UNITED STATES DEPARTMENT OF COMMERCE / BUREAU OF ECONOMIC ANALYSIS

June 1988 / Volume 68 Number

SURVEY OF CURRENT BUSINESS

U.S. Department of Commerce C. William Verity / Secretary Robert Ortner / Under Secretary for Economic Affairs

Bureau of Economic Analysis Allan H. Young / Director Carol S. Carson / Deputy Director

Editor-in-Chief: Carol S. Carson Managing Editor: Leland L. Scott

Staff Contributors to This Issue: Leo M. Bernstein, David W. Cartwright, Howard L. Friedenberg, Kenneth P. Johnson, Harlan King, Russell C. Krueger, Daniel J. Larkins, Kwok Lee, Jeffrey H. Lowe, William McCormick, Howard Murad, National Income and Wealth Division, Alicia M. Quijano, Vernon Renshaw, Charles S. Robinson, Russell B. Scholl, Eugene P. Seskin, David F. Sullivan, Obie G. Whichard.

SURVEY OF CURRENT BUSINES Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, SURVEY OF CURRENT BUSINESS, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Annual subscription: Second-class mail-\$18.00 domestic, \$22.50 foreign; first-class mail-\$46.00. Single copy-\$6.50 domestic, \$8.13 foreign.

Mail subscription orders and address changes to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Make checks payable to the Superintendent of Documents

Second-class postage paid at Washington, DC and at additional mailing offices. (USPS 337-790).

Inside back cover: BEA Publications

Note.—This issue of the Survey went to the printer on July 11, 1988. It incorporates data from the following monthly BEA news releases: Gross National Product (June 23), Personal Income and Outlays (June 24), and Composite Indexes of Leading, Coincident, and Lagging Indicators (June 29).

the BUSINESS SITUATION

Corporate Profits

PROFITS from current production declined \$2 billion in the first quarter of 1988 after a similar decline in the fourth quarter of 1987. Despite these two declines, profits in the first quarter were \$17 billion higher than a year earlier.

The first-quarter decline resulted from a sharp drop in profits from the rest of the world (ROW) that was not quite offset by an increase in domestic profits. ROW profits plummeted \$12 billion in the first quarter after an increase of about one-half that size in the preceding quarter; domestic profits, which also reversed direction, increased \$10 billion after a decline of \$9 billion. Relative to year-earlier levels, ROW profits were down \$6 billion while domestic profits were up \$23 billion.

The \$12 billion first-quarter drop in ROW profits reflected a \$1 billion decline in profits of U.S.-owned corporations abroad and an \$11 billion increase in profits of foreign-owned corporations in the United States. Usually profits of foreign-owned corporations do not affect national profits because they enter domestic profits as a positive and enter ROW profits as a negative. However, as explained in detail in the May "Business Situation," profits of foreign-owned corporations did affect national profits in the first quarter because the measure included as a positive in domestic profits was smaller than the measure included as a negative in ROW profits. In ROW profits, profits of foreignowned corporations are based on financial accounting standards; about one-third of the sharp increase in the profits of foreign-owned corporations reflected a change in one of these

standards. In domestic profits, in contrast, profits of foreign-owned (as well as U.S.-owned) corporations are based on tax accounting rules; thus changes in financial accounting standards should have no effect.

Profits from current production equals profits before tax (PBT) plus the inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). PBT declined \$4 billion in the first quarter, following an increase of \$1/2 billion, yet was \$24½ billion higher than a year earlier. Inventory profits-the IVA with sign reversed-declined \$5 billion because inventory price inflation slowed. The CCAdj-the difference between depreciation based on tax accounting and economic depreciation as estimated by BEA-declined \$3 billion in the first quarter, reflecting the less liberal depreciation rules in the Tax Reform Act of 1986.

Domestic profits by industry.—Quarterly estimates of the CCAdj are not available by industry. PBT with IVA alone—i.e., PBT less inventory profits—is the best available quarterly measure of profits. For domestic industries, this measure of profits increased \$12½ billion in the first quarter after a decline of \$10 billion in the preceding quarter; profits of nonfinancial corporations dominated these changes, increasing \$12 billion after a decline of \$8½ billion.

Manufacturing profits increased \$8 billion after declining the same amount in the preceding quarter. Within manufacturing, first-quarter increases were widespread; only profits in petroleum refining declined.

Trade profits, which increased \$5 billion after a 31/2 billion decline. have been erratic for some time. Profits have failed to register movements in the same direction in two consecutive quarters since mid-1985 in retail trade and since mid-1984 in wholesale trade, so that undue weight should not be attached to a single quarter's movement. A better indication of trends can be obtained by averaging profits in one quarter with profits in the preceding quarter. Retail trade profits smoothed in this way have not increased for seven quarters, and the level in the first quarter of 1988 was \$4 billion lower than in the second quarter of 1986. Smoothed profits in wholesale trade increased in five of

Looking Ahead . . .

• Annual Revisions of the National Income and Product Accounts. Revised estimates will be presented in the July SURVEY. The revisions cover the 3-year period beginning with the first quarter of 1985.

• Conference Presentations of New Economic Data. Papers and discussion from the "New Horizons in Data Sets" sessions from last May's 50th Anniversary Jubilee of the Conference on Research in Income and Wealth will appear in a fall issue of the SURVEY. The "new horizons" papers present new economic data from U.S. statistical agencies and from Statistics Canada that will be useful for analytical purposes.

the seven quarters, and the level in the first quarter of 1988 was 31/2 billion higher than in the second quarter of 1986.

Profits of financial corporations increased \$1 billion after a decline of \$1¹/₂ billion. Current net earnings of Federal Reserve banks, which are treated as corporate profits in the NIPA's, more than accounted for the increase. For depository institutions, profits were unchanged after declining $1\frac{1}{2}$ billion in the preceding quarter; savings and loan associations reg-

istered losses for the second consecutive quarter.

* * *

Table 1 on page 16 shows the second revision of the NIPA estimates for the first quarter of 1988.

Statistical Conventions Used for NIPA Estimates

Most of the estimates are presented in billions of dollars. The major exceptions are certain current-dollar annual estimates, which are presented in millions of dollars, and estimates presented as index numbers. Current-dollar estimates are valued in the prices of the period in which the transaction takes place. Constantdollar estimates are valued in the prices of a period designated the base period (at present, 1982), thus removing price change from any period-toperiod movement in the series. The designation of 1982 as the base period also means that price levels in 1982 are set equal to 100 in calculating price indexes and implicit price deflators.

For quarters and months, the estimates (except price indexes) are presented at annual rates. Annual rates show values for a quarter or a month at their annual equivalent (that is, the value that would be registered if the rate of activity measured for a month or a quarter were maintained for a full year). Annual rates make it easier to compare values for time periods of different lengths—for example, quarters and years. The percent changes shown in table 8.1 are also at annual rates and are calculated from the published quarterly estimates, which are rounded to the nearest one-tenth of a billion dollars. The annual rates for quarterly percent changes are calculated with the formula:

$$r = \left[\left(rac{Q_t}{Q_{t-1}}
ight)^4 - 1
ight] imes 100,$$

where r = the percent change at an annual rate, and Q_t and $Q_{t-1} =$ the quarterly estimates for a quarter and the preceding quarter, respectively.

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. The statistical procedures used are based on historical experience; the Census Bureau's X-11 program is widely used. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

National Income and Product Accounts Tables

Selected NIPA Tables

New estimates in this issue: First quarter 1988, revised (7).

The selected set of 52 national income and product accounts (NIPA) tables shown in this section presents quarterly estimates, which are updated monthly. (In most of these tables, annual estimates are also shown.) The full set of 130 tables usually shown in July presents annual NIPA revisions. For more information on the presentation of the estimates, see "National Income and Product Accounts Estimates: When They are Released, Where They Are Available, and How They Are Presented" in the January 1988 SURVEY.

The full set of estimates for 1984-86 is in the July 1987 issue of the SURVEY; estimates for 1983 are in the July 1986 issue. Estimates for 1929-82 are in National Income and Product Accounts, 1929-82: Statistical Tables (GPO Stock No. 003-010-00174-7, price \$23.00). These publications are available from the Superintendent of Documents; see address on inside front cover.

The full set of NIPA tables is available on diskette for \$240 per year (12 updates, for the quarterly estimates prepared each month). For more information, write to the Bureau of Economic Analysis (BE-54), U.S. Department of Commerce, Washington, DC 20230.

1. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (first-in, first-out; lastin, first-out; etc.) underlying book value inventories derived primarily from Census Bureau statistics. This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics. Prior to 1973, the two IVA's are the same because information required for separate estimates is not available.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current dollar change in business inventories (CBI) component of GNP. The former is the difference between two inventory stocks, each valued at their respective endof-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates. 2. Quarterly totals at monthly rates. Business final sales equals final sales less gross product of households and institutions, government, and rest of the world, and includes a small amount of final sales by farms.

1. Inventories are as of the end of the quarter. Quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the constant-dollar change in business inventories component of GNP is stated at annual rates. 2. Quarterly totals at monthly rates. Business final sales equals final sales less gross product of households and institutions, government, and rest of the world, and includes a small amount of final sales by farms.

Norz.—The fixed-weighted price index and the chain price index, both of which are weighted averages of the detailed prices used in the deflation of GNP, are measures of price change. In calculating changes in these indexes, the composition of GNP is held constant. Consequently these changes reflect only changes in prices. The fixed-weighted price index measures price change over any period, using as weights the composition of GNP in 1982. The chain price index measures price change between two consecutive periods, using as weights the composition of GNP in the first period. The implicit price deflator is a byproduct of the deflation of GNP. It is derived as the ratio of current to constant-dollar GNP (multiplied by 100). It is the average of the detailed prices used in the deflation of GNP, but the prices are weighted by the composition of GNP in each period. Consequently, the implicit price deflator reflects not only changes in prices but also changes in the composition of GNP, and its use as a measure of price change should be avoided.

Recent Data and Percent Changes

^r Revised. ^p Preliminary.

Nore.-Quarterly data are averages of monthly figures. Quarterly percent changes are computed from quarterly data.

Note.—Peak (P) indicates the end of business cycle expansion and the beginning of recession (shaded area). Trough (T) indicates the end of business cycle recession and the beginning of 'expansion. Business cycle peaks and troughs are designated by the National Bureau of Economic

Research, inc. The humbers entered on the chart indicate the rengin of reads (--) and lags (+-) in months from the business cycle turning dates. 1. Beginning with data for January 1984, the net business formation component has been suspended from this index.

U.S. Department of Commerce, Bureau of Economic Analysis

Plant and Equipment Expenditures, the Four Quarters of 1988

BUSINESS plans to spend \$430.2 billion for new plant and equipment (P&E) in 1988, 10.7 percent more than in 1987, according to the BEA survey conducted in April and May (tables 1 and 2, and chart 1).1 Spending was \$388.6 billion in 1987, 2.4 percent more than in 1986. The latest estimate of planned spending for 1988 is \$7.3 billion higher than that reported in April for the survey conducted in January through March. Although first-quarter spending was lower than planned,

P&E expenditures differ from nonresidential fixed investment, which is a component of GNP, in type of detail, data sources, coverage, and timing. For further information, see pages 24-25 of the February 1985 SURVEY OF CURRENT BUSINESS.

spending plans for the remainder of 1988 were revised up. The previous survey showed planned spending of \$423.0 billion for 1988, 8.8 percent more than in 1987.²

Real spending-capital spending adjusted to remove price changes-is estimated to increase 11.9 percent in 1988; in the previous survey, an 8.0percent increase was estimated. Real spending increased 1.7 percent in 1987, following a decline of 2.6 percent in 1986 (tables 2 and 3). Estimates of real spending are calculated

2. The estimates of planned spending have been adjusted for systematic reporting biases. The bias adjustments are calculated by industry for each planning horizon. For a given time period, the bias-adjustment factor is the median of the ratios of planned to actual expenditures for that time period in the preceding 8 years. Before adjustments, 1988 planned spending was \$424.13 billion for "all industries," \$168.55 billion for manufacturing, and \$255.58 billion for nonmanufac-turing industries surveyed quarterly.

Surveyed quarterly.
 Includes industries not shown separately.

CHART 1

^{1.} The survey covers expenditures for new facilities and for repair, expansion, or replacement of existing facilities that are chargeable to fixed asset accounts and for which depreciation or amortization accounts are ordinarily maintained. The survey excludes expenditures for land and mineral rights; maintenance and repair that are not capitalized; used plant and equipment, including that purchased or acquired through mergers or acquisitions; assets located in foreign countries: residential structures: and a few other items.

The estimates presented are universe totals of domestic P&E expenditures for all industries surveyed quarterly, which account for nearly 90 percent of cap-ital spending by U.S. nonfarm business. Sample data are compiled from reports on a company basis, not from separate reports for plants or establishments. A company's capital expenditures are assigned to a single industry in accordance with the industry classification of the company's principal product or service.

1. Estimates are based on planned capital expenditures reported by business in April and May 1988. The planned expenditures are adjusted for systematic biases in reporting. The adjustment procedures are described in the February 1985 SURVEY OF CURRENT BUSINESS. Before bias adjustment, current-dollar plans for 1988 were \$42.13 billion for "all industries," \$186.55 billion for manufacturing, and \$255.58 billion for nonmanufacturing industries surveyed quarterly. 2. Surveyed quarterly.

Surveyed quarverry.
 Includes industries not shown separately.
 Consists of lumber, furniture, instruments, and miscellaneous.
 Consists of tobacco, apparel, printing-publishing, and leather.
 Includes construction.
 The latest estimates for the industries surveyed annually are based on data reported by busi-

ness in January through March 1988. The current-dollar plans for 1988 were \$477.12 billion for total nonfarm business, \$317.44 billion for total nonmanufacturing, and \$54.16 billion for non-manufacturing industries surveyed annually. The constant-dollar plans for 1988 were \$475.38 bil-lion for total nonfarm business, \$313.58 billion for total nonmanufacturing, and \$55.46 billion for nonmanufacturing industries surveyed annually.

nonmanufacturing industries surveyed annually.
8. "All industries" plus the part of nonmanufacturing that is surveyed annually.
9. Consists of real estate; professional services; membership organizations and social services; and forestry, fisheries, and agricultural services.
10. Procedures for preparing constant-dollar estimates are described in the February 1985 SURVEY. To estimate real spending plans, BEA adjusts the survey results for assumed price changes. Estimates for the fourth quarter and the year 1987 have been revised.

Table 3.—New Plant and Equipment Expenditures by Business in Constant (1982) Dollars [Percent change from preceding year]

^r Revised 1. Surveyed quarterly.

from survey data on current-dollar spending and from estimated capital goods price deflators developed by BEA.³ The capital goods deflator for "all industries" is projected by BEA to decline 1.1 percent in 1988; the deflator increased 0.7 percent in 1987 and 0.6 percent in 1986.

The latest estimates indicate a larger upward revision in planned real spending than in planned current-dollar spending because of changes in the capital goods price de-flator for "all industries." The projected decline in the deflator contrasts with the 0.8-percent increase reported in April because the four quarters on which the latest projection is based now incorporate a decline in the deflator in the first quarter of 1988, rather than an increase in the first quarter of 1987. If the previously projected deflator were used to adjust the latest survey results, a 9.9-percent increase in real spending would be indicated for 1988.

Current-dollar spending in the first quarter of 1988 increased 0.1 percent, to an annual rate of \$409.7 billion, following a 4.1-percent increase in the fourth quarter of 1987. First-quarter spending was 3.1 percent lower than anticipated in the previous survey. Plans reported in the latest survey indicate a 4.7-percent increase in the second quarter of 1988, a 2.1-percent increase in the third, and a 1.3-percent increase in the fourth. Real spending increased 1.0 percent in the first quarter of 1988, following a 3.8-percent increase in the fourth quarter of 1987. Estimates indicate a 4.8-percent increase in the second quarter of 1988, a 2.2-percent increase in the third, and a 1.8-percent increase in the fourth.

The small increase in capital spending in the first quarter of 1988 and the upward revision in 1988 spending plans occurred when indicators of future investment activity were generally improving. In the first quarter, both new orders of durable goods and new orders of nondefense capital goods increased for the fourth consecutive quarter. Real final sales of GNP, both including and excluding transactions of the Commodity Credit Corporation, also increased in the first quarter, following little change in the fourth quarter of 1987. Manufacturing capacity utilization in-creased for the sixth consecutive quarter, to its highest level since the first quarter of 1980. Several indicators of corporate ability to finance capital expenditures, including domestic corporate profits (both before and after tax) and domestic corporate net cash flow, also increased in the first quarter, following declines in the fourth quarter of 1987. In addition, interest rates as measured by Moody's corporate bond yield declined, following three consecutive quarterly increases.

Manufacturing Programs

In manufacturing, current-dollar spending increased 3.2 percent in the first quarter of 1988, to an annual rate of \$157.8 billion, following a 3.6percent increase in the fourth quarter of 1987. Durable goods increased 3.7 percent in the first quarter of 1988, and nondurables increased 2.8 percent. Manufacturers plan a 3.2-percent increase in the second quarter, a 1.8-percent increase in the third, and little change in the fourth.

For the year 1988, manufacturers plan to spend \$163.0 billion, 12.1 percent more than in 1987; in the previous survey, a planned increase of 9.8 percent was reported. Manufacturers' spending increased 1.9 percent in 1987, following a 7.0-percent decline in 1986.

Durable goods industries plan a 9.5percent increase for 1988; the largest planned increases are in blast furnaces-steel works, nonferrous metals, and electrical machinery. Large increases are also planned in "other durables," machinery (except electrical), and stone-clay-glass. Smaller increases are planned in fabricated metals and aircraft. A 4.0-percent decline is planned in motor vehicles. Nondurable goods industries plan a 14.5-percent increase for 1988; the largest planned increase is in paper. Large increases are also planned in "other nondurables," food-beverage, chemicals, petroleum, rubber, and textiles.

Real spending by manufacturers is estimated to increase 12.9 percent for 1988—11.6 percent in durables and 14.2 percent in nondurables. In 1987, real spending increased 1.1 percent— 2.1 percent in durables and 0.2 percent in nondurables.

Nonmanufacturing Programs

In nonmanufacturing, currentdollar spending declined 1.8 percent in the first quarter of 1988, to an annual rate of \$251.9 billion, following a 4.5-percent increase in the fourth quarter of 1987. Nonmanufacturing industries plan a 5.7-percent increase in the second quarter of 1988, a 2.4-percent increase in the third, and a 2.1-percent increase in the fourth.

For the year 1988, nonmanufacturing industries plan to spend \$267.2 billion, 9.9 percent more than in 1987; in the previous survey, a planned increase of 8.3 percent was reported. Nonmanufacturing industries' spending increased 2.7 percent in 1987, following a 1.3-percent increase in 1986. For 1988, the largest planned increases are in air transportation, railroads, and "commercial and other."

^{3.} Specifically, the current-dollar figures reported by survey respondents are adjusted using implicit price deflators developed for each industry from unpublished detail on current- and constant-dollar nonresidential fixed investment in the national income and product accounts. To estimate real spending, the implicit price deflator for each industry is projected using the deflator's growth over the latest four quarters for which it is available.

Large increases are also planned in mining, "other transportation," and gas utilities; a smaller increase is planned in electric utilities.

Real spending by nonmanufacturing industries is estimated to increase 11.3 percent in 1988; it increased 2.0 percent in 1987. For 1988, the largest

increases are estimated in "commercial and other" and transportation; smaller increases are estimated in mining and public utilities.

New plant and equipment expenditures shown in the table below are based on the survey conducted in January through March 1988 and include estimates, not published earlier, for nonmanufacturing industries surveyed only annually. (Estimates from the January-March survey for the manufacturing and nonmanufacturing industries surveyed quarterly were published in the April 1988 SURVEY OF CURRENT BUSINESS.) For the industries surveyed quarterly, the estimates of planned spending for 1988 shown below differ from those shown in the preceding article, which are based on the survey conducted in April and May 1988.

The nonmanufacturing industries surveyed only annually account for about $11\frac{1}{2}$ percent of capital spending by total nonfarm business. Current-dollar spending for the annual-only industries increased 6.8 percent in 1987; spending for new plant increased 8.0 percent and spending for new equipment increased 4.5 percent. Estimates based on the January-March survey indicate a 6.2percent increase in planned spending for 1988, somewhat smaller than the 8.3-percent increase planned by nonmanufacturing industries surveyed quarterly.

Tracking the BEA Regional Projections, 1983-86

BEA's projections of population growth for 1983-86 are within narrow margins of error in most regions, but the projections of employment growth show wider margins of error in most industries and regions. These results are from comparisons of projected percent changes from BEA's most recent long-term regional projections with measured changes. The projections, which are based on growth trends through 1983, were published in 1985. Because trends change, the projections are tracked to alert users to the industries and regions in which

Nore.—John Turner provided statistical and programming assistance.

the projections have missed the mark and to help BEA prepare the next set of projections.¹

Employment growth

For the Nation, projected growth in total employment is 2.8 percentage

1. The projections for 1990 and 2000 appeared in the May 1985 SURVEY OF CURRENT BUSINESS. Projections for 1986, based on interpolation, are available from the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. The measured employment and population levels through 1986 are available from the Regional Economic Measurement of Division, BE-55, at the same address. (Employment estimates for 1987 have not yet been completed.) Earlier articles tracking BEA's regional projections appeared in the April 1976 and May 1983 issues of the SURVEY. The next set of BEA long-term regional projections is scheduled for publication in 1990. points less than measured growth (tables 1 and 2). The difference reflects partly offsetting industry patterns: In service-type industries, projected employment growth is 6.1 percentage points less than measured, and in goods-producing industries, projected growth is 6.3 percentage points more than measured (table 3). The offset is partial because the number of jobs in goods-producing industries is substantially less than in service-type industries.

Growth in service-type employment was underprojected because the projections did not fully account for the

1. Consists of Virginia, North Carolina, South Carolina, Georgia, and Florida.

2. Consists of West Virginia, Kentucky, Tennessee, Arkansas, Louisiana, Mississippi, and Alabama.

NOTE.—Negative differences indicate underprojections, and positive differences indicate overprojections. Within the service-type group, the industries are listed from left to right by size of underprojection, and within the goods-producing group, the industries are listed from left to right by size of overprojection.

continuing strength of the service economy. In addition, projected and measured growth were based on different concepts of self-employment.² The difference in concept contributed to shortfalls between the projected and the measured growth of self-employment, mainly in the real estate, personal services, business services, and miscellaneous repair services industries. Goods-producing employment, in contrast, was overprojected because the projections did not fully anticipate the employment effects of declines in farm and energy prices and the uncharacteristically slow recovery of durable goods manufacturing from the 1981-82 recession.

The industrial patterns of underprojection and overprojection have different effects on regions, inasmuch as regions' industry specializations differ. In general, the underprojection of service-type employment, while affecting all regions, most affects regions along the Atlantic and Pacific coasts (including the part of the Southeast region on the Atlantic coast), and the overprojection of

goods-producing employment most affects interior regions (including the other States in the Southeast region).

Coastal regions.-Unexpectedly, employment growth in service-type industries and construction far exceeded growth in other industries during the recovery from the 1981-82 recession; in each coastal region, projected employment growth in these industries—and in the all-industry total fell substantially short of measured growth. In the Far West and coastal Southeast, the national defense buildup early in the expansion benefited research and development and other services as well as construction. The national defense buildup also benefited New England and the Mideast. In addition, these regions provided business and professional services to growing national and international markets, and the gains in these service industries stimulated construction activity. (New England and the Mideast had not participated in the late 1970's construction boom, which had been centered in interior regions, where sharp price increases for farm commodities and oil stimulated growth.)

In the Mideast, despite the large underprojections of employment growth in service-type industries and construction, total employment growth was underprojected less than in any other coastal region. The major reason was a partly offsetting, large overprojection of employment growth in durables manufacturing. The overprojection for Pennsylvania, in particular, reflected the failure of the primary metals (steel) industry to recover from the 1980 and 1981-82 recessions in the face of import competition.

Interior regions.—Largely reflecting unexpected developments in goodsproducing industries, the Rocky Mountain, Southwest, and interior Southeast regions show overprojections of total employment growth, and the Plains and Great Lakes regions show relatively small underprojections.

In the Rocky Mountain and Southwest regions, total employment, projected to grow faster than in the Nation in 1983-86, grew more slowly. The overprojections were mainly due to the direct and indirect effects of declines in energy-related mining. Declining oil prices—especially the sharp drop in 1986—substantially curtailed oil and gas exploration, coal mine development, and related activities such as construction and financial services; strength in these activi-

^{2.} The 1986 comprehensive revisions to the State personal income series (see the August 1986 SURVEY OF CURRENT BUSINESS) introduced a job count measure of self-employment. In 1985, when the projections were published, self-employment was mainly a count of persons. The person count measure is lower than the job count measure because of multiple job holding.

ties had contributed to rapid employment growth in these regions before 1983.

Large overprojections of total employment growth due to declines in energy-related mining extended to States outside the Rocky Mountain and Southwest regions—notably, Alaska, North Dakota, Louisiana, and West Virginia. The energy-related overprojections in Louisiana and West Virginia were especially large and offset underprojections of total employment growth in other States in the interior Southeast region.

In the Plains region, total employment-although projected to grow more slowly than in the Nationgrew even more slowly than had been projected, largely reflecting unexpected weakness in the farm economy. In the 1970's, a long-term decline in the number of farm proprietors appeared to be bottoming out, as high prices encouraged farmers to retain, and even to expand, their businesses. In the first half of the 1980's, a falloff in farm prices and high interest rates led to increased bankruptcies and continued decline in the farm economy. Employment in farm-related construction and trade, in turn, was adversely affected.

In the Great Lakes region, employment growth in goods-producing industries—in particular, durables manufacturing—was overprojected. Durables employment in the region was weak in the 1981-82 recession, as is typical in recessions. Uncharacteristically, durables employment—except in motor vehicles—did not recover strongly after the recession; in the face of competition from imports and from regions with lower labor costs, firms laid off workers and closed plants to cut costs. An underprojection of employment in service-type industries more than offset the overprojection in goods-producing industries, resulting in a total employment underprojection about equal to the national average.

Population growth

Projected growth in population for the Nation (2.8 percent) was close to measured growth (2.9 percent). All the regions projected to grow at a slower rate than the Nation did so, and all the regions projected to grow at a faster rate than the Nation except the Rocky Mountain region did so (table 4). The Rocky Mountain region, projected to grow faster than any other region in 1983-86, grew more slowly than the national average. The overprojection was mainly due to sharp declines in job opportunities in energy-related industries.

The other regions for which BEA overprojected population growth are the Plains, interior Southeast, New England, and Mideast regions. In each, population in 1983-86 grew more slowly than in the Nation. In New England, the overprojection occurred despite large gains in employment; this overprojection reflected a wider gap than was expected in the responsiveness of population migration to growing job opportunities in a region with a longstanding trend of relatively slow employment growth.

The regions for which BEA underprojected population growth are the Far West, coastal Southeast, and Southwest regions. In the Southwest, the underprojection occurred despite weakness in employment, reflecting in the converse of the New England case—a wider gap than was expected in the responsiveness of population migration to reduced job opportunities.

1. Percentage-point difference between projected and measured percent changes, 1983-86. A negative difference indicates an underprojection, and a positive difference indicates an overprojection.

U.S. International Transactions, First Quarter 1988

THE U.S. current-account deficit increased to \$39.8 billion in the first quarter of 1988 from \$33.5 billion in the fourth quarter of 1987.1 The increase was more than accounted for by a \$12.7 billion shift in the net services balance to a deficit of \$0.7 billion from an unusually high fourth-quarter surplus of \$12.0 billion. The shift

was primarily due to changes in direct investment income transactions. Receipts of income on U.S. direct investment abroad were sharply lower due to a substantial reduction in capital gains from currency translation; payments of income on foreign direct investment in the United States were higher due to a shift from capital losses to small gains and a change in a financial accounting standard. The merchandise trade deficit decreased to \$35.9 billion from \$41.2 billion, as a strong increase in exports exceeded the increase in imports. Net unilateral transfers decreased \$1.2 billion to \$3.2 billion.

A large increase in foreign official assets in the United States mostly reflected placement of dollars in the United States by foreign monetary authorities. U.S. official reserve assets decreased.

In the private capital accounts, large reductions in both U.S. bank claims on foreigners and U.S. liabil-

1. Quarterly estimates for U.S. current- and capitalaccount components are seasonally adjusted when statistically significant seasonal patterns are present.

Preliminary.
 Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
 Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.
 Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.

ities to foreigners mostly reflected repayments of earlier borrowing in the interbank market.

In securities transactions, net purchases of U.S. Treasury securities by private foreigners increased strongly, partly reflecting rising bond prices and the relative stability of the dollar during the quarter. There was a shift to net foreign purchases of other U.S.

160 150 140 22 OECD currencies 130 120 10 currencies 110 100 90 80 L 1987 1988 1985 1986 Australia, Austria, Belgium-Luxembourg, Canada, Denmark, Finland, France, Germany, Gre New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. ece, Iceland, Ireland, Italy, Japan, Netherlands

securities after a record selloff in the fourth quarter. Net U.S. purchases of foreign securities increased.

Outflows for U.S. direct investment abroad decreased sharply, mostly because smaller capital gains resulted in lower reinvested earnings. Inflows for foreign direct investment in the United States slowed somewhat but remained strong.

The statistical discrepancy (errors and omissions in reported transactions) was an inflow of \$3.0 billion, following an inflow of \$16.3 billion.

Technical notes, which follow the text, describe revisions to the estimates of U.S. international transactions, including changes to the enduse classification system for merchandise trade.

U.S. dollar in exchange markets

In the first quarter, the U.S. dollar depreciated 2 percent on a tradeweighted quarterly average basis against the currencies of 10 industrial countries, but appreciated 6 percent against the currencies of 22 OECD countries. This relative stability was in contrast to the dollar's sharp depreciation in the fourth quarter.

The dollar began the quarter at historic lows against many major currencies. It sharply appreciated early in the quarter, partly due to concerted intervention purchases of U.S. dollars and to interest rate reductions in several European countries. Also, in mid-January, a joint United States-Japanese statement pledged support adequate to maintain stability between the dollar and yen.

From mid-January until mid-March, the dollar was essentially stable against the yen and the Euro-

pean Monetary System (EMS) currencies, but depreciated against the currencies of several countries with robust growth and high interest rates. The Canadian dollar was particularly attractive for these reasons and rose against the U.S. dollar despite extensive intervention by Canadian authorities. The British pound was also attractive for these reasons and because of indications that British authorities would not intervene to prevent some appreciation of the pound relative to the mark and other EMS currencies. The pound appreciated nearly 7 percent against the dollar between mid-February and mid-March, before a drop in U.K. interest rates and intervention sales of pounds by British authorities (mostly against the mark) began to slow the rise in the pound.

Depreciation of the dollar against the yen resumed during the last 2 weeks of the quarter, possibly because Japanese corporations sold dollars in preparation for their end-of-fiscal-year accounting.

On a quarterly average basis, the dollar depreciated 6 percent against the Japanese yen, 3 percent against the Canadian dollar and British pound, and 1 to 2 percent against the EMS currencies.

Merchandise trade

88-6-3

The merchandise trade deficit decreased to \$35.9 billion in the first

quarter from \$41.2 billion in the fourth, as a strong increase in exports exceeded the increase in imports. Both exports and imports rose to record levels.

Exports.—Exports increased \$6.7 billion, or 10 percent, to \$74.7 billion; volume increased 8 percent. Both agricultural and nonagricultural exports increased. Spurred by the cumulative effect of the depreciation of the U.S. dollar, which has sharply lowered the foreign currency cost of U.S. exports, exports have increased 31 percent in value and 28 percent in volume since the first quarter of 1987. The share of U.S. goods production that is exported has increased to a record 18.8 percent from 15.9 percent in the first quarter of 1987.

The values and volumes of all major end-use categories have increased during the past year (charts 3 and 4). The similarity between the value and volume patterns since the first quarter of 1987 indicates that commodity export prices have been relatively stable over the period. This stability suggests that U.S. exporters in general have taken advantage of the depreciation of the dollar to build export volume and market share abroad rather than to increase profit margins on exported goods. The exceptions to the general picture of price stability are in industrial supplies and materials excluding nonmonetary gold, where rising prices in commodity markets worldwide have contributed to higher U.S. export prices, and in computers and other office and business machines, where rapid improvements in productivity and technology have contributed to price decreases.

Agricultural exports increased \$1.4 billion, or 18 percent, to \$9.0 billion; volume increased 14 percent. Wheat increased \$0.4 billion to \$1.3 billion; the increase was entirely in shipments to the Soviet Union under a U.S. export promotion program. Since the first quarter of 1987, wheat exports have doubled; two-thirds of the increase has been accounted for by the Soviet Union. Corn increased \$0.2 billion, and soybeans, \$0.1 billion. Industrial supplies and materials increased \$0.3 billion, led by a \$0.2 billion increase in tobacco.

Nonagricultural exports increased \$5.3 billion, or 9 percent, to a record \$65.7 billion; volume increased 8 percent. Industrial supplies and materi**Current- and Constant-Dollar**

als increased \$2.5 billion to \$19.4 billion. The increase was broadly based: an exception was a small decrease in fuels and lubricants. Nonmonetary gold increased \$1.0 billion to \$1.9 billion. Continuing purchases by Taiwan accounted for most of the increase: several other Southeast Asian countries made smaller purchases.

Capital goods increased \$2.3 billion to \$26.4 billion. The broadly based increase was led by computers and peripheral equipment, up \$0.6 billion, and civilian aircraft, up \$0.4 billion.

Automotive products decreased slightly to \$7.6 billion. Exports to Canada remained strong, but were \$0.3 billion less than the record shipments of \$5.7 billion in the fourth quarter. Recent strength in exports of complete cars to Canada may reflect both the strength of the Canadian economy and some shift in Canadian imports from more expensive Japanese cars. Exports to other areas increased \$0.3 billion to a record \$2.2 billion.

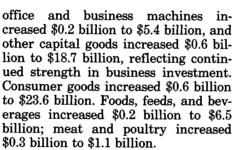

Consumer goods increased \$0.5 hillion to \$5.3 billion. Durables increased 15 percent, and nondurables, 7 percent.

Imports.-Imports increased \$1.4 billion, or 1 percent, to \$110.6 billion: volume increased 1 percent. Nonpetroleum imports increased, and petroleum imports decreased.

Import volume increases have slowed in recent quarters (charts 5 and 6). Volume increases have been held down by the increased dollar cost of imports and, for consumption-oriented imports, by stable real consumer demand, as measured by personal consumption expenditures for goods in constant (1982) dollars. The share of imports in real gross domestic purchases excluding services was 20.7 percent in the first quarter, virtually unchanged over the last three quarters. Price increases have continued to push import values higher.

Nonpetroleum imports increased \$2.7 billion, or 3 percent, to a record \$100.6 billion; volume increased less than 1 percent. Industrial supplies and materials increased \$1.5 billion to \$21.4 billion. Much of the large amount of nonmonetary gold imported during the last two quarters was subsequently exported to Taiwan and several other Southeast Asian countries, as previously mentioned.

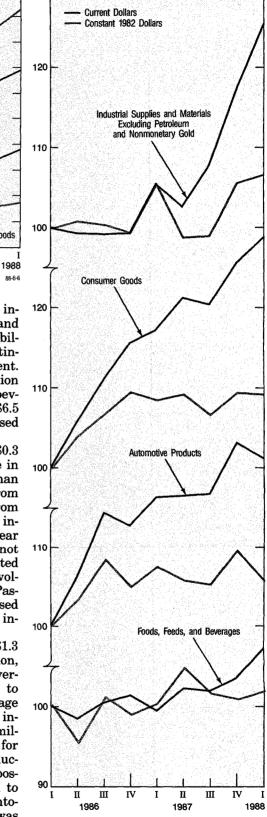

Capital goods increased \$0.8 billion to \$24.1 billion. Computers and other

Automotive products decreased \$0.3 billion to \$21.9 billion. An increase in new cars from Canada was more than offset by a decrease in new cars from other areas. The number of cars from Japan decreased 30 percent; prices increased 4 percent. For the year ending March 1988, Japan did not export as many cars to the United States as allowed under Japan's voluntary export restraint program. Passenger cars from Germany decreased 15 percent; cars from South Korea increased 27 percent.

Petroleum imports decreased \$1.3 billion, or 12 percent, to \$10.0 billion, entirely due to lower prices. The average price per barrel decreased to \$15.24 from \$17.46; the average number of barrels imported daily increased to 7.16 million from 7.08 million. High production quotas for OPEC members, increases in production by non-OPEC countries, and possible price discounting contributed to the price decline. Domestic inventories rose strongly and production was unchanged.

U.S. Department of Commerce, Bureau of Economic Analysis 88-6-5

Service transactions

The net services balance shifted to a deficit of \$0.7 billion in the first quarter, compared to an unusually large surplus of \$12.0 billion in the fourth. Receipts decreased \$7.1 billion to \$44.2 billion, and payments increased \$5.6 billion to \$44.8 billion; both changes were primarily due to direct investment income.

Receipts of income on U.S. direct investment abroad decreased to \$11.1 billion from a record \$19.2 billion. Nearly all the decrease was accounted for by a decrease in capital gains to \$1.1 billion from \$9.0 billion in the fourth quarter, when currency translation gains, especially in Western Europe, were exceptionally large. Operating earnings slipped \$0.2 billion to \$10.5 billion.

Payments of income on foreign direct investment in the United States increased \$5.3 billion to a record \$5.6 billion, as fourth-quarter capital losses shifted to small gains and as earnings increased. The increase partly reflected a change in a financial accounting standard that increased reported income of some foreign-owned U.S. affiliates.

Receipts of income on other private investment abroad decreased \$1.0 billion to \$11.9 billion; the decrease was due to lower interest rates and a decrease in bank-reported claims. U.S. Government income receipts increased \$0.9 billion to \$2.1 billion; a rescheduling of interest receipts with Egypt accounted for most of the increase.

Payments of income on other private investment in the United States decreased \$0.8 billion to \$13.4 billion; most of the decrease was due to lower interest rates and a large decrease in U.S. bank liabilities to foreigners. U.S. Government income payments increased \$0.4 billion to \$6.6 billion.

Travel receipts increased slightly to \$4.0 billion. Receipts from overseas visitors were up 10 percent; a continued increase in the number of visitors was probably associated with the depreciation of the dollar. Receipts from Canada increased, and those from Mexico decreased. Travel payments increased \$0.2 billion to \$5.6 billion; most of the increase was accounted for by increased air and land travel to the Mexican interior. Payments to Canada and overseas areas were up slightly.

^p Preliminary. 1. Constant-dollar estimates will be revised in July to incorporate new deflation procedures.

Passenger fare receipts increased \$0.2 billion to \$1.7 billion. During the past year, the number of travelers on U.S. flag carriers from developed countries increased by 50 percent, due largely to the depreciation of the dollar. Lesser depreciation or appreciation of the dollar against the currencies of many developing countries has contributed to an increase in travelers from developing countries of less than 20 percent, including an increase of only 2 percent from Latin America. Passenger fare payments decreased slightly to \$2.2 billion.

Other transportation receipts increased \$0.3 billion to \$4.7 billion. Payments increased \$0.2 billion to \$5.0 billion.

Receipts from unaffiliated foreigners for other private services (e.g. reinsurance, securities commissions, communications, etc.) were unchanged at \$2.8 billion. Receipts of commissions on securities transactions decreased, due to a decrease in the volume of stock transactions. Payments decreased \$0.1 billion to \$2.0 billion; the decrease was more than accounted for by lower securities commissions.

Transfers under U.S. military agency sales contracts increased \$0.4 billion to \$2.6 billion; the increase mostly reflected increased deliveries of aircraft and missiles. Direct defense expenditures abroad were unchanged at \$3.4 billion.

Unilateral transfers

Net unilateral transfers decreased \$1.2 billion to \$3.2 billion due to lower U.S. Government grants. A few countries had received large portions of their annual grants in the fourth quarter, the first quarter of the U.S. Government fiscal year.

U.S. assets abroad

U.S. assets abroad decreased \$8.9 billion in the first quarter of 1988, compared to an increase of \$38.9 billion in the fourth quarter of 1987.

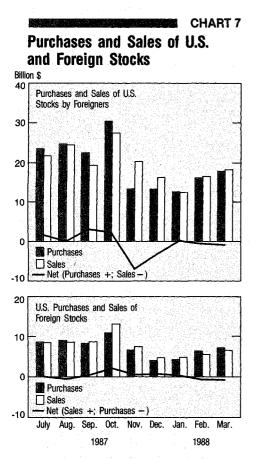

U.S. official reserve assets.—U.S. official reserve assets decreased \$1.5 billion in the first quarter, compared to \$3.7 billion in the fourth. Most of the decrease reflected intervention sales of foreign currency holdings.

Claims reported by banks.—U.S. claims on foreigners reported by U.S. banks decreased \$17.4 billion in contrast to an increase of \$23.5 billion. U.S. banks' dollar claims on own foreign offices and on unaffiliated banks decreased \$13.6 billion, mostly in January; earlier borrowing was repaid and interest rate differentials, which had favored depositing abroad in the fourth quarter, narrowed. Claims on most areas decreased; an increase in claims on Japan was a notable exception.

U.S. banks' dollar claims on foreign public borrowers and other private foreigners decreased \$5.1 billion compared to \$1.8 billion. Claims on foreign public borrowers in Latin America continued to decrease. A decrease with Mexico partly reflected the exchange of some U.S. bank claims for a special Mexican Government bond. The U.S. Government's imposition in February of restrictions on the transfer by U.S. banks of funds to Panama contributed to the decrease in claims. Also, international financial institutions made repayments on earlier borrowing.

U.S. banks' dollar claims for domestic customers' accounts increased \$0.5 billion compared to \$3.4 billion.

Claims payable in foreign currencies increased \$1.0 billion compared to \$8.6 billion.

U.S. Department of Commerce, Bureau of Economic Analysis 88-6

Foreign securities.—Net U.S. purchases of foreign securities were \$4.4 billion compared to \$1.8 billion. A resumption of net purchases of foreign stocks after the large fourth-quarter selloff was partly offset by reduced purchases of foreign bonds.

Net U.S. purchases of foreign stocks were \$0.7 billion following record net sales of \$3.9 billion. As indicated in chart 7, net purchases of foreign stocks resumed in February and March, when stock prices in major markets rose sharply. Net purchases in Japan accounted for most of the shift, as Japanese stock prices increased to near record levels. Gross transactions in foreign stocks remained below levels prior to the October plunge in stock prices.

Net U.S. purchases of foreign bonds were \$3.7 billion compared to \$5.7 billion. New foreign bonds issued in the United States were \$2.1 billion compared to \$3.7 billion. Placements by Canada were slightly higher, while placements by other areas and international financial institutions declined. Net U.S. purchases of special Mexican Government bonds, mentioned above, were about \$0.3 billion. The bonds were issued in March in exchange for deeply discounted public sector debt held by U.S. banks and were collateralized by special nonmarketable U.S. Treasury zero-coupon bonds.

Net U.S. purchases of outstanding foreign bonds were \$1.7 billion compared to \$2.0 billion. Continued purchases of British gilt-edge bonds and a shift to net purchases of Canadian bonds probably reflected widening interest differentials in favor of longterm assets denominated in pounds and Canadian dollars, as well as the strength of those currencies in exchange markets. Transactions in Japanese bonds shifted to net sales.

Direct investment.—Net outflows for U.S. direct investment abroad were \$4.8 billion compared to \$19.7 billion. Reinvested earnings fell to \$3.6 billion from \$15.8 billion, due to lower capital gains; distributed earnings increased. Equity capital shifted to inflows of \$0.8 billion from outflows of \$2.8 billion, as several companies sold foreign petroleum interests. In the United Kingdom, a petroleum company purchased in the fourth quarter was resold in the first, and in Latin America and in other developing countries, interests in several petroleum operations were sold. Intercompany account debt outflows increased to \$2.0 billion from \$1.1 billion.

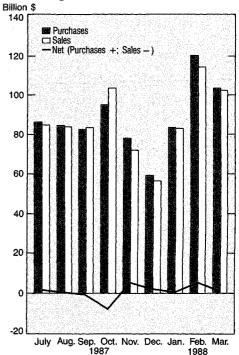

Foreign assets in the United States

Foreign assets in the United States increased \$27.9 billion in the first quarter of 1988, compared to an increase of \$56.1 billion in the fourth quarter of 1987.

Foreign official assets.—Foreign official assets in the United States increased a record \$24.4 billion in the first quarter compared to \$20.0 billion in the fourth. The increase reflected placement of dollars in the United States by monetary authorities of key industrial countries and some increases in dollar assets of smaller industrial countries in Western Europe. Assets of OPEC members continued to decrease. Assets of other countries, particularly several Southeast Asian countries, increased.

Liabilities reported by banks.-U.S. liabilities to private foreigners and

Purchases and Sales of U.S. Treasury Securities by Private Foreigners

U.S. Department of Commerce, Bureau of Economic Analysis 88-68

international financial institutions reported by U.S. banks, excluding U.S. Treasury securities, decreased \$16.0 billion in contrast to an increase of \$29.8 billion. Decreases in dollar liabilities to own foreign offices and to unaffiliated banks were widespread in January, as earlier borrowing was repaid; an exception was Japan, where liabilities to own foreign offices increased. Dollar liabilities to other private foreigners and international financial institutions increased \$0.4 billion, compared to a decrease of \$3.3 billion.

Liabilities payable in foreign currencies increased \$1.6 billion, compared to \$9.2 billion; the smaller increase partly reflected the relative stability of the dollar.

An increase in U.S. banks' custody liabilities was mostly with U.S. banks' offices in the Caribbean.

U.S. Treasury securities.-Net foreign purchases of U.S. Treasury securities by private foreigners and international financial institutions were \$7.0 billion compared to \$0.5 billion (chart 8). In February and March. the volume of transactions surged to record levels, reflecting the steady increase in bond prices, increased investor confidence that the dollar had stabilized, and a shift toward higher yielding longer term assets. European investors continued net purchases during the first quarter; Japanese investors, who account for about onehalf of transactions, shifted from net sales in the fourth quarter to small net purchases in the first.

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$2.3 billion in contrast to net sales of \$5.0 billion. Net sales of stocks slowed substantially, and net purchases of U.S. bonds slowed slightly.

Net foreign sales of U.S. stocks slowed to \$0.2 billion from a record selloff of \$7.8 billion following the decline in U.S. stock markets in October. Although interest in the U.S. market picked up with some recovery of U.S. stock prices and more stable foreign exchange markets, the volume of gross transactions remained well below the previous two quarters (chart 7).

Net foreign purchases of U.S. bonds slowed to \$2.5 billion from \$2.8 billion. The decrease was more than accounted for by a continued slowdown—to \$2.6 billion from \$3.3 billion—in bonds newly issued abroad by U.S. corporations. Foreign investors remained cautious about acquiring more U.S. corporate and dollar-denominated assets, and U.S. borrowers found alternative funding in the domestic bond and commercial paper markets.

Direct investment.-Inflows for foreign direct investment in the United States were \$10.2 billion compared to \$11.7 billion. Equity capital inflows were \$5.7 billion compared to \$11.3 billion. The largest transactions were a Japanese acquisition of a division of a U.S. entertainment company and of a U.S. hotel chain and two British acquisitions in service industries. Reinvested earnings shifted to an inflow of \$3.8 billion after a net outflow of \$1.9 billion. A shift to small capital gains from capital losses and a change in a financial accounting standard boosted first-quarter earnings. Intercompany account debt inflows were \$0.7 billion compared to \$2.4 billion.

Technical Notes

As is customary each June, estimates of U.S. international transactions are revised to incorporate new information and improved methodologies. Revisions were limited to 1984-87, except for those related to a reclassification of passenger fare payments to and receipts from Canada and Mexico for 1983-87 and revisions to merchandise trade for 1978-87.

For U.S. international transactions, tables 1 and 2 present annual estimates for 1960-87 and quarterly estimates for 1982-87. For merchandise trade, table 3 presents annual estimates for 1978-87 and quarterly estimates for 1986-87. For account and area detail, tables 4-10 present annual estimates for 1985-87 and quarterly estimates for 1986-87. For selected country detail, table 10a presents annual estimates for 1985-87.

Seasonal adjustment factors—for the current-account items that show seasonal patterns; for repayments on U.S. Government credits and other long-term assets, other than official reserve assets; and for U.S. direct investment abroad—were recalculated by extending through 1987 the period used to derive the factors.

Passenger fares

Beginning with estimates for 1983, passenger fare payments to and receipts from Canada and Mexico are reclassified from travel to passenger fares. The average annual revision to payments due to this reclassification was \$190 million for Canada and \$412 million for Mexico. The average annual revision to receipts was \$504 million for Canada and \$125 million for Mexico.

Merchandise trade

A new end-use commodity classification system has been developed and is introduced with data presented in this issue of the SURVEY. The new system presents considerably more detail than the old and includes a few definitional changes. In addition, seasonal factors have been recalculated and applied to revised unadjusted data for 1978 to the present, and the format of table 3 has been modified.

End-use commodity classification system.-The end-use commodity classification system has undergone a number of changes since its introduction. The last major change occurred in 1978 when a new Statistical Classification of Domestic and Foreign Commodities Exported from the United States (Schedule B) for exports and a new Tariff Schedule of the United States Annotated (TSUSA) for imports were adopted. The new end-use system is being introduced in this issue of the SURVEY because it offers analytical advantages in that it provides more detail. The new end-use system was designed to incorporate the Harmonized System (HS), which comprises nearly 8,000 10-digit export codes and 14,500 10-digit import codes. The HS was developed under the auspices of the Customs Cooperation Council to establish an internationally accepted standard for the classification of internationally traded goods in order to eliminate classification as a source of nontariff trade barriers. The HS has already been adopted by the major trading partners of the United States and is awaiting approval by the U.S. Congress.

A complete outline of the new enduse system is presented at the end of these notes (table J). It uses five-digit

Note.—Revisions to the end-use commodity classification system and to the merchandise trade estimates were prepared by Howard Murad and Kwok Lee. Howard Murad prepared the Technical Notes.

codes instead of four-digit codes to facilitate future revisions to the system. Users will be able to derive trade summaries at the one-, two-, three-, and five-digit levels. The four-digit summary level is not used at present because it is the same as the five-digit summary level in nearly all cases. Future changes in the five-digit classifications may require the introduction of a four-digit summary level. Some definitional changes have also been made.

Table F summarizes changes in the lowest level of product detail for each one-digit commodity category for the new and old systems, as measured by the number of categories in each group, and table G indicates changes in the relative importance in various categories that have occurred since 1978, as measured by the share of total dollar exports and imports in each group.

The larger number of changes in imports than exports reflects the changing patterns of trade in recent years. The largest areas of import growth have been in capital goods and consumer goods, and that is reflected by the greater degree of detail in these categories under the new

schedule. Industrial supplies no longer dominate imports to the extent that they once did, and many detailed categories are no longer shown because they have become relatively insignificant.

Table H presents a comparison of the current and previous series for 1978, the earliest year for which revised data could be produced, and 1987. The differences between current and previous data for 1978 are solely due to changes in definition; the differences for 1987 include, in addition to changes in definition, the effects of the retabulation of Census Bureau data to reflect actual month of transaction, the inclusion of errata to Census data, and the inclusion of the most recent United States-Canadian reconciliation revisions.

The definitional changes affected imports more than exports. For imports, the changes in petroleum and products largely reflect the addition of benzene and xylene to conform more closely with the definition used by the Department of Energy (\$0.5 billion in 1987). These products were previously classified as chemicals and

included in industrial supplies. For capital goods, the major changes reflect: (1) television receivers imported as parts (\$1.1 billion in 1987), previously classified in electrical machinery, are now a part of consumer goods; and (2) blank audio and visual disks and other media (\$1.3 billion in 1987), previously classified in business machines, are now part of industrial supplies as a new category. Within capital goods imports, computers are now a separate category (21300) (references are to the complete end-use outline presented in table J), as are peripherals, accessories, and parts (21301). Both were previously included in business machines. Imports of chemicals are now consolidated under one major 3-digit grouping and are comparable with exports. Another change in imports provided for separate identification of agricultural products. Total agricultural imports can be identified under the new system by adding agricultural foods. feeds, and beverages (00), agricultural industrial supplies and materials (120), and nursery stock and cut flowers (42000).

10.52.8 For exports, nuclear fuels have been redefined to match the definition used in imports by including uranium oxide (\$1.1 billion in 1987), previously part of chemicals, and excluding nuclear fuel rods (\$.1 billion in 1987), now part of generators, transformers, and parts.

Two new end-use import codes are being introduced in anticipation of the HS. Passenger and cargo vessels (22200) and electric energy (10400), which were not included in the TSUSA, will be separately identified under the new 10-digit codes. In addition, for both exports and imports, spacecraft, engines, and parts, except military (22300) are being added in anticipation of future need for separate identification. No exports were recorded in 1987, and imports were \$34 million.

Table I indicates commodity codes, as listed in the complete outline in table J, that are summarized in each commodity category shown in section C of table 3.

Seasonal adjustment.—Published totals for commodity groupings are the sum of the five-digit categories. All five-digit categories have been tested for seasonality and have been adjusted when they meet statistical criteria for seasonality incorporated in the X-11-ARIMA seasonal adjustment program. Unadjusted data are used for series not meeting the statistical criteria. In all, 19 export series

Data Availability

A hard copy version of Table 3, Section C, for 1978-88:I is available. These data are also available on diskettes. Those interested should order as follows:

Printout: Table 3, section C, 1978-88:I, seasonally adjusted and unadjusted quarters and years. Accession No. BEA BPD 87-201, price \$10.00.

Diskette: Table 3, section C, 1978-88:I, seasonally adjusted and unadjusted quarters and years. Accession No. BEA BPD 87-401, price \$40.00 (2 diskettes).

Orders should be sent to Economic and Statistical Analysis/BEA, U.S. Department of Commerce, Citizens and Southern National Bank, 222 Mitchell Street, P.O. Box 100606, Atlanta, GA 30384. A check or money order payable to "Economic and Statistical Analysis/BEA" must accompany all orders.

These data will also be available on the Commerce Department's electronic bulletin board. and 24 import series—accounting for 10 percent and 13 percent of the values of exports and imports, respectively—are not seasonally adjusted. New seasonal factors were applied to revised unadjusted data for 1978-87. Previously, seasonal factors were applied to quarterly data. Beginning this year, monthly data are seasonally adjusted and then summed to derive quarterly totals for most series. It was necessary to continue use of

n.e.c. Not elsewhere classified.

quarterly seasonal factors for 27 export and 18 import series because they were too erratic for seasonal adjustment on a monthly basis. Generally, the series for which this procedure was used were concentrated in agricultural products, petroleum products, and passenger cars. The seasonality of agricultural products, especially exports, is affected by weather conditions, which force changes in monthly harvest and shipping patterns. Petroleum and products have been affected by a variety of supply and price movements that have also altered monthly patterns. (Crude petroleum remains too erratic for either monthly or quarterly seasonal adjustment.) For passenger cars, there has been a change in the previous monthly pattern of introducing models during certain months of the year.

Presentation of data.-The format for table 3 has been changed to improve its analytical usefulness. Section C, commodity detail on a balance of payments basis, is expanded, and section D, commodity detail on a Census basis, is eliminated. The old section D differed from section C by the amount of the balance of payments adjustments, many of which could not be distributed by the detailed commodity categories in section D. Exports were primarily affected because limited commodity detail was available for undocumented exports to Canada, which account for a substantial part of the United States-Canadian reconciliation adjustments. More commodity information is now being made available to BEA from the United States-Canadian reconciliation studies than previously. When both countries develop a common set of data in the early 1990's, even greater commodity detail will become available.

Table J appears on pages 38, 39, and 57.

Table J.—Outline of BEA End-Use Classification System for Exports and Imports, With End-Use Code Numbers—Continued

Exports Abbreviated description	End-use	Imports Abbreviated description	En
Abbreviated description	code	Abbreviated description	0
Building materials, except metals		Finished metals associated with durable goods output	
Lumber and other wood supplies Logs, lumber, plywood, and veneers	13100	Iron and steel products, except advanced manufactures Iron and steel products, except advanced manufactures	
Wood supplies, manufactured		Iron and steel manufactures-advanced	
Other building materials, except metals Glass-plate, sheet, etc., except automotive	132 13200	Iron and steel manufactures-advanced	
Glass—plate, sheet, etc., except automotive Other—finished (shingles, molding, wallboard, etc.) Nontextile floor and wall tiles and other coverings	13210 13220	Finished metal shapes and advanced manufactures Finished metal shapes and advanced maufactures	
Capital goods, except automotive	1	Nonmetals	
lectric generating machinery, electric apparatus, and parts		Unfinished	
Electric and electric generating equipment	(Sulfur and nonmetallic minerals Other (synthetic rubber, wood, cork, gum, resin, etc.)	
Generators, transformers, and accessories Electric equipment and parts, n.e.c	20000	Finished	
onelectric, including parts and attachments	1	Blank audio and visual tapes and other media Other (boxes, belting, glass, abrasives, etc.)	
		Capital goods, except automotive	l
Oil-drilling, mining, and construction machinery. Drilling and oilfield equipment. Specialized mining and oil-processing equipment.	21000 21010	Electric generating machinery, electric apparatus and parts	•
Excavating, paying, and construction machinery	21030	Electric generating machinery, electric apparatus and parts	
Nonfarm tractors and parts		Generators, transformers, and accessories Electric equipment and parts, n.e.c.	
Industrial and service machinery, n.e.c. Industrial engines, pumps, compressors, and generators	21100	Nonelectric, including parts and attachments	
Food- and tobacco-processing machinery Machine tools, metal-working, molding, and rolling-mill machinery	21120		
Textile, sewing, and leather-working machinery Woodworking, glass-working, and plastic- and rubber-molding machinery	21140	Oil-drilling, mining, and construction machinery. Drilling and oilfield equipment. Specialized mining and oil-processing equipment	
Pulp and paper machinery, bookbinding, printing, and packaging machinery Measuring, testing, and control instruments	21150 21160	Excavating, paving, and construction machinery	
Materials-handling equipment		Nonfarm tractors and parts	
Photo- and service-industry machinery and trade tools	21190	Industrial and service machinery, n.e.c Industrial engines, pumps, compressors, and generators	
Agricultural machinery and equipment	212 21200	Food- and tobacco- processing machinery Machine tools, metal-working, molding, and rolling-mill machinery	
Computers, peripherals, and semiconductors		Textile, sewing, and leather-working machinery Woodworking, glass-working, and plastic- and rubber-molding machinery Pulp and paper machinery, bookbinding, printing and packaging machinery Measuring, testing, and control intruments	
Computers	I 91900	Pulp and paper machinery, bookbinding, printing and packaging machinery Measuring, testing, and control intruments	
Computer accessories, peripherals, and parts. Semiconductors and related devices.	21301 21320	Materials-handling equipment	
Telecommunications equinment	914	I now and service industry machinery and trade tools	
Telecommunications equipment		Agricultural machinery and equipment Agricultural machinery and equipment	
Other office and business machines Other office and business machines	215 21500	Computers, peripherals, and semiconductors	
Scientific, hospital, and medical equipment and parts	216	Computers	
Laboratory testing, and control intruments	1 21600 1	Computer accessories, peripherals, and parts Semiconductors and related devices	
ransportation equipment and spacecraft, except automotive		Telecommunications equipment Telecommunications equipment	
		Other office and business machines	
Civilian aircraft, engines, and parts Civilian aircraft, complete, all types Parts for civilian aircraft	22000 22010	Other office and business machines	
Engines for civilian aircraft	22020	Scientific, hospital, and medical equipment and parts Laboratory testing, and control instruments	
Railway transportation equipment	221 22100	Other scientific, hospital, and medical equipment Transportation equipment and spacecraft, except automotive	
Vessels, except military and pleasure craft	222		
Passenger and cargo vessels, except scrap vessels Other commercial vessels (barges, tugboats, fishing, and patrol boats)	22210	Civilian aircraft, engines, and parts Civilian aircraft, complete—all types	
Marine engines and parts	1	Parts for civilian aircraft	
Spacecraft, engines, and parts, except military Spacecraft, engines, and parts, except military	223 22300	Railway transportation equipment Railway transportation equipment	
Automotive vehicles, parts, and engines	3	Vessels, except military and pleasure craft	- T
utomotive vehicles, parts, and engines		Passenger and cargo vessels, except scrap vessels. Other commercial vessels (barges, tugboats, fishing and patrol boats)	
Passenger cars, new and used		Marine engines and parts	
Passenger cars, new and used	30000	Spacecraft, engines, and parts, except military Spacecraft, engines, and parts, except military	
Trucks, buses, and special-purpose vehicles Trucks, buses, and special-purpose vehicles	301 30100		1
Parts, engines, bodies, and chasses		Automotive vehicles, parts, and engines	
Engines and engine parts (engines, carburetors, etc.) Bodies and chasses for passenger cars	30200	Automotive vehicles, parts, and engines	
Automotive tires and tubes Other parts and accessories	30220	Passenger cars, new and used Passenger cars, new and used	
	1	Trucks, buses, and special-purpose vehicles	
Consumer goods (nonfood), except automotive onsumer nondurables, manufactured		Complete and assembled Bodies and chasses for trucks and buses	
Apparel, footwear, and household goods		Parts, engines, bodies, and chasses	
Textile apparel, footwear, and household goods	40000	Engines and engine parts (engines, carburetors, etc.) Bodies and chasses for passenger cars	
Nontextile apparel, footwear, and household goods	40030 40050	Automotive tires and tubes Other parts and accessories	
Other consumer nondurables	401	Consumer goods (nonfood), except automotive	
Books, magazines, and other printed matter	40110	Consumer goods (nontood), except automotive Consumer nondurables, manufactured	
Toiletries and cosmetics Cigars, cigarettes, other tobacco manufactures	40120 40130	Apparel, footwear, and household goods	1
Other products (notions, writing and art supplies, etc.)	40140	Apparel and household goods—cotton	
onsumer durables, manufactured	41	Apparel and household goods—wool Apparel and household goods—other textiles Nontextile apparel and household goods	
Household and kitchen appliances and other household goods Furniture, household items, and baskets		Footwear of leather, rubber, and other materials	
Glassware, porcelain, and chinaware	41010	Sporting and camping apparel, footwear and gear Other consumer nondurables	
Cookware, cutlery, house and garden wares, and tools	41030	Medicinal, dental, and pharmaceutical preparations, including vitamins Books, magazines, and other printed matter	
Rugs and other textile floor coverings Other (clocks, portable typewriters, other household goods)	41040	Toiletries and cometics

General notes for all tables: ^p Preliminary. *Less than \$500,000 (\pm) n.a. Not available.

Table 1: 1. Credits, +: Exports of goods and services; unilateral transfers to United States; capital in-flows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. offi-cial reserve assets; increase in foreign official assets in the United States.

(decr

2. Excludes transfers of goods and services under U.S. military grant programs (see line 15).
3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 3.
4. Beginning in 1982, line 7 and line 22 are redefined to include only net receipts and payments for the use or sale of intangible property rights, including patents, industrial processes, trademarks, copyrights, franchises, designs, know-how, formulas, techniques, and manufacturing rights. Other direct investment services, net—which include fees for management, professional, and technical services; charges for the use or tangible property rights, mine 9 and line 24. Data on the redefined basis are not separately available prior to 1982.
5. For all areas, amounts outstanding March 31, 1987, were as follows in millions of dollars: Line 36, 43,186; line 37, 11,063; line 38, 9,899; line 39, 10,164; line 40, 11,579. Data are preliminary.
6. Includes sales of foreign obligations to foreigners.
7. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible

Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible nonconvertible bonds and notes.

8. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

Includes, primarily, U.S. Government liabilities associated with military agency sales con-tracts and other transactions arranged with or through foreign official agencies; see table 4.

Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.
 Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
 Conceptually, the sum of lines 69 and 64 is equal to "net foreign first constants" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) excludes capital gains and losses of foreign affiliates of U.S. parent companies from the NIPA's measure of income receipts from direct investment abroad, and from the corresponding income payments on direct investment in the United States, (c) includes an adjustment for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (d) includes services furnished without payment by financial intermediaries, except life insurance carriers and private noninsured pension plans. In addition, for NIPA purposes, U.S. Government interest payments to foreign transactions in the exports of goods and services from the international accounts and the NIPA net exports of goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the Survey or CURRENT Business. A reconciliation in 1973:IV and \$22 million in 1973:II, of aircraft originally reported in 1970:III in line 3 as a long-term lease to Australia.
 Includes extraordinary U.S. Government transactions with India. See "Special U.S. Government intermational externational externational second set originally reported in 1970:III in line 3 as a long-term lease to Australia.

In Includes extraordinary U.S. Government transactions with India. See "Special U.S. Govern-ent Transactions," June 1974 SURVEY, p. 27. 14. Includes foreign currency-denominated notes sold to private residents abroad.

Table 2:

For footnotes 1–11, see table 1. 12. See footnote 14 to table 1.

Table 3: 1. Exports, Census basis, represent transaction values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent transactions values, f.a.s. foreign port of exportation for 1974-81. For all prior years and beginning in 1982, imports reflect Customs values (see Technical Notes, June 1982 Susvey). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes, December 1985 Survey). The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 and June 1988 Surveys). Prior to 1983, annual data are as published by the Census Bureau, vexcept that for 1975-80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries. 2. Adjustments in lings A5 and A13 B12 B46 and B60 reflect the Consur Bureau's and the seasonally adjusted consus data are adjusted to include trade between the U.S. Table 3:

Virgin islands and foreign countries.

 Adjustments in lines A5 and A13, B12, B46, and B30 reflect the Census Bureau's reconciliation of discrepancies between the merchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A-1.
 Promet of militery accumpant under U.S. military across sales contracts with foreign cov.

shown in line A¹. 3. Exports of military equipment under U.S. military agency sales contracts with foreign gov-ernments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1, 2, and 10, line 3 (transfers under U.S. military agency sales contracts); the imports are included in tables 1, 2, and 10, line 18 (direct defense expenditures). 4. Addition of electrical energy, deduction of exposed motion picture film for rental rather than sale; deduction of exports to the Panama Canal Zone before October 1, 1979; net change in stock of U.S.-owned grains in storage in Canada; for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjust-ments for special situations in which shipments were omitted from Census data. 5. Addition of understatement of inland freight in f.as., values of U.S. merchandise imports

ments for special situations in which singlements were omitted from Lensus data. 5. Addition of understatement of inland freight in f.as. values of U.S. merchandise imports from Canada in 1974-81; deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1, 2, and 10, line 21; other transportation; deduction of imports from the Panama Canal Zone before October 1, 1979; for 1975-82, net timing adjustments for goods record-ed in Census data in one period but found to have been shipped in another; and coverage adjust-ments for special situations in which shipments were omitted from Census data.

ments for special situations in which shipments were omitted from Census data. 6. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 17. Trade with international organizations includes purchases of non-monetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: Industrial countries: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; Members of OPEC Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon, Other countries: Eastern Europe, Latin American Republics, other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjust-ments. Therefore, the detail shown does not always sum to the values shown for the area aggre-gates. For all years, 'Asia' and ''Africa'' exclude certain Pacific Islands and unidentified coun-tries included in ''Other countries in Asia and Africa.'' 7. Includes nuclear fuel materials and fuels. 7. Includes nuclear fuel materials and fuels

Table 4:

Table 4: 1. Expenditures to release foreign governments from their contractual liabilities to pay for mili-tary goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93-199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A38 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A33 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A34. A

ITransactions Tables 1-10a
 Transactions under military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions purchases by foreigners directly from commercial suppliers are not included as transactions related to military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.
 The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
 Line A35 includes foreign currency collected as interest and line A40 includes foreign cur-rency collected as principal, as recorded in lines A13 and A14, respectively.
 Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also in-cludes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

make repayment.

Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.
 Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

Table 5:
1. Also included in line 4.
2. Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.
3. Sales, liquidations, and other dispositions of equity holdings, total and partial.
4. Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking; mining; construction; transportation, communication, and public utilities; and retail trade.
5. Also included in line 47.

 Table 6:
 1. Primarily provincial, regional, and municipal.

 Descriptions
 by International Bank
 Finiarly provincial, regional, and municipal.
 Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).

velopment Bank (ADB), and Inter-American Development Bank (IDB). 3. Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Un-identified and nonscheduled retirements appear in line 28. 4. Issues through finance affiliates established primarily to borrow capital from abroad. Issues are almost always guaranteed by the establishing U.S. parent and are often convertible into the parents' securities. To the extent proceeds are transferred from offshore affiliates to U.S. par-ents—the common practice—they are recorded as direct investment transactions in table 5, line 10.

 Table 7:

 1. Primarily mortgages, loans, and bills and notes drawn on foreigners.

 2. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

 3. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

 4. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting

 countries.

Table 8

1. Includes central governments and their agencies and corporations; state, provincial, and local governments and their agencies and corporations; and international and regional organizations.

2. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.

ates. 3. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

Sectors and the sector of the s

6. Includes Eastern Europe and international and regional organizations.

Table 9:

Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits.

 Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits. 3. Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.

o. manuy negouance and readily transferable instruments, excluding U.S. Treasury securities, 4. Mainly International Bank for Reconstruction and Development (IBRD), International Devel-opment Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Mone-tary Fund.

5. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' liabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United Status.

 Bates.
 Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
 Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
 Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries 9. Includes Eastern Europe and international and regional organizations.

Table 10: For footnotes 1-11, see table 1.

12. The "European Communities (10)" includes the "European Communities (6)," United King-dom, Denmark, Ireland, and Greece. "European Communities (12)" reflects the admission of Spain and Portugal in 1986.

13. The "European Communities (6)" includes Belgium, France, Germany, Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

Netherlands, European Avonne Europey, Science 20, 2017 European Investment Bank. 14. Includes, as part of international and unallocated, the estimated direct investment in for-eign affiliates engaged in international shipping, in operating oil and gas drilling equipment that is moved from country to country during the year, and in petroleum trading. 15. Details not shown separately; see totals in lines 51 and 58. 16. Details not shown separately are included in line 63.

Table 10a: For footnotes 1-11, see table 1.

12. Details not shown separately are included in line 63.

Norg.—Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. export statistics reflect country of reported destination; in many cases the exports may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of security transactions reflects country with which transaction occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds. Data for individual countries within EC(6) may not add to the published totals for EC(6), because in several instances estimates for the group are not available for each country. In addition, country data may not add to EC(6) totals because of rounding.

Selected Military Transactions in the U.S. International Accounts, 1983-87

TRANSFERS under U.S. military agency sales contracts, which are primarily deliveries of goods and services to foreign governments under the foreign military sales (FMS) program, reached a high of \$12.3 billion in 1983, declined to \$8.6 billion in 1986, and advanced to \$11.5 billion in 1987 (chart 9). Completion of major delivery programs in the Middle East, Western Europe, and Japan led to the decline in 1983-86; an increase in deliveries to the Middle East contributed to the advance in 1987. By category, deliveries of aircraft dominated; construction activity decreased sharply.

Direct defense expenditures, which are payments for goods and services purchased abroad by the U.S. Department of Defense (DOD) and the U.S.

NOTE.—For discussion of these transactions in an earlier period, see "Military Transactions in the U.S. International Accounts, 1976-82," SURVEY OF CURRENT BUSINESS 63 (May 1983): 18-24. Rodney D. Thorn contributed to the data preparation for this article.

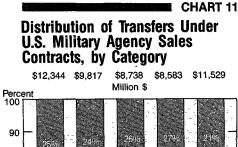

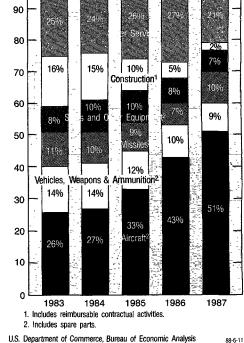

U.S. Department of Commerce, Bureau of Economic Analysis

Coast Guard, were \$12.6 billion in 1983, decreased to \$11.9 billion in 1984, and increased to \$13.9 billion in 1987. Expenditures by category changed substantially, in part reflecting fluctuations in the exchange value of the dollar. In 1983-84, dollar appreciation encouraged U.S. personnel to spend in local economies but moderated DOD operating costs overseas; in 1985-87, however, dollar depreciation increased operating costs just as DOD implemented major modernization programs abroad but discouraged personnel from spending in local economies. DOD foreign expenditures for petroleum and expenditures for which DOD is reimbursed fell throughout 1983-87.

U.S. Military Transfers

Deliveries of goods and services under the FMS program accounted for over 97 percent of transfers under U.S. military agency sales contracts in 1983-87. These deliveries fulfilled DOD-negotiated FMS agreements with foreign governments and international organizations that promote U.S. strategic interests through the sale of U.S.-origin military articles, services, and training. Actual deliveries lagged sales agreements by months or, for major weapon systems,

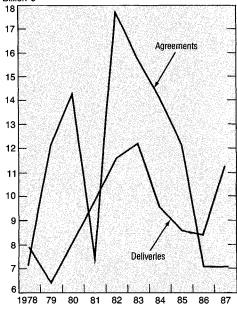

Agreements and Deliveries
Billion \$

Foreign Military Sales

by years (chart 10). High delivery levels in 1982-83 followed the 1980 and 1982 peaks in agreements. Similarly, deliveries mirrored with a lag the sharp drop in agreements in 1982-86. The remaining 3 percent of transfers were non-FMS deliveries of surplus military property, special construction activities, and other items and services. (For further description, see the technical note at the end of the article.)

The decrease in transfers in 1983-86 was primarily attributable to the completion of construction activity in Saudi Arabia, the fulfillment of F-16 deliveries to four European NATO countries, and the decline in aircraft deliveries to Japan. Irregularly higher transfers in various years to several countries (notably Pakistan, Venezuela, Tunisia, Israel, Australia, Taiwan, Egypt, Korea, Spain, and Singapore) were partial offsets. In 1987, aircraft deliveries to Israel, Egypt, Australia, and Spain contributed to an increase in transfers.

Aircraft deliveries dominated transfers throughout 1983-87 and accounted for over one-half of total transfers

by 1987. The share of construction declined markedly; other categories changed marginally (chart 11).

Countries in the Middle East and Western Europe were the principal recipients of transfers in 1983-87, although the country distribution within the Middle East changed considerably (chart 12).

Middle East

Transfers to the Middle East decreased from \$7.0 billion in 1983 to \$4.0 billion in 1986, then advanced to \$5.4 billion in 1987 (table 1).

Saudi Arabia received the largest amount of U.S. military goods and services under the FMS program, but deliveries decreased nearly 55 percent, from \$5.3 billion in 1983 to \$2.4 billion in 1987. This decrease was due

to sharply lower reimbursable contractual activity with DOD for construction and other services (technical, financial, and administrative) related to military development projects. These construction and related services peaked at \$2.3 billion in 1983, and they decreased to \$0.4 billion in 1987 as a result of the completion of large multiyear projects. For military hardware, final deliveries of F-15's and patrol craft occurred in 1983, and final deliveries of RF-5's occurred in 1984-85. Aircraft deliveries rose in 1986-87 when Saudi Arabia took delivery of sophisticated Airborne Warning and Control System (AWACS) aircraft and a fleet of KE-3 refueling tankers. Shipments of parts for existing and new weapons systems remained at high levels throughout 1983 - 87.

⁷ Hevised. [•] Less than \$500,000. 1. For quarterly data, see table 1-2, line 3, of the international transactions presentation in the March, June, September, and December issues of the SURVEY OF CURRENT BUSINESS. 2. Includes transfers to other NATO countries and to NATO agencies. 3. Transactions with Spain are included in NATO beginning the third quarter of 1982. Spain became a member of NATO on May 30, 1982.

Source: U.S. Department of Commerce, Bureau of Economic Analysis, from information made available by operating agencies.

Egypt received the second largest amount under the FMS program; deliveries exceeded \$0.5 billion annually in 1983-86 and reached \$1.1 billion in 1987. Aircraft deliveries were dominant: F-16's in 1983, E-2C early warning and control aircraft in 1985-87, and new-model F-16's in 1986-87. Substantial deliveries of tanks and other vehicles contributed to the high transfer levels.

After Israel acquired major weapons systems in the late 1970's and early 1980's, transfers dropped to \$0.2 billion for 3 of the 4 years during 1983-86. Acquisition of a substantial number of F-16's accounted for much of the surge to \$1.4 billion in 1987. At times throughout the period, parts and missile deliveries boosted transfer levels.

Western Europe

Deliveries to European NATO countries decreased from \$2.6 billion in 1983 to \$2.0 billion in 1986 before increasing to \$3.3 billion in 1987. The completion of the initial multiyear programs of F-16 deliveries (which began in 1979-80) to four countries was primarily responsible for the 1983-86 decrease. F-16 deliveries ended in 1983 for Denmark, in 1984 for Norway, and in 1985 for Belgium; fewer F-16's went to the Netherlands in each successive year. Increased delivery of aircraft parts was the major factor raising transfers to these countries in 1987.

In other NATO countries within Europe, transfers to Germany decreased through 1985; deliveries of missiles, equipment, and parts in 1987 nearly doubled total transfers to \$0.5 billion. Fewer missile deliveries lowered transfers to the United Kingdom from 0.5 billion in 1983 to 0.3 billion in 1987. Transfers increased substantially to Spain (\$0.9 billion in 1987: F-18's, AV-8B's, and ship components) and to Turkey (\$0.5 billion in 1984 and in 1987: F-4's, helicopters, F-16's, and aircraft parts). Transfers increased to Portugal (A-7's) and France (aircraft parts) in 1985 and to Italy (missile systems) throughout 1983-87.

Other countries

Japan was also a major recipient of transfers. In 1983-85, annual transfers were in the \$0.3-\$0.5 billion range (F-15, C-130, and E-2C aircraft). After a low in 1986, transfers rebounded to \$0.4 billion in 1987 with the delivery of additional C-130's, missiles, and assorted equipment.

Deliveries of modern weapons systems to many other countries increased in 1983-87. Pakistan acquired F-16's, helicopters, tanks, and weapons in 1983-85, and transfers ranged from \$0.3 billion to \$0.5 billion. Australia took final deliveries of patrol frigates in 1984 and deliveries of F-18's in 1984-87. Deliveries to Korea included F-4's in 1984-85 and F-16's in 1986-87. Deliveries to Taiwan were large throughout the period; delivery of C-130's raised the 1986 transfer level to \$0.6 billion. Tunisia took delivery of F-5's in 1984-85, and Singapore took delivery of E-2C aircraft in 1985-86. Venezuela acquired F-16's in 1983 and 1985, raising total deliveries

to \$0.3 billion in 1985. El Salvador and Honduras obtained various aircraft, weapons, ammunition, and construction services in 1983-87.

Direct Defense Expenditures Abroad

Direct defense expenditures abroad consist of outlays for goods and services purchased abroad by DOD agencies under all U.S. defense programs and by the U.S. Coast Guard. These expenditures include DOD outlays that are reimbursed under FMS and other programs. The reimbursed outlays are for goods (equipment, materials, and supplies) and services (construction and contractual services) purchased abroad to fulfill contracts with foreign governments and international organizations. (For further description, see the technical note.)

Direct defense expenditures abroad decreased from \$12.6 billion in 1983 to \$11.9 billion in 1984, then increased to \$13.9 billion in 1987 (table 2). In 1983-84, markedly lower petroleum prices and a drop in expenditures abroad for reimbursable contractual activities in the Middle East were primarily responsible for the decline.

Dollar appreciation moderated the rise in DOD's overseas operating costs and encouraged U.S. military and civilian personnel to spend more in the local economies.

In 1985-87, dollar depreciation and DOD's efforts to modernize facilities and improve military life abroad quickly led to record foreign expenditure levels. Spending in local economies by U.S. personnel continued to increase sharply in 1985, but further dollar depreciation slowed its rise in 1986-87. Expenditures abroad for petroleum and for reimbursable contractual activities continued to decrease in 1985-87.

Changes in the expenditure categories shifted the relative shares of total expenditures abroad in 1983-87; contractual services, personnel expenditures, and pay to foreign nationals gained larger shares (chart 13).Germany, Japan, and Korea received increased shares of total expenditures in 1983-87; the share to the rest of the world (primarily the Middle East) decreased (chart 14).

Expenditure categories

Personnel and related expenditures increased from \$3.0 billion in 1983 to

\$4.0 billion in 1987 (table 2). U.S. troop deployment abroad, which fluctuated between 485,000 and 531,000 in 1983-87, affected this expenditure pattern. In addition, the increase in the annual average number of U.S. civilian employees (up from 42,000 in 1983 to 53,000 in 1987) and of dependents of both military and civilian personnel (up from 385,000 to 418,000) contributed to higher expenditures abroad. However, wide swings in the dollar value of foreign currencies were the dominant influences. In 1983-84, dollar appreciation encouraged U.S. troops, U.S. civilian employees, and their dependents to spend more in local economies and less at post exchanges (PX's) and commissaries. The spending surge continued through 1985, but slowed in 1986 and 1987 as the cumulative depreciation of the dollar caused personnel to increase the share of their expenditures at facilities on base. Personnel expenditures in the local economies remained high in 1986-87 largely because DOD attempted to maintain the living standards of U.S. personnel overseas through substantially higher cost-of-living adjustments.

DOD foreign expenditures for contractual services also increased, from \$2.8 billion in 1983 to \$4.5 billion in 1987. Dollar depreciation pushed costs for improving facilities and enhancing military life overseas over the amounts Congress had appropriated. forcing DOD to draw extensively on a special foreign currency fluctuation account to cover the higher exchange costs. Similarly, DOD tapped the account to help meet the payroll of foreign nationals, which increased from \$1.7 billion for 123,000 foreign nationals in 1983 to \$2.4 billion for 125,000 foreign nationals in 1987. By 1987, DOD had depleted the entire \$1.3 billion balance in the account.

Foreign expenditures by DOD for construction, major equipment, and other materials and supplies together decreased from \$3.2 billion in 1983 to \$2.1 billion in 1987. The decline was more than accounted for by the decline in expenditures, from \$1.8 bil-

 For quarterly data, see table 1-2, line 18, of the international transactions presentation in the March, June, September, and December issues of the SURVEY OF CURRENT BUSINESS.
 Includes payments to other NATO countries and to NATO agencies, to the NATO Infrastructure Program, and to the acquisition fund for AWACS for NATO.

3. Expenditures in Spain are included in NATO beginning the third quarter of 1982. Spain became a member of NATO on May 30, 1982.

Source: U.S. Department of Commerce, Bureau of Economic Analysis, from information made available by operating agencies

lion to \$0.2 billion, for which DOD was reimbursed by foreign governments and international organizations under FMS and other programs. (A part of expenditures reimbursed is included in contractual services, discussed earlier.)

Expenditures for foreign petroleum products fell sharply from \$1.7 billion in 1983 to \$0.5 billion in 1986, mostly because petroleum prices paid by DOD declined 62 percent. Expenditures changed little in 1987. Purchases from European refineries, mainly in Greece, accounted for 55-60 percent of each year's total, except in 1985, when large purchases from Bahrain were made.

Area and country

Western Europe.—Direct defense expenditures in Western Europe increased from \$7.4 billion in 1983 to \$9.6 billion in 1987, declining only in 1984 (table 3). Increases in troops, support personnel, and dependents, together with dollar depreciation and modernization efforts in 1985–87, accelerated these foreign payments.

Germany remained the primary location for U.S. overseas troop deployment (250,000 in 1987); the largest overseas contingent of U.S. civilians (34,000) and foreign nationals (60,000)supported these troops. Over 228,000 dependents accompanied U.S. personnel in Germany in 1987. As a result, DOD overseas expenditures were the highest in Germany and increased from \$4.4 billion in 1983 to \$6.4 billion in 1987. Exchange rate fluctuations were a major influence. From the beginning of 1983 to the end of February 1985, the dollar appreciated 40 percent against the German mark. U.S. military personnel increased expenditures in the German economy by 31 percent from 1983 to 1985 (from \$1.6 billion to \$2.1 billion) and decreased their expenditures at PX's and commissaries, to take advantage of the cheaper mark. Dollar appreciation contributed to a slight reduction in costs of German employees, supplies, and construction services.

From the end of February 1985 to the end of 1987, the dollar depreciated 52 percent against the mark. Expenditures by U.S. personnel in Germany continued to increase during much of 1985, but the dollar's decline led to a leveling of expenditures in 1986-87. DOD assisted its personnel by increasing the amount, and expanding the

application, of pay supplements in an attempt to maintain their standard of living. Personnel spent more at PX's and commissaries than in 1983-85; sales increased from \$1.5 billion in 1985 to \$2.0 billion in 1987.

U.S. military installations in Germany received the bulk of expanded DOD funding to improve facilities and enhance military life overseas in 1985-87. Contractual services provided by German companies (primarily for the operation and maintenance of real property) doubled from \$1.0 billion in 1983 to \$2.0 billion in 1986. reflecting both real growth and, in 1985-86, rising foreign exchange costs. Congressionally mandated budget cuts and the depletion of the special foreign currency fluctuation account in 1986-87 forced a scaledown of DOD modernization efforts, but additional foreign exchange costs raised payments for German services to \$2.1 billion in 1987. Pay to German nationals employed by DOD increased from \$0.9 billion annually in 1983-85 to \$1.3 billion in 1987.

In the United Kingdom, direct defense expenditures were \$0.9 billion annually in 1983-86, then increased to \$1.1 billion in 1987. A strong dollar slowed the rise in operating costs in 1983-84; reduced outlays for petroleum and for major equipment (missiles, aircraft, engines, and related parts) offset the rise in exchange costs in 1985-86. Preparation and deployment of cruise missiles throughout 1983-87 led to higher U.S. troop, U.S. civilian, and dependent levels (30,000, 2,700, and 38,000, respectively, in 1987) and to higher U.S. foreign costs. Substantial dollar depreciation in 1985-87 contributed to increases in all expenditure categories in 1987.

In Italy, expenditures fluctuated in the \$0.4-\$0.6 billion range in 1983-87. In 1983-86, expenditures for petroleum decreased, but expenditures related to deployment of cruise missiles and the acquisition of helicopters increased. By 1987, U.S. troop strength in Italy increased to 15,000 (along with 2,000 U.S. civilian employees and 16,000 dependents), and expenditures were \$0.6 billion.

Among other countries in Western Europe, expenditures in Greece in 1983-87 dropped sharply, mostly due to the decline in petroleum prices. Lower expenditures for petroleum and for equipment reduced total expenditures in Belgium in 1984; cruise

missile deployment in 1985-87 contributed to higher expenditures. Expenditures in Spain fluctuated around \$0.2 billion in 1983-86 and increased to \$0.3 billion in 1987. Completion of payments into the acquisition fund for NATO AWACS in 1983-84 contributed to the decline in total expenditures to NATO agencies in 1985-86; higher infrastructure payments raised these total expenditures in 1987.

Korea, Philippines, and Japan. Panama.-Expenditures in Japan increased from \$1.3 billion in 1983 to \$2.0 billion in 1986 and remained there in 1987. As in Western Europe, exchange rate fluctuations were an important influence. However, the 1983-84 dollar appreciation against the yen was smaller (11 percent) and the 1985-87 depreciation was greater (53 percent). Because U.S. troops (50,000), U.S. civilian employees (4.200), and their dependents (44,000)in Japan already faced high expenses in 1983-84 and escalating expenses in 1985-87, they limited their expenditures to \$0.6-\$0.7 billion annually throughout 1983-87. Purchases from Japan for resale by the PX system (an important component of personnel expenditures) have historically been a major element of foreign expenditures, but the rise in foreign exchange costs and a concerted effort to stock PX shelves with U.S.-origin goods reduced real purchases of Japanese products. Pay supplements to DOD personnel were higher in Japan than in any other overseas location.

Payments for Japanese contractual services to improve conditions for U.S. troops doubled from 1983 to 1986. to \$0.6 billion; budget cuts and tight overall DOD funding slowed modernization efforts, but continued dollar depreciation kept expenditures at \$0.6 billion in 1987. Employment of Japanese nationals by DOD decreased slightly to 17,000 by 1987, but annual payroll costs increased from \$0.3 billion in 1983 to \$0.5 billion in 1986 and 1987. The Japanese Government agreed in 1987 to cover more of the costs of employing Japanese nationals.

Korea also has a large U.S. presence (44,000 troops, 2,400 U.S. civilian employees, and 15,000 dependents in 1987). U.S. expenditures in Korea were \$0.6 billion in 1983, fell to \$0.5 billion in 1984, then increased to \$0.8 billion in 1987. In 1983-87, personnel and contractual service expenditures both increased, petroleum expenditures dropped (especially in 1984), and pay to Korean employees (17,000 in 1987) remained stable at \$0.2 billion annually.

Expenditures in the Philippines increased from \$0.2 billion in 1983 to \$0.4 billion in 1986 and decreased to \$0.3 billion in 1987. To the benefit of U.S. personnel (17,000 troops, 1,400 civilian employees, and 22,000 dependents in 1987), the dollar appreciated against the Philippine peso throughout the period, and spending in the local economy doubled to \$0.2 billion. Pay to Philippine nationals (15,000 in 1987) steadily increased until 1987; expenditures for contractual services and supplies increased for most of 1983-87.

Panama has the largest overseas U.S. troop contingent (10,000 in 1987) in the Western Hemisphere, and DOD foreign expenditures in Panama were \$0.2 billion annually in 1983-87. Because the U.S. dollar circulates in Panama and is at par with the balboa (the national currency), DOD expenditures in this country primarily reflect DOD budgeted improvements and levels of operations.

Middle East.—Expenditures in the Middle East decreased from \$2.2 billion in 1983 to \$0.5 billion in 1987. The decrease was attributable to expenditures abroad by the U.S. Army Corps of Engineers and the U.S. Air Force for reimbursable construction and related services in Saudi Arabia; these expenditures decreased from \$1.8 billion in 1983 to \$0.2 billion in 1987 as major contracts were completed. (DOD's contractual obligations for these activities were discussed in the section on transfers.)

Technical Note

Transfers under U.S. military agency sales contracts consist primarily of deliveries of goods and services to foreign governments under U.S. foreign military sales (FMS) contracts authorized by the Arms Export Control Act of 1976 (Public Law 90-629, as amended) and previous legislation. These transfers are often financed by U.S. Government credits or grants, which are recorded elsewhere in the U.S. international accounts. Transfers in which the U.S. Government is the purveyor to a foreign government or an international organization are included. Transfers in which a private U.S. contractor is the direct supplier to a foreign government are included elsewhere in the U.S. international accounts, as are direct grant deliveries of military goods and services of the U.S. Government.

Transfers under FMS contracts are goods delivered to, and services performed for, foreign governments or international organizations for use in the United States or abroad. They include transfers of goods from stocks at U.S. military installations overseas. Goods primarily include aircraft, naval vessels, vehicles, weapons, ammunition, missiles, and communication equipment, plus associated parts. Services generally entail training, technical assistance, logistical support, and construction activities. Transfers are recorded when goods are delivered, when services are performed, or when construction is put in place, not when contracts, orders, offers, or any other types of agreement are negotiated.

In addition to FMS deliveries. transfers under U.S. military agency sales contracts also include small amounts of non-FMS deliveries resulting from U.S. military agency sales of surplus property to foreigners; sales of material and services to foreign countries or international organizations under logistical support programs; delivery of services to foreign governments by U.S. military advisory missions abroad; and sales to foreigners of U.S. grant aid material declared excess by recipient countries and returned to the U.S. Government. Some construction activity outside of the FMS program is also included.

Direct defense expenditures abroad are outlays for goods and services purchased abroad by the Department of Defense (DOD) and by the U.S. Coast Guard. They consist of personal expenditures abroad by U.S. military and civilian personnel employed by DOD agencies; outlays by DOD for foreign goods, including those purchased abroad for resale to U.S. personnel in overseas post exchanges and commissaries; and payments for hire of foreign personnel. These expenditures also include overseas outlays by U.S. and foreign contractors employed by DOD for construction, operation, and maintenance of U.S. overseas military installations and for construction projects managed abroad by DOD, and U.S. payments to the commonly funded NATO infrastructure program. Expenditures exclude foreign products imported into the United States by U.S. companies to fulfill defense contracts and purchases of crude petroleum by DOD for the U.S. strategic petroleum reserve; these imports are included in the merchandise trade account in the U.S. international accounts.

DOD reimbursable contractual activities abroad (mostly construction and related services) are recorded in both the transfers and expenditures accounts. When a foreign government or an international organization contracts for DOD services (whether under the FMS program or not), the foreign entity's provision of funds to DOD creates a U.S. liability. DOD, acting as a prime contractor, draws on these funds to pay its agencies, U.S. contractors, and foreign contractors for the delivery of goods and rendering of services. Delivered goods and services are recorded as transfers under U.S. military agency sales contracts and the liability is liquidated. To the extent that foreign goods and services are procured (including those purchased by U.S. contractors) to fulfill DOD's contractual obligations, purchases are recorded as direct defense expenditures abroad. Net receipts or payments from these reimbursable contractual activities overseas are the difference between total DOD deliveries to fulfill the contracts (transfers) and expenditures for foreign goods and services used in these contracts (direct defense expenditures). If foreign contractors purchase U.S.-origin goods and services, these purchases are recorded (but not identified) in the merchandise trade account.

The International Investment Position of the United States in 1987

THE negative net international investment position of the United States increased \$99.0 billion to \$368.2 billion in 1987 from \$269.2 billion (revised) in 1986 (table 1). Net capital inflows of \$135.5 billion were accounted for by substantial net inflows to U.S. banks from banks overseas, large net foreign purchases of U.S. corporate securities, and increased foreign official inflows largely reflecting intervention purchases of dollars by several industrial countries. The capital inflows were partly offset by net valuation adjustments of \$36.5 billion, mostly reflecting exchange rate appreciation of U.S. official reserve assets and of U.S. holdings of foreign securities, and price depreciation of U.S. securities held by foreigners. By yearend 1987, foreign assets in the United States increased to \$1,536.0 billion from \$1,340.7 billion (revised), and U.S. assets abroad increased to \$1,167.8 billion from \$1,071.4 billion (revised) (table 2).

The increase in the negative net investment position in 1987 reflected the continued large U.S. current-account deficit, which widened to \$154.0 billion in 1987 from \$138.8 billion in 1986. Net capital inflows, the mirror image of the current-account deficit, were attracted by a significant widening of the interest rate differentials between (higher) U.S. and (lower) foreign rates and by U.S. economic expansion. Inflows of private capital were augmented by large inflows of official capital, as foreign monetary authorities, through coordinated intervention in exchange markets, purchased substantial amounts of dollars. Banks in the United States

stepped up their borrowing from the interbank market overseas and limited their lending to that market, as the cost of funding in the United States rose. Until the October stock market plunge, foreign investment in U.S. stocks was particularly strong; foreign purchases of bonds newly issued overseas by U.S. corporations slowed. Net outflows in the direct investment accounts were small, as record U.S. direct investment abroad was mostly offset by continued strength in foreign direct investment in the United States.

The statistical discrepancy in the U.S. international transactions accounts was again a large net inflow in 1987. If part of these net unrecorded inflows were capital inflows, net foreign assets in the United States would be understated by that amount. On the other hand, understatement of some U.S. assets abroad-for instance, because direct investment is carried at book value-would work in the opposite direction. Thus, the net investment position is only a rough indicator, rather than a precise statistical measure, and should be interpreted with caution.

Changes in U.S. Assets Abroad

Bank claims

Claims on foreigners reported by U.S. banks increased \$40.5 billion, or 8 percent, to \$547.9 billion (line 19). Growth in U.S. claims denominated in dollars in the overseas interbank market was further curtailed in 1987, especially by U.S.-owned banks.

Increased lending in foreign currencies offset some of the slowdown. The slowing partly reflected the rise in U.S. interest rates, as the U.S. prime rate jumped from 7.5 to 9.25 percent between April and September, and the increase in demand for currencies other than the dollar, especially the Japanese yen. Outside the interbank market, U.S. bank lending was practically stagnant; virtually no new loans went to major debtor countries in Latin America.

U.S. banks' own dollar claims increased \$14.0 billion to \$458.7 billion-only one-third the 1986 increase. Claims on own foreign offices and unaffiliated banks abroad increased \$15.9 billion to \$350.4 billion. The rise in claims in the overseas interbank market occurred in April and in the autumn of the year. In both periods, foreign demand for dollar credits surged in response to temporary increases in Eurodollar interest rates compared with U.S. rates and to strong demand for U.S. bank credits in Asia, especially by Japan. Most of the rise in U.S. claims was accounted for by foreign-owned banks in the United States, especially Japanese-owned banks. In contrast, U.S.owned banks, which participated only briefly in these lending surges, subsequently reduced their claims on banks abroad, resulting in the third consecutive annual decline in their interbank claims.

Unaffiliated banks in Japan received the largest share of U.S. lending—over one-half. Japanese banks continued to expand their share of international banking business and to accommodate strong demand for bank credit from nonbank Japanese residents. Claims on banks in France, Canada, and other parts of Asia also increased; in contrast, banks in the United Kingdom made sizable repayments. U.S. bank offices in the Caribbean received only limited funding from parent banks in the United States.

U.S. banks' dollar claims on other private and foreign public borrowers decreased \$2.0 billion to \$108.3 billion; an increase in claims on borrowers in Japan and Canada was more than offset by a decrease in Western Europe and Latin America. Claims on major debtor countries in Latin

NOTE.—The sections on "U.S. Direct Investment Abroad" and on "Foreign Direct Investment in the United States" were written by Jeffrey H. Lowe and Alicia M. Quijano, respectively. Harlan King contributed to the data preparation for the accounts other than the direct investment accounts.

America were reduced through loan sales, equity swaps, and regular repayments; little new lending took place. The claims reduction occurred during a year when Brazil and Ecuador discontinued servicing a major portion of their indebtedness with international banks and U.S. banks set aside substantial amounts from current earnings as reserves for possible loan losses.

U.S. banks' and customers' claims payable in foreign currencies in-

creased sharply, \$22.7 billion, to \$51.3 billion. Three-fourths of the increase was with banks in Japan, which expanded their international banking activities by advancing yen credits to foreigners and to nonbank residents in Japan.

U.S. bank claims for domestic customers' accounts, payable in dollars, increased \$3.8 billion to \$37.7 billion in 1987; deposits in banks overseas slowed due to rising U.S. interest rates.

Foreign securities

Holdings of foreign securities in U.S. portfolios increased \$13.5 billion to \$146.7 billion; net purchases of \$4.5 billion and exchange rate appreciation of \$14.7 billion were partly offset by \$5.6 billion in price depreciation (line 15). Stock prices fell sharply in major financial markets in the last quarter of 1987, after having increased strongly earlier in the year.

⁷ Revised.

^p Preliminary

† Includes U.S. gold stock.

Less than \$500,000 (±).

1. Represents gains or losses on foreign currency-denominated assets due to their revaluation ent exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets

Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemora-tive and bullion coins; also reflects replenishment through open market purchases. These demon-etizations/monetizations are not included in international transactions capital flows.

4. Also includes paid-in capital subscription to international financial institutions and outstand-ing amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

5. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.
6. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment that is moved from country to country during the year, and in petroleum trading.
7. U.S. holdings of foreign securities in some areas may be understated. This understatement is in part due to the recording of security transactions by area of transactor rather than by area of issuer.

8. Details not shown separately are included in line 20.

9. Details not shown separately are included in totals in lines 21 and 28.

10. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

U.S. holdings of foreign bonds increased \$9.2 billion to \$91.0 billion (line 16). U.S. purchases accelerated in the fourth quarter when bond prices rebounded, resulting in \$6.8 billion in net purchases for the year. Valuation adjustments reflected appreciation of \$7.0 billion in foreign currency bonds and a partly offsetting \$4.5 billion in price depreciation in dollar bonds. U.S. net purchases of new issues of foreign bonds in the U.S. market were \$6.2 billion, bolstered by the fourth quarter's rebound in prices. Issues were limited to highly rated government borrowers until the fourth quarter. Canada and international financial institutions were the principal issuers; redemptions of their outstanding issues largely offset U.S. purchases. Purchases of Australian and New Zealand new issues increased in popularity due to their high yields. U.S. net purchases of outstanding bonds-mostly highyielding British gilt-edged bondswere enhanced by appreciation of the British pound.

U.S. holdings of foreign stocks increased \$4.3 billion to \$55.7 billion. The increase was more than accounted for by exchange rate appreciation of \$7.7 billion, partly offset by \$2.4 billion in net U.S. sales and price depreciation of \$1.1 billion (line 17). Most of the net sales and price depreciation occurred following the worldwide stock price plunge in the last quarter of the year, although some switching from Japanese to Canadian and Western European stocks had been underway earlier. Profit-taking net sales of Japanese stocks began in mid-1986 and accelerated in 1987, nearly depleting U.S. holdings despite buoyant Japanese stock prices and the rising exchange value of the ven. U.S. net purchases of British and Canadian stocks halted in the fourth quarter, except for U.S. underwriters' purchases of British Petroleum stock from the British Government that were contracted before the market plunge.

' Revised

^p Preliminary.

^P Preliminary. 1. Total reserve assets include increases from changes in the par value of the dollar: On May 8, 1972, the increase totaled \$1,016 million, consisting of \$828 million gold stock, \$155 million special drawing rights (SDR's), and \$33 million U.S. reserve position in the International Monetary Fund (IMF); on October 18, 1973, the increase totaled \$1,436 million, consisting of \$1,165 million gold stock, \$217 million SDR's, and \$54 million reserve position in the IMF. The gold stock is valued at \$35 per fine troy ounce until May 8, 1972; thereafter, at \$38 per fine troy ounce until May 8, 1972; thereafter, at \$38 per fine troy ounce until May 8, 1972, thereafter, at 100 to the Par Value Modification Act (P.L. 92-268); and, thereafter, at \$42% per fine troy ounce pursuant to an amendment (in P.L. 93-101 to the Par Value Modification Act. Beginning in 1974, the value of the SDR, in which U.S. holdings of SDR's and the reserve position in the IMF are denominated, fluctuates based on the weighted average of exchange rates for the currencies of principal IMF members. Foreign currency reserves are valued at exchange rates time of purchase through 1973 and at current exchange rates thereafter.

2. Also includes paid-in capital subscription on at current exchange have interested. amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

4. Estimates are linked, for 1982 forward, to the U.S. Department of Commerce 1982 bench-mark survey and, for 1977-81 and 1966-76, to the Commerce 1977 and 1966 benchmark surveys, respectively.

5. Breaks in the series reflect: in 1972 and 1978, expanded reporting coverage; in 1982, an inin repo rters' exemption levels

crease in reporters' exemption levels. 6. Breaks in the series reflect: in 1972, expanded reporting coverage; in 1978, expanded cover-age of bank holding companies and of brokers' and security dealers' reporting of liabilities; in 1981, expanded coverage of brokers' and security dealers' reporting of claims; in 1977 and 1982, an increase in reporters' exemption levels; and in 1986, an increase in liabilities of nonbanking concerns held in bank custody.

concerns held in bank custody. 7. Estimates include results of 1974 and 1978 portfolio benchmark surveys conducted by the U.S. Department of the Treasury. Beginning with the 1978 benchmark, marketable Treasury bonds are valued at market price; previously, they were valued at acquisition price. 8. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies. 9. Estimates are linked, for 1980 forward, to the U.S. Department of Commerce 1980 bench-mark survey; for 1978-79, to the Commerce 1974 benchmark survey; and through 1972, to the Commerce 1959 benchmark survey.

Norg.-Revised area tables for 1972-87 are available upon request from the Balance of Pay-ments Division (BE-58), Bureau of Economic Analysis, U.S. Department of Commerce, Washing-ton, DC 20230.

U.S. direct investment abroad and other private assets

U.S. direct investment abroad increased \$49.3 billion, a record 19 percent, to \$308.9 billion (line 14). Reinvested earnings nearly doubled to \$35.7 billion; equity and intercompany debt capital outflows totaled \$8.8 billion, and valuation adjustments added \$4.9 billion. Earnings of foreign affiliates of U.S. companies improved substantially, augmented by large currency translation gains as the dollar declined sharply against major for-eign currencies. The strong increase in reinvested earnings also reflected changes in the Tax Reform Act of 1986 restricting the use of foreign tax credits. Investment in Canada, Japan, United Kingdom, and some other European countries increased; net funding of finance affiliates in the Netherlands Antilles slowed. (Details on 1987 direct investment developments are in a separate section on "U.S. Direct

Investment Abroad" in this article.) Claims on unaffiliated foreigners reported by U.S. nonbanking concerns decreased \$3.1 billion to \$30.1 billion; financial claims decreased \$4.1 billion, and commercial claims increased \$1.0 billion (line 18). U.S. corporations, faced with rising interest rates in the United States, drew down their deposits in Canada, the United Kingdom, and Caribbean banking centers and expanded their trade credits to industrial countries.

U.S. official reserve assets and other U.S. Government assets

U.S. official reserve assets decreased \$2.7 billion to \$45.8 billion; reductions in assets of \$9.1 billion were partly offset by exchange rate appreciation of \$6.4 billion (line 3). Most of the reduction in assets was due to the sale of German marks and Japanese ven in exchange markets as part of coordinated intervention with other industrial countries. Exchange rate appreciation offset about one-half the decline in foreign currency holdings. Valuation adjustments to other reserve assets mostly reflected a rise in the value of the market basket of currencies used to value special drawing rights and the U.S. reserve position in the International Monetary Fund.

U.S. Government assets, other than official reserve assets, decreased \$1.2 billion to \$88.4 billion—the first drop since 1974 (line 8). Repayments on Export-Import Bank (EIB) credits were accelerated by creditors in the United Kingdom, Japan, and other countries in Asia, and prepayments were made by Korea, Spain, Thailand, and Oman on credits financing military exports that had been contracted at the high interest rates prevailing earlier in the 1980's. Concurrently, disbursements of U.S. Government credits, particularly EIB credits, slowed.

Changes in Foreign Assets in the United States

Bank liabilities

Liabilities to private foreigners and international financial institutions reported by U.S. banks increased a record \$87.8 billion, or 19 percent, to \$539.4 billion (line 35). U.S. banks borrowed heavily from the overseas interbank market, partly to finance domestic expansion and increased lending in foreign currencies. Inflows were encouraged by a substantial widening of the differential between (higher) U.S. and (lower) foreign interest rates and by a growing preference for liquid dollar assets and foreign currency credits by international investors. High yields on bank deposits relative to yields on Treasury bills also favored bank inflows. Dollar liabilities to own foreign offices and unaffiliated foreign banks increased \$61.1 billion to \$371.1 billion. Foreignowned banks in the United Statesespecially Japanese-owned banksthat were rapidly expanding their lending in the United States and overseas accounted for more than 60 percent of the increase; most of the borrowing occurred in the fourth quarter, when demand for bank credit surged. U.S.-owned banks borrowed most heavily from their own foreign offices in April and September, when bank reserves tightened and the U.S.-Eurodollar interest rate differential widened, favoring funding from offshore.

Banks in Western Europe provided over 60 percent of the increase in interbank liabilities. Banks in Canada and in Asian banking centers, excluding Japan, accounted for another 20 percent. Banks in Japan, faced with heavy credit demands, withdrew funds from the United States and also received a substantial share of new lending by banks in the United States.

U.S. banks' liabilities payable in foreign currencies increased \$25.3 billion to \$54.9 billion, mostly to finance expanded foreign currency lending. More than one-half of the increase was to Japan; the remainder was mainly to Western Europe.

Banks' custody liabilities increased \$2.6 billion to \$44.3 billion; most of the increase occurred in the second and third quarters, when U.S. interest rates increased sharply.

U.S. Treasury securities

U.S. Treasury securities held by private foreigners and international financial institutions decreased \$13.1 billion to \$78.4 billion, as a result of \$7.6 billion in net sales and \$5.5 billion in price depreciation (line 30). Foreigners sold \$1.8 billion of bills and \$5.8 billion of bonds following 3 years of net purchases. Japanese sales were especially large, as institutional investors there shifted portfolios from bonds to U.S. stocks and profited from the fourth-quarter recovery in bond prices. International financial institutions, switching to U.S. bank deposits, also liquidated some of their holdings. Sales through accounts in the Caribbean were also large. Although net purchases for accounts in the United Kingdom continued, they were 25 percent below last year's pace.

Other U.S. securities

Foreign holdings of U.S. securities, other than U.S. Treasury securities, increased \$35.6 billion, or 8 percent, to \$344.4 billion, reflecting strong foreign demand for most of the year (line 31). Net foreign purchases of \$42.2 billion were offset by \$12.4 billion in price depreciation, mostly due to the steep fall in U.S. stock prices in October. Exchange rate appreciation of foreign currency bonds issued by U.S. companies and held overseas added \$5.8 billion to holdings.

Foreign holdings of U.S. corporate and other bonds increased \$28.9 billion, or 20 percent, to \$171.0 billion, bolstered by the above-mentioned \$5.8 billion in exchange rate appreciation. Partly offsetting was price depreciation of \$3.6 billion (line 32). Rising bond rates and a weak dollar in exchange markets reduced both the demand for and the supply of U.S. corporate bonds newly issued overseas, which fell 40 percent to \$22.6 billion. U.S. industrial companies and nonbank financial firms reduced their placements, and bank holding companies withdrew from the floating-rate note market. Straight fixed-rate bonds were preferred by international investors and accounted for most of the U.S. issues; bonds convertible into U.S. stock were increasingly issued until the plunge in U.S. stock prices. Foreign currency issues by U.S. corporations declined to less than one-half

the prior year's level. Because most U.S. issues overseas are initially placed through underwriters in the United Kingdom, holdings in Western Europe showed the largest increase. Direct purchases by Japanese institutions slowed substantially after 2 years of strong increases.

Foreign holdings of U.S. federally sponsored agency bonds increased \$3.4 billion to \$20.5 billion, entirely reflecting net purchases by Western European and Japanese residents.

Foreign holdings of U.S. stocks increased strongly until October; net purchases for the first three quarters of 1987 exceeded purchases for 1985 and 1986 combined. Large net sales occurred in the fourth quarter, as stock prices plummeted 30 percent in October. For the year, foreign holdings increased \$6.7 billion to \$173.4 billion; net purchases of \$15.5 billion were partly offset by \$8.8 billion in price depreciation (line 33). Japan accounted for over 70 percent of the net purchases, partly due to the relaxation of restrictions on Japanese institutional investors' foreign portfolios and to the strong yen. Japanese purchases slowed considerably in the fourth quarter. Western European residents made large net purchases before the market plunge, but sold over 85 percent of these purchases in the fourth quarter.

Foreign official assets

Foreign official assets held in the United States increased \$41.4 billion to \$283.1 billion, mostly reflecting intervention purchases of dollars in exchange markets-subsequently invested in U.S. Treasury securities-by major industrial countries (line 21). Capital inflows of \$45.0 billion were partly offset by \$3.6 billion in price depreciation. Industrial countries' dollar assets increased \$49.2 billion. more than accounting for the increase in total official holdings. (In addition, some of their dollars acquired as a result of intervention were placed in the Eurodollar market.) OPEC members again reduced their dollar assets, by \$10.0 billion, as petroleum revenues remained weak. Assets of other countries, mostly those of newly industrialized countries in Asia with large trade surpluses, increased \$5.7 billion.

Foreign direct investment in the United States and other liabilities

Foreign direct investment in the United States increased a record \$41.5 billion, or 19 percent, to \$261.9 billion (line 29). Substantial acquisition activity continued as equity inflows remained strong at \$25.5 billion; intercompany debt inflows increased to \$14.0 billion, and reinvested earnings shifted to a positive \$2.5 billion. The largest inflow was from the United Kingdom, followed by Japan and the Netherlands. Sustained U.S. economic expansion, the depreciation of the dollar against major currencies, U.S. corporate restructuring through the sale of assets, and rising protectionist sentiment in the United States were among the factors contributing to the growth of foreign investment in the United States. (Details on 1987 direct investment developments are in a separate section on "Foreign Direct Investment in the United States" in this article.)

U.S. liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns increased \$2.2 billion to \$28.8 billion, reversing a 2-year decline (line 34). Commercial liabilities increased \$2.9 billion, partly associated with capital goods purchases in the United States and partly representing increased payables for petroleum imports. Financial liabilities decreased \$0.8 billion, as U.S. firms continued to repay loans from foreign branches of U.S. banks in the Caribbean.

Direct Investment

U.S. direct investment abroad

The U.S. direct investment position abroad increased 19 percent (\$49.2 billion) in 1987, to \$308.8 billion, compared with 13 percent in 1986 (table 3).¹ The 1987 increase marked the fourth consecutive year of increased growth and was a record, both in percentage and dollar terms.

Nearly three-fourths of the increase resulted from the reinvestment of earnings. Reinvested earnings were \$35.7 billion, nearly double the previous record level of \$19.7 billion in 1986. Their rapid growth in 1987 was due to increases in both earnings and the reinvestment ratio.

Earnings rose \$13.0 billion, to \$54.7 billion, mainly because of the twofold effects of dollar depreciation. First, the translation into dollars, at the new exchange rates, of affiliates' assets and liabilities denominated in foreign currencies resulted in large capital gains, which are included in earnings. Second, the translation into dollars of affiliates' earnings denominated in foreign currencies resulted in higher dollar-valued earnings. In addition, improved operating profits manufacturing—particularly in in transportation equipment, chemicals, and "other manufacturing"-and in wholesale trade contributed to the increase in earnings. The improvement probably reflected strong demand and more cost-efficient operations resulting from recent corporate restructurings.

The reinvestment ratio, defined as the fraction of earnings that are reinvested, increased substantially, from 0.46 in 1986 to 0.64 in 1987. Three factors contributed to the increase. First, the earlier mentioned capital gains resulting from dollar depreciation are not available for distribution and thus became part of reinvested earnings. Second, U.S. parent companies, particularly in petroleum and manufacturing, have had reasons to reinvest a larger portion of their affiliates' earnings. In petroleum, reinvested earnings are needed to finance increased exploration and development in anticipation that the partial recovery in crude oil prices in 1987 will be maintained. In manufacturing, affiliates are facing increased global competition and are stepping up expansion plans. Finally, the 1986 reinvestment ratio had been lowered by U.S. parent companies in response to provisions of the Tax Reform Act of 1986 that imposed new restrictions on the use of foreign tax credits. To lessen the impact of the new restrictions, which became effective at the beginning of 1987, U.S. parent companies had accelerated the distribution of their affiliates' earnings in the last half of 1986. (U.S. companies use foreign tax

^{1.} The position is the book value of U.S. direct investors' equity in, and net outstanding loans to, their foreign affiliates. A foreign affiliate is a foreign business enterprise in which a single U.S. investor owns at least 10 percent of the voting securities, or the equivalent.

credits to offset U.S. taxes on foreignearned income to the extent such income is taxed abroad and distributed to the U.S. company.)

A \$2.2 billion increase in equity capital outflows, to \$2.5 billion, contributed to the increased growth in the position, although to a much lesser extent than reinvested earnings. Shifts to outflows in manufacturing and banking were partly offset by smaller outflows in finance and larger inflows in "other industries."

Intercompany debt outflows decreased \$1.5 billion, to \$6.3 billion. A \$2.4 billion shift to inflows in manufacturing and a \$1.8 billion decrease in outflows in petroleum were partly offset by a \$2.7 billion increase in outflows to all other industries. In manufacturing, the shift to inflows partly reflected sharply increased earnings of affiliates in transportation equipment, which may have lessened their need for U.S.-source funds. In petroleum, the decline in outflows reflected an increase in U.S. parents' payables to their affiliates due to higher crude oil prices and an increased volume of U.S. petroleum imports. The partly offsetting increase in outflows to all other industries mainly resulted from larger U.S. parent receivables from affiliates in finance and wholesale trade, possibly to finance larger U.S. exports in 1987.

By account.—The \$49.2 billion increase in the position consisted of capital outflows of \$44.5 billion and valuation adjustments of \$4.8 billion. Capital outflows consisted of equity capital outflows of \$2.5 billion, intercompany debt outflows of \$6.3 billion, and reinvested earnings of \$35.7 billion. (For estimates of capital outflows by account, see table 5 in "U.S. International Transactions, First Quarter 1988," on page 55 of this issue.)

The equity capital outflows were concentrated in finance and petroleum. In finance, the outflows represented capital contributions to affiliates in Bermuda, the United Kingdom, and Hong Kong. A return of capital from Netherlands Antilles finance affiliates was partly offsetting. In petroleum, most of the outflows resulted from two acquisitions. In Australia, a company with substantial petroleum reserves was acquired, perhaps in response to the easing of Australian restrictions on foreign ownership in the petroleum industry. In the United Kingdom, a minority interest in a large petroleum company was acquired. (The minority interest was subsequently sold in early 1988, and some of the proceeds were used to acquire a smaller British company with sizable petroleum reserves.)

Partly offsetting the outflows in finance and petroleum were large inflows in "other industries"; they mostly resulted from the sale of a major British food retailer and partial sales of two Australian mining operations. The British retailer was probably sold because the U.S. parent needed funds to repay debt incurred while opposing a hostile takeover attempt. One of the Australian sales reflected a public offering of a minority interest in what was previously a wholly owned affiliate. The other reflected the selloff of a minority interest in an affiliate; the proceeds were used by the U.S. parent for a stock buyback.

About one-half of the intercompany debt outflows were for U.S. parents' repayments of loans to their Netherlands Antilles finance affiliates.² Much of the remaining outflows were in finance as well; in one particularly large transaction, a loan was made to holding company affiliate in a Canada, which, in turn, used the funds to acquire a major Canadian real estate company with substantial U.S. holdings. Other intercompany debt outflows were to affiliates in wholesale trade, perhaps reflecting increased U.S. exports in 1987, and to affiliates in services.

Reinvested earnings were boosted by depreciation of the U.S. dollar against major foreign currencies. Nearly one-half of the \$35.7 billion of reinvested earnings were accounted for by capital gains from currency translation. By industry, affiliates in manufacturing had reinvested earnings of \$20.4 billion, mostly in Europe. Reinvested earnings were \$6.4 billion in finance and insurance and \$4.1 billion in wholesale trade.

Valuation adjustments were \$4.8 billion. They were particularly large in "other industries" and reflected the above-mentioned sales of the British food retailer and Australian mining operations for more than book value.

By country.-The position increased 20 percent, to \$233.3 billion, in developed countries. Among these countries, the largest increase-\$9.0 billion-was in the United Kingdom. Most of the increase resulted from reinvested earnings that were boosted by capital gains from currency translation. In addition, equity outflows to the United Kingdom were larger than to any other country. They reflected the earlier mentioned capital contributions to affiliates in finance and the purchase of a minority interest in a petroleum company. Inflows from the sales of several large retailing operations were partly offsetting. Several other European countries-Germany (\$3.6 billion), France (\$2.6 billion), and the Netherlands (\$2.5 billion)-also had large increases in position. In each of these countries, reinvested earnings accounted for most of the increase.

The position in Canada increased \$6.9 billion. As in Europe, the increase was mostly attributable to reinvested earnings. However, gains from currency translation were not as significant as in the United Kingdom, in part because the U.S. dollar did not decline as much against the Canadian dollar as against the British pound. The position in Canada was also boosted by the earlier mentioned loan to a Canadian holding company, which was used to finance the purchase of a real estate company.

The position in Japan increased \$2.9 billion, mainly due to reinvestment of currency translation gains. The \$1.9 billion increase in Australia mostly reflected widespread growth in earnings from operations, most of which were reinvested.

In developing countries, the position increased 18 percent, to \$71.2 billion. Over one-half of the increase— \$6.0 billion—was in "other Western Hemisphere," particularly in Bermuda and the Netherlands Antilles. In Bermuda, the \$3.5 billion increase partly reflected a large capital contribution and several loans to affiliates in finance. In the Netherlands Antilles, the increase reflected the continuation of U.S. parents' repayments of loans to their finance affiliates.

^{2.} Previously, these affiliates had borrowed funds in European capital markets and re-lent them to their U.S. parents. The parents were prompted to borrow indirectly through these affiliates, rather than directly from Euromarkets, because the interest payments on their borrowings from affiliates were exempt from U.S. withholding taxes under a United States- Netherlands Antilles tax treaty. However, in the third quarter of 1984, the U.S. withholding tax on interest paid to foreigners was repealed, ending any advantage to borrowing through Netherlands Antilles affiliates. Consequently, most borrowing from these affiliates has ceased, and repayments of previous borrowings have increased substantially.

In "other Asia and Pacific," the position increased \$2.4 billion. Most of the increase was in Hong Kong, particularly in finance and wholesale trade. It partly reflected the use of affiliates in that country as a base for expansion elsewhere in the Far East. In "other Africa," most the the \$0.8 billion increase was in Nigeria and consisted primarily of equity capital outflows to petroleum affiliates.

Foreign direct investment in the **United States**

The foreign direct investment position in the United States increased 19 percent (a record \$41.5 billion) in 1987, to \$261.9 billion, following an equal rate of growth in 1986 (table 4).³ Growth in 1987 reflected both continued acquisitions of U.S. businesses by foreign direct investors and increases in foreign investors' ownership stakes in existing U.S. affiliates.

Factors that contributed to the continued growth in foreign direct investment included dollar depreciation, continued U.S. real economic growth, corporate restructuring in the United States, concerns over U.S. protectionist measures, and the availability of large dollar holdings in several developed countries with trade surpluses.⁴

Capital inflows were \$42.0 billion, an increase of 23 percent from 1986. An increase in intercompany debt inflows and a shift from negative to positive reinvested earnings accounted for most of the increase. Equity capital inflows increased only slightly from the very high level in 1986.

Intercompany debt inflows in-creased \$2.7 billion, to \$14.0 billion. The increase was more than accounted for by a British parent's loan of roughly \$5 billion to its U.S. petroleum affiliate. The funds financed part of a tender offer for the publicly held stock of the affiliate, which raised the parent's ownership stake to 100 percent.

Reinvested earnings shifted \$4.8 billion to a positive \$2.5 billion. The shift reflected both a reduction in capital losses and an improvement in earnings before capital gains and losses. Capital losses fell from \$2.1 billion to \$0.2 billion. The losses in 1986 were more than accounted for by a large writedown of the assets of a U.S. machinery affiliate and the writedown of oil reserves of U.S. petroleum affiliates following the collapse of oil prices that year. In 1987, capital losses in petroleum shifted to capital gains, and capital losses in manufacturing declined substantially. Partly offsetting was a shift from gains to losses in insurance, which reflected

^{3.} The position is the book value of foreign direct investors' equity in, and net outstanding loans to, their U.S. affiliates. A U.S. affiliate is a U.S. business enterprise in which a single foreign direct investor owns at least 10 percent of the voting securities, or the equivalent.

^{4.} For a more detailed analysis of these and other factors affecting foreign direct investment in the United States, see "U.S. Business Enterprises Ac-quired or Established by Foreign Direct Investors in 1987," SURVEY 68 (May 1988): 50-54. The data from BEA's survey of new foreign direct investments in the United States, summarized in that article, indicate that outlays to establish or acquire U.S. affiliates de creased to \$30.5 billion in 1987, from a record \$39.2 billion in 1986. These figures differ from those on changes in the foreign direct investment position presented here, primarily because they cover only transactions involving the acquisition or establishment of new U.S. affiliates and because they include financing other than from the foreign parent, such as local borrowing by existing U.S. affiliates. Changes in the position, in contrast, reflect transactions of existing as well as new U.S. affiliates, but only if the transactions are with the foreign parent.

declines in the value of affiliates' stock and bond portfolios, particularly after the October stock market collapse.

Earnings before capital gains and losses increased \$2.6 billion, to \$7.0 billion. The increases were more than accounted for by affiliates in manufacturing and petroleum. They reflected improved performance in these industries, acquisitions of new U.S. affiliates, and increases in the ownership—and, thus, in foreign parents' shares of the earnings—of existing affiliates. Partly offsetting were a shift to losses in banking and an increase in losses in real estate.

Equity capital inflows increased \$0.4 billion, to \$25.5 billion. The high level of inflows in both 1986 and 1987 reflected strong acquisition activity, as well as increases in ownership of existing affiliates, by foreign direct investors. Large increases in equity inflows in manufacturing and "other industries" were partly offset by a decline in wholesale trade and a shift to outflows in insurance.

By account.—The \$41.5 billion increase in the position in 1987 consisted of capital inflows of \$42.0 billion and negative valuation adjustments of \$0.5 billion. Capital inflows consisted of equity capital inflows of \$25.5 billion, intercompany debt inflows of \$14.0 billion, and reinvested earnings of \$2.5 billion.

Equity capital inflows largely reflected acquisitions of U.S. businesses by foreign direct investors. Three large acquisitions, each involving inflows of over \$1.0 billion, were financed through equity capital. One involved the purchase of a large U.S. employment agency by a smaller British employment agency. Another involved the purchase of a Wisconsinbased brewery by a large Australian brewery. Finally, a British company acquired the international hotel division of a large U.S. company that was divesting most of its nonairline businesses.

In addition, a portion of the inflows financed increases in foreign investors' ownership of existing affiliates. The single largest equity capital inflow, about \$1.5 billion, financed the increase in a Netherlands parent's equity stake in a manufacturing joint venture.

Substantial portions of intercompany debt inflows financed acquisitions by U.S. affiliates and increases in foreign parents' ownership in existing U.S. affiliates. The large intercompany debt inflow in petroleum mentioned earlier was among the largest ever for either a new investment or an increase in an existing investment. Other large intercompany debt inflows occurred in manufacturing, wholesale trade, "other industries", and real estate and were dis-persed among many affiliates. In manufacturing, large intercompany debt inflows (from the United Kingdom and the Netherlands) to a single U.S. chemical affiliate refinanced the affiliate's 1986 acquisition of a U.S. manufacturer of chemical, cosmetic, and health products.

Reinvested earnings were more than accounted for by affiliates in manufacturing, wholesale trade, and petroleum; affiliates in banking and real estate had negative reinvested earnings. In manufacturing, U.S. chemical affiliates accounted for a substantial portion of reinvested earnings. European chemical companiesattracted by strong demand; high profitability, particularly in speciality chemicals; and U.S. corporate restructuring-have expanded their U.S. operations over the past few years. The high earnings that have accompanied the expansion have tended to be reinvested rather than distributed to foreign parents. In wholesale trade, reinvested earnings were more than accounted for by Canadian-owned affiliates. In petroleum, reinvested earnings reflected the recovery of oil prices in the first half of 1987 and an increase in foreign ownership in a large U.S. affiliate, which boosted the foreign parent's share of the affiliate's net income.

By country.—By far the largest share of the increase in the position, 46 percent, was accounted for by the United Kingdom. Japan and the Netherlands accounted for 16 and 15 percent, respectively.

The position of British parents increased \$19.0 billion, to \$74.9 billion. The largest increases were in manufacturing (particularly chemicals, machinery, and food), petroleum, and "other industries." Two major factors contributed to the surge in investment from the United Kingdom: The

sharp appreciation of the pound against the dollar in 1987 and the deregulation of U.K. financial markets. The latter provided an opportunity for British parents to finance several large acquisitions in the United States by issuing their shares in the London stock market.

The position of Japanese parents increased \$6.5 billion, to \$33.4 billion. The largest increases, which were in manufacturing and real estate, were almost entirely related to acquisitions.

The position of Netherlands parents increased \$6.3 billion, to \$47.0 billion. The largest increases were in manufacturing (particularly chemicals), petroleum, and banking and reflected both acquisition activity by Netherlands parents and transactions involving Netherlands finance affiliates of direct investors in other countries. In banking, the Netherlands affiliate of a Hong Kong bank purchased the remaining shares of its U.S. affiliate.

Smaller inflows from France, Switzerland, and Germany-ranging from \$2.3 to \$2.5 billion—accounted for large percentage increases in the positions of these countries. The position of French parents increased 32 percent, to \$10.2 billion. The increase was largely accounted for by equity inflows in manufacturing. Several French chemical companies made capital contributions to their U.S. affiliates. In machinery, a French company acquired the consumer electronics business of a large U.S. company in exchange for the French company's medical equipment business and cash.

The 19 percent increase, to \$14.3 billion, in the position of Swiss parents was primarily in manufacturing. There was a shift to positive reinvested earnings as well as an equity inflow to finance the acquisition of a U.S. confectionery producer by a Swiss company that manufactures similar products. The position of German parents increased 14 percent, to \$19.6 billion. The increase was accounted for by equity capital and intercompany debt inflows related to acquisitions in manufacturing. The equity inflows financed the acquisition of a U.S. manufacturer of tires and rubber products and the intercompany debt inflows financed a portion of a U.S. affiliate's purchase of a U.S. chemical company.

U.S. Multinational Companies: Operations in 1986

MEASURES of the operations of U.S. multinational companies (MNC's) diverged in 1986: Assets increased, sales were virtually unchanged, and employment and U.S. merchandise exports and imports associated with U.S. MNC's declined. Measures that were denominated in monetary units tended to be boosted by the depreciation of the U.S. dollar against foreign currencies, but both the monetary and employment measures were depressed by the effects of a sharp drop in petroleum prices and by the sale of a large minority-owned affiliate. The net effect of these developments on the various measures of MNC operations was mixed.

The first part of this article presents these and other highlights of U.S. MNC operations in 1986.¹ The

NOTE.—The 1986 annual survey was conducted under the supervision of Patricia C. Walker, Chief, Direct Investment Abroad Branch, International Investment Division. David H. Galler was project leader for the survey. Marie C. Gott and Arnold Gilbert designed the computer programs for data retrieval and analysis.

The estimates are on a fiscal year basis. An individ-ual parent's or affiliate's 1986 fiscal year is its financial reporting year that had an ending date in calendar vear 1986.

The estimates were obtained by expanding, to universe totals, sample data collected in BEA's annual survey of U.S. direct investment abroad. The sample data accounted for a large share of the universe estimates of items covered by the survey. Based on employment, for example, sample data accounted for 89 percent of the universe estimate for U.S. parents and 81 percent of the universe estimate for foreign affiliates in 1986.

second part presents a detailed discussion of sales of services by MNC's, updating a series introduced last year.

Highlights of Operations in 1986

Assets

 Total worldwide assets of U.S. MNC's increased 10 percent, to \$4,746 billion (table 1). Assets of U.S. parent companies increased 10 percent, to \$3.814 billion, and assets of their foreign affiliates increased 12 percent, to \$932 billion. For both parents and affiliates, the largest increases were in finance (except banking), insurance, and real estate (FIRE) and in manufacturing. Decreases in petroleum were partly offsetting.

• A major factor contributing to the increase in assets of affiliates was the decline in the value of the U.S. dollar against major foreign currencies. During 1986, the dollar depreciated 15 percent against a trade-weighted average of the currencies of 10 industrial countries and 5 percent against an average of the currencies of 22 OECD countries: in some individual countries with sizable U.S. direct investments, the dollar depreciation was greater than indicated by these tradeweighted averages. As a result of dollar depreciation, the dollar value of affiliate assets denominated in foreign currencies rose. Because U.S. parent assets include the value of their investment in foreign affiliates, the increase in affiliate assets also raised the value of parent assets, although by a smaller percentage.

To some extent, the geographic pattern of increases in affiliate assets followed the pattern of changes in exchange rates. The increases were concentrated in developed countries, particularly in Europe and Japan. Assets of affiliates in developing countries declined.

· Assets of parents in FIRE increased 27 percent, to \$1,295 billion. The increase was financed by increases in both liabilities and owners' equity. Increased net income, which resulted from a rise in securities prices and trading volumes, was largely reinvested and was coupled with borrowed funds to support expanded operations. Also, assets were boosted by a reclassification of an affiliate from petroleum wholesale

MNC Multinational company. * Less than 0.05 percent (±). 1. Compound annual rate.

^{1.} The estimates presented in this article cover nonbank U.S. parent companies and their nonbank for-eign affiliates. A U.S. parent is a U.S. person that owns or controls, directly or indirectly, 10 percent or more of the voting securities of an incorporated foreign business enterprise or that owns or controls an equivalent interest in an unincorporated foreign busi-ness enterprise. A foreign affiliate is a foreign business enterprise so owned or controlled. A U.S. MNC consists of a U.S. parent company and its foreign affiliates.

In the estimates, sales and total assets of MNC's are shown on an aggregated basis—that is, parent and af-filiate data have been summed. The sums contain duplication because of intercompany positions and transactions between parents and affiliates and among af-filiates of the same parent. Data needed to derive consolidated sales and assets of MNC's are not available.

86

trade to finance (except banking), as a result of a change in the composition of its sales.²

• Assets of parents in manufacturing increased 10 percent, to \$1,409 billion. Within manufacturing, increases were concentrated in transportation equipment and in electrical machinery.

• Assets of parents in petroleum declined 22 percent, to \$423 billion. The decline occurred for several reasons, the most important of which was the reclassification mentioned earlier. The decline also reflected selloffs of unprofitable assets or lines of business not related to petroleum. Finally, a sharp drop in petroleum prices caused companies to write down the book values of inventories and other assets to bring them into line with the lower market values.

• Assets of affiliates in manufacturing increased 17 percent, to \$450 billion. Within manufacturing, increases were widespread; the largest increase, 44 percent, was in electrical machinery.

• Assets of affiliates in FIRE increased 15 percent, to \$238 billion. Over one-third of the increase was in the United Kingdom, where assets rose in response to the deregulation of the London Stock Exchange in October 1986. The deregulation resulted in an expansion of British financial markets and increased participation in these markets by U.S.- and other foreign-owned (non-British) firms.

• Assets of affiliates in services increased 24 percent, to \$26 billion. The increase was centered in Europe. Over 40 percent of the increase in that area was accounted for by affiliates in computer and data processing services.

• Assets of affiliates in petroleum declined 4 percent, to \$175 billion. The decline, which was spread among several countries, largely reflected the previously mentioned drop in oil prices. The largest decline was in the United Kingdom and was accounted for mainly by affiliates producing crude oil in the North Sea area. In that area, the decline was partly due to a restructuring of intercompany accounts within an MNC: A parent company repaid a large loan from its affiliate; the repayment, in turn, enabled the affiliate to pay a large dividend to the parent, thus drawing down the affiliate's assets.

Sales

• Worldwide sales by U.S. MNC's were virtually unchanged, at \$3,475 billion. Sales by U.S. parents declined 2 percent, to \$2,544 billion. Sales by foreign affiliates increased 4 percent, to \$931 billion.

• The decline in sales by U.S. parents was more than accounted for by parents in petroleum; their sales declined 34 percent, to \$289 billion. Declines also were recorded in several other industries. Sales by parents in FIRE increased 29 percent, to \$338 billion, due to strong growth in revenues of finance and insurance companies.

• The increase in sales by affiliates was spread among several nonpetroleum industries and was concentrated in developed countries. Much of the increase appears attributable to the depreciation of the U.S. dollar against foreign currencies. In contrast, sales by affiliates in petroleum declined substantially as a result of the drop in oil prices.

U.S. merchandise trade

• U.S. merchandise exports and imports associated with U.S. MNC's de-

Data Availability

These estimates are from the 1986 annual survey of U.S. direct investment abroad, which collected key items on the operations of a sample of nonbank U.S. parent companies and their nonbank foreign affiliates. (Banks were excluded from the survey.) U.S. direct investment abroad exists when one U.S. person (U.S. parent) has a direct or indirect ownership interest of 10 percent or more in a foreign business enterprise (foreign affiliate). The annual survey focuses on the operations of U.S. parents and their foreign affiliates,

The annual survey focuses on the operations of U.S. parents and their foreign affiliates, and it covers parents' and affiliates' transactions and positions with all parties, not just with each other. In contrast, data published by BEA on the U.S. direct investment position abroad and on related capital and income flows cover only positions and transactions between parents and affiliates.

For a more detailed description of the differences between the two sets of data, see the methodology section in U.S. Direct Investment Abroad: 1982 Benchmark Survey Data, which may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402; price \$18.00; stock number 003-010-00161-5.

Washington, DC 20402; price \$18.00; stock number 003-010-00161-5. The most recent data on the U.S. direct investment position abroad and on the related capital and income flows may be found in "The International Investment Position of the United States in 1987" and "U.S. International Transactions, First Quarter 1988," respectively, in this issue of the SURVEY.

Additional detail from the 1986 annual survey of U.S. direct investment abroad—including estimates of foreign affiliate balance sheets, income statements, and external financial position and of U.S. parent and foreign affiliate sales and merchandise trade—is available in U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates, Preliminary 1986 Estimates. Revised estimates for 1983–85 are available in separate publications. These publications, which cost \$5.00 each, may be obtained from Economic and Statistical Analysis/BEA, U.S. Department of Commerce, Citizens and Southern National Bank, 222 Mitchell Street, P.O. Box 100606, Atlanta, GA 30384. Estimates on microcomputer diskette may be ordered from the same address at \$80 (four diskettes) for each year. When ordering, please specify title, year, accession number, and number of copies desired, and enclose a check or money order made payable to "Economic and Statistical Analysis/BEA." Allow 3 weeks for delivery. The accession numbers for the publications and diskettes are as follows:

	Publications	Diskettes
1983	BEA IID 86-103	BEA IID 86-403
1984	BEA IID 87-103	BEA IID 87-409
1985	BEA IID 88-103	BEA IID 88-403
1986	BEA IID 88-104	BEA IID 88-404

Estimates are also available on magnetic tape, and BEA can prepare additional tabulations or perform regressions or other statistical analyses of the data at cost, within the limits of available resources and subject to legal requirements to avoid disclosure of data of individual companies. Requests should be directed to Office of the Chief, International Investment Division (BE-50), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

^{2.} Industry codes are assigned to the U.S. parent and each of its foreign affiliates separately. A parent or affiliate is first classified in the major industry group that accounts for the largest percentage of its sales and then in the two- and three-digit industries in which its sales were largest. In a benchmark year, this procedure is uniformly applied. Between benchmark surveys, an entity's classification is changed only if there is a significant or lasting change in the composition of its sales, so that the classification does not shift back and forth due to small or transient fluctuations. The reclassification of the U.S. parent company referred to here reflected an apparently lasting change in the mix of its activities. For further discussion of industry classification procedures, see U.S. Direct Investment Abroad: 1983 Benchmark Survey Data, pages 9-10.

clined in 1986 (table 2). U.S. merchandise exports associated with MNC'sthe sum of goods shipped to affiliates

Table 2.—U.S. Merchandise Exports and Imports Associated With Nonbank U.S. MNC's, 1985 and 1986

[Millions of dollars]

	1985	1986
MNC-associated U.S. exports, total	171,904	170,974
Shipped to affiliates, as reported on		
affiliates' forms	69,618	71,284
To majority-owned foreign affiliates	66,510	67,998
By U.S. parents	57,567	59,093
By unaffiliated U.S. persons	8,943	8,905
To other affiliates 1	3,108	3,286
Shipped to unaffiliated foreigners by	400.000	
U.S. parents	102,286	99,689
MNC-associated U.S. imports, total Shipped by affiliates, as reported on	153,570	147,107
affiliates' forms	68,181	65,580
By majority-owned foreign affiliates	60,301	57,195
To U.S. parents	51.751	49,847
To unaffiliated U.S. persons	8,551	7,348
By other affiliates ¹	7,879	8,386
Shipped by unaffiliated foreigners to	.,	-,
U.S. parents	85,389	81,527
Addenda:		
U.S. exports shipped by U.S. parents to all affiliates, as reported on parents' forms ²	61,852	61,607
U.S. imports shipped to U.S. parents by all affiliates, as reported on parents'	FA 007	54,349
forms ³	54,027	54,549

forms a 54,027 54,349 MNC Multinational company. I. In the annual survey, U.S. exports shipped to minority-owned foreign affiliates were not disaggregated by affiliation of shipper, and U.S. imports shipped by minority-owned for-eign affiliates were not disaggregated by affiliation of person to whom the goods were shipped. 2. Includes exports shipped by U.S. parents to all foreign affiliates were honk or nonbank, majority- or minority-owned, regardless of size-as reported on the U.S. parents report forms. Such exports may differ from exports shipped by parents to affiliates, as reported on the affiliates' forms, because of differences in timing, valuation, and method of estimation. (Exports shown as being reported on affiliates' forms had to be estimated for affiliates that fell below the these affiliates were, however, included in the data reported on the parents' forms.) 3. Includes imports shipped to U.S. parents by all foreign affiliates to parents, as reported on the u.S. parents report forms. Such any differ from imports shipped by worked, regardless of size-as reported on the U.S. parents these affiliates to parents, as reported on the U.S. parents preport forms. Such imports may differ from imports shipped by affiliates to parents, as reported on the U.S. parents affiliates to parents, as reported on the U.S. parents preport of differences in timing, valuation, and method of stimation. (Imports shown as being reported on affiliates' forms had to be estimated for affiliates that fell below the exemption levels for the annual survey. Data for imports from these affiliates were, however, included in the data reported on the parents' forms.)

by all U.S. persons and goods shipped to unaffiliated foreigners by U.S. parents-declined 1 percent, to \$171 billion. U.S. merchandise imports associated with MNC's-the sum of goods shipped by affiliates to all U.S. persons and goods shipped by unaffiliated foreigners to U.S. parents-declined 4 percent, to \$147 billion.

• Exports associated with MNC's accounted for nearly 80 percent of total U.S. merchandise exports in 1986. The decline in MNC-associated exports was in exports to unaffiliated foreigners. It was more than accounted for by parents in petroleum and in wholesaling of nondurable goods.

• Imports associated with MNC's accounted for 40 percent of total U.S. imports in 1986. The decline in MNCassociated imports was more than accounted for by MNC's with U.S. parents in petroleum. In that industry, U.S. merchandise imports from affiliates and from unaffiliated foreigners each declined by about 40 percent. Although trade data were not reported by product in the annual survey, the declines probably largely represented a reduction in the dollar value of imported petroleum. Total U.S. petroleum imports (including those by companies that were not U.S. parents) declined 33 percent in 1986.

Employment

• Employment by U.S. MNC's declined 2 percent, to 24.1 million. Employment by U.S. parents declined 1 percent, to 17.9 million (tables 3-5). In contrast, total private employment in the United States rose in 1986. EmTaple 6.—Distribution of Employment of Nonbank Foreign Affiliates, by Industry of U.S. Parent and by Industry of Affiliate, 1986

(Percent]

	By industry of parent	By industry of affiliate
All industries	100.0	100.0
Petroleum Manufacturing Wholesale trade	5.7 70.6 2.0	4.7 66.7 7.7
Finance (except banking), insurance, and real estate	7.2 2.8	2.4 5.1
Other industries	11.7	13.4

ployment by foreign affiliates declined 2 percent, to 6.3 million (tables 6-9).

• Employment by parents in petroleum, manufacturing, wholesale trade, and "other industries" declined. These declines were partly offset by increases in employment by parents in FIRE and services. The decline in U.S. parent employment partly reflected a concentration in industries, such as manufacturing and petroleum, in which total U.S. employment declined.

 The decline in employment by foreign affiliates was more than accounted for by a U.S. automaker's sale of its minority interest in a large French automaker. In the absence of this sale, employment by affiliates would have increased slightly.

• By industry, employment declined in petroleum, manufacturing, and "other industries" and increased in wholesale trade, FIRE, and services.

Text continues on p. 93.

D Suppressed to avoid disclosure of data of individual companies. Fewer than 50 employees. See footnote 1, table 8.

• The largest increases in employment were recorded for affiliates in Australia, Germany, the United Kingdom, Japan, and Brazil. The largest declines were in France, Mexico, South Africa, and Saudi Arabia.

• Employment by majority-owned foreign affiliates (MOFA's)—those in which U.S. parents held more than a 50-percent interest—declined 2 percent, to 4.7 million (tables 10–12). The pattern of changes in employment by MOFA's by industry and by country was similar to that of all affiliates (discussed earlier), except that it was not affected by the disinvestment in the minority-owned French automaker.

• In 1986, MOFA's accounted for 75 percent of the employment by all affiliates. Among countries in which affiliate employment was sizable, the MOFA shares were higher than average in Canada (93 percent), Brazil (92 percent), Germany (84 percent), and the United Kingdom (83 percent). The MOFA shares were lower than average in Japan (31 percent), South Korea (34 percent), and India (35 percent). The countries with lower-thanaverage shares restricted, or had previously restricted, majority ownership by foreigners. In addition, in some cases, factors other than government policy may have influenced the decision to have only a minority interest. For example, interests in several large minority-owned automotive af-

filiates may have been acquired more to transfer technology and facilitate trade than to gain control.

Sales of Services

Beginning with 1982, BEA's benchmark and annual surveys of U.S. direct investment abroad have requested a disaggregation of sales (or gross operating revenues) of U.S. parents and MOFA's into goods and services. Results for 1982-84 were presented in the SURVEY OF CURRENT BUSI-NESS early last year.³ This part of the article brings the series up to date with the revision of estimates for 1984 and the addition of estimates for 1985 and 1986.

For purposes of distributing sales between goods and services, "services" are defined as the activities characteristic of a particular group of indus-tries, consisting of the "services" division of the Standard Industrial Classification; petroleum services; FIRE; agricultural services: metal mining services; and transportation, communication. and public utilities. A parent or affiliate need not be classified in one of these industries in order to have sales of services; in fact, a significant portion of sales of services was accounted for by entities in manufacturing and other goods-producing industries that sold services as a secondary activity.

The remainder of this part discusses the composition of, and the growth in, sales of services by U.S. MNC's in 1986.

Composition of sales

Of total sales by U.S. parents in 1986 of \$2,544 billion, \$1,834 billion, or 72 percent, were goods, and \$710 billion, or 28 percent, were services (table 13).⁴ ⁵ Of total sales by MOFA's

4. Most of the sales categories shown in table 13 are disaggregated by industry of parent or affiliate, or by country of affiliate, in the publications mentioned in the accompanying box.

5. In examining U.S. parent sales of goods in table 13, it should be noted that parent sales of goods to foreign persons (which are not separately available) and U.S. parent merchandise exports (shown in table 2) are related, but not conceptually identical. The major difference between them is that, whereas sales are recorded on the basis of the location of the person to whom the sales are charged, merchandise exports are recorded on the basis of the location of the person to whom the goods are shipped. Although the two locations usually are the same, goods are sometimes charged to a person in one country but shipped to a person in another. The time of recording a transaction

of \$720 billion, \$638 billion, or 89 percent, were goods, and \$83 billion, or 11 percent, were services.

For both parents and MOFA's, most sales of services were to customers in the country of the entity making the sale (that is, local), reflecting the need, in many instances, to deliver services through an entity located near the customer. Of U.S. parent sales, 98 percent were to U.S. persons. Of MOFA sales, nearly 75 percent were local, 14 percent were to persons in other foreign countries, and 12 percent were to U.S. persons.

Most sales of services by MNC's to foreign (non-U.S.) persons were to unaffiliated persons. For U.S. parents, sales to unaffiliated foreigners-that is, to foreign persons other than a parent's own affiliates-accounted for three-fourths of sales of services to all foreigners. For MOFA's, the share of sales to foreigners that were to unaffiliated persons-that is, to foreign persons besides other affiliates of the same parent-was over 85 percent. Even though total sales of services by parents were several times larger than those by affiliates, affiliates had much larger sales to unaffiliated foreigners-\$63 billion, compared to \$13 billion.

Sales by U.S. parents to unaffiliated foreigners were concentrated in a few industries in which cross-border transactions are a common means of delivering services to foreign customers. About one-third of the sales were by parents in transportation, communication, and public utilities. In that industry group, the sales largely consisted of two types of transactions: U.S. telecommunications carriers' receipts from foreign carriers for their share of revenues from transmitting messages originating abroad to U.S. destinations, and U.S. airlines' ticket sales to foreigners. (The ticket sales, although attributable to U.S. parents, may have been made largely through foreign ticket offices of the parents. In BEA's surveys, such an office is treated as an extension of the parent, rather than as a foreign affiliate, if it services only the parent's own operations.)

^{3.} See "U.S. Sales of Services to Foreigners," SURVEY 67 (January 1987): 22-41. That article contains a more detailed discussion of methodology, definitions, and results than is provided here.

may also differ between the two measures, because goods may not be charged in the same period as they are shipped. Further differences may arise because of differences in the sources companies use to compile the data: sales usually are compiled on the basis of accounting records, whereas merchandise exports usually are compiled on the basis of export declarations or other shipping documents.

Growth in sales

U.S. parents.-The previously mentioned 2-percent decline in sales by U.S. parents in 1986 was the net result of a 7-percent decline in sales of goods and a 14-percent increase in sales of services. The share of services in total sales rose from 24 percent to 28 percent. It was 23 percent in 1982 and 1983, and 22 percent in 1984. The decline in the services share in 1984

occurred because a major U.S. telephone company divested several regional operating companies that, at that time, did not have direct investment abroad (and thus were not included in the 1984 estimates). Some of

these companies, although not major direct investors, have since estab-lished or acquired foreign affiliates.

The increase in sales of services was more than accounted for by sales to U.S. persons, which increased 14 percent. Sales of services by U.S. parents to foreign persons declined 5 percent, reflecting a decline in sales to unaffiliated foreigners.

The increase in sales by U.S. parents to U.S. persons was concentrated in FIRE, which accounted for over 70 percent of the total increase. Some of the increase probably was in the form

of investment income.⁶ In transportation, communication, and public utilities, there was a sizable increase in sales to U.S. persons, but sales to unaffiliated foreigners declined substantially.

6. In the annual survey, investment income is treated as a service if it is included in sales or gross operating revenues. In finance and insurance, this income is included in gross operating revenues because it is generated by a primary activity of the company. In most other industries, however, investment income is considered an incidental revenue source and is included in the income statement in a separate "other income" category. In order to reflect more accurately services performed, BEA plans to introduce a three-way breakdown of revenues of parents and MOFA's--into goods, services, and investment income-beginning with the next benchmark survey of U.S. direct investment abroad, which will cover 1989. (Such a breakdown was introduced in surveys of foreign direct investment in the United States beginning with the benchmark survey that covers 1987.) MOFA's.—Sales by MOFA's increased 2 percent, to \$720 billion. As in previous years, sales of services increased faster than sales of goods—19 percent, to \$83 billion, compared to 1 percent, to \$638 billion, for goods. Thus, the share of total sales accounted for by services increased—to 11 percent, compared with 10 percent in 1985 and 9 percent in each of the years 1982-84.

The increase in MOFA sales of services was almost entirely in sales to foreign persons, which increased 22 percent, to \$73 billion. Sales to other foreign affiliates (of the same U.S. parent) increased 15 percent, and sales to unaffiliated foreigners increased 23 percent. Sales to U.S. persons increased 1 percent, to \$10 billion. The increase in sales to foreign persons was spread among affiliates in a number of industries. MOFA's classified in office and computing machine manufacturing and in computer and data processing services had particularly large increases. Most of the services sold by MOFA's in both industries were probably computer and data processing services. Sizable increases were also recorded for MOFA's in wholesale trade, insurance, and finance (except banking).

Sales of services to foreigners by MOFA's in petroleum declined significantly. Part of the decline was due to the drop in oil prices, which led to cutbacks in exploration and development activity and reduced the demand for oil and gas field services.

Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 present quarterly and monthly constant-dollar inventories, sales, and inventory-sales ratios, respectively. Table 4 presents quarterly fixed-weighted constant-dollar inventory-sales ratios, i.e., ratios obtained by weighting detailed industry ratios by 1982 sales. Table 5 presents quarterly and monthly inventories for manufacturing by stage of fabrication.

Quarterly constant-dollar manufacturing and trade inventories, sales,

r Revised. Preliminar

Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.
 Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

Nore.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory. Table 4: The I-S ratios shown in this table were obtained by weighting detailed industry I-S ratios by 1982 sales. For manufacturing, 21 industries were used; for merchant wholesalers, 20 kinds of business; and for retail trade, 8 kinds of business.

Subject Guide

Volume 68, Numbers 1-6 (1988)

This guide lists articles and "Business Situation" sections by subject, giving the title, issue number, and beginning page number for each entry.

National

Business cycle indicators

Composite Indexes of Leading, Coincident, and Lagging Indicators. 1:28; 2:18; 3:20; 4:24; 5:20; 6:18. Leading Indicators. 2:1; A Note on Revisions, 5:21.

Government transactions

Federal Fiscal Programs. 2:19.

Government Sector. Fourth Quarter 1987, 3:2; First Quarter 1988, 5:2.

State and Local Government Fiscal Position in 1987. 2:25.

GNP by industry

Gross Product by Industry, 1987. 4:25.

Information

National Income and Product Accounts Estimates: When They Are Released, Where They Are Available, and How They Are Presented. 1:11. User's Guide to BEA Information. 3:62.

Input-output

Annual Input-Output Accounts of the U.S. Economy, 1982. 4:31.

Inventories and sales

Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade. 3:60; 6:97.

National income and product accounts (NIPA's)

- National Income and Product Accounts Estimates: When They Are Released, Where They Are Available, and How They Are Presented. 1:11.
- National Income and Product Accounts Tables. 1:15; 2:3; 3:4; 4:10; 5:4; 6:3. (See also entries under *Reconciliation and other special tables.*)
- Preliminary Estimates for Selected Component Series of the NIPA's: Real GNP, GNP Prices, and Personal Income. Fourth Quarter 1987, 1:1; First Quarter 1988, 4:1.
- Revisions in Selected Component Series of the NIPA's. Fourth Quarter 1987, 2:1; First Quarter 1988, 5:1. (See also this entry under *Reconciliation and other special tables.*)

Plant and equipment expenditures

Plant and Equipment Expenditures. First and Second Quarters and Second Half of 1988, 4:26; Four Quarters of 1988, 6:19.

Pollution abatement and control expenditures

Pollution Abatement and Control Expenditures, 1983-86. 5:22.

Profits

Corporate Profits. Fourth Quarter 1987, 3:1; Year 1987, 4:8; First Quarter 1988, 5:1 and 6:1.

Reconciliation and other special tables

- Cyclically Adjusted Federal Receipts, Expenditures, Surplus or Deficit, and Debt. 3:17; 5:18.
- Gross Private Domestic Investment. 2:17; 3:18; 4:23; 5:19; 6:17.
- Reconciliation of BEA Compensation and BLS Earnings. 2:16; 5:18.
- Reconciliation of NIPA Net Exports and BPA Balance on Goods and Services. 3:17; 6:16.
- Revisions in Selected Component Series of the NIPA's. Fourth Quarter 1987, 2:16 and 3:19; First Quarter 1988, 5:17 and 6:16.

International

Balance of payments

International Travel and Passenger Fares, 1987. 5:47.

- Selected Military Transactions in the U.S. International Accounts, 1983–87. 6:70.
- U.S. International Transactions. Fourth Quarter and Year 1987, 3:27; First Quarter 1988, 6:28.

Foreign investment in the United States

- U.S. Affiliates of Foreign Companies: Operations in 1986. 5:59.
- U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1987. 5:50.

Information

User's Guide to BEA Information. 3:62.

Investment position

International Investment Position of the United States in 1987. 6:76.

Reconciliation and other special tables

Reconciliation of NIPA Net Exports and BPA Balance on Goods and Services. 3:17; 6:16.

U.S. investment abroad

Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, 1988. 3:21.

U.S. Multinational Companies: Operations in 1986. 6:85.

Regional

Gross state product

Gross State Product by Industry, 1963-86. 5:30.

Information

User's Guide to BEA Information. 3:62.

Personal income

County and Metropolitan Area Personal Income, 1984-86. 4:47.

- State Quarterly Personal Income. First Quarter 1985 to Third Quarter 1987, 1:29; First Quarter 1981 to Fourth Quarter 1987, 4:72.

Projections

Tracking the BEA Regional Projections, 1983-86. 6:23.

CURRENT BUSINESS STATISTICS

The statistics here update series published in BUSINESS STATISTICS: 1986, a statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (available from the Superintendent of Documents for \$16.00, stock no. 003-010-00181-0) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1983 through 1986, annually, 1961-86; for selected series, monthly or quarterly, 1961-86 (where available).

The sources of the series are given in BUSINESS STATISTICS: 1986; they appear in the main methodological note for each series, and are also listed alphabetically on pages 145–146. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Effective with the Feb. 1988 SURVEY, data (back to 1984, for some commodities) have been revised. These revisions are available upon request  $\diamond$  See note " $\dagger$ " for p. S-6.

## Page S-6

§ Effective with the release of the January 1988 index, all producer price indexes previously expressed on a base of 1967 = 100, or any other base through December 1981, have been rebased to 1982 = 100. Only indexes with a base later than December 1981 remain unchanged. relation to 1962 – 100. Only indexes with a base rate than because 1961 rolation including the shipment weights, which have been taken primarily from the 1982 Census of Manufactures. The last rebasing of these indexes occurred in February 1971, when the 1967 base was substituted for the 1957-59 base. Historical data on the new base are available upon request. For producer price indexes of individual commodities, see respective commodities in the Industry section beginning p. S-19. All indexes subject to revision four months after original publication.

# Includes data for items not shown separately. # Effective with the release of the January 1988 index, all consumer price indexes previously expressed on a base of 1967 = 100, or any other base through December 1981, have been rebased to  $1982 \cdot 84 = 100$ . Only indexes with a base later than December 1981 remain unchanged. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of these indexes occurred in February 1971, when the 1967 base was substituted for the 1957-59 base. Historical data on the new base are available upon request. Beginning with January 1987, data are calculated using 1982-84 expenditure patterns and updated population weights. Additional information regarding these changes is available from the Bureau of Labor Statistics, Washington, DC 20212.

1. Advance estimate.

Advance estimate.
 # Includes data for items not shown separately.
 Effective with the January 1988 SURVEY, the seasonally adjusted labor force series have been revised back to January 1983. The January 1988 issue of *Employment and Earnings* contains the new seasonal adjustment factors, a description of the current methodology, and

revised data for the most recent 13 months or calerdar quarters. Revised monthly data for the entire 1983-87 revision period are in the February 1988 issue of *Employment and Earnings*. † The participation rate is the percent of the civilian honinstitutional population in the civilian labor force. The employment-population ratio is civilian employment as a percent of the civilian noninstitutional population, 16 years and over. @ Data include resident armed forces. * Sea note "#" for p \$ 8

See note "‡" for p. S-8.

#### Page S-10

 $\diamondsuit$  See note " $\diamondsuit$ " for p. S-9. § Effective June 1988 SURVEY, data have been revised back to April 1986 (not seasonally adjusted) and January 1983 (seasonally adjusted) to reflect new benchmarks and seasonal adjustment factors. The June 1988 issue of *Employment and Earnings* will contain a detailed discussion of the effects of the revisions.

#### Page S-11

[‡] This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

Production and nonsupervisory workers.
 § See note"§" for p. S-10.

#### Page S-12

1. This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision. Use the corresponding unadjusted series

§ See note "§" for p. S-10.
 ◊ Production and nonsupervisory workers.

4 Earnings in 1977 dollars reflect changes in purchasing power since 1977 by dividing by Consumer Price Index. Effective Feb. 1988 SURVEY, this series has been revised back to 1983 to reflect new seasonal factors for the CPI-W. Revised data are available upon request. §§ Wages as of June 1, 1988: Common, \$17.36; Skilled, \$22.54. † Excludes farm household and Erderal workers

Excludes farm, household, and Federal workers.
 See note "‡" for p. S-11.

1. Average for Dec.

 Effective December 31, 1987, eight brokers and dealers in commercial paper were added to the reporting panel resulting in a series break. End of month figures on the old basis are as follows: All issuers, 352,915; financial companies, 275,907; dealer placed, 103,667; directly placed, 172,240; and nonfinancial companies, 77,008.

‡ Effective Jan. 1988, series revised due to changes in the panel of reporting banks. The new reporting panel of 168 banks accounts for about 52 percent of total assets in U.S. offices of domestically-chartered banks. Back data have been estimated for the years 1984-87.

# Includes data for items not shown separately.
* "Transaction balances other than demand deposits" consists of ATS, NOW, super

NOW, and telephone transfer accounts. § Excludes loans and federal funds transactions with domestic commercial banks and includes valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

@ Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data.

 $(\widehat{a})$  (a) Insured unemployment as a percent of average covered employment in a 12-month

** Effective Aug. 1987 SURVEY, data are provided by the Farm Credit Corporation of America on a quarterly basis. Quarterly data are available back to first quarter 1985, with

## Page S-14

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months

2. Weighted by number of loans.

3. Beginning Feb. 1988, data temporarily suspended by the Farm Credit Administra-tion, which is revising the information it collects and amending the reports it distributes. § Effective Mar. 1988 SURVEY, data have been revised to reflect new benchmark and

seasonal adjustments. These revisions are available upon request.

t Effective Apr. 1988 SURVEY, the consumer installment credit series have been revised back to Jan. 1980 to reflect newly available historical information and to incorporate new seasonal factors. These revisions are available upon request.

# Includes data for items not shown separately

 $\diamond$  Adjusted to exclude domestic commercial interbank loans and federal funds sold to domestic commercial banks.

‡ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent

§§ Effective Apr. 1988 SURVEY, a total adjustment of \$920 million for fiscal year (FY) 1987 and \$1,565 million thru Feb. 1988 has been distributed by month for notes issued by the Federal Savings and Loan Insurance Corporation (FSLIC) in lieu of cash and not reported as outlays. The previous adjustment, in the Feb. 1988 SURVEY, has been reversed prior to these corrections. Effective Sept. 1987 SURVEY, the outlays for the Federal Deposit Insurance Corporation (FD1C) have been adjusted by \$442 million for 1986 and \$158 million for 1987 to reflect FDIC debentures issued in lieu of cash and not reported previously as outlays.

‡‡ Courtesy of Metals Week.

 @@ Average effective rate
 @ Revised for periods between October 1986 and February 1987. During this interval. outstanding gold certificates were inadvertently in excess of the gold stock.

#### Page S-15

1. Beginning in the first quarter 1987, the universe of manufacturing corporations was redefined to exclude corporations with less than \$250,000 in assets at the time of sample selection

[†] Effective Feb. 1988 SURVEY, the money stock measures and components have been revised and are available from the Banking Section of the Division of Research and Statis-tics at the Federal Reserve Board, Washington, D.C. 20551.

‡ Composition of the money stock measures is as follows:

M1.—This measure is currency plus demand deposits at commercial banks and interest-earning checkable deposits at all depository institutions—namely NOW accounts, auto-matic transfer from savings (ATS) accounts, and credit union share draft balances—as well as a small amount of demand deposits at thrift institutions that cannot, using present data

sources, be separated from interest-earning checkable deposits. M2.—This measure adds to MI overnight repurchase agreements (RP's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than \$100,000) at all depository institutions. Depository institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions

M3.-This measure equals M2 plus large-denomination time deposits (those issued in denominations of \$100,000 or more) at all depository institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations

L-This broad measure of liquid assets equals M3 plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial the European hours of 0.5 hours to be the second states are the second states are the second states and market able liquid Treasury obligations. ## Includes ATS and NOW balances at all depository institutions, credit union share

draft balances, and demand deposits at thrift institutions.

 $\diamond$  Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers. @ Small time deposits are those issued in amounts of less than \$100,000. Large time

deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions

# Includes data for items not shown separately.
 § Effective Apr. 1988 SURVEY, 1987 data have been revised. Revisions for Jan. 1987: long-term, 7,486; short-term, 372.

#### Page S-16

1. Effective with the June 1988 SURVEY, total exports and imports have been revised

 Effective with the June 1988 SURVEY, seasonal adjustment of exports and imports was reintroduced. The monthly data were last adjusted for December 1985. Historical data from Jan. 1986 forward are available upon request

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

For bonds due or callable in 10 years or more.

# Includes data for items not shown separately. @ Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the component items

Less than 500 short tons.

 Final constraints of a short tension of the specified material unless
 Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated. t Data for 1985-86 (and 1984, for inorganic chemical production items) have been revised

and are available upon request.
 ◇ Beginning January, 1986, data are not directly comparable to earlier periods because the data represent only companies that have annual revenues over \$100 million.

#### Page S-20

1. Reported annual total; monthly or quarterly revisions are not available.

Data are no longer available.

Data are not wholly comparable from year to year because of changes from one classification to another.

♦ Data for 1985-86 have been revised and are available upon request.

 Includes less than 500 electric generation customers not shown separately.
 Effective with the May 1988 SURVEY, data have been revised back to 1985 and are available upon request.

## Page S-21

1. Previous year's crop. New crop is not reported until Sept. (crop year: Sept. 1-Aug. 31). 2. Crop estimate for the year.

Stocks as of June 1. Stocks as of June 1 and represents previous year's crop; new crop not reported until June (beginning of new crop year).

Less than 50,000 bushels. 6. Stock estimates for barley and oats are available once a year as June 1 stocks and shown here in the May column and (as previous year's crop) in the annual column

7. Stocks as of Dec. 1.

See note "§" for p. S-6 regarding a change to a new reference base in 1988.

Prices are no longer available.
 Based on quotations for fewer than 12 months.

@ Quarterly data represent the 3-month periods Dec.-Feb., Mar.-May, June-Aug., and Sept. -Nov. Annual data represent Dec.-Nov.

† Coverage for 21 selected States, representing approximately 85 percent of U.S. production.

June 1 estimate of the 1988 crop.

§ Excludes pearl barley. # Bags of 100 lbs.

**June 1988** 

1. See note 1 for p. S-16

#### Page S-18

3. For month shown.

## Page S-22

Monthly quotation not available.
 See note "\$" for p. S-6 regarding a change to a new reference base in 1988.
 See note """ for this page.

§ Cases of 30 dozen.

 Bags of 60 kilograms.
 # Effective with the release of 1st Qtr. 1988 data, the import price index for coffee has been discontinued by BLS and replaced in the SURVEY with the import price index for coffee and coffee substitutes. The weighting structure used for the import price index reflects U.S. foreign trade flows based on 1985 data. Indexes, beginning with 2nd Qtr. 1975, are available upon request.

#### Page S-23

Crop estimate for the year.
 Reported annual total; revisions not distributed to the months.

3. Data suppressed because they did not meet publication standards of the Bureau of the Census.

See note "§" for p. S-6 regarding a change to a new reference base in 1988. # Totals include data for items not shown separately.

#### Page S-24

1. Annual data: monthly revisions not available.

 See note "\$" for p. S-6 regarding a change to a new reference base in 1988.
 New series from the American Metal Market. The composite scrap price represents the average of consumers' buying prices, delivered, at the following markets: Chicago, Pittsburgh, and Philadelphia. Annual and monthly composite price data are available back to January 1982.

#### Page S-25

1. Annual data; monthly revisions are not available.

2. For month showr

 ror month shown.
 @ Beginning 1987, includes foreign ores.
 Beginning January 1982, data represent metallic (mostly aluminum) content. Data for 1981 and prior years represent aluminum content only

The source for these series is now the Bureau of Mines.
 Source: Metals Week.

## Page S-26

1. Annual data; monthly revisions are not available

Less than 50 tons.
 Total for 5 months; data for May, June, Sept., Nov., and Dec.

4

Total for 10 months, no data for Jan. and Feb. Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.  $\diamond$ @ All data (except annual production figures) reflect GSA remelted zinc and zinc purchased for direct shipment.

‡ Source for monthly data: American Bureau of Metal Statistics. Source for annual data: Bureau of Mines.

 Plockade of Minds.
 Includes data not shown separately.
 Beginning with the Aug. 1985 SURVEY, unadjusted fluid power shipments indexes are shown. Seasonally adjusted indexes are no longer available.

* For an explanation of material handling equipment shipments and historical data, see p. S-35 of the Dec. 1985 SURVEY

(@@ Beginning Oct. 1986, the Lead price represents North American Mean.

## Page S-27

 See note "§" for p. S-6 regarding a change to a new reference base in 1988.
 Beginning January 1986, data have been restated because a new methodology has been adopted.

# Includes data for items not shown separately.

Includes nonmarketable catalyst coke. See also note "††" for this page.
 Includes small amounts of "other hydrocarbons and alcohol new supply (field

production)," not shown separately. * Effective with the Oct. 1987 SURVEY, coal production data for 1986 have been revised. Effective with the May 1988 SURVEY, coal consumption and stocks back through 1986

have been revised. These revisions are available upon request. @ Includes U.S. produced and imported microwave ovens and combination microwave

oven/ranges. ‡ "Tractor shovel loaders" includes some front engine mount wheel tractors that had previously been included in "Tractors, wheel, farm, and nonfarm."

tt Effective with the June 1988 SURVEY, data for 1987 have been revised and are avail-

able upon request. ‡‡ March, June, September and December are five-week months. All others consist of four weeks

#### Page S-28

- See note "\$" for p. S-6 regarding a change to a new reference base in 1988. Includes data for items not shown separately.

Except for price data, see note "++" for p. S-27.

#### Page S-29

Reported annual totals; revisions not allocated to the months.

 2. See note "\$" for p. S-6 regarding a change to a new reference base in 1988.
 ♦ Source: American Paper Institute. Total U.S. estimated consumption by all newspaper users

Compiled by the American Newspaper Publishers Association.

 # Compiled by the American Newspaper Publishers Association.
 † Effective with the April 1988 SURVEY, the import price index for natural rubber has been revised. The index is now expressed on a base of 1985=100. Also new weights based on 1985 trade flows have been applied to all data from 1985 onward. Revised data are available back to 4th gtr. 1983.

#### Page S-30

1. Reported annual total: revisions not allocated to the months.

Monthly data are being withheld to avoid disclosing data from individual firms. Annual total covers 9 months.

Data cover five weeks; other months, four weeks

Includes data for items not shown separately.

Cumulative ginnings to the end of month indicated.

§ Bales of 480 lbs.

#### Page S-31

1 Less than 500 hales

Annual total includes revisions not distributed to the months.

Average for crop year; Aug. 1-Jul. 31. For five weeks; other months four weeks 3

 5. See note "\$" for p. S-6 regarding a change to a new reference base in 1988.
 ♦ Based on 480-lb. bales, preliminary price reflects sales as of the 15th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).

# Beginning 1st Qtr. 1986; quarterly data are estimated by the American Textile Manufacturers Institute based on annual data collected by the Bureau of Census.

§ Bales of 480 lbs..
F Beginning 1st Qtr. 1987, data are not comparable with earlier periods. Girls apparel included with women's, misses' and juniors' and boys' apparel are now included with men's. Also, some classification changes were made.

## Page S-32

Annual total includes revisions not distributed to the months.

Production of new vehicles (thous. of units) for May 1988: passenger cars, 692; trucks and buses, 365.

3. Data are reported on an annual basis only.

4. Effective with the Feb. 1988 SURVEY, data have been revised back to 1985 and are available upon request.

5. Beginning with January 1987, data include Honda, Nissan, and Toyota passenger cars produced in U.S. plants.

 Beginning with January 1987, data include Nissan trucks produced in U.S. plants.
 Beginning with 1st qtr. 1987, jeans, jean-cut casual and dungarees are included with trousers

8. See note "+" for this page.

 Fotal includes backlog for nonrelated products and services and basic research.
 S Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.

This comprise an other cars.  $\diamond$  Courtesy of R.L. Polk & Co.; republication prohibited. Because data for some states are not available, month-to-month comparisons are not strictly valid.

 ‡ Excludes railroad-owned private refrigerator cars and private line cars.
 ‡ Effective with the Mar. 1988 SURVEY, retail inventories for trucks and buses have been restated to exclude captive imports (vehicles manufactured overseas by U.S. affili-ates). These data are available back through 1966. ‡‡ See note "†" for page S-31.

## **Available From GPO**

SURVEY OF CURRENT BUSINESS. Contains estimates and analyses of U.S. economic activity. Features include a review of current economic developments; articles pertaining to BEA's work on the national, regional, and international economic accounts and related topics; quarterly national income and product accounts tables; and 36 pages of tables that present over 1,900 major economic series obtained from other public and private sources. Monthly. \$6.50 single copy; \$18.00 per year.

Business Statistics: 1986. (1987) Provides monthly or quarterly data for 1983–86 and annual data for 1961–86 for series that appear in the SURVEY OF CURRENT BUSINESS. Also contains definitions of terms, sources of data, and methods of compilation. 325 pages. \$16.00 (GPO Stock No. 003-010-00181-0).

Business Conditions Digest. Contains tables and charts for 300 series, including business cycle indicators and other series that help evaluate business conditions. Features the composite indexes of leading, coincident, and lagging indicators. Also included are cyclical comparison charts and data sources. Monthly. \$4.00 single copy; \$44.00 per year.

Handbook of Cyclical Indicators. (1984) Contains series descriptions and data for 1947–82 for all series that appear in Business Conditions Digest. Features the composite indexes of cyclical indicators. 195 pages. \$5.50 (GPO Stock No. 003-010-00127-5).

The National Income and Product Accounts of the United States, 1929-82: Statistical Tables. (1986) Contains detailed estimates of the national income and product accounts for 1929-82 from the comprehensive revision released in 1985. Also includes definitions of the major components of the accounts and of the major sectors of the economy. 442 pages. \$23.00 (GPO Stock No. 003-010-00174-7).

BEA Methodology Paper No. 1: Introduction to National Economic Accounting. (1985) Introduces the concepts of the national income and product accounts by placing these accounts within the framework of national economic accounting. Shows how the national income and product accounts, capital finance accounts, and input-output accounts the major branches of national economic accounting in the United States are derived from the conventional accounting statements. 19 pages. \$1.00 (GPO Stock No. 003-010-00158-5).

BEA Methodology Paper No. 2: Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends. (1985) Describes the concepts, sources, and methods of the corporate profits components of the national income and product accounts. 61 pages \$2.50 (GPO Stock No. 003-010-00143-7).

**BEA Methodology Paper No.3: Foreign Transactions**. (1987) Describes the preparation of estimates in the national income and product accounts (NIPA's) of net exports (both current- and constant dollar), transfer payments to foreigners, capital grants received by the United States, interest paid by Government to foreigners, and net foreign investment. Also describes the relationship between foreign transactions estimates in the NIPA's and those in the balance of payments accounts. 52 pages. \$2.75 (GPO Stock No. 003-010-00178-0).

BEA Methodology Paper No. 4: GNP: An Overview of Source Data and Estimating Methods. (1987) Provides basic information about GNP, including the conceptual basis for the account that presents GNP, definitions of each of the components on the income and product side of that account, and a summary, presented in tabular form, of the source data and methods used in preparing estimates of current- and constant-dollar GNP. Also provides an annotated bibliography, with a directory, of the more than 50 items over the last decade that provided methodological information about GNP. 36 pages. \$2.00 (GPO Stock No. 003-01 0-001 79-8).

Index of Items Appearing in the National Income and Product Accounts Tables. (1987) Indexes general subject areas as well as detailed line items in the national income and product accounts tables. 18 pages. \$1.25 (GPO Stock No. 003-010-00180-1).

Fixed Reproducible Tangible Wealth in the United States, 1925-85. (1987) Contains annual estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States for 1925-85. Estimates are for fixed nonresidential private capital by major industry group (farm, manufacturing, and nonfarm nonmanufacturing), for residential capital by tenure group (owner-occupied and tenant-occupied), for governmentowned fixed cpital by type of government (Federal and State and local), and for 11 types of durable goods owned by consumers. 400 pages. \$18.00 (GPO Stock No. 003-010-00177-1).

U.S. Direct Investment Abroad: Balance of Payments and Direct Investment Position Estimates, 1977–81. (1987) Contains revised estimates of U.S. direct investment abroad and balance of payments transactions between U.S. parent companies and their foreign affiliates for 1977–81. Includes estimates by country and industry of foreign affiliate. 51 pages. \$2.75 (GPO Stock No. 003-010-00175-5).

U.S. Direct Investment Abroad: 1982 Benchmark Survey Data. (1985) Contains estimates by country and industry of foreign affiliate and by industry of U.S. parent on the financing and operations of foreign affiliates and U.S. parent companies, on the U.S. direct investment position abroad, and on balance of payments transactions between U.S. parents and their foreign affiliates. 462 pages, \$18.00 (GPO Stock No. 003-010-00161-5).

1985 OBERS BEA Regional Projections. (1985) Two volumes. Contains estimates for 1969, 1973, 1978, and 1983, and projections for 1990, 1995, 2000, 2005, 2015, and 2035 for total personal income, population, per capita personal income, and employment and earnings by industry for the United States and States.

Vol. 1. State Projections to 2035. 131 pages, \$4.75 (GPO Stock No. 003-010-00157-7).

Vol. 2. Metropolitan Statistical Area Projections to 2035. 356 pages. \$12.00 (GPO Stock No. 003-010-159-3).

Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (RIMS II). (1986) Contains an explanation of how to use regional input-output multipliers, by industry, for output, earnings, and employment. Includes information on how to perform systematic analyses of regional economic impacts of projects and programs. Also contains multipliers from the RIMS II, sample tables of inputoutput multipliers, and hypothetical case studies. 131 pages. \$6.50 (GPO Stock No. 003-010-00163-1).

BEA Staff Paper No. 43: The Use of National Income and Product Accounts for Public Policy: Our Successes and Failures. (1985)'Uses two indirect approaches to evaluate the national income and product accounts' successes and failures as tools for public policy. 26 pages. \$1.25 (GPO Stock No. 003-010-00162-3).

BEA Staff Paper No. 44: The BEA Quarterly Econometric Model of the U.S. Economy: 1985 Version. (1986) Contains a detailed description of the component sectors and individual equations contained in the BEA quarterly econometric model as of fall of 1985. 87 pages. \$4.50 (GPO Stock No. 003-010-00164-0).
