand for U.S. output was stimulated both here and abroad by the effects of dollar devaluations and revaluations of leading foreign currencies over the past several years, and by more rapid inflation abroad than here. Prior to the exchange rate adjustments of the past several years, the dollar had been appreciably overvalued. The resulting competition from foreign-made goods in both U.S. markets and abroad probably held back capacity expansion in some U.S. industries (such as textiles, petroleum, and primary metals). Market distortions that have arisen both from sharp price increases and from the imposition of price controls have probably also dampened manufacturers' investment in recent years. Finally, in the past several years, the demands first of pollution control, and then of safety requirements, have taken a rising share of capital outlays, posing competition to funds for capacity expansion.

According to the BEA surveys, every major manufacturing industry except petroleum will spend more in 1973 than it had planned early in the year. The petroleum industry seems to have a whole set of problems-including environmental obstacles, preembargo questions of crude supply, and the price outlook-that have kept spending down in the face of high utilization. The upward revisions by other industries are probably in part a result of rising prices for structures and equipment, but it is unlikely that prices account for all the revision. The sharpest upward revisions of planned 1973 spending were in the machinery, textile, paper, and rubber industries. According to the latest survey, spending increases from 1972 to 1973 of 25 percent or more will occur in the rubber, nonferrous metal, paper, chemical, and stone-clay-glass industries, with most other manufacturing industries showing increases between 10 and 20 percent. (Aggregate nonmanufacturing outlays will be up about 8½ percent.)

The combined evidence of the BEA and private surveys indicates that large spending increases are planned throughout manufacturing industry in 1974. It appears that the biggest gains will occur in the steel, nonferrous metals, motor vehicle, chemical, and petroleum industries; this is consistent with the current evidence on capacity pressures.

#### **Personal Income**

Personal income rose at an annual rate of 12 percent from June to November, somewhat faster growth than the already strong 9 percent advance recorded over the first 6 months of this year (table 1). All of the acceleration was in the nonpayroll components, as wages and salaries increased at about the same rate as in the first half of the vear. The increase of wages and salaries in the commodity-producing industries slowed appreciably after midvear, mirroring the slowdown in output growth, but this was offset by a faster rate of increase in Government and in the service industries. Transfer payments, which by definition are not related to current production, accounted for the largest part of the acceleration of personal income after midyear, although growth of the other nonwage components-proprietors' income, rent. interest, and dividends-also speeded up.

Transfer payments increased at an annual rate of 12½ percent from June to November, a little more than double the rate in the first half of the year. That acceleration mainly reflected the extension of medicare coverage to disabled persons under 65, and the increase in Federal pensions that

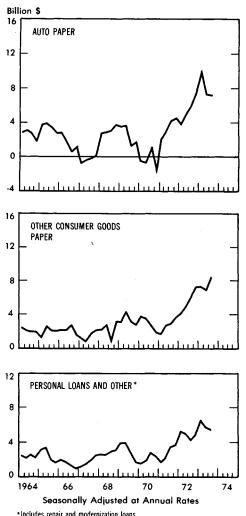

#### Table 1.—Personal Income

Rental income	0	7.9
Dividends	6.9	11.8
Interest	13.8	17.5
Transfer payments	6.1	12.6

stemmed from cost-of-living increases in these pensions that became effective July 1 and from a big surge in the number of retirees at the close of fiscal 1973. Interest income and dividends rose faster after midyear, the latter partly reflecting a late-June easing by the Committee on Interest and Dividends of the restrictions on dividend increases. Rental income of persons has increased since midyear after showing no growth from December to June; rental income was held down in the first half of this year as a result of property losses associated with spring floods. The growth of farm proprietors' income stepped up sharply after midyear as a result of both increases in the

volume of marketings and sharp increases in agricultural prices.

The acceleration of wage and salary increases in the service industries after June was due to gains in both hourly earnings and employment, with gains in hourly pay somewhat the stronger of the two. In Government, the acceleration was due to pay raises-particularly at the Federal level, for postal workers effective in late July and in November. and for other Federal civilian and military personnel in October.

In the commodity-producing industries, on the other hand, growth of wages and salaries slowed from an annual rate of 13 percent in the first half of 1973 to a rate of 9% percent from June to November. This was due to a slowing of employment growth after midyear, which more than offset a faster rise in hourly pay; hours of work were little changed. Contributing significantly to the accelerated rise in pay rates were wage increases called for by existing contracts, mainly in primary metals, apparel manufacturing, and trucking, and new wage increases provided in major contract settlements in the auto and farm equipment industries.

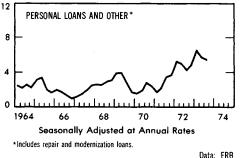

The prospects are for a much slower rate of income growth in the months ahead. A slower rate of activity will mean appreciably slower growth in wage and salary income, particularly in the commodity-producing industries. It is likely that profits will be squeezed by rising costs and reduced output so that further sharp gains in dividend income are not expected, and interest rates, which are currently at exceptionally high levels, will probably decline. Harvests of fall crops both here and abroad are considerably larger this

year than was the case in 1972 and upward pressures on agricultural prices should abate somewhat and the growth of farm income should slow. On the other hand, transfer incomes are likely to increase more in the first half of next year than in the second half of this year. A 5½ percent increase in Federal pensions becomes effective on January 1, 1974. Also, under legislation pending in mid-December, social security benefits would be increased 7 percent (\$4 billion at an annual rate) in April and 4 percent (\$2½ billion) in July. Also, adult welfare benefits are expected to rise in January when responsibility for these programs shifts from the States to the Federal Government. To the extent that slowing economic activity results in higher unemployment, transfer income will reflect the increases in unemployment compensation.

#### **Consumer** credit

Consumers have substantially augmented their purchasing power over the past 3 years through unprecedented use of installment credit. The net increase in installment credit (extensions minus repayments) accelerated steadily from a seasonally adjusted annual rate of \$5½ billion (5½ percent of personal consumption expenditures for durable goods) in the first quarter of 1971, when the step-up in credit use began, to a peak rate of \$24 billion (18 percent of spending for durables) in the first quarter of this year. Since that time installment credit growth has slowed, but nevertheless remains very rapid by historical standards: installment credit increased at an annual rate of \$21 billion in the third quarter and \$201/2

(Continued on page 13)

#### HISTORICAL STATISTICS

THE national income and product data for 1929-63 are in *The National Income and Product Accounts of the United States*, 1929-1965, Statistical Tables (available at \$1 from Commerce Department District Offices or the Superintendent of Documents; see addresses inside front cover). Each July SURVEY contains preliminary data for the latest 2 years and fully revised data for the preceding 2. The July 1973 issue has data for 1969-72. Prior July issues have fully revised data as follows: 1968-69, July 1972; 1967-68, July 1971; 1966-67, July 1970; 1965-66, July 1969; 1964-65, July 1968. BEA will provide on request a reprint of the fully revised data for the years 1964-69.

CHART 3

**BUSINESS** expenditures for new plant and equipment rose 3 percent from the second quarter of 1973 to the third, to a seasonally adjusted annual rate of \$100.9 billion, according to the survey conducted in late October and November by the Bureau of Economic Analysis. Businessmen project advances of 4 percent in the fourth quarter, 3 percent in the first quarter of 1974, and 3½ percent in the second quarter. For the full year 1973, spending is expected to total \$100.1 billion,<sup>1</sup> 13.2 percent higher than outlays in 1972. The latest projection for 1973 is almost the same as the May and August projections but about half of 1 percent less than the February projection (table 1). The gain expected for 1973 compares with increases of 9 percent in 1972 and 2 percent in 1971.

It should be noted that most of the responses to the latest survey were received by mid-November, and it is unlikely that they reflect any significant impact of the Arab oil embargo. However, supply problems that had already arisen, or been forecast, involving various raw materials and sources of energy—including petroleum products—are reflected in the survey projections to the extent that businessmen were aware of such problems and formulated their investment programs accordingly.

Manufacturers reported a strong increase in spending from the second to the third quarter of 1973—6 percent with large gains in both durable and nondurable goods industries. Aggregate outlays by manufacturers exceeded their August projections by 1½ percent, with outlays substantially above expectations in the nonferrous metals, machinery, paper, and chemical industries. Nonmanufacturing outlays as a whole rose 1½ percent in the third quarter with increases in the railroad, utility, communication, "other transportation," and mining industries, and declines in the airline and commercial industries. Aggregate nonmanufacturing outlays were 2½ percent short of expectations, with all major industries

<sup>1.</sup> The expectations figures have been adjusted for systematic biases (footnote 2, table 6). Before adjustment, 1973 expenditures were expected to be \$99.84 billion for all industries, \$38.09 billion for manufacturing and \$61.76 billion for nonmanufacturing. The adjustments were applied separately to each major industry; their net effect was to lower the manufacturing total by \$0.08 billion and to raise the nonmanufacturing total by \$0.32 billion.

except nonrail transportation showing shortfalls.

The increase in capital expenditures in the third quarter was the eighth successive quarterly advance. Manufacturers' spending rose faster than spending by nonmanufacturing industries in seven of these eight quarters; in each of the past four quarters, the rise in manufacturing outlays has equaled or exceeded 3 percent, a rate that has been recorded for nonmanufacturing spending in only two of the past eight quarters. Manufacturers project an average quarterly increase of 5.2 percent from the third quarter of 1973 to the second quarter of 1974, somewhat less than their average increase of 5.8 percent from the third quarter of 1972

to the third quarter of 1973. The average quarterly rise projected for nonmanufacturing outlays through mid-1974 is 2.5 percent, compared with 2.3 percent for the past four quarters.

#### Manufacturers' expectations

All major durable goods industries except nonferrous metals expect sizable percentage increases in spending from the third quarter to the fourth; in nondurables manufacturing, only the petroleum, textile, and "other nondurables" industries expect increases. Total manufacturers' outlays are expected to advance 4½ percent from the third quarter to the fourth.

Manufacturers expect an increase of 6 percent in the first quarter of 1974

and 5 percent in the second, with advances for most major industries in both the durables and nondurables categories. Outlays in the first half of 1974 are expected to be 11 percent above the second half of 1973 and 22 percent above the first half of this year. If the expectations are realized, manufacturers' spending in the second quarter will be about 55 percent above the recent low recorded in the third quarter of 1971. Current indications are that the steepest advances from 1971 will be in the nonferrous metals, transportation equipment, stone-clay-glass, paper, rubber, and "other nondurables" industries; other industries with large indicated increases are iron and steel. machinery, "other durables," textiles, and chemicals. The smallest increase currently indicated is in the petroleum industry; investment by this industry has been sluggish over the past 2 years, generally ranging from about 80 to 90 percent of the industry's most recent peak in the second quarter of 1971. According to some industry and trade sources, the relative weakness in petro-

U.S. Department of Commerce, Bureau of Economic Analysis

leum investment reflects uncertainties relating to the availability of crude oil.

Table 3 shows a measure of the pervasiveness of the expansion in manufacturers' outlays, calculated by matching outlays reported by each company in the survey sample for a given quarter with those reported by the company in the year-earlier quarter. In the third quarter of 1973, 57 percent of the companies reported over-the-year increases in expenditures, about the same percentage as in the preceding three quarters; this is somewhat higher than the ratio of approximately 50 percent in early- and mid-1972. In the third quarter, the percentage of overthe-year increases moved up sharply in the primary metals, transportation equipment, paper, and petroleum industries.

Probably the most important factor behind the strong expansion in manufacturers' capital outlays over the past year has been the increase in utilization of their capacity. The Federal Reserve series on overall capacity utilization in manufacturing rose from 76 percent in the first quarter of 1972 to 83 percent in the third quarter of 1973. The Federal Reserve's new-and separately estimated-series on capacity utilization in the major materials industries shows a rate of 96 percent for the third guarter compared with 88 percent in the first quarter of 1972. According to the BEA survey, companies owning 51 percent of fixed assets in manufacturing reported that facilities were inadequate as of September 30, taking account of current and prospective sales over the next 12 months; this was an increase from 48 percent at June 30 (table 4). The "need more" percentage rose for both durable and nondurable goods industries. The "about adequate" percentage declined to 46 percent at September 30 from 49 percent at June 30, while the "excess" percentage held at 3 percent.

#### Manufacturers' starts and carryover

Manufacturers' expectations of rising outlays in the current quarter and the first half of 1974 are supported by the recent high rate of new project starts. Projects started by manufacturers in the third guarter totaled \$12.1 billion. seasonally adjusted, less than the record \$12.4 billion in the second quarter but 30 percent above the third quarter of 1972. Starts in the petroleum industry dropped sharply in the third quarter from the unusually large second quarter level. Excluding the petroleum indus-

try, manufacturers' starts rose 10½ percent in the third quarter, with substantial increases in the food-beverage and chemical industries.

The value of new projects started by manufacturing companies exceed their capital expenditures in the third quarter, resulting in an increase in carryover—the amounts still to be spent on plant and equipment projects already underway. Manufacturers' seasonally adjusted carryover at September 30 totaled \$29.6 billion, up \$2.4 billion from the end of June and \$9 billion above the year-earlier figure.

#### Nonmanufacturing industries

Aggregate spending by nonmanufacturing industries is expected to advance 3<sup>3</sup>/<sub>4</sub> percent in the fourth quarter of 1973, 1 percent in the first quarter of 1974, and 2 percent in the second quarter. Most of the increase scheduled for the fourth quarter is attributable to public utility firms, with electric utilities expecting an increase of 12 percent and gas and other utilities expecting an increase of 30 percent. Communications firms expect an increase of about 6 percent, and railroads and the mining inudstry expect very small increases. Airlines and other nonrail transportation firms expect sizable declines, and commercial firms expect a small decline.

In the first half of 1974, total expenditures by nonmanufacturing firms are expected to be 4 percent above the second half of 1973 and 8 percent above the first half. Large increases from the second half of 1973 to the first half of 1974 are expected by railroads (27 percent) and electric utility firms (10 percent). Mining, communication, commercial, and "other transportation" firms expect small increases, and small declines are expected by airlines and gas utilities.

Railroads project spending at an annual rate of about \$2½ billion in the first half of 1974; if realized, this will be the highest rate since the peak set in 1966. The industry's earnings also reached a peak in 1966, and have since been well below the peak, while capital outlays fluctuated between 60 and 80 percent of the 1966 figure. Data on new and unfilled orders for freight cars confirm the expectations of a rise in the industry's capital investment in the near term, and earnings have shown some improvement during the past several quarters.

The value of new projects started by public utilities reached a record \$11.2 billion in the third guarter, up \$1.2 billion from the second quarter; carryover totaled \$59.1 billion at September 30, up from \$52.5 billion at June 30. The rapid advance in utility carryover-more than doubling in the past 2 years-reflects the initiation of many large electric generating plants requiring long construction periods. At June 30, 1971, 6 percent of electric utility firms had carryover equal to or exceeding 15 times their expenditures in the preceding quarter; at September 30, 1973, the proportion of firms in this category had risen to 27 percent.

Starts are estimated by adding changes in carryover to expenditures during given period.
 Carryover refers to expenditures yet to be incurred in plant and equipment projects already underway at end of period.
 Includes data not shown separately.

4. Includes guided missiles and space vehicles.

1. Excludes agricultural business; real estate operators; medical, legal, educational, and

Excludes agricultural business; real estate operators; medical, legal, educational, and cultural service; and nonprofit organizations.
 Estimates are based on expected capital expenditures reported by business in late October and November 1973. The estimates for the fourth quarter, and first quarter of 1974 have been corrected for systematic biases. The adjustment procedures are described in the February 1970 issue of the SURVEY OF CURRENT BUSINESS. Before such adjustments, 1973 expenditures were expected to be \$99.84 billion for all industries, \$38.09 billion for manufacturing and \$61.76 billion for nonmanufacturing.
 Includes data not shown separately.

Includes guided missiles and space vehicles.
 Includes fabricated metal, lumber, furniture, instrument, ordnance and miscellaneous except guided missiles and space vehicles.
 Includes apparel, tobacco, leather and printing-publishing.
 Includes trade, service, construction, finance and insurance.

#### (Continued from page 4)

billion in October, the latest month for which data are available (chart 2).

The surge in installment credit use over the recent cyclical upswing carried the net increase to a record share of disposable personal income. In the past four quarters, the net increase in credit outstanding ranged between 2.3 and 2.8 percent of personal disposable income, up from 0.8 percent in the first quarter of 1971. Previously in the postwar period, this ratio had only rarely reached 2 percent of disposable income and on those occasions held at that level only briefly-seldom more than one quarter.

The slowdown in credit growth that has occurred since the first quarter of this year has thus far been largely related to the weakening of auto sales. Extensions of credit for automobiles declined slowly after the first quarter, more or less in line with sales, while repayments continued to increase sharply. As a result, the net increase in auto credit fell sharply from a \$10 billion annual rate in the first quarter to \$7.2 billion in the third and \$5.8 billion in the month of October. The growth of personal loans, which include an element of auto credit as some people take out personal loans before they shop for cars (especially used cars), has also slackened, from \$5.4

billion in the first quarter to \$4.3 billion in the third and \$4.2 billion in October.

The slower growth of auto credit and personal loans has been partly offset by further acceleration of credit growth for purchases of consumer goods other than automobiles. After reaching a record rate of \$7½ billion in the first quarter, growth of other consumer goods paper slowed a little in the second quarter and then surged to \$8¼ billion in the third and to a rate of nearly \$9¼ billion in October. The recent strength here is suprising because there has not been any comparable surge in consumer purchases of nonauto durables.

## **U.S. International Transactions in Royalties and Fees:** Their Relationship to the Transfer of Technology

In recent years the international flow of technology has attracted considerable attention, especially from a balance of payments viewpoint. Technology is difficult to define. Some would limit the term to scientific knowledge that has recognized practical applications, while others prefer broader concepts, including general know-how and experience, such as marketing and management expertise. The international transfer of technology is correspondingly difficult to measure. International direct invest-

ment flows are sometimes considered a proxy for technology transfer defined in the broad sense. BEA compiles other statistics that are associated with a more limited concept. These are the data on U.S. receipts and payments of fees and royalties, including both transactions between direct investors and their foreign affiliates and transactions between unaffiliated firms.

Most royalties and fees are payments for the use of technology. However, some royalties and fees are not related to technology, and some technology transfers do not give rise to payments of royalties or fees. This article describes the content and coverage of the BEA data to clarify the extent to which they can be considered a measure of technology transfer. The second part of the article presents a brief summary of the behavior of U.S. payments and receipts of royalties and fees during the postwar period.

Preliminary estimates indicate that U.S. companies earned \$2.8 billion in royalties and fees from foreign firms in 1972, 75 percent of which came from foreign affiliates (table 1 and chart 6). Receipts have expanded rapidly in recent years, growing at a compound annual rate of 12.8 percent since 1960. Royalties and fees from Japan have grown especially fast and in 1972 accounted for 12.5 percent of total receipts, up from 6.8 percent in 1965. Payments of royalties and fees to foreigners are still very small, less than \$0.3 billion in 1972, and are about equally divided between affiliated and unaffiliated foreign companies. Their growth has been somewhat slower than the growth of receipts (11.5 percent per year from 1960 to 1972) and more irregular.

This article presents the BEA series for royalties and fees, with some geographic breakdown, as far back as the data are available. Table 3 covers unaffiliated receipts and payments, and table 4 covers transactions between affiliated companies. Table 5 shows receipts from affiliated companies with management fees excluded. BEA publishes current data on fees and royalties quarterly in the balance of payments tables in the SURVEY.<sup>1</sup> In those tables, however, receipts from affiliated companies include film rental receipts, which are excluded from the data presented here because they are an identifiable item clearly not related to technology transfer.

<sup>1.</sup> Lines 7 and 21 of the table, "U.S. International Transactions" (table 2) in the balance of payments presentation show unaffiliated receipts and payments, respectively, and line 24 shows direct investment-related payments; receipts from foreign affiliates shown in line 10 of that balance of payments table include the affiliated film rental receipts that are excluded from the data presented in this article.

#### **Coverage and Data Limitations**

THE BEA statistics on royalties and fees measure payments for the use of rights or intangible property (patents, techniques, processes, formulas, designs, trademarks, copyrights, franchises, manufacturing rights, etc.) and management fees. The term royalty generally refers to payments for the utilization of copyrights or trademarks, while licensing fees refer to charges for the use of a patent or industrial process: however, the BEA statistics do not distinguish between these two components. Management fees are charged mainly by parent companies to their affiliates and include payments for administrative, professional, and management services. The BEA data on direct investment-related royalties and fees are net measures. That is, the receipts figure represents receipts by U.S. firms from their foreign affiliates net of any payments by the parents to the affiliates. The payments figure measures payments by U.S.-based subsidiaries to their foreign parents net of any receipts by the subsidiaries from their parents.

The technology content of management fees can vary considerably from case to case: they may cover consulting and technical advice provided in connection with a process for which the subsidiary is also paying royalties or licensing fees, or they may simply cover home office administrative expenses. The distinction between management fees and royalties or licensing fees is not clearcut. For example, one company providing blueprints and technical advice to its affiliate may classify the associated charges as a licensing fee for know-how, while another may classify them as a management fee for services rendered.

Royalties of fees are ordinarily paid throughout the term of the contract, so royalties and fees paid in any given period relate to technology transferred in the past as well as in that period.

Moreover, variations in business practice lessen the precision of the relationship between royalties and fees and technology transfers. The terms of a contract are often negotiated before the value of the know-how in the new market can be ascertained. Furthermore, the terms of contracts can vary widely. including not only the rate charged but the base on which the payment is calculated. For example, payments may be based on annual profits, gross sales, or some other measure of performance, and there may be a minimum annual charge regardless of the profits or sales. Some contracts call for an initial pavment in addition to or in place of annual rovalties. Joint ventures of U.S. and foreign companies in which part of one company's contribution is in the form of know-how rather than capital involve a one-time royalty payment. Thus, year-to-year changes in total royalties and fees are influenced by the type and timing of the payments specified in individual agreements, as well as actual changes in the number or value of technology transfers.

Some types of technology transfer do not generate payments of royalties or fees and are thus not reflected in these BEA statistics. One example is technical services. Agreements generating royalties and licensing fees may provide for technical consulting and related services as part of the package, and in those instances the payments reported cover these services. However, royalties and fees generally exclude payments for a wide range of other services provided under contract to foreigners that may involve technology transfer. Examples are the provision of training; marketing, management, and economic consulting; and engineering consulting and services.<sup>2</sup> The Balance of Payments Division of BEA collects some information

on these types of services for inclusion with other private services in the balance of payments statistics, but in their current form these statistics do not provide a satisfactory measure of technological content.

Companies do not always establish formal licensing arrangements with their foreign affiliates, even for patented know-how or for processes already generating royalties or fees from unaffiliated companies. Without a formal arrangement, there are no payments of royalties and fees, and the technology transfer is not reflected in the BEA data. Moreover, since profits accrue to the parent in any case, the terms of any agreement that is established may be influenced by considerations other than the value of the technology transferred. A company may set royalty payments so as to minimize taxes, for example, if corporate income tax rates paid by the foreign affiliates differ from those in the United States. The pattern and size of payments may also be affected by such factors as political considerations or exchange controls.

Other business practices, not limited to parent-affiliate relationships, can also result in the underestimation of technology transfers as measured by royalties and fees. For example, agreements often include the rights to future technological developments by either party without additional charges. Another example is cross-licensing, in which two companies share rights to each other's processes without monetary payments by either side.

On the other hand, some payments included in the data on royalties and fees are not ordinarily interpreted as payments for technology. As mentioned previously, this is true of some managefees. Other examples mentare rovalties for books and records and for the use of trademarks. The statistics on transactions between unaffiliated companies also include franchise fees, and royalties and fees paid by affiliated companies include a small amount for rentals of equipment. These royalties and licensing fees are relatively small, but they may affect year-to-year changes.

<sup>2.</sup> However, management fees received from affiliates, which are included in the statistics presented here, may include charges for services similar to these.

### **Review of BEA Data**

U.S. companies earn much more in royalties and fees through direct investment abroad than from unaffiliated foreigners. Preliminary estimates for 1972 show direct investment-related receipts of \$2.1 billion, compared to \$0.7 billion in receipts from unaffiliated foreigners (table 1). Royalties and fees from affiliates are not only larger but have expanded more rapidly (14.8 percent per year from 1956 to 1972. compared to 10.6 percent per year for receipts from unaffiliated firms), suggesting that U.S. firms prefer to retain an equity interest in the use of their intangible property. The leading industrialized countries outside the Western Hemisphere account for most of the growth in total receipts of royalties and fees, with receipts from Japan showing an especially rapid growth in recent years.

Fees and royalties paid by U.S. companies to their foreign parents have not differed much from payments to unaffiliated foreigners, with each amounting to about \$0.1 billion in 1972. While growth has been sporadic, direct investment-related payments have increased less rapidly from 1956 to 1972 than payments to unaffiliated com-

1. Excluding management fees; data from table 5. 2. Growth rates are based on data from the Bureau of Economic Analysis, Special Survey of U.S. Multinational Companies, 1970, and cover sales by the foreign affiliates of 298 U.S. companies.

panies (compound annual rates of 8.4 percent and 11.8 percent, respectively). U.S. payments of royalties and fees have gone almost wholly to Canada and Western Europe (including the United Kingdom); in 1972 these countries accounted for 96.4 percent of the total.

#### **Receipts**

Receipts of royalties and fees from U.S. direct investment abroad have grown rapidly since World War II (table 4). They increased at a compound rate of 14.3 percent per year from 1946 to 1972, well ahead of the rate of increase for direct investment capital outflows (6.7 percent per year since 1948). (Of course, the absolute level of direct investment capital outflows has been higher than the receipts of direct investment-related fees and royalties.) This is not surprising, since receipts of royalties and licensing fees from foreign affiliates can be expected to grow with the rising sales of the affiliates, even if there is no new direct investment. This is because royalties and licensing fees are often based on sales or a related measure, and comparison with the growth of sales may be more relevant than comparison with direct investment capital outflows.<sup>3</sup> Yet, from 1966 to 1970-a period for which relevant data are available-

3. Management fees are excluded here because they are not ordinarily based on sales

#### **Receipts of Royalties and Fees From Unaffiliated Foreigners**

CHART 7

direct investment-related receipts rose twice as fast as the sales of the foreign affiliates of a broad sample of U.S. multinational corporations (table 2).4 This suggests that recent U.S. direct investment abroad may have been concentrated in more technologically oriented industries. Another possible factor may have been a shift in business practice toward more licensing to affiliates on a formal basis.

At the beginning of the postwar period, almost 80 percent of direct investment-related royalties and fees came from Western Hemisphere countries, about equally divided between Canada and the Latin American Republics; only 10 percent came from Western Europe. However, U.S. companies have subsequently invested heavily in Europe, especially since the late 1950's, and the preliminary 1972 data indicate that about 45 percent of direct investment-related receipts last year came from Western Europe and only 32 percent from the Western Hemisphere. Direct investment in the original six Common Market countries accounted for much of the postwar investment growth, and 25 percent of the receipts in 1972 came from that

group. Receipts of royalties and fees from affiliates in Japan are still small, accounting for only 5 percent of the direct investment-related total in 1972, but they grew very rapidly during the 1960's-almost 25 percent per year from 1960 to 1972.

Receipts of royalties and fees from

unaffiliated foreigners (table 3) have grown somewhat less rapidly than those from foreign affiliates, and in 1972 unaffiliated receipts were \$0.7 billion, about one-third as large as receipts from foreign affiliates. Throughout the period since 1956 (the first year for which data are available), the leading

Preliminary. \*Less than \$500,000. n.s.s. Not shown separately.
1. Receipts measure the net transactions between U.S. firms and their foreign affiliates; payments measure the net transactions between U.S.-based affiliates and their foreign parents.
2. Excludes film rental receipts, which are included with receipts of royalties and fees from foreign affiliates in line 10, table 2, of the balance of payments tables.
3. Series changed in 1951 to include insurance company head office charges paid to Canada.
4. When not shown separately, EEC(6) is included with Other Western Europe, while Japan, and Australia, New Zealand, and South Africa are included with Other.

NOTE.-Details may not add to totals because of rounding.

<sup>4.</sup> The sales by affiliates acquired or established after 1966 are included in the 1970 data, but not in the 1966 data; thus, the 1966-70 sales growth cited here reflects not only growth in the sales of existing affiliates but also increases in direct investment

industrialized countries have accounted for almost all receipts of royalties and fees from unaffiliated foreigners. Asia, Africa, and Latin America have accounted for less than 15 percent since 1960 (the first year for which sufficient detail is available).

Much of the growth in unaffiliated receipts since 1960 has been accounted for by Japan, with receipts from Canada and Western Europe declining in relative importance. Receipts from Japan grew at an average rate of 14.5 percent from 1960 to 1972 and now account for over one-third of total unaffiliated receipts. In fact unaffiliated receipts excluding those from Japan have grown at an average rate of only 6.5 percent per year during the period 1960-1972 (chart 7). The slowness of this expansion suggests that much of it is accounted for by increases in receipts from rising sales under a stable number of contracts-which commonly base royalties and fees on sales-rather than from any growth in the number of agreements in effect.

The much faster increase in receipts from unaffiilated Japanese companies than in other unaffiliated receipts may be partly associated with restrictions on foreign direct investment in Japan. Until recently, foreign investment in new Japanese companies was limited to no more than 50 percent, with a 25 percent maximum for established companies. In 1967, Japanese authorities began to allow 100 percent investment in several industries, and each year since then have freed additional industries from restrictions. However, direct investment is still limited in many important industries, such as computers and integrated circuits. Despite these restrictions U.S. investment in Japan has grown rapidly, with companies participating in joint ventures as an alternative to 100 percent ownership. Continuation of the liberalization of foreign ownership should encourage more direct investment and investment-related royalty receipts, with licensing of unaffiliated companies declining in importance as a vehicle for transferring U.S. technology to Japan.

#### Payments

Payments by U.S. companies to foreign residents, including both direct investment-related and unaffiliated royalties, totaled less than \$0.3 billion in 1972 and have been growing more slowly and irregularly than U.S. receipts. The average annual increase in the total since 1956 has been 9.9 percent. Western Europe and Canada now account for almost all payments of royalties and fees by the United States. The Common Market countries have relatively low levels of direct investment in the United States, and most U.S. payments of royalties and fees to these countries come from unaffiliated companies. In contrast, most payments to Canada are direct investmentrelated.

Payments by U.S. subsidiaries to their foreign parents have shown some signs of acceleration since 1968, especially to Western European countries outside the original six Common Market countries. Direct investment-related U.S. payments to these countries in 1972 were \$72 million, compared to \$9 million in 1968. If the recent growth of foreign direct investment in the United States is maintained in coming vears, and if the level of technological sophistication in Europe and Japan continues to advance, U.S. payments of fees and royalties can be expected to grow commensurately.

## Property, Plant, and Equipment Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies:

Revised Estimates for 1966-72 and Projections for 1973 and 1974

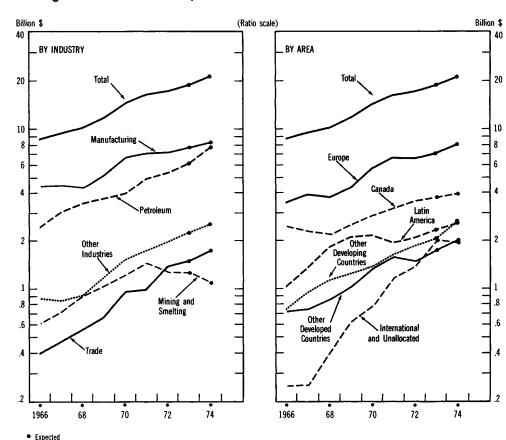

THIS article presents revised estimates for 1966-72, revised projections for 1973, and BEA's first published projections for 1974 on property, plant, and equipment expenditures by majority-owned foreign affiliates of U.S. companies.

The revisions in the 1966-72 estimates result primarily from "benchmarking" reported sample data against the universe data from BEA's most recent census of U.S. direct investments abroad (covering the year 1966)<sup>1</sup>, and several modifications to the method for deriving universe estimates from sample data. These changes also affected the 1973 and 1974 projections; in addition, part of the revision of the 1973 projections (compared to those published last spring) stemmed from actual changes in expectations and also from the use of a revised method of adjusting for bias in the reported expectations. The final data for 1972 and the projections for 1973 and 1974 presented in this article were gathered in the latest semiannual BEA survey, taken in June 1973.

As part of the revision process, the definition of the universe has been changed to include all primary and secondary foreign affiliates <sup>2</sup> in which U.S. ownership is at least 50 percent (majority-owned affiliates). Formerly, the universe was defined to include all primary foreign affiliates in which U.S. ownership was at least 25 percent. The

2. A primary foreign affiliate is a foreign business organization which is directly owned by a U.S. individual or organization. A secondary foreign affiliate is a foreign business organization which is indirectly owned by a U.S. individual or organization through another foreign affiliate. net effect of the change in definition on the data series, by itself, was probably small since it resulted in both additions to and deletions from the universe; majority-owned secondary affiliates are now included in the universe while primary affiliates in which U.S. ownership is between 25 and 49 percent are now excluded.

Property, Plant, and Equipment Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies

U.S. Department of Commerce, Bureau of Economic Analysis

73-12-8

Note.—The three authors were responsible for the first, second, and third major sections of the article, respectively. In addition, significant contributions were made by Juris E. Abolins and Ronald E. Reed to the preparation and presentation of these data and by Arnold A. Gilbert and Alan L. Tyson to the procedure for deriving universe estimates. The last named was also responsible for programing the estimating procedure.

<sup>1.</sup> Previously, all data for 1957-73 were benchmarked to the 1957 census of U.S. direct investments abroad.

The remainder of the article is divided into three major sections. The first section presents a brief analysis of the revised data with particular emphasis on the projections for 1973 and 1974. (Industry and country detail is shown in tables 1 and 6A through 6I.) The second section describes the refined general method for deriving universe estimates from sample data in BEA's direct investment series. The last section outlines how that method was specifically applied to the property, plant, and equipment expenditures data, indicates the magnitude of the revisions, and describes the procedure for adjusting for reporting bias in the projected data.

#### **Foreign Affiliate Expenditures**

Property, plant, and equipment expenditures by majority-owned foreign a ffiliates of U.S. firms are expected to rise 11 percent in 1973 and 13 percent in 1974 to \$21.4 billion (see table 1).

The expected increases in 1973 and 1974 are much larger than the gain of 5 percent in 1972, but in line with the 12 percent average annual rate of growth in the period 1966-72. (These are the years for which revised estimates of actual spending are available.)

Affiliates in the *petroleum* industry expect the strongest rise in capital spending in 1974-a 25 percent increase to \$7.7 billion, following a 16 percent rise expected this year. In 1974, substantial increases are expected in most major oil producing areas except Latin America, with the largest gains expected in Indonesia and the North Sea area. In 1973, on the other hand, most of the projected increase is related to the expansion of tanker fleets by international shipping affiliates; such spending is expected to fall slightly next year.

Since the estimates of 1973 and 1974 spending are based on the semiannual survey taken in June 1973, they do not reflect any impact of recent events in the Middle East. New estimates of 1973 and 1974 spending from the semiannual survey now being taken will be published in the March 1974 SURVEY OF CURRENT BUSINESS.

In the period 1966–72, expenditures by petroleum affiliates grew at an average rate of 14 percent per year, but the growth rate was quite uneven with exceptionally strong increases in 1967 and 1971. Of major importance in the 1966-72 period was the expansion of tanker fleets by U.S. oil firms through expenditures by their international shipping affiliates; outlays for that purpose rose from \$0.1 billion in 1966 to \$0.9 billion in 1972.

Expenditures in developing countries,

 The property, plant, and equipment expenditures data series has been revised back to and including the year 1966 (see text for discussion).
 Based on results of the surrey taken in June, 1973. Spending projections are adjusted in order to eliminate—or at least reduce—any systematic bias in projected data (see text for discussion). discussion)

The "European Economic Community (6)" includes Belgium, France, Germany, Italy, Luxembourg, and the Netherlands.
 The "European Economic Community (9)" includes the "European Economic Com-munity (6)", the United Kingdom, Denmark, and Ireland.

December 1973

primarily by affiliates engaged in exploration and production of crude oil, grew twice as fast from 1966 to 1972 as expenditures in developed areas. In the Middle East, petroleum outlays remained comparatively small until 1971 when a major expansion, centered in Saudi Arabia, began. Spending in the Far East and the Caribbean area was negligible in 1966 but grew substantially in subsequent years, while spending by the more mature petroleum affiliates in Venezuela and Middle Eastern countries except Saudi Arabia grew relatively slowly. Spending by petroleum affiliates in Europe increased an average of 9 percent per year, mainly to expand refinery capacity, while spending by Canadian affiliates rose very little.

Manufacturing affiliates expect to increase expenditures 9 percent this year and 7 percent in 1974, to \$8.3 billion. In 1972 there was no change in their outlays. The planned increases in 1973 and 1974 are spread among both developed and less-developed countries. Strong increases are expected in both years in Japan and in several countries in Western Europe and Latin America. Canadian affiliates expect a substantial increase in 1973 but plan little growth next year.

expected Within manufacturing, changes in 1973 and 1974 are quite varied. Affiliates in the transportation equipment industry will lead growth in 1974 with a 30 percent increase, following little change in 1973 and declines in the preceding 2 years. Affiliates which manufacture food products, chemicals, and electrical machinery expect substantial increases this year to be followed by smaller gains or reductions in 1974. In both 1973 and 1974, affiliates in the non-electrical machinery industry plan large increases while affiliates which manufacture paper. concentrated in Canada, and primary and fabricated metals, expect reductions.

Expenditures by manufacturing affiliates rose at an average annual rate of only 8 percent from 1966 to 1972, the lowest rate among major industry groups. Most of the increase was in the 6-nation European Economic Community, as constituted prior to 1973, where spending grew at an average annual rate of 12 percent. In Japan, expenditures grew at twice that rate, but from a very small base of \$0.1 billion in 1966. Outlays by relatively more mature affiliates in Canada and the United Kingdom grew at an average rate of only 4 percent per year.

Following a large drop in 1972, spending by affiliates in *mining and smelting* is expected to remain at the 1972 level this year but to fall substantially in 1974. Rising expenditures in Australia and Indonesia in 1973 and in Peru in 1974 are expected to offset large reductions in both years in Canada.

Expenditures by Canadian mining affiliates rose steadily from 1968 to 1970, then nearly doubled in 1971. The recent reductions of expenditures in Canada largely reflect completion of several large projects. Also, a substantial part of the estimated reduction for 1973 was due to the removal from both the sample and the universe of a large Canadian mining company in which many unrelated U.S. shareholders have an ownership interest. Such publicly-owned companies are treated as primary foreign affiliates if the aggregate U.S. ownership is greater than 50 percent. In 1973, the total U.S. equity participation in this Canadian company was below BEA's 50 percent cutoff.

Affiliates in *trade* expect to increase expenditures 18 percent in 1974 to \$1.8 billion, following an increase of 8 percent this year. Particularly strong gains next year are expected in Canada and the United Kingdom.

The increases by trade affiliates this year and next are below the average annual increase of 23 percent from 1966 to 1972. Outlays were quite small in 1966 but growth through 1972 far outpaced that of all other major industry groups. With some notable exceptions, the major function of trade affiliates is to distribute the products of foreign manufacturing affiliates of the same U.S. parent company. Thus, expenditures by trade affiliates, like those by manufacturing affiliates, are concentrated heavily in developed countries. Their rapid expansion in the 1966-72 period to a large extent reflects previous and continuing overseas manufacturing investment by U.S. companies.

Affiliates in all other industries combined—including agriculture, public utilities, transportation, construction, finance, and services—expect a 17 percent increase in spending this year to be followed by a rise of 10 percent in 1974 to \$2.5 billion. In 1973, the largest increase is expected in the United Kingdom, while Canadian affiliates will lead the growth next year. For the period 1966–72, expenditures by affiliates in this industry group grew at an average annual rate of 15 percent, slightly faster than the rate of growth for all industries combined.

#### A Procedure for Deriving Universe Estimates From Sample Survey Data

BEA's direct investment data series in non-census years are based on sample data which, in most of the series, are used to extrapolate universe data reported in a census (benchmark) vear to derive universe estimates in subsequent years. All of the direct investment series are being revised because universe data from BEA's most recent direct investment census (1966) are now available. Also, for those series for which universe estimates in subsequent years are developed, as against just using the sample data as reported, the general procedure for deriving the universe estimates has been refined. This section of the article describes the revised general procedure and the next section discusses the specific application of this procedure to the series on foreign affiliate expenditures for property, plant, and equipment.

### Procedure for estimating universe data

The earlier procedure for estimating a universe value for a given period from sample data for that period is to multiply the universe value in the prior period by the ratio of the sample's value in the current period to the sample's value in the prior period,

and then add data reported by companies which are new to the universe in the current period (births). For the computation, the universe value in the prior period is reduced by the amount reported in that period for companies known to have since dropped out of the universe (deaths). The procedure is the conventional link-relative method, that is, the 1967 universe estimate is computed by applying the ratio of the 1967-to-1966 sample values to the 1966 benchmark universe value, then the 1968 universe estimate is computed by applying the ratio of the 1968-to-1967 sample values to the 1967 universe estimate and so on.

The formula previously used is:

$$U_{i} = \frac{S_{i}}{S_{i-1}} (U_{i-1} - Dr_{i-1}) + Br_{i}$$

where:

- t-1 = prior period
  - t =current period, which is to be estimated
- U=universe data
- S=sample data for companies existing and reported in both periods
- Dr = data reported for deaths
- Br = data reported for births
- The following refinements to this procedure have been made in conjunction with the benchmarking of the direct investment series to the 1966 census universe:

(1) Universe estimates are computed at four levels of aggregation—countryindustry, country total, industry total, and grand total. The sum of all country-industry cells, all country total cells, and all industry total cells and the grand total can then be compared with each other in order to judge the validity of and to adjust, if necessary, the individual country-industry estimates. The published global universe estimate is the sum of the individual country-industry estimates after such adjustments.

(2) A procedure has been added for estimating data for total deaths and total births, i.e., including the values associated with unreported deaths and births.

(3) The procedure for adjustment

to take account of cells for which reported samples are small has been standardized.

The second and third refinements are discussed below.

#### Total deaths and births

In the direct investment data series, affiliates which existed in the prior period but do not exist in the current period (deaths) report only in the prior period while affiliates which exist in the current period but did not exist in the prior period (births) report only in the current period. Data for such companies are not considered part of the sample data used to compute universe estimates, since the sample used is composed only of data of companies which report in both periods. In the formula previously used (cited above), data for deaths and births reported in the sample surveys were included as reported. This procedure has been modified in order to obtain an estimate of data for total births and deaths, including those which are not reported. This estimate is based on the assumption that the ratio of reported to total deaths or births is equal to the ratio of the sample plus reported deaths to the universe in the prior period. The total value of deaths-companies that were in the universe in the prior period but have since dropped out-is estimated by assuming that the ratio of the total value to the value of reported deaths is equal to the ratio of the universe value to the value of the sample (including data for firms that are known to have since died) in the prior period. Thus, for total deaths (D):

$$\frac{D_{t-1}}{Dr_{t-1}} = \frac{U_{t-1}}{S_{t-1} + Dr_{t-1}}$$
$$D_{t-1} = \frac{U_{t-1}}{S_{t-1} + Dr_{t-1}} \cdot Dr_{t-1}$$

or:

The total value of births—companies that have entered the universe since the prior period—is estimated in the same way:

$$B_{i} = \frac{U_{i-1}}{S_{i-1} + Dr_{i-1}} \cdot Br_{i}$$

The formula previously used, modified to include unreported births and deaths, becomes:

$$U_{t} = \frac{S_{t}}{S_{t-1}} \left[ U_{t-1} - \left( \frac{U_{t-1}}{S_{t-1} + Dr_{t-1}} \cdot Dr_{t-1} \right) \right] + \left[ \frac{U_{t-1}}{S_{t-1} + Dr_{t-1}} \cdot Br_{t} \right]$$

The reciprocal of the ratio

$$\left(\frac{U_{t-1}}{S_{t-1}+Dr_{t-1}}\right)$$

that is computed for each countryindustry cell in order to blow up reported data for deaths and births is tested for adequacy of sample coverage. This test is the same as that described below in the discussion of small samples.

#### Small samples

At the country-industry cell level, the sample value of certain direct investment data items is quite small relative to the universe value in period t-1. In such cases, the change in the sample from period t-1 to period t does not necessarily reflect the change in the nonreported data in the cell. Therefore, the ratio of the sample (including reported deaths) to the universe for each country-industry cell is compared to a predetermined acceptable percentage. Denoting the acceptable percentage by Y, the criterion is that the computed ratio for each country-industry cell must be equal to or greater than Y:

$$\frac{S_{t-1} + Dr_{t-1}}{U_{t-1}} \ge Y$$

If the ratio in a given country-industry cell is less than Y, then the modified estimating formula is adjusted as follows (with the subscript i denoting industry):

(a) The ratio of the sample value in period t to the sample value in period t-1 is computed at the industry total level, rather than at the country-industry level:

$$\frac{Si_{\iota}}{Si_{\iota-1}}$$

and

(b) The ratio of the universe to the sample (including reported deaths) used to estimate total deaths and births is calculated with industry total data, rather than country-industry data:

$$\frac{Ui_{t-1}}{Si_{t-1}+Dri_{t-1}}$$

Since Y is held constant, the addition of the test for adequacy of sample coverage to the modified formula provides a standardized procedure for estimating universe totals where reported samples are small.

Table 4.—Revised Value of Property, Plant, and Equipment Expenditures by Affiliates in Sample and in Universe, and Sample as Percent of Universe, by Industry and Area, 1966

Estimation of Property, Plant,	
and Equipment Spending	(

The property, plant, and equipment series is the first to be benchmarked to the 1966 census of U.S. direct investment abroad and the first to which the modified procedure for computing universe estimates has been applied. Table 2 shows the differences between the new and old estimates of actual (not projected) spending for 1966 to 1971. The combined effect of the revisions has been to raise the level of total spending by affiliates above the previously published levels in each year. The upward revisions become larger each year, increasing from \$85 million in 1966 to \$1,436 million in 1971. In percentage terms, the difference between the old and new series ranges between 1 and 9 percent of the revised estimates.

By industry, the largest revisions were in the "other" category, mainly the hotel and construction industries. By area, the largest revisions were in Europe. In all other major industry or area categories shown in table 2, the difference between the old and new series never exceeds 2 percent of the revised estimate.

The estimating procedure now used is described in the preceding section of this article, and the differences between the current procedure and the one used previously for plant and equipment expenditures are discussed below. The most important modification is the new treatment of total births and deaths. Births have always been larger

than deaths so that the failure to "inflate" the reported births and deaths to take account of nonreported cases resulted in net underestimation of property, plant and equipment expenditures abroad. The net amount involved for the unreported births and deaths in any one year was guite small-less than two percent of total expenditures.

However, the effect is cumulative and table 3 shows that by 1971, this procedural change accounted for 56 percent of the total difference between the revised and previously published series. The balance of the difference is the result of the benchmarking of the spending series to the 1966 census, including a change in the

definition of the universe; the introduction of an adjustment for small samples; and the elimination of adjustments formerly made for extreme data movements. The specific contribution of each of these items to the total difference cannot be readily measured.

#### Benchmarking to the 1966 census

For purposes of computing the re-

this article, the definition of the universe was changed to conform to that used for the spending data in the 1966 BEA census.<sup>3</sup> That census asked for data on expenditures for all primary

vised spending estimates presented in

3. For a description of the census, see Bureau of Economic Analysis, U.S. Direct Investments Abroad 1966. Part 1: Balance of Payments Data.

\*Less than \$500,000. D Suppressed to avoid disclosure of data for individual reporters.

December 1973

and secondary foreign affiliates in which U.S. ownership was at least 50 percent. In contrast, the universe covered by the unrevised spending series included all primary foreign affiliates in which U.S. ownership was at least 25 percent. Thus, while the new universe estimates for 1966 onward are based on data from the same sample surveys as used for the previously published estimates, only the data reported in those surveys for majority-owned foreign affiliates (MOFA's), both primary and secondary, are actually used in the new estimates.

In addition, each affiliate's industry and country classification from the 1966 census is now applied to that affiliate in

subsequent years.<sup>4</sup> The industry classification of an affiliate was changed more often than the country classification. Most affected affiliates were reclassified from manufacturing to trade or other services.

4. These classifications will remain in effect until the next census is taken.

\*Less than \$500,000. D Suppressed to avoid disclosure of data for individual reporters.

The first step in the benchmarking process was to identify the MOFA's that were in both the sample in 1966 and the benchmark survey universe in 1966. For each such matched affiliate, if the plant and equipment expenditure data from the two surveys were within 10 percent of the data reported in the 1966 census, the census data were

accepted as "correct." If they differed by more than 10 percent and if total expenditures by the affiliate were at least \$50,000, the discrepancy was investigated further. Consultation with reporters resulted in some changes to the census data; however, more often the 1966 census data were accepted.

The final match showed that in 1966

the sample accounted for 73 percent of total property, plant, and equipment expenditures of all MOFA's (table 4). In terms of number of affiliates, the sample contained 5,800 MOFA's, 28 percent of all MOFA's.

#### **Deriving universe estimates**

Revised universe estimates have been

\*Less than \$500,000. D Suppressed to avoid disclosure of data for individual reporters.

1. The property, plant, and equipment expenditures data have been revised back to and including the year 1966 (see text for discussion).

computed separately for 616 countryindustry data cells (14 industries in each of 44 countries). Previously, estimates were made for 624 countryindustry cells (16 industries in each of 39 countries). As outlined in the previous section of this article, estimates have now been made of unreported additions to and deletions from the universe. Previously, additions and deletions were added or subtracted simply as reported, with no estimates for those unreported.

A standardized test for cells with small samples has now been applied. as described in the previous section of the article. Formerly, adjustment for inadequate coverage in cells where the reported data were small relative to the universe was done manually without standard guidelines. For the plant and equipment series, the minimum acceptable sample-to-universe percentage coverage has been set at 25 percent, after comparing the results using this percentage with those using other percentages.

\* Less than \$500,000. D Suppressed to avoid disclosure of data for individual reporters.

There is no longer any adjustment to eliminate the effect of extreme year-to-year change in the sample data used to calculate universe estimates. Formerly, an attempt was made to adjust for this type of movement, but the method was highly subjective and tests indicated that no adjustment yielded better results.

#### Bias adjustment of spending projections

As in the past, the data on projected spending presented in this article are adjusted so as to eliminate-or at least reduce-any systemtic bias in the four projections obtained for each year (in June and December of the preceding year and June and December

of the year in question, i.e., A, B, C, and D projections).

For the C and D projections, the bias adjustment procedure involves calculating ratios of actual spending (the final, or E, estimate) to the comparable reported expectation for each of the previous 5 years. No bias adjustment is made unless there is

a deviation of projection from estimate in the same direction in at least 4 of the 5 years. Also, no adjustment is made to items below \$10 million. When an adjustment is necessary under these criteria, the median ratio of actual to expected spending in the 5-year period is applied as an adjustment factor.

The decision as to whether the A and B projections for a given year need adjustment must be made without ratios of actual to expected spending for the preceding year since there are no actual figures yet available for that year. In deriving the bias-adjusted 1974 data (A projections) presented here, the years 1968-1972 were used since

actual data for 1973 are not available.

This bias adjustment procedure is the same as that used in the past with two exceptions. First, the adjustment is calculated for all 616 country-industry cells. Previously, the adjustment was made in the same way but for only 138 consolidated data cells. Comparison of the data adjusted at these two levels of

consolidation showed only slight differences because data for most major country-industry cells were adjusted separately at both levels.

Second, sample data are used to calculate the ratios over the 5-year

period. Previously, the ratios were calculated from universe estimates. Use of the sample data was made necessary because revised universe estimates were not calculated for the projections, only for actual spending. A problem arises in using the sample data, however, because some reporters provide actual data but no projections. Since only data from reporters who give both actual and projected figures can be used to calculate the bias adjustment, the actual

2. The "European Economic Community (9)" includes the "European Economic Com-munity (6)", the United Kingdom, Denmark, and Ireland.

Less than \$500,000.
 D Suppressed to avoid disclosure of data for individual reporters.
 The property, plant, and equipment expenditures data have been revised back to and including the year 1966 (see text for discussion).

data which are usable are sometimes only a small portion of the total actual data of the sample. Thus, a test for adequacy of coverage was adopted. If in any year the actual data used are less than 25 percent of the total actual data reported, then no bias adjustment is made to the projection for that cell.

As a result of bias adjustment, projected total plant and equipment spending was reduced by 9 percent for 1973 and 3 percent for 1974 relative to the estimates before adjustment. The differences by major industry are shown in table 5.

## U.S. Balance of Payments Developments: Third Quarter and First Nine Months of 1973

ALL measures of the U.S. balance of payments showed substantial improvement in the third quarter. The balance on current account and long-term capital, which is widely considered to be an indicator of underlying balance of payments developments, registered a \$2.5 billion surplus, compared with a \$0.6 billion deficit in the second quarter. This was the first surplus in this balance in almost 4 years and the largest ever recorded. The balance on current account was in surplus by \$1.2 billion in the third quarter, following a deficit of \$0.4 billion in the second; the improvement mainly reflected a marked shift in the merchandise trade balance from deficit to surplus, although a net improvement in the military and services accounts and some reduction in Government grants also contributed. There was a net long-term capital inflow of \$1.3 billion in the third quarter, compared with a net outflow of \$0.2 billion in the second, as substantial favorable shifts in direct investment flows, net securities transactions, and long-term bank-reported flows more than offset a small adverse shift in Government capital flows.

The net liquidity balance was in surplus by \$1.4 billion in the third quarter compared with a \$1.6 billion deficit in the second, an improvement of about the same size as that in the balance on current account and longterm capital. In addition to the developments already mentioned in connection with the current and long-term capital accounts, the change in the net liquidity balance was unfavorably affected by a shift in unrecorded transactions (errors and omissions) from a small inflow in the second quarter to a large outflow in the third; however, that shift was virtually offset by a favorable swing in net nonliquid shortterm private capital flows, from a substantial outflow in the second quarter to a small inflow in the third. The official reserve transactions balance showed a surplus of \$2.1 billion in the third quarter, following a \$0.3 billion surplus in the second. This \$1.8 billion improvement was less pronounced than the shifts in the two other broad balance of payments measures, because net liquid private capital inflows, which affect the official balance but not the other two, were much smaller in the third quarter than in the second.

\*Excludes exports under military grants and U.S. military agency sales contracts and imports of U.S. military agencies.

Note.—In Highlights and Perspectives, Max Lechter wrote the section on Merchandise Trade and Leo Maley, the section on U.S. Corporate Capital.

#### The First Nine Months of 1973

The balance of payments for January-September 1973 showed dramatic improvement from the same period of 1972 in both current account flows and long-term capital movements. However, there was an increase in short-term capital outflows-both liquid and nonliquid—and in outflows associated with transactions not covered by the statistical reporting system (errors and omissions). A sorting out of transitory from more fundamental influences helps to explain these contrasting flows.

Widespread exchange market uncertainties in the first quarter (which culminated in a new 10 percent dollar devaluation in mid-February, and the floating of several leading currencies against the dollar, including the Japanese yen) led to heavy reported and unreported capital outflows, mostly short term. These outflows were intensified by a widening differential between short term interest rates in the United States and in the Eurodollar market, which favored borrowing here and lending in Europe. (Part of the increase in the differential was caused by expectations of exchange rate changes, which prompted an increased demand for dollar loans by

borrowers who desired to switch out of dollars into currencies expected to appreciate against the dollar.) Expectations of dollar devaluation also affected the timing of some long-term capital outflows, especially through the direct investment accounts. All these factors affected the net liquidity deficit in the first quarter: it was further swelled by a large increase in bank-reported short-term nonliquid outflows and in unreported outflows. The official reserve transactions deficit was, in addition, enlarged by substantial liquid private capital outflows. The official reserve deficit was \$10½ billion in the first quarter, more than the deficit for the entire year 1972.

The adoption of a system of floating exchange rates for the dollar and a number of other leading currencies early this year also required a reinterpretation of the official reserve transactions balance. Under a system of floating rates, exchange market pressures on the dollar should be mainly reflected in changes in exchange rates rather than in changes in U.S. liabilities to foreign official agencies and a deficit in the official balance. In the absence of intervention through purchases and sales of dollars by foreign official agencies, the official reserve transactions balance should approach zero. Under the fixed exchange rate system, exchange market pressures on the dollar were reflected mainly in increases in U.S. liabilities to foreign official agencies, which were obliged to intervene via purchases (or sales) of dollars to maintain the exchange rates for their currencies within perscribed limits. During the second quarter of 1973, there was limited official intervention (mostly by the Japanese authorities who sold dollars to limit the decline in the yen rate), and in the third quarter there were indications of some increase in intervention by a number of countries, including a return to limited intervention by U.S. monetary authorities in early July.

Net long-term private capital flows, although shifting adversely in the first and second quarters, showed marked improvement for the first 9 months of 1973 compared with the 1972 period; foreign direct investment in the United States increased substantially, and net foreign purchases of U.S. securities rose markedly, despite a sharp decline in the second quarter. These inflows more than offset a rise in direct investment outflows (a rise concentrated in the first half of 1973, part of which was probably associated with expectations of exchange rate changes).

Nonliquid short-term capital outflows

r Revised. P Preliminary. NOTE.—Details may not add to totals because of rounding.

were substantial in January-September 1973, much larger than in the same period of the previous year. However, there was a sharp improvement in the third quarter, when bank loans to foreigners and acceptance financing were reduced in contrast to the large increase earlier in the year. Nonetheless, the outflow in the first 9 months of 1973 was much larger than in the same period of 1972. The very large outflow through unrecorded transactions (errors and omissions) in the first quarter was followed by a small inflow in the second, perhaps related to a narrowing of the short-term interest rate differential between the United States and the Eurodollar market, and the adoption of generally floating exchange rates by a number of leading foreign countries. However, unfavorable exchange market pressures on the dollar began to develop again late in the second quarter and intensified in July; part of the third quarter outflow through unrecorded transactions probably occurred in that period.

There was a net liquid private capital outflow in the first 9 months of 1973, compared with an inflow of the same amount in 1972. A heavy outflow in the first quarter, dominated by expectations of exchange rate changes and high interest rates in the Eurodollar market, more than offset inflows in the following two quarters, when there was a narrowing of the spread between Eurodollar and U.S. interest rates and generally calmer exchange markets.

In contrast to the complex factors that influenced financial flows, the balance on goods and services—especially the merchandise trade component—has been improving all year, reflecting the more fundamental contributions of the cumulative price effects of two dollar devaluations (in December 1971 and in February 1973), the revaluation of a number of leading foreign currencies against the dollar, and a sharp rise in foreign demand for U.S. agricultural goods.

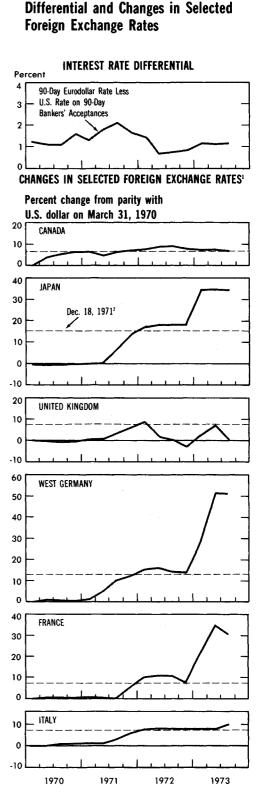

## Current account transactions

The merchandise trade balance moved into a surplus of \$0.7 billion in the third quarter, an improvement of \$1.0 billion from the second. Exports rose sharply by \$1.4 billion, while imports increased only \$0.4 billion. The large gain in exports was mainly in foodstuffs, in industrial supplies and materials and in capital equipment, while the import rise was concentrated in industrial materials, capital equipment, and nonfood consumer goods, other than autos; imports of autos declined slightly. For the first 9 months of 1973, the trade deficit was \$0.5 billion, down \$4.7 billion from the same period of 1972. The reduction reflected not only the effects of two dollar devaluations but also a sharp rise in agricultural exports. (See Highlights and Perspectives for a more detailed analysis.)

The deficit on military transactions (excluding transfers under military grants) was \$0.6 billion in the third quarter, down \$0.2 billion from the second. A dip in direct defense expenditures and an increase in receipts from military sales contracts contributed about equally to the improvement. (The reported decline in expenditures took place despite the increase in costs associated with the decline in the value of the dollar vis-avis many foreign currencies). The deficit on military transactions for January-September was \$2.1 billion, down \$0.6 billion from the 1972 period; most of the improvement was accounted for by increased military aircraft sales.

The travel and transportation deficit narrowed by \$0.2 billion in the third quarter to \$0.5 billion. The main factors were a decline in travel payments, perhaps associated with the lower value of the dollar abroad, and continued growth in the number of foreign visitors to the United States, especially from Japan. The travel and transportation deficit for the first 9 months of the year was down \$0.3 billion from the 1972 period, the first decline in 4 years.

Net investment income rose \$0.2 billion in the third quarter to \$2.3 billion, and rose \$1.1 billion in the January-September period, compared with 1972, to \$6.7 billion. Income from U.S. direct investment abroad was the main contributing factor; it rose \$0.2

**U.S.-Foreign Short-Term Interest Rate** 

1. Spot rates at end of quarter.

CHART 10

Represents the percent change between parity on March 31, 1970 and the central rates established in the Smithsonian agreement on December 1971.

December 1973

billion in the third quarter, to \$3.4 billion and \$2.4 billion, to \$9.8 billion, for the first 9 months of the year. The increase was especially large in income from branch operations of the petroleum and mining industries, reflecting sharply higher prices for their products. The rise in income receipts more than offset a rise in payments on U.S. liabilities to private and official holders abroad, largely due to higher interest rates and the large accumulation of dollar obligations by foreign official agencies in the first quarter of 1973.

The balance on goods and services improved by \$1.5 billion in the third quarter to a surplus of \$2.1 billion. For the first 9 months of 1973, the balance showed a surplus of \$3 billion, a \$6.7 billion improvement from the same period of 1972. There was little change in remittances, pensions, and other transfers in the third quarter or in January-September: thus, the balance on goods, services, and remittances showed just about the same change as the balance on goods and services. Government grants (excluding military) were \$1.5 billion in the first 9 months of 1973, down \$0.2 billion from the 1972 period; thus, the balance on current account improved by \$6.9 billion, from a deficit of \$6.6 billion in the 1972 period to a surplus of \$0.3 billion in January-September 1973. In the third quarter, the current account surplus was \$1.2 billion, compared with a deficit of \$0.4 billion in the second quarter.

## Long-term capital flows

There was a \$1.6 billion favorable swing in net long-term capital transactions (private and Government) in the third quarter to an inflow of \$1.3 billion, and a \$2.4 billion improvement in these flows for the first 9 months of 1973 to an inflow of \$0.7 billion, compared with an outflow of \$1.7 billion for the same period in 1972. During the third quarter, Government capital flows moved to a net outflow of \$0.4 billion after an inflow of \$0.1 billion in the second quarter, which had been bolstered by a special advance payment and increased repayments of other credits. For the first 9 months of the year, there was a \$0.1 billion reduction in Government capital outflows, to

\$0.6 billion. Net long-term private capital flows showed a marked \$2.0 billion improvement in the third quarter, to an inflow of \$1.7 billion; in January-September 1973, there was a net inflow of \$1.4 billion, compared with a \$0.9 billion outflow for the same period a year earlier.

Among the long-term private capital accounts, U.S. direct investment outflows showed a marked reduction in the third quarter but were an exception to the general pattern of improvement for long-term private capital transactions from 1972 to 1973; they totaled \$3.2 billion in the first 9 months of this year, compared with \$2.6 billion for the same period in 1972. In the third quarter, direct investment outflows dropped to only \$0.2 billion, compared with \$0.9 billion in the second, as net inflows from petroleum affiliates in producing areas largely offset net outflows to manufacturing affiliates abroad (see Highlights and Perspectives-U.S. Corporate Capital). However, outflows were very large in the first half of 1973, probably stimulated by exchange market considerations as well as by plans for increased plant and equipment expenditures by affiliates in 1973.

Foreign direct investment in the United States was record \$0.7 billion in the third quarter, up from \$0.5 billion in the second. About two-thirds of the third quarter inflow was accounted for by a petroleum participation agreement receipt. Foreign direct investment in the United States for the first 9 months of 1973 was \$1.5 billion, larger than any previous annual direct investment inflow; in January-September 1972, the net flow was approximately zero.

Net U.S. purchases of foreign securities totaled \$0.2 billion in the third quarter, compared with \$0.1 billion in the second. The rise was wholly accounted for by net U.S. purchases of outstanding foreign bonds, which more than offset some decline in new Canadian issues in the United States. During January-September 1973, net U.S. purchases of foreign securities were less than \$0.3 billion, compared with \$0.6 billion for the same period in 1972. A major factor in the shift was

that no World Bank bond issues were floated in the United States in 1973, whereas almost \$0.3 billion had been floated here in 1972. Net U.S. sales of foreign stocks continued in the first 9 months of 1973, amounting to about \$0.2 billion, the same as in that period in 1972. Net sales of Japanese and Canadian stocks more than offset small purchases of West European shares.

Net foreign purchases of U.S. securities rose to \$1.2 billion in the third quarter, compared with \$0.5 billion in the second. Virtually all the increase was accounted for by net purchases of U.S. stocks, which rose from \$0.1 billion in the second quarter to \$0.9 billion in the third There was little change in net foreign purchases of U.S. bonds, as net investment in federal agency bonds by the World Bank mostly offset a decline in new issues sold abroad by U.S. corporations. For the first 9 months of 1973, net foreign purchases of U.S. securities reached \$3.4 billion, compared with \$2.6 billion in the same period of 1972. Net foreign purchases of U.S. stocks rose from \$1.2 billion in January-September 1972 to \$2.3 billion this year, while net foreign purchases of U.S. bonds declined from \$1.4 billion in the 1972 period to \$1.1 billion this year. New issues of Eurobonds by U.S. corporations declined from more than \$1.4 billion in January-September 1972 to less than \$0.9 billion in 1973, more than offsetting a \$0.3 billion increase in foreign purchases of other U.S. bonds. Activity in the Eurobond market has been curtailed this year by exchange market uncertainties; after the February dollar devaluation, there was a decline in dollardenominated issues in particular, with some signs of revival toward the end of the third quarter.

Other net long-term outflows declined to \$0.1 billion for the first 9 months of 1973, compared with \$0.3 billion for the same period in 1972.

In total, net long-term capital transactions in the third quarter registered a \$1.3 billion inflow; combined with the current account surplus of \$1.2 billion, this resulted in the \$2.5 billion surplus in the balance on current account and long-term capital. For the

first 9 months of 1973, a net long-term capital inflow of \$0.7 billion, together with the \$0.3 billion current account surplus, resulted in a \$1.0 billion surplus in the balance on current account and long-term capital, compared with an \$8.3 billion deficit for the same period in 1972.

Short-term capital flows

Net nonliquid short-term capital flows showed a sharp improvement in the third quarter, registering a small inflow of \$0.2 billion following a \$1.4 billion outflow in the second quarter. Virtually all the shift was accounted for by bank-reported nonliquid claims,

reflecting a reduction in bank loans to foreigners and in outstanding acceptance financing with Asiatic countries. For the first three quarters of 1973, however, the outflow through shortterm nonliquid bank claims was a net \$3.0 billion, compared with only \$0.6 billion in January-September 1972.

33	Balance on merchandise trade, adjusted to balance of payments basis, includ- ing "military" (16)	-6, 221	-1, 635	-1, 602	1, 417	-1, 567		-2	961	963	-4, 654	153	4, 807
34	Balance on merchandise trade, adjusted to balance of payments basis, ex- cluding "military" (17)	-6, 912	-1, 820	-1, 774	— 1, 573	-1, 745	-960	-244	714	958	—5, 167	-490	4, 677

\* Revised. \* Preliminary. \*''Adjusted'' items reflect balance of payments corrections to Census trade figures for coverage, valuation, and timing. For example: Line 6 is adjusted for changes in stocks of U.S. grain stored in Canada; lines 8 and 23 include exports and imports of nonmonetary gold, electric power, and petroleum trade of the Virgin Islands with foreign countries; line 18 ex-cludes reexports and line 23 excludes imports of natural gas in transit through the United States from western to eastern Canada; lines 28 and 29 reflect adjustments for the overvalua-tion in Census import data of autos and trucks from Canada. 1. Includes goods physically exported from the United States under U.S. military agency sales contracts and recorded in Census trade statistics; includes goods physically imported into the United States directly by U.S. military agencies (and by the Atomic Energy Com-mission and the Coast Guard) and recorded in Census trade statistics.

2. The statistical identification of automotive products exports to Canada (line 15) is not as complete and comprehensive as the identification of automotive products imports from Canada, which are more definitively classified for duty-free status under the U.S.-Canada Automotive Products Trade Act. The less comprehensive identification in U.S. trade statis-tics of automotive parts exports to Canada results in an undercounting of such exports (line 15) which—estimated from examination of Canada's import statistics—amounted to about \$450 million in 1072 million in 197

NOTE .- Seasonally adjusted quarterly details may not add to unadjusted annual totals.

Part of the 1973 rise was related to anticipations of exchange rate changes, especially in the first quarter. Another factor was the spread between interest rates in the United States and abroad, especially in the Eurodollar market, which generally favored borrowing in the United States and lending abroad during the first half of 1973. As a result, foreigners drew heavily on their assets and lines of credit with U.S. banks and with U.S. agencies and branches of foreign banks. Short-term nonliquid capital flows reported by nonbanking concerns showed virtually no net change from the first 9 months of 1972 to the same period in 1973.

Outflows associated with transactions not covered by the reporting system

(errors and omissions) were \$1.4 billion in the third quarter, compared with a \$0.4 billion inflow in the second. For the first 9 months of 1973, unrecorded outflows totaled \$4.8 billion, compared with \$1.6 billion for the same period in 1972. The total was strongly affected by the large first quarter outflow, which was probably related to expectations of a dollar devaluation and (later in the quarter) to expectations of further revaluations of a number of leading currencies.

The \$0.2 billion inflow of recorded short-term nonliquid capital in the third guarter and the unrecorded outflow of almost \$1.4 billion, combined with the \$2.5 billion surplus on current account and long-term capital, resulted in a \$1.4 billion surplus in the net liquidity balance, compared with a \$1.6 billion deficit in the second quarter. For the first 9 months of 1973, recorded outflows of short-term nonliquid capital were up \$2.3 billion from the 1972 period, unrecorded outflows were up \$3.2 billion, and there was no new SDR allocation in 1973, while \$0.5 billion had been allocated for the first 9 months of 1972; thus, with the balance current account and long-term on capital showing a \$9.3 billion improvement from the 1972 period to 1973, the net liquidity balance showed a \$3.2 billion improvement from a deficit of \$10 billion to a deficit of \$6.8 billion.

Net liquid private capital inflows were \$0.7 billion in the third quarter,

 Corporate foreign borrowing and changes in "other corporate claims" may include funds to finance trade or other activities not entirely related to direct investment. The amounts cannot be disaggregated. A (-) reflects a decline in foreign deposits and money market paper held in the United

States

down \$1.2 billion from the second. The major factor in the decline was a \$1.1 billion adverse shift in liquid claims, which rose \$0.3 billion following a drop of \$0.8 billion in the second quarter. Liquid liabilities to foreigners increased \$1.0 billion, \$0.1 billion less than in the second quarter. Because of the large first quarter outflows, there was a net liquid private capital outflow of \$1.2 billion for the first 9 months of 1973. in contrast to an inflow of the same size in January-September 1972. (The second and third quarters of 1973 showed a combined inflow of \$2.6 billion, almost double that for the same period in 1972.)

The \$0.7 billion net inflow of liquid private capital in the third quarter, combined with the \$1.4 billion surplus in the net liquidity balance, adds to the \$2.1 billion surplus in the official reserve transactions balance. For the first 9 months of 1973, the official reserve transactions deficit was \$8.1 billion, compared with \$8.9 billion for the same period in 1972. Here again, the 1973 figure is dominated by unfavorable first quarter developments.

#### Financing the official reserve transactions balance

The \$2.1 billion official reserve transactions surplus in the third quarter was reflected in a \$1.7 billion reduction in liquid liabilities to foreign official agencies, and in a \$0.5 billion reduction in nonliquid liabilities, mainly special nonmarketable issues, to these agencies.

For January-September 1973, liquid liabilities to foreign official agencies rose \$6.7 billion, compared with an increase of \$8.1 billion for the first 9 months of 1972. The 1973 increase was smaller in proportion to the official reserve deficit than was the 1972 increase. The difference was accounted for by a 1973 rise of \$1.5 billion (of which \$1.2 billion was in the first quarter) in other readily marketable liabilities to foreign official agencies. compared with a rise of only \$0.3 billion in the first three quarters of 1972. (See Technical Note in the December 1972 SURVEY article, p. 40.) There was a net decline of \$0.3 billion in nonliquid liabilities to foreign official agencies reported by the U.S. Government during January-September 1973. compared with a \$0.4 billion increase in the 1972 period.

U.S. official reserve assets showed little change in the first 9 months of either 1972 or 1973. The decline of \$0.2 billion this year was largely accounted for by the use of convertible currencies in exchange market support for the dollar before the mid-February devaluation.

# **Highlights and Perspectives**

## Merchandise trade in the third quarter

The merchandise trade balance improved \$1.0 billion in the third quarter, shifting to a surplus of \$0.7 billion from a deficit of \$0.2 billion in the second quarter. (The last previous quarterly merchandise trade surplus was \$0.1 billion in the first quarter of 1971.) The swing in the third quarter was strongly influenced by an unusually large surplus in September, when there was a sharp export rise and a sharp import decline. Exports in the third guarter increased \$1.4 billion, to \$18.2 billion; imports advanced \$0.4 billion, to \$17.4 billion. (All trade figures are on the usual balance of payments basis, excluding "military," as shown in tables 1, 2, 3, and B2. Trade totals including "military" can be found in tables 4 and B1.)

Exports of nonagricultural goods rose \$0.8 billion in the third quarter, or 7 percent (including an average price rise of 3 percent). The increase was concentrated in the two largest export supplies and categories-industrial materials (led by gains in metals and

chemicals), and capital equipment (with aircraft exports boosted by a sharp rise in civilian plane deliveries in September). Most other major nonfood groupings showed product only moderate changes from the second quarter. (See tables B1 and 4.) The value of agricultural exports increased \$0.5 billion, or 13 percent-mainly in foodstuffs-but there was a decline in volume, as farm export prices (unit values) rose 20 percent. A sharp reduction in exports of soybeans, subject to Government export controls during the quarter, was the main factor in the volume decline, more than offsetting increased quantities of grain shipments.

40

The \$0.4 billion increase in imports in the third quarter was largely in industrial materials, with lesser gains in capital equipment and in nonfood consumer goods (other than autos). Among industrial materials, substantial increases in imports of petroleum and precious metals (silver and platinum) more than offset a decline in building materials. Automotive imports from Canada declined because of parts shortages there, while auto imports from overseas held at their high second quarter level. There was a sharp drop in coffee and cocoa arrivals, more than offsetting gains in other foodstuffs.

## Merchandise trade in the first 9 months of 1973

The trade deficit for the first three quarters of 1973 was less than \$0.5 billion compared with the deficit of \$5.2 billion for the same period in 1972. Exports this year were \$50.2 billion, 41 percent above the 1972 total, while imports were \$50.7 billion, 25 percent above the 1972 total. From 1971 to 1972, exports rose only 14 percent but imports rose 22 percent.

Rising prices for both exports and imports have boosted the increases in trade values in 1973, as they did in 1972. Import prices (unit values) rose somewhat faster than export prices this year, reflecting the second devaluation of the dollar in mid-February and the further appreciation of foreign currencies against the dollar in subsequent months, combined with strong inflationary pressures abroad. The rise in export prices has been most conspicuous for agricultural goods, generated by worldwide shortages of farm products; however, inflation in the United States has also affected the prices of nonagricultural exports. Overall import prices in January-September 1973 were 16 percent higher than in the same period in 1972, while overall export prices were 10 percent higher. After adjustment for price changes, exports in the first 9 months of 1973 showed an

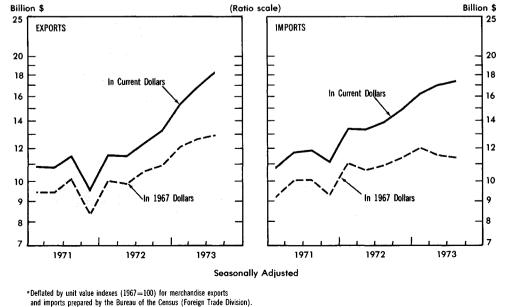

increase of 28 percent over 1972 in volume terms, while imports were up only 8 percent, with import volume actually declining in the second and third quarters this year (see chart 11).

Table B1 shows the commodity pattern of the rise in the value of trade this year. Agricultural exports normally comprise less than one-fifth of total exports but this year they have accounted for one-fourth of total exports and for two-fifths of the increase in exports: they have risen to \$12.7 billion in January-September 1973, 85 percent above the total in 1972. Included in this rise was a 43-percent increase in farm export prices. Exports of nonagricultural goods have risen to \$37.6 billion, 31 percent above the comparable 1972 total, with prices up 7 percent.

Agricultural shipments to the Soviet Union and to mainland China rose \$0.6 billion and \$0.3 billion, respectively, this year but the combined \$0.9 billion increase represented little more than one-seventh of the total rise in the value of farm exports in the first 9 months of 1973. The bulk of the gain was to our more traditional markets abroad as higher consumption rates, poor harvests, and inadequate supplies spurred worldwide demand for U.S. farm products.

Nonagricultural exports in the first 9 months of 1973 were \$8.8 billion higher than in 1972. Nonfarm industrial supplies and materials accounted for nearly 37 percent of that rise. Strongly rising economic activity abroad increased demand for a number of commodities; in addition, price controls on U.S. products sold domestically may have diverted some sales to export markets, where products were exempt from such controls. The rise was mainly in metals (nonferrous, steel products, and steel scrap), chemicals, logs and lumber (principally to Japan). Exports of capital goods also rose strongly, as machinery exports were up \$2.6 billion, and deliveries of civilian planes were up \$0.4 billion in contrast to a \$0.2 billion decline in 1972. Automotive exports were \$0.9 billion above the January-September 1972 total; exports of other nonfood consumer goods also rose \$0.9 billion.

<sup>\*</sup> Revised. <sup>\*</sup> Preliminary. <sup>\*</sup> Less than \$500,000 (±). n.a. Not available.
1. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports of U.S. military agencies.
2. Includes fees and royalties from U.S. direct investments abroad or from foreign direct investments in the United States.
3. Equal to net exports of goods and services in national income and product accounts of the United States.
4. The sum of lines 15 and 31 is equal to "net foreign investment" in the national income and product accounts of the United States.

5. Includes some short-term U.S. Government assets.
 6. Includes changes in nonliquid liabilities reported by U.S. banks and in investments by foreign official agencies in debt securities of U.S. Government corporations and agencies, pri-vate corporations, and State and local governments.

NOTE.-Details may not add to totals because of rounding.

Revised Preliminary \*Less than \$500,000.
Mainly net additions to or liquidations of U.S.-owned grains stored in Canada, and exports of electrical energy.
Mainly exports of exposed motion picture film for rental rather than sale.
Irregular and occasional adjustments; valuation adjustments for goods considered to be underpriced or overpriced in Census data; timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unadjusted recorded annual totals.

unadjusted recorded annual totals.

unaquisted recorded annual totals.
5. Exports of military equipment under U.S. military agency sales contracts with foreign governments to the extent such exports are identifiable from Census export documents. These exports are included in table 2, line 3: "Transfers under U.S. military agency sales contracts."
6. Mainly imports of electrical energy.

7. Mainly foreign charges for repair of U.S. vessels abroad, which are included in tables 2, 3, and 9, line 20 (other transportation).

8. Merchandise imported directly by the Department of Defense, as well as "defense" imports of the Coast Guard and Atomic Energy Commission, to the extent such imports are identifiable from Census import documents and verifiable from separate reports of the importing agencies. These imports are included in tables 2, 3, and 9, line 17: "Direct defense expenditures."
9. Includes nuclear fuel materials and fuels, formerly in exports of "other metals"-(1.33) and in imports of "steelmaking materials"-(1.76).
10. The statistical identification of automotive products exports to Canada (line 47) is not as complete and comprehensive as the identification of automotive products imports from Canada, which are more definitively classified for duty-free status under the United States-Canada Automotive Products Trade Act. The less comprehensive identification in U.S. trade statistics of automotive para ersults in an undercounting of such exports (line 47) which-estimated from examination of Canada's import statistics—amounted to about \$460 million in 1972.

NOTE .- Details may not add to totals because of rounding.

<sup>r</sup> Revised. <sup>\*</sup> Preliminary. <sup>\*</sup>Less than \$500,000 (±).
1. The identification of transactions involving direct dollar outflow from the United States is made in reports by each operating agency. However, such data for fourth quarter 1972 and third quarter 1973 are only extrapolated estimates by BEA, because of incomplete reports from one operating agency, and are to be revised in future issues of the SURVEY.
2. Line A.28 includes foreign currency collected as interest and line A.30 includes foreign currency collected as principal, as recorded in lines A.6 and A.7.
3. Lines A.29 and A.31 include some short-term U.S. Government claims, collections of which are recorded in line B.16.
4. Consists of transfers of military goods and services financed by U.S. Government credits and of advance payments to the Defense Department (on military sales contracts) financed by credits extended to foreigners by U.S. Government agencies.

5. Includes securities payable in U.S. dollars and in convertible foreign currencies.
6. Transactions under military sales contracts are those in which the Defense Department sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. The entries for the several categories of transactions related to military sales contracts in this and the other tables are partially estimated from incomplete data.
7. Consists of transfers of military goods and services than anced by U.S. Government credits (included in line B.16) and of increases in Defense Department liabilities (on military sales contracts) which arise from advance payments to the Defense Department financed by credits to foreigners by U.S. Government agencies.
8. Excludes liabilities associated with military sales contracts financed by U.S. Government credits and included in line B.11.

NOTE.—Details may not add to totals because of rounding. Source: U.S. Department of Commerce, Bureau of Economic Analysis.

r Revised. » Preliminary. \* Less than \$500,000 (±). n.a. Not available.
1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.
2. Sales and liquidations of capital stock and other equity holdings, total, and partial.
3. Includes security issues placed with outside interests in the United States, the amortization of transaction.
4. Mining and smelting includes the exploration and development of mining properties, the extraction of raw ores and the processing necessary for basic refined metals. Petroleum includes the exploration of or getroleum refining and the smelting operations of mining ormanies. "Other" industries include all industries except those previously listed, the major ones being agriculture, public utilities, transportation, trade, insurance, finance and services.

5. As published in Treasury Bulletin. Treasury data are based on transactions by foreigner-reported by banks and brokers in the United States; net purchases by foreigners (+) cor respond to net U.S. sales (+).
6. Redemptions measure scheduled retirements and identifiable premature retirements of U.S. held foreign debt securities. Unidentifiable nonscheduled retirements appear in line 45.
7. Securities newly issued by finance subsidiaries incorporated in the Netherlands Antilles are included to the extent that the proceeds are transferred to U.S. parent companies.
8. Mainly reflects exclusion of investments and agencies, private corporations, and State and local governments. These investments are included in table 2, line 56.

Revised. \* Preliminary. \*Less than \$500,000. (±)
1. Position figures reflect increase of \$15 million in U.S. Treasury bills and certificates (line 27), \$128 million in U.S. Treasury boligations (line 38) and a negligible amount in convertible currencies (line 45), as a result of revaluations in foreign currencies due to the dollar devaluation in the first quarter, 1973.
2. With maturity of 1 year or less; negotiable certificates of deposit with a maturity of 1 year or less.

4. Includes liabilities of U.S. monetary authorities for gold deposited by and held for the IMF and includes U.S. Treasury obligations obtained from proceeds of gold sales by the IMF to the United States to acquire income-earning assets. Investment was terminated in February 1972, and gold was reacquired by the IMF. 5. Includes nonliquid liabilities reported by U.S. banks and investment in debt securities of U.S. Government corporations and agencies, private corporations, and State and local governments.

governments.

Revised. Preliminary.

<sup>r</sup> Revised. <sup>\*</sup> Preliminary. I. Balance of payments by area on the net liquidity basis and the official reserve trans-actions basis lack validity because liquid dollar holdings of private and official foreigners may be affected not only by their transactions with the United States but also by transactions among themselves. The balances shown by area here have some shortcomings due to statis-tical discrepancies including errors, omissions, and incorrect area attributions.

Balances are derived from lines in table 2 (all areas) and table 9 (individual areas) as follows:

Merchandise trade	
Goods and services	
Goods, services and remittances. 1, 15, 31, 32.	1
Current account 1, 15, 29	
Current account and long-term capital	-41.
44, 48, 49-51	. 53
(by area on	v part
of line 53 is i	ncluded).

The balance on current account and long-term capital with "all areas" includes changes in long-term liabilities to all private foreigners reported by U.S. banks; with "international organizations" includes only liabilities to IBRD and affiliated organizations; and with other areas includes only liabilities to regional organizations. Increases in the long-term liabilities

to other private foreigners included in the total, but not in the areas, amounted to (millions of dollars): 1972 year, 33; 1972-I, 17; 1972-II, 19; 1972-II, 7; 1972-IV, -10; 1973-I, 36; 1973-II, 6; 1973-III, 39. 2. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports under direct defense expenditures. 3. Includes some short-term U.S. Government assets; area data exclude long-term liabilities reported by U.S. banks other than to international organizations (see footnote 1). 4. The "European Economic Community (9)" includes the "European Economic Com-munity (6)," the United Kingdom, Denmark, and Ireland. 5. The "European Economic Community (6)" includes Belgium, France, Germany, Italy, Luxembourg, and the Netherlands. 6. "Other Western Europe" excludes the United Kingdom and the "EEC (6)" through the fourth quarter of 1972. Beginning in the first quarter of 1973 "Other Western Europe" excludes the "E.E.C. (9)". 7. Transactions with the Ryukyu Islands that were under U.S. military administration from the end of World War II until May 15, 1972 are included with Japan beginning in the first quarter 1972; in previous periods they are included with "other countries in Asia and Africa". Africa".

NOTE.—Details may not add to totals because of rounding. Source: U.S. Department of Commerce, Bureau of Economic Analysis.

Imports in the first 9 months of 1973 were \$10.0 billion above the 1972 total. Industrial supplies and materials (as in the case of exports) accounted for much of the rise; their value in the first three quarters was \$4.4 billion or 29 percent above the 1972 total, as oil imports jumped \$2.0 billion or 58 percent. The value of metal imports increased because of strong industrial activity in the United States and higher world prices but the increase was moderated by an acceleration of sales from the Government stockpilenotably of aluminum. In the first 9 months of this year, sales from Government stocks increased 400,000 tons and aluminum imports declined by more than 100,000 tons. Imports in other major commodity categories-capital goods, automotive, other nonfood consumer goods, and foodstuffs-each rose by roughly \$1.2 to \$1.4 billion: in percentage terms, the largest rise was in capital goods imports.

The merchandise trade deficit declined to \$0.5 billion, seasonally adjusted, in January-September 1973 from \$5.2 billion in the comparable period of 1972. The \$4.7 billion improvement in the trade balance was mainly with Japan, Western Europe, and the Soviet Union (see table B2). The trade deficit with Japan declined \$2.0 billion to \$1.1 billion. In addition to the combined price effects of dollar devaluation and yen revaluation, trade with Japan was influenced by the rapid pace of business activity therewhich helped U.S. exports, while U.S. imports were moderated by Japanese Government restrictions on "excessive" exports to the United States of 20 major commodities. (These restrictions were lifted as of September 1, 1973.) The trade balance with Western Europe showed a favorable shift of \$1.6 billion, from a deficit of \$0.6 billion in January-September 1972 to a surplus of \$1.0 billion (table B2). The trade surplus with Eastern Europe, reflecting rising agricultural exports to the U.S.S.R. and other countries, increased \$0.8 billion to \$1.1 billion. Canada was the only major trading market with which the U.S. trade balance worsened: the deficit with that country increased by more than \$0.2 billion, as exports rose \$2.0 billion, and imports rose \$2.2 billion. There was a small improvement in the trade balance with the less-developed countries of the world, as higher U.S. imports of petroleum partly offset other gains in net trade with the Near East, Africa, and the Western Hemisphere.

## U.S. Corporate Capital

Net corporate capital flows showed virtual balance in the third quarter following an outflow of \$0.9 billion in the second (see table C). The improvement resulted primarily from a \$0.7 billion decline in direct investment outflows; there was also a small increase in corporate foreign borrowing, partially offset by an unfavorable shift in other corporate claims. Despite the third quarter improvement, total net corporate capital outflows for the first three quarters of 1973 were \$3.0 billion, compared with only \$1.2 billion for the same period in 1972. Direct investment. corporate foreign borrowing, and corporate claims other than for direct investment all contributed to the unfavorable shift from 1972 to 1973.

Direct investment outflows were \$0.2 billion in the third quarter compared with \$0.9 billion in the second. Preliminary data indicated that the decline was the result mainly of large net inflows from petroleum affiliates in oil producing countries, including payments associated with the nationalization of U.S.-owned petroleum production facilities in Libya.

Direct investment outlows in the first quarter of 1973 were very large-\$2 billion-and for the first three quarters totaled \$3.2 billion, \$0.6 billion more than in the same period of 1972 and almost equal to the \$3.4 billion for that entire year. The increase this year may partly reflect the expected 11 percent increase in affiliates' plant and equipment spending this year, compared to an increase of only 5 percent in 1972, as indicated by the latest BEA survey of affiliates' spending plans (see article beginning on page 19 of this issue of the SURVEY). However, part of the large direct investment outflow in the first half of 1973 was probably stimulated by expectations of exchange rate

changes, particularly in the first quarter when outflows on short-term intercompany accounts were unusually large.

Corporate foreign borrowing was \$0.6 billion in the third quarter, up from \$0.3 billion in the second. New issues of Eurobonds by U.S. corporations continued to decline, reaching the lowest volume since the third quarter of 1970, and the Eurobond market remained in the doldrums (although there were some signs of renewed activity late in the quarter). The decline in new issues was largely offset by an increase in other corporate long-term liabilities, reflecting a shift by U.S. corporations from bond financing to term borrowing from banks. Short-term liabilities also moved favorably, increasing \$0.3 billion in the third quarter, following a small decline in the second. This may have been encouraged by the narrowing of the differential between U.S. shortterm interest rates and those abroad.

In the first three quarters of 1973, corporate foreign borrowing was \$1.6 billion, \$0.4 billion less than in the same period of 1972. This unfavorable shift, largely concentrated in new issues, was probably associated with uncertainties in foreign exchange markets.

Other corporate claims remained virtually unchanged in the third quarter. Long-term claims and short-term nonliquid claims each shifted unfavorably by less than \$0.1 billion; short-term liquid claims, which include deposits held abroad, moved favorably by \$0.1 billion in the third quarter.

In the first 9 months of 1973, outflows of corporate capital through claims other than direct investment rose \$1.4 billion compared to \$0.6 billion for the same period in 1972. Short-term liquid claims rose \$0.7 billion, compared with \$0.4 billion in 1972, as increases in such claims in the first half of 1973 were only partially offset by the decline in the third quarter. Long-term and short-term nonliquid claims increased \$0.8 billion in the first three quarters of 1973, \$0.6 billion more than in the comparable period of 1972, perhaps partly associated with a growing volume of trade financing.

# **CURRENT BUSINESS STATISTICS**

 ${
m T}_{
m HE}$  STATISTICS here update series published in the 1971 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (available from the Superintendent of Documents for \$3.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1967 through 1970 (1960-70 for major quarterly series), annually, 1947-70; for selected series, monthly or quarterly, 1947-70 (where available). Series added or significantly revised after the 1971 BUSINESS STATISTICS went to press are indicated by an asterisk (\*) and a dagger (†), respectively; certain revisions for 1970 issued too late for inclusion in the 1971 volume appear in the monthly SURVEY beginning with the September 1971 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1971 edition of BUSINESS STATISTICS; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 189-90. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Revised. » Preliminary. <sup>1</sup> Estimates (corrected for systematic biases) for Oct.-Dec. and Jan.-Mar. 1974 based on expected capital expenditures of business. Expected expenditures for the year 1973 appear on p. 13 of the December 1973 SURVEY. <sup>2</sup> Includes communication. † See corresponding note on p. St. Q Includes inventory valuation adjustment. A Personal outlaws comprise personal consumption expenditures, interest paid by

consumers, and personal transfer payments to foreigners. § Personal saving is excess of disposable income over personal outlays. TData for individual durable and nondurable goods industries components appear in the Mar., June, Sept., and Dec. issues of the SURVEY. quarterly reviews in the Mar., June, Sept., and Dec. issues of the SURVEY.

#### December 1973

Revised.
 Advance estimate. 
 Source: Media Records, Inc. 64-City Newspaper Advertising Trend Chart.
 New series. Beginning Jan. 1971 the series was revised to reflect trends in newspaper advertising expenditures in 64 cities instead of linage in 52 cities as formerly pub-lished.
 TRevised to reflect new sample design, improved techniques, and new information from the 1967 Census of Business; revisions for periods prior to Oct. 1970 appear on p. 55 ff.
 of the Dec. 1971 SURVEY (complete details appear in the Census Bureau Monthly Retail

Trade Report, Aug. 1971 issue). Q Includes data for items not shown separately. †Formerly Marketing/Communications advertising index. Series revised in June 1971; comparable 1970 monthly data are in the SURVEY for that month (no comparable earlier data are available). ¬Comprises lumber yards, building materials dealers, and paint, plumbing, and electrical stores. §Except department stores mail order.

# S-12

\* Revised. » Preliminary. <sup>1</sup>As of July 1. <sup>2</sup>See note § below. <sup>†</sup>See note "<sup>†</sup>," p. S-14. §Effective Jan. 1972, data are adjusted to the 1970 Census and are not directly comparable with earlier data. On unadjusted basis, 330,000 were added to civilian labor force and 301,000 to civilian employment. Effective Mar. 1973, subsequent adjustments added 60,000 to the labor force and to total employment. Beginning in the Feb. 1973 SUBVEY, data reflect new seasonal factors; comparable earlier figures appear in EMPLOYMENT & EARNINGS (Feb. 1973), USDL, BLS.

\*New series; see also note "‡". ±Effective Oct. 1972 SURVEY, employment, hours, earnings, etc., reflect revised bench-marks and seasonal factors, and are not comparable with figures in earlier SURVEYS and in BUSINESS STATISTICS. Unadjusted data through June 1972 and seasonally adjusted data through Dec. 1967 appear in BLS Bulletin 1312-9, EMPLOYMENT & EARNINGS, 1909-72. Effec-tive June 1973 SURVEY, all seasonally adjusted data again reflect new factors; comparable data, 1968-73, appear in EMPLOYMENT & EARNINGS (June 1973), BLS.

Unless otherwise stated in footnotes below, data	1971	1972		1972							1973					
through 1970 and descriptive notes are as shown in the 1971 edition of BUSINESS STATISTICS	An	nual	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	Мау	June	July	Aug.	Sept.	Oct.	Nov.

r Revised. P Preliminary. <sup>1</sup> Includes adjustments not distributed by months. tSee corresponding note, p. S-13. [Production and nonsupervisory workers. \*New series. <sup>2</sup> Line-haul roads; omits wages in switching and terminal companies. OSource: USDL, Bureau of Labor Statistics; the indexes exclude effects of changes in the proportion of workers in high-wage and low-wage industries, and the total and manufacturing

Indexes also exclude, for the manufacturing sector only, effects of fluctuations in overtime premiums. See also note "t," p. S-13.  $\mathcal{A}$ Wages as of Dec. 1, 1973: Common, \$7.27; skilled, \$9.84.  $\triangle$ Earnings expressed in 1967 dollars are adjusted for changes in purchasing power since the base period, 1967, by dividing by the Consumer Price Index for the respective period.

Revised. Preliminary. <sup>1</sup>See note "§", this page. <sup>2</sup>Beginning Dec. 1971, data on new basis reflect inclusion of paper issued directly by real estate investment trusts and several additional finance companies. § Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from the annual figure and, beginning Jan. 1973, from the monthly data. • For Jan.-Sept. 1972 revisions, see footnote, p. S-21. e Estimate.
 † Revised (back to 1951) to reflect new seasonals and other modifications.

c<sup>3</sup>Insured unemployment as % of average covered employment in a 12-month period.  $\oplus$ Series revised to reflect recalculation of seasonal factors and trading-day adjustment; revisions back to 1964 are shown in the July 1972 Federal Reserve Bulletin, p. 634. ‡See note "‡", p. S-13.  $\odot$  Total SMSA's include some citles and counties not designated as SMSA's. ¶Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakland and Los Angeles-Long Beach. § Includes data not shown separately.

\* Revised. P Preliminary. <sup>1</sup> Average for Dec. <sup>3</sup> Average for year. <sup>3</sup> Dally average. <sup>4</sup> See note "⊕" for this page. <sup>4</sup> Beginning Jan. 1973, data reflect changes in sample and weighting. ⊕Begin-ning Nov. 1972, data are not comparable with those for earlier periods because of regulatory changes affecting reserve requirements (Regulation D) and check collection processing (Regulation J) that became effective in early November. <sup>3</sup> For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to and Federal funds transactions with domestic commercial banks and

after deduction of valuation reserves (individual loan items are shown gross; i.e., before deduc-tion of valuation reserves). ‡Revisions for months prior to Feb. 1971 will be shown later. 97ncludes data not shown segarately. CAdjusted to exclude intertank lcans. § For bond yields, see p. S-20. ¶Revised: new data incorporate adjustment of sample-based estimates to reflect recent benchmarks and new seasonal factors. Monthly revisions appear in the October 1972 Fed-eral Reserve Bulletin. †Beginning Jan. 1959, monthly data have been revised to reflect new seasonal factors and adjustment to benchm arks for the latest call date (June 30, 1973). Revisions are in the Nov. 1973 Federal Reserve Bulletin.

<sup>7</sup> Revised. **P** Preliminary. <sup>1</sup> Number of carriers filing complete reports for the year. <sup>3</sup> For month shown. <sup>3</sup> For 4th qtr. 1971. <sup>4</sup> Annual total reflects revisions not distrib-uted to the monthly or quarterly data. <sup>5</sup> For 2d qtr. 1972. <sup>5</sup> Before extraordinary and prior period items. <sup>7</sup> Reporting roads only; excludes AMTRAK operations. <sup>8</sup> For six months ending in month shown. <sup>9</sup> For 66 carriers. <sup>10</sup> Beginning 1973, data refer to net income after extraordinary and prior period charges and credits and not to expenses. <sup>11</sup> For 1st qtr. 1972. <sup>12</sup> For 3d qtr. 1972. <sup>13</sup> For 1st half of 1972. <sup>Δ</sup> Quarterly data beginning 1973 (and restated 1972 figures) are for large class I motor car-riers and include operations of most of those with annual revenues of \$30 mil. in 1972. Tonnage

hauled refers to common and contract services. o'Indexes are comparable for the identical quarter of each year (and from year to year).  $\oplus$  Natl. Railroad Pass. Corp. (AMTRAK), not included in AAR data above, for 1972 and 1st 6 months 1973 (mil. dol.): Pass. revenues, 138; 74; net income, -148; -79 (ICC). 9 In-cludes data not shown separately. I Revised monthly data back to 1969 will be shown later.  $\odot$  Not comparable with data in 1971 BUSINESS STATISTICS. §Effective Jan. 1972, data reflect an expanded sample that includes many motor-hotels. ¶Data include visits, effective Jan. 1972, to Arches and Capitol Reef National Parks, and effective July 1973 to Voyageurs Natl. Park.

r Revised. <sup>1</sup> Reported annual total; revisions are not distributed to the monthly data.
 <sup>2</sup> Includes Hawaii; no monthly data available for Hawaii.
 §Data are not wholly comparable on a year to year basis because of changes from one

classification to another. †Data restated to represent the total gas utility industry, 99 percent of which is natural gas; also, sales are expressed in B.t.u. instead of therms. ‡Revised data for months prior to May 1971 will be shown later.

<sup>\*</sup> Revised. \*Preliminary. <sup>1</sup> Less than 50 thousand pounds. <sup>1</sup> Crop estimate for the year. <sup>3</sup> Previous years' crop; new crop not reported until beginning of new crop year (July for barley, oats, rye, and wheat; Oct. for corn). <sup>4</sup> Effective May 1971, weighted average, 4 markets, all grades. <sup>4</sup> Average for Jan.-April, June-Oct. and Dec. <sup>4</sup> Average for July-Sept., and Dec. <sup>7</sup> Annual total reflects revisions not distributed to the months.

<sup>6</sup> Revised monthly data for Jan. 1970-June 1972 will be shown later.
 <sup>6</sup> Effective May 1972, price is for No. 2 (Southwest Louisiana).
 <sup>10</sup> Nov. 1 estimate of 1973 crop.
 <sup>10</sup> Condensed milk included with evaporated to avoid disclosing operations of individual firms.
 § Ercludes pearl barley.
 <sup>10</sup> Bags of 100 lbs.

Unless otherwise stated in footnotes below, data through 1970 and descriptive notes are as shown	1971	1972	. <u></u>	1972					·		1973

Revised. P Preliminary. Annual data; monthly revisions are not available.
 Average for 11 months. Less than 50 tons. For quarter ending in month shown.
 New series.

△ Effective Dec. 1971, nationwide delivered price substituted for N.Y.-basis price. ∂Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap. ⊙Producers' stocks elsewhere, end of Nov. 1973, 5,800 short tons.

Revised. P Preliminary. 1 Annual data; revisions are not available. 2 Excludes figures for rubber-tired dozers. From month shown. 4 Data cover 5 weeks; other periods, 4 weeks. See note "3". Monthly revisions are available upon request.
 For 6 months ending in month shown.
 tRevisions for Jan. 1970-Feb. 1972, comparable with indexes shown effective May 1973 SURVEY, appear at bottom of p. S-34, Sept. 1973 SURVEY. See due "1", p. S-35. 3" Effective Jan. 1973, data reflect total market: Those produced in the United States, imports by U.S. manufacturers for sale under their brand name and, beginning 1973, also those imported directly for resale. fEffective Mar. 1973 SURVEY, index revised back to 1500.

\*New series. Industrial hardware supplies and machinery (marketed through distributors)— orders index (Amer. Supply & Mach. Mirs. Assn.) and sales index (Natl. & Southern Ind. Distributors Assns.) are based on 2-month moving average of selected members' operations and are adjusted for no. of working days. Effective June 1973 SURVEY, sales index revised back to 1970. Dishwashers and disposers (Assn. of Home Appliance Mirs.) and gas equip-ment (Gas Appliance Mirs. Assn.) reflect total industry sales. Monthly data prior to 1971 are available upon request.

Revised. P Preliminary. 1 Reported annual total; revisions not allocated to months.
 Publication of monthly rubber statistics was discontinued by the Census Bureau effective with the Dec. 1972 report (Series M30A). Data beginning Jan. 1973 are from the Rubber Manufacturers Association and are not strictly comparable with earlier data.

tRepresents the sum of book paper, uncoated and writing and related papers formerly shown separately; data for new orders no longer available for the individual items. c<sup>A</sup>As reported by publishers accounting for about 75 percent of total newsprint consumption. § Monthly data are averages for the 4-week period ending on Saturday nearest the end of the month; annual data are as of Dec. 31.

Revised. <sup>1</sup> Season average. <sup>2</sup> For 5 weeks; other months, 4 weeks. <sup>3</sup> Less than 500 bales. <sup>4</sup> Price not directly comparable with earlier data. <sup>3</sup> Revised total; revisions not distributed by months. <sup>6</sup> Beginning Aug. 1971, net weight basis: 1971 average is for Aug. - Dec. <sup>7</sup> Avg. for Oct.-Dec. <sup>8</sup> Avg. for Nov.-Dec. <sup>9</sup> Season average based on sales through May. <sup>10</sup> For 24 cloths only; for months shown, number of cloths included in average has declined from 47 to 39 for July-Sept. 1973.
 <sup>\*</sup>New series. Effective with Aug. 1973 SURVEY, market price refers to Strict low middling (grade 41) staple cotton, 1½e"; monthly prices back to 1947 are available. <sup>O</sup> Beginning

Aug. 1971, prices are on 480-lb. net-weight bale basis (for earlier months, on 500-lb. gross-weight bale basis); to compute comparable prices for earlier months, multiply farm price by 1.04167. † Effective with the Oct. 1972 SURVEY, series restated on an unadjusted basis. 9 Includes data not shown separately. 5<sup>7</sup> Effective Nov. 1972, specifications were changed: Print cloth, to 64x56; sheeting, to 47x44.

December 1

Revised. <sup>1</sup> Annual total includes revisions not distributed by months. <sup>2</sup> Estimate of production, not factory sales. <sup>3</sup> Effective Feb. 1972, imports include trucks valued less than \$1,000 each. <sup>4</sup> Excludes 1 State. <sup>5</sup> Excludes 2 States. <sup>‡</sup> Revisions appear in Census reports, Men's and Women's Selected Monthly Apparel Cuttings, 1970-72, Revised and 1971-72 (MA-23A Supplements), Feb. and Sept. 1973. Beginning 1973, a new panel of items is planned for men's apparel; data are not presently available.

9 Total includes backlog for nonrelated products and services and basic research. ∆Domestics include U.S.-type cars produced in the United States and Canada; imports cover foreign-type cars and captive imports, and exclude domestics produced in Canada. ¶Effective Sept. 1973 SURVEY, data include imports of separate chassis and bodies; com-parable data for Jan.-June 1972 appear in the Sept. 1973 SURVEY. ⊙Courtesy of R. L. Polk & Co.; republication prohibited. §Excludes rallroad-owned private refrigerator cars and private line cars.
