SURVEY OF CURRENT BUSINESS

U.S. Department of Commerce Robert A. Mosbacher / Secretary Michael R. Darby / Under Secretary for Economic Affairs

Bureau of Economic Analysis Allan H. Young / Director Carol S. Carson / Deputy Director

Editor-in-Chief: Douglas R. Fox Managing Editor: Leland L. Scott

Publication Staff: W. Ronnie Foster, M. Gretchen Gibson, Eric B. Manning, Donald J. Parschalk

SURVEY OF CURRENT BUSINESS. Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, Survey of CURRENT BUSINESS, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Annual subscription: Second-class mail— \$23.00 domestic, \$28.75 foreign; first-class mail— \$52.00. Single copy—\$6.50 domestic, \$8.13 foreign.

Mail subscription orders and address changes to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Make checks payable to the Superintendent of Documents.

Second-class postage paid at Washington, DC and at additional mailing offices. (USPS 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

Inside back cover: BEA Information

NOTE.—This issue of the SURVEY went to the printer on March 7, 1991. It incorporates data from the following monthly BEA news releases: Gross National Product (Feb. 27), Personal Income and Outlays (Feb. 28), and

Composite Indexes of Leading, Coincident, and Lagging Indicators (Mar. 1).

the BUSINESS SITUATION

PRELIMINARY estimates show that real GNP-a measure of U.S. production-decreased at an annual rate of 2.0 percent in the fourth quarter of 1990, 0.1 percentage point less than reported in the advance estimates released a month ago. Real gross domestic purchases-a measure of U.S. demand-decreased 4.5 percent, 0.3 percentage point more than previously The revisions in the two reported. measures differed because of a sizable upward revision in net exports.¹ Among the components that are included in both measures, downward revisions in inventory investment and in Federal Government purchases were partly offset by an upward revision in nonresidential fixed investment (see table 1 on page 23).

The price index for gross domestic purchases (fixed weights), a measure of U.S. inflation, increased 6.4 percent in the fourth quarter; the increase was 0.1 percentage point more than that reported in the advance estimates issued a month ago. The increase in the GNP

NOTE.—Douglas R. Fox of the Current Business Analysis Division was primarily responsible for preparing this article, with contributions from Daniel Larkins, Larry R. Moran, Ralph W. Morris, and Mira A. Piplani.

Looking Ahead...

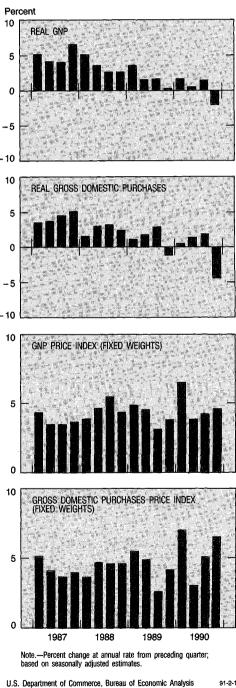

• National Income and Product Accounts Revisions. The next comprehensive revision—that is, benchmark revision—of the national income and product accounts is now scheduled for release in November 1991 instead of in July. The annual revision of the estimates for 1987–89 that would usually be released this July will be combined with the benchmark revision. (Selected tables that show detailed annual estimates for 1990 on an unrevised basis will appear in the July SURVEY.)

price index (fixed weights) was revised up 0.6 percentage point, to 4.7 percent. The unusually large upward revision in GNP prices reflected upward revisions in export prices and downward revisions in import prices. These revisions were spread across most major end-use categories of merchandise trade.

Revisions in components of real GNP.—Net exports was revised up \$5.1 billion in the fourth quarter; the revision was more than accounted for by a downward revision in imports. Within imports, a \$5.8 billion downward revision in merchandise imports was about evenly split between imports of petroleum and products and of nonpetroleum products (mainly in industrial supplies and materials and in autos).

Among the other components of GNP, inventory investment-that is, the change in business inventorieswas revised down \$5.9 billion; both farm inventories and nonfarm inventories (mainly in durables manufacturing and in retail auto dealers) were revised down. Federal Government purchases was revised down \$2.7 billion; the revision was more than accounted for by national defense purchases (mainly in military equipment). Nonresidential fixed investment was revised up \$4.4 billion; the revision was more than accounted for by producers' durable equipment (in information processing and related equipment). Within personal consumption expenditures, an upward revision in services (mainly in electricity and gas

^{1.} Revisions in net exports—that is, exports minus imports—lead to revisions in GNP but not in gross domestic purchases. Gross domestic purchases is calculated as the sum of personal consumption expenditures (PCE), gross private domestic investment (GPDI), and government purchases. GNP is calculated as the sum of these three components plus exports minus imports (thereby including U.S. production of goods and services marketed outside the United States and excluding goods and services in PCE, GPDI, and government purchases that are not U.S. produced).

and in "other" services) was largely offset by a downward revision in durables goods (mainly in furniture and equipment and in "other" durables). (The newly available source data for the preliminary fourth-quarter estimates are listed in the box on page 6.)

Real GNP

The fourth quarter marked what is generally regarded as the beginning of an economic downturn: Real GNP decreased 2.0 percent after increasing 1.4 percent in the third quarter.² As described in last month's "Business Situation," the fourth-quarter decrease was concentrated in motor vehicles and construction; the rest of the economy that is, GNP excluding motor vehicles and construction—continued to record weak growth (table 1).

Before discussing fourth-quarter developments in terms of the conventional GNP components, it is useful to consider recent changes in real GNP expressed on a command basis. Command-basis GNP measures U.S. production in terms of its purchasing power; thus, changes in commandbasis GNP reflect changes in the U.S. terms of trade, which BEA measures as the ratio of the implicit price deflator for exports to the implicit price deflator for imports. (Dollar levels for command-basis GNP and the terms-oftrade ratios are shown in table 1.11 of the "Selected NIPA Tables.") Largely in response to surging imported petroleum prices, the U.S. terms of trade worsened considerably in the second half of 1990. As a result, commandbasis GNP increased only 0.2 percent in the third quarter (compared with the 1.4-percent increase in real GNP) and dropped 4.5 percent in the fourth (compared with the 2.0-percent decrease in real GNP). (A sharp falloff in imported petroleum prices in the beginning of 1991 points to an improvement in the U.S. terms of trade in the first quarter and a better performance for command-basis GNP relative to real GNP.)

Personal consumption expenditures

Real personal consumption expenditures (PCE) fell 2.9 percent in the fourth quarter, its largest decline since the second quarter of 1980, after increasing 2.7 percent in the third quarter (table 2). For the year 1990, PCE increased only 1.0 percent.

The lackluster performance of PCE was traceable to several interrelated developments: Weakness in disposable personal income, declines in consumer confidence, and an increase in the unemployment rate in the second half of the year. Disposable personal income declined 3.7 percent in the fourth quarter, after a 0.7-percent decline in the third quarter and small increases in the first half of the year. The Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center) dropped sharply for the second consecutive quarter-to its lowest level since the second quarter of 1980-after small declines in the three preceding quarters. The unemployment rate increased for the second consecutive quarter, reaching its highest level since the fourth quarter of 1987.

Expenditures for durables dropped in the fourth quarter, continuing a pattern of alternating decreases and increases that began in the fourth quarter of 1989. Expenditures for motor vehicles and parts-the principal cause of the wide swings in durable goods throughout the year-fell 18.0 percent, to the lowest level since the fourth quarter of 1987. Recent swings in purchases of new cars and trucks have been associated with changes in salesincentive programs offered by manufacturers: The programs offered in the fourth quarter were modest in comparison with those offered in the third. A sharp increase in the prices of new cars in the fourth quarter may also have contributed to the decline in expenditures. Expenditures for used cars was the only component of durable goods that increased in the fourth quarter. The increase may have been partly attributable to large supplies of attractively priced, late-model used cars on retail dealers' lots; as a result of very aggressive fleet-marketing programs, manufacturers reacquired substantial numbers of fleet cars and sold many of them to dealers. Furniture and house-

Table 1.—Gross National Product, Motor	Vehicle Output, and Construction Output

Gross national product less motor vehicle and construction output	3,653.9	15.4	5	17.5	15.6	1.7	1	1.9	1.7	

Note.—Motor vehicle output is derived by summing auto output (table 1.18 of the "Selected NIPA Tables") and truck output (table 1.20). Construction output may be roughly approximated by "structures," shown in table 1.4. This approximation excludes maintenance and repair expenditures and includes brokers' commissions as well as mining exploration, shafts, and wells; nevertheless, it probably tracks movements in construction output quite closely. The value of motor vehicle and construction output includes the value of inputs, such as steel.

Gasoline and oil, and fuel oil and coal.
 Electricity and gas.

NOTE .- Percent changes in major aggregates are found in table 8.1 of the "Selected NIPA Tables." Dollars levels are found in table 2.3.

^{2.} The regularly featured estimate of real GNP is based on 1982 weights. An alternative estimate of real GNP growth based on 1987 weights decreased 3.5 percent in the fourth quarter after increasing 1.7 percent in the third (see tables 3 and 4 on page 24).

hold equipment declined 6.5 percent after a slight decline; all components declined, but consumer electronics—the durable goods subcomponent that had increased the most in recent years declined the most. "Other durables" declined 1.1 percent after increasing 7.1 percent; the largest decline was in jewelry.

Expenditures for nondurables declined 5.9 percent in the fourth quarter—the largest decline since 1974 and the fourth decline in five quarters. Fourth-quarter declines left expenditures for food at their lowest level since the third quarter of 1987 and left expenditures for clothing and shoes and for "other nondurables" at their lowest levels since the second quarter of 1989. Expenditures for energy also declined in the fourth quarter. Fuel oil and coal declined, largely because of warmerthan-normal weather in New England, where use of fuel oil predominates; gasoline and oil was unchanged.

Expenditures for gasoline and oil changed little from the second quarter to the fourth quarter, even though petroleum prices increased 65 percent as a result of the Middle East crisis. In the two earlier periods when petroleum prices increased sharply, expenditures fell: From the fourth quarter of 1973 to the first quarter of 1974, expenditures dropped 34 percent; from the first quarter to the third quarter of 1979, they dropped 21 percent. There are several possible explanations for why

Housing Starts

U.S. Department of Commerce, Bureau of Economic Analysis

CHART 2

gasoline and oil expenditures behaved differently in 1990 than in 1974 and 1979. First, supply shortages were associated with the oil price shocks in 1974 and 1979 but not in 1990. Second, because prices were more volatile in the years prior to 1990 than in the years prior to the earlier oil price shocks, consumers were more accustomed to sharp price changes and thus Third, gasoreacted less to them. line and oil expenditures accounted for a smaller portion of total PCE in 1990 than in the 1970's; this reduction, which was partly the result of higher vehicle fuel efficiency, may have lowered the price elasticity of demand.

Expenditures for services increased 1.8 percent in the fourth quarter after increasing 3.0 percent in the third. The deceleration was accounted for by household operations and medical care. A downswing in household operations reflected declines in natural gas and in telephone and telegraph after increases; the decline in natural gas partly reflected warmer-thannormal weather in much of the United States. Expenditures for housing services and for "other services," mainly recreation, both increased more in the fourth quarter than in the third.

Nonresidential fixed investment

Real nonresidential fixed investment declined 1.3 percent in the fourth quarter after increasing 8.9 percent in the third. A sharp drop in structures more than accounted for the decline (table 3).

Structures dropped 17.9 percent in the fourth quarter. Construction of commercial buildings posted the largest drop, as it fell to its lowest level in 7 years. Construction of industrial buildings declined for the first time since the fourth quarter of 1989.

Producers' durable equipment increased 4.2 percent in the fourth quarter. Information processing equipment increased sharply after two small quarterly declines; the increase was accounted for by office, computing, and accounting machinery. Transportation equipment dropped sharply after a very strong increase. Motor vehicles accounted for most of the drop; some motor vehicle purchases originally scheduled for the fourth quarter may have been shifted into the third quarter in response to the very aggressive fleet-marketing programs by automobile manufacturers.

Although interest rates (as measured by the yield on new issues of high-

⁹¹⁻²⁻²

grade corporate bonds) moved down in the fourth quarter, most of the other factors that are usually considered in assessing the outlook for investment spending are generally discouraging. A Census Bureau survey of business plans for plant and equipment expenditures that was conducted in October and November 1990 found that real spending on plant and equipment is expected to increase only 0.4 percent in 1991. Contract awards for new commercial and industrial buildings fell substantially in each quarter of 1990. The rate of capacity utilization in manufacturing dropped sharply in the fourth quarter. Finally, for more than a year, corporate profits and cash flow have been weak, and real final sales have grown at an annual rate of less than 2 percent.

Residential investment

Real residential investment declined 18.5 percent in the fourth quarter after declining 19.8 percent in the third (table 3). Single-family construction, multifamily construction, and the "other" component (which includes additions and alterations, major replacements, mobile home sales, and brokers' commissions on house sales) each declined in both quarters.

Single-family construction declined 25.6 percent in the fourth quar-ter, the third consecutive quarter in which the decline exceeded 20 percent. These declines mirror a sharp falloff in single-family starts (chart 2). In the fourth quarter, single-family starts were 786,000 units (seasonally adjusted annual rate), 202,000 units below their year-earlier level.

The 4-year downward trend in multifamily construction continued in the fourth quarter. Multifamily construction declined 10.0 percent after declining 25.9 percent. Vacancy rates above 7 percent continue to plague the multifamily housing sector.

The "other" component declined 11.5 percent in the fourth quarter after declining 9.2 percent in the third. Both declines were largely accounted for by additions and alterations and by major replacements, two components that measure improvements to existing houses. Brokers' commissions on house sales also declined in both quarters, as sales of both new and existing homes continued to drop. Sales of new houses declined 46,000 units, to 478,000 units (seasonally adjusted annual rate), in the fourth quarter, the fifth consecutive decline; sales of existing homes declined 90,000 units, to 3,164,000 units (seasonally adjusted annual rate). These declines are consistent with a falloff in consumer confidence: The percentage of respondents to the University of Michigan's survey of consumer sentiment who indicated that "now is a good time to buy a house" fell to 53 percent in the fourth quarter from 65 percent earlier in the year. The weakness in the housing market continued despite recent declines in interest rates (chart 3). The commitment rate on fixed-rate mortgages declined 16 basis points, to 9.95 percent, in the fourth quarter after falling 33 basis points in the third.

Inventory investment

Real inventory investment-that is, the change in business inventoriesfell \$26.9 billion in the fourth quarter, as businesses reduced their inventories \$22.2 billion after adding \$4.7 billion in the third quarter (table 4). Nonfarm inventories, particularly manufacturing inventories and retail auto dealers' inventories, more than accounted for the downswing.

Manufacturing inventories declined \$16.1 billion in the fourth quarter after increasing \$3.7 billion in the third. Inventories of durables registered a substantial decumulation, resuming a runoff that had been interrupted by a modest accumulation in the third quarter. The decumulation was primarily in electrical machinery, in nonelectrical machinery, and in transportation equipment other than motor vehicles. Inventories of nondurables declined after small increases in the second and third quarters; the decline was concentrated in petroleum and coal products and in apparel.

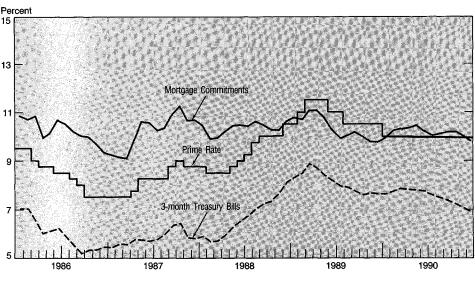

Retail auto dealers' inventories were drawn down \$10.3 billion in the fourth quarter after increases in the two preceding quarters. The liquidation reflected the extremely low level of motor

Data: FRB, FLHLMC. U.S. Department of Commerce, Bureau of Economic Analysis

01-2-4

CHART 3

vehicle production. Other retail trade inventories increased after a decline; the upswing was in nondurables.

Wholesale trade inventories increased \$1.4 billion in the fourth quarter, continuing a series of moderate increases. Inventories of merchant wholesalers were up considerably more than in the third quarter; the larger increase was accounted for by inventories of grocery and farm product wholesalers. Inventories of nonmerchant wholesalers declined after a small increase; the downswing was largely in inventories held in petroleum bulk stations and terminals.

Farm inventories increased \$1.9 billion in the fourth quarter after no change in the third. Inventories of crops increased after two quarters of decline; these changes largely reflected net placements of crops with the Commodity Credit Corporation. Inventories of livestock increased less than in the third quarter.

Although the fourth quarter marked what is generally regarded as the beginning of an economic downturn, all three of the aggregate constant-dollar inventory-sales ratios shown in table 5 moved lower. For example, the ratio of nonfarm inventories to final sales dropped from 2.82 in the third quarter to 2.79 in the fourth. All three ratios were considerably below their year-earlier levels.

An alternative set of constant-dollar inventory-sales ratios that provides more detailed information about inventory developments shows a somewhat different picture. This set is limited to the manufacturing and trade

Table 5.—Constant-Dollar Inventory-Sales Ratios 1

[Ratio, based on 1982 dollars]

	1989 IV	1990						
		I	n	m	IV			
Inventories and final sales of business:			*					
Inventories to final sales	3.08	3.04	3.06	3.05	3.03			
Nonfarm inventories to final sales	2.84	2.81	2.82	2.82	2.79			
Nonfarm inventories to final sales								
of goods and structures	4.64	4.55	4.60	4.60	4.50			
Inventories and sales for manufacturing and trade:								
Manufacturing and trade	1.46	1.44	1.43	1.43	1.40			
Manufacturing	1.49	1.50	1.47	1.46	1.48			
Merchant wholesalers	1.28	1.28	1.27	1.28	1.34			
Retail trade	1.58	1.52	1.55	1.55	1.5			

 All ratios are based on end-of-quarter inventories and quarterly sales at monthly rates. Thus, the ratios measure the number of months that the current rate of sales could be sustained from the current level of inventories. For the first set of ratios, sales are limited to those to final users. For the second set of ratios, sales reflect various degrees of double counting. (For example, manufacturers' sales include interplant transfers within the same company, intercompany sales within the same industry, and interindustry sales within manufacturing.)

NOTE.—Dollar levels for most inventories and final sales of business are found in table 5.11 of the "Selected NIPA Tables." Manufacturing and trade inventories and sales estimates are published in the March, June, September, and December issues of the SURVEY OF CURENT BUSINESs. The estimates published next month will reflect revisions to inventories and sales that will take place next month. industries: The inventories account for approximately 85 percent of total nonfarm business inventories, and the sales include intermediate sales-that is, sales from one industry to anotheras well as sales to final purchasers. The inventory-sales ratio for manufacturing and trade increased from 1.43 to 1.46 in the fourth quarter, bringing it back up to the year-earlier level. The ratio for manufacturing turned up in the fourth quarter; among manufacturing industries, the ratios for primary metals and for motor vehicles were considerably higher than a year earlier. The ratio for merchant wholesalers jumped in the fourth quarter; the ratios for motor vehicles and for other durables were considerably higher than a year earlier. The ratio for retail trade edged up in the fourth quarter; ratios for durables other than auto dealers and for food stores were higher than a year earlier.

Net exports

Net

E

h

Real net exports jumped \$28.0 billion in the fourth quarter after declining \$1.9 billion in the third (table 6). Exports were up \$10.9 billion, slightly more than in the third

quarter; imports were down \$17.1 billion after increasing \$12.3 billion. In both exports and imports, merchandise trade more than accounted for the fourth-quarter movements; several major end-use categories posted exceptionally large changes.

Merchandise exports increased \$13.2 billion (or 13.1 percent) in the fourth quarter after a small increase in the third. Nonagricultural exports, which increased \$13.4 billion after increasing \$3.9 billion, accounted for most of the pickup. Within nonagricultural exports, industrial supplies and materials, which increased a record \$6.8 billion, accounted for most of the fourth-quarter increase; capital goods (except autos) accounted for most of the rest of the increase. Agricultural exports changed little after a \$1.3 billion decline.

Merchandise imports declined \$17.8 billion (or 12.9 percent) in the fourth quarter after a substantial increase in the third. Petroleum imports, which dropped a record \$18.0 billion, accounted for the decline. The drop in petroleum imports reflected a reaction to higher prices and the falloff in eco-

nomic activity. Nonpetroleum imports changed little; a substantial increase in capital goods (except autos) was nearly offset by the largest decline in auto imports in 8 years.

Government purchases

Real government purchases increased \$8.6 billion (or 4.2 percent) in the fourth quarter after increasing \$2.5 billion (or 1.2 percent) in the third (table 7). Both Federal defense purchases and State and local government purchases increased more than in the third quarter; Federal nondefense purchases declined more than in the third quarter.

Federal defense purchases increased \$5.2 billion in the fourth quarter after increasing \$1.7 billion in the third; the step-up was at least partly attributable to spending for Operation Desert Shield. Purchases of nondurables increased considerably after a decline; purchases of petroleum products were up \$3.7 billion, and purchases of ammunition were up \$1.2 billion. Compensation of military personnel increased \$0.7 billion after little change. Among services other than compensation, spending on transportation of materiel, on travel of persons, and on personnel support picked up; together, these services increased \$2.4 billion in the fourth quarter. Purchases of military equipment declined \$1.2 billion after increasing \$4.4 billion.

Federal nondefense purchases declined \$2.9 billion in the fourth quarter after declining \$1.6 billion in the third. The larger decline was traceable to changes in inventories of farm products held by the Commodity Credit Corporation (CCC); these changes largely reflected transactions under the commodity loan program. The level of CCC inventories declined \$1.6 billion in the fourth quarter after two quarters of modest accumulations. Federal nondefense purchases excluding CCC inventory change was unchanged after a decline.

State and local government purchases increased \$6.2 billion in the fourth quarter after increasing \$2.4 billion in the third. The pickup was traceable to structures, largely reflecting a rebound in highway construction.

NOTE.—Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1982 dollars and are based on 1982 weights. (Alternative measures based on more current weights are shown in tables 3 and 4 on page 24.)

The preliminary GNP estimate for the fourth quarter incorporates the following revised or additional source data that were not available when the advance estimate was prepared a month ago.

- Personal consumption expenditures: Retail sales for November (revised) and December (revised).
- Nonresidential fixed investment: Construction put in place for November (revised) and December, manufacturers' shipments of equipment for November (revised) and December, and partial information on plant and equipment expenditures for the quarter.
- Residential investment: Construction put in place for November (revised) and December.
- Change in business inventories: Manufacturing and trade inventories for November (revised) and December.
- Net exports of goods and services: Merchandise exports and imports for November (revised) and December.
- Government purchases of goods and services: Federal outlays for December, and State and local construction put in place for November (revised) and December.
- GNP prices: Detailed merchandise export and import price indexes for October through December, values and quantities of petroleum imports for December, and residential housing prices for the quarter.

BEA Vacancies

BEA is hiring additional staff—primarily economists and accountants. The positions are in national economic accounting, balance of payments accounting, and international investment surveys. Requests for information, including how to apply for these positions, may be addressed to James J. Hartman, Administrative Officer, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; phone (202) 523-0508.

NATIONAL INCOME AND PRODUCT ACCOUNTS

Selected NIPA Tables

New estimates in this issue: Fourth quarter 1990, preliminary.

The selected set of 54 national income and product accounts (NIPA) tables shown in this section presents quarterly estimates, which are updated monthly. (In most of these tables, annual estimates are also shown.) The full set of 132 tables usually shown in July presents annual NIPA revisions. For more information on the presentation of the estimates, see "National Income and Product Accounts Estimates: When They are Released, Where They Are Available, and How They Are Presented" in the July 1988 SURVEY.

The tables shown are available the day of the GNP news release on printouts and diskettes on a subscription basis or from the Commerce Department's Economic Bulletin Board. Estimates for 1986–89 are in the July 1990 issue of the SURVEY; estimates for 1985 are in the July 1988 issue; estimates for 1984 are in the July 1987 issue; estimates for 1983 are in the July 1986 issue. Estimates for 1929–82 are in National Income and Product Accounts, 1929–82: Statistical Tables. For more information, write to National Income and Wealth Division (BE-54), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

NOTE .- This section of the SURVEY is prepared by the National Income and Wealth Division and the Government Division.

Exports of nonagricultural products	328.5	357.7	327.6	337.8	350.4	353.7	354.5	372.0
Imports of nonpetroleum products	430.0	440.6	430.5	434.7	435.4	435.5	445.3	446,2

Estimates beginning with the first quarter of 1986 exclude repairs and alterations of equipment, which was reclassified to services other than factor income.
 Beginning with 1987, reexports—that is, exports of foreign merchandise—are assigned to end-use categories in the same manner as exports of domestic merchandise. For earlier periods, all reexports are included in the "other" categories.
 Because no data are available to distribute exports and imports of "other" merchandise between durable and nondurable goods prior to 1986, or to distribute imports of "other" merchandise for all time periods, estimates were distributed equally.
 Includes parts of line 2 and line 5.

NOTE.---Beginning with 1985, the definitions of the end-use categories have been changed. For a description of the new definitions, see the technical notes in "U.S. International Transactions, First Quarter 1988," SURVEY OF CURRENT BUSINESS 68 (June 1988): 34-39 and 57.

The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (first-in, first-out; last-in, first-out; etc.) underlying book value inventories derived primarily from Census Bureau statistics. This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GNP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates. 2. Quarterly totals at monthly rates. Business final sales equals final sales less gross product of households and institutions, government, and rest of the world, and includes a small amount of final sales by farms.

1. Percent changes for 1986 and the first quarter of 1986 reflect discontinuities in the series. NOTE.—The fixed-weighted price index and the chain price index, both of which are weighted averages of the detailed prices used in the deflation of GNP, are measures of price change. In calculating changes in these indexes, the composition of GNP is held constant. Consequently these changes reflect only changes in prices. The fixed-weighted price index measures price change over any period, using as weights the composition of GNP in 1982. The chain price index measures price change between two consecutive periods,

using as weights the composition of GNP in the first period. The implicit price deflator is a byproduct of the deflation of GNP. It is derived as the ratio of current- to constant-dollar GNP (multiplied by 100). It it the average of the detailed prices used in the deflation of GNP, but the prices are weighted by the composition of GNP in each period. Consequently, the implicit price deflator reflects not only changes in prices but also changes in the composition of GNP, and its use as a measure of price change should be avoided.

* Preliminary.

1. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmarking procedures; quarterly estimates also include differences in seasonal adjustment procedures.

adjustment procedures. 2. These estimates usually differ slightly from the BEA-derived estimates (first line) because the BLS esti-mates include compensation and hours of tenant-occupied housing. The larger differences in 1988 and 1989

primarily reflect a BLS adjustment to make the 1988 compensation data, which cover 53 Fridays (the most frequent pay day), consistent with the hours data, which are based on a constant 52-week year. NOTE.-The table incorporates revised BLS estimates released in February 1991.

^p Preliminary.

Federal Fiscal Programs

HE fiscal year 1992 budget is consistent with the 5-year deficit reductions enacted in the Omnibus Budget Reconciliation Act of 1990.¹ The budget recommends discretionary spending levels that are within the statutory caps of the act for defense, international, and domestic spending. It implements the savings and reforms for entitlement programs as provided in the act, and it conforms to the "pay-as-you-go" requirements; that is, any new proposals to reduce taxes or increase spending must be offset so that the effect on the deficit is neutral. The budget holds the rate of growth in total spending to 2.6 percent, well below projected inflation.

The Omnibus Budget Reconciliation Act of 1990 includes several provisions to increase receipts in 1992: Limiting itemized deductions, phasing out the personal exemption as a taxpayer's adjusted gross income exceeds threshold amounts, and increasing excise taxes on alcohol, tobacco, and gasoline. In addition, the budget proposes to increase receipts by lowering the tax rate on capital gains (thereby increasing individual income taxes in the short run as taxpayers realize more capital gains) and by extending coverage of medicare hospital insurance to all State and local government employees.

The budget shows national defense outlays declining 1.2 percent in 1992. (In real terms, according to the administration, national defense outlays decline 5.3 percent.) Outlays for the procurement of military hardware decline 6.1 percent in 1992, compared with a 2.3-percent decline in 1991. The largest increase—6.5 percent—is for research, development, test, and evaluation. Nondefense outlays increase 3.6 percent in 1992. (In real terms, nondefense outlays decline 0.5 percent.) Proposed policy changes in mandatory programs, such as medicare, and a "flexible freeze" hold down the increase in spending.

Economic assumptions

After almost 8 years of expansion, the economy entered a recession in the fourth quarter of 1990. According to the *Economic Report of the President*, "The downturn was caused

in large part by the economic effects of Iraq's invasion of Kuwait. That caused a jump in oil prices and directly reduced business and consumer confidence."² These factors, along with the uncertainty about the resolution of the Persian Gulf crisis, "dealt a substantial blow to an economy already sluggish from other factors." The other factors included rising interest rates, tight credit conditions, and the other effects of a tight monetary policy that was undertaken in early 1988 in "a successful attempt to prevent an increase in inflation."

The Council of Economic Advisers, in describing the outlook for 1991 in the Economic Report, noted that the downturn is not expected to last long and that a recovery will start by the middle of 1991. The Council also stated that the administration's economic policies "are designed both to mitigate the current downturn and to strengthen the foundations for a solid recovery and a return to sustained economic growth." The administration believes that several factors point to a short downturn and an early recovery. First, business inventories are low relative to sales, indicating "that a prolonged period of inventory liquidation is not likely in the short term." Second, in the early stage of previous recessions both interest rates and inflation were either high or rising; in the current downturn, the core inflation is moderating and is lower than in the 1974-75 and 1981-82 recessions. Third, the established credibility of the Federal Reserve's policy to fight inflation allows room for the Federal Reserve to soften the downturn without raising expectations of higher inflation. Fourth, the outlook for export growth continues to be strong as major trading partners are

^{2.} Percent of labor force, including armed forces residing in the United States.

^{3.} Average rate on new issues within a year. The estimates assume, by convention, that interest rates vary with the rate of inflation. Source: The Budget of the United States Government, Fiscal Year 1992.

^{2. &}quot;Annual Report of the Council of Economic Advisers," in the *Economic Report of the President* (Washington DC: U.S. Government Printing Office, February 1991).

expected to experience stronger growth than the United States. Fifth, declining interest rates will have positive effects on investment and consumer spending in the second half of 1991. According to the Council, a successful resolution to the Persian Gulf crisis is a major ingredient to the recovery.

Real GNP is forecast to increase 0.9 percent from the fourth quarter of 1990 to the fourth quarter of 1991 and 3.6 percent from the fourth quarter of 1991 to the fourth quarter of 1992 (table 1). The rate of inflation is expected to moderate slightly in 1991: The GNP implicit price deflator is forecast to increase 4.3 percent (fourth quarter to fourth quarter) after increasing 4.5 percent in 1990. The Council states that the "economic slowdown in 1990 created excess capacity in many industries and eased tightness in labor markets, which will contribute to downward pressure on underlying inflation during the year." The unemployment rate is expected to increase to 6.6 percent by the fourth quarter of 1991, and the interest rate for 91-day Treasury bills is expected to decline to 6.4 percent.

For 1991, the Council based their forecast of the increase in real GNP (fourth quarter to fourth quarter) on the following assessment. Personal consumption expenditures-paced by consumer durables-are expected to increase 0.5 percent. Nonresidential fixed investment is expected to increase 1.6 percent as business spending on new plant and equipment improves through the year. Residential

investment is expected to increase 1.5 percent, in contrast to an 8.7-percent decline in 1990. According to the Council, exports of manufactured goods and farm commodities are expected to increase, and the higher export growth of manufactured goods will further stimulate spending on new plant and equipment. Federal Government purchases of goods and services are expected to decline 3.9 percent, in contrast to a 5.5-percent increase in 1990. State and local government purchases are expected to increase 1.8 percent, down from a 2.5-percent increase in 1990.

Current services estimates

Current services estimates show what receipts and outlays would be without policy change. In concept, these estimates are neither recommended amounts nor forecasts; they are bases with which administration or congressional proposals can be compared. The current services estimates conform to the limits on discretionary spending and the requirement that direct spending and receipts proposals be deficit neutral as provided in the **Omnibus Budget Reconciliation Act of** 1990. The estimates are based on the same economic assumptions as those underlying the budget.

Budget receipts in 1992 are \$2.7 billion higher than current services receipts, reflecting the administration's proposals to increase receipts, as previously mentioned (table 2). Budget outlays are \$1.3 billion lower than current services outlays; proposed program reductions (\$6.3 billion) exceed proposed program increases (\$5.0 billion). The largest proposed program increase-\$4.6 billion—is for Operation Desert Storm, and the largest proposed program reduction-\$2.9 billion-is for a variety of medicare reforms.

The budget estimates

The budget deficit decreases \$37.2 billion in fiscal year 1992, from \$318.1 billion in fiscal year 1991 to \$280.9 billion (table 3 and chart 4). Of this decrease, \$25.4 billion is the result of a decline in the current services budget deficit, and \$11.8 billion is the result of the administration's deficit-reduction proposals.

Receipts increase \$73.6 billion-or 6.7 percent-in 1992, to \$1,165.0 billion. Receipts in 1991 are \$1,091.4 billion, up 5.8 percent from 1990. Administration proposals for tax legislation have only a minor effect on receipts, increasing them \$2.3 billion in 1992: Receipts are raised \$2.6 billion by lowering the capital gains tax and \$1.1 billion by extending medicare hospital insurance to all State and local government employees; receipts are lowered \$0.8 billion by extending the research and experimentation credit and allocation rules and \$0.3 billion by allowing for the establishment of family savings accounts.

Outlays increase \$36.3 billion-or 2.6 percent-in 1992, to \$1,445.9 bil-Outlays in 1991 are \$1,409.6 lion. billion, up 12.6 percent. The 1992 increase is the net result of \$42.3 billion

in increases and \$6.0 billion in decreases. Table 4 shows budget outlays by function: Four functions—social security, net interest, income security, and medicare—more than account for the increase in total outlays; all other functions, on balance, decline. The largest increase—\$19.6 billion—is for social security and includes \$10.5 billion for a 5.2 percent cost-of-living ad-

justment, effective January 1, 1992. The largest decline—\$26.7 billion—is for commerce and housing; it is mainly due to declines in spending by the Resolution Trust Corporation.³ National defense spending declines \$3.7 billion because of reduced spending for Operation Desert Storm.

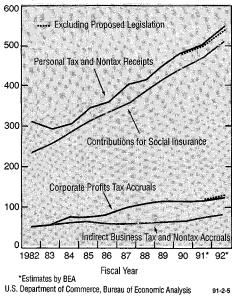

Federal sector

BEA has prepared estimates of the Federal sector on the national income and product accounts (NIPA) basis that are consistent with the budget estimates. Estimates of the Federal sector, which are integrated conceptually and statistically with the rest of the NIPA's, differ in several respects from the budget estimates; unlike the budget estimates, these estimates exclude financial transactions, such as loans, and they record several cate-

gories of receipts and expenditures on a timing basis different from that of the budget. (For a more detailed discussion of the differences, see *Government Transactions*, NIPA Methodology Paper Series MP-5; order information appears on the inside back cover of this issue.) Table 5 shows the relation between budget receipts and NIPA receipts, and table 6 shows the relation between budget outlays and NIPA expenditures.⁴

Federal receipts on the NIPA basis increase \$89.3 billion, to \$1,237.4 billion, in fiscal year 1992 (chart 5). The

4. A major expenditure reconciliation item in table 6-\$85.9 billion in fiscal year 1992---is for "deposit insurance"; this item represents the different treatments of spending for the bailout of thrift institutions. In

1992 increase is the result of a \$69.8 billion increase due to higher tax bases and a \$19.5 billion increase due to tax changes (table 7). The increase due to tax changes is largely accounted for by social security rate and base increases and by the Omnibus Budget Reconciliation Act of 1990; proposed tax legislation has only a small impact on 1992 receipts.

Federal expenditures on the NIPA basis increase \$67.1 billion, to \$1,418.6 billion, in 1992 (charts 6 and 7). Table 8 highlights the major factors that

the budget, this spending is included in outlays; in the NIPA's, this spending is regarded as asset transfers, which are excluded from expenditures because they do not arise from current production. For a detailed discussion of this treatment, see the "Business Situation" article referred to in footnote 3.

contribute to recent changes in Federal expenditures. Expenditures for Operation Desert Storm have a significant impact on the change in expenditures for both 1991 and 1992. The budget estimates include an allowance for the operation of \$23.2 billion in 1991 and \$4.6 billion in 1992; the estimates for 1991 also include an offsetting receipt

CHART 6 Federal Government Expenditures. **NIPA Basis**

U.S. Department of Commerce, Bureau of Economic Analysis

CHART 7 Changes in Federal Government Expenditures, NIPA Basis

U.S. Department of Commerce, Bureau of Economic Analysis 91-2-7 of \$15.0 billion reflecting contributions from various allies in the operation. In the NIPA's, the allowance is included in defense purchases, and the contributions are included as negative transfer payments to foreigners.

In NIPA expenditures, the largest 1992 increase-\$19.3 billion-is for social security, which includes \$14.1 billion for cost-of-living adjustments. Within purchases, Federal employee pay raises add \$5.3 billion, and "other nondefense" purchases add \$5.2 bil-lion; more than offsetting these increases is an \$18.6 billion decline in an allowance for Operation Desert Storm and a \$3.7 billion decline in purchases of military hardware. Grants-in-aid to State and local governments for public assistance increase \$9.2 billion. Net interest paid increases \$10.2 billion. An increase in housing subsidies is partly offset by a increase in the Postal Service surplus, which reflects a postal rate increase in February 1991.

Table 9 shows the relation between national defense outlays in the budget estimates and national defense purchases in the NIPA's. In 1992, pur-

Quarterly pattern.---Table 10 shows the major factors that affect the quarterly pattern of NIPA Federal receipts and expenditures through 1992. Receipts reflect the pattern of enacted and proposed legislation and the administration's projected quarterly pattern of wages and profits. Expenditures reflect the pattern of proposed legislation and selected other items, mainly pay raises for Federal employees and cost-of-living adjustments in social security and in Federal employee retirement benefits. The Federal deficit increases through the first half of 1991, reflecting pay raises, costof-living adjustments, and spending for Operation Desert Storm. The short recession limits the growth in receipts in the first half of 1991-despite social security rate and base increases and the initial effects of the Omnibus Budget Reconciliation Act of 1990. The deficit declines in the second half of 1991, reflecting a rebound in receipts and a decline in spending for Operation

Desert Storm. The deficit increases in early 1992 when pay raises and cost-ofliving adjustments take effect, and it declines through the remainder of the fiscal year.

Cyclically adjusted deficit.--Cyclically adjusted receipts, expenditures, and surplus or deficit are estimates of what these measures would be if the economy were moving along a trend GNP path-a path free from cyclical fluctuations-rather than along its actual path. Consequently, cyclical fluctuations in the economy do not affect cyclically adjusted budgets.

As measured using cyclical adjustments based on a 6-percent unemployment rate trend GNP, the Federal sector of the NIPA's was in deficit in calendar year 1989 (table 11). The deficit increased in 1990, but it is expected to decline in 1991. In 1991 and 1992, the cyclically adjusted deficit follows a quarterly pattern similar to, but at a lower level than, that of the NIPA deficit.

State and Local Government Fiscal Position in 1990

 ${
m T_{HE}}$ surplus of State and local governments as measured on a national income and product accounts (NIPA) basis was \$36 billion in 1990, \$10 billion less than in 1989 (table 1). This deterioration in the overall fiscal position was the net result of a \$3 billion increase in the surplus of social insurance funds and a \$13 billion increase in the "other funds" deficit. The fiscal position of State and local governments as measured by the "other funds" surplus or deficit has deteriorated steadily since 1984, while the social insurance funds surplus has continued to increase. The "other funds" surplus declined through 1986, and a deficit appeared in 1987. In 1989, the $3^{1/2}$ billion increase in the "other funds" deficit was the result of an increase in expenditures that was larger than the increase in receipts. The sharper deterioration in 1990 was largely the result of an acceleration in expenditures; receipts increased about as much in 1990 as in 1989.

Receipts

State and local government receipts increased 7 percent in 1990,^{1/2} percentage point less than in 1989 (table 2). General own-source receiptsthat is, receipts excluding contributions for social insurance and Federal grants-in-aid—increased 6 percent, $1^{1/2}$ percentage points less than in 1989.

NOTE.—The estimates for 1989 and 1990 are in table 3.3 in the "Selected NIPA Tables" in this issue; the estimates for 1986-88 are in table 3.3 in the "National Income and Product Accounts Tables" in the July 1990 SURVEY OF CURRENT BUSINESS.

The deceleration was most marked in personal tax and nontax receipts, which increased 6 percent, following a $10^{1/2}$ -percent increase.

The deceleration in personal tax and nontax receipts was traceable to income taxes, which increased $4^{1/2}$ percent in 1990, down from a 13-percent increase in 1989. The pattern of income tax growth has been irregular in recent years; in 1986-88, and to some extent in 1989, this pattern reflected both behavioral responses of taxpayers to the Tax Reform Act of 1986 and State and local government legislative actions.¹ In 1990, the deceleration largely reflected economic factors,

1. The behavioral responses of taxpayers to the Tax Reform Act of 1986 included deferral of income to later ars to take advantage of lower income tax rates provided by the act. The net effect on income taxes of these

mainly slower economic growth. Personal income increased 6 percent in 1990, down from a $7^{1/2}$ -percent increase in 1989 (see table 2.1 of the "Selected NIPA Tables" in this issue). In 1990, both taxpayer responses to the Tax Reform Act and State and local legislative actions were estimated to have had relatively little effect; in the absence of both (notably the $1^{1/2}$ billion added by taxpayer responses in 1989), income taxes would have increased $5^{1/2}$

taxpayer responses was to add an estimated $^{1/2}$ billion in 1986, \$3 billion in 1987, $^{1/2}$ billion in 1988, and \$1^{1/2} billion in 1989. State and local government legislation reduced income taxes an estimated \$2 billion in 1987, $$2^{1/2}$ billion in 1988, and $$^{1/2}$ billion in 1989. This legislation included actions, particularly in 1988, by a number of States to return all or part of the "windfall" associated with the Tax Reform Act. In the absence of both the taxpayer responses and the legislative actions, income taxes would have increased $10^{1/2}$ percent in 1987, 10 percent in 1988, and 12 percent in 1989.

Nore.—Estimates of the effect on receipts of law changes are calculated as follows. For changes of which BEA is aware (hence the use of "selected" in the line title in the table), the estimate is of the amount of the change over the 12-month period after the change is introduced. For personal taxes, the change is introduced when the tax is paid/refunded or when withholding is changed. For indirect business taxes, the change is introduced when the tax is paid/refunded or when withholding is changed. For indirect business taxes, the change is introduced the tax is paid/refunded or when withholding is changed. For indirect business taxes, the change is introduced. The calculations are made by months for personal taxes and nontaxes (because they are used to prepare monthly estimates of disposable personal income) and by quarters for other taxes. Two characteristics of the resulting estimates should be noted. First, aggregation of the monthly or quarterly estimates to calendar years may give results that appear anomalous. For example, a sales tax imposed for 1 year beginning July 1 would be recorded as follows: (a) For quarters, an increase in receipts by the amount of the 12-month yield divided by 2 in the year after that (i.e., 2 years after the increase). Second, a law change after July, which is the beginning of the fiscal year for many States, would have more impact on receipts of the next calendar year than on those of the calendar year in which it occurs. The effects of tax law changes excluded from receipts to derive the addenda items in the table are the effects of the changes beginning with

The effects of tax law changes excluded from receipts to derive the addenda items in the table are the effects of the changes beginning with those introduced in 1985. The 12-month effects, recorded for calendar years as described above, are cumulated.

percent in 1990. There were a number of legislative changes to income taxes in 1990, but the net effect of those that reduced taxes (mostly enacted before 1990) and of those that increased taxes (mostly enacted during 1990) was small.

Corporate profits tax accruals decreased 2 percent in 1990, compared with a 4-percent decrease in 1989. The effect of decreases in corporate profits more than offset tax increases imposed by several States in 1989 and 1990.

Indirect business tax and nontax accruals increased $6^{1/2}$ percent in 1990, down from a 7-percent increase in 1989. Much of the deceleration was in property taxes, which increased $7^{1/2}$ percent, following a $9^{1/2}$ -percent increase. Sales taxes increased 6 percent, following a $6^{1/2}$ -percent increase. Legislative actions added about $$4^{1/2}$ billion to sales taxes in 1990 and about \$3 billion in 1989. In the absence of these actions, sales taxes would have increased $3^{1/2}$ percent in 1990 and $4^{1/2}$ percent in 1989. "Other" indirect business tax and nontax accruals increased $5^{1/2}$ percent in 1990, up from a 4percent increase in 1989. The acceleration is partly traceable to paymentsabout \$1/2 billion-by oil companies to States to settle lawsuits. Without these payments, "other" indirect business tax and nontax accruals would have increased $4^{1/2}$ percent in 1990.

Contributions for social insurance increased $6^{1/2}$ percent in 1990, down from a $7^{1/2}$ -percent increase in 1989; the deceleration is in contributions to State and local government employee retirement systems and may be a response to the continued large surpluses of these systems. Federal grants-in-aid accelerated sharply in 1990; they increased $11^{1/2}$ percent, up from a $6^{1/2}$ -percent increase in 1989. Increases in grants for medicaid, aid to families with dependent children, social services, and health care accounted for most of the acceleration. Grants for community development decreased in 1990.

Expenditures

State and local government expenditures increased 9 percent in 1990, up from an 8-percent increase in 1989 (table 3). Purchases of goods and services and transfer payments to persons, the two largest categories of expenditures, accelerated in 1990.

St

A

Purchases of goods and services increased 8 percent in 1990, up from a $7^{1/2}$ -percent increase in 1989. Purchases of structures accelerated sharply; compensation of employees and purchases of "other" goods and services decelerated. Much of the acceleration in purchases of structures was traceable to construction of highways and water supply facilities. Highway construction increased $$2^{1/2}$ billion in 1990, following a $^{1/_2}$ billion decrease; construction of water supply facilities increased \$1 billion, following little change. Other sizable increases in construction were in educational buildings, other buildings (such as offices and prisons), and sewers.

The deceleration in "other" purchases of goods and services was most pronounced in purchases of durable and nondurable goods; purchases of services other than compensation increased at about the same rate in 1990 as in 1989. Measured in constant (1982) dollars, "other" purchases increased $2^{1/2}$ percent in 1990, following a 3-percent increase in 1989; the deceleration was apparent in all three categories of "other" purchases (table 4). The fixed-weighted price index for services purchased by State and local governments increased 5 percent in 1990, up from a 4-percent increase in 1989; the fixed-weighted price indexes for durables and nondurables increased less in 1990 than in 1989 (see table 7.16 in the "Selected NIPA Tables" in this issue).

Expenditures other than purchases increased $16^{1/2}$ percent in 1990, up from a 13-percent increase in 1989. Transfer payments to persons increased $11^{1/2}$ percent in 1990, up from an 11-percent increase in 1989; the acceleration was traceable to transfers for aid to families with dependent children. Interest received decelerated slightly more than did interest paid, so that the increase in net interest paid

NOTE.—The constant-dollar estimates for 1989 and 1990 are in table 3.8B in the "Selected NIPA Tables" in this issue; the estimates for 1986-88 are in table 3.8B in the "National Income and Product Accounts Tables" in the July 1990 SURVEY OF CURRENT BUSINESS.

was less in 1990 than in 1989. The current surplus of government enterprises increased 8 percent in 1990, down from a $13^{1/2}$ -percent increase in 1989, primarily because of a deceleration in the net revenue of lotteries. Because net interest paid and the current surplus of government enterprises are offsets to State and local government expenditures, their deceleration contributed to the acceleration in total government expenditures.

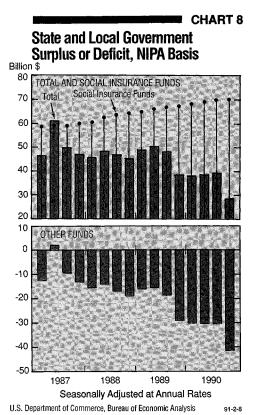

Fiscal position

The fiscal position of State and local governments as indicated by the "other funds" measure deteriorated in 1990: The deficit increased from \$29 billion in the fourth guarter of 1989 to \$411/2 billion in the fourth quarter of 1990 (chart 8).² The deterioration in the fiscal position resulted from increases in expenditures that exceeded increases in receipts; the quarterly pattern of these increases was irregular during the year. In the first quarter, both receipts and expenditures excluding social insurance funds showed strong increases-\$18 billion for receipts and \$19 billion for expenditures-that resulted in an increase in the "other funds" deficit. In the second and third quarters, the "other funds" deficit changed little, but the growth of both receipts and expenditures slowed to an \$8 billion increase in the second quarter and then accelerated to a $\$15^{1/2}$ billion increase in the third. In the fourth guarter, the "other funds" deficit increased sharply as the growth of receipts slowed and the growth of expenditures accelerated.

The quarterly increases in receipts reflected irregular patterns of change among the components of receipts. The strong first-quarter increase in receipts primarily reflected a \$7 billion increase in Federal grants-in-aid and a $4^{1/2}$ billion increase in sales taxes; a small decrease in income taxes, which was more than accounted for by tax law changes, was a partial offset. The much smaller second-quarter increase in receipts reflected a decrease in sales taxes and a smaller increase in Federal grants-in-aid than in the first quarter; income taxes increased. The large third-quarter increase in receipts

was attributable to strong increases in sales and income taxes and to a nontax payment to Alaska in settlement of a lawsuit; Federal grants-in-aid decreased. The $6^{1/2}$ billion increase in sales taxes included $3^{3/2}$ billion from tax law changes that went into effect in a number of States. The smaller fourth-quarter increase in receipts reflected the absence of the factors that had raised third-quarter receipts, as well as a slight decrease in personal income taxes; Federal grants-in-aid increased substantially.

The quarterly increases in expenditures primarily reflected the irregular pattern of purchases of goods and services from business-that is, purchases excluding employee compensation. Expenditures other than purchases of goods and services from business increased roughly $10^{1/2}$ billion each quarter. In contrast, purchases of goods and services from business increased \$9 billion in the first quarter, decreased \$2 billion in the second, increased $$5^{1/2}$ billion in the third, and increased \$12 billion in the fourth. This irregularity is traceable both to purchases of structures and to other purchases from business. Purchases of structures reflected the pattern of con-

struction activity. The pattern of other purchases from business reflected the pattern of price changes; much of this pattern is traceable to the price index for petroleum products, which decreased at an annual rate of 34 percent in the second quarter and then surged 126 percent in the third quarter and 171 percent in the fourth.

Outlook

A major factor in the outlook for the State and local fiscal position in 1991 will be the pace of economic activity; the year began with the recognition that a recession was underway, as evidenced by a decrease in real GNP in the fourth quarter of 1990. This discussion assumes little or no yearto-year economic growth in 1991, compared with about 1-percent growth in 1990.

On the receipts side, personal income taxes are likely to accelerate slightly, and sales taxes are likely to decelerate; legislation already enacted should increase personal income taxes about $1^{1/2}$ billion and reduce sales taxes about $^{1/2}$ billion in 1991. Although State and local governments may increase taxes later in the year in response to their deteriorating fiscal position, this discussion assumes no further tax law changes effective in 1991 because of the difficulty of predicting such changes. Further assuming a decrease in corporate profits tax accruals similar in size to that in 1990 and a continued slowing in property tax accruals, general own-source receipts are likely to increase about 6 percent. In contrast, Federal grants-in-aid are expected to increase about 17 percent; the Federal budget indicates large increases in grants for medicaid, education, mass transit, and health care. If contributions for social insurance decelerate again in 1991, total receipts are likely to increase about \$60-65 billion, to about \$860-865 billion.

On the expenditures side, the increase in purchases is likely to be smaller in 1991 than in 1990. Given the continued deterioration in their fiscal position, State and local governments are likely to curb the growth of expenditures, particularly compensation of employees and purchases from business other than structures. In recent months, a number of governors have proposed or announced cuts in

^{2.} The quarterly estimates of State and local governments receipts and expenditures for 1990 are shown in table 3.3 of the "Selected NIPA Tables."

February 1991

spending from budgeted levels for fiscal year 1991, which ends in June 1991 for most States, in order to deal with projected general-fund deficits.³

The course of inflation, particularly in prices of energy, is a source of uncertainty. This discussion assumes price increases for goods and services other than compensation similar in size to those in 1990. (Larger increases in prices of goods and services would tend to increase current-dollar State and local government purchases of goods and services, at least in the short term, as governments attempt to maintain the level of government services.)

It is likely that purchases of structures will decelerate in 1991, even though new borrowing by State and local governments increased in 1990 and Federal grants for capital purposes are likely to increase in 1991. In particular, it is likely that highway construction will not match its 10-percent 1990 increase; new borrowing by State and local governments for highways decreased substantially in 1990, and Federal grants for highways are likely to change little in 1991. Assuming a 6-percent increase in structures, total purchases would increase about 7 percent. Transfer payments are likely to increase faster in 1991 than in 1990; medical care transfers, which are largely financed by Federal grants, are likely to accelerate again in 1991. If the other categories of expenditures increase at about the same rate as in 1990, total expenditures are likely to increase about \$60-65 billion, to about \$825-830 billion in 1991.

Accordingly, the NIPA surplus would change little, remaining at about \$35– 40 billion. The social insurance funds surplus is likely to increase about \$2– 3 billion, to about \$72 billion, so that the "other funds" deficit is likely to increase, to about \$35–40 billion.

^{3.} In most States, general-fund budgets are operating budgets in that they generally exclude capital spending, such as construction, which is often financed by borrowing. They may also exclude funds for special purposes that vary from State to State; typically, employee retirement funds and highway funds are among those excluded from general funds. The general-fund budget is legally required to be balanced in most States. In the NIPA "other funds" measure of surplus or deficit, funds other than social insurance funds (such as employee retirement funds) are included; capital spending financed by borrowing is included in expenditures, but proceeds from this borrowing are excluded from receipts. Consequently, when capital spending is financed by borrowing, the other funds measure tends to move toward a deficit.

Annual Input-Output Accounts of the U.S. Economy, 1986

 $T_{
m HIS}$ article presents the annual input-output (I-O) accounts for 1986. These accounts are consistent definitionally with the 1977 benchmark I-O accounts as modified by the comprehensive revision of the national income and product accounts (NIPA's) released in December 1985.¹ They are the last in a series of annual I-O accounts, which began with the I-O accounts for 1980, that are based on the modified 1977 benchmark I-O accounts; the annual I-O accounts for 1987, which will be published late this year, will be based on the 1982 benchmark I-O accounts to be completed this spring.²

Annual I-O accounts are prepared using basically the same procedure as that used for benchmark accounts; however, they are based on less comprehensive and less reliable source data. The procedure has four steps: (1) Determine industry and commodity output totals, (2) estimate the commodity composition of intermediate consumption for each industry, (3) derive each GNP component and its commodity composition, and (4) balance the table.³

The 1986 annual I-O estimates of final demand—that is, estimates of GNP components—differ from the published NIPA estimates for that year because the I-O estimates incorporate additional source data and because they are based on estimating methods that re-

NOTE.—The 1986 annual I-O accounts were prepared under the direction of Mark A. Planting, Chief of the Auxiliary Studies Branch. Staff contributors were William A. Allen, Claiborne M. Ball, Esther M. Carter, Nicholas R. Dopuch, Robert S. Robinowitz, Nancy W. Simon, and Patricia A. Weiss.

2. Annual I-O accounts for 1981, 1982, 1983, 1984, and 1985 appeared, respectively, in the January 1987, April 1988, February 1989, November 1989, and January 1990 issues of the SURVEY OF CURRENT BUSINESS. The 1980 I-O accounts were not published, but they are available from the Bureau of Economic Analysis; see the box for details.

3. For more detailed information on the preparation of annual I-O accounts, see "Input-Output Accounts of the U.S. Economy, 1981," SURVEY 67 (January 1987): 42-58.

Table A.—Comparison of GNP in the NIPA's and the I-O Accounts, 1986

[Billions of dollars]

	NIPA'S	I-O ac- counts	NIPA's less I- O ac- counts
Gross national product	4,231.6	4,235.1	-3.4
Personal consumption expenditures	2,797.4	2,794.8	2.6
Gross private domestic investment	659.4	668.6	-9.2
Net exports of goods and services Government purchases of goods and	-97.4	-100.6	3.2
services	872.2	872.2	0

flect these source data. For the major GNP components, the differences are shown in table A. For personal consumption expenditures, the difference is mainly due to the methods used to prepare the estimates of goods: The I-O estimates for goods are based on the commodity-flow method; the NIPA estimates are based primarily on the retail-control method.⁴ For gross private domestic investment, the difference reflects the incorporation into the I-O estimates of newly available source data: Revised industry shipments from the Census Bureau's Annual Survey of Manufacturers (ASM), revised Census Bureau estimates of new construction, and revised U.S. Department of Agriculture estimates of farm invento-The ASM revision, which covries.

4. For a description of these methods, see *Personal Consumption Expenditures*, NIPA Methodology Paper Series MP-6; order information appears on the inside back cover of this issue. ers 1983–86, eliminates an understatement of shipments that was corrected by benchmarking the ASM estimates to the 1987 Census of Manufacturers.⁵ For net exports, the difference reflects the incorporation into the I-O estimates of revised BEA estimates of international services transactions. All the revised and newly available source data will be incorporated into the NIPA estimates as part of a comprehensive revision scheduled for release in November 1991.

The 1986 annual I-O accounts, at the two-digit industry/commodity level, are presented in five tables: (1) The use of commodities by industries. (2) the make of commodities by industries, (3) commodity-by-industry direct requirements, (4) commodity-bycommodity total requirements, and (5) industry-by-commodity total requirements. The structure of these tables is identical to that of the tables published for the 85-industry/commodity benchmark I-O accounts except that in tables 1 and 3 the components of value added are not shown. This article presents only tables 1 and 2; see the box for information about the availability of the other tables.

5. The revision to the 1983–85 ASM estimates affects the previously published annual I-O tables for those years. At present, BEA does not plan to revise these tables; however, the ASM revision for these years will be reflected in the forthcoming comprehensive NIPA revision.

Data Availability

The 1986 I-O accounts presented in this article, as well as the latest 1977 and 1980-85 I-O accounts at the two-digit industry/commodity level, are available in magnetic tape, diskette, and computer printout forms. Magnetic tapes containing data in tables 1 through 5 cost \$100 for each year. Diskettes containing data in tables 1 through 3 on the first diskette and tables 4 and 5 on the second cost \$20 per diskette per year. Computer printouts containing data for all five tables cost \$55 per year. For foreign shipment, add 25 percent. Orders must specify tables and years desired and accession numbers as follows:

Year	Magnetic tapes	Diskettes	Printouts
1977 (Revised)	BEA IED 87-001	BEA IED 87-403	BEA IED 87-206
1980 (Revised)	BEA IED 87-002	BEA IED 87-406	BEA IED 87-212
1981	BEA IED 87-003	BEA IED 87-409	BEA IED 87-218
1982	BEA IED 88-001	BEA IED 88-401	BEA IED 88-201
1983	BEA IED 89-001	BEA IED 89-401	BEA IED 89-201
1984	BEA IED 89-002	BEA IED 89-402	BEA IED 89-202
1985	BEA IED 90-001	BEA IED 90-401	BEA IED 90-201
1986	BEA IED 91-001	BEA IED 91-401	BEA IED 91-201

Orders for magnetic tape must specify density (1,600 BPI or 6,250 BPI) and whether or not internal labels are needed. To order tapes, diskettes, or printouts, write to Bureau of Economic Analysis, Public Information Office, Order Desk, BE-53, U.S. Department of Commerce, Washington, DC 20230. A check or money order, payable to "Bureau of Economic Analysis," must accompany all orders. For further information about these products or how to order them, call the Interindustry Economics Division at (202) 523-0792.

^{1.} For a description of the 1977 benchmark I-O accounts, see "The Input-Output Structure of the U.S. Economy, 1977," SURVEY 64 (May 1984): 42-84. For a description of the NIPA revision, see "Revised Estimates of the National Income and Product Accounts of the United States, 1929-85: An Introduction," SURVEY 65 (December 1985): 1-19.

FOREIGN DIRECT INVESTMENT IN THE UNITED STATES: 1987 Benchmark Survey, Final Results

This publication presents results from the latest benchmark survey of foreign direct investment in the United States conducted by the Bureau of Economic Analysis (BEA). Benchmark surveys are BEA's most comprehensive surveys, both in terms of companies covered and information gathered.

The publication contains 1987 data on the financial structure and operations of U.S. affiliates of foreign direct investors, on the foreign direct investment position in the United States, and on balance of payments transactions between U.S. affiliates and their foreign parents. Data on manufacturing employment by State and a breakdown of sales into goods, services, and investment income are presented for the first time. The publication contains 164 tables, organized by industry of affiliate, by country and industry of ultimate beneficial owner or foreign parent, and, for selected items, by State. It presents a comprehensive view of foreign direct investment in 1987, including:

- · Balance sheets and income statements
- · Employment and employee compensation
- Property, plant, and equipment
- Merchandise trade
- · Sales of goods and services
- · Acres of land and mineral rights owned or leased
- · Selected items by State

A complete methodology and a reprint of the survey forms and instructions are also included. Order today!

These data are also available on diskettes; for more information call BEA at (202)523-0653.

- L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unclassified) at reference cycle peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.
 - * Cyclical indicator series denoted by ‡ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.
 - † Cyclical indicator series denoted by † are smoothed by an autoregressive-moving-average filter developed by Statistics Canada

For information on composite indexes and other concepts used in this section, see "Composite Indexes of Leading, Coincident, and Lagging Indicators" in the November 1987 SURVEY OF CURRENT BUSINESS and "Business Cycle Indicators: Revised Composite Indexes" in this section use the prefix "BCL" followed by the series number. Unless otherwise noted, series are seasonally adjusted.

Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3-month changes are placed in the 3d month, 6-month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarter, and 4-quarter changes are placed in the 3d quarter. Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Diffusion index data are centered within the spans: 1-month indexes are placed in the ending month and 6-month indexes are placed in the 4th month.

High values reached by cyclical indicators since the last reference cycle trough (November 1982) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs. Sources for series in this section are shown on pages C-47 and C-48 in the October 1990 SURVEY.

Page C-1

1. A component's contribution measures its impact, in percentage points, on the percent change in the index. Each month, the sum of the contributions plus the trend adjustment factor equals (except for rounding differences) the index's percent change from the previous month. The trend adjustment factors are 0.142 for the leading index, -0.186 for the coincident index, and 0.030 for the lagging index.

2. Excludes BCI-57, for which data are not available.

3. Excludes BCI-77 and BCI-95, for which data are not available.

Page C-2

NOTE .- Major data revisions:

For the following series, new seasonal adjustment factors have been computed by the Bureau of Economic Analysis and applied beginning with the month indicated: BCI-570 (January 1985); BCI-604 (January 1989); BCI-9, -10, -12, -13, -20, -517, -525, and -543 (January 1990); BCI-606, -614, -616, -732, -735, -736, and -738 (December 1990); and BCI-5, -72, -101, -112, -733, and -737 (January 1991). For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

The average weekly insured unemployment rate (BCI-45) has been revised from 1986 forward to reflect a new seasonal adjustment by the source agency. For further information, contact the U.S. Department of Labor, Employment and Training Administration, Office of Administration Management, Washington, DC 20210.

Wages and salaries in 1982 dollars for mining, manufacturing, and construction (BCI-53) has been revised from 1986 forward to incorporate the revisions in its seasonally adjusted CPI U deflator—see note for page C-3. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

Manufacturers' new orders in 1982 dollars for durable goods (BCI-7) and for con goods and materials (BCI-8) and the change in manufacturers' unliked orders in 1982 dollars for durable goods (BCI-92) have been revised from 1986 forward to incorporate the revisions in the Producer Price Indexes used as deflator notes to the producer of the information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

New business incorporations (BCI-13) has been revised from 1985 forward to incorporate updated data from the source agency and a new seasonal adjustment-see note above. For further information, contact The Dun & Bradstreet Corporation, 299 Park Avenue, New York, NY 10171.

1. Data exclude Puerto Rico, which is included in figures published by the source agency. 2. Copyrighted. This series may not be reproduced without written permission from the

University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248. 3. Copyrighted. This series may not be reproduced without written permission from McGraw-Hill Information Systems Company, F.W. Dodge Division, 1221 Avenue of the Americas, New York, NY 10020.

Page C-3

Note .--- Major data revisions:

New private housing units started (BCI-28) has been revised from 1988 forward to reflect a new seasonal adjustment by the source agency. For further information, contact the U.S. Department of Commerce, Bureau of the Census, Construction Statistics Division, Washington, DC 20233.

Producer Price Indexes and series based on them (BCI-98, -99, -331, -332, -333, -334, -336, and -337) have been revised from 1986 forward to reflect a new seasonal adjustment by the source agency. For further information, contact the U.S. Department of Labor, Bureau of Labor Statistics, Office of Prices and Living Conditions, Division of Industrial Prices and Price Indexes, Washington, DC 20212 and the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230. In addition, six spot market components of BCI-99 have been converted from 1986 forward: Tin, burlap, print cloth, and hides are now unadjusted; rubber and tallow are now seasonally adjusted. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

Seasonally adjusted Consumer Price Indexes for all urban consumers (CPI-U)-BCI-120, -323, and the percent change in BCI-320—have been revised from 1986 forward to reflect a new seasonal adjustment by the source agency. For further information, contact the U.S. Department of Labor, Bureau of Labor Statistics, Office of Prices and Living Conditions, Division of Consumer Prices, Washington, DC 20212.

U.S. money supply measures (BCI-85, -102, -105, -106, -107, and -108) have been revised by the source agency to incorporate benchmark revisions and updated seasonal adjustment factors. These revisions begin as follows: BCI-85 and BCI-105 (1970), BCI-107 (1971), BCI-102 and BCI-106 (1975), and BCI-108 (1976). In addition, the series on U.S. money supply in 1982 dollars (BCI-105 and BCI-106) have been revised from 1986 forward to incorporate the revisions in their seasonally adjusted CPI-U deflator-see note above. For further information, contact the Board of Governors of the Federal Reserve System, Division of Research and Statistics, Banking Section, Washington, DC 20551. For information concerning the deflation of the money supply, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

* Preliminary February values: BCI-23 = 293.7, BCI-19 = 361.66, BCI-85 = 1.35; anticipated 1st quarter values: BCI-61 = 557.92, BCI-100 = 538.47; anticipated 2d quarter values: BCI-61

= 561.85, BCI-100 = 539.87.

Page C-4

NOTE .---- Major data revisions:

U.S. money supply (BCI-107 and BCI-108)—see note for page C-3. New seasonal adjustments for commercial and industrial loans (BCI-72, -101, and -112)—see note for page C-2.

Seasonally adjusted Consumer Price Indexes (BCI-323 and the percent change in BCI-320)see note for page C-3.

Producer Price Indexes (BCI-331, -332, -333, -334, -336, and -337)-see note for page C-3. * Preliminary February values: BCI-119 = 6.29, BCI-114 = 5.92, BCI-116 = 9.14, BCI-115 = 8.13, BCI-117 = 6.88, and BCI-109 = 9.06.

1. This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

Page C-5

NOTE .--- Major data revisions:

New seasonal adjustments for series BCI-517, -525, -543, -570, -604, -606, -614, -616, -732, -733, -735, -736, -737, and -738—see note for page C-2.

Consumer Price Index (percent change in BCI-320)-see note for page C-3.

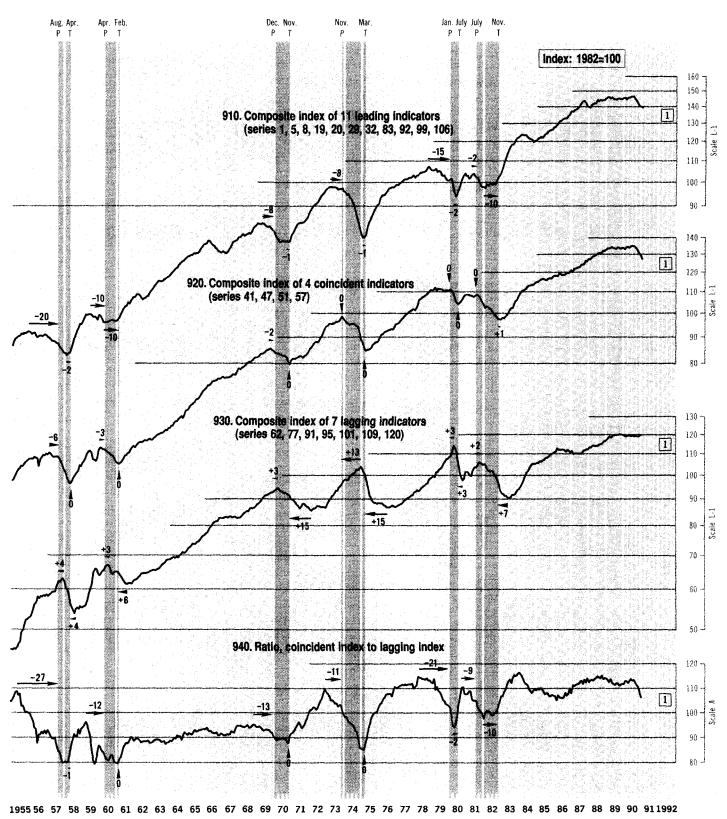

* Preliminary February values: BCI-19 = 393.4, BCI-748 = 1,669.6, BCI-747 = 416.7, BCI-743 = 397.7, BCI-750 = 81.62, BCI-758 = 129.92, BCI-755 = 1.4693, BCI-756 = 5.0030, BCI-752 = 0.5059, BCI-757 = 1,104.04, and BCI-753 = 1.1558.

1. Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).

2. Organisation for Economic Co-operation and Development

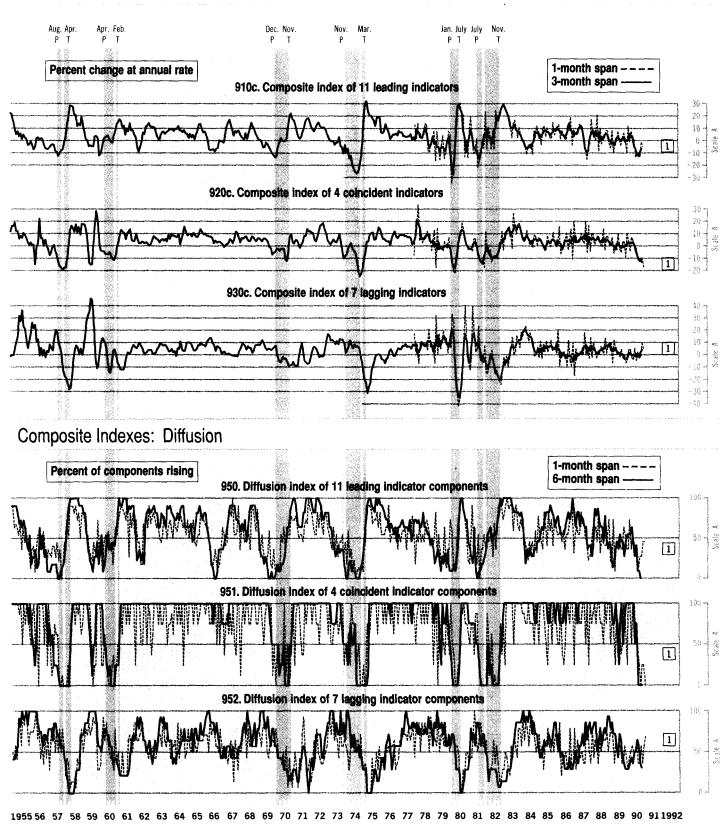

3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972–76 global trade. For a description of this index, see the August 1978 *Federal Reserve Bulletin* (p. 700).

Page S-1

† Revised series. See Tables 2.6-2.9 in the July 1990 SURVEY for revised estimates for 1987–89.

‡ Includes inventory valuation and capital consumption adjustments. § Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

♦ See note "♦" for p. S-2.

Page S-2

1. Based on data not seasonally adjusted.

♦ Effective April 1990 SURVEY, the industrial production index has been revised back to 1977 and has a new base year of 1987. A more detailed explanation of this revision is in the April 1990 Federal Reserve Bulletin. Historical data are available from the Industrial Output Section, Mail Stop 82, Division of Research and Statistics, Federal Reserve Board, Washington, DC 20551.

Includes data not shown separately.

Page S-3

Includes data for items not shown separately.

Page S-4

1. Based on data not seasonally adjusted.

Includes data for items not shown separately.

t Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

> For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

Page S-5

@ Compiled by Dun & Bradstreet, Inc.

Includes data for items not shown separately. § Ratio of prices received to prices paid (parity index).

See note "‡" for p. S-4.

† In the Feb. and July issues of the SURVEY each year, data for the most recent six to eight years are subject to revise and are available upon request.

Page S-6

§ For producer price indexes of individual commodities, see respective commodities in the Industry section beginning p. S-19. All indexes subject to revision four months after original publication.

Includes data for items not shown separately.

‡ Effective with the Feb. 1991 SURVEY, data have been revised back to 1986 and are available upon request.

Page S-7

1. Computed from cumulative valuation total.

Index as of Feb. 1, 1991: building, 402.0; construction, 444.3. Beginning Dec. 1988, series has been discontinued by the Bureau of the Census.

‡ Effective July 1990 SURVEY, data have been revised back to 1985. Revised data are available from the Construction Statistics Division at the Bureau of the Census, Washington, DC 20233. # Includes data for items not shown separately.

§ Data for June, Aug., and Nov. 1989, and Mar. 1990 are for five weeks; other months four

 \Diamond Effective Feb. 1990 SURVEY, data for seasonally adjusted housing starts have been revised back to 1987. These revisions are available upon request.

@ Effective Feb. 1990 SURVEY, data for seasonally adjusted manufacturers' shipments of mobile homes have been revised back to 1987.

† Effective May 1990 SURVEY, data for seasonally adjusted building permits have been revised

back to 1988 and are available upon request. * Series first shown in the July 1990 SURVEY. The fixed-weighted price index is a weighted average of the individual price index series used to deflate the Value of New Construction Put in Place (VIP) series. In calculating the index, the weights (the composition of current dollar VIP in 1987 by category of construction) are held constant. Consequently, the index reflects only

changes in prices. The implicit price deflator is a derived ratio of total current to constant dollar VIP (multiplied by 100). It is the average of the individual price indexes used in the deflation of VIP, but the prices are weighted by the composition of VIP each period. As a result, the Address requests for data to:

Business Statistics Branch Current Business Analysis Division (BE-53) Bureau of Economic Analysis U.S. Department of Commerce Washington, D.C. 20230

implicit price deflator reflects not only changes in prices, but also changes in the composition of VIP, and its use as a measure of price change is discouraged.

11 Effective Sept. 1990 Survey, the construction cost index for the Federal Highway Administration has been revised back to 1986 and has a new base year of 1987=100.

Page S-8

1. Advance estimate.

 Beginning with Feb. 1989 data, associations in conservatorship are excluded.
 ♦ Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.

§ Data include guaranteed direct loans sold. # Includes data for items not shown separate

Includes data for items not shown separately.

@ Data are for closed mortgage loans of thrift institutions insured by the Savings Association Insurance Fund (SAIF)—FSLIC-insured institutions prior to Sept. 1989.

† Effective April 1990 SURVEY, wholesale trade data have been revised back to Dec. 1980. Revised data and a summary of changes appear in the report Revised Monthly Wholesale Trade Sales and Inventories BW89-R, available from the Bureau of the Census, Washington, DC 20233.

t Effective April 1990 SURVEY, retail trade data have been revised. Estimates of retail sales and inventories have been revised back to January 1982. Revised data and a summary of changes appear in the report Revised Monthly Retail Sales and Inventories BR89-R, available from the Bureau of the Census, Washington, DC 20233.

Page S-9

1. Advance estimate.

Includes data for items not shown separately. \diamond Effective with the January 1991 SURVEY, the seasonally adjusted labor force series have been revised back to January 1986. The January 1991 issue of Employment and Earnings contains the new seasonal adjustment factors, a description of the current methodology, and revised data for the most recent 13 months or calendar quarters. Revised monthly data for the entire 1986-90

revision period appear in the February 1991 issue of *Employment and Earnings*. † The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is civilian employment as a percent of the civilian noninstitutional population, 16 years and over.

@ Data include resident armed forces.

‡ See note "‡" for p. S-8.

Page S-10

♦ See note "♦" for p. S-9. § Effective Sept. 1990 SURVEY, data have been revised to reflect annual benchmark revisions, the conversion of the industry series to 1987 SIC codes, and updated seasonal adjustment factors. All series have been revised back to April 1988, unadjusted, and Jan. 1985, seasonally adjusted. Industry series affected by revisions in the SIC have been revised back to the inception of the series, to the extent possible. In addition, all constant-dollar and indexed series have been recomputed on a 1982 base. The Sept. 1990 issue of *Employment and Earnings* contains a detailed description of the effects of these revisions and revised data for all regularly published tables. All historical data will be published in a historical bulletin, Employment, Hours, and Earnings, United States, 1909-1990.

Page S-11

§ See note "§" for p. S-10.

[‡] This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

Production and nonsupervisory workers.

Page S-12

1. This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision. Use the corresponding unadjusted series.

2. The hourly earnings index has been discontinued.

§ See note "§" for p. S-10.
◊ Production and nonsupervisory workers.

Teoretain and industry rises, in the second seco revised, respectively, back to 1985 and 1986 to reflect new seasonal factors for the CPI-W. Revised data are available upon request. §§ Wages as of Feb. 1, 1991: Common, \$18.61; Skilled, \$24.35.

† Excludes farm, household, and Federal workers.

@ Effective with the April 1990 SURVEY, the employment cost index is based on June 1989=100. rather than June 1981=100. Historical data for both June 1989 and June 1981 bases are available from the Bureau of Labor Statistics, Division of Employment Cost Trends, 441 G Street, N.W., Washington, DC 20212.

tt These series were affected by an error in the Sept. 1990 SURVEY. The stub for "Trans-portation equipment" was omitted. Hourly earnings for "Transportation equipment" were shown following the stub for "Electronic and other electrical equipment". Hourly earnings for "Elec-tronic and other electrical equipment" were shown following the stub for "Industrial machinery and equipment". Hourly earnings for "Industrial machinery and equipment" were shown fol-lowing the stub for "Machinery, except electrical", which was the former name for that industry (SIC 35).

Page S-13

1. Effective Feb. 28, 1989, there was a break in the series due to the enlargement of the panel of reporting dealers to 17 and of reporting direct issuers to 36. End of month figures on the old basis are as follows: All issuers, 481,734; financial companies, 373,717; dealer placed, 172,330; directly placed, 201,387; and nonfinancial companies, 108,017.

2. Average for Dec.

Includes data for items not shown separately.

§ Excludes loans and federal funds transactions with domestic commercial banks and includes valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

‡ Covers 50 States and the District of Columbia. Only regular benefits are included.

@ Average weekly insured unemployment for 12-month period divided by average monthly covered employment (lagging 4 full quarters for annual figure and 2 full quarters for monthly figure)

† Effective Oct. 1989 SURVEY, loans by loan type are provided by the Federal Farm Credit Banks Funding Corporation.

♦ Effective with the April 1990 SURVEY, the reserves of depository institutions have been revised back to 1984 and are available upon request.

Page S-14

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.

2. Weighted by number of loans.

3. Beginning Feb. 1988, data suspended by the Farm Credit Administration, which is revising

the information it collects and amending the reports it distributes. § Effective Mar. 1990 SURVEY, data have been revised to reflect new benchmark and seasonal adjustments and are available from the Banking and Money Market Statistics Section of the Division of Monetary Affairs at the Federal Reserve Board, Washington, DC 20551.

Includes data for items not shown separately.

♦ Excludes loans to commercial banks in the U.S.

 \ddagger Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent. ‡‡ Courtesy of Metals Week.

@ Average effective rate

† Effective May 1990 SURVEY, the consumer installment credit series have been revised back to 1980 to incorporate new information and updated seasonal adjustment factors. These revisions are available upon request.

* Series first shown in the June 1990 SURVEY.

†† This series, first shown in the June 1990 SURVEY, represents the outstanding balances of loans that the loan originator has sold and are no longer carried on the loan originator's books. The loans are pooled and securities are issued on the pools.

Page S-15

1. Beginning Jan. 1989, the primary public offering statistics have been discontinued by the Securities and Exchange Commission. † Effective Feb. 1990 SURVEY, the money stock measures and components have been revised

and are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.

‡‡ Includes ATS and NOW balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions

♦ Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

@ Small time deposits are those issued in amounts of less than \$100,000. Large time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions

Includes data for items not shown separately.

Page S-16

1. The railroad average was discontinued by Moody's on July 13, 1989. Therefore, the July average reflects only eight working days.

2. Effective Oct. 3, 1990, the German Democratic Republic (GDR; East Germany) ceased to exist as a sovereign state and became a part of the Federal Republic of Germany. Accordingly, effective with the statistics for Oct. 1990, all merchandise imported from or exported to the former GDR will be included as trade with the Federal Republic of Germany

3. Beginning Jan. 1991 data; Roadway Services, Inc. will be included in the Dow Jones Transportation Average replacing Pan Am Corp. Roadway Services is listed on the NASDAQ

National Market System. Comparability with earlier averages is not affected by this change. @ See note "4" for p. S-19 regarding the new commodity classification systems introduced Jan. 1989. Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because the revisions to the totals are not reflected in the component

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series

‡ For bonds due or callable in 10 years or more.

 I includes data for items not shown separately.
 f Effective with the Mar. 1990 SURVEY, seas. adj. exports and imports have been revised back to Jan. 1988, and are available upon request.

Page S-17

1. Beginning with Jan. 1989 data, undocumented exports to Canada are now included, resulting in a break with Dec. 1988 data.

2. Beginning Jan. 1989, buses are excluded from "Motor vehicles and parts" and included in "Other manufactured goods," resulting in a break with Dec. 1988 data.

3. See note "2" for p. S-16.

@ See note "@" for p. S-16.

† See note "†" for p. S-16. # Includes data not shown separately.

> Data include undocumented exports to Canada, which are based on official Canadian import totals.

Page S-18

1. Reported annual total; quarterly or monthly revisions are not available.

2. For month show 3. Beginning Aug. 1989, the export and import indexes have been discontinued by the Census

Bureau

Includes data for items not shown separately.

§ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled servi ‡ The threshold for Class I railroad status is adjusted annually by the Interstate Commerce

Commission to compensate for inflation.

♦ Average daily rent per room occupied, not scheduled rates.
Data represent entries to a national park for recreational use of the park, its services, conveniences, and/or facilities.

† Before extraordinary and prior period items.

@ Changes in these unit value indexes may reflect changes in quality or product mix as well as price changes.

tt Effective with the Dec. 1989 SURVEY, data for 1981-88 have been revised and are available upon request.

tt Effective with the Mar. 1990 SURVEY, data for 1985-89 have been revised and are available upon request.

Page S-19

1. Reported annual total; monthly or quarterly revisions are not available.

2. Less than 500 metric tons.

3. Figure suppressed because it did not meet Census publication standards.

4. Beginning with 1989 data, merchandise trade data are based upon two new commodity classification systems; the International Harmonized System and, Revision 3 of the Standard International Trade Classification and, as a result, data may not be directly comparable to 1988 and earlier years.

Includes data for items not shown separately.

§ Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated.

‡ Effective with the Jan. 1990 SURVEY, revisions for 1987-88 are available upon request.

Page S-20

1. Reported annual total; monthly or quarterly revisions are not available. 2. Quarterly data are no longer available.

See note 4 for p. S-19.

§ Data are not wholly comparable from year to year because of changes from one classification to another.

 @ Includes less than 500 electric generation customers not shown separately.

 £ Effective with the Jan. 1990 SURVEY, revisions for 1987–88 are available upon request.
 & Effective with the Dec. 1989 SURVEY, revisions for 1987–88 are available upon request.

Page S-21

1. Previous year's crop. New crop is not reported until Sept. (crop year: Sept. 1-Aug. 31). 2. Crop estimate for the year.

3. Stocks as of June 1.

4. Stocks as of June 1 and represents previous year's crop; new crop not reported until June (beginning of new crop year).

5. Series has been discontinued.

6. Stock estimates are available once a year as June 1 stocks and shown here in the May column and (as previous year's crop) in the annual column.

7. Stocks as of Dec. 1.

- 8. See note 4 for p. S-19. § Excludes pearl barley.

@ Quarterly data represent the 3-month periods Dec.-Feb., Mar.-May, June-Aug., and Sept.-Nov. Annual data represent Dec .- Nov.

† Coverage for 21 selected States, representing approximately 85 percent of U.S. production

Page S-22

1. See note 4 for p. S-19. § Cases of 30 dozen.

Series first shown in the Jan, 1991 SURVEY

Page S-23

Totals include data for items not shown separately.

Page S-24

1. Reported annual total; monthly revisions are not available.

2. See note 4 for p. S-19.

3. Less than 500 tons

4. Beginning in 1990, monthly data have been discontinued. Annual data will continue to be available.

Page S-25

1. Reported annual total; monthly revisions are not available.

2. For month shown.

3. Effective with Jan. 1989, import data are for consumption; earlier periods of data are general imports. See also note 4 for p. S-19 regarding the introduction of new classification systems.

4. Beginning in 1990, monthly data have been discontinued. Annual data will continue to be available.

@ Includes foreign ores.

§ Source: Metals Week.

Page S-26

1. Reported annual total; monthly revisions are not available.

2. Less than 50 tons

3. See note 3 for p. S-25.

♦ Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.

‡ Source for monthly data: American Bureau of Metal Statistics. Source for annual data: Bureau of Mines.

Includes data not shown separately.

† Includes bookings (new orders) for automatic guided vehicles, automated storage and retrieval systems, below hook lifters, cranes, hoists, monorails, racks, shelving, casters and floor trucks, and conveyors.

@@ Price represents North American Mean.

@ Effective with the Sept. 1990 SURVEY, the new orders index numbers have been converted to a new base year of 1987=100. Data back to 1988 are available upon request.

Page S-27

1. Annual total includes revisions not distributed to the months.

 See note 4 for p. S-19.
 Beginning in 1990, quarterly data have been discontinued. Annual data will continue to be available.

Includes data for items not shown separately.

§ Includes nonmarketable catalyst coke.

♦ Includes small amounts of "other hydrocarbons and alcohol new supply (field production)," not shown separately

11 March, June, September and December are five-week months. All others consist of four weeks.

Page S-28

1. Reported annual total; revisions not allocated to the months.

2. See note 4 for p. S-19.

Includes data for items not shown separately.

Page S-29

1. Reported annual total; revisions not allocated to the months.

2. See note 4 for p. S-19. Source: American Paper Institute. Total U.S. estimated consumption by all newspaper

See also note "#" for this page. § Effective with the October 1990 SURVEY, data have been revised back to 1989 to reflect adjustments made by the Rubber Manufacturers Association's Rubber Statistical Committee.

‡ Effective with the October 1990 SURVEY, synthetic data consisting of Butyl, polyisoprene, polychloroprene, silicone, and other elastomers have been revised in keeping with data provided

by the Census Bureau's MA30A report beginning in 1990. Also see not "§" on this page. # Compiled by the American Newspaper Publishers Association. † Effective with the March 1990 SURVEY, Canadian newsprint statistics have been revised

back to Jan. 1982 to exclude supercalendered and some soft-nip calendered paper that was originally classified as newsprint and is now classified as uncoated groundwood papers. This revision also affects estimated consumption. Revised data are available upon request

Page S-30

1. Reported annual total: revisions not allocated to the months

Data are being withheld to avoid disclosing data from individual firms.

Data cover five weeks; other months, four weeks. Beginning Jan. 1989, sales of industrial plasters are included with building plasters. 3.

4. Beginning Jan. 1969, sales of industrial plasters are 1
5. Jan. 1, 1991 estimate of the 1990 crop.
6. Total for crop year, Aug. 1-Jul. 31.
Includes data for items not shown separately.
♦ Cumulative ginnings to the end of month indicated.
§ Bales of 480 lbs.

Page S-31

2. Annual total includes revisions not distributed to the months.

3. Average for crop year; Aug. 1-Jul. 31.

1. Less than 500 bales.

A. For five weeks; other months four weeks.
S. See note 4 for p. S-19.
Beginning in 1990, data are available only on a quarterly basis.
A Based on 480-1b. bales, preliminary price reflects sales as of the 15th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and another price). and premiums).

§ Bales of 480 lbs.

The total may include some miscellaneous wool imports. Series first shown in the July 1990 SURVEY.

Page S-32

1. Annual total includes revisions not distributed to the months.

2. Production of new vehicles (thous. of units) for Jan. 1991: passenger cars, 451; trucks and buses, 225.

Data are reported on an annual basis only.
 See note 4 for p. S-19.

5. Beginning Jan. 1989, shipments of trailer bodies are included with trailer chassis to avoid disclosure of data from individual firms.

6. Effective with the August 1990 SURVEY, data have been revised back to 1987 and are available upon request.

Total includes backlog for nonrelated products and services and basic research.

§ Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars

♦ Courtesy of R.L. Polk & Co.; republication prohibited. Because data for some States are not available, month-to-month comparisons are not strictly valid.

* Series first shown in the August 1990 SURVEY. † Includes some imported trucks over 10,000 lbs. GVW.

‡ Excludes railroad-owned private refrigerator cars and private line cars.

BEA Information

BEA's economic information is available in publications, on computer tapes, on diskettes, and through a variety of other products and services. Most of these are described in *A User's Guide to BEA Information*. For a copy, send a self-addressed stamped envelope (8 1/2 by 11 inches, with 75 cents postage) to Public Information Office, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Available From GPO

ORDER FROM: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Payment may be by check (made payable to Superintendent of Documents) or charged to a GPO deposit account number, VISA, or MasterCard. Phone (202) 783-3238 or fax (202) 275-0019.

SURVEY OF CURRENT BUSINESS. Contains estimates and analyses of U.S. conomic activity. Features include a review of current economic developments; articles pertaining to BEA's work on the national, regional, and international economic accounts and related topics; quarterly national income and product accounts tables; a 28-page section of business cycle indicators containing tables for over 250 series and charts for about 130 series; and a 36-page section of current business statistics presenting over 1,900 major economic series obtained from public and private sources. Monthly. Annual subscription: \$23.00 second class mail, \$52.00 first class mail. Single copy: \$6.50.

Business Statistics, 1961–88. (1989) Provides monthly or quarterly data for 1985–88 and annual data for 1961–88 for series that appear in the SURVEY OF CURRENT BUSINESS. Also contains definitions of terms, sources of data, and methods of compilation. 328 pp. \$16.00 (GPO Stock No. 003-010-00198-4).

The National Income and Product Accounts of the United States, 1929–82: Statistical Tables. (1986) Contains detailed estimates of the national income and product accounts for 1929–82 from the comprehensive revision released in 1985. Also includes definitions of the major components of the accounts and of the major sectors of the economy. 442 pp. \$23.00 (GPO Stock No. 003-010-00174-7).

NIPA Methodology Papers:

- No. 1 through No. 4: Available from NTIS (see box below).
- No. 5: Government Transactions. (1988) Presents the conceptual basis and framework of government transactions in the national income and product accounts; describes the presentations of the estimates; and delineates the sources and methods used to prepare estimates of Federal transactions and of State and local transactions. 120 pp. \$5.50 (GPO Stock No. 003-010-00187-9).

No. 6: Personal Consumption Expenditures. (1990) Presents the conceptual basis and framework of personal consumption expenditures in the national income and product accounts. Describes the presentation of the estimates and the sources and methods used to prepare them. 92 pp. \$4.50 (GPO Stock No. 003-010-00200-0).

BEA Regional Projections to 2040. (1990) Three volumes. Presents regional projections for selected economic and population variables for 1995, 2000, 2005, 2010, 2020, and 2040. Includes projections for employment and earnings by industry and for personal income, as well as a statement of methodology.

NIPA Methodology Papers 1 through 4 (photocopies) are available from the National Technical Information Service (NTIS).

- No. 1: Introduction to National Economic Accounting. (1985) 19 pp. \$11.00 (NTIS Accession No. PB 85-247567).
- No. 2: Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends. (1985) 67 pp. \$17.00 (NTIS Accession No. PB 85-245397).
- No. 3: Foreign Transactions. (1987) 52 pp. \$17.00 (NTIS Accession No. PB 88-100649).
- No. 4: GNP: An Overview of Source Data and Estimating Methods. (1987) 36 pp. \$15.00 (NTIS Accession No. PB 88-134838).

ORDER FROM: U.S. Department of Commerce, National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. Payment may be by check (made payable to NTIS) or charged to an NTIS deposit account number, American Express, VISA, or Mastercard. Phone (703) 487-4650 or fax (703) 321-8547.

Vol. 1: States. 144 pp. \$7.50 (GPO Stock No. 003-010-00199-2).

- Vol. 2: Metropolitan Statistical Areas. 352 pp. \$17.00 (GPO Stock No. 003-010-00211-5).
- Vol. 3: BEA Economic Areas. 200 pp. \$10.00 (GPO Stock No. 003-010-00213-3).

State Personal Income: 1929-87. (1989) Contains annual estimates for 1929-87 of total personal income, annual estimates for 1948-87 of disposable personal income, and quarterly estimates for 1969-88 of total personal income. Also contains a statement of methodology. 320 pp. \$16.00 (GPO Stock No. 003-010-00197-6).

Local Area Personal Income, 1983-88. (1990) Contains estimates of personal income by major type of payment and earnings by major industry, population, and total and per capita personal income for regions, States, counties, and metropolitan areas.

- Vol. 1. Summary: Regions, States, and Metropolitan Areas. Estimates for the United States, regions, States, and metropolitan areas. Also contains county definitions of metropolitan areas, a detailed description of sources and methods, and samples of tables available. 300 pp. \$15.00 (GPO Stock No. 003-010-00205-1).
- Vol. 2. New England, Mideast, and Great Lakes Regions. (CT, DE, DC, IL, IN, ME, MD, MA, MI, NH, NJ, NY, OH, PA, RI, VT, WI) 324 pp. \$16.00 (GPO Stock No. 003-010-00206-9).
- Vol. 3. Plains Region. (IA, KS, MN, MO, NE, ND, SD) 236 pp. \$12.00 (GPO Stock No. 003-010-00207-7).
- Vol. 4. Southeast Region. (AL, AR, FL, GA, KY, LA, MS, NC, SC, TN, VA, WV) 372 pp. \$18.00 (GPO Stock No. 003-010-00208-5).
- Vol. 5. Southwest, Rocky Mountain, and Far West Regions and Alaska and Hawaii. (AK, AZ, CA, CO, HI, ID, MT, NV, NM, OK, OR, TX, UT, WA, WY) 328 pp. \$16.00 (GPO Stock No. 003-010-00209-3).

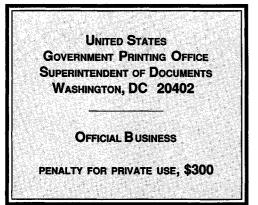

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures. (1990) Describes in detail the methodology used in constructing the balance of payments estimates for the United States. Explains underlying principles, and describes the presentation of the estimates. Includes a comprehensive list of data sources. 160 pp. \$8,50 (GPO Stock No. 003-010-00204-2).

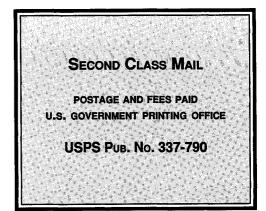

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Preliminary 1988 Estimates. (1990) Contains information on the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. Data are classified by industry of U.S. affiliate, by country and industry of ultimate beneficial owner, and, for selected data, by State. 92 pp. \$4.75 (GPO Stock No. 003-010-00203-4).

Foreign Direct Investment in the United States: 1987 Benchmark Survey, Final Results. (1990) Contains information for 1987 on the financial structure and operations of U.S. affiliates of foreign direct investors, on the foreign direct investment position in the United States, and on balance of payments transactions between U.S. affiliates and their foreign parents. Data are classified by industry of affiliate, by country and industry of ultimate beneficial owner or foreign parent, and, for selected data, by State. Also contains a complete methodology and copies of survey forms and instructions. 284 pp. \$14.00 (GPO Stock No. 003-010-00210-7).

Foreign Direct Investment in the United States: Balance of Payments and Direct Investment Position Estimates, 1980–86. (1990) Contains final estimates of the foreign direct investment position in the United States and of balance of payments transactions between U.S. affiliates and their foreign parent groups for calendar years 1980–86. Includes estimates by country of foreign parent and industry of U.S. affiliate. Most of the estimates in this publication appeared earlier in various issues of the SURVEY OF CURRENT BUSINESS. 56 pp. \$3.00 (GPO Stock No. 003-010-00213-1).

U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates. (1990) Presents results of BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of both U.S. parent companies and their foreign affiliates. Data are classified by country and industry of foreign affiliate and by industry of U.S. parent. 80 pp, \$4.25 each. Preliminary 1988 Estimates: GPO Stock No. 003-010-00202-6; Revised 1987 Estimates: GPO Stock No. 003-010-00201-8.
