

IN THIS ISSUE . . . Annual Revision of the NIPA's

ENT OF COMMERCE ~ ECONOMICS AND STATISTICS ADMINISTRATION BUREAU OF ECONOMIC ANALYSIS

U.S. DEPART

U.S. Department of Commerce Ronald H. Brown, Secretary

Economics and Statistics Administration

Bureau of Economic Analysis Carol S. Carson, Director J. Steven Landefeld, Deputy Director

Editor-in-Chief: Douglas R. Fox Managing Editor: Leland L. Scott

Publication Staff: W. Ronnie Foster, M. Grenchen Gibson, Ernestine T. Gladden, Eric B. Manning, Donald J. Parschalk

SURVER OF CURRENT BUSINESS. Published monthly by the Bureau of Economic Analysis of the U.S. Department of Commerce. Editorial correspondence should be addressed to the Editor-in-Chief, SURVER OF CURRENT BUSINESS, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Annual subscription: Second-class mail—\$43.00 domestic, \$53.75 foreign; firsi-class mail—\$89.00. Single copy—\$11.00 domestic, \$13.75 foreign.

Mail subscription orders and address changes to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Make checks payable to the Superintendent of Documents.

Second-class postage paid at Washington, oc and at additional mailing offices. (US#S 337-790).

The Secretary of Commerce has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department.

SURVEY of CURRENT BUSINESS

9 Annual Revision of the U.S. National Income and Product Accounts

- Annually, 1990–92
- Quarterly, 1990:1–1993:11

52 National Income and Product Accounts

- 52 National Income and Product Accounts Tables
- 120 NIPA Charts
- 122 Index to the NIPA Tables

C-pages: Business Cycle Indicators (See page C-1 for contents)

S-pages: Current Business Statistics (See page S-35 for contents and subject index)

Inside back cover: BEA Information

NOTE.—This issue of the SURVEY went to the printer on September 13, 1993. It incorporates data from the following monthly BEA news releases: Gross Domestic Product (August 31), Personal Income and Outlays (Sept. 1), and Composite Indexes of Leading, Coincident, and Lagging Indicators (Sept. 3).

THE BUSINESS SITUATION

Daniel Larkins. Larry R. Moran, and Ralph W. Morris prepared this article.

 ${oldsymbol{D}}$ EAL GROSS domestic product (GDP), a meas- $\mathbf{\Lambda}$ ure of goods and services produced in the United States, increased 1.8 percent in the second quarter of 1993, up from a 0.8-percent increase in the first quarter (chart 1).¹ Real gross domestic purchases, a measure of goods and services purchased by U.S. residents, increased 2.8 percent, up slightly from a 2.5-percent increase in the first quarter. The fixed-weighted price index for gross domestic purchases increased 3.0 percent after increasing 3.5 percent.

National income and product account (NIPA) estimates for the first quarter of 1990 through the second quarter of 1993 have been revised as part of the annual revision that incorporates new and revised source data and methodologies. The revised estimates show somewhat stronger growth and slightly more inflation in the U.S. economy than was indicated by the previously published estimates. See "Annual Revision of the U.S. National Income and Product Accounts" in this issue.

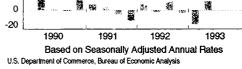

The step-up in real GDP growth in the second quarter, though relatively modest, was broadly based. Production of goods other than motor vehicles and of structures turned up, and production of services increased more than in the first quarter; motor vehicle production, in contrast, turned down (table 1).

Looking Ahead ...

• Annual Revision of State Personal Income. Revised estimates of State personal income for 1990–92 are scheduled to be presented in the September SURVEY. The annual revisions are usually published in the August SURVEY, but, as announced earlier this year, the schedule has been delayed one month because of BEA's move this summer to a new location.

The slight step-up in real gross domestic purchases reflected a sharp acceleration in final sales to domestic purchasers that was largely offset by

^{1.} Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1987 dollars and are based on 1987 weights.

Table 1.—Real Gross Domestic Product, by Major Type of Product

Second-Quarter 1993 Preliminary GDP Estimate: Source Data

The preliminary estimates for the second quarter of 1993, which were released on August 31, incorporate the following revised or additional major source data that were not available when advance estimates for the second quarter were released on July 29. In addition, the preliminary estimates for the second quarter reflect the impact of the annual revision of the national income and product accounts. See "Annual Revision of the U.S. National Income and Product Accounts" in this issue.

Personal consumption expenditures: Revised retail sales for May and June, and consumers' share of new car and truck purchases for May.

Nonresidential fixed investment: Construction put in place for April and May (revised) and June, manufacturers' shipments of machinery and equipment for May (revised) and June, and business' share of new car and truck purchases for May.

Residential investment: Construction put in place for April and May (revised) and June.

Change in business inventories: Manufacturing and trade inventories for May (revised) and June, and revised unit inventories of motor vehicles for June.

Net exports of goods and services: Merchandise exports and merchandise imports for May (revised) and June.

Government purchases: Federal outlays for June, State and local construction put in place for May (revised) and June, State and local government employment for May and June (revised), and Employment Cost Index for State and local government wages and salaries for the quarter.

Wages and salaries: Revised employment, average hourly earnings, and average weekly hours for May and June.

GDP prices: Detailed merchandise export and import price indexes for April through June, values and quantities of petroleum imports for June, and housing prices for the quarter.

a sharp slowdown in the rate of inventory accumulation (table 2). The following are highlights of the estimates of final sales.

- Personal consumption expenditures increased much more than in the first quarter.
- Nonresidential fixed investment increased as much as in the first quarter, but residential investment decreased after a small increase.
- Government purchases rebounded from a sharp first-quarter decrease.

Personal consumption expenditures

Real personal consumption expenditures increased 3.2 percent in the second quarter after edging up 0.8 percent in the first (table 3). Expenditures for goods more than accounted for the step-up; expenditures for services increased less than in the first quarter.

For the second consecutive quarter, the factors that are usually associated with changes in consumer spending sent mixed signals (chart 2).

Real disposable personal income increased 5.9 percent after falling 7.8 percent.² In contrast, the Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center)

1. Gasoline and oil, and fuel oil and coal.

2. Electricity and gas.

NOTE.—Dollar levels are found in table 2.3 of the "Selected NIPA Tables." and percent changes in major aggregates are found in table 8.1.

^{2.} The large first-quarter decrease was due to an acceleration of bonus payments—that is, the payment in the fourth quarter of 1992 of year-end bonuses that typically would have been paid in the first quarter of 1993. The upswing in the second quarter reflected a return to more normal levels. See the section "Changes in methodology" in "Annual Revision of the U.S. National income and Product Accounts" in this issue.

fell sharply after increasing. The unemployment rate was 7.0 percent in both quarters.

Expenditures for durable goods jumped 10.8 percent after decreasing 1.3 percent. All major types of durable goods contributed to the upturn. Motor vehicles and parts jumped sharply after decreasing. Furniture and household equipment increased more than in the first quarter; the largest second-quarter increase was in consumer electronics, such as computers and televisions. "Other" durable goods (such as jewelry, books, sporting goods, and boats) turned up.

Expenditures for nondurable goods increased 2.6 percent after decreasing 2.1 percent. Food increased after a decrease; the increase was more than accounted for by purchased meals, as food purchased for off-premises consumption decreased. Clothing and shoes also increased after a decrease. "Other" nondurable goods increased more, and energy increased less, than in the first quarter.

Expenditures for services increased 1.7 percent after increasing 3.1 percent; the second-quarter increase was the smallest since the fourth quarter of 1991. The slowdown was accounted for by household operation, which decreased after increasing, and by medical care and "other" services, both of which increased less than in the first quarter. The decrease in household operation was accounted for by electricity and natural gas and reflected milder-than-normal spring weather. The slowdown in "other" services was accounted for by brokerage and investment counseling,

which decreased after increasing sharply; this downturn was partly offset by upturns in recreation (largely in casino gambling and in motion picture admissions), in education and research, and in religious and welfare services. Transportation increased twice as much as in the first quarter, and housing increased about the same in both quarters.

Nonresidential fixed investment

Real nonresidential fixed investment increased 14.4 percent in the second quarter, the same rate as in the first (table 4). Structures increased more than in the first quarter, but producers' durable equipment increased less.

Many of the factors that underlie investment spending were moderately favorable in the second quarter. The yield on new high-grade corporate bonds continued its downtrend, and the capacity utilization rate in manufacturing continued its uptrend. (However, the changes in both series were smaller than in the first quarter.) Real final sales of domestic product increased moderately, as it has in two of the three preceding quarters. Corporate profits (in current dollars) increased modestly, and cash flow relative to fixed investment remained high.

Structures increased 6.4 percent after edging up 0.5 percent. The second-quarter increase was the largest in more than 3 years. Most of the increase was in utilities and in mining exploration, shafts, and wells. Nonresidential buildings increased, but considerably less than in the first quarter; the

NOTE.--Dollar levels are found in table 5.5 of the "Selected NIPA Tables," and percent changes in major aggregates are found in table 8.1.

second-quarter increase was accounted for by religious, educational, hospital, institutional, and miscellaneous structures. Commercial structures changed little; a slight slippage in office construction offset a small increase in other commercial construction. Industrial structures decreased.

Producers' durable equipment (PDE) increased 17.4 percent after increasing 19.9 percent. Information processing equipment and "other" PDE increased less than in the first quarter. The slowdown in information processing equipment was more than accounted for by computers; communications equipment, the second largest component of information processing equipment, rebounded from a first-quarter drop. The slowdown in "other" PDE was widespread. Both transportation equipment and industrial equipment increased more than in the first quarter. The step-up in transportation equipment was more than accounted for by autos, which increased after a slight decrease; purchases of trucks and of civilian aircraft increased less than in the first quarter.

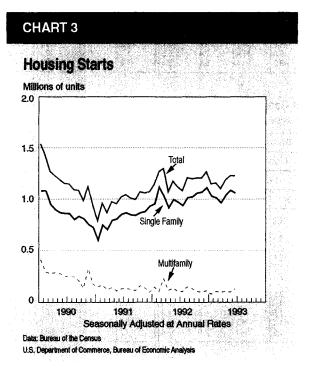

Residential investment

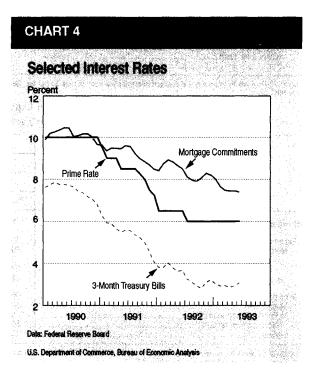

Real residential investment decreased 8.4 percent in the second quarter after increasing 1.5 percent in the first. The downturn was accounted for by single-family construction. Multifamily construction decreased less than in the first quarter, and "other" residential investment was unchanged. Single-family construction decreased 14.3 percent after increasing 24.2 percent. Single-family construction in a quarter is largely determined by housing starts in that quarter and in the preceding quarter. In the first two quarters of 1993, starts averaged 1.053 million units (annual rate), down from a combined average of 1.063 million for the fourth quarter of 1992 and the first quarter of 1993 (chart 3).

The second-quarter decrease in multifamily construction was relatively small. Weakness in the multifamily market continues to reflect very high rental vacancy rates.

'Other" residential investment was unchanged after decreasing, as a decrease in mobile home sales was offset by an increase in brokers' commissions.³ The increase in brokers' commissions reflected somewhat stronger house sales. Sales of existing houses increased 1.4 percent (not an annual rate), and sales of new houses increased 10.5 percent. These increases in sales partly reflected a continued downtrend in mortgage interest rates (chart 4). The Housing Affordability Index, prepared by the National Association of Realtors, reflects the combined effects of median house prices, median family incomes, and mortgage rates; the index's upward trend continued in the second quarter, as the effects of higher incomes and lower mortgage rates more than offset the effect of higher prices.

The "other" component includes additions and alterations, major replacements, sales of new mobile homes, brokers' commissions on house sales, and residential equipment.

Inventory investment

Real inventory investment—that is, the change in business inventories—decreased \$15.4 billion in the second quarter, as inventory accumulation slowed to \$13.9 billion from \$29.3 billion (table 5). In contrast, inventory investment increased \$20.6 billion in the first quarter.

Nonfarm inventories increased \$17.5 billion after increasing \$29.3 billion. The slowdown was more than accounted for by a downturn in automotive inventories at the retail level.

Manufacturing inventories increased \$4.2 billion after decreasing \$0.8 billion. Inventories of durable goods increased after having decreased for 10 consecutive quarters; the increase was more than accounted for by electronic and industrial equipment. Inventories of nondurable goods increased less than in the first quarter.

Wholesale trade inventories increased \$7.9 billion after increasing \$0.7 billion. Inventories of durable goods—particularly those of motor vehicles and parts, electrical goods, and sports and recreation goods—increased after decreasing. Inventories of nondurable goods increased slightly less than in the first quarter.

Retail trade inventories increased \$1.8 billion after increasing \$24.0 billion. Retail automotive inventories decreased after a substantial increase; the decrease reflected strength in motor vehicle sales. Other retail trade inventories increased a little less than in the first quarter.

"Other" nonfarm inventories increased \$3.6 billion after increasing \$5.4 billion. (The "other" component consists mainly of inventories held by the mining, construction, public utilities, transportation, communication, and service industries.)

Farm inventories decreased \$3.6 billion after no change. Inventories of crops decreased more than in the first quarter. Inventories of livestock decreased slightly after increasing.

The constant-dollar ratio of nonfarm inventories to all final sales of domestic businesses moved down to 2.50 in the second quarter from 2.51 in the first. A different ratio, in which final sales are limited to goods and structures, move down

to 4.35 from 4.37. Both ratios are quite low by historical standards.⁴

Net exports of goods and services

Real exports increased 4.8 percent in the second quarter after decreasing 2.4 percent in the first. Real imports increased 13.1 percent after increasing 11.6 percent (table 6).

Exports of merchandise turned up, but exports of services decelerated. Most of the strengthening in merchandise exports was accounted for by nonautomotive capital and consumer goods and by agricultural products. Within nonautomotive capital goods, exports of civilian aircraft and of computers turned up, the former more sharply than the latter. Within nonautomotive consumer goods, exports of durable and nondurable goods contributed equally to the strengthening. Exports of agricultural products increased slightly after a sharp decrease.

Imports of merchandise accelerated, and imports of services turned down. The acceleration in merchandise imports was more than accounted for by step-ups in imports of petroleum and products and of nonautomotive capital goods. In contrast, auto imports increased much less than in the first quarter.

~Government purchases

Real government purchases increased 4.3 percent in the second quarter after decreasing 6.4 percent in the first (table 7). Federal Government purchases turned up, and purchases of State and local governments increased substantially more than in the first quarter.

Federal defense purchases increased 2.0 percent after decreasing 21.4 percent; the decrease was the largest in the 21 years that constant-dollar defense purchases have been separately estimated in the NIPA's. The increase was spread across all types of purchases other than employee compensation, which decreased for the ninth consecutive quarter.

Federal nondefense purchases increased 5.9 percent after decreasing 3.2 percent. The increase was accounted for by purchases of services; both compensation of employees and "other" services increased.

State and local government purchases increased 5.0 percent after increasing 0.3 percent. The pickup was accounted for by purchases of structures, which increased after having decreased in the preceding four quarters; most types of structures contributed to the increase, but the increase in highway construction was especially large.

Corporate Profits

Profits from current production—profits before tax plus inventory valuation adjustment (IVA) and capital consumption adjustment (ccAdj) increased \$11.2 billion in the second quarter after decreasing \$7.4 billion in the first (table 8). Profits from the domestic operations of nonfinancial corporations increased \$13.2 billion after decreasing \$22.0 billion. Profits from the domestic operations of financial corporations increased \$1.4 billion after increasing \$10.3 billion. Profits from the rest of the world decreased \$3.5 billion after increasing \$4.3 billion.

Cash flow from current production, a profitsrelated measure of internally generated funds

changes are found in table 8.1.

^{4.} The first ratio, in which the denominator consists of all final sales of domestic businesses, implies that the demand for inventories that results from the production of services is similar to the demand for inventories that results from the production of goods and structures. The second ratio, in which the denominator consists of final sales of goods and structures, implies that the production of services does not generate any demand for inventories. Both implications are extreme.

available to corporations for investment, increased \$6.7 billion after decreasing \$12.3 billion. As a percentage of nonresidential fixed investment, cash flow remained high, at 83.2 percent, though slightly below its first-quarter level.

Profits by industry.--Industry profits are measured by profits before tax (PBT) with IVA because estimates of the ccadj by industry do not exist. In the aggregate, PBT plus IVA presents much the same picture of the second quarter as does profits from current production. For domestic operations, PBT with IVA increased \$15.1 billion after decreasing \$12.1 billion. The swing mainly reflected an upturn in profits of nonfinancial corporations. On the basis of preliminary and incomplete information, most of the upturn appears to be accounted for by durable goods manufacturing and wholesale trade. (Detailed estimates by industry will not be available until next month.)

As already noted, profits from the rest of the world decreased \$3.5 billion. This component of profits measures receipts of profits from foreign affiliates of U.S. corporations less payments of profits by U.S. affiliates of foreign corporations. Preliminary and incomplete information for the second quarter shows receipts increasing \$2.6 billion and payments increasing \$6.1 billion.

Annual Revision of the U.S. National Income and Product Accounts

- Annually, 1990-92
- Quarterly, 1990:1–1993:11

T N THIS issue of the SURVEY OF CURRENT BUSINESS, the Bureau of Economic Analysis (BEA) presents revised estimates of the national income and product accounts (NIPA'S) for 1990– 92 and the first two quarters of 1993. As is usual in annual NIPA revisions, source data that are more complete, more detailed, and otherwise more appropriate than previously available information have been incorporated into the estimates, and seasonal factors have been updated. In addition, several methodological changes have been made.

The first section of this article discusses the impact of the revisions on several measures of economic activity, the second section provides a summary of the revisions and the major source data underlying them, and the third section describes the changes in methodology and summarizes the source data and methods used to prepare the NIPA estimates. Appendix A to this article shows, in current dollars, the revised annual estimates and the revisions for the five summary accounts of the NIPA's. A set of most of the NIPA tables follows this article; the missing tables are scheduled to appear in the September 1993 SURVEY (see page 52). An index to the complete set of NIPA tables begins on page 122.

Impact of the Revisions

The revised estimates show that the U.S. economy was stronger than indicated by the previously published estimates. From the fourth quarter of 1989 to the second quarter of 1993, the

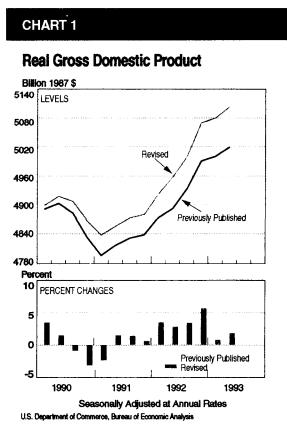

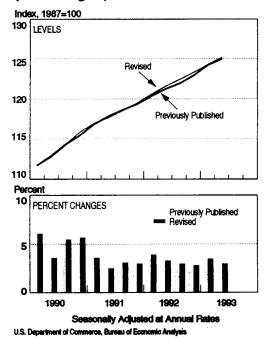

CHART 2

Gross Domestic Purchases Price Index (Fixed Weights)

10 • August 1993

growth rate (average annual rate of change) for real gross domestic product (GDP) was revised up 0.5 percentage point to 1.4 percent (table 1). The stronger growth was mainly due to upward revisions to personal consumption expenditures (PCE) for goods, to nonresidential producers' durable equipment (PDE), and to State and local government purchases.

Growth in real GDP is stronger for each of the 3 full years that were revised. The increase for 1990 was revised from 0.8 percent to 1.2 percent, the decrease for 1991 was revised from 1.2 percent to 0.8 percent, and the increase for 1992 was revised from 2.1 percent to 2.6 percent. On a fourth-quarter-to-fourth-quarter basis, the 0.5percent decrease during 1990 was revised to a 0.2-percent increase; the increase during 1991 was revised from 0.1 percent to 0.3 percent; and the increase during 1992 was revised from 3.1 percent to 3.9 percent.

The revised estimates show slightly more inflation than previously indicated. From the fourth quarter of 1989 to the second quarter of 1993, the average annual rates of increase in the price indexes (fixed weights) for both GDP and gross domestic purchases were revised up slightly: 0.1 percentage point to 3.8 percent for the GDP price index and 0.2 percentage point to 3.8 percent for the gross domestic purchases price index (table 2). Among major components, none of the revisions to the average annual rates of change exceeded 0.4 percentage point.

Business cycle.—As in the previously published estimates, real GDP reaches a cyclical peak in the second quarter of 1990 and a cyclical trough in the first quarter of 1991. However, in the revised estimates, the contraction is less severe than in the previously published estimates. The total decrease in real GDP from the second quarter of 1990 to the first quarter of 1991 is now 1.6 percent (not at an annual rate); in the previously published estimates, the decrease was 2.2 percent. An upward revision to gross private domestic investment contributed most to the lessened severity of the contraction.

In the revised estimates, the current expansion is stronger than in the previously published estimates. The increase in real GDP from the first quarter of 1991 to the second quarter of 1993 is now 2.4 percent (average annual rate); in the previously published estimates, the increase was 2.0

percent. As a consequence of the stronger growth in the revised estimates, the preceding peak in real GDP (that is, the level of GDP in the second quarter of 1990) is surpassed in the second quarter of 1992, one quarter earlier than in the previously published estimates.

Gross saving and investment.—Gross saving as a percentage of gross national product (GNP) is somewhat higher on the revised basis, but a downtrend is still apparent: It was unrevised at 13.0 percent for 1990 and was revised up 0.4 percentage point to 12.8 percent for 1991 and 0.4 percentage point to 11.9 percent for 1992.

The level of gross saving is revised up substantially for 1991 and 1992, reducing the previously published decline of 6.9 percent from 1989 to 1992 to a decline of 3.2 percent. For 1991, the revision was more than accounted for by corporate net cash flow—undistributed corporate profits with inventory valuation adjustment (IVA) and with capital consumption adjustment (ccAdj) and corporate consumption of fixed capital)—which was revised up substantially mainly because of revisions to undistributed profits. For 1992, the upward revision to gross saving was mainly accounted for by an upward revision to personal saving and a downward revision to the government deficit.

Personal saving was revised up substantially for 1992; as a result, the personal saving rate (personal saving as a percentage of disposable personal income) was revised up 0.5 percentage point to 5.3 percent. The revision to personal saving stemmed mainly from a substantial upward revision to wage and salary disbursements, which in part reflected a large upward revision to the previous estimate of accelerated bonus payments (that is, the payment in the fourth quarter of 1992 of yearend bonuses that typically would have been paid in the first quarter of 1993). Because this revision affected wage and salary disbursements and not wage and salary accruals, the "wage accruals less disbursements" component of gross saving was revised down by the same amount. (See the section "Changes in methodology.")

The government deficit (NIPA basis) for 1992 is somewhat smaller than previously estimated. The downward revision was more than accounted for by the Federal Government deficit, which, at \$276.3 billion, is \$21.7 billion smaller, mostly reflecting higher receipts. The State and local

Data Availability

The revised estimates, along with the estimates for 1989 and earlier years (back to 1929), are available on diskette and magnetic tape. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230, or call (202) 606–9700.

government surplus, at \$7.2 billion, is \$8.3 billion smaller, mostly reflecting higher expenditures.

Gross investment—which is measured as the sum of gross private domestic investment, net foreign investment, and the statistical discrepancy—is somewhat higher on the revised basis. Within gross investment, gross private domestic investment was revised up for all 3 years, and net foreign investment was revised down for all 3 years.

Summary of the Revisions

The incorporation of newly available source data and of changes in methodology leads to revisions to current-dollar estimates and to the prices and quantities used to prepare constant-dollar estimates. In turn, these revisions lead to revisions to constant-dollar estimates. This section describes the revisions to the annual current-dollar, price, and constant-dollar estimates and then briefly describes the revisions to the quarterly estimates.

Annual current-dollar estimates

Table 3 summarizes the current-dollar revisions to major NIPA components. It provides a guide to the revisions by identifying the subcomponent series for which revisions were \$2.0 billion or more and by listing the major source data that underlie the revised estimates. (For a list of the principal source data and estimating methods used in preparing the current-dollar estimates, see table 7.) It should be noted that newly available source data lead to a revision in the level of an estimate not only for the year into which they are directly incorporated, but usually in the levels for subsequent years as well. The discussion in this section follows the sequence of entries in table 3.

GDP.—The level of current-dollar GDP was revised up for all 3 years: \$23.9 billion, or 0.4 percent, for 1990; \$45.4 billion, or 0.8 percent, for 1991; and \$87.8 billion, or 1.5 percent, for 1992. These

Text continues on page 18.

Acknowledgments

Gerald F. Donahoe, Chief of the National Income and Wealth Division, supervised the preparation of the revision of the national income and product accounts of the United States. Richard C. Ziemer, Chief of the Government Division, directed major parts of the revision. Robert P. Parker, Associate Director for National Economic Accounts, provided overall supervision. Norman E. Bakka developed the major computer systems used in the revision. Shelby W. Herman assisted in the review of the estimates.

Eugene P. Seskin coordinated the preparation of the article describing the revisions. Brooks B. Robinson, John C. Musgrave, Claire G. Pitzer, Heather L. Quick, George M. Smith, and Teresa L. Weadock prepared the tables for the article.

Other staff who made significant contributions to the revision are listed below.

Personal consumption expenditures—Clinton P. McCully, M. Greg Key, Everette P. Johnson, William T. Bannister, Myung G. Han, Craig D. Yokum, Moses J. Branch.

Investment—David W. Cartwright, David B. Wasshausen, Gail P. Jones. Structures—Brooks B. Robinson. Producers' durable equipment—Jeffrey W. Crawford. Inventories—Gregory Y. Won, Michael D. Glenn, Jean M. Stiller.

Net exports-Christian Ehemann, Corinne E. Krincek, Phyllistine M. Barnes.

Federal Government receipts and expenditures—David T. Dobbs, Gary W. Davis, Ann M. Groszkiewicz, Alex Nemirovsky, Joyce M. Northwood, Benyam Tsehaye, Michael W. Webb. Federal Government purchases—Karl D. Galbraith, Pamela A. Kelly, Peter G. Beall, Laura M. Bilenki, James E. Boucher, Florence H. Campi, Doris N. Johnson, Raymen G. Labella, Tamara M. Mast, Michael D. McConathy, Matthew P. McNeil, Claire G. Pitzer.

State and local government transactions—David F. Sullivan, Steven J. Andrews, Jennifer A. Medairy, Donald L. Peters.

Measures of price change—Christian Ehemann, Mary W. Hook. Income—Eugene P. Seskin.

Personal income—Arthur L. Sensenig. Wages and salaries—Arthur L. Sensenig, Pauline M. Cypert, Toui C. Pomsouvan, Tracy D. Marsh. Other labor income—Helen K. Rose. Other contributors to the personal income estimates include Thae S. Park and James E. Rankin.

Business income—Kenneth A. Petrick. Corporate profits—Kenneth A. Petrick, Craig A. Hargenrader, Michael T. McNamara, Jerry L. Stone. Nonfarm proprietors' income—Willie J. Abney.

Farm output and income—George M. Smith, Clark D. Allen. Interest income—Teresa L. Weadock.

Rental income of persons—George M. Smith, Denise A. McBride. Consumption of fixed capital—John C. Musgrave, Heather L. Quick.

Computer services-Norman E. Bakka, Mary Carol Barron, Phyllistine M. Barnes.

NIPA Index—Jeanette M. Honsa.

NIPA information-Virginia H. Mannering, Eunice V. Blue.

Secretarial—Eunice V. Blue, Mary B. Perkins, Lynda A. Swanson, Dorothy A. Wilson.

revisions were large by historical standards. For example, the revision for 1992, the "most recent year" in this annual NIPA revision, is 1.0 percentage point larger than the average revision for the "most recent year" in the annual NIPA revisions since 1969.

In this annual revision, the largest dollar revisions among the major components of GDP were to personal consumption expenditures for goods and for services, to nonresidential producers' durable equipment, and to State and local government purchases.

Personal consumption expenditures (PCE) for goods.—PCE goods was revised up for all 3 years: \$8.6 billion for 1990, \$18.1 billion for 1991, and \$27.1 billion for 1992. Upward revisions to "goods other than motor vehicles and parts" accounted for most of the revisions for all 3 years; these revisions resulted from the incorporation of revised Census Bureau retail sales data. Within this category, the largest upward revisions were to furniture and household equipment, food, clothing and shoes, and "other durable goods." Gasoline and oil was revised down for all 3 years, reflecting revised gasoline consumption data by type of vehicle for 1990 from the Federal Highway Administration (FHWA), newly available FHWA consumption data for 1991, and Energy Information Administration data on gasoline supplied to retailers for 1992.

PCE for services.—PCE services was revised up for all 3 years: \$4.1 billion for 1990, \$0.6 billion for 1991, and \$16.9 billion for 1992. Revisions to recreation services accounted for most of the upward revision for 1990; revisions to personal business services more than accounted for the upward revisions for 1991 and 1992. The upward revision to recreation services for 1990 was accounted for primarily by revised Census Bureau data on annual service receipts. The upward revisions to personal business services for 1991 and 1992 reflected the incorporation of newly available information from a variety of regular sources for two components---"services furnished without payment by financial intermediaries except life insurance carriers and private noninsured pension plans" and "expense of handling life insurance."

Among the other types of PCE services, household operation services was revised up for all 3 years; the revisions were primarily to telephone and telegraph services. Within telephone and telegraph services, the revisions largely reflected a change in BEA's assumptions about the consumer share of purchases of cellular phone services; previously, the consumer share of these purchases had been assumed to be zero. In addition, newly available source data for cellular phone services revenue for 1990–92 were incorporated.

Transportation services was revised down for 1990 and 1991 and up for 1992. Revisions to motor vehicle repair, greasing, washing, parking, storage, rental, leasing, and related services more than accounted for the 1991 and 1992 revisions. These revisions primarily reflected the incorporation of revised Census Bureau receipts data for 1991, new receipts data for 1992, and new Bureau of Labor Statistics (BLS) data on automobile rental and leasing for 1991.

Medical care services was revised up for 1990 and down for 1991 and 1992. Within medical care services, health insurance was revised up for all 3 years, reflecting revised Health Care Financing Administration (HCFA) data for 1990, new HCFA data for 1991, and revised BEA projections for 1992. Physicians' services was revised down for all 3 years, reflecting the incorporation of revised Census Bureau annual receipts data for 1990 and 1991 and new receipts data for 1992. Personal care services was revised down for all 3 years, also reflecting the incorporation of newly available Census Bureau receipts data.

Net foreign travel was revised up for 1990 and down for 1991 and 1992, reflecting revisions to the BEA balance of payments accounts (BPA's) and an improved procedure for estimating passenger fare payments by U.S. residents; the improved procedure incorporates BPA estimates of passenger fare exports and imports and U.S. Department of Transportation data on international passenger revenue.

Nonresidential structures.—Nonresidential structures was revised up for all 3 years: \$0.5 billion for 1990, \$2.5 billion for 1991, and \$4.2 billion for 1992. Revisions to utilities, mainly to electric light and power, more than accounted for the upward revision for 1991. The upward revision to electric light and power reflected newly available data from a variety of regular sources. For 1992, nonresidential buildings was revised up, and "other nonfarm structures" was revised down. These revisions reflected revised Census Bureau data on the value of new construction put in place.

Nonresidential producers' durable equipment (PDE).—Nonresidential PDE was revised up for all 3 years: \$8.6 billion for 1990, \$12.4 billion for

1991, and \$13.0 billion for 1992. The upward revisions were widespread among the components of PDE. For 1990 and 1991, the revisions primarily reflected the introduction of commodity shipments data from the 1990 and 1991 Annual Surveys of Manufactures. For 1992, the revisions reflected newly available industry shipments data from the Census Bureau monthly survey of manufacturers and from the Census Bureau Current Industrial Report covering civilian aircraft. For all 3 years, the revisions also reflected a BEA adjustment to account for a downward bias in the Census Bureau shipments data that resulted from an incomplete incorporation of new businesses (see the section "Changes in methodology").

Residential fixed investment.—Residential fixed investment was revised down slightly for 1990 and 1991 and up \$5.9 billion for 1992. For 1992, the revision was largely accounted for by an upward revision to "improvements," reflecting the incorporation of information from BLS and Census Bureau surveys.

Change in business inventories.—The change in business inventories was revised up for all 3 years: \$0.6 billion for 1990, \$1.6 billion for 1991, and \$2.9 billion for 1992. The change in farm inventories was unrevised for 1990 and 1991 and was revised up \$2.8 billion for 1992; the revision for 1992 reflected the incorporation of new estimates from the U.S. Department of Agriculture (USDA).

The change in nonfarm inventories was revised up for all 3 years: \$0.5 billion for 1990, \$1.7 billion for 1991, and \$0.1 billion for 1992. For 1990, upward revisions to the IVA more than offset downward revisions to the change in book value; both revisions largely reflected the incorporation of data from a variety of regular sources. For 1991, the upward revision was primarily due to revisions to the IVA. For 1992, upward revisions to the IVA more than offset downward revisions to the change in book value; the latter reflected downward revisions to retail trade automotive dealers and to industries other than manufacturing and trade that offset an upward revision to merchant wholesale trade.

Net exports of goods and services.—Net exports of goods and services was revised down \$2.5 billion for 1990, up \$2.2 billion for 1991, and up \$0.8 billion for 1992. The downward revision for 1990 was due to upward revisions to imports of merchandise and of services. The upward revisions for 1991 and 1992 were due to upward revisions to exports of merchandise; for 1992, the revision to merchandise exports was mostly offset by an upward revision to imports of services. Except for the revisions to merchandise exports for 1991 and 1992, the revisions to exports and imports mainly reflected revisions to the BPA's. The revisions to merchandise exports mainly reflected revisions to the territorial adjustment and were based on revised data from Puerto Rico and the U.S. Virgin Islands.¹ (For more information about revisions to the BPA's, see the section "Changes in methodology.")

Government purchases.—Government purchases was revised up for all 3 years: \$4.2 billion for 1990, \$8.8 billion for 1991, and \$16.9 billion for 1992. The revisions were primarily to State and local government purchases, which accounted for most of the revision for 1990 and more than accounted for the revisions for 1991 and 1992, and reflected revised fiscal year 1991 and new fiscal year 1992 data from Census Bureau surveys of government finances. Within State and local government purchases, the revisions for 1991 and 1992 were largely to structures and to "goods and services other than compensation of employees."

Net receipts of factor income.---Net receipts of fac-tor income from the rest of the world, which is excluded from GDP but included in GNP, was revised up \$1.0 billion for 1990, down \$3.3 billion for 1991, and down \$3.9 billion for 1992. Both receipts and payments of factor income were revised up for all 3 years. Receipts of factor income was revised up \$8.0 billion for 1990, \$2.6 billion for 1991, and \$0.4 billion for 1992; payments of factor income was revised up \$7.0 billion for 1990, \$5.9 billion for 1991, and \$4.3 billion for 1992. The revisions reflected the incorporation of the results of two 1989 benchmark SURVEYS: BEA'S benchmark survey of U.S. direct investment abroad and the U.S. Treasury Department's benchmark survey of foreign portfolio investment in the United States. (See the section "Changes in methodology.")

GNP.—The level of GNP was revised up for all 3 years: \$24.9 billion, or 0.4 percent, for 1990; \$42.2 billion, or 0.7 percent, for 1991; and \$83.9 billion, or 1.4 percent, for 1992. The revision to GNP for 1990 was roughly the same as that to GDP, and it was somewhat smaller than that to GDP for 1991 and 1992. The relatively smaller revisions

^{1.} The territorial adjustment converts merchandise trade from a BPA basis, which includes Puerto Rico and U.S. territories as part of the United States, to a NIPA basis, which includes Puerto Rico and U.S. territories as part of the "rest of the world." Similar adjustments are made for services and for receipts and payments of factor income.

to GNP for 1991 and 1992 reflected the downward revisions to net receipts of factor income.

Gross national income (GNI) and the statistical discrepancy.—GNI measures the costs incurred and the profits earned in the production of GNP; GNP measures final expenditures—the sum of consumer spending, investment, net exports, and government purchases—plus net receipts of factor income from the rest of the world. In concept, GNP is equal to GNI. In practice, they differ because they are estimated using less than perfectly consistent source data. The difference between GNP and GNI is the statistical discrepancy.

The level of GNI was revised up for all 3 years: \$22.6 billion, or 0.4 percent, for 1990; \$54.4 billion, or 1.0 percent, for 1991; and \$94.4 billion, or 1.6 percent, for 1992. For 1990, the revision to GNI was slightly less than that to GNP, and the statistical discrepancy was revised up from \$5.4 billion to \$7.8 billion. For 1991 and 1992, the revisions to GNI were considerably larger than those to GNP, and the statistical discrepancy was revised down from \$21.9 to \$9.6 billion for 1991 and from \$34.1 billion to \$23.6 billion for 1992. As a percentage of GNP, the revised statistical discrepancy is 0.1 percent for 1990, 0.2 percent for 1991, and 0.4 percent for 1992.

Within GNI, corporate profits with IVA and CCAdj was revised up considerably for all 3 years. Net interest, compensation of employees, and proprietors' income with IVA and CCAdj were revised up considerably for 1991 and 1992. For 1992, the upward revisions were partly offset by a downward revision to rental income of persons with CCAdj.

Compensation of employees.—Compensation of employees was revised up for all 3 years: \$6.4 billion for 1990, \$11.6 billion for 1991, and \$56.8 billion for 1992. Both wages and salaries and supplements to wages and salaries were revised up for all 3 years. The substantial upward revision to wages and salaries for 1992 resulted from the incorporation of BLs tabulations of unemployment insurance wage and salary data. For 1992, these data were adjusted from a "when-paid" basis to an accrual basis for inclusion in national income by excluding the larger-than-usual amount of bonuses paid in 1992. (For more information, see the section "Changes in methodology.")

For all 3 years, the revisions to supplements were mostly accounted for by other labor income. For 1990, the revision to other labor income was to group health insurance; it reflected revised HCFA data. For 1991, the revision was to group health insurance, reflecting revised HCFA data, and to pension and profit-sharing plans, reflecting newly available Internal Revenue Service (IRS) tabulations of corporate tax return data. For 1992, the revision reflected the revised levels for 1991 and revised BEA projections for 1992. In addition, employer contributions for social insurance was revised up for 1992, reflecting the incorporation of newly available regular source data.

Proprietors' income with IVA and CCAdj.— Proprietors' income with IVA and CCAdj was revised down \$3.6 billion for 1990, up \$8.4 billion for 1991, and up \$9.8 billion for 1992. For 1990 and 1991, the revisions were mostly accounted for by the nonfarm component of proprietors' income; for 1992, the farm and nonfarm components contributed about equally to the revision. For farm proprietors' income, the revision for 1992 reflected the incorporation of new estimates from USDA.

For nonfarm proprietors' income, the revision for 1990 primarily reflected the incorporation of newly available data from the IRS Taxpayer Compliance Measurement Program, which BEA uses for the tax return misreporting adjustment. This adjustment modifies tax return data for underreported incomes, for overreported expenses, and for nonreported incomes. The revisions for 1991 and 1992 primarily reflected newly available IRS tabulations of 1991 tax return data for sole proprietorships and partnerships. The ccAdj for nonfarm proprietors' income was revised down for 1991 and 1992 (see the discussion of consumption of fixed capital).

Rental income of persons with CCAdj.-Rental income of persons with ccadj was revised down for all 3 years: \$1.9 billion for 1990, \$2.4 billion for 1991, and \$13.6 billion for 1992. Rental income of persons (without ccAdj) accounted for all of the revisions for 1990 and 1991 and for \$11.1 billion of the revision for 1992. For all 3 years, the revisions to rental income of persons were primarily due to revised mortgage interest payments-the largest expense item in calculating rental income. Specifically, the revised estimates incorporate an improvement in the procedure introduced in last year's annual revision for estimating the effective rate of interest on mortgage debt (see the section "Changes in methodology"). The ccadj for rental income of persons was unrevised for 1990 and 1991 and was revised down \$2.5 billion for

1992 (see the discussion of consumption of fixed capital).

Corporate profits with IVA and CCAdj.—Corporate profits with IVA and CCAdj was revised up for all 3 years: \$18.9 billion for 1990, \$23.2 billion for 1991, and \$13.4 billion for 1992. Revisions to domestic profits primarily reflected the incorporation of revised IRS tabulations of corporate tax return data for 1990 and newly available tabulations for 1991. Revisions to rest-of-the-world profits reflected the incorporation of revisions to the BPA's.

Corporate profits before tax was revised up for all 3 years. Domestic profits of financial corporations, mainly commercial banks and savings and loan associations, accounted for most of the revisions. For 1990, the revisions reflected the revised IRS tax return tabulations. For 1991, the revisions resulted from the replacement of profits derived from regulatory agency reports with profits derived from the tax return tabulations. For 1992, the revision largely reflected the revised levels for 1991.

The IVA for corporate profits, mainly for manufacturing, was revised up for all 3 years, reflecting revised price indexes and new information on inventory accounting methods from Census Bureau annual surveys.

The ccAdj for corporate profits was revised up for 1990 and down for 1991 and 1992 (see the discussion of consumption of fixed capital).

Net interest.---Net interest was revised up for all 3 years: \$3.0 billion for 1990, \$13.3 billion for 1991, and \$26.8 billion for 1992. For each year, a downward revision to net monetary interest was more than offset by an upward revision to net imputed interest. For 1990, monetary interest paid to and received by domestic business were both revised up, reflecting revised IRS tabulations of corporate tax return data. Rest-of-the-world monetary interest paid and received were both revised up (received more than paid), reflecting revisions to the BPA's. The revision to net imputed interest was to interest paid both by life insurance carriers, reflecting new source data (see the section "Changes in methodology"), and by private noninsured pension plans, reflecting revised Federal Reserve Board flow-of-funds accounts assets data and BEA estimates of effective interest rates. For 1991, monetary interest paid to and received by domestic business were both revised up, reflecting new IRS tabulations of tax return data for corporations and for nonfarm sole proprietorships and partnerships. The revision to

net imputed interest was mostly to interest paid by pension plans, reflecting the revised flow-offunds data and the estimated interest rates noted earlier. For 1992, the revisions were similar to, albeit larger than, those for 1991.

Consumption of fixed capital.—Consumption of fixed capital—that is, economic depreciation and accidental damage—was revised little for 1990 and 1991 and was revised up \$4.5 billion for 1992. The revisions reflected revised BEA estimates of fixed investment and prices and, for 1992, revised trade source data used to estimate the damage caused by Hurricane Andrew.

Capital consumption allowances—that is, taxreturn-based depreciation for corporations and nonfarm proprietorships, historical-cost depreciation using consistent service lives for farm proprietorships and rental income of persons, and accidental damage—was revised up \$5.4 billion for 1990, down \$8.2 billion for 1991, and down \$13.6 billion for 1992. The upward revision for 1990 reflected revised IRS tabulations of corporate tax return data. The downward revisions for 1991 and 1992 reflected newly available IRS tabulations of 1991 tax return data for corporations and for nonfarm sole proprietorships and partnerships.

The ccAdj—which is derived as the difference between capital consumption allowances and the economic measure of depreciation—was revised up \$5.5 billion for 1990, down \$8.2 billion for 1991, and down \$18.0 billion for 1992.

Nonfactor incomes.—Nonfactor incomes—indirect business tax and nontax liability, business transfer payments, and subsidies less current surplus of government enterprises—was revised little for 1990, up \$0.4 billion for 1991, and down \$3.3 billion for 1992. The revision for 1992 was largely due to business transfer payments.

National income.—National income was revised up for all 3 years: \$22.7 billion for 1990, \$54.1 billion for 1991, and \$93.2 billion for 1992. These revisions reflected the aforementioned revisions to compensation of employees, proprietors' income, rental income of persons, corporate profits, and net interest.

Personal income and its disposition.—Personal income was revised up for all 3 years: \$9.6 billion for 1990, \$22.6 billion for 1991, and \$86.8 billion for 1992. These revisions partly reflected the previously described revisions to the components of national income that are included in personal income—wages and salaries, other labor income, proprietors' income, and rental income of persons. They also reflect revisions to personal dividend income, personal interest income, and transfer payments to persons, all of which are in personal income but not in national income. Personal dividend income was revised up \$4.1 billion for 1990, down \$9.1 billion for 1991, and up \$1.1 billion for 1992; these revisions reflected the incorporation of revised IRS tabulations of corporate tax return data for 1990 and newly available tabulations for 1991, as well as the incorporation of data from publicly available corporate financial statements for 1992. Personal interest income was revised up for all 3 years, largely reflecting the aforementioned revisions to net interest. Transfer payments was revised up for 1990 and down for 1991 and 1992. The revision for 1992 was more than accounted for by newly available HCFA data on State and local government payments for medicaid.

The smaller revisions to personal income than to national income for the 3 years were traceable to the components of corporate profits that are not in personal income. For 1992, the difference in the size of the revisions to the two income measures was much smaller than for the 2 preceding years because of the revisions to wages and salaries: Wages and salaries in national income was revised up \$36.5 billion for 1992; wages and salaries in personal income was revised up \$55.0 billion. (See the section "Changes in methodology.")

Personal tax and nontax payments was revised up for all 3 years: \$2.0 billion for 1990, \$1.7 billion for 1991, and \$17.5 billion for 1992. The upward revision for 1992 was due mostly to payments to the Federal Government and reflected newly available data from the U.S. Treasury Department. As noted in the April 1993 SURVEY, there was an unusually large difference between the fiscal year 1992 collections of personal taxes and the corresponding NIPA series. The difference was due to two factors: First, the impact of a change to withholding tables that was implemented in March 1992; and second, as noted above, a substantial understatement in the previously published NIPA wage and salary series used to estimate tax payments.²

Reflecting the revisions to personal income and to personal tax and nontax payments, disposable personal income (DPI) was revised up for all 3 years: \$7.6 billion for 1990, \$20.9 billion for 1991, and \$69.4 billion for 1992. Personal outlays—PCE, interest paid by persons, and personal transfer payments to rest of the world (net)—was revised up for all 3 years: \$13.3 billion for 1990, \$19.1 billion for 1991, and \$43.4 billion for 1992. The revisions for all 3 years were largely to PCE.

Personal saving—the difference between DPI and personal outlays—was revised down \$5.6 billion for 1990, up \$1.9 billion for 1991, and up \$26.1 billion for 1992.

Annual price estimates

Revisions to fixed-weighted price indexes result from the incorporation of newly available source data and of methodological changes. Source data that affect these indexes consist not only of price indexes, which are used for deflation, but also of current-dollar estimates and quantity data, which are used for preparing constant-dollar estimates by quantity extrapolation or direct valuation (see the section "Updated summary methodologies").

Newly available price index information includes revised price indexes for domestic, exported, and imported computers, for foreign travel, for single-family houses, and for defense goods and services. Newly available currentdollar estimates affected the price estimates for two types of PCE services—"services furnished without payment by financial intermediaries except life insurance carriers and private noninsured pension plans" and health insurance for petroleum and natural gas exploration, and for Federal Government and State and local government employee compensation.

In addition, methodological changes were made in the deflation of two GDP components. For residential structures, BEA's multifamily price index, which had been introduced in the 1991 comprehensive revision of the NIPA's, was extended through 1992. For net exports, changes were made in the deflation of several service components—air passenger fares, royalties and license fees, "other private services," and the territorial adjustments. (See the section "Changes in methodology.")

The level of the GDP fixed-weighted price index was unrevised at 113.6 for 1990 and was revised up 0.1 index point to 118.2 for 1991 and up 0.5 index point to 122.1 for 1992. Reflecting these revisions in level, the annual percent increase in the index was unrevised at 4.6 percent for 1990 and was revised up 0.1 percentage point to 4.1 percent for 1991 and up 0.4 percentage point to 3.3 percent for 1992. (Revisions to price changes for gross domestic purchases were about the same

^{2.} See Karl Galbraith, "Federal Budget Estimates, Fiscal Year 1994," SURVEY 73 (April 1993): 46-52.

as those for GDP.) Revisions to the price changes for components of GDP were generally small; the largest revisions were to PCE services for 1992 and to State and local government purchases for 1992 (table 4).

The increase in prices of PCE services for 1992 was revised up 0.9 percentage point to 5.0 percent. The revision was to services furnished without payment by financial intermediaries, to health insurance, and to foreign travel by U.S. residents. The prices of services furnished without payment by financial intermediaries and of health insurance are "implicit" prices because the constant-dollar estimates of these components are prepared by quantity extrapolation. The revisions to both components were due primarily to upward revisions to the current-dollar estimates. For services furnished without payment by financial intermediaries, the quantity extrapolator was revised down slightly; for health insurance, the quantity extrapolator was revised up slightly. The revision to foreign travel reflected a newly available composite index of consumer prices for foreign countries.

The increase in prices of State and local government purchases for 1992 was revised up 0.6 percentage point to 2.5 percent. The revision was mainly due to the implicit price for compensation of employees. For this component, the current-dollar estimate was revised up more than the quantity extrapolator.

Annual constant-dollar estimates

In general, revisions to real GDP reflect four factors: (1) Revisions to current-dollar components of GDP whose constant-dollar estimates are prepared by deflation, (2) revisions to the prices used in deflation, (3) revisions to the quantities used to estimate components of real GDP by extrapolation or direct valuation, and (4) revisions caused by shifts in the composition of current-dollar GDP. The following tabulation provides information on the effects of these factors on the revisions to the level of and percent change in real GDP, which are shown in the last line. Revisions to current-dollar GDP are shown in the first line; revisions to the GDP price index (fixed weights) are shown in the second line; and "other" revisions, a residual, is shown in the third line.

In this presentation, the first line, "revisions to current-dollar GDP," includes current-dollar revisions for those components of real GDP that are estimated by extrapolation or direct valuation; the second line, "revisions to the GDP price index," includes revisions to the "implicit" prices that result from the relationship between the current-dollar estimates and the quantities used to prepare the constant-dollar estimates for those components. Thus, for those components, current-dollar revisions are offset by revisions to the "implicit" prices if there are no revisions to the constant-dollar estimates.

		nt rev		Revision in annual percent change in GDP				
<u></u>	1990	1991	1992	1990	1991	1992		
Current-dollar revisions	0.4	0.8	1.5	0.4	0.4	0.7		
Less: Price revisions	0	.1	-4	0	.1	.3		
Plus: Other revisions	0	.1 .8	.2 1.3	0 .4	.1 .5	.2 .5		

The level of real GDP was revised up for each year: 0.4 percent for 1990, 0.8 percent for 1991, and 1.3 percent for 1992. Reflecting these revisions in level, the annual percent change in real GDP was also revised up for each year: 0.4 percentage point to 1.2 percent for 1990, 0.5 percentage point to -0.7 percent for 1991, and 0.5 percentage point to 2.6 percent for 1992 (table 4). For 1990 and 1991, the current-dollar revisions fully accounted for the constant-dollar revisions; for 1991, the price and "other" revisions had small offsetting effects. For 1992, the current-dollar revision was more than the constant-dollar revision, and "prices" were revised up. The pattern of revisions for 1992 largely reflected revisions to the PCE component "services furnished by financial intermediaries except life insurance carriers and noninsured pension funds"-for which the constant-dollar estimate is prepared using quantity extrapolation. In current dollars, this component was revised up for 1992, contributing 0.2 percentage point to the 0.7-percentage point upward revision to current-dollar GDP. Because there was virtually no revision to the quantity extrapolator, there was no revision to the constant-dollar estimate of this component.

For 1990, the upward revision to the increase in real GDP was more than accounted for by PCE (both goods and services) and by nonresidential fixed investment. For 1991, the upward revision to the decrease in real GDP reflected smaller decreases in PCE goods and in nonresidential fixed investment and larger increases in State and local government purchases and in net exports of goods and services. For 1992, the upward revision to the increase in real GDP was accounted for by larger increases in PCE goods, residential fixed investment, and State and local government purchases and by a smaller decrease in net exports.

Table 4.—Revisions in Percent Change in GDP, Real GDP, and Price Indexes (Fixed Weights)

[Percent change from preceding year]

Revisions to components of real GDP.—The annual percent change in PCE was revised up for all 3 years: 0.3 percentage point to 1.5 percent for 1990, 0.2 percentage point to -0.4 percent for 1991, and 0.3 percentage point to 2.6 percent for 1992. For 1990, the upward revisions were to durable goods, nondurable goods, and services. For 1991, the smaller decrease was mainly due to an upward revision to durable goods, which was more than accounted for by furniture and house-hold equipment; a smaller increase in services was partly offsetting. For 1992, the larger increase was mostly due to goods.

The change in nonresidential fixed investment was revised up 1.6 percentage points to an increase of 1.2 percent for 1990, up 1.1 percentage points to a decrease of 5.9 percent for 1991, and was revised little for 1992. The revisions for 1990 and 1991 largely reflected upward revisions to PDE. For 1990, information processing, transportation equipment, and "other equipment" were revised up. For 1991, the smaller decrease mainly reflected revisions to industrial equipment.

The change in residential investment was revised little for 1990, down 0.3 percentage point to -12.9 percent for 1991, and up 3.1 percentage points to 16.3 percent for 1992. The upward revision for 1992 largely reflected revisions to the "improvements" component.

The change in exports of goods and services was revised little for 1990 and 1992 and up 0.6 percentage point to 6.4 percent for 1991. The upward revision for 1991 largely reflected revisions to goods. The change in imports of goods and services was revised up 0.6 percentage point to 3.6 percent for 1990, down 0.4 percentage point to -0.5percent for 1991, and down 0.9 percentage point to 8.7 percent for 1992. The revisions for all 3 years reflected current-dollar and price revisions to both goods and services. In goods, the price revisions were mainly to capital goods. In services, the price revisions were mainly to travel and passenger fares (see the section "Changes in methodology").

The change in government purchases was revised up for all 3 years: 0.3 percentage point to 3.1 percent for 1990, 0.3 percentage point to 1.5 percent for 1991, and 0.2 percentage point to -0.1 percent for 1992. The revisions for all 3 years largely reflected revisions to State and local government purchases of structures and of "goods and services other than employee compensation." For 1991, a downward revision to the change in Federal Government purchases, mainly to "services other than compensation of employees," partly offset the upward revision to State and local government purchases.

Quarterly estimates

Quarterly estimates are affected by annual NIPA revisions in three major ways: (1) Adjustments to reflect revisions to the annual estimates, (2) incorporation of new and revised source data (including the updating of seasonal factors that are used to indicate quarterly patterns), and (3) changes in the methodology used to prepare the quarterly estimates.

Table 5.—GDP, Real GDP, the GDP Price Index (Fixed Weights), and the Gross Domestic Purchases Price Index (Fixed Weights): Revisions in Percent Change From Preceding Quarter [Percent change at annual rates; based on seasonally adjusted annual rates]

	GDP			Real GDP		GDP price index (fixed weights)		Gross domestic purchases price index (fixed weights)				
	Previ- ously pub- lished	Revised	Revision	Previ- ously pub- lished	Revised	Revision	Previ- ously pub- lished	Revised	Revision	Previ- ously pub- lished	Revised	Revision

In general, the quarter-to-quarter patterns of changes in BEA's measures of real output and prices are not markedly different on the revised basis (table 5), but output was clearly stronger in the quarters of 1990 and 1992. For real GDP, the revisions to the 14 quarterly percent changes (at annual rates) averaged 0.5 percentage point (without regard to sign). Only one of the 14 quarters had a downward revision in change (the second quarter of 1991), and two had no revision in change (the fourth quarter of 1991 and the third quarter of 1992). The two largest revisions in change were upward, and both were for 1992: The second quarter was revised up 1.3 percentage points to 2.8 percent, mainly reflecting PCE, and the fourth quarter was revised up 1.0 percentage point to 5.7 percent, mainly reflecting residential fixed investment.

For gross domestic purchases prices, the revisions to the 14 quarterly percent changes (at annual rates) averaged 0.2 percentage point (without regard to sign). For only one quarter was the revision larger than 0.5 percentage point: For the first quarter of 1992, the increase was revised up 1.0 percentage point to 3.9 percent. Sources of this revision were widespread.

The quarterly pattern of changes in disposable personal income (DPI) and related measures was revised substantially beginning with the fourth quarter of 1992. These revisions mainly reflected the incorporation of a larger-than-expected acceleration of bonus payments (see the section "Changes in methodology"). Primarily because of these revisions, the percent change (at an annual rate) in real DPI was revised up from 4.3 percent to 10.6 percent for the fourth quarter of 1992, down from 2.7 percent to -7.8 percent for the first quarter of 1993, and up from 1.3 percent to 5.9 percent for the second quarter of 1993.

Methodology

The revised NIPA estimates incorporate several changes in methodology—either in the source data or in the methods used to prepare the estimates. This section of the article describes these changes and updates previously published tables showing methodologies for current- and constant-dollar GDP.

Changes in methodology

Producers' durable equipment (PDE).—In the previously published PDE estimates for 1988 and 1989, BEA adjusted shipments data from the 1988 and 1989 Annual Surveys of Manufactures

(ASM's) to account for a downward bias that resulted from an incomplete incorporation of new businesses. The adjustments were based on information from the 1987 Census of Manufactures that implied shortfalls in the level of total manufactures' shipments of 0.7 percent for 1988 and 1.4 percent for 1989. In the previously published estimates, BEA had discontinued the adjustment for estimates after 1989 because the Census Bureau improved its mailing list for subsequent ASM's. However, because new Census Bureau studies indicated that the improvements reduced but did not eliminate the bias, BEA has reintroduced the adjustment for the estimates from 1990 forward. These adjustments implied shortfalls in the level of total manufactures' shipments of 1.2 percent for 1990, 1.6 percent for 1991, and 2.0 percent for 1992. For the components of manufactures' shipments used to estimate PDE, the adjustment added \$3.9 billion for 1990, \$5.1 billion for 1991, and \$5.1 billion for 1992.

Price index for multifamily housing.-In the comprehensive revision of the NIPA's that was released in December 1991, a hedonic price index for multifamily housing was used to prepare constantdollar estimates of this component of residential fixed investment for 1977-89.3 Until this annual revision, the price index for 1990 forward was extrapolated by the Census Bureau price deflator for single-family houses under construction. For the revised estimates, the multifamily price index was updated through 1992, based on regression equations for 1990, 1991, and 1992. The multifamily index is calculated only for annual estimates; for quarterly estimates, the Census Bureau singlefamily deflator is used as both the interpolator and extrapolator.

U.S. balance of payments accounts revisions.—The BPA's provide the basis for the foreign transactions entries in the NIPA's. (Differences between the BPA's and the NIPA's are identified in NIPA table 4.5 in this issue of the SURVEY.) In this year's annual BPA revision, BEA incorporated newly available data from regular sources and introduced a number of major improvements that involve new source data and new estimating methodologies. (For a description of the annual BPA revision, see "U.S. International Transactions, Revised Estimates for 1983–92" in the June 1993 SURVEY.)

^{3.} For a summary description of the index, see "The Comprehensive Revision of the U.S. National Income and Product Accounts: A Review of Revisions and Major Statistical Changes," SURVEY 71 (December 1991): 40. For additional detail, see Frank de Leeuw, "A Price Index for New Multifamily Housing," SURVEY 73 (February 1993): 33-42.

The effects of the BPA methodological changes on the components of GDP were small. The change that provides improved estimates of foreign air carriers' expenses incurred in the United States had the largest effect; it reduced exports of other transportation services by \$1.9 billion for 1992. This reduction in exports of services was partly offset by the effect of another methodological change, the inclusion of late reporters in the estimation of net "other private service receipts by U.S. parents from their foreign affiliates"; this change increased exports of "other private services" by \$1.1 billion for 1992.

Changes in BPA methodology that affected receipts of factor income included the incorporation of the 1989 benchmark survey of U.S. direct investment abroad, which added \$1.3 billion for 1992, and the incorporation of new source data on foreign commercial paper and certificates of deposit, which added \$1.5 billion. Changes in methodology that affected payments of factor income included the incorporation of new data sources for interest payments on U.S. corporate bonds and U.S. Treasury securities, which added \$3.9 billion for 1992; the new data sources included results from the U.S. Treasury Department's benchmark survey of foreign portfolio investment in the United States for 1989.

Because this annual NIPA revision-as usualcovered only 3 years, the BPA revisions were brought into the NIPA's at the best level beginning

with the estimates for 1990; the estimates for earlier years were not revised. As a result, there are discontinuities in the NIPA estimates. The extent of these discontinuities between 1989 and 1990 is quantified in table 6. For net exports of goods and services, the discontinuities are small; the change in GDP from 1989 to 1990 is understated by \$0.3 billion. For net receipts of factor income, the discontinuities are also small; the change in GNP from 1989 to 1990 is overstated by \$0.2 billion. However, the discontinuities in receipts and in payments of factor income, mainly in interest flows, are more substantial: The change in NIPA receipts of factor income from 1989 to 1990 is overstated by \$4.2 billion, and the change in NIPA payments of factor income is overstated by \$3.7 billion. (Revisions to the NIPA's for years prior to 1990 will be made in the next comprehensive NIPA revision.)

Deflation of net exports.-Several changes in the prices used for the deflation of net exports of services are introduced with this annual revision. The prices used to deflate exports and imports of air passenger fares are affected by two modifications in the way BEA uses BLS price indexes for these fares. Rapid changes in air passenger fares in recent years have made the BLS indexes, which are based on fares for a single week of the quarter (specifically, the first week of the third month of the quarter), less representative of the average quarterly fare; as a result, beginning with

	1989			1000	Change, 19	89 to 1990
	Published	Discontinuity 1	Adjusted	1990	Published	Adjusted

Table 6.—Discontinuities in NIPA Foreign Transactions: 1989–90

[Billions of dollars]

1. Equals the revisions to the U.S. balance of payments accounts that have not been carried back in the NIPA's at this time.

1990, this revision introduces a two-quarter moving average of the BLS indexes. In addition, the BLS indexes are now seasonally adjusted.

Also beginning with 1990, the implicit price deflator for final sales to domestic purchasers is used to deflate exports and imports of royalties and license fees, exports and imports of other private services, and BEA's territorial adjustments to exports and imports of services. Previously, these components were deflated using the GDP implicit price deflator.

Beginning with the first quarter of 1993, the BEA composite index of foreign country consumer price indexes, adjusted for changes in exchange rates and weighted by country of destination, is used to deflate the "final" current quarterly estimates of the imports of travel services. Previously, this index was available only for annual revisions, and the current quarterly estimates were deflated with an index of foreign exchange rates. (For the "advance" and "preliminary" quarterly estimates of GDP, judgmental extrapolation will be used.)

Wage and salary accruals.—The methodology for estimating annual wage and salary accruals (a component of national income) was changed for 1992 to reflect the large amount of bonuses paid in 1992. For previous years, the revised estimates for wage and salary accruals and the revised estimates of wage and salary disbursements (a component of personal income) reflected the incorporation of BLS tabulations of wages and salaries paid to employees covered by State unemployment insurance (UI). These tabulations were used for both wage and salary series because BEA assumed either that (1) all wages earned during the year are paid during the same year or that (2) the amount of wages earned during a year and paid the next year is the same from year to year.

In early 1993, reports indicated that bonus payments earned by many employees in the securities industry in 1992 that typically would have been paid in early 1993 had instead been paid in late 1992. Because of the assumption that most of the bonuses earned in 1991 had been paid in early 1992, the acceleration created an imbalance between the accruals and disbursements series for 1992 and potentially for 1993. BEA took this fragmentary information into account in preparing the initial estimates for the fourth quarter of 1992; at that time, BEA estimated that \$1.5 billion in bonus payments had been accelerated and increased fourth-quarter wage and salary disbursements by \$6 billion (the \$1.5 billion at an annual rate). This adjustment was necessary because the source data used to prepare the current quarterly wage and salary estimates—the employment, average weekly hours, and average hourly earnings from the BLS establishment survey—do not cover these types of bonus payments.

In June 1993, BEA received fourth-quarter 1992 UI tabulations, which cover all bonus payments. These us data showed a substantially largerthan-expected increase in wage and salary disbursements. In addition, collections of personal income taxes showed an unusually strong increase at the end of 1992. To determine the cause of the large fourth-quarter increase in the UI data, BEA analyzed the quarterly tabulations for 1982-92 and concluded that about \$20.0 billion of the fourth-quarter 1992 increase-\$18.5 billion more than originally estimated-reflected an acceleration of bonus payments from early 1993. Consequently, the revised 1992 estimate of wage and salary accruals is based on wages and salaries from the UI tabulations that are adjusted to exclude the \$20 billion in accelerated bonus payments.

Until June 1994, BEA will receive no regular source data to indicate whether the acceleration of bonus payments that occurred in December 1992 will occur again in December 1993. For the 1993 estimates of wage and salary disbursements, BEA is assuming that the acceleration of bonus payments in 1992 was unusual. Next June, when the UI tabulations for the fourth quarter of 1993 become available, BEA will reassess this assumption.

Mortgage interest.—Annual and quarterly estimates of the mortgage interest component of net interest and of the deduction for mortgage interest used in deriving rental income of persons are estimated through the first quarter of 1993 using the product of mortgage debt outstanding, which is based on Federal Reserve Board data, and a BEA estimate of the *effective* rate of interest on mortgage debt. (These data are not available for the "advance" and "preliminary" quarterly estimates.) The result is then used to extrapolate a benchmark estimate of mortgage interest paid based on data from the Census Bureau decennial survey of residential finance.

In last year's annual NIPA revision, a new procedure was introduced for estimating the effective rate of interest.⁴ This procedure for the first time accounted for prepayments of all types of residential mortgages, but it was based on data

^{4.} See "Annual Revision of the U.S. National Income and Product Accounts," SURVEY 72 (July 1992): 22–23.

that reflected only the prepayment pattern of mortgages insured by the Federal Housing Administration (FHA). In this year's annual revision, the FHA data are replaced with prepayments data from an industry source that are representative of all types of mortgages.

Imputed interest paid by life insurance carriers.— The revised estimates of net interest reflect a change in the source data used for estimating imputed interest paid by life insurance carriers, which is defined as their property income-that is, net monetary interest received plus dividends less monetary interest paid to policyholders. In the revised estimates for 1990 and 1991, monetary interest received by life insurance carriers-the largest component of their property incomeis based on interest receipts from tabulations of income statements for life insurance carriers prepared by the American Council of Life Insurance. Previously, these estimates had been based on IRS tabulations of corporate tax return data on interest receipts for corporations classified as life insurance carriers. This change came about because in last year's and this year's annual revisions, the IRS tabulations of interest receipts have been unreasonably low, probably due to industry classification problems in the data.⁵ (The estimates for the latest full year-in this case, 1992-continue to be based on Federal Reserve Board flow-of-funds accounts assets data and corresponding interest rates estimated by BEA.)

Updated summary methodologies

Table 7 identifies the principal source data and estimating methods used to prepare the currentdollar estimates of the product- and income-side components of GDP, and table 8 identifies the principal source data and estimating methods used to prepare the constant-dollar estimates of the product-side components. These tables have been updated to reflect the methodological changes introduced in this annual NIPA revision.

Current-dollar estimates of GDP.—The components in table 7 are as shown in the national income and product account (see table A, account 1), starting on the product side and proceeding to the income side. The subcomponents in table 7, with their 1992 dollar values, are grouped

according to the methodology used to prepare them.

The column in table 7 for annual estimates covers the several annual estimates in the estimating cycle; the major differences in methodology as the estimates move through the three annual revisions to a benchmark revision are few enough to condense into the table. For example, for most goods in PCE (the first item on the product side), the table indicates one methodology for benchmark years and another for all other years.

The column for the quarterly estimates is a condensation in two respects. First, it refers to the advance estimate for the current quarter—that is, the estimate prepared in the first month following the end of the quarter. That one estimate, rather than all three of the current quarterly estimates, is described because more attention focuses on the "first look" at the quarter. Second, even for the advance estimate, the column does not detail how many months of source data are available nor whether the data are subject to revision by the source agency.

Table 7 lists source data representing a variety of different economic measures—wages and salaries, premiums, expenses, interest rates, mortgage debt, tax collections, unit sales, housing stock, employment, and average price, to name a few. For most components, the source data are "value data"; that is, they embody both the quantity and price dimensions that are required for current-dollar estimates. In these cases, the methodology indicated in table 7 is the adjustment of the value data to derive estimates consistent with NIPA definitions and coverage.

When value data are not used in preparing an estimate, the table indicates the combination of data with separate quantity and price dimensions that is used to derive the required value estimate (as well as any major adjustments needed to derive estimates consistent with NIPA definitions and coverage). On the product side, a "physical quantity times price" method is used for several components. For example, the estimate for new autos is prepared as unit sales times average list price. An "employment times earnings times hours" method and variations of a "stock of assets/liabilities times an interest rate" method also are used for several components.

Some of the source data shown in table 7 for the annual estimates are used to interpolate and extrapolate the levels established by source data that are viewed as final, and all of the source data shown for the advance quarterly estimates are used to extrapolate the level of the preceding

^{5.} In the IRS data, some life insurance carriers are classified in the casualty insurance industry and others are classified in industries not related to insurance because the IRS information is based on the filing of consolidated tax returns.

quarter. In addition to using indicator series, as is the case when specific source data are listed in the table, extrapolation and interpolation may be based on trends, as is the case when "judgmental trend" is listed in the table.⁶

Constant-dollar estimates of GDP.—Table 8 shows which of three methods is used to prepare constant-dollar estimates and indicates the source data with which it is implemented.⁷ The method used for most of GDP is deflation. In deflation, constant-dollar estimates are obtained by dividing the most detailed current-dollar components by appropriate price indexes, with the base period—at present, the year 1987—equal to 100.

The other two methods, quantity extrapolation and direct base-year valuation, are similar to each other in that they both use quantity data. For quantity extrapolation, constant-dollar estimates are obtained by extrapolating the base-year current-dollar estimates in both directions from the base period (1987) by the quantity indicators. For direct base-year valuation, constant-dollar estimates are obtained by multiplying base-year prices by actual quantity data for each period.

The subcomponents in table 8 are the same as those shown in table 7, except where more detail is needed to highlight differences in methodology for constant-dollar estimates. For table 8, the distinction between annual and quarterly methodology is far less important than it is for the current-dollar methodology, and major differences between the annual and quarterly source data are noted within the individual entries.

Tables 7 and 8 and Appendix A follow.

^{6.} Extrapolation is a method of extending estimates from one period forward (or backward) in time to other periods. In simple terms, extrapolation applies a percent change—either the percent change in the indicator series or the percent change in the trend—to the level of the preceding (following) period. Interpolation is a method of filling in estimates between two periods. Interpolation applies a more complex mathematical formula—there are several in use—to preserve the pattern of the indicator series consistent with the level of the source data viewed as final.

^{7.} With few exceptions, BEA does not prepare constant-dollar estimates of income measures because, unlike product measures, price indexes cannot be associated with them. Three exceptions are disposable personal income and, as presented in the "Business Cycle Indicators" section of the SURVEY, personal income and corporate profits. In these cases, the estimates are adjusted for price change by reference to the prices of the goods and services on which the income is spent. BEA derives constant-dollar net national product and national income by preparing constant-dollar estimates of consumption of fixed capital and of the nonfactor incomes and then subtracting these estimates from constant-dollar GNP.

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP

Component (billions of dollars) Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
--	--	--

Product side (GDP of \$6,038.5 billion in 1992)

Personal consumption expenditures (\$4,139.9)	Durable and nondurable goods: (\$1,798.3) ¹		
	Most goods (goods except subcomponents listed separately) (\$1,507.4)	 Benchmark years—Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census and including an adjustment for exports and imports from Census Bureau merchandise trade. Other years—Retail-control method, using retail trade sales from Census Bureau annual survey or, for most recent year, monthly survey of retail trade. 	Same as annual for most recent year
	New autos (\$87.3)	Physical quantity purchased times average retail price: Unit sales, information with which to allocate sales among consumers and other purchasers, and average list prices, all from trade sources.	Same as annual.
	Net purchases of used autos (\$39.5)	 Benchmark years—For net transactions, change in the consumer stock of autos from trade sources. For dealers' margin, retail sales from Census Bureau quinquennial census and margin rate from Census Bureau annual survey of retail trade. Other years except most recent—For net transactions, same as benchmark. For dealers' margin, franchised dealers' unit sales times sales price, both from trade sources, times margin rate for independent dealers from Census Bureau annual survey; independent dealers' margin from Census Bureau annual survey. 	For net transactions, residual based on net sales by other sectors. For dealers' margin, unit sales of franchised dealers from trade source and sales price from Burea of Labor Statistics consumer price index for used cars.
		Most recent year—For net transactions, same as benchmark. For dealers' margin, for franchised dealers, unit sales and sales price from trade sources; for independent dealers, sales from Census Bureau monthly survey of retail trade.	
	New trucks (\$43.3)	 Benchmark years—Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census and including an adjustment for exports and imports from Census Bureau merchandise trade. Other years except most recent—Abbreviated commodity-flow method, starting with manufacturers' shipments from Census Bureau annual survey and including an adjustment for exports and imports from Census Bureau merchandise trade. Most recent year—Physical quantity purchased times average retail price: Unit sales and information with which to allocate sales among consumers and other purchasers from trade sources and average price based on Bureau of Labor Statistics consumer price index for new trucks. 	Same as annual for most recent year
	Gasoline and oil ² (\$103.4)	 Benchmark years—Physical quantity purchased times average retail price: Gallons consumed from the Dept. of Transportation, information with which to allocate that total among consumers and other purchasers from Federal agencies and trade sources, and average retail price from Census Bureau quinquennial census. Years except most recent—Same as benchmark years, except average retail price from the Energy Information Admin. Most recent year—Physical quantity purchased times average retail price: Gallons consumed and average price both from the Energy Information Admin. 	Same as annual for most recent year

---------------------------------	------------------------------------	--	--

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Personal consumption expenditures— Continued	Durable and nondurable goods—Continued		
	Food furnished to employees (including military) (\$11.7)	 Benchmark years—For commercial employees, number of employees of appropriate industries from Bureau of Labor Statistics tabulations times BEA estimate of per capita expenditures for food; for military personnel, outlays from the <i>Budget of the United States</i> prepared by the Office of Management and Budget. Years other than benchmark years—Same as benchmark years, except per capita expenditures for food based on Bureau of Labor Statistics consumer price index for food. 	For commercial employees, same as annual for years other than benchmark years; for military personnel, judgmental trend.
	Expenditures abroad by U.S. residents (\$3.2) less personal remittances in kind to nonresidents (\$0.6)	Estimated as part of the balance of payments; see the entry for service exports and imports, net, under net exports of goods and services.	Judgmental trend.
	Services: (\$2,341.6)		
	Nonfarm dwellings—space rent for owner-occupied and rent for tenant- occupied (\$571.6)	 Benchmark years—Based on data on housing stock and average annual rent from Census Bureau decennial census of housing and survey of residential finance. Other years—Based on data on housing stock and average annual rent from the Census Bureau biennial housing survey or on the number of households from Census Bureau monthly current population survey and Bureau of Labor Statistics consumer price indexes for rent. 	Same as annual: For housing stock, judgmental trend; for average ren Bureau of Labor Statistics consumer price indexes for rent.
	Rental value of farm dwellings (\$5.3)	 Benchmark years—Based on data on housing stock and average annual rent from Census Bureau quinquennial census and decennial census of housing and survey of residential finance. Other years—Based on data on net value of farm housing stock from BEA capital stock series. 	Judgmental trend.
	Motor vehicle and other repair, other purchased intercity transportation, legal and funeral services, barbershops and beauty parlors, nursing homes, laundries, employment agency fees, accounting and tax return preparation services, recreation (except video cassette rentals, cable TV, casino gambling, parimutuel net receipts, and lotteries), hotels and motels, and other education and research (\$382.9)	 Benchmark years—Receipts and expenses from Census Bureau quinquennial census adjusted for receipts from business and governments. Other years—Receipts, for spectator sports from trade sources, for legitimate theaters and other education and research from tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics, for others in this group from Census Bureau service annual survey. 	For nursing homes, other education and research, employment agence fees, and clubs and fraternal organizations, wages and salarie derived from Bureau of Labor Statistics monthly employment times earnings times hours; for legitimate theaters and motion pictures, receipts from trade sources; for radio and TV repair, number of TV's based on stock and sales from trade source time Bureau of Labor Statistics consumer price index for applian and furniture repair; for others in this group, judgmental trend.

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Personal consumption expenditures— Continued	Services—Continued		
	Physicians, dentists, and other professional medical services (\$258.7)	 Benchmark years—For nonprofit professional services, expenses; for others in this group, receipts, adjusted for government purchases, from Census Bureau quinquennial census. Other years—Receipts and revenues, adjusted for government purchases, from Census Bureau service annual survey. 	For physicians and dentists, judgmental trend; for other professional medical services, wages and salaries derived from Bureau of Labor Statistics monthly employment times earnings times hours.
	Private nursery, elementary, and secondary schools, day care, welfare activities, and trade unions and professional associations (\$115.0)	 Benchmark years—For religious-affiliated schools, enrollment from the Dept. of Education times BEA estimate of average expenditures per pupil; for nursery schools and day care, expenditures from Bureau of Labor Statistics consumer expenditure survey; for others in this group, receipts and expenses from Census Bureau quinquennial census. Other years except most recent—For nursery schools and day care, annual tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics. Most recent year—For nursery schools and day care, judgmental trend; for others in this group, tabulations of wages and salaries of softwages and salaries of state unemployment insurance from the Bureau of Labor Statistics. 	For political organizations and foundations, judgmental trend; for others in this group, wages and salaries derived from Bureau of Labor Statistics monthly employment times earnings times hours.
	Financial services furnished without payment by banks, credit agencies, and investment companies ³ (\$145.9)	See entry for net interest: Imputed—banks, credit agencies, and investment companies.	Judgmental trend.
	Brokerage charges and investment counseling, bank service charges, intercity transportation except other, and private higher education (\$111.5)	Years except most recent—For private higher education, expenses, and for others in this group, receipts, all from annual reports of government administrative agencies. Most recent year—For brokerage and bank service charges and intercity transportation, receipts from reports of government administrative agencies; for private higher education, enrollment from the Dept. of Education times price index for higher education from trade source.	For stock brokerage charges, stock exchange transactions from trade sources; for income from sale of investment company securities, sales of open-end investment company shares from trade source for other brokerage charges and investment counseling and for band service charges, judgmental trend; for intercity transportation, receipts from trade sources; for private higher education, wages and salaries derived from Bureau of Labor Statistics monthly employment times earnings times hours.

Product side (GDP of \$6,038.5 billion in 1992)-Continued

ersonal consumption expenditures— Continued	Services—Continued		
	Domestic services (\$10.8)	 Benchmark years—For cleaning services, receipts from Census Bureau quinquennial census; for other domestic services, number of workers times weekly hours times earnings from the Bureau of Labor Statistics. Other years—Number of workers times weekly hours times earnings from the Bureau of Labor Statistics. 	Judgmental trend.
	Public higher education and hospitals, water and other sanitary services, and lotteries (\$116.0)	Years except most recent—For lotteries, net receipts from Census Bureau quinquennial census and annual surveys of State and local governments, adjusted to a calendar year basis from a fiscal year basis; for others in this group, receipts from the same sources. Most recent year—Judgmental trend.	Same as annual for most recent ye
	Insurance, private hospitals, religious activities, cable TV, utilities, and local transport (\$590.7)	Years except most recent—For life insurance, expenses from trade sources; for insurance other than life insurance, premiums and benefits from trade sources; for private hospitals, receipts and expenses from Census Bureau quinquennial census (benchmark year), expenses from trade sources (other years); for religious activities, expenses based on contributions and membership from trade sources; for cable TV and utilities, receipts from government agencies and trade sources; for local transport, receipts from trade source. Most recent year—For life insurance, tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics; for insurance other than life insurance, judgmental trend; for religious activities, expenses based on population from the Census Bureau and per capita disposable personal income from BEA; for local transport, passenger trips from trade source times Bureau of Labor Statistics consumer price index for intracity mass transit; for others in this group, same as other years.	For life insurance, hospitals, and religious activities, wages and salaries derived from Bureau of Labor Statistics monthly employment times earnings times hours; for electricity and gas, projected quantities based on degree day data from the Nation Oceanic and Atmospheric Admin times price based on Bureau of Labor Statistics consumer price indexes for utilities; for others in this group, judgmental trend.
	Foreign travel by U.S. residents (\$38.9) less expenditures in the United States by nonresidents (\$63.9)	Estimated as part of the balance of payments; see the entry for service exports and imports, net, under net exports of goods and services.	Same as annual.
	Other services: Video cassette rentals, casino gambling, and parimutuel net receipts; other housing except hotels and motels; bridge, etc., tolls; other household operation except repairs and insurance; travel and entertainment card fees; stenographic and reproduction services; and money orders and classified advertising (\$58.2)	Various source data.	For casino gambling, receipts from State agency; for others in this group, judgmental trend.

Table 7.---Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP---Continued

Component (billions Su of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
---------------------------------------	------------------------------------	--	--

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Fixed Investment (\$789.1)	Nonresidential structures: (\$172.6) ⁴		
	Utilities: Telecommunications (\$9.1)	Value put in place from Census Bureau monthly construction survey.	Same as annual.
	Utilities: Other (\$26.7)	Expenditures from Federal regulatory agencies and trade sources.	Judgmental trend.
	Mining exploration, shafts, and wells (\$12.4)	 Benchmark years—Expenditures from Census Bureau quinquennial census. Other years—For petroleum and natural gas, physical quantity times average price: Footage drilled and cost per foot from trade sources; for other mining, expenditures from Census Bureau plant and equipment survey. 	Same as annual for years other than benchmark years.
	Other nonfarm buildings and structures (\$122.6)	Benchmark years—Contract construction receipts for new construction and architectural and engineering fees from Census Bureau quinquennial censuses, and BEA estimates of force-account construction from a variety of sources. Other years—Value put in place from Census Bureau monthly construction survey.	Same as annual for years other than benchmark years.
	Farm buildings (\$2.2)	Expenditures for new construction from Dept. of Agriculture surveys.	Judgmental trend of value put in place from the Census Bureau.
	Nonresidential producers' durable equipment: (\$392.9)		
	Equipment except autos (\$355.3)	 Benchmark years—Commodity-flow method, starting with manufacturers' shipments from Census Bureau quinquennial census and including an adjustment for exports and imports from Census Bureau merchandise trade. Other years—Abbreviated commodity-flow method, starting with manufacturers' shipments from Census Bureau annual survey or, for most recent year (except aircraft and trucks), monthly survey of manufactures and including an adjustment for exports and imports from Census Bureau merchandise trade. For aircraft, manufacturers' shipments from Census Bureau current industrial report. For trucks, domestic and North American imports, physical quantity purchased times average retail price: Unit sales and information with which to allocate sales among business and other purchasers from trade sources and average price based on Bureau of Labor Statistics producer price indexes; imports other than North American, from Census Bureau merchandise trade; truck trailers, shipments from Census Bureau current industrial report. 	For trucks, see entry for personal consumption expenditures; for others in this group, same as annual for years other than benchmark years but with less detail.
	New and used autos (\$37.6)	For new autos, see entry for personal consumption expenditures; for used autos, change in business stock of autos at least 1 year old from trade source.	For new autos, same as annual; for used autos, judgmental trend.

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Fixed investment— Continued	Residential investment: (\$223.6) ⁵		
	Permanent-site new single- family housing units (\$116.5)	Value put in place based on phased housing starts and average construction cost from Census Bureau monthly construction surveys.	Same as annual.
	Permanent-site new multifamily housing units (\$13.1)	Value put in place from Census Bureau monthly construction survey.	Same as annual.
	Mobile homes (\$5.7)	Benchmark years—See entry for equipment except autos under nonresidential producers' durable equipment. Other years—Physical quantity shipped times price: Shipments from trade sources and average retail price from Census Bureau monthly survey.	Same as annual for years other than benchmark years.
	Improvements (\$58.2)	Expenditures by owner-occupants from Bureau of Labor Statistics quarterly consumer expenditure survey and by landlords from Census Bureau quarterly survey of landlords.	Judgmental trend.
	Brokers' commissions (\$24.5)	Physical quantity times price times average commission rate: Number of single-family houses sold, mean sales price, and commission rates from Census Bureau monthly construction survey and trade sources.	Same as annual.
	Producers' durable equipment (\$7.3)	See entry for most goods for personal consumption expenditures.	Same as annual.

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP—Continued

Component (billions of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
---------------------------------	------------------------------------	--	--

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Change in business inventories (\$7.3)	Manufacturing and trade (\$2.5)	Benchmark years—Inventories from Census Bureau quinquennial censuses revalued (in effect, by the calculation of the IVA ⁶) to current replacement cost, using information on the proportions of inventories reported with different accounting methods, the commodity composition of goods held in inventory, and the turnover period, all from Census Bureau quinquennial censuses and surveys, combined with cost of goods held in inventory, largely Bureau of Labor Statistics producer price indexes. Other years—For petroleum bulk stations, physical quantities times price: Monthly quantities and prices from the Energy Information Admin.; for retail auto dealers for the most recent year, quantities times average prices from trade sources; for all other except nonmerchant wholesale trade, inventories from Census Bureau annual surveys or, for the most recent year, monthly surveys, revalued as described above; for nonmerchant wholesale trade, judgmental trend.	Same as annual for most recent year.
	Other nonfarm industries (-\$0.2)	Inventories revalued to current replacement cost (except when noted as physical quantity times price) as described for manufacturing and trade: For years except most recent, Internal Revenue Service tabulations of business tax returns; for the most recent year, Census Bureau quarterly survey of corporations for mining, monthly quantities from the Energy Information Admin. combined with Bureau of Labor Statistics producer price indexes for electric utilities, and judgmental trend for all others.	For electric utilities, same as annual for the most recent year; for all others, judgmental trend.
	Farm (\$5.0)	Physical quantities times current prices from Dept. of Agriculture surveys.	Judgmental projection by BEA and the Dept. of Agriculture.
Net exports of goods and services (-\$29.6)	Merchandise exports and imports, net (-\$95.8)	Estimated as part of the balance of payments: Import and export documents compiled monthly by the Census Bureau with adjustments by BEA for coverage and valuation to put the data on a balance-of-payments basis. Adjusted for NIPA coverage of U.S. territories and Puerto Rico with data from the Commonwealth of Puerto Rico and the U.S. Virgin Islands, and coverage of gold with data from the Bureau of Mines and the Bureau of the Mint.	For territorial adjustment, judgmental trend; for all others, same as annual.
	Service exports and imports, net (\$66.2)	Estimated as part of the balance of payments: For government transactions, reports by Federal agencies on their purchases and sales abroad; for most others in this group (including travel, passenger fares, other transportation, and royalties and license fees), BEA quarterly or annual surveys (supplemented with data from other sources). Adjusted for NIPA coverage of U.S territories and Puerto Rico, see entry above, and to include financial services furnished without payment, see entry for net interest: Imputed—banks, credit agencies, and investment companies.	For territorial adjustment, judgmental trend; for all others, same as annual.

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP—Continued

---------------------------------	------------------------------------	--	--

Product side (GDP of \$6,038.5 billion in 1992)-Continued

Government purchases (\$1,131.8)	Federal national defense (\$313.8)	Within a control total established by the fiscal year analysis: For compensation, military wages from the <i>Budget of the</i> <i>United States</i> prepared by the Office of Management and Budget, civilian wages and benefits from the Office of Personnel Management, and employer contributions for social insurance mainly from outlays from <i>Monthly Treasury</i> <i>Statement</i> ; for purchases by type, one of three methods, based mainly on data from Dept. of Defense reports: (1) Physical quantity delivered times price paid; (2) by category, the ratio of funds for purchases not estimated by method (1) to total funds times disbursements; and (3) mainly disbursements.	For components of compensation, employment from the Dept. of Defense, outlays from <i>Monthly</i> <i>Treasury Statement</i> , and judgmental trend; for other, same methods as annual, with partial data for (1) and outlays from <i>Monthly Treasury Statement</i> and judgmental trend for (2) and (3).
	Federal nondefense (\$135.0)	Within a control total established by the fiscal year analysis: For net purchases of agricultural commodities by the Commodity Credit Corporation, book values of acquisitions and physical quantities of dispositions from agency reports times average market prices from the Dept. of Agriculture; for financial services furnished without payment, see entry for net interest: Imputed—banks, credit agencies, and investment companies; for compensation, civilian wages and benefits from the Office of Personnel Management and employer contributions for social insurance mainly from outlays from <i>Monthly Treasury Statement</i> ; for construction, value put in place from Census Bureau monthly construction survey; for all other, outlays from <i>Monthly</i> <i>Treasury Statement</i> .	For components of compensation, outlays from <i>Monthly Treasury</i> <i>Statement</i> and judgmental trend; for other, same as annual.
	State and local compensation (\$457.3)	For wages and salaries, mainly tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics; for employer contributions for social insurance, tabulations from the Social Security Admin. and other agencies administering social insurance programs, and Census Bureau surveys of State and local government retirement funds; for other labor income, trade sources, Health Care Financing Admin., and Census Bureau surveys of State and local governments.	For wages and salaries, employment from Bureau of Labor Statistics monthly employment times earnings from judgmental trend; for other compensation, judgmental trend.
	State and local structures (\$99.8)	 Benchmark years—See entry for other nonfarm buildings and structures for fixed investment, nonresidential structures. Other years except most recent—Expenditures data from Census Bureau quinquennial censuses and annual surveys of these governments. Most recent year—Value of construction put in place from Census Bureau monthly construction survey. 	Same as annual for most recent year.
	State and local brokerage charges and financial services furnished without payment (\$8.7)	See entries for personal consumption expenditures for services	See entries for personal consumption expenditures for services.
	State and local other than compensation, structures, and brokerage charges and financial services furnished without payment (\$117.2)	Years except most recent—Total expenditures from Census Bureau quinquennial censuses and annual surveys of these governments, selectively replaced with source data that are more appropriate for the NIPA's and adjusted as follows: For coverage; for netting and grossing differences; and to a calendar year basis from a fiscal year basis and for other timing differences; to exclude interest, subsidies, net expenditures of government enterprises, and transfer payments; and to exclude compensation and structures. Most recent year—Judgmental trend.	Same as annual for most recent year.

Table 7.--Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP-Continued

Component (billions of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
	Incom	e side (Gross national income of \$6,022.2 billion in 1992)	
Compensation of employees ⁷ (\$3,582.0)	Wages and salaries: Private industries (\$2,385.6)	For most, annual tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics; for remainder, wages from a variety of sources (such as the Dept. of Agriculture for farms and the Railroad Retirement Board for railroad transportation) and indirect estimation for only a few cases (such as a percentage of revenues for tips not reported as wages).	For most, wages and salaries derived, by industry, from Bureau of Labor Statistics monthly employment times earnings times hours; for others, judgmental trend.
	Wages and salaries: Federal government (\$174.8)	For civilians, wages from the Office of Personnel Management; for military personnel, wages from the <i>Budget</i> of the United States prepared by the Office of Management and Budget.	For civilians, judgmental trend; for military personnel, employment from the Dept. of Defense and judgmental trend.
	Wages and salaries: State and local governments (\$392.7)	Mainly tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics.	Employment from Bureau of Labor Statistics monthly survey times earnings from judgmental trend.
	Employer contributions for social insurance (\$306.3)	Tabulations from the Social Security Admin. and other agencies administering social insurance programs, and Census Bureau surveys of State and local government retirement funds.	For Federal programs, BEA-derived wages and salaries of employees covered by the programs; for State and local government programs, judgmental trend.
	Other labor income (\$322.7)	 Years except most recent—For private pension and profit- sharing plans, employer contributions from Internal Revenue Service tabulations of business tax returns; for group health and life insurance, mainly total premiums paid from trade sources and the Health Care Financing Admin. and data on employer share from trade source; for workers' compensation, contributions from trade sources. Most recent year—For group health insurance, total premiums paid from the Health Care Financing Admin.; for others in the category, judgmental trend. 	Judgmental trend.
Proprietors' income with IVA and CCAdj (\$414.3)	Farm income with IVA (\$51.2)	Based on Dept. of Agriculture data on net income, obtained by deriving gross income (cash receipts from marketing, inventory change, government payments, other cash income, and nonmoney income) and subtracting production expenses; adjusted to exclude corporate income from Internal Revenue Service tabulations of business tax returns and adjusted to a NIPA basis.	Dept. of Agriculture projection adjusted for consistency with NIPA's.
	Farm CCAdj (-\$7.5)	The CCAdj is described under the entry for consumption of fixed capital.	
	Nonfarm income (\$358.0)	Years except most recent—Income from Internal Revenue Service tabulations of business tax returns, adjusted for understatement of income on tax returns and for several conceptual differences. Most recent year—For construction, trade, and services, indicators of activity (such as value of housing put in place); for most others, judgmental trends.	Same as annual for most recent year.
	Nonfarm IVA (-\$0.5)	The IVA is described under the entry for corporate profits with IVA and CCAdj.	
	Nonfarm CCAdj (\$13.1)	The CCAdj is described under the entry for consumption of fixed capital.	

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP-Continued

Component (billions of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
---------------------------------	------------------------------------	--	--

Income side (Gross national income of \$6,022.2 billion in 1992)-Continued

Rental income of persons with CCAdj (-\$8.9)	Owner-occupied nonfarm housing (-\$0.3)	Derived as space rent—see the entry for nonfarm housing for personal consumption expenditures—less related expenses, including maintenance and repair from Bureau of Labor Statistics quarterly consumer expenditure survey, mortgage interest from Census Bureau decennial survey of residential finance and mortgage debt from the Federal Reserve Board times a BEA interest rate, and property taxes from Census Bureau quarterly surveys of State and local tax collections.	For owner-occupied space rent, same as annual; for depreciation, interest, and taxes, based on NIPA estimates of those components; for other expenses, based on judgmental trend.
	Tenant-occupied nonfarm housing (\$32.8)	Same as described under owner-occupied housing and adjusted to cover only rental income accruing to persons not primarily engaged in the real estate business.	Same as annual.
	Farms owned by nonoperator landlords (\$4.0)	Prepared in conjunction with farm proprietors' income; see that entry.	Judgmental trend.
	Nonfarm nonresidential properties (\$13.7)	Years through 1983—Rents paid and received by business and government, adjusted for expenses associated with property (mainly depreciation, taxes, interest, and repairs), from Internal Revenue Service tabulations of business tax returns, Census Bureau surveys, and the <i>Budget of the United States</i> prepared by the Office of Management and Budget. Other years—Judgmental trend.	Judgmental trend.
	Royalties (\$7.3)	Years except most recent—Internal Revenue Service tabulations of royalties reported on individual tax returns. Most recent year—Oil production and prices from the Dept. of Energy.	Same as annual for most recent year.
	CCAdj (-\$66.3)	The CCAdj is described under the entry for consumption of fixed capital.	
Corporate profits with IVA and CCAdj (\$407.2)	Domestic profits before tax (\$333.2)	Years except most recent—Receipts less deductions from Internal Revenue Service tabulations of business tax returns, adjusted for understatement of income on tax returns and several conceptual differences. Most recent year—For about 70 industries, profits from Census Bureau quarterly survey of corporate profits, regulatory agency reports, and compilations of publicly available corporate financial statements.	For some industries in transportation, some in finance, etc., and all in services, judgmental trend; for others in this group, same as annual for most recent year. (Released at time of preliminary estimate of GDP for the first, second, and third quarters and of final estimate for the fourth quarter.)
	Rest-of-the-world profits before tax (\$62.3)	Estimated as part of the balance of payments: For direct investment income, BEA surveys; for portfolio income, BEA and Treasury Dept. surveys and BEA study of pension funds and mutual funds. Adjusted for NIPA coverage of U.S. territories and Puerto Rico—see entry for merchandise exports and imports, net, under net exports of goods and services.	Same as annual. (Released on same schedule as domestic profits before tax.) ⁸
	IVA ⁶ (-\$5.3)	For corporations and for nonfarm sole proprietorships and partnerships, the difference between the NIPA change in business inventories (that is, physical volume of inventories valued in prices of the current period), as described in the entry for change in business inventories, and the change in inventories reported by businesses for tax purposes, from Internal Revenue Service tabulations of business tax returns.	Same as annual.
	CCAdj (\$17.1)	The CCAdj is described under the entry for consumption of fixed capital.	

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP—Continued

Component (billions of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator

Income side (Gross national income of \$6,022.2 billion in 1992)-Continued

Net interest (\$442.0)	Domestic monetary, net (\$120.8)	Years except most recent—For farm interest paid and received, Dept. of Agriculture surveys; for residential mortgage interest, Census Bureau decennial survey of residential finance and mortgage debt from the Federal Reserve Board times a BEA interest rate; for all other interest paid and received by business, Internal Revenue Service tabulations of business tax returns, adjusted for misreporting on tax returns and several conceptual differences. Most recent year—For farm and mortgage interest, same as other years; for all other interest, interest receipts and payments from regulatory agencies (such as the Federal Deposit Insurance Corporation), from trade sources, or obtained by applying an interest rate to a stock of assets/ liabilities from Federal Reserve Board flow-of-funds accounts.	Derived by combining estimates of (1) interest received by persons, (2) government interest paid and received, and (3) interest paid by persons. For (1), judgmental trend; for (2), <i>Monthly Treasury Statement</i> for Federal and judgmental trend for State and local; for (3), consumer debt from the Federal Reserve Board times BEA estimates of interest rates. (Released on same schedule as domestic profits before tax.) ⁸
	Rest-of-the-world monetary, net (-\$44.6)	Estimated as part of the balance of payments: For direct investment income, BEA surveys; for portfolio income, BEA and Treasury Dept. surveys and BEA study of pension funds and mutual funds. Adjusted for NIPA coverage of U.S. territories and Puerto Rico—see entry for merchandise exports and imports, net, under net exports of goods and services.	Same as annual. (Released on same schedule as domestic profits before tax.) ⁸
	Imputed—banks, credit agencies, and investment companies (\$153.5)	Property income earned on investment of deposits and monetary interest paid (and for mutual depositories, profits from Internal Revenue Service tabulations of business tax returns when available) from annual reports of regulatory agencies and the Federal Reserve Board. The counterentry, financial services furnished without payment, is allocated to persons, government, and rest of the world on the basis of deposit liabilities from the same sources.	Judgmental trend. (Released on same schedule as domestic profits before tax.)
	Imputed—life insurance carriers and private noninsured pension plans (\$212.3)	Property income earned (and for life insurance carriers, profits) from Internal Revenue Service tabulations of business tax returns, trade sources, and the Federal Reserve Board.	Judgmental trend. (Released on same schedule as domestic profits before tax.)
Business transfer payments (\$27.6)		Payments to persons: For charitable contributions, for years except the most recent, Internal Revenue Service tabulations of business tax returns or, for most recent year, judgmental trend; for other components (such as liability payments for personal injury), for years except the most recent, information from government agency reports and trade sources or, for most recent year, judgmental trend. Payments to nonresidents: Estimated as part of the balance of payments.	Judgmental trend.
Indirect business tax and nontax liability (\$502.8)	Federal government (\$81.3)	For excise taxes, collections from the Internal Revenue Service; for customs duties, receipts from <i>Monthly Treasury</i> <i>Statement</i> , and for nontaxes (such as fines), receipts from the <i>Budget of the United States</i> prepared by the Office of Management and Budget.	For customs duties, the <i>Monthly</i> <i>Treasury Statement</i> ; for most excise taxes, indicators of activity (such as gasoline production for gasoline tax); for others in this group, judgmental trend.
	State and local governments (\$421.5)	Receipts from Census Bureau quinquennial censuses and annual and quarterly surveys.	Judgmental trend.

Table 7.—Principal Source Data and Estimating Methods Used in Preparing Current-Dollar Estimates of GDP-Continued

Component (billions of dollars)	Subcomponent (billions of dollars)	Annual estimates: Source data and methods used to deter- mine level for benchmark and other final years or, for other years, used to prepare an extrapolator or interpolator	Advance quarterly estimates: Source data and methods used to prepare an extrapolator
of dollars)	dollars)	······································	

Income side (Gross national income of \$6,022.2 billion in 1992)-Continued

Subsidies less current surplus of government enterprises (\$2.7)	Federal government (\$27.5)	For subsidies, payments by the Commodity Credit Corporation from agency reports and, for most other agencies, outlays from <i>Monthly Treasury Statement</i> , for current surplus, mainly reports of various agencies, such as the Postal Service.	For subsidies, reports from the Commodity Credit Corporation and outlays from <i>Monthly Treasury</i> <i>Statement</i> ; for current surplus, judgmental trend.
	State and local governments (\$24.8)	For subsidies, limited to railroad, Census Bureau annual surveys of expenditures; for current surplus, see entry for State and local purchases other than compensation, structures, and brokerage charges and financial services furnished without payment.	Judgmental trend.
Consumption of fixed capital (\$657.9)	Capital consumption allowances (\$605.7)	 Years except most recent—For depreciation of corporations and of nonfarm sole proprietorships and partnerships, Internal Revenue Service tabulations of business tax returns, adjusted for several conceptual differences; for other depreciation (including noncorporate farms, nonprofit institutions, and owner-occupied houses), perpetual-inventory calculations; for accidental damage to fixed capital, losses reported to insurance companies and government agencies. Most recent year—For depreciation of corporations and nonfarm sole proprietorships and partnerships, BEA estimates of tax-return-based depreciation; for other depreciation and accidental damage to fixed capital, same as other years. 	Judgmental trend.
	<i>Less:</i> CCAdj (–\$52.1)	Obtained in two parts: (1) The part that places a historical- cost series for capital consumed on a consistent basis with regard to service lives and on a straight-line depreciation pattern is the difference between tax-return-based calculations at historical cost and the perpetual-inventory calculations; (2) the part that places the historical-cost series on a current-cost basis is the difference between two perpetual-inventory calculations, one at historical cost and one at current cost.	For capital consumption allowances, judgmental trend; for current-cost series, perpetual-inventory calculations based on investment and on investment prices.

Includes \$3.1 billion for food produced and consumed on farms, standard clothing issued to military personnel, and used trucks.
 The retail-control method cited under personal consumption expenditures (PCE) for most goods is based on retail trade sales data that include sales of gasoline service statises of PCE for gasoline and oil are derived separately and are deducted from the retail-control totals (that include goods sold by gasoline service stations) to derive the estimates for PCE for most goods.
 Also referred to as services turnished without payment by financial intermediaries except life insurance carriers and private noninsured pension plans.
 Includes -\$0.4 for brokers' commissions on sale of structures and net purchases of used structures.
 Includes -\$1.7 billion for other structures (dormitories, fraternity and sorority houses, nurses' homes, etc.) and net purchases of used structures.

6. The IVA on the income side and the IVA mentioned with the change in business inventories on the product side differ because the source data on the two sides reflect different mixes of methods (last-in, first-out, etc.) underlying reported inventories.
7. Includes -S0.1 for rest of the world, net.

8. For profits and interest from the rest of the world and for parts of domestic net monetary interest, data become available to replace the judgmental trend by the time of the final estimate in the current quarterly sequence.

		Deflation,	using price based on-	Using quanti	ty for—
Component	Subcomponent	Components of the Consumer Price Index (CPI) or the Producer Price Index (PPI)	Other	Extrapolation	Direct valuation
Government purchases	Federal national defense	Selected goods, PPI; utilities and com- munications, CPI and PPI.	Some goods, some services, and most military structures, BEA indexes based on Dept. of Defense prices paid; some services, BEA earnings index; computers, BEA price index and PPI; nonmilitary structures, cost indexes from trade sources and government agencies.	Military compensation, full- time equivalent employment by rank and length of service; civilian compensation, full-time equivalent employment by grade adjusted for change from base year in hours worked.	Many goods, some services, and a few military structures, quantities and prices from Dept. of Defense reports.
	Federal nondefense	Most goods, PPI; rent, utilities, and com- munications, CPI.	Structures, cost indexes from trade sources and government agencies; computers, BEA price index and PPI; most services, BEA earnings indexes.	Compensation, full-time equivalent employment by grade adjusted for change from base year in hours worked; financial services furnished without payment ¹ , paid employee hours of relevant financial institutions.	Net purchases of agricultural commodities by the Corporation, quantities by crop from agency reports with Dept. of Agriculture prices; selected petroleum transactions, quantities and prices from the Dept. of Energy.
	State and local compensation.			For employees in education, full-time equivalent employment by education and experience times change from base year in hours worked; for other employees, full- time equivalent employment times change from base year in hours worked.	
	State and local structures		Cost indexes from trade sources and government agencies.		
	State and local brokerage charges and financial services furnished without payment.		See entries for personal consumption expenditures for services.		
	State and local other than compensation, structures, and brokerage charges and financial services furnished without payment.	Services except as noted and goods used in maintenance and repair, CPI; goods except as noted and electricity, PPI.	Transportation, books, and postal services, BEA indexes based on Dept. of Defense prices paid; computers, BEA price index and PPI.		

Table 8.--Methodology Used in Preparing Constant-Dollar Estimates of GDP-Continued

Also referred to as "services furnished without payment by financial intermediaries except life insurance carriers and private noninsured persion plans."
 Constant-dollar estimates of merchandise exports and imports and of service exports and imports are prepared separately. Constant-dollar receipts and payments of factor income from the rest of the world, the difference between

GDP and GNP, are prepared using the following methods: Except as noted, deflation by implicit price index for final sales to domestic purchasers; imputed interest paid to nonresidents, extrapolation by paid employee hours of relevant institutions.

NATIONAL INCOME AND PRODUCT ACCOUNTS

National Income and Product Accounts Tables

This section presents revised estimates for 1990 through the second quarter of 1993 for most of the national income and product accounts (NIPA) tables that are usually published as part of an annual revision of the NIPA's. (The article that precedes this section describes the annual NIPA revision.)

Fifteen tables that are usually included in the full set of NIPA tables are not yet available on the revised basis; they are scheduled to be published in the September 1993 SURVEY OF CURRENT BUSINESS. The missing tables are 1.15, 1.16, 3.15–3.20, 7.15, and 9.1–9.6. A list of the full set of tables is shown below.

The revised NIPA estimates, along with the estimates for 1989 and earlier years (back to 1929), are available on diskette and magnetic tape. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230, or call (202) 606-9700.

The tables contain annual, quarterly, and monthly estimates, indicated as follows:

Page

63

64

65

- A Only annual estimates
- Q Only quarterly estimates
- QA Quarterly and annual estimates
- MA Monthly and annual estimates

A detailed index to the NIPA tables begins on page 122.

NOTE.——Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.). 1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establish-ments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. In-cludes meals and beverages consumed both on and off-premise. 2. Includes luggage. 3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal serv-ices. Outsists of maint, econy are prime, represent the consists of maint, econy are prime, represent the prime prima prime prime prime prime prime prime prime prime prima prime p

6. Consists of transient hotels, motels, clubs, schools, and other group housing. 7. Consists of refrigerances and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air condi-tioners, sewing machines, vacuum cleaners, and other appliances. 8. Includes such house furnishings as floor coverings, comforters, quilts, blankets, pillows, picture frames, mirrors, art products, portable lamps, and clocks. Also includes writing equipment and hand, power, and garden tools. 9. Consists largely of taxile house furnishings including piece goods allocated to house furnishing use. Also in-cludes lamp shades, brooms, and brushes. 10. Consists of maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and express charges, premiums for fire and theft insurance on personal property less benefits and divi-dends, and miscellaneous household operation services. 11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical serv-ices.

ices

ices.
12. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others providing health and allied services, not elsewhere classified.
13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.
14. Consists of (1) premiums, less benefits and dividends, for health, hospitalization, and accidental death and dismemberment insurance provided by commercial insurance carriers, and (2) administrative expenses (including consumption of fixed capital) of Blue Cross and Blue Shield plans and other independent prepaid and self-insured beath plans. health plans. 15. Consists of premiums, less benefits and dividends, for income loss insurance. 16. Consists of premiums, less benefits and dividends, for privately administered workers' compensation.

Consists of (1)operating expenses of life insurance carriers and private noninsured pension plans, and (2)premiums, less benefits and dividends, of fraternal benefit societies. Excludes expenses allocated by commercial carriers to accident and health insurance.
 Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.
 Consists of pagage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.
 Consists of admissions to professional and amateur athletic events and to racetracks.
 Consists of dues and fees excluding insurance arthletic events and to racetracks.

Consists of admissions to professional and amateur athletic events and to racetracks.
 Consists of dues and fees excluding insurance premiums.
 Consists of biliard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; sightseeing buses and and guides; private flying operations; casino gambling; and other commercial participant amusements.
 Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studies, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.

25. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts— such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.

26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts— such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For gov-ernment institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.

religious and welfare activities. 27. Consists of (1)fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2)current expenditures (including consumption of fixed capital) by research organizations and foundations for education and research. 28. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, so-cial welfare, foreign relief, and political organizations, museums, libraries, and foundations. The expenditures are net of receipts—such as those from meals, nooms, and entertainments—accounted for separately in consumer ex-penditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.

Equals personal income less the following farm components: wages and salaries, other labor income, propri-etors' income with inventory valuation and capital consumption adjustments, and net interest. These farm components plus employer contributions for social insurance and farm corporate profits with inventory valuation and capital con-sumption adjustments equal farm national income shown annually in table 1.21.

Table 2.9.—Personal Income and Its Disposition

			<u> </u>	Billions	of dollars				Dispo	sable personal in	come		
					Less: Perso	onal outlays				Per o	xapita	Population	Personal sav-
Year and month	Personal in- come	Less: Personal tax and nontax payments	Equals: Dis- posable per- sonal income	Total	Personal con- sumption ex- penditures	Interest paid by persons	Personal transfer pay- ments to rest of the world (net)	Equals: Per- sonal saving	Total, billions of 1987 dollars	Current dollars	1987 dollars	Population (mid-period, thousands)	ing as a per- centage of dis- posable per- sonal income ¹

1. Beginning in 1967, the treatment of net exports of gold in the NIPA's differs from that in the BPA's. BPA gold exports (line 2) and imports (line 13) are excluded from the NIPA's. Imports of gold in the NIFA's (line 16) is the excess of the value of gold in final sales of domestic product plus the change in business inventories over the value of U.S. production of gold. Prior to 1967, the treatment of net exports of gold in the NIPA's is identical and is the same as the present NIPA treatment.

2. BPA capital gains and losses included in U.S. direct investment income abroad (line 3) and in foreign direct investment income in the United States (line 14) are removed from the NIPA's beginning in 1974 for imports and in 1977 for exports. Beginning in 1982, U.S. direct investment income abroad in the BPA's excludes capital gains and losses associated with currency translation

adjustments. 3. Transfers of goods and services under military grant programs, net, are classified as exports in the BPA's. In the NIPA's, these transactions are excluded from exports and included in Federal

in the BPA's. In the NIPA's, these transactions are excluded from exports and included in rederal Government purchases. 4. Consists of statistical revisions in the BPA's that have not yet been incorporated in the NIPA's. 5. Consists of arms shipments to Israel financed under the Emergency Security Act of 1973. In the NIPA's, these arms shipments are classified as military grants, which are included in the defense purchases component of GDP at the time they are acquired by the U.S. Government. Their transfer abroad is not reflected in the NIPA's. 6. Consists of transactions between the United States and its territories, Puerto Rico, and the Northern Mariana Islands. The treatment of U.S. territories, Puerto Rico, and the Northern Mariana

45 -89.3 -78.5 6.4 -55.1 Islands in the NIPA's differs from that in the BPA's. In the NIPA's they are included in the rest of the world; in the BPA's, they are treated as part of the United States. The adjustments to exports and imports of goods and services and to receipts and payments of factor income are shown in lines 7 and 17, respectively. The adjustment to unilateral transfers, net (line 35) consists only of transfer payments from persons because transfer payments, subsidies, and grants-in-aid from the Federal Government to residents of U.S. territories, Puerto Ricc, and the Northern Mariana Islands are excluded from NIPA transfer payments to rest of the world.
7. In the BPA's, income transactions between parents and affiliates are recorded on a net basis. In BPA exports, U.S. parents' receipts from foreign affiliates in interest are net of such payments by U.S. parents to toreign diffuses. In BPA imports, U.S. affiliate's payments to receipts and the NIPA's, these transactions are recorded on a gross basis beginning with 1974. The amount of adjustment is denical in payments to and receipts of factor income and, thus, does not affect NIPA net receipts of factor income are added to imports in 1946 to, adjust to geographic coverage of imports to the 48-State coverage used in the NIPA's, prior to 1960. From 1947 through 1959, such shipments are regread used in 1963, the adjustment is not required because Alaska and Hawaii gained statehood in 1959.
9. Consists of shipment to India under the Agricultural Trade Development and Assistance Act; less writeoffs of loan principal owed to the U.S. Government, which are a type of financial transaction that is excluded from the NIPA's.

In this table, purchases of structures includes compensation of government employees engaged in new force-account construction. In tables 1.4 and 3.8, this compensation is classified as a service and is included as part of government compensation of employees.
 Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
 Consists of streets, dams and reservoirs, sewer and water facilities, parks, airfields, etc.
 Consists of general office buildings, police and fire stations, courthouses, auditoriums, garages, passenger ter-minals, etc.

minals etc.

6. Consists of electric and gas facilities, transit systems, airfields, etc.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from cur-rent-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition,

changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates. 2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and general government and includes a small amount of final sales by farm.

1. Equals the number of full-time equivalent employees (table 6.5) plus the number of self-employed persons (table 6.7). Unpaid family workers are not included. 2. Consists of museums, botanical, zoological gardens: engineering and management services; and services, not elsewhere classified. 3. Includes Coast Guard. NOTES:—(1)Estimates in this table are based on the 1987 Standard Industrial Classification (SIC). (2) Estimates in this table have been revised beginning with 1982 to reflect revisions in source data for employment. Revisions in employment affect tables 6.4C, 6.5C, 6.4C, 6

1. Consists of social services; membership organizations; engineering and management services, except for commercial research and testing services and for management and public relations; and services, not elsewhere classified.
2. Consists of receipts by all U.S. residents, including both corporations and persons, of dividends from their incorporated foreign affiliates, their share of reinvested earnings of their incorporated foreign affiliates, and earnings of unincorporated foreign affiliates, net of corresponding payments.
NOTE—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC) except for commercial research and testing services and for management and public relations. In the 1987 SIC, these industries are included in engineering and management services; in this table, they are included in business services.

1. Consists of social services; membership organizations; engineering and management services, except for commercial research and testing services and for management and public relations; and services, not elsewhere classified.
 2. Consists of receipts by all U.S. residents of dividends paid by their incorporated foreign affiliates and remitted earnings of their unincorporated toreign affiliates.
 3. Consists of payments by incorporated U.S. affiliates of dividends paid to foreign residents and earnings of unincorporated U.S. affiliates remitted to foreign residents.
 MOTE—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC) except for commercial research and testing services and for management and public relations. In the 1987 SIC, these industries are included in engineering and management services; in this table, they are included in business services.

1. Consists of social services; membership organizations; engineering and management services, except for com-mercial research and testing services and for management and public relations; and services, not elsewhere classi-

Note-Estimates in this table are based on the 1987 Standard Industrial Classification (SIC) except for commer-cial research and testing services and for management and public relations. In the 1987 SIC, these industries are included in engineering and management services; in this table, they are included in business services.

NOTE.—The quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for

the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year. Percent changes from preceding period for selected items in this table are shown in table 8.1.

Equals GDP less change in business inventories

Equals GDP less net exports of goods and services or equals the sum of personal consumption expenditures, gross private domestic investment, and government purchases.

3. Equals gross domestic purchases less change in business inventories or equals the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases. NOTE.—Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE.-Except for disposable personal income, the quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixedweighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type

indexes with annual weights use weights for the preceding and current years, and the indexes with benchmarkyears weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year.

Addendum: Capital consumption adjustment for national income (4+13+19+26)	27	-1.3	22.6	-51.5	43.6

1. Except for farm proprietorships and partnerships (line 14) and other private business (line 18), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation based on the service lives and depreciation schedules employed by firms when filing their income tax returns to consistent service lives and straight-line depreciation schedules. The adjustment for correct the historical cost convents depreciation schedules and provide the service lives and straight-line depreciation schedules. The adjustment for current replacement cost series. For farm proprietorships and partnerships and other private business, the historical cost series is based on consistent service lives and straight-line depreciation schedules so that the adjustment reflects only a conversion to current replacement cost.

service lives and straight-line depreciation scredules so that the adjustment release only a control on the scheduler replacement cost. 2. Fixed capital assets owned and used by these entities are considered to be business activities selling their current services to their owners. The value of these services is included in personal consumption expenditures and is equal to their current-account purchases including consumption of fixed capital.

1. Excludes interest paid or received by government enterprises, whose interest is included in the government

sector. 2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan

2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.
3. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 29.
NOTE.—In table 8.17, inputed interest paid (line 36) is the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, governments, and rest of the world. In table 8.18, imputed interest file 59.—the interest component of imputations that affect GNP—consists of the imputed interest paid by financial intermediaries and private noninsured pension plans to persons and government, and the interest paid on owner-occupied housing and on buildings and equipment owned and used by nonprofit institutions serving individuals.

				·							

Contributions for these programs, for which a social insurance fund is imputed, are set equal to benefits paid. These payments are funded directly out of current budget.
 Consists largely of retirement programs for Public Health Service officers and employees of the judiciary.
 Consists of payments for medical services for dependents of active duty military personnel at nonmilitary facilities. Notes.—(1) Only national income and product items for which there are imputations are shown in this table.
 In table 8.17, imputed interest paid (line 36) is the difference between the property income received by financial

intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, governments, and rest of the world. In table 8.18, imputed interest (line 55)—the interest component of imputations that affect GNP—consists of the imputed interest paid by financial intermediaries other than life insurance carriers and private noninsured pension plans to persons and government, and the interest paid no owner-occupied housing and on buildings and equipment owned and used by nonprofit institutions serving individuals.

 Consists of the imputations included in personal income shown in Table 8.18 except for employer-paid health
 and life insurance premiums (line 115). In table 8.24, these premiums are included in line 4.
 2. Equals imputed interest received by persons from life insurance carriers and private noninsured pension plans
 as shown in table 8.17 (line 51).
 3. Beginning in 1990, the methodology for estimating the difference between the IRS and NIPA depreciation
 estimates was changed. This change results in discontinuities between the estimates for 1990 and earlier years.
 The revised estimates prior to 1990 are available on request.
 4. Consists of income earned by low-income individuals who are not required to file income tax returns, unreport ed income that is included in the NIPA measure, and gross errors and onisions in lines 2 through 15. Also in cludes the net effect of errors in the IRS adjusted gross income (line 17) and NIPA personal income (line 1) meas ures. Such errors can arise from the sample used by IRS to estimate line 17 and from the data sources used
 by BEA to estimate inc. by BEA to estimate line 1.

NIPA Charts

REAL GDP AND ITS COMPONENTS: TRENDS AND CYCLES

SELECTED SERIES: RECENT QUARTERS

Index to the NIPA Tables

THE ENTRIES in this index refer to national income and product accounts (NIPA) table numbers. The 53 quarterly tables that appear each month in the SURVEY are identified by bold italic type in the index; other tables are printed in regular type.

The first character of the NIPA table number (the number preceding the decimal point) identifies the table as belonging to one of the following subject areas:

- 1. Product and Income
- 2. Personal Income and Outlays
- 3. Government Receipts and Expenditures
- 4. Foreign Transactions
- 5. Saving and Investment
- 6. Income, Employment, and Product by Industry
- 7. Quantity and Price Indexes
- 8. Supplementary Tables
- 9. Seasonally Unadjusted Estimates

For most of the NIPA tables showing the industry distributions of gross domestic product, national income, and their components, a suffix is used to represent the year of the Standard Industrial Classification (SIC) underlying the estimates. Estimates for 1929–48, based on the 1942 SIC, are shown in tables designated with an "A" suffix; estimates for 1948–87, based on the 1972 SIC, are shown in tables with a "B" suffix; and estimates for 1987 forward, based on the 1987 SIC, are shown in tables with a "C" suffix.

For several tables in the "Government Receipts and Expenditures" section, a suffix is used to indicate that more detail is available for recent time periods than for earlier periods. Specifically, tables 3.7, 3.8, and 3.9 show more detail beginning with estimates for 1972, and table 3.18 shows more detail beginning with estimates for 1968. In each case, the corresponding tables for the earlier period are designated with an "A" suffix, and the tables for the later period are designated with a "B" suffix.

A

Accidental damage 8.19

Accounting machinery 5.8, 5.9, 7.8

- Accruals See corporate profits tax accruals; indirect business tax and nontax accruals; wage accruals less disbursements.

FIXED REPRODUCIBLE TANGIBLE WEALTH IN THE UNITED STATES, 1925-89

This report presents BEA's latest official estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States. The report provides annual estimates of gross and net stocks, depreciation, discards, and average ages of gross and net stocks in historical-cost, constant-cost, and current-cost valuations, as follows:

- Fixed nonresidential private capital owned by each two-digit Standard Industrial Classification(SIC) establishment-based industry for 1947-89, based on the 1987 SIC;
- Fixed nonresidential private capital, by type of equipment and structures and by legal form of organization, for 1925-89;
- Residential capital, by type of equipment and structures, by legal form of organization, by industry, and by tenure group, for 1925-89;
- Durable goods owned by consumers, by type of goods, for 1925-89;
- Government-owned fixed capital, by type of equipment and structures, separately for the Federal Government and for State and local government, for 1925-89.

The report also includes the investment series and service lives used to derive the wealth estimates and a detailed statement of methodology. BEA's fixed capital and investment estimates are used by economists, academics, public officials, private business leaders, students, and others. The estimates are used in studies of industry, productivity, and economic growth, in econometric models, and in studies of business taxation. *Order your copy today!*

The estimates are also available in other media; for information, call BEA at (202) 606-9740.

Latest Estimates Now Available!

U.S. DIRECT INVESTMENT ABROAD: Operations of U.S. Parent Companies and Their Foreign Affiliates

Revised 1990 Estimates and Preliminary 1991 Estimates

These new publications present the revised 1990 and preliminary 1991 results of BEA's annual survey of the worldwide operations of U.S. multinational companies. They provide an overview of the operations and financial structure of U.S. parent companies and their foreign affiliates. The tables in the publications, which are shown by country and/or by industry, present the following:

- · Balance sheets and income statements
- Employment and employee compensation
- · Research and development expenditures
- Merchandise trade
- · Sales of goods and services
- Foreign income taxes

These publications provide some of the most detailed information on U.S. multinational companies collected by the U.S. Government and will be of interest to economists and other researchers, corporate executives, public officials, and others. *Order your copy today!*

NOTE: These estimates are also available from BEA on diskette. For further information, or for information on how to obtain estimates for 1983-89, write to: International Investment Division, Direct Investment Abroad Branch, BE-69, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230 USA, or call (202) 606-9820.

L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unclassified) at reference cycle peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.

‡ Cyclical indicator series denoted by ‡ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.

† Cyclical indicator series denoted by † are smoothed by an autoregressive-moving-average filter developed by Statistics Canada.

For information on composite indexes and other concepts used in this section, see "Composite Indexes of Leading, Coincident, and Lagging Indicators" in the November 1987 SURVEY OF CURRENT BUSINESS and "Business Cycle Indicators: Revised Composite Indexes" in the January 1989 SURVEY.

References to series in this section use the prefix "BCI-" followed by the series number. Unless otherwise noted, series are seasonally adjusted.

Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3-month changes are placed in the 3d month, 6-month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarter, and 4-quarter changes are placed in the 3d quarter.

Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Diffusion index data are centered within the spans: 1-month indexes are placed in the ending month and 6-month indexes are placed in the 4th month.

High values reached by cyclical indicators since the last reference cycle trough (March 1991) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs.

Sources for series in this section are shown on pages C-27 and C-28 in the April 1993 SURVEY.

Page C-1

NOTE.—Major data revisions:

Personal income less transfer payments in 1987 dollars (BCI-51)- see note for page C-2. Manufacturing and trade sales in 1987 dollars (BCI-57)- see note for page C-2.

Change in labor cost per unit of output (BCI-62)-see note for page C-2.

Ratio, consumer installment credit outstanding to personal income (BCI-95)- see note for page C-2. * Preliminary August 1993 values: BCI-32 = 51.6, BCI-19 = 454.13, and BCI-109 = 6.00.

1. Data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments. Data exclude Puerto Rico, which is included in figures published by the source agency.

 Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

3. Excludes BCI-57, for which data are not available.

4. Excludes BCI-77 and BCI-95, for which data are not available.

5. The wages and salaries portion of this series has been adjusted to smooth yearend 1992 bonus payments that are in the revised national income and product accounts data. The bonus payments were too large to be adequately dealt with by the autoregressive-moving-average filter used to smooth this series.

Page C-2

Note .- Major data revisions:

Series based on the national income and product accounts have been revised by the source from 1990 forward to reflect the incorporation of new source data and new seasonal adjustment factors. Series affected by this revision are as follows: BCI-16, -18, -30, -35, -49, -50, -51, -52, -53, -55, -62, -86, -87, -88, -89, -95, -107, -108, -290, -292, -293, -295, -298, and -564. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, National Income and Wealth Division, Washington, DC 20230.

Retail sales in 1987 dollars (BCI-59) and manufacturing and trade sales in 1987 dollars (BCI-57) have been revised from 1989 forward to incorporate revisions in the retail sales deflator. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

*Preliminary August 1993 value: BCI-32 = 51.6; anticipated 3d quarter 1993 values: BCI-61 = 587.05 and BCI-100 = 567.09; anticipated 4th quarter 1993 values: BCI-61 = 585.34 and BCI-100 = 568.65.

 Data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments. Data exclude Puerto Rico, which is included in figures published by the source agency.

2. Data exclude Puerto Rico, which is included in figures published by the source agency.

3. Copyrighted. This series may not be reproduced without written permission from McGraw-Hill Information Systems Company, F.W. Dodge Division, Paramount Plaza, 13th Floor, 1633 Broadway, New York, NY 10019.

Page C-3

Note.—Major data revisions: Series based on the national income and product accounts (BCI-30, -86, -87, -88, and -89)-see note for page C-2.

* Preliminary August 1993 value: BCI-23 = 255.5.

 Copyrighted. This series may not be reproduced without written permission from Knight-Ridder Financial Publishing, 30 South Wacker Drive, Suite 1820, Chicago, IL 60606-5271.

Page C-4

Note.---Major data revisions: Series based on the national income and product accounts (BCI-16, -18, -35, -51, -52, -53, -62, -107, -108, -290, -292, -293, -295, and -298) —see note for page C-2.

- * Preliminary August 1993 values: BCI-122 = 59.0, BCI-123 = 67.0, and BCI-85 = 0.97.
- 1. See footnote 5 for page C-1.

3. Copyrighted. This series may not be reproduced without written permission from the American Bankers Association, 1120 Connecticut Avenue, NW, Washington, DC 20036.

Page C-5

Note.---Major data revisions: Series based on the national income and product accounts (BCI-95 and BCI-564) ---see note for page C-2.

* Preliminary August 1993 values: BCI-119 = 3.03, BCI-114 = 3.05, BCI-116 = 7.04, BCI-115 = 6.20, BCI-117 = 5.45, BCI-109 = 6.00, BCI-19 (1941-43=10) = 454.13, BCI-19 (1967-100) = 494.0, BCI-748 = 1,513.1, BCI-745 = 330.6, BCI-746 = 1,030.8, BCI-742 = 1,421.5, BCI-747 = 412.6, BCI-743 = 461.4, BCI-750 = 94.35, BCI-758 = 103.71, BCI-755 = 1.6962, BCI-756 = 5.9369, BCI-752 = 0.6704, BCI-757 = 1,604.02, and BCI-753 = 1.3068.

1. Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).

2. Organisation for Economic Co-operation and Development.

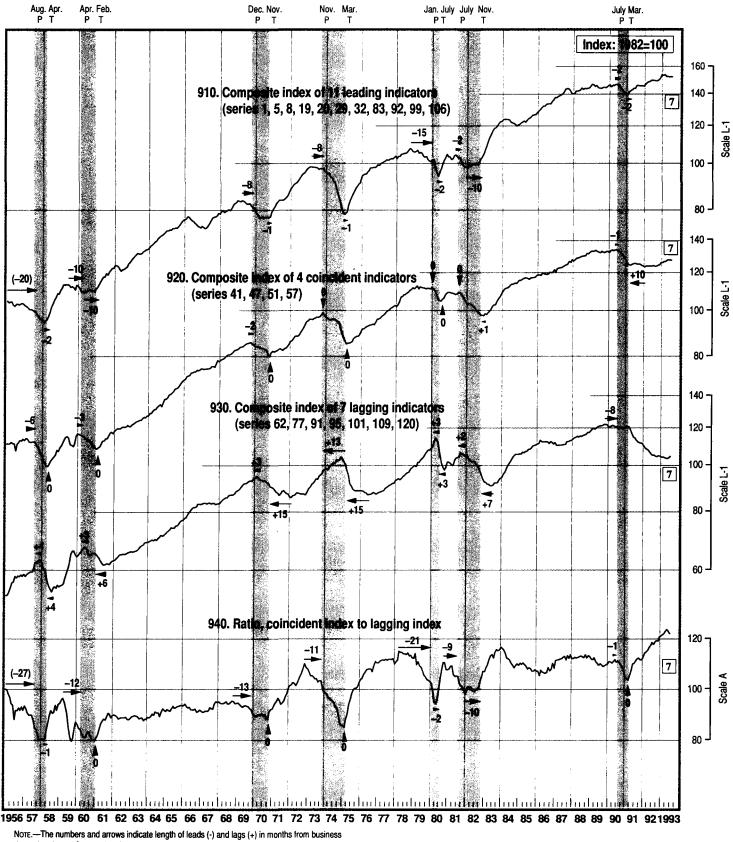

3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972–76 global trade. For a description of this index, see the August 1978 *Federal Reserve Bulletin* (p. 700).

 This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

 For an explanation of this index, see "The Composite Index of Coincident Indicators and Alternative Coincident Indexes" in the June 1992 SURVEY.

FOOTNOTES FOR PAGES S-1 THROUGH S-32

General notes for all pages:

r Revised. p Preliminary. e Estimated. c Corrected. © Copyrighted.

Page S-1

§ Series based on personal income have been revised by the source from 1990 forward to reflect the incorporation of new source data and new seasonal adjustment factors. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, National Income and Wealth Division, Washington, DC 20230.

‡ Includes inventory valuation and capital consumption adjustments.

† Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

Page S-2

1. Based on data not seasonally adjusted. # Includes data for items not shown separately.

Page S-3

Includes data for items not shown separately.

Page S-4

Includes data for items not shown separately.

‡ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

† For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

Page S-5

‡ See note "‡" for page S-4.

Includes data for items not shown separately.

† Ratio of prices received to prices paid (parity index).

Page S-6

1. Based on data not seasonally adjusted.

includes data for items not shown separately.

† For producer price indexes of individual commodities, see respective commodities in the Industry section beginning on page S-19. All indexes are subject to revision four months after original publication.

Page S-7

1. Computed from cumulative valuation total.

Includes data for items not shown separately.

† The fixed-weighted price index is a weighted average of the individual price index series used to deflate the Value of New Construction Put in Place (VIP) series. In calculating the index, the weights (the composition of current dollar VIP in 1987 by category of construction) are held constant. Consequently, the index reflects only changes in prices. The implicit price deflator is a derived ratio of total current to constant dollar VIP (multiplied by 100). It is the average of the individual price indexes used in the deflation of VIP, but the prices are weighted by the composition of VIP each period. As a result, the implicit price deflator reflects not only changes in prices, but also changes in the composition of VIP, and its use as a measure of price change is discouraged.

* Written permission was granted by the owner of the copyright, American Appraisal Associates, Inc., P.O. Box 664, Milwaukee, WI 53201–0664 prior to its reproduction in this publication.

‡ Index as of August 1, 1993: building, 446.1; construction, 486.9

Page S-8

† Home mortgage rates are under money and interest rates on page S-14.

♦ Data are for closed mortgage loans of thrift institutions insured by the Savings Association Insurance Fund (SAIF)—FSLIC-insured institutions prior to September 1989. Associations in conservatorship are excluded.

Includes data for items not shown separately.

Page S-9

includes data for items not shown separately

‡ Data include resident armed forces.

† The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is civilian employment as a percent of the civilian noninstitutional population, 16 years and over.

Address requests for data to:

Business Statistics Branch Business Outlook Division (BE-52) Bureau of Economic Analysis U.S. Department of Commerce Washington, DC 20230 202-606-5367

Page S-10

† The unemployment rates are the number of unemployed in each group as a percent of the civilian labor force in that group.

Page S-11

Production and nonsupervisory workers.

‡ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

Page S-12

Production and nonsupervisory workers.

@ Wages as of August 1, 1993: Common, \$20.03; Skilled, \$26.20,

‡ Earnings in 1982 dollars reflect changes in purchasing power since 1982 by dividing by Consumer Price Index.

† Excludes farm, household, and Federal workers.

Page S-13

‡ Covers the 50 States and the District of Columbia. Puerto Rico and the Virgin Islands are excluded. Only regular benefits are included.

@ Average weekly insured unemployment for 12-month period divided by average monthly covered employment (lagging 4 full quarters for annual figure and 2 full quarters for monthly figure).

Includes data for items not shown separately.

† Excludes loans and federal funds transactions with domestic commercial banks and includes valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

Page S-14

1. Weighted by number of loans.

2. Data are for fiscal years ending September 30 and may include revisions not distributed to the months.

† Excludes loans to commercial banks in the U.S.

@ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent.

Includes data for items not shown separately.

‡ Comprises mobile home loans and all other installment credit loans not included in automobile or revolving credit, such as loans for education, boats, trailers, or vacations. These loans may be secured or unsecured.

♦ Courtesy of Metals Week.

Page S-15

† Includes ATS and NOW balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions.

Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

± Includes money market deposit accounts.

@ Small time deposits are those issued in amounts of less than \$100,000. Large time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.

includes data for items not shown separately.

Page S-16

‡ For bonds due or callable in 10 years or more.

Includes data for items not shown separately.

† Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because the revisions to the totals are not reflected in the component items.

Page S-17

‡ Data include undocumented exports to Canada, which are based on official Canadian import totals.

† See note "†" for page S-16.

Includes data for items not shown separately.

Page S-18

1. For month shown.

† Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service. ‡ The threshold for Class I railroad status is adjusted annually by the Interstate Commerce Commission to compensate for inflation.

includes data for items not shown separately.

♦ Before extraordinary and prior period items.

@ Data represent entries to a national park for recreational use of the park, its services, conveniences, and/or facilities.

Page S-19

1. Data withheld to avoid disclosing figures for individual companies.

2. Data are partially estimated for first three quarters of 1991 and are not available. Value for 4th quarter 1991 is based on partially estimated production data. Data for 1992 were not published because they would have disclosed individual company operations.

† Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated.

Page S-20

† Data are not wholly comparable from year to year because of changes in classification. ‡ Includes less than 500 electric generation customers not shown separately.

Page S-21

1. Crop estimate for the year.

2. Stocks as of December 1.

Stocks as of June 1 and represents previous year's crop; new crop not reported until June (beginning of new crop year).

4. Previous year's crop. New crop is not reported until September. (Crop year: September 1-August 31.)

5. Stocks as of June 1.

Stock estimates are available once a year as June 1 stocks and shown in the May column and (as previous year's crop) in the annual column.

† Coverage for 21 selected States, representing approximately 85 percent of U.S. production. ± Excludes pearl barley.

@ Quarterly data represent the 3-month periods December-February, March-May, June-August, and September-November. Annual data represent December-November.

	P	age	S-22
--	---	-----	------

† Cases of 30 dozen.

Page S-23

Page S-25

♦ Source: Metals Week.

1. Crop estimate for the year.

‡ Includes domestic and foreign ores.

Page S-26

1. Monthly data not available for 1990 and 1991.

± includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.

Source: Metals Week.

@ Price represents North American Mean.

Includes data for items not shown separately.

Page S-27

@ March, June, September, and December are five-week months. All others consist of four-week months.

Includes data for items not shown separately.

‡ Includes nonmarketable catalyst coke.

† Includes small amounts of "other hydrocarbons and alcohol new supply (field production)," not shown separately.

Page S-28

Includes data for items not shown separately.

Page S-29

♦ Source: American Paper Institute. Total U.S. estimated consumption by all newspaper users. † Compiled by the American Newspaper Publishers Association.

Page S-30

1. Average for calendar year.

2. Data cover five weeks; other months, four weeks.

‡ Cumulative ginnings to the end of month indicated.

Bales of 480 lbs.

Includes data for items not shown separately.

Page S-31

1. Weighted average for crop year, August 1-July 31.

2. Weighted average for August 1992-March 1993.

3. Spot market average for crop year, August 1-July 31.

4. Based on the average of August 1992-June 1993.

5. For five weeks; other months, four weeks.

6. No price because the Australian market was shut down for the month of July.

7. Excludes "down and feather filled coats, jackets, and vests".

8. Data withheld to avoid disclosing figures for individual companies.

9. Excludes "sweatpants".

† Based on 480-lb. bales, preliminary price reflects sales as of the 15th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).

t The total may include some miscellaneous wool imports.

Page S-32

1. Data are reported on an annual basis only.

 Production of new vehicles (thousand of units) for June 1993: passenger cars, 559; trucks and buses, 444.

t Total includes backlog for nonrelated products and services and basic research.

† Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.

 \diamondsuit Courtesy of R.L. Polk & Company; republication prohibited. Because data for some States are not available, month-to-month comparisons are not strictly valid.

@ includes some imported trucks over 10,000 lbs. GVW.

§ Seasonally adjusted retail sales for trucks and buses have been revised from 1990 forward. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, National Income and Wealth Division, Washington, DC 20230.
