Inside back cover: BEA Information

Nore.—This issue of the SURVEY went to the printer on April 6, 1993. It incorporates data from the following monthly and news releases: Gross Domestic Product (Mar. 26), Personal Income and Outlays (Mar. 29), and Composite Indexes of Leading, Coincident, and Lagging Indicators (Mar. 31).

THE BUSINESS SITUATION

Larry R. Moran prepared the first section of this article, Daniel Larkins prepared the section on corporate profits, and Michael W. Webb prepared the section on the government sector.

T HE "FINAL" estimate of growth in real gross domestic product (GDP) for the fourth quarter of 1992 is 4.7 percent, 0.1 percentage point lower than the "preliminary" estimate reported in last month's Survey of Current Business (table 1).¹ Downward revisions in exports of goods and services and in government purchases more than offset an upward revision in personal consumption expenditures (PCE).

For exports, the largest downward revision was in services; for government purchases, the largest downward revisions were in Federal defense purchases other than compensation and in State and local government purchases other than compensation. For PCE, the upward revision was in services, mainly in electricity and gas and in brokerage commissions. Nonresidential structures and residential fixed investment were revised down slightly.

The final estimate for real gross domestic purchases shows a 4.4-percent increase, 0.1 percentage point higher than the preliminary estimate. (Unlike GDP, gross domestic purchases excludes exports of goods and services and includes imports of goods and services.)

The final estimate for the fixed-weighted price index for gross domestic purchases shows an increase of 2.9 percent, 0.1 percentage point higher than the preliminary estimate; the final estimate for the fixed-weighted price index for GDP shows

Looking Ahead...

• Changes in BEA Release Schedules. Because of a move to a new location this summer, BEA is changing the scheduled dates for several of its national and regional news releases. In addition, the annual revision of the national income and product accounts (NIPA's) for 1993 will be released in August along with the preliminary NIPA estimates for the second quarter instead of in July along with the advance NIPA estimates. (For more information, see the box on page 2.)

an increase of 3.4 percent, 0.5 percentage point higher than the preliminary estimate.

Gross national product (GNP).-Real GNP increased 4.1 percent in the fourth quarter (table 2). GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world. In the fourth quarter, receipts decreased and payments increased. The decrease in receipts was primarily accounted for by profits of foreign affiliates of

NOTE .- Final estimates for the fourth quarter of 1992 incorporate the following revised or additional major source data that were not available when the pretiminary estimates were prepared a month ago.

Personal consumption expenditures: Revised retail sales for December. Nonresidential fixed investment: Revised construction put in place for November and December, revised manufacturers' shipments of equipment for December, and revised shipments of complete civilian aircraft for December.

Residential investment: Revised construction put in place for November and December

Change in business inventories: Revised manufacturing and trade inventories for December Net exports of goods and services: Revised merchandise exports and imports for December and revised exports and imports of services for the quarter.

Government purchases: Revised State and local government construction put in place for November and December

Net interest: Financial assets held by households for the quarter and net interest from the rest of the world for the quarter

Corporate profits: Domestic book profits and profits from the rest of the world for the quarte

GDP prices: Revised housing prices for the quarter.

^{1.} Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1987 dollars and are based on 1987 weights.

U.S. corporations. The increase in payments was more than accounted for by interest payments.

In estimating real GNP, the current-dollar value of exports of goods and services is deflated by export prices, the current-dollar value of im-

Table 2.—Relation of Gross Domestic Product, Gross National Product, and Command-Basis Gross National Product in Constant Dollars

[Seasonally adjusted at annual rates]

Addendum: Terms of trade ¹	101.7	1.5	-1.3	6.0	-5.0	

 Ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE .---Levels of these series are found in tables 1.10 and 1.11 of the "Selected NIPA Tables."

ports of goods and services is deflated by import prices, and the current-dollar value of both receipts and payments of factor income is deflated by the implicit price deflator for net domestic product. In estimating command-basis GNPa measure of U.S. production in terms of its purchasing power-the current-dollar value of exports of goods and services and receipts of factor income is deflated by the implicit price deflator for imports of goods and services and payments of factor income. In the fourth quarter, command-basis GNP increased less than GNP-3.4 percent, compared with 4.1 percent-reflecting a worsening in the terms of trade. In the third quarter, command-basis GNP had increased more than GNP-4.7 percent, compared with 3.9 percent-reflecting an improvement in the terms of trade.

Corporate Profits

Profits from current production—profits before tax (PBT) plus inventory valuation adjustment (IVA) and capital consumption adjustment (ccAdj)—increased \$57.2 billion in the fourth quarter of 1992 after decreasing \$14.3 billion in the third (table 3). Third-quarter profits had been depressed by Hurricanes Andrew and Iniki; losses of insurance carriers amounted to about \$46.0 billion.

Changes in **BEA** Release Schedules

BEA's move this summer to a new location will necessitate some changes in the release dates for the national income and product accounts (NIPA) estimates and the State personal income estimates. At this time, the scheduled release dates for the monthly composite indexes and for the quarterly international estimates, including the annual revision of the international transactions accounts in June, are unchanged.

NIPA estimates

In June, the following changes are made to the NIPA release dates:

	From	То
Gross domestic product, first quarter 1993 (final) Corporate profits, first quarter 1993 (revised) Personal income and outlays, May 1993	June 30 June 30 July 1	June 23 June 23 June 24

In July, the advance NIPA estimates for the second quarter will be released as scheduled; however, the annual revision of the NIPA's, usually released in July, will not be released until August when the preliminary estimates are released.

In August, the following changes are made to the NIPA release dates:

	From	То
Gross domestic product, second quarter 1993 (preliminary) Corporate profits, second quarter 1993 (preliminary) Personal income and outlays, July 1993.	Sept. 1 Sept. 1 Sept. 2	Aug. 31 Aug. 31 Sept. 1

Regional estimates

Because BEA's regional estimates depend upon its national estimates, the rescheduling of the annual NIPA revision to August will cause the following changes in the scheduled dates for State personal income:

	From	То
State per capita personal income, 1992 (revised) State personal income, second quarter 1993	Aug. 24 Oct. 21	Oct. 7 Nov. 18

Profits from the domestic operations of nonfinancial corporations increased \$41.2 billion in the fourth quarter after increasing \$2.3 billion in the third; the fourth-quarter increase mainly reflected an increase in unit profits that resulted from higher unit prices and lower unit costs (both labor and nonlabor). Profits from the domestic operations of financial corporations increased \$19.9 billion after decreasing \$20.6 billion. Profits from the rest of the world decreased \$4.0 billion after increasing \$4.1 billion; the decrease was more than accounted for by a \$5.3 billion decrease in receipts from foreign affiliates of U.S. corporations.

Cash flow from current production, a profitsrelated measure of internally generated funds available to corporations for investment, increased \$22.1 billion after increasing \$9.5 billion. In recent quarters, the ratio of cash flow to nonresidential fixed investment has been more than 90 percent; in the 1980's, the ratio averaged 72.1 percent. Thus, in the aggregate, at least, cash flow does not appear to have constrained investment

7.15 of the "Selected NIPA Tables." IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

in recent quarters; indeed, investment could increase substantially without cash flow becoming a constraint.

PBT and related measures.—PBT increased \$38.1 billion in the fourth quarter. The difference between the \$57.2 billion increase in profits from current production and the \$38.1 billion increase in PBT reflects increases in the IVA and in the ccAdj.

The IVA, which increased \$10.7 billion—to \$1.0 billion—in the fourth quarter after increasing \$5.8 billion in the third, is an estimate of how much PBT would be affected if all inventory with-drawals were valued at replacement cost. (In the source data used to estimate PBT, most inventory withdrawals are valued at historical cost.) The Producer Price Index, a major source of inventory prices, decreased at an annual rate (not season-ally adjusted) of 0.3 percent in the fourth quarter after increasing at a 2.4-percent rate in the third.

The ccAdj, which increased \$8.4 billion in the fourth quarter after increasing \$2.7 billion in the third, is the difference between the predominantly tax-based depreciation measure that underlies PBT and BEA's estimate of the consumption of fixed capital. The third-quarter ccAdj and the third- and fourth-quarter changes in cCAdj were affected by Hurricanes Andrew and Iniki; excluding the effects of the hurricanes, the cCAdj would have increased about \$5.5 billion in each quarter.

Government Sector

The fiscal position of the government sector improved in the fourth quarter of 1992, as the combined deficit of the Federal Government and of State and local governments decreased \$19.2 billion, to \$276.0 billion (table 4). The Federal Government deficit decreased \$9.8 billion, and the State and local government surplus increased \$9.4 billion.

Federal

The Federal Government deficit decreased to \$294.6 billion, as receipts increased significantly more than expenditures. Much of the increase in receipts was due to the upswing in economic activity.

Receipts.—Receipts jumped \$38.6 billion in the fourth quarter after increasing \$5.6 billion in the third. This jump was the largest increase in Federal Government receipts since 1987.

Corporate profits tax accruals surged \$14.2 billion in the fourth quarter after a decrease of \$10.1 billion in the third. The upswing was attributable to the pickup in the economy in the fourth quarter and to the negative impact of Hurricanes Andrew and Iniki on corporate profits in the third quarter.

Personal tax and nontax receipts increased \$12.7 billion after increasing \$11.3 billion. Strong growth in wages and salaries in the fourth quarter led to an \$8.7 billion increase in withheld income

NOTE .- Dollar levels are found in tables 3.2 and 3.3 of the "Selected NIPA Tables."

taxes. The growth in wages and salaries was due to the upswing in economic activity, to bonus payments in the aircraft and motor vehicles industries, and to accelerated bonus payments in the securities industry. Typically, most bonuses in the securities industry are paid in January and are based on profits earned in the preceding year.

Indirect business tax and nontax accruals increased \$4.5 billion after increasing \$1.5 billion. The pickup was due primarily to increases in customs duties and in business nontax payments; payments to the Federal Government were boosted \$1.7 billion (annual rate) by civil damage recovery settlements related to the savings and loan bailout and \$0.3 billion (annual rate) by settlements for the Valdez oil spill.

Contributions for social insurance increased \$7.3 billion after increasing \$3.0 billion. Employer and personal contributions for social security each increased \$2.7 billion in the fourth quarter as a result of the growth in wages and salaries.

Expenditures.—Expenditures increased \$28.8 billion in the fourth quarter after increasing \$7.1 billion in the third. The upswing was more than accounted for by transfer payments and by subsidies less the current surplus of government enterprises.

Transfer payments increased \$18.8 billion after increasing \$3.1 billion. Transfer payments to the rest of the world increased \$11.9 billion after a decrease of \$1.6 billion. The upswing was largely accounted for by payments to Israel, but it also included disbursements from the U.S. Department of Defense to support relief operations in Somalia. In transfer payments to persons, benefits for social security (old-age, survivors, and disability insurance) increased \$2.1 billion, and medicare (hospital and supplementary medical insurance) increased \$2.3 billion.

Subsidies less the current surplus of government enterprises increased \$12.0 billion after decreasing \$6.7 billion. The upswing was attributable to agricultural subsidies, which increased \$10.4 billion after decreasing \$7.7 billion.

Purchases decreased \$3.6 billion after increasing \$10.4 billion; both defense and nondefense purchases contributed to the downswing. Defense purchases decreased \$1.4 billion after increasing \$7.9 billion; the fourth-quarter decrease was accounted for by purchases of nondurable goods, mainly petroleum products. Nondefense purchases decreased \$2.3 billion after increasing \$2.6 billion. Grants-in-aid to State and local governments increased \$4.7 billion after little change in the third quarter. The largest increases were in programs for public assistance, education, and food and nutrition.

Net interest paid decreased \$3.0 billion after increasing \$0.3 billion. This decrease was more than accounted for by gross interest paid for public debt, which decreased \$4.8 billion as a result of lower interest rates.

State and local

The State and local government surplus increased to \$18.6 billion, as receipts increased more than expenditures.

Receipts increased \$19.4 billion in the fourth quarter after increasing \$6.0 billion in the third.

Corporate profits tax accruals increased \$3.7 billion after decreasing \$2.2 billion, reflecting the upswing in corporate profits. Indirect business tax and nontax accruals increased \$8.1 billion after increasing \$7.3 billion. Federal grants-in-aid increased \$4.7 billion after little change.

Expenditures increased \$10.0 billion in the fourth quarter after increasing \$14.5 billion in the third. Purchases increased \$2.7 billion after increasing \$4.7 billion; the slowdown was attributable to a downswing in structures, which was more than accounted for by highway construction. All other expenditure categories combined increased \$7.3 billion after increasing \$9.8 billion. Most of the increase in both quarters was in transfer payments to persons, which increased \$6.8 billion after increasing \$9.3 billion.

NATIONAL INCOME AND PRODUCT ACCOUNTS

Selected NIPA Tables

New estimates in this issue: Fourth quarter 1992, final.

The selected set of national income and product accounts (NIPA) tables shown in this section presents quarterly estimates, which are updated monthly. (In most tables, the annual estimates are also shown.) Alternative quantity and price measures are shown elsewhere in this issue (see box below).

The tables shown are available on the day of the gross domestic product (GDP) news release on printouts and diskettes on a subscription basis or from the Commerce Department's Economic Bulletin Board. Most shown in this section are available, beginning with 1929, on diskette or magnetic tape. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230, or call (202) 523–0669.

NOTE.—This section of the SURVEY is prepared by the National Income and Wealth Division and the Government Division.

NOTE TO USERS: Alternative quantity and price measures are presented in tables 1 and 2 of "Alternative Measures of Change in Real Output and Prices, Quarterly Estimates for 1959–92" in this issue of the SURVEY OF CURRENT BUSINESS. Beginning with the May 1993 SURVEY, BEA will publish the alternative measures for the current quarter in the regular presentation of the preliminary and final NIPA estimates.

Next month, the NIPA tables will include revised fixed-weighted price indexes that reflect the new procedures for calculating them that were developed as part of BEA's project on alternative measures. The revisions are widespread, though generally small. For GDP and its major components and for the other selected aggregates, the revisions extend back to 1988; for a few detailed components, some quarters of 1987 are also revised. The revised fixed-weighted price indexes along with the alternative quantity and price indexes will be incorporated into next month's "Selected NIPA Tables." In addition, next month's issue will contain tables 7.1–7.12 and table 8.1 (which present quantity and price measures) of the "National Income and Product Accounts Tables" for 1988–91. The revised indexes will also be made available on diskette and magnetic tape and on the Commerce Department's Economic Bulletin Board.

 Inventories are as of the end of the quarter. Quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the constant-dollar change in business inventories component of GDP is stated at annual rates.

 Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and general government and includes a small amount of final sales by farm.

Equals GDP less change in business inventories.
 Equals GDP less net exports of goods and services or equals the sum of personal consumption expenditures, gross private domestic investment, and government purchases.
 Equals gross domestic purchases less change in business inventories or equals the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases.
 Equals gross domestic purchases less change in business inventories or equals the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases.
 Ensurement purchases the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases.

NOTE .- Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE .- The quantity and price indexes in this table are calculated from weighted averages of the detailed volt2.—Ine duality and pice indexes in this table are calculated infin weighted weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year. Percent changes from preceding period for selected items in this table are shown in table 8.1.

weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, and 1987 and the most recent year.

Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 present quarterly and monthly constant-dollar inventories, sales, and inventory-sales ratios, respectively. Table 4 presents quarterly fixed-weighted constant-dollar inventory-sales ratios—that is, ratios obtained by weighting detailed industry ratios by 1987 sales. Table 5 presents quarterly and monthly inventories for manufacturing by stage of fabrication. Quarterly constant-dollar manufacturing and trade inventories, sales, and inventory-sales ratios for 1977 forward were published in the January 1993 SURVEY OF CURRENT BUSINESS.

r Revised.

Preliminary.
 Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries
 Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

NOTE.—.Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory Trade inventories are classified by the type of product sold by the establishment holding the inventory Table 4: The I-S ratios shown in this table were obtained by weighting detailed industry I-S ratios by 1987 sales For manufacturing, 21 industries were used: for merchant wholesalers, 20 kinds of business; and for retail trade.

8 kinds of business.

Data Availability

Quarterly and monthly constant-dollar manufacturing and trade inventories, sales, and inventory-sales ratios for 1977-92, as well as constant-dollar manufacturing inventories by stage of fabrication, are available on printouts, diskette, and computer tape. Data for 1967-76 will be available soon. To order, write to the National Income and Wealth Division, BE-54, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. Specify Constant-Dollar Manufacturing and Trade Inventories, Sales, and Ratios (Accession No. BEA 54-90-21-205 for printouts, BEA 54-91-40-409 for diskette, or BEA 54-85-01-004 for computer tape), and include a check or money order for \$55.00 for printout, \$20.00 for diskette, or \$100.00 for computer tape, payable to the Bureau of Economic Analysis. To order by telephone, call (202) 523-0669; MasterCard and VISA are accepted.

The National Income and Product Accounts of the United States:

Volume 1, 1929-58 Volume 2, 1959-88

These volumes present a detailed statistical description of the U.S. economy over the last 60 years. The national income and product accounts (NIPA's)—the official U.S. economic accounts—show the value and composition of the Nation's output and incomes. With these data, users can track long-term trends and short-term fluctuations in U.S. economic activity.

Volume 1 contains the set of NIPA estimates for 1929-58, and Volume 2 contains the set of NIPA estimates for 1959-88. Introductory text in each volume presents definitions and conventions underlying the accounts, and a detailed index makes it easy to locate information in the tables. Featured NIPA estimates include:

- Gross domestic product
- · Personal income and outlays
- Quantity and price indexes
- · Corporate profits
- Government receipts and expenditures
- · Exports and imports
- Saving and investment
- Selected data by industry

The estimates in these volumes are the result of the most recent comprehensive revision of the NIPA's. Comprehensive revisions are undertaken about every 5 years to incorporate definitional and classificational changes, statistical changes, and new and redesigned tables.

These estimates are also available in other media: For more information, call the Bureau of Economic Analysis at (202) 523-0804.

Alternative Measures of Change in Real Output and Prices, Quarterly Estimates for 1959–92

By Allan H. Young

Christian Ehemann, assisted by Mary W. Hook and Clifton Baldwin, directed the assembling of the database and prepared the alternative measures of real GDP and GDP prices. Robert P. Parker and Jack E. Triplett contributed to the development of the article.

 ${\cal T}$ his article presents quarterly estimates of the alternative measures of change in real output and prices that BEA introduced in April 1992.¹ It also updates the annual estimates for 1988-90 to incorporate the results of the annual revision of the national income and product accounts (NIPA's) in July 1992 and extends the annual estimates to 1991.² The alternative measures, which supplement BEA's featured fixed-weighted measures, are especially useful for studies of long-term economic growth, for comparisons of business cycles, and for gauging the effect of changes in the economy's relative price structure on the measurement of real gross domestic product (GDP). Beginning with the May issue of the Survey of Current Business, bea will publish current quarterly estimates of the alternative measures in the regular presentation of the preliminary and final NIPA estimates.

BEA's featured measure of real GDP is a fixedweighted measure in which quantities in all periods are weighted with 1987 prices.³ The ad-

The quantity and price measures presented in this article were prepared using a newly developed database that contains detailed current-dollar and price-index components and a refined algorithm for computing these measures. Beginning with 1987, there are some differences between the fixed-weighted price indexes that are calculated using these procedures and the fixed-weighted indexes that are presently shown in the national income and product accounts (NIPA's). See the headnote to the "Selected NIPA Tables" in this issue for information about these differences and how they will be incorporated into the NIPA tables.

vantages of this type of measure are the following: (1) The index number formula itself is simple; (2) any two, or in fact any number of, periods can be compared on a consistent basis; and (3) the index may be stated in terms of real dollars (by using only the numerator of the formula). The third advantage makes it possible to "add up" the components of real output and to compute for each component the "real dollar share" of GDP and the "real dollar contribution" to the change in GDP.

The disadvantage of the fixed-weighted measure lies in the fact that it assumes the relative price structure of the economy does not change. It provides a good approximation for real growth in the economy as long as the change in the relative price structure remains fairly small, which is likely to be true over fairly short time periods. For longer periods, however, larger changes in price structure have taken place in the U.S. economy. The two alternative measures are designed to allow for changes over time in the relative price structure. For this reason, they provide a better basis for assessing long-term growth in the economy and for comparing business cycles.

The alternative measures also provide a way to monitor the extent to which changes in the relative price structure since 1987 are affecting the measurement of real GDP. If the difference between the 1987-weighted index and the alternatives becomes large and prolonged, the alternative indexes will be more appropriate than the 1987weighted index for analysis of the most recent periods.⁴ BEA will discuss such differences in

^{1.} See Allan H. Young, "Alternative Measures of Change in Real Output and Prices," SURVEY OF CURRENT BUSINESS 72 (April 1992): 32–48. Also see Jack E. Triplett, "Economic Theory and BEA's Alternative Quantity and Price Indexes," SURVEY 72 (April 1992): 49–52.

^{2.} Estimates of the annual and quarterly alternative output and price measures for 1959-87 are available in U.S. Department of Commerce, Bureau of Economic Analysis, National Income and Product Accounts of the United States: Volume 2, 1959-88 (Washington, DC: U.S. Government Printing Office, September 1992). Order information is on the preceding page.

^{3.} In this article, in order to facilitate comparisons with the alternative measures, BEA's featured measure of real GDP is shown as a fixed-weighted

quantity index in which the weights are 1987 prices. This index, divided by 100 and multiplied by the 1987 value of current-dollar GDP, is equal to real GDP in constant 1987 dollars—the form in which real GDP is customarily presented in the NIPA charts and tables. Percentage changes in these two forms of real GDP are identical.

^{4.} As described in the article in the April 1992 SURVEY, BEA plans to introduce a fixed-weighted quantity index that is calculated using 1992 prices as a third alternative following the 1993 annual NIPA revision. This index will provide an advance indication of how the fixed-weighted index will be affected by the updating of the price weights in the next comprehensive revision. If changes in the relative price structure since 1987 become an important factor, this third alternative, like those presented in this article, would be

the "Business Situation," the lead article in the SURVEY.

The first section of this article provides a summary description of the annual alternative measures for real GDP, explains the calculation of the quarterly values for these measures, and compares the quarterly measures of real GDP; the second section briefly describes and compares the GDP price measures.

Tables 1 and 2, at the end of this article, present the annual and quarterly estimates of the fixed-weighted and alternative quantity and price measures for 1988–92. Table 1 presents the index numbers for gross domestic product and its major components and for other selected aggregates, and table 2 presents percent changes for these series.

Real GDP Measures

Summary description of the annual alternative measures

Unlike the fixed-weighted measure, the two alternative measures of real GDP are not based on the price weights of a single base year. In one of

more appropriate than the 1987-weighted index for analysis of the most recent periods. (None of the alternative indexes will indicate the extent to which measured growth may be affected by revised source data and changes in methodology in subsequent annual revisions or in the comprehensive revision. Such effects can be as large as or larger than the effect of the choice of price weights.)

NOTE.—For more information on the system of components, including the decrease in the number of components after 1987, see Allan H. Young, "Alternative Measures of Change in Real Output and Prices." SURVEY 72 (April 1992): 41. In the 1993 annual NIPA revision, 1987-level annual detail will be available through 1991. The chain-type annual-weighted indexes will use the 1987 detail through 1991; the benchmark-years-weighted indexes based on weight years 1987 and 1992 will use the level shown for 1991 in the table.

the alternative measures, the *chain-type annual-weighted quantity index*, the weights change each year; in the other, the *benchmark-years-weighted quantity index*, the weights change each benchmark year—that is, at about 5-year intervals. These alternative indexes use the Fisher Ideal index formula to provide a measure of change between two periods.⁵

Chain-type annual-weighted quantity index.—For this alternative, a Fisher Ideal quantity index is used to calculate the change from year t - 1 to year t. Thus, the annual change is provided by the geometric mean of the year t values of two fixed-weighted quantity indexes, one of which uses prices of year t - 1 as weights and the other, prices of year t as weights. Annual changes computed in this manner are "chained" (multiplied) together to form a time series.⁶

Benchmark-years-weighted quantity index.—For this alternative, the Fisher Ideal index formula is adapted to use weights from pairs of adjacent benchmark years. (Benchmark years are used as weighting periods because, for components of GDP that incorporate information from the guinguennial economic censuses, the benchmark-year price and quantity estimates are considered to be more accurate than those for other years.) For each pair of benchmark years and for the interval between them, two fixedweighted quantity indexes are computed: One with the prices of the first benchmark year as weights, and the other with the prices of the second benchmark year as weights. The geometric mean of these indexes is the benchmark-yearsweighted quantity index. For example, for each year between the benchmark years of 1982 and 1987, the benchmark-years-weighted quantity index is the geometric mean of the fixed-weighted quantity index that uses 1982 prices as weights and the fixed-weighted quantity index that uses 1987 prices as weights.⁷ For years beyond the most recent benchmark year, the benchmarkyears-weighted quantity index is calculated as the geometric mean of the fixed-weighted quantity

^{5.} A Fisher Ideal quantity index is the geometric mean of a Laspeyres and a Paasche quantity index. The Laspeyres quantity index uses the prices of the first of the two periods being compared to weight quantities. The Paasche quantity index uses the prices of the second period. Given that the Fisher Ideal index is a geometric mean, the change in the Fisher Ideal index falls between the changes in the Paasche and Laspeyres indexes.

^{6.} For example, if the percent change from year 1 to year 2 is 4.0 percent and from year 2 to year 3 is 5.0 percent, the annual changes are chained together as follows: Year 1 = 1.00, year $2 = 1.00 \times 1.04$, and year $3 = 1.00 \times 1.04 \times 1.05$.

^{7.} Except for statistical and definitional revisions, the former index corresponds to the fixed-weighted GDP measure used before the comprehensive revision in 1991. The latter index is the presently featured fixed-weighted GDP measure.

index that uses prices of the most recent benchmark year and the fixed-weighted quantity index that uses prices of the most recent year.⁸ Thus, at present, the index for years beyond 1987 is calculated using 1987 and 1991 prices. When prices for 1992—the next benchmark year—become available during the 1993 annual NIPA revision, the benchmark-years-weighted quantity index for the third quarter of 1987 forward will be recalculated using prices for 1987 and 1992. A year later, when prices for 1993 become available, the index will be extended to 1993 using 1992 prices as those of the most recent benchmark year and 1993 prices as those of the most recent year.

Quarterly alternative measures

The procedure for calculating the quarterly alternative measures is similar to that for the annual measures. For the chain-type annual-weighted index, the quarterly quantity indexes use the annual prices for adjacent years as weights. (Annual prices rather than quarterly prices are used as weights because annual prices are more stable and contain less statistical noise than quarterly prices.) The calculation of the quarterly values are "centered" between adjacent years—that is, price weights for year t-1 and year t provide the basis for calculating the quarterly values of the chain-type index for the third and fourth quarters of year t - 1 and for the first and second quarters of year t.

For the benchmark-years-weighted index, the quarterly quantity indexes use the annual prices for adjacent benchmark years as weights. These calculations are also centered—for example, the quarterly fixed-weighted quantity indexes that use 1982 and 1987 prices as weights are used to calculate the benchmark-years index from the third quarter of 1982 to the second quarter of 1987.

Because the calculation of the annual alternative measures is carried out in more detail than that for the quarterly measures, the quarterly measures are adjusted so that the annual average of the four quarterly values equals the corresponding annual measure. The number of detailed components in the quarterly and annual calculations is shown in table A.

Most recent estimates.—For the chain-type annual-weighted index, the most recent quarterly values are calculated using annual prices for only the most recently available year as weights. For the benchmark-years-weighted index, the most recent quarterly values are calculated using the annual prices for the most recent benchmark year and for the most recently available year as weights. Each year, when more recent annual prices become available, the index is recalculated for the period since the most recent benchmark year. Table B illustrates the approaches used for the two alternative indexes,

Table B.—Price Weights for Most Recent Estimates

Nore.—The solid vertical lines indicate points from which the quarterly estimates are "centered," as described in the text. The dotted vertical lines indicate quarters through which price weights introduced in a given annual NIPA revision extend. Annual revisions usually coincide with the release of estimates for the second quarter of the year. Therefore, the annual price weights introduced in an annual revision will be used only through the first quarter of the following year. Note that the price weights for recent years are subject to revision in subsequent annual NIPA revisions. 1. For clarification, consider the following two examples:

(a) For the chain-type annual-weighted index, following the annual NIPA revision in 1992, the estimates for the third quarter of 1990 through the second quarter of 1991 are calculated using price weights from 1990 and 1991.

(b) For the benchmark-years-weighted index, following the annual NIPA revision in 1994, the estimates for the third quarter of 1992 through the first quarter of 1995 will be calculated using price weights from 1992 (the most recent benchmark year) and 1993 (the most recently available year).

^{8.} In the context of the alternative measures, prices of the most recent year refer to estimates prepared in the annual NIPA revision. They do not refer to earlier, preliminary annual estimates that incorporate the current quarterly estimates for the third and fourth quarters of the year. Thus, until the 1993 annual NIPA revision provides detailed 1992 estimates, the most recent annual estimates are those for 1991.

Table C.—Fixed-Weighted and Alternative Quantity Indexes for Gross Domestic Product and Percent Change from Preceding Period

including a modification to the above scheme for the benchmark-years-weighted index that is necessary in the benchmark and following year.

Comparison of the quarterly real GDP measures

The trends in the quarterly real GDP measures reflect those in the annual measures that were described in the April 1992 SURVEY article. From the business cycle peak in the first quarter of 1960 to 1987, the alternative indexes increase 14 to 16 percent more than the featured measure: The fixed-weighted index increases 129.9 percent, the chain-type annual-weighted index increases 147.5 percent, and the benchmark-years-weighted index increases 150.0 percent. In contrast, from 1987 to the fourth quarter of 1992, the alternative indexes increase 3 percent less than the featured measure: The fixed-weighted index increases 9.9 percent, and both alternative indexes increase 9.6 percent. Over the complete period from the first quarter of 1960 to the fourth quarter of 1992, the alternative indexes increase 12 to 14 percent more than the fixed-weighted index: The fixed-weighted index increases 152.6 percent, the chain-type index increases 171.3 percent, and the benchmark-years index increases 174.0 percent.

The largest differences between the quarterly changes in the alternative indexes and those in the fixed-weighted index are more than 2.0 percentage points at an annual rate (table C). In the 1960's, such differences occurred in one or both of the alternatives in four quarters. In the 1970's, such differences occurred in three quarters. In the fourth quarter of 1973, the difference was 3.2 percentage points for the chain-type index. After 1984, there are no differences larger than 1.0 percentage point.

An analysis of the sources of the differences between changes in the fixed-weighted index and changes in the alternative indexes requires further work. It is clear, however, that changes in the prices and quantities of computers and peripheral equipment are a major source of the differences over both long periods and from quarter to quarter. The output of computers and peripheral equipment has increased much more rapidly than that of other components of GDP, and computer prices have declined very rapidly. As a result, the output of computers received a higher valuation in the alternative indexes, which reflect the higher prices in earlier years, than in the fixedweighted index, which reflects the relatively lower price in 1987. The effect of the higher valuation of computers in the alternative indexes is largest in producers' durable equipment. Also affected are

personal consumption expenditures, government purchases, exports, and imports.

Cyclical comparisons.—The timing of the business cycle peaks and troughs in real GDP is the same for the alternative indexes as for the fixed-weighted index.

The alternative indexes are particularly useful for measuring the amplitude of business cycle contractions and expansions. Generally, the amplitudes of cyclical contractions and expansions in earlier years have been reduced as the fixedweighted measure has been rebased to a more recent year in each subsequent comprehensive revision. This phenomenon has occurred because the prices of the components of real GDP that are cyclically sensitive tend either to decline or to increase more slowly than the prices of the components that are not, with the consequence that the weight of the cyclically sensitive components-including computers and peripheral equipment-has become smaller in each rebasing.

Table D shows the amplitudes of cyclical contractions and expansions measured with the fixed-weighted index and the alternative indexes. In 1960 and in 1969–70, the cyclical contractions in the alternative indexes are about twice as large as those in the fixed-weighted index. In the 1973–75 contraction, the alternative indexes decline somewhat more than the fixed-weighted index. However, in 1980, the expected pattern does not hold, and in 1981–82, the results are

mixed. In each of the complete expansions, the alternative indexes increase at a faster rate than the fixed-weighted index.

In the current business cycle, the differences between the fixed-weighted index and the alternative indexes are small. The chain-type annual-weighted index decreases somewhat less than the other indexes in the contraction following the peak in the second quarter of 1990. Both alternative indexes increase somewhat less than the fixed-weighted index following the trough in the first quarter of 1991. In the fourth quarter of 1992, the fixed-weighted index was up 1.8 percent from the second-quarter 1990 peak; the chain-type index was up 1.6 percent, and the benchmark-years index was up 1.7 percent.

GDP Price Measures

The featured measure of GDP prices is the GDP price index with 1987 quantity weights. The two alternative measures of GDP prices are the *chain-type annual-weighted price index* and the *benchmark-years-weighted price index*. On both a quarterly and an annual basis, these price indexes are analogues to the alternative quantity indexes, with the variables for price and quantity simply reversed in the index formulas.

The fixed-weighted price indexes for several components of GDP—producers' durable equipment, exports, and imports—and for total GDP and other aggregates containing these components are not shown in the NIPA tables for years before 1982, because the use of the relative quantity structure in 1987 to measure price change for those years is inappropriate. Before 1982, the combination of the high level and very rapid decline of the price index for computers and the large 1987 quantity weight for computers results in either declines or very small increases in the fixed-weighted price indexes for these series.⁹

The quarterly alternative GDP price indexes are like the corresponding quantity indexes in that they increase more rapidly than the fixedweighted index before 1987 and less rapidly after 1987. From the first quarter of 1982 to 1987, the alternative indexes increase 5 percent more than the fixed-weighted index: The fixed-weighted index increases 19.9 percent, the chain-type annualweighted index increases 20.8 percent, and the benchmark-years-weighted index increases 20.9 percent. From 1987 to the fourth quarter of 1992, the alternative indexes increase 1 to 3 percent less than the fixed-weighted index: The fixed-weighted index increases 22.8 percent, the chain-type index increases 22.2 percent, and the benchmark-years index increases 22.5 percent. The largest differences between the quarterly changes in the alternative indexes and those in the fixed-weighted index are between 0.5 and 1.0 percentage point at an annual rate (table E).

Tables 1 and 2 follow.

^{9.} Rates of change in the annual fixed-weighted GDP price index for periods before 1982 are shown for illustrative purposes in tables C and D in the article in the April 1992 SURVEY.

State and Local Government Fiscal Position in 1992

By David F. Sullivan

T HE SURPLUS of State and local governments measured on a national income and product accounts (NIPA) basis was \$15.5 billion in 1992, \$1.6 billion less than in 1991 (table 1, chart 1). This slight deterioration in the overall fiscal position was the result of a \$2.8 billion decrease in the surplus of social insurance funds and a \$1.1 billion decrease in the "other funds" deficit.

The slight improvement in the "other funds" deficit in 1992 resulted from an acceleration in receipts along with a deceleration in expenditures. In 1991, the "other funds" deficit had increased \$10.2 billion as a result of decelerations in both receipts and expenditures. Although the "other funds" deficit improved slightly in 1992, its level remained high; the deficit in 1992 was exceeded only by that in 1991.

Receipts

State and local government receipts increased 7.7 percent in 1992, 1.0 percentage point more than in 1991 (table 2). Federal grants-in-aid increased 12.8 percent in 1992, 3.1 percentage points less than in 1991. General own-source receipts—that is, receipts excluding contributions for social insurance and Federal grants-in-aid—increased 6.6 percent in 1992, 2.1 percentage points more than in 1991. Personal, corporate, and indirect business taxes all contributed to the acceleration, reflecting the effects of a pickup in economic activity on personal income, corporate income, and retail sales, the tax bases of major State

Table 1.—State and Local Government Receipts, Expenditures, and Surplus or Deficit, NIPA Basis [Billions of dollars]

	1988	1989	1990	1991	1992
Receipts	631.3	681.5	729.3	777.9	837.8
Expenditures	593.0	636.7	699.2	760.7	822.3
Surplus or deficit ()	38.4	44.8	30.1	17.1	15.5
Social insurance funds	56.8	62.3	63.0	60.3	57.5
Other funds	-18.4	-17.5	-32.9	-43.1	-42.0

NOTE-The estimates for 1991 and 1992 are in table 3.3 of the "Selected NIPA Tables" in this issue; the estimates for 1988-90 are in table 3.3 in "National Income and Product Accounts Tables" in the July 1992 SURVEY OF CURRENT BUSINESS. and local taxes. Legislation also increased taxes, particularly personal income and sales taxes, in both years. Excluding the effects of tax legislation, general own-source receipts would have increased only 5.5 percent in 1992 and 2.9 percent in 1991.

Personal tax and nontax receipts increased 5.4 percent in 1992 after a 4.8-percent increase. The acceleration was more than accounted for by personal income taxes, which increased 5.0 percent after increasing 4.0 percent. Personal income and, thus, taxes were boosted by the pickup in economic activity. Personal income increased 4.8 percent after increasing 3.5 percent (dollar levels are found in table 2.1 of the "Selected NIPA Tables" in this issue). Legislative actions added an estimated \$3.1 billion to income taxes in 1992 after having added \$4.0 billion in 1991. Excluding these actions, income taxes

CHART 1

State and Local Government Surplus or Deficit, NIPA Basis

would have increased only 2.3 percent in 1992 and 0.3 percent in 1991. Personal tax and nontax payments excluding income taxes decelerated in 1992.

Corporate profits tax accruals increased 17.1 percent in 1992, following 3 years of decline. The upturn reflected the effects of the pickup in economic activity on corporate profits before tax, which increased 11.2 percent in 1992, following a 5.8-percent decrease in 1991 (dollar levels are found in table 1.14 of the "Selected NIPA Tables").

Indirect business tax and nontax accruals increased 6.5 percent in 1992, up from a 5.0-percent increase in 1991. The acceleration was accounted for by sales taxes, which increased 6.3 percent after a 3.0-percent increase. Legislative actions added less-about \$4.0 billion-to sales taxes in 1992 than they had-\$4.8 billion-in 1991. Excluding these actions, sales taxes would have increased 4.5 percent in 1992 and 0.4 percent in 1991. Property taxes decelerated slightly to a 7.6-percent increase in 1992 from a 7.9-percent increase in 1991. "Other" indirect business tax and nontax accruals increased 2.5 percent in 1992, the same as in 1991. Among these taxes, severance taxes-that is, taxes imposed on the extraction of natural resources-decreased 4.3 percent after a o.8-percent decrease. Excluding severance taxes, "other" indirect business tax and nontax accruals

increased 3.6 percent in 1992 and 3.0 percent in 1991.¹

Contributions for social insurance increased 5.1 percent in 1992, down from a 5.7-percent increase in 1991. The deceleration reflected a slowdown in wages and salaries of State and local government employees.

Federal grants-in-aid decelerated in 1992, following a sharp acceleration in 1991; they increased 12.8 percent in 1992, 15.9 percent in 1991, and 11.9 percent in 1990. Despite the deceleration in 1992, Federal grants-in-aid has been one of the fastest growing components of receipts in recent years; its share of total receipts increased from 17.3 percent in 1989 to 20.6 percent in 1992. The 1992 deceleration in Federal grants-in-aid was more than accounted for by grants for medicaid, which increased 21.0 percent, down from a 32.4-percent increase in 1991. These large increases may be partly traceable to new financing mechanisms used by States. Under the medicaid program, Federal grants to States depend partly on the payments made by States on behalf of indigents to providers of medical services, drugs, and other medical supplies. In recent years, a number of States have used donations and taxes paid by providers of medical services to increase

^{1.} The detailed estimates of indirect business tax and nontax accruals for 1988–91 are shown in table 3.5 of the "National Income and Product Accounts Tables" in the July 1992 SURVEY OF CURRENT BUSINESS.

Table 2.--State and Local Government Receipts, NIPA Basis

1. Estimates of the effect on receipts of law changes are calculated as follows. For changes of which BEA is aware (hence the use of "selected" in the line title in the table), the estimate is of the amount of the change over the 12-month period after the change is introduced. For personal taxes, the change is introduced when the tax is paid/refunded or when withholding is changed. For indirect business taxes, the change is introduced to coincide with the transaction affected. The calculations are made by monits for personal taxes and nontaxes (because they are used to prepare monthly estimates of disposable personal income) and by quarters for other taxes. Two characteristics of the resulting estimates should be noted. First, aggregation of the monthly or quarterly estimates to calendar years may give results that appear anomalous. For quarters, an increase in receipts by the amount of the 12-month yield in the third quarter of that

year and a decrease by the same amount in the third quarter of the following year, and (b) for calendar years, an increase in receipts by the amount of the 12-month yield divided by 2 in the year that the increase takes place, no change in receipts in the following year, and a decrease by the amount of the 12-month yield divided by 2 in the year after that (i.e., 2 years after the increase). Second, a law change after July, which is the beginning of the fiscal year for many States, would have more impact on receipts of the next calendar year than on those of the calendar year in which it occurs.

The effects of tax law changes excluded from receipts to derive the addenda items in the table are the effects of the changes beginning with those introduced in 1987. The 12-month effects, recorded for calendar years as described above, are cumulated. the States' payments under the medicaid program and, thus, the Federal grants.² Grants excluding medicaid increased 8.0 percent in 1992, about the same as in 1991.

Expenditures

State and local government expenditures decelerated in 1992 for the second consecutive year; expenditures increased 8.1 percent in 1992, 8.8 percent in 1991, and 9.8 percent in 1990 (table 3). The two largest components of expenditures, purchases and transfer payments, both decelerated in 1992.

Purchases.—Purchases increased 3.5 percent in 1992, down from a 4.3-percent increase in 1991; the deceleration reflected continuing efforts of many governments to improve their fiscal position. Compensation of employees decelerated in 1992, and "other" purchases decreased after a small increase. In contrast, purchases of structures accelerated sharply in 1992.

Compensation of employees increased 4.4 percent in 1992, down from a 5.9-percent increase in 1991. Most of the deceleration reflects slower growth in compensation per employee, which increased 3.4 percent, following a 4.7-percent increase. Full-time equivalent employment for State and local general government increased 1.0 percent, following a 1.1-percent increase. The 1992 increase in employment was the smallest since 1983.

"Other" purchases decreased 2.6 percent in 1992 after a 0.6-percent increase in 1991; these purchases grew at an average annual rate of 6.6 percent from 1986 to 1990. The 1992 decrease reflected, in part, a substantial increase in State and local government receipts from the sales of goods and services, which are treated in the NIPA's as deductions from government purchases.³ Government sales have increased at double-digit rates every year since 1988. Purchases of services other than employee compensation decreased 16.2 percent in 1992 and 9.2 percent in 1991, reflecting, in part, substantial increases in receipts from the two largest components of government sales-tuition and related educational charges and health and hospital charges. Purchases of nondurable goods increased 0.9 percent after a 3.5-percent increase, and durable goods increased 1.8 percent after a 4.3-percent increase.

Purchases of structures increased 7.4 percent, the largest increase since 1986, following a 1.7-percent increase in 1991. The acceleration was mainly attributable to highway construction,

^{3.} For a description of the NIPA treatment of government sales of goods and services, see Robert P. Parker, "A Preview of the Comprehensive Revision of the National Income and Product Accounts: Definitional and Classificational Changes," SURVEY, 71 (September 1991): 24. Estimates of gross purchases and sales of services for 1988–91 are shown in table 3.98 of the "National Income and Product Accounts Tables" in the July 1992 SURVEY.

Table 3.—State and Local Government Expenditures, NIPA Basis

^{2.} Federal legislation was passed in 1991 to regulate the State use of donations and taxes paid by providers of medical services to finance State medicaid payments, but the details of the legislation's implementation remain unsettled.

March 1993 • 45

which increased \$2.8 billion (10.1 percent), following a \$1.2 billion (4.0-percent) decrease in 1992. It was partly attributable to the construction of electric and transit facilities, of hospitals, and of "other" buildings (such as prisons and offices) and to miscellaneous nonbuilding construction (such as parks, airports, gas utilities, and parking facilities). Construction of housing decreased.

Measured in constant (1987) dollars, State and local government purchases increased 1.7 percent in 1992, following a 1.2-percent increase in 1991 (table 4). Among the components of State and local government purchases, compensation of employees increased 0.8 percent after a 1.1percent increase, and structures increased 8.6 percent after a 0.8-percent increase. "Other" purchases increased 0.1 percent after a 1.6-percent increase, reflecting slowdowns in most categories.

Transfer payments to persons.—Transfer payments to persons increased 18.0 percent in 1992, following a 20.2-percent increase in 1991. The largest category of transfer payments, medical care, continued to grow at a very high rate, 27.2 percent, following a 32.4-percent increase. Transfer payments excluding medical care increased 8.5 percent, following a 9.9-percent increase. Among other large categories of transfer payments, aid to families with dependent children decelerated sharply, and government pensions increased about the same in 1992 as in 1991.⁴

Other expenditures.—Net interest paid increased more in 1992 than in 1991. Interest paid deceler-

4. The detailed estimates of government transfer payments to persons for 1988–91 are shown in table 3.12 of the "National Income and Product Accounts Tables" in the July 1992 SURVEY. ated again, and interest received decreased more in 1992 than in 1991. These changes reflected the low level of interest rates during the year. New borrowing increased during the year, mostly for refinancing existing debt at lower interest rates. Dividends received, primarily by State and local government pension funds, increased 5.2 percent in 1992, about the same as in 1991.

Outlook for fiscal position in 1993

A major factor in the outlook for the State and local government fiscal position in 1993 will be the pace of economic activity. This discussion assumes 3.0-percent year-over-year growth in real gross domestic product in 1993, somewhat higher than the 2.1-percent growth in 1992.

Total receipts are likely to increase about \$65-\$70 billion, to about \$905-\$910 billion, in 1993. Despite the assumed pickup in economic activity, tax and nontax receipts are likely to increase at about the same rate as in 1992, because tax law changes are expected to have little effect in 1993. (This conclusion assumes that no further tax law changes will become effective in 1993; State and local governments are likely to change tax laws during the year, but such changes are difficult to predict.) Tax legislation already enacted is likely to result in a slight reduction in personal income taxes and a slight increase in sales taxes; legislation added \$3.1 billion and \$4.0 billion to these taxes, respectively, in 1992. Excluding the effects of tax law changes, personal income taxes and sales taxes are likely to accelerate along with economic activity in 1993. Assuming a considerably smaller increase in corporate profits tax accruals in 1993 than in 1992 and a continuing slowdown

Table 4.—State and Local Government Purchases

1. For a discussion of these indexes, see "Alternative Measures of Change in Real Output and Prices, Quarterly Estimates for 1959-92" in this issue.

NOTE .- The constant-dollar estimates for 1991 and 1992 are in table 3.8B of the "Selected

NIPA Tables" in this issue: the estimates for 1988-90 are in table 3.8B in "National Income and Product Accounts Tables" in the July 1992 SURVEY OF CURRENT BUSINESS.

in property tax accruals, general own-source receipts are likely to increase slightly less than in 1992.

Another large increase in Federal grants-in-aid is expected in 1993, as indicated by the budgetary statement transmitted to Congress in early January 1993. In February, President Clinton proposed a supplemental appropriations bill that, if adopted, would further raise these grants-inaid in 1993. Contributions for social insurance are assumed to increase at about the same rate as in 1992.

Total expenditures are likely to increase about \$65-\$70 billion, to about \$890-\$895 billion, in 1993. Purchases are likely to accelerate slightly. Evidence from proposed State and local government budgets suggests a slight acceleration in compensation of employees and a slight upswing in "other" purchases. As noted earlier, the small increase in compensation of employees and the decrease in "other" purchases in 1992 were unusual. Based on increases in new borrowing by State and local governments in 1992 and on expected increases in Federal grants for capital purposes in 1993, purchases of structures are likely to increase again in 1993, though at a slower rate than in 1992. In particular, highway construction is likely to increase, as the President's economic plan proposes additional grants for highway construction. Transfer payments are likely to increase somewhat less in 1993 than in 1992. The largest component of transfer payments, payments for medical care, is likely to register another large increase. The other categories of expenditures are assumed to increase at about the same rate as in 1992.

The changes in receipts and expenditures discussed earlier in this section would result in a NIPA surplus in the \$10-\$15 billion range. The social insurance funds surplus is again likely to decrease \$2-\$3 billion, and the "other funds" deficit is likely to remain in the \$40-\$45 billion range.

Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, Plans for 1993

By Mahnaz Fahim-Nader

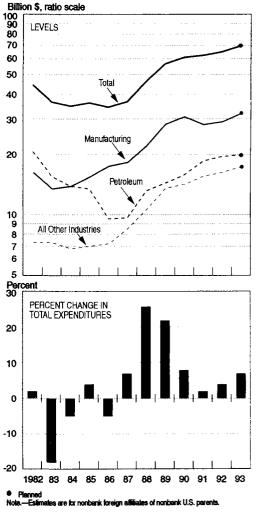

Laura A. Downey prepared the estimates of expenditures, using computer programs designed by Jane M. Fry. Arnold Gilbert designed the programs for adjusting the expenditure estimates for 1983-88 to incorporate information from the 1989 benchmark survey of U.S. direct investment abroad.

 $\mathcal{M}^{AJORITY-OWNED FOREIGN}$ affiliates of U.S. companies (MOFA's) plan to increase capital expenditures 7 percent in 1993, to \$70.2 billion (table 1, chart 1).¹ If realized, the increase will be somewhat above the 4-percent increase in MOFA capital spending in 1992, but well below the 14-percent average annual growth in 1987–91. It is also above the 5-percent increase in domestic capital spending planned by all U.S. businesses for 1993.²

The increase in capital spending planned for 1993 is concentrated in Asia and Pacific, mainly in several newly industrialized countries, and in "Latin America and Other Western Hemisphere," particularly Mexico and Brazil. In these areas, domestic markets have grown rapidly in recent years, and increased capital spending may be prompted largely by a need for expanded capacity to serve local markets.³ The availability of raw materials or relatively inexpensive labor may also have played a role, particularly for affiliates producing mainly for export. The planned 1993 growth in spending is moderated by sluggish spending in Canada and Europe, where business conditions remain generally weak. Nonetheless, because of their large local markets and predominant position in the

CHART 1

U.S. Department of Commerce, Bureau of Economic Analysis

^{1.} Capital expenditures estimates are for majority-owned nonbank foreign affiliates of nonbank U.S. parents. (An affiliate is majority-owned when the combined ownership of all U.S. parents exceeds 50 percent.) Capital expenditures include all expenditures that are charged to capital accounts and are made to acquire, add to, or improve property, plant, and equipment. For affiliates engaged in natural resource exploration and development, they also include those exploration and development expenditures that are expensed on the books of the affiliates. Capital expenditures are measured on a gross basis; sales and other dispositions of fixed assets are not netted against them.

^{2.} The planned increase in capital spending by all U.S. businesses in 1993 is based on a survey conducted in October-November 1992 by the Census Bureau. Although the Census Bureau estimate covers all U.S. businesses rather than only U.S. parent companies, the available estimates of domestic capital spending of parent companies for 1982–90 are significantly correlated with spending by all U.S. businesses.

^{3.} Sales to local markets (i.e., sales within the country of the affiliate) account for a majority of the sales by MOFA's in these and other major geographic areas. In 1990, the most recent year for which data are available, local sales accounted for 72 percent of sales by MOFA's located in Asia and Pacific and for 67 percent of sales by MOFA's in "Latin America and Other Western Hemisphere." In comparison, local sales accounted for 64 percent of the sales by MOFA's in Europe and for 73 percent of sales by MOFA's in Canada. For more information on the destination of sales by MOFA's, see U.S. Department of Commerce, Bureau of Economic Analysis, U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates, Preliminary 1990 Estimates (Washington, DC: U.S. Government Printing Office, September 1992).

global economy, these and other highly developed countries continue to account for the bulk of affiliates' total capital spending. MOFA's located in (non-U.S.) member countries of the Organisation for Economic Co-operation and Development (OECD), for example, account for 73 percent of total planned capital expenditures by моға's in 1993.⁴

Valuation issues.—The estimates of capital spending by MOFA's are in current dollars; they are not adjusted for changes in prices in host countries or for changes in foreign exchange rates, both of which affect the relationship between changes in current-dollar spending and changes in the real volume of capital goods purchased by affiliates.

4. The OECD members are Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

In 1992, wholesale prices in major host countries increased an average of about 2 percent, and the U.S. dollar appreciated about 9 percent against the currencies of those countries.⁵ Inasmuch as dollar appreciation lowers the dollar value of a given amount of spending denominated in foreign currencies, these figures tend to suggest that growth in the real volume of spending in 1992 probably was significantly above the 4-percent increase in dollars. Similar information on prices and exchange rates for 1993 is not yet available; however, it can be noted that, in the first quarter of 1993, the dollar appreciated less than 1 percent against major host-country currencies.

5. Weighted by the value of the assets of MOFA's in 1990, the U.S. dollar appreciated 9 percent from yearend 1991 to yearend 1992 against the currencies of 21 countries that accounted for over 80 percent of affiliates' assets, and foreign-currency wholesale prices (or consumer prices when wholesale prices were unavailable) increased 2 percent.

Table 1.—Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, 1988–93

Less than 0.5 percent (±).

Based on BEA survey taken in December 1992.
 Based on BEA survey taken in June 1992.
 Prior to 1990, this line includes data only for the Federal Republic of Germany. Beginning in 1990, this line also includes the former German Democratic Republic (GDR). This change does not create a discontinuity in the data because, prior to 1991, there were no majority-owned affiliates of U.S. companies in the former GDR.

4. "International" affiliates are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-

drilling equipment.

Grilling equipment. 5. European Communities (12) comprises Belgium, Denmark, France, Germany, Greece, Ire-land, Italy, Luxembourg, Netherlands, Portugal, Spain, and the United Kingdom. 6. OPEC, the Organization of Petroleum Exporting Countries, comprises Algeria. Gabon, Indo-nesia, Iran, Iraq, Kuwait, Libya. Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezu-ela. Before January 1, 1993, Ecuador was also a member of OPEC; its data are included in this line through 1992.

Revisions for 1983–92

The estimates of capital spending by MOFA's for 1983–92 have been revised to incorporate information from the 1989 benchmark survey of U.S. direct investment abroad. In addition, the 1992 estimates have been revised to incorporate information from the latest survey of capital expenditures, which was conducted in December 1992. Estimates were revised upward for all years; the largest revision—11 percent—was for 1989 (table 2).

Benchmark survey information.-The 1989-92 estimates are now fully benchmarked to universe data from the 1989 benchmark survey of U.S. direct investment abroad.⁶ The estimates for 1989 were derived as the sum of data for the universe of affiliates reported in the benchmark survey. The 1990-92 estimates were derived as the sum of data for affiliates reported in the annual sample survey plus estimates for affiliates that were not reported. The latter group consists of affiliates that were below the threshold required for reporting or that should have been reported but were not. The estimates for nonreporting affiliates for these years were usually obtained by extrapolating the estimates or reported data for these affiliates from the preceding year on the basis of the movement of the reported sample data. In addition, the estimates were adjusted to reflect the exit of some affiliates from the MOFA universe (because they had been sold, liquidated, or merged or consolidated with another foreign affiliate).

Table 2.—Revisions to Capital Expenditures Estimates, 1983–92

* Less than 0.5 percent (±).

In order to avoid the discontinuity that otherwise would have occurred in 1989, the estimates for 1983–88, which remain benchmarked to (that is, extrapolated from) the 1982 benchmark survey, have been adjusted to incorporate information from the 1989 benchmark survey. The discontinuity would have occurred because of errors in extrapolation and because of changes in the survey universe during 1983–88 that were not known until processing of the 1989 benchmark survey was complete.

Plans for 1993

This section discusses 1993 capital spending plans for MOFA's and changes in spending from 1992 to 1993 by area and by industry. It should be noted that changes in spending may occur because of changes in spending by existing affiliates, the addition of spending by affiliates that have been newly established or acquired, or the elimination of affiliates that have been sold or liquidated. In the discussion, information from outside sources, mainly press reports, has been used to supplement BEA's survey data.

Area highlights

By area, affiliates in all major areas except "International" plan spending increases. As planned, spending will grow much faster in "Latin America and Other Western Hemisphere," Asia and Pacific, and the Middle East than in Europe and Canada.

In "Latin America and Other Western Hemisphere," affiliates plan to increase spending 22 percent in 1993, to \$7.6 billion, after a 14percent increase in 1992. Most of the increase is accounted for by affiliates in Mexico and Braziltwo of the largest economies in the area. In both countries, but especially in Brazil, affiliates have produced mainly for local markets; in 1990, local markets were the destination of 90 percent of Brazilian affiliates' sales and 70 percent of Mexican affiliates' sales. In Mexico, where a growing economy, liberalized rules for foreign direct investment, and the prospective free-trade agreement with the United States and Canada have produced a favorable investment climate, affiliates plan to boost spending 30 percent, to \$2.6 billion. Most of the increase is in manufacturing, particularly in transportation equipment and in chemicals and allied products. In transportation equipment, affiliates appear to be expanding capacity to serve export as well as domestic markets, both of which have grown rapidly in recent years.

^{6.} Revised estimates of capital expenditures for 1989–91 that incorporated preliminary information on newly identified affiliates from the 1989 benchmark SURVEY OF CURRENT BUSINESS. The 1989–92 capital expenditures estimates presented in this article are benchmarked to the final data from that survey and reflect exits from, as well as entries into, the direct investment universe by affiliates that were newly identified in the benchmark survey.

In chemicals, affiliates are probably expanding capacity mainly to serve local markets, which were the destination of more than 90 percent of the affiliates' sales in 1990. In Brazil, increases are planned in all manufacturing industries after decreases in 1992; the turnaround appears to be partly due to policies favorable to foreign trade and investment. Increases are particularly large in transportation equipment and rubber products (part of "other manufacturing"). In both industries, nearly 90 percent of affiliates' sales in 1990 were local.

Affiliates in some other Latin American countries also plan to increase spending in response to economic reforms, such as liberalized trade and investment regulations. In Argentina, affiliates in "other industries" and in manufacturing plan to increase spending. In Venezuela, affiliates in petroleum and in manufacturing plan increases. In Ecuador, affiliates in petroleum plan to double spending.

In Asia and Pacific, affiliates plan to increase spending 16 percent, to \$13.1 billion, after a 7percent increase. The planned increases are largely traceable to rapid economic growth in several newly industrialized countries, which has generated favorable markets for affiliates in all industries. In manufacturing, most of the increase is accounted for by affiliates in Japan and in the Republic of Korea, Singapore, Hong Kong, and Malaysia. Judging from the pattern of sales by destination in 1990, a large share of the spending in Japan is probably to service the domestic market (83 percent of sales by Japanese affiliates were local), whereas the spending in the newly industrialized countries is probably to service both domestic and export markets (for the four countries combined, 27 percent of sales were to local markets, 45 percent were to the United States, and 28 percent were to other foreign countries). Petroleum and mining affiliates have been attracted by host countries' reserves of natural resources and by the growing energy needs resulting from rapid economic growth.

By country, most of the increase in Asia and Pacific is accounted for by affiliates in Indonesia, Japan, Hong Kong, Thailand, China, and the Republic of Korea. In Indonesia, Thailand, and China, the largest increases are in petroleum. In Japan, the largest increases are in chemicals and in wholesale trade. In Hong Kong, affiliates in "other industries," particularly in public utilities, plan the largest increases. In the Republic of Korea, the largest increases are in electric and electronic equipment. In the Middle East, affiliates plan to increase spending 16 percent, to \$1.2 billion, after a 44-percent increase. Most of the increase is accounted for by Yemeni affiliates engaged in the exploration and development of petroleum and natural gas.

In Europe, affiliates plan to increase spending 2 percent, to \$38.6 billion, after a 6-percent increase. The small 1993 increase is the net result of large increases planned by affiliates in the Netherlands, Spain, and Ireland and of large decreases planned by affiliates in Germany and France. In the Netherlands, affiliates in chemicals and petroleum plan the largest increases. In Spain, the largest increases are planned by affiliates in transportation equipment. In Ireland, the largest increases are planned by affiliates in chemicals and "other manufacturing," particularly in medical instruments and supplies. In Germany, large decreases in spending are planned by affiliates in transportation equipment and in wholesale trade. In France, large decreases are planned by affiliates in paper products (part of "other manufacturing"). In the United Kingdom, affiliates plan to hold spending virtually constant, as a decline in petroleum is offset by increases in "other industries."

Some of the growth in capital spending by affiliates in Europe appears attributable to the recent market-oriented reforms in Eastern Europe. These reforms are encouraging parent companies to expand their European Communities (12) affiliates to service Eastern Europe and, increasingly, to establish production facilities in the region. The amount spent so far is small, though expenditures by affiliates in Eastern Europe have grown rapidly during the last 3 years and are expected to reach \$0.6 billion in 1993. In 1993, affiliates in "other manufacturing" and in "other industries" plan to more than triple spending. Most of the increase in "other manufacturing" is accounted for by producers of paper products in Poland and of tobacco products in the former Czechoslovakia; most of the increase in "other industries" is accounted for by retail trade affiliates in the former Czechoslovakia and Poland.⁷ Affiliates in petroleum-mainly in Russia-also plan increases.

In Canada, affiliates plan to increase spending 3 percent, to \$7.5 billion, after a 12-percent decrease. The largest increases are planned by

^{7.} In December 1992, when the BEA survey of capital spending was conducted, Czechoslovakia was a single country. On January 1, 1993, the former Czechoslovakia ceased to exist; it was succeeded by two independent States—the Czech Republic and Slovakia.

affiliates in "other industries," particularly in telecommunications.

Industry detail

Petroleum.—Petroleum affiliates plan to increase spending 2 percent in 1993, to \$20.0 billion, after a 6-percent increase in 1992. The planned 1993 increase is about in line with the 3-percent increase in domestic capital spending planned by U.S. petroleum companies.⁸ Although many U.S. multinational oil companies are maintaining an emphasis on overseas exploration and development, the continued weakness in oil prices—a consequence of the oil glut that has developed during the prolonged period of weak worldwide industrial activity—apparently is constraining growth in spending abroad.

By area, spending increases are planned in Asia and Pacific, the Middle East, and Africa. In Asia and Pacific, affiliates plan to increase spending 13 percent, to \$5.2 billion. As noted earlier, the increased spending in this area has been attracted by host countries' growing energy needs resulting from rapid economic growth in the newly industrialized countries and by the area's potentially large oil and gas reserves. The increases are particularly large in Indonesia and Thailand: In Indonesia, they are mainly for crude petroleum and natural gas exploration and production, and in Thailand, they are mainly for refinery expansions. A sizable spending increase is planned in China for the construction of a large natural gas extraction project. In the Middle East, the planned spending increase is mainly for the exploration and development of oil and gas reserves in Yemen. In Africa, the increase is mainly for exploration and development in Angola.

Spending decreases by affiliates in petroleum are planned in Europe and, to a much lesser extent, in Canada. In Europe, affiliates plan to decrease spending 5 percent, to \$9.4 billion, after a 3-percent increase. A large decrease in spending by affiliates in the United Kingdom more than offsets increases by affiliates in the Netherlands, Norway, and Germany. The spending decrease in the United Kingdom partly reflects project completions.

Manufacturing.—Manufacturing affiliates plan to increase spending 10 percent in 1993, to \$32.4 billion, after a 3-percent increase in 1992. The planned 1993 increase is above the 6-percent increase in domestic capital spending planned by all U.S. manufacturing companies excluding petroleum manufacturing.

By area, the largest increase in spending is expected to occur in Europe; increases are also expected in Mexico, Brazil, and several countries in Asia and Pacific. Spending is expected to remain virtually constant in Canada.

Increases in spending are planned in all major manufacturing industries except primary and fabricated metals. In chemicals, affiliates plan to increase spending 25 percent, to \$8.2 billion, after a 1-percent increase. Sizable increases by industrial chemical producers are expected in the Netherlands, Mexico, and Singapore. Large spending increases by manufacturers of drugs are planned in Belgium and the United Kingdom.

In "other manufacturing," affiliates plan to increase spending 11 percent, to \$6.5 billion, after a 16-percent increase. Major producers of consumer nondurables are planning sizable spending increases in Canada, Poland, and Ireland. These increases are partly offset by sizable decreases in Germany and France that reflect project completions by producers of paper products.

In nonelectrical machinery, affiliates plan to increase spending 10 percent, to \$4.1 billion, after an 18-percent decrease. Large spending increases by computer manufacturers are planned in the United Kingdom and Japan.

In electric and electronic equipment, affiliates plan to increase spending 6 percent, to \$2.7 billion, after a 7-percent decrease. Increases in spending by semiconductor producers in the Republic of Korea and by manufacturers of household appliances in Germany are partly offset by a decrease in spending by semiconductor producers in Japan.

In food and kindred products, affiliates plan to increase spending 5 percent, to \$3.2 billion, after a 3-percent increase. Most of the increase is accounted for by affiliates in Mexico and Australia.

In transportation equipment, affiliates plan to increase spending 1 percent, to \$6.6 billion, after a 17-percent increase. Increases in spending by affiliates in Mexico and Brazil are expected to offset decreases in spending by affiliates in Canada and Europe. In Mexico, spending appears to

^{8.} This figure is from the Census Bureau survey identified in footnote 2. Both the Census Bureau data and the BEA data for foreign affiliates are classified according to the primary activity of each company, but they differ in coverage. The Census Bureau data cover only companies primarily engaged in petroleum manufacturing, whereas BEA's data cover companies engaged in all phases of the industry—including not only manufacturing but also extraction and distribution. Nevertheless, the Census Bureau figure for petroleum manufacturing does include the large, integrated companies that account for much of the total activity in the domestic petroleum industry; thus, the figure probably would not be greatly affected if domestic spending by smaller, independent companies primarily engaged in extraction or other phases of the industry were included to make it more comparable with BEA's data for foreign affiliates.

have been stimulated by a growing auto market, more favorable government policies toward foreign investment, and the prospective free-trade agreement. In Brazil, affiliates are expanding capacity partly to serve growing auto markets in other Latin American countries. In Europe, spending is expected to decrease 2 percent, to \$4.3 billion, after a 10-percent increase. The decrease is more than accounted for by affiliates in Germany, where an economic slowdown has weakened sales. Spending increases are planned by affiliates in Spain and the United Kingdom. Outside Europe, spending decreases by affiliates in Canada appear to reflect both project completions and the deferral of spending until business conditions improve.

In primary and fabricated metals, affiliates plan to decrease spending 1 percent, to \$1.1 billion, after a 2-percent increase. In primary metals, spending decreases by affiliates in Canada partly reflect project completions; decreases in Chile partly reflect the scaling back of expansion projects.

All other industries.—In all other industries combined, affiliates plan to increase spending 7 percent in 1993, to \$17.7 billion, after a 4percent increase in 1992. In "other industries" mainly in public utilities, telecommunications, and mining—affiliates plan to increase spending 17 percent, to \$6.0 billion, after a 7-percent decrease.⁹ The largest increases are planned by affiliates in Hong Kong, Canada, Indonesia, and Chile. In Hong Kong, electric utility affiliates plan increases to construct power plants and related facilities. In Canada, affiliates in telecommunications plan increases. In Indonesia and Chile, affiliates in mining plan increases.

In finance (except banking), insurance, and real estate, affiliates plan to increase spending 8 percent, to \$3.1 billion, after an 11-percent increase. Most of the increase is accounted for by affiliates in Switzerland, Japan, and Canada.

In services, affiliates plan to increase spending 4 percent, to \$4.0 billion, after a 22-percent increase. About one-half of the increase is in the United Kingdom, where affiliates in computer processing and data preparation services are expanding capacity.

In wholesale trade, affiliates plan to decrease spending 2 percent, to \$4.7 billion, after a 1percent increase. The largest decrease is planned in Germany, where a soft-drink affiliate is scaling back its plans for expansion.

Tables 3.1 through 3.11 follow.

^{9. &}quot;Other industries" consists of agriculture, forestry, and fishing; mining; construction; transportation, communication, and public utilities; and retail trade.

U.S. DIRECT INVESTMENT ABROAD: 1989 Benchmark Survey, Final Results

This publication presents the final results from the latest benchmark survey, or census, of the worldwide operations of U.S. multinational companies. Benchmark surveys are BEA's most comprehensive surveys, both in terms of companies covered and information gathered.

The publication contains detailed 1989 data on the financial structure and overall operations of U.S. parent companies and their foreign affiliates. In the 263 tables organized by industry of parent or by country and industry of affiliate, you can find data on:

- · Balance sheets and income statements
- · Employment and employee compensation
- · Property, plant, and equipment
- Merchandise trade

Order Proces

- · Sales of goods and services
- · Research and development expenditures

This publication provides some of the most detailed information on U.S. multinational companies collected by the U.S. Government. Order your copy today!

These data are also available on diskette; for more information call BEA at (202) 523-0655.

U.S. DIRECT INVESTMENT ABROAD: Operations of U.S. Parent Companies and Their Foreign Affiliates

Preliminary 1990 Estimates

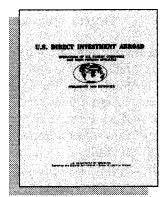

This new publication presents the preliminary results of BEA's 1990 annual survey of the worldwide operations of U.S. multinational companies. It provides an overview of the operations and financial structure of U.S. parent companies and their foreign affiliates. The tables in the publication, which are shown by country and/or by industry, present the following:

- Balance sheets and income statements
- Employment and employee compensation
- Property, plant, and equipment
- Merchandise trade
- Sales of goods and services
- Foreign income taxes

Order Processing Code:

YES, please send me the following:

U.S. International Transactions, Fourth Quarter and Year 1992

By Christopher L. Bach

Fourth Quarter 1992

T^{HE U.S.} current-account deficit increased to \$22.0 billion in the fourth quarter from \$15.8 billion (revised) in the third (table A).¹ Decreases in the surpluses on both services and investment income and an increase in net unilateral transfers more than offset a decrease in the deficit on merchandise trade.

In the capital account, U.S. residents slowed their acquisitions of foreign assets, while foreign residents stepped up their acquisitions of U.S. assets.

The following are highlights for the fourth quarter of 1992:

• The merchandise trade deficit fell in the fourth quarter as exports, led by a surge in

capital goods, increased more rapidly than imports.

- The surplus on service transactions returned to a normal level after being boosted in the previous quarter by exceptional transactions related to Hurricanes Andrew and Iniki.
- The surplus on investment income decreased, mostly as a result of continued economic weakness abroad, which pushed earnings on U.S. direct investment lower.
- Net unilateral transfers increased as a result of a bunching in U.S. Government grants to Israel.
- Net U.S. capital outflows decreased, but outflows into foreign securities strengthened.
- Net foreign capital inflows increased sharply, as inflows into U.S. securities picked up by very substantial amounts.
- Tensions in the European exchange markets prompted sizable activity in the foreign of-

^r Revised.
^p Preliminary

Quarterly estimates of U.S. current- and capital-account components are seasonally adjusted when significant seasonal patterns are present. The accompanying tables present both adjusted and unadjusted estimates.

ficial accounts within the quarter. Because many of the inflows and outflows were offsetting, however, there were only moderate net official capital inflows for the quarter.

U.S. dollar in exchange markets.—The U.S. dollar appreciated sharply in the fourth quarter, ris-

ing 10 percent on a trade-weighted basis against the currencies of 10 industrial countries and 7 percent against the currencies of 22 OECD countries plus 4 newly industrialized countries in Asia (table B, chart 1). Much of the appreciation against the European currencies occurred in October in response to the European currency crisis in September; the dollar was viewed as being safe from the uncertainties associated with the crisis. The dollar was particularly strong against the British pound and Italian lira, both of which had been withdrawn from the Exchange Rate Mechanism (ERM) in mid-September and promptly fell by substantial amounts.

In November and December, the dollar was supported by evidence that the U.S. economy might be growing more rapidly than previously thought and that downturns in industrial economies abroad were larger than expected. German authorities, who were reluctant to reduce interest rates further in spite of an economic downturn there, repeatedly stated their commitment to maintaining the existing relationship of the German mark to the French franc in order to maintain the narrow band of the ERM. Nonetheless, another currency crisis occurred, and several countries found it necessary to devalue within the ERM or to abandon their links to the European currency unit.

Current account

Merchandise trade.—The U.S. merchandise trade deficit decreased to \$26.0 billion in the fourth quarter from \$27.6 billion in the third.

Exports.—Merchandise exports increased \$4.3 billion, or 4 percent, to \$114.4 billion in the fourth quarter. Volume, measured in constant (1987) dollars, also increased 4 percent. Nonagricultural

 Currencies of 22 OECD countries—Australia, Austria, Belgium-Luxembourg, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom—plus Hong Kong, Republic of Korea, Singapore, and Taiwan. Data: U.S. Department of the Treasury. End-ol-month rates for months; averages of end-ol-month rates for quarters. Currencies of Belgium, Canada, France, Germany, Italy. Japan, Netherlands, Sweden, Switzerland, and United Kingdom. Data: Federal Reserve Board. Monthly and guarterly average rates. Index rebased by BEA.
 Data: Federal Reserve Board. Monthly and guarterly average rates. Indexes prepared by BEA. exports accounted for the increase in current dollars; agricultural exports changed little.

Nonagricultural exports increased \$4.3 billion, or 4 percent, to \$103.0 billion. Volume increased 5 percent. More than one-half of the increase in current dollars was in capital goods—completed civilian aircraft, telecommunications equipment, semiconductors, and computers, peripherals, and parts. Consumer goods and automotive products also increased strongly. A substantial increase in nonmonetary gold to Western Europe boosted industrial supplies and materials.

Agricultural exports decreased \$0.1 billion, or 1 percent, to \$11.4 billion, following an especially strong increase. Volume decreased 2 percent. Most major commodity categories changed little in current dollars from their high third-quarter levels. Soybeans, though down from an exceptionally strong third quarter, continued to be stimulated somewhat by their use as a substitute oil for rapeseeds, particularly in Western Europe, where rapeseeds were in short supply. Exports of wheat increased worldwide; however, they fell off sharply to the Commonwealth of Independent States (CIS) when U.S. Government credit guarantees and shipments were suspended in mid-December because the CIS fell behind on its debt repayments.²

Imports.—Merchandise imports increased \$2.6 billion, or 2 percent, to \$140.3 billion in the fourth quarter. Volume, measured in constant (1987) dollars, increased 3 percent. Nonpetroleum imports more than accounted for the increase in current dollars; petroleum imports decreased.

Nonpetroleum imports increased \$3.1 billion, or 3 percent, to \$126.6 billion. Volume increased 3 percent. In current dollars, the increase in capital goods was much smaller than in the third quarter, as computer shipments were off sharply. An increase in nonpetroleum industrial supplies and materials was more than accounted for by a jump in nonmonetary gold imports from Western Europe. Automotive products were boosted by a sharp increase in cars from Japan and Western Europe. Consumer goods decreased after an exceptionally strong increase in the third quarter.

Petroleum imports decreased \$0.5 billion, or 4 percent, to \$13.7 billion. Both prices and volume decreased. The average price per barrel decreased to \$17.93 from \$18.56. The average number of barrels imported daily decreased to 8.39 million from 8.42 million. Consumption and domestic production increased, and inventories decreased.

Services.—Net service receipts were \$12.9 billion in the fourth quarter, compared with \$15.7 billion in the third.

Transfers under U.S. military agency sales contracts were down slightly to \$2.5 billion. U.S. direct defense expenditures abroad were down slightly to \$3.1 billion.

Foreign visitors spent \$14.0 billion in the United States, up 3 percent. Receipts from overseas increased 3 percent to \$10.2 billion; receipts from Canada decreased 10 percent to \$2.0 billion; and receipts from Mexico increased 22 percent to \$1.8 billion. U.S. travelers spent \$11.0 billion in foreign countries, a 1-percent increase. Payments for overseas travel were unchanged at \$8.7 billion; payments to Canada decreased 5 percent to \$0.8 billion; and payments to Mexico increased 9 percent to \$1.4 billion.

Passenger fare receipts increased 7 percent to \$4.4 billion, and passenger fare payments decreased 2 percent to \$2.9 billion.

Transportation receipts increased slightly to \$6.3 billion. Port expenditure receipts were boosted by higher ocean port receipts, and freight receipts were boosted by higher revenues of air carriers resulting from higher export tonnage. Transportation payments decreased slightly to \$5.9 billion. Port expenditure payments decreased as nearly all major U.S. airlines reported lower port costs abroad; the decrease would have been larger except for a significant pickup in export and import freight tonnage. Freight payments were unchanged.

Receipts from foreigners for other private services decreased \$0.3 billion, to \$12.7 billion. Payments to foreigners for other private services increased \$2.9 billion, to \$7.4 billion; payments had been depressed in the third quarter by large losses recovered from foreign reinsurers for the damage caused by Hurricanes Andrew and Iniki. (Payments for insurance are recorded net of losses recovered.) Losses recovered returned to a normal level in the fourth quarter.

Investment income.—Net receipts of investment income were \$0.8 billion in the fourth quarter, compared with \$3.0 billion in the third.

Direct investment income.—Income receipts on U.S. direct investment abroad decreased to \$11.2 billion from \$12.5 billion; a drop in earnings of manufacturing affiliates more than accounted for the decrease.

^{2.} The Commonwealth of Independent States comprises the republics of the former Soviet Union excluding the Baltic republics (Estonia, Latvia, and Lithuania): Armenia, Azerbaijan, Byelarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

Income payments on foreign direct investment in the United States shifted to small losses from profits of \$0.2 billion as a result of larger operating losses.

Portfolio investment income.—Receipts of income on other private investment increased slightly to \$12.7 billion. Payments of income on other private investment were \$14.7 billion, compared with \$14.1 billion, as a result of higher payments on large foreign purchases of U.S. bonds in recent quarters.

Receipts of income on U.S. Government assets dropped to \$1.4 billion from \$2.0 billion. Payments of income on U.S. Government liabilities were unchanged at \$9.8 billion.

Unilateral transfers.—Unilateral transfers were net payments of \$9.8 billion in the fourth quarter, compared with net payments of \$6.9 billion in the third.

U.S. Government grants were \$5.7 billion, up from \$2.5 billion. The step-up was due to the recurring fourth-quarter distribution of cash to Israel (\$1.2 billion), which is drawn completely in the first quarter of the U.S. Government's fiscal year as soon as funds are appropriated by Congress, and to additional funds (\$1.8 billion) disbursed to Israel under the credit waiver program to finance military purchases. Grants include an estimate for small amounts disbursed to support relief efforts in Somalia.

Capital account

Net recorded capital inflows—that is, net changes in U.S. assets abroad less net changes in foreign assets in the United States—increased to \$13.8 billion in the fourth quarter from \$0.7 billion in the third. Foreign residents stepped up their acquisitions of U.S. assets, and U.S. residents slowed their acquisitions of foreign assets.

U.S. assets abroad.—U.S. assets abroad increased \$18.5 billion in the fourth quarter, compared with an increase of \$21.2 billion in the third.

U.S. official reserve assets.—U.S. official reserve assets decreased \$1.5 billion in the fourth quarter, mostly as a result of a decline in foreign currency holdings of German marks from off-market activities. Transactions included an offsetting transfer of \$3.0 billion from the special drawing rights account to the U.S. reserve position in the International Monetary Fund (IMF) account for payment of the U.S. share of the IMF quota increase in early December. U.S. Government assets other than official reserve assets.—U.S. Government assets other than official reserve assets increased \$0.3 billion in the fourth quarter, the same amount as in the third. Neither debt reschedulings nor repayments had a significant impact on transactions in the fourth quarter; they had only a minor impact in the third.

Claims reported by banks.—Claims on foreigners reported by U.S. banks decreased \$6.8 billion in the fourth quarter, in contrast to a \$1.3 billion increase in the third. Although an increase in interbank claims payable in dollars indicated some pickup in lending by U.S. banks in the fourth quarter, reductions in other claims were more than offsetting.

Banks' own claims payable in dollars increased \$9.9 billion, following a \$26.4 billion decrease. This was the first quarterly rise in interbank lending in 1992, but the rise was limited by weak economic activity abroad, including weak yearend demand. Increases in claims on banks in Western Europe, Caribbean banking centers, and "other" Asia were partly offset by further cutbacks in claims on banks in Japan. Some of the rise in claims may have been prompted by the sharp appreciation of the dollar in October, as well as by tensions among European currencies in November.

Banks' domestic customers' claims payable in dollars decreased \$6.8 billion after a surge of \$13.3 billion, as U.S. money market mutual funds sharply reduced their holdings of Eurodollar certificates of deposit.

Banks' claims payable in foreign currencies decreased \$10.5 billion, as large third-quarter borrowings were repaid.

Foreign securities.—Net U.S. purchases of foreign securities increased to a record \$17.8 billion in the fourth quarter, a \$3.9 billion increase over the previous record in the third quarter. The surge was paced by record net purchases of foreign stocks and continued strong net purchases of foreign bonds.

Net U.S. purchases of foreign stocks reached a record \$11.8 billion, with heavy investments in Western Europe, especially the United Kingdom. Heavy demand for foreign equities was augmented by a large volume of foreign new issues placed in the U.S. market. Net purchases from Western Europe totaled \$7.5 billion, up \$1.1 billion, despite concerns over weak economic activity in many European countries. Partly because of this interest, British stock prices jumped 14 percent in the quarter. Purchases in France and the Netherlands were down. Purchases in Japan also fell, as the Japanese stock market gained only marginally amidst political crises that delayed implementation of key fiscal stimulus programs. Towards the end of the quarter, the Japanese Government announced a policy that propped up stock prices with intervention purchases by large pension funds.

New foreign bond issues in the United States remained heavy at \$7.6 billion, the highest quarterly total since the first quarter of 1990, when a large Latin American debt rescheduling boosted new issues. Western European issues reached record quarterly levels.

Transactions in outstanding foreign bonds were about in balance, with net purchases offsetting net sales. Net purchases of British gilt-edged securities soared \$8.0 billion, to \$9.3 billion, reflecting optimism that the recession was ending and that the British economy would fare better now that the tie of the pound to the currencies in the Exchange Rate Mechanism had been eliminated. Net sales occurred in other major markets, mainly Germany and Japan. Net sales also occurred in the Caribbean and "other" Asia.

Direct investment.—Net capital outflows for U.S. direct investment abroad increased to \$8.8 billion in the fourth quarter from outflows of \$3.5 billion in the third. Increases in net equity capital outflows and reinvested earnings outflows were about equal; intercompany debt shifted to net outflows from net inflows.

Foreign assets in the United States.—Foreign assets in the United States increased \$32.3 billion in the fourth quarter, compared with an increase of \$22.0 billion in the third. Foreign official assets.—Foreign official assets increased \$5.5 billion, in contrast to a decrease of \$7.3 billion (table C). A substantial volume of activity occurred within the quarter, as Western European monetary authorities first rebuilt reserve positions in October and then drew heavily on positions in November to finance heavy sales of dollars and to restrain the dollar's appreciation against the German mark.

Liabilities reported by banks.—U.S. liabilities to foreigners reported by U.S. banks, excluding U.S. Treasury securities, decreased \$3.2 billion in the fourth quarter, compared with a \$22.9 billion increase in the third. Borrowing from abroad by foreign-owned banks in the United States picked up, but this increase was more than offset by other reductions in borrowings.

Liabilities of foreign-owned banks increased \$10.5 billion, partly to fund U.S. loan expansion; in contrast, liabilities of U.S.-owned banks decreased \$4.0 billion. Not all of the inflows to foreign-owned banks were for loan expansion. Large interbank inflows from France, Italy, and other European countries, as well as Caribbean offices, occurred in October and November as a result of tensions between the French franc and German mark. Most of the reductions in liabilities were with Caribbean offices and Japan.

Banks' own liabilities payable in foreign currencies decreased \$12.7 billion, roughly paralleling the closing out of foreign currency asset positions in the quarter.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were a record \$20.7 billion in the fourth quarter, up from \$4.9 billion in the third. Demand was particularly strong from the United Kingdom in November, a time of instability among European currencies, and from

Preliminary

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.
 Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.

Caribbean financial centers. Demand was also strong from Japan, as it had been throughout the year.

Other U.S. securities.—Net foreign purchases of securities other than U.S. Treasury securities surged to \$12.3 billion in the fourth quarter, a fourfold increase from net purchases of \$2.7 billion in the third. Foreign demand for U.S. securities was boosted by the strength of the dollar in exchange markets and signs that the U.S. economic expansion was accelerating. Much of the increase was in U.S. stocks, which shifted to net purchases of \$3.9 billion from net sales of \$4.0 billion. Gross trading in U.S. stocks picked up 20 percent.

Transactions in outstanding bonds shifted to net sales of \$2.5 billion from net purchases of \$0.7 billion. Foreign demand was weak as investors shifted to U.S. stocks and agency bonds. Agency bonds surged to net purchases of \$6.1 billion from \$0.5 billion; fourth-quarter purchases were mainly by Japanese, British, and Latin American investors.

New bond issues abroad by U.S. corporations decreased \$0.7 billion, to \$4.8 billion, but remained moderately strong as the Euromarket calmed following volatility in the third quarter. Issues placed by nonbank financial corporations remained strong, but those of banking corporations were off sharply. The German mark emerged as the preferred European currency following the collapse of the European currency unit sector of the bond market and the liberalization of Bundesbank rules regarding bond issuance.

Direct investment.—Net capital outflows for foreign direct investment in the United States were \$3.0 billion in the fourth quarter, compared with \$2.6 billion in the third. A decrease in net equity capital inflows and a decrease in net intercompany debt outflows were about offsetting.

The Year 1992

The merchandise trade deficit increased in 1992; merchandise imports moved sharply higher in response to the gradual pickup in the U.S. economy, while merchandise exports again slowed, restrained by weak economic activity abroad. The surplus on service transactions increased, although the rise in the surplus was smaller than in 1991. The surplus on investment income decreased, largely because income on foreign direct investment in the United States shifted to small net profits from losses. Net unilateral transfers, which had held down the current-account deficit in 1991 because of sizable cash contributions from abroad, returned to a normal level.

Net capital outflows into foreign assets were significantly smaller in 1992 than in 1991 because of a large reduction in U.S. banks' claims on foreigners. Net outflows into foreign securities remained strong.

Net capital inflows into U.S. assets were substantially larger in 1992 than in 1991; inflows to U.S. banks resumed, but much of the step-up was the result of very large inflows into U.S. securities, both private and official. There were substantial net inflows into the foreign official accounts.

U.S. dollar in exchange markets.-The U.S. dollar fluctuated widely in 1992, rising strongly in the first and fourth guarters and dropping sharply in the second and third. On a Decemberto-December trade-weighted basis, the dollar appreciated 6 percent against the currencies of 10 industrial countries (table B, chart 1). The dollar appreciated 1 percent against most continental European currencies, but it appreciated 20 percent against the British pound and 18 percent against the Italian lira, partly as a result of those countries' withdrawals from the Exchange Rate Mechanism (ERM). The U.S. dollar appreciated 11 percent against the Canadian dollar and depreciated 3 percent against the Japanese yen.

Appreciation of the dollar against the European currencies during the first quarter of 1992 was supported partly by growing evidence of economic recovery in the United States, which contrasted with the moderating performance of overseas economies. A narrowing of interest-rate differentials also supported the dollar, as foreign rates fell slightly more rapidly than U.S. rates (charts 2 and 3). This narrowing attracted foreign investors into long-term U.S. assets, especially corporate bonds.

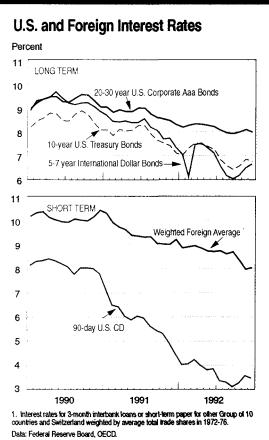

When expectations of U.S. growth were tempered during the second quarter, the dollar depreciated. In addition, steep declines in both short-term and long-term U.S. interest rates to their lowest levels in 20 years increased already wide interest-rate differentials against dollar assets. In contrast, interest rates rose further in Germany, as monetary authorities there continued to be concerned about the high costs of unification, high wage settlements and inflation, and a money supply that was rising more rapidly than anticipated. Considerable strains began to develop in the exchange markets between Germany and other European countries whose economies were much less robust than the German economy.

By July, prospects for a significant pickup in the U.S. economy were very uncertain. This uncertainty was influential in pushing the dollar lower in exchange markets. In addition, interestrate differentials against dollar-denominated assets widened further, as U.S. interest rates fell faster than European rates. In response to slow U.S. economic growth, the Federal Reserve eased monetary policy, and market participants expected further easing in policy in the absence of indicators of a stronger recovery.

In the meantime, evidence accumulated that industrial countries abroad, including Germany and Japan, were experiencing substantial slowdowns in economic growth. In spite of the slowdown, German authorities tightened monetary policy in mid-July. Concerted central bank intervention on two occasions in August did little to interrupt the dollar's decline, which approached 1991 lows against the German mark by the end of the month.

During September, pressures against the dollar ceased temporarily as most attention focused

CHART 2

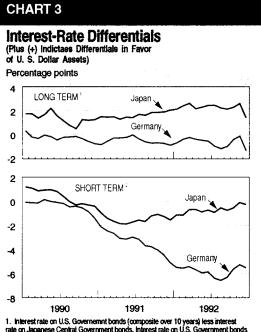

U.S. Department of Commerce, Bureau of Economic Analysis

on the mark and its relationship to other currencies in the ERM and on the relationship among the currencies linked to the ERM through the European currency unit (ECU). Market participants lost confidence in the current relationships among currencies when disparities in interest rates and monetary policies became significant and when substantial reservations arose over the desirability of rapid monetary unification. Consequently, a currency crisis ensued, leading to coordinated European central bank interventions of unprecedented size, large changes in interestrate differentials within Europe, a small cut in German official interest rates, two currency realignments, and the suspension of the British pound and the Italian lira from the ERM. The French franc came under pressure but stabilized amid intervention purchases of francs and a temporary sharp rise in French interest rates.

In October, the dollar appreciated strongly as investors sought refuge from the European currencies and the uncertainties associated with them. The European currency situation was temporarily calm in October, partly in response to Germany's willingness to let market interest rates fall significantly in late September, which in turn led to substantial declines in other European interest rates.

In November, however, another crisis in confidence occurred, particularly over the relationship

1. Interest rate on U.S. Governemnt bonds (composite over 10 years) less interest rate on Japanese Central Government bonds. Interest rate on U.S. Government bonds (composite over 10 years) less interest rate on German 7-15 year public sector bonds. Data OECD.

2. Interest rate on 90-day Eurodoltar deposits less Japanese CD rate .Interest rate on 90-day Eurodotar deposits less German interbank rate. Data: Federal Reserve Board.

U.S. Department of Commerce, Bureau of Economic Analysis

between the French franc and German mark. French authorities were forced to sharply raise short-term interest rates, and German authorities repeatedly stated their commitment to maintaining the existing relationship of the French franc to the German mark in order to maintain the narrow band of the ERM. Several countries devalued within the ERM, and others abandoned their currency's link to the ECU.

The dollar was supported in November and December by evidence that the U.S. economy was growing faster than had been expected as recently as midsummer, by the perception that the incoming administration would pursue a policy of fiscal stimulus, and by a sharp boost in confidence that the economic recovery would be more rapid in the coming months.

Fluctuations of the dollar against the Japanese yen for the year were narrower than those against the German mark and European currencies, especially in the fourth quarter, when the dollar appreciated much less against the Japanese yen than against the European currencies. The Japanese economy slowed sharply over the year, Japanese stock and real estate values fell precipitously, and the differential between U.S. and Japanese shortterm rates fell from 112 basis points against the holding of U.S. dollar assets at the beginning of the year to 26 basis points against dollar assets at yearend.

The U.S. dollar appreciated significantly against the Canadian dollar, which was held down by weak economic activity in Canada, the steep decline in Canadian interest rates, and uncertainties preceding the late October referendum on constitutional reform. When the Canadian dollar's decline accelerated in the last 4 months of the year, Canadian authorities sharply increased Canadian short-term interest rates. In December, a major program to reduce government spending was announced. Against the currencies of the newly industrialized countries in Asia, the U.S. dollar appreciated 4 percent against the South Korean won. In contrast, it depreciated 1 percent against the Taiwan dollar and was unchanged against the Hong Kong dollar and the Singapore dollar.

Current account

The U.S. current-account deficit increased to \$62.4 billion in 1992 from \$3.7 billion in 1991. Cash contributions from coalition partners in Operation Desert Storm held down the currentaccount deficit in 1991, but no sizable contributions were received in 1992; as a result, U.S. Government grants and unilateral transfers returned to normal levels. The deficit on goods, services, and income, which does not include unilateral transfers, increased to \$31.1 billion from \$11.7 billion. The increase in the deficit was the result of an increase in the merchandise trade deficit and a decrease in the surplus on investment income; partly offsetting these developments was an increase in the surplus on services, but the increase was smaller than in 1991 (table D).

Merchandise trade.—The U.S. merchandise trade deficit increased to \$96.3 billion in 1992 from \$73.4 billion in 1991 (tables E and F). U.S. export growth again slowed, largely in response to the second successive year of weak growth in world trade and output. The slight depreciation of the dollar on average (measured on a trade-weighted year-over-year basis) had little stimulative effect on exports in 1992. U.S. import growth, which had been severely limited by weak U.S. economic activity in 1991, accelerated by a substantial amount, particularly in the last half of the year, when U.S. economic activity picked up appreciably.

P Preliminary

74 • March 1993

The continued weakness in real demand and output abroad had a significant impact on U.S. trade in 1992. Output slowed sharply in Germany and Japan, grew little in Canada and the United Kingdom, and slowed somewhat in many of the other continental European countries and in many developing countries, including Mexico. The growth in U.S. real gross domestic product recovered from -1.2 percent in 1991 to 2.1 percent in 1992. Although the U.S. recovery was significantly slower than other post-World War II recoveries, it did serve as a source of export growth for many industrial and developing countries at a time when their domestic outputs were lagging.

Price changes in exports and imports by major end-use categories were not uniform in 1992 (table G). Domestic prices of exports were mixed, rising for automotive goods, consumer goods (nonfood), and capital goods excluding computers, and declining for industrial supplies and materials. As in the previous year, domestic price increases were held down by slow growth. When converted into foreign currency prices, price increases of all export categories were slightly less, as a small depreciation of the dollar (measured on a trade-weighted year-over-year basis) offset some of the increase in domestic prices (table H).

Dollar prices of most imports increased less rapidly than in the previous year, with the exception of consumer goods, which increased more rapidly. A decline in prices of industrial supplies and materials excluding petroleum reflected a small decline in metals prices; other nonfood commodity prices leveled in world markets. Prices of capital goods other than computers and aircraft were unchanged. Petroleum prices declined 4 percent.

^r Revised.
^p Preliminary

Exports.—Nonagricultural exports increased \$19.5 billion, or 5 percent, to \$395.3 billion in 1992, compared with an 8-percent increase in 1991. Volume increased 7 percent, following a 9-percent increase. Expansion slowed significantly for capital goods and for industrial supplies and materials but increased for automotive products and consumer goods (chart 4). Three-fourths of the export growth was to developing countries in Asia and Latin America.

Capital goods increased \$9.8 billion, or 6 percent, to \$176.8 billion, compared with an increase of 9 percent. Volume also increased 6 percent, compared with an increase of 9 percent. The slowdown in value was attributable to a drop in exports of aircraft and parts from an especially strong pace in 1991.

Aircraft and parts to Western Europe, particularly Germany, Belgium, Luxembourg, and

P Preliminary

NOTE.—Fixed-weighted price indexes multiplied by trade-weighted exchange rate index of the currencies of 22 OECD countries and 4 newly industrialized countries in the Far East. France declined substantially, mostly as a result of declines in economic activity and increased competition. These declines were only partly offset by a significant jump in aircraft and parts to China and Latin America.

Excluding aircraft and parts, capital goods increased at nearly the same pace as a year earlier, with the increases led by the same categories that have been the source of growth for the past several years—computers, peripherals, and parts; semiconductors; and telecommunications equipment. Computers increased at the same pace in both years, with the source of growth coming from Latin America, the newly industrialized countries in Asia (NIC's), and "other" Asia. Shipments of computers to the major markets of Western Europe, Japan, and Canada were unchanged in 1992, as they were in 1991, as a result of weak economic activity in those areas. Semiconductors increased significantly faster

CHART 4

Growth in U.S. Merchandise Nonpetroleum Exports and Imports 1987=100

U.S. Department of Commerce, Bureau of Economic Analysis

than a year earlier to major markets in the NIC's and "other" Asia. Telecommunications equipment also picked up significantly, particularly to "other" Asia, Mexico, and Canada.

Machine tools and metalworking machinery contributed to export growth for the first time in several years; the growth was to Mexico, but shipments remained depressed to the larger markets of Western Europe and Japan due to weak economic activity there.

Nonagricultural industrial supplies and materials decreased \$0.2 billion, or less than 1 percent, to \$101.6 billion, compared with an increase of 5 percent. Volume increased 2 percent, compared with a 7-percent increase. Exports of paper and paper-base products increased for the seventh consecutive year to major markets in Canada, Western Europe, Mexico, and the NIC's. Building materials also increased. Chemicals declined to industrial countries, but declines were also registered in the developing countries of Asia and China. Nonferrous metals were off sharply; however, nonmonetary gold increased sharply with substantial shipments to Western Europe, Mexico, and the NIC's, mostly in the fourth quarter. Energy products were also off sharply.

Automotive products increased \$6.6 billion, or 17 percent, to \$46.7 billion, compared with a 10percent increase. Volume increased 14 percent, compared with a 7-percent increase.

Parts continue to account for much of the expansion in automotive trade (table I). A significant increase in parts to Canada was the first in 3 years. A strong increase in parts to Mexico reflects substantial expansion of assembly opera-

tions there over the past decade; many assemblies are subsequently shipped to the United States. The increase in both Canadian and Mexican operations in 1992 was partly in response to a 2-percent increase in domestic auto sales, the first increase since 1988.

Passenger cars to Taiwan increased sharply, and those to Japan increased moderately.

Consumer goods (nonfood) increased \$4.4 billion, or 10 percent, to \$50.4 billion, compared with a 7-percent increase. Volume increased 6 percent, compared with a 4-percent increase. Much of the step-up was to Mexico and other countries in Latin America, where U.S. exports of consumer goods have risen rapidly over the past several years. Exports to Western Europe and Japan were held down by weak economic activity there, and along with exports to the NIC's, were essentially unchanged.

Agricultural exports increased \$3.8 billion, or 10 percent, to a record \$43.9 billion in 1992, compared with a decrease of less than 1 percent in 1991. Volume increased 12 percent, compared with an increase of 1 percent.

Wheat increased \$1.2 billion, largely to the Commonwealth of Independent States (CIS), Japan, and the developing countries in Africa. Exports to the CIS were boosted substantially throughout much of the year by credit guarantees extended by the U.S. Government. However, in mid-December, credit guarantees and shipments were halted when the CIS fell behind on its debt repayments. Corn to the CIS dropped by a substantial one-half, but this drop was offset by a sharp increase to developing countries in Africa.

Preliminary

Soybeans increased \$0.4 billion, largely to Western Europe and Latin America. The U.S. soybean crop was 9 percent larger than in 1991, and stepped-up exports were used in part to offset shortages in rapeseed harvests in Western Europe and Canada. This was the second consecutive year of strong increases in soybeans.

Meat and poultry products increased \$0.6 billion to a record, largely to Japan, Mexico, and the NIC's. Exports of these products have tripled in the past 6 years, partly as a result of initiatives to open new markets. Vegetables, fruits, and nuts increased \$0.4 billion.

Imports.---Nonpetroleum imports increased \$45.9 billion, or 10 percent, to \$484.2 billion in 1992, compared with an increase of 1 percent in 1991. Volume increased 13 percent, compared with a 1-percent increase. The jump in both value and volume was the result of a substantial step-up in both consumer goods (nonfood) and capital goods in response to the pickup in U.S. economic activity. Industrial supplies and automotive products shifted to increases from decreases, also as a result of the pickup in economic activity (chart 4). Industrial and developing countries each accounted for about one-half of the increase in total imports. China accounted for a sharply higher share of imports from Asia.

Consumer goods (nonfood) increased \$15.0 billion, or 14 percent, to \$123.0 billion, following a 3-percent increase. Volume increased 11 percent, following a 2-percent increase. Most of the stepup in consumer goods was from China and other developing countries in Asia and in Latin America, reflecting both cyclical and long-run trends. China now accounts for 16 percent of consumer goods imports, up from 14 percent in 1991 and just 4 percent in 1986. Much of this increase in China's share has come at the expense of the NIC'S. In 1987, the NIC'S supplied 52 percent of nondurable consumer goods, and China 9 percent; in 1992, the NIC's supplied only 30 percent, and China 22 percent. In 1987, the NIC's supplied 35 percent of durable consumer goods, and China 10 percent; in 1992, the NIC's supplied 22 percent, and China 15 percent.

Television, video receivers, and stereo equipment, largely from Japan and the NIC's, were up significantly for the first time in several years.

Capital goods increased \$13.7 billion, or 11 percent, to \$134.4 billion, following a 4-percent increase. Volume increased 22 percent, following a 9-percent increase. The two categories that contributed most to the increase in 1992 also accounted for most of the 1991 increase—

computers, parts, and peripherals; and semiconductors. In 1992, computers and parts increased from Japan and the NIC's. Semiconductors increased from major markets in "other" Asia, the NIC's, and Japan. Although imports of telecommunications equipment from Japan and the NIC's remain large, these countries have been partly replaced in recent years by other suppliers in Asia, including Malaysia, China, Thailand, and the Philippines.

Machine tools and metalworking machinery fell in 1992, mostly from key suppliers in Japan and Germany. Civilian aircraft and parts slowed.

Nonpetroleum industrial supplies and materials increased \$7.5 billion, or 9 percent, to \$88.4 billion, following a 2-percent decrease. Volume increased 8 percent, following a 3-percent decrease. The step-up was in chemicals, building materials, nonmonetary gold, and iron and steel products. Chemicals rose from all major areas, with substantial increases from Canada, Western Europe, and Japan. The increase in building materials was largely from Canada and Mexico, with Canada accounting for over four-fifths of the step-up in lumber and wood (largely the result of a pickup in private home construction). The increase in nonmonetary gold was largely the result of a surge from Western Europe in the fourth quarter. The increase in iron and steel products was the first in several years; it was mostly from Canada, Japan, and the NIC's. Voluntary restraint agreements between the United States and 29 countries expired in March, ending all restrictions on U.S. imports of iron and steel mill products; however, this had little effect on imports, as most exports to the United States remained below the old ceilings throughout the remainder of the year, reflecting weak U.S. prices and competitive foreign markets.

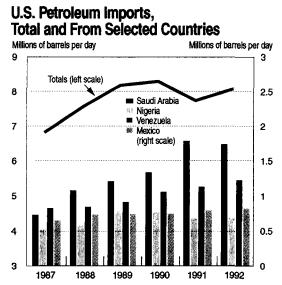

Automotive products increased \$6.3 billion, or 7 percent, to \$91.2 billion, following a decrease of 3 percent. Volume increased 4 percent, following a decrease of 6 percent.

Automotive parts increased 13 percent as a result of increases from Canada (13 percent), Mexico (27 percent), and Japan (10 percent). Japan's share of parts imports has remained steady in recent years, while Canada's share has declined at the expense of a larger share from Mexico, where assembly operations have expanded (table I). The 1991–92 pickup in parts imports was the largest since the pickup in 1987–88.

Passenger cars increased slightly, as increases from Canada, Mexico, and Germany more than offset decreases from Japan and South Korea. In 1992, sales of domestic nameplates rose 3 percent, the first annual increase since 1988. Sales of Japanese transplants and imports declined 2 percent. The market share of domestic nameplates increased to 57.5 percent, while the Japanese share, including imports and transplants, dropped slightly to 34.4 percent.

Petroleum imports increased \$0.2 billion, or less than 1 percent, to \$51.4 billion in 1992, compared with a decrease of 18 percent in 1991. A

P Preliminary. 1. Includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990. In earlier periods, the German Democratic Republic is included in Eastern Europe. decrease in price offset an increase in volume. The average price per barrel fell to \$17.37—the lowest level since 1989—from \$18.13. Volume increased 5 percent—to 8.1 million barrels per day from 7.7 million—but remained 3 percent below the 1990 peak. The volume increase in 1992 was the result of only a gradual pickup in the U.S. economy from recession levels in late 1990 and early 1991.

U.S. supplies of petroleum and products remained plentiful relative to demand during 1992, despite the continued U.N. ban on imports from Iraq. Although the volume of imports from OPEC members was unchanged, OPEC's share of U.S. imports declined to 53 percent from 55 percent. The volume of imports from Venezuela increased 8 percent, raising its share of imports to 15 per-

CHART 6

Growth in U.S. Merchandise Exports and Imports by Selected Areas and Countries

1987=100

cent, compared with 11 percent in 1988. The volume of imports from Saudi Arabia decreased 3 percent (chart 5).

U.S. consumption of petroleum increased to 17.02 million barrels per day from 16.71 million. Domestic production and inventories decreased. Imports as a percentage of consumption increased to 48 percent from 46 percent.

Balances by area.—Capital goods imports from Western Europe and Japan and consumer goods from Asia accounted for much of the rise in total imports in 1992. Capital goods exports to Latin America (mostly Mexico) and Asia accounted for most of the rise in total exports in 1992; exports of capital goods and industrial supplies to Western Europe and Japan were lower (tables J and K, and chart 6).

The surplus with Western Europe decreased to \$3.0 billion from \$14.9 billion. Nearly all the decrease was the result of substantial increases in imports of industrial supplies and materials, capital goods, and consumer goods; exports fell.

The deficit with developing countries in Asia increased to \$45.0 billion from \$34.5 billion. The rise in imports was due to the substantial stepup in consumer goods from China and in capital goods from Taiwan, Singapore, and Malaysia; a rise in exports of capital goods to China and Taiwan was partly offsetting. The deficit with the NIC's changed little.

The deficit with Japan increased to \$50.0 billion from \$44.3 billion, mostly the result of a stepup in capital goods imports, mainly computers and semiconductors, and industrial supplies and materials, mainly chemicals; exports decreased slightly.

The surplus with Latin America and Other Western Hemisphere increased to \$6.2 billion from \$0.3 billion. Most of the increase was the

P Preliminary.

result of higher U.S. exports to Mexico of capital goods and industrial supplies and materials. The balance on automotive products with Mexico was about unchanged.

Services.—Net service receipts were \$55.1 billion in 1992, compared with \$45.3 billion in 1991 (table L).

Transfers under U.S. military agency contracts were \$10.9 billion in 1992, compared with \$10.7 billion in 1991. Transfers increased significantly to the Middle East, mostly Egypt, Israel, and Saudi Arabia, but they declined by an equal amount to Western Europe. Transfers to Kuwait for reconstruction also increased.

Direct defense expenditures abroad were \$13.4 billion in 1992, down from \$16.2 billion in 1991 and \$17.7 billion in 1990. The decline is the result of a U.S. Government decision to scale back U.S. military operations abroad, particularly in Western Europe, beginning in mid-1990. The early impacts of this decision were felt in 1991, and the cutbacks were accelerated in 1992. The impacts are evident across all major expenditure categories, but the largest are in personnel expenditures abroad and petroleum purchases. (Expenditures, particularly for petroleum, were boosted temporarily early in 1991 as a result of Operation Desert Storm.)

Foreign visitors spent \$54.7 billion for travel in the United States, up 12 percent; receipts also rose 12 percent in 1991. Travel receipts from overseas were \$40.3 billion, up 17 percent, following an increase of 12 percent. Larger receipts from Western Europe accounted for about two-thirds of the step-up in 1992, and receipts from Japan for about one-tenth. Receipts from Canada de-

1. Consists of goods and services transferred under U.S. military agency sales contracts less imports of goods and services by U.S. defense agencies.

creased 2 percent to \$8.3 billion; in contrast, they had increased 20 percent in 1991. The number of auto travelers, the largest component, decreased 4 percent; it was down especially sharply—17 percent—in the fourth quarter. Receipts from Mexico increased 6 percent to \$6.1 billion, as the number of visitors to the interior increased 8 percent.

U.S. travel payments increased to \$43.5 billion, up 18 percent, following a 1-percent decrease. Travel expenditures overseas increased 24 percent to \$34.7 billion; the number of travelers is estimated to have increased 11 percent, following a 5-percent decrease. (In 1991, travel to all areas, but especially Western Europe and Japan, was severely curtailed by uncertainties created by the Persian Gulf War in the first quarter; travel recovered only slowly throughout the remainder of the year.) Because only partial data are available, these estimates on overseas travel are subject to larger-than-normal amounts of revision. Payments to Canada decreased 3 percent to \$3.6 billion, largely because the amount of same-day automotive travel dropped. Payments to Mexico increased 2 percent to \$5.2 billion, as the number of travelers to the border area increased 5 percent.

Passenger fare receipts from foreign visitors traveling on U.S.-flag carriers increased 8 percent to \$16.9 billion, up from a 3-percent increase last year. Passenger fare payments from U.S. residents traveling on foreign transocean carriers increased 11 percent to \$11.8 billion after no change the year before.

Other transportation receipts were \$24.7 billion, up \$1.0 billion. A \$1.1 billion jump in port expenditure receipts more than offset a \$0.1 billion decrease in freight receipts.

The jump in port expenditure receipts reflected higher air port and ocean port expenditures. Air port expenditures increased \$0.8 billion, reflecting a recovery in passenger traffic from the depressed 1991 level brought about by the Persian Gulf War and higher export and import tonnage carried by foreign airlines. Ocean port expenditures increased \$0.3 billion, but stable import and export tonnage carried by foreign-flag vessels and a 5-percent decline in the price of bunker fuel held the gain in check.

Freight receipts decreased slightly. Receipts from air carriers continued to grow, while receipts from ocean carriers decreased because of a sharp drop in U.S. Government agricultural shipments.

Other transportation payments were \$23.4 billion, just slightly higher than last year. An increase in port expenditure payments was offset by a drop in freight payments.

Port expenditure payments increased \$0.3 billion as a result of increased expenses associated with the jump in passenger traffic and increased export and import tonnage carried by U.S. air carriers. The increase was limited by a decline in the cost of jet fuel and a general slowing of price increases in key countries abroad.

Freight payments fell for the second consecutive year, decreasing \$0.3 billion. A decrease in ocean freight payments resulted from lower freight rates in liner and tanker services and from excess capacity, more than offsetting a significant increase in petroleum and nonpetroleum import tonnage carried by foreign-flag vessels.

Net receipts from foreigners for other private services were \$26.2 billion, compared with \$21.3 billion. Among transactions with unaffiliated foreigners, net receipts for education increased 14 percent, a little faster than last year. Net payments for telecommunications were slightly higher. Net receipts for business, professional, and technical services also increased, as receipts increased more than in payments. Net receipts from the sale of financial services declined; a step-up in transactions on foreign exchanges resulted in higher payments to foreign securities brokers. Net receipts on primary and reinsurance transactions included large losses recovered from foreign reinsurers for the damage caused by Hurricanes Andrew and Iniki in late August and mid-September. (The full amount of these losses is recorded when the disasters occurred, rather

than when claims are presented to the insurance company.)

Investment income.—Net receipts of investment income were \$10.1 billion in 1992, compared with \$16.4 billion in 1991 (table L).

Direct investment income.—Income receipts on U.S. direct investment abroad edged up to \$49.6 billion in 1992 (table M). Earnings of petroleum affiliates were down 16 percent; the decrease was due to the absence of the profits that affiliates earned in the first quarter of 1991 as a result of price increases associated with the Persian Gulf War and to weak economic activity in industrial countries abroad. Earnings of manufacturing affiliates were off 8 percent, also reflecting weak economic activity. Earnings in "other" industries were up 13 percent, largely because of improved earnings of banking affiliates.

Income payments on foreign direct investment in the United States shifted to \$0.4 billion in profits in 1992 from \$3.7 billion in losses in 1991. Operating losses decreased to \$5.9 billion from \$11.6 billion, more than accounting for the shift. The reduction in operating losses, which was relatively widespread, may have been loosely related to the gradual pickup in economic activity in the United States, particularly for chemical and banking affiliates.

Portfolio investment income.—Receipts of income on other private investment tumbled \$14.9 billion in 1992, to \$53.1 billion (table N). Interest receipts on bank claims fell \$11.6 billion because of the continued decline of U.S. interest rates

^{*} Revised.
^{*} Preliminary

charged to foreign customers on their loans; for the year, average interest rates fell more than 225 basis points. Income receipts on foreign securities held by U.S. residents increased \$2.4 billion as a result of strong acquisitions of both bonds and stocks.

Receipts of income on U.S. Government assets were \$6.4 billion, down from \$8.1 billion. Most of the decline reflected the absence of \$1.1 billion in interest that had been rescheduled in 1991 (table O). In addition, interest receipts declined because of lower earnings on holdings of foreign currencies.

Payments of income on other private investment dropped \$13.8 billion, to \$59.8 billion. Interest payments on bank liabilities fell \$12.9 billion as a result of the decline in interest rates paid on U.S. bank deposits. Interest payments on foreign-held U.S. bonds increased \$1.5 bil-

NOTE .- Excludes direct investment income receipts and payments.

lion because of continued strength in foreign acquisitions.

Payments of income on U.S. Government liabilities were virtually unchanged at \$38.9 billion, as the decline in interest rates was offset by an increase in foreign holdings.

Unilateral transfers.—Unilateral transfers shifted to net payments of \$31.4 billion in 1992 from net receipts of \$8.0 billion in 1991. Nearly all of the shift was accounted for by U.S. Government grants.

U.S. Government grants were net payments of \$13.8 billion in 1992; in 1991, they were net receipts of \$24.5 billion as a result of large contributions to the U.S. Government from coalition partners in Operation Desert Storm (table O). Only \$0.2 billion remains in outstanding pledges from coalition partners.

Disbursements of grants for debt forgiveness were negligible, compared with an especially large total of \$5.2 billion.

Disbursements of grants other than those for debt forgiveness increased to \$5.8 billion from \$3.4 billion. Grants to Israel accounted for nearly all of the increase: Israel received funds under both the economic support program and under the waiver credit program to finance military purchases.

Private remittances and other transfers were \$13.8 billion, up from \$13.0 billion.

Revised P Preliminary bank claims were particularly large for Western Europe during the first three quarters. In the fourth quarter, the modest resumption in interbank lending to Western Europe was probably related to the turbulence of European currencies in the exchange markets and did not reflect any fundamental recovery in overall interbank activity. Interbank claims on Caribbean financial centers were curtailed in the third quarter, when U.S. banks sharply scaled back their interoffice operations there. Interbank claims on Japan were also sharply lower, as Japanese banks continued to withdraw from U.S. financial markets, both in reaction to a sharp economic slowdown in Japan and to sharp declines in Japanese asset values. This retrenchment was interrupted in the third quarter, when there was strong temporary demand for funds from banks in Japan to improve asset quality, to meet accounting requirements for the fiscal half-year close, and to meet credit demands in response to developments in the exchange markets among European currencies.

Banks' claims on foreign public borrowers were reduced \$5.4 billion by repayments. Banks' claims on other private foreigners increased \$13.1 billion, largely reflecting securities firms' lending to international investment funds in Caribbean banking centers through resale agreements.

Banks' claims payable in foreign currencies decreased \$9.8 billion. Large credit extensions in the third quarter were repaid in the fourth, and the reductions in the first quarter repaid credit extended in the fourth quarter of 1991. The temporary surge in demand for foreign currencies by Japan and Western Europe, part of which was related to the European currency crisis in September, was met by matched borrowing of currencies from abroad.

Banks' domestic customers' claims decreased \$4.0 billion, as U.S. money market mutual funds reduced their holdings of negotiable certificates of deposit issued by overseas branches of U.S. banks.

Foreign securities.—Net U.S. purchases of foreign securities were a record \$48.6 billion in 1992, \$3.6 billion higher than the 1991 record. This was the fourth successive year of record outflows. Net purchases of stocks increased to another record; net purchases of bonds were also stronger than in 1991 (table P).

Net U.S. purchases of foreign stocks were a record \$30.7 billion, just slightly above the 1991 record of \$30.2 billion. Investments were heaviest in Western Europe. U.S. investors stepped up their net purchases of British stocks to \$11.5 billion from \$9.4 billion in 1991, mostly in the second half of the year; strong net purchases helped boost British stock prices 14 percent in the fourth quarter after the pound was withdrawn from the Exchange Rate Mechanism. Net U.S. purchases of German stocks slowed to \$0.8 billion from \$1.5 billion in 1991. Prices in the German market fell over 16 percent early in the third quarter as a result of high interest rates, a strong German mark, and a sharp slowdown in economic activity; the lower prices encouraged some pickup in pur-

" Revised.

1. Excludes liabilities to foreign official agencies.

chases in the fourth quarter. Net purchases from Japan, a major source of strength in purchases in 1991, decreased sharply to \$4.5 billion from \$13.8 billion. Declining corporate profits contributed to a 22-percent decline in stock prices, all in the first half of the year, before prices recovered somewhat in the second half. New issues of foreign stock in the United States were strong in 1992; as in 1991, some of the strength came from privatizations of Mexican companies.

Foreign new bonds issued in the United States reached a record \$25.2 billion, up from \$21.0 billion in 1991. Low inflation and further substantial declines in U.S. long-term interest rates encouraged stepped-up demand, particularly in the second half of the year. Canadian new issues increased to \$10.4 billion from \$7.8 billion, as Canadian long-term rates were 200 basis points higher than U.S. rates in the first half of the year and 100 basis points higher in the second half. Western European issues increased to \$8.1 billion

Private foreign corporations placed \$12.6 billion, up 25 percent. Governments placed \$10.6 billion, up 42 percent.

Transactions in outstanding bonds, though resulting in only small net sales of \$0.8 billion, included very large and nearly offsetting transactions. Net purchases of \$12.6 billion from Western Europe were concentrated in the British long-term interest United Kingdom. rates, though declining sharply through most of the year, remained 150-200 basis points higher than comparable U.S. rates, thus offering attractive returns even after accounting for exchange rate risk; British gilt-edged securities were especially attractive. Net sales of bonds in Japan and the developing countries of Asia and Latin America slightly more than offset net purchases in Western Europe.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$35.3 billion in 1992, compared with \$27.1 billion in 1991 (table M).

Net equity capital outflows decreased to \$6.4 billion from \$11.7 billion; most of the decrease was to Western Europe, the result of a large sale of an affiliate to its foreign parents, and to Latin America, where there were several major acquisitions in 1991, but few in 1992.

Net intercompany debt shifted to outflows of \$9.9 billion from inflows of \$2.4 billion. Much of the shift was due to the absence of a large loan repayment to a U.S. parent, to the repayment of loans by U.S. parents to their affiliates in the Netherlands Antilles, and to new loans made by U.S. parents to automotive affiliates in Canada and to petroleum affiliates in the Pacific Rim.

Reinvested earnings increased to \$19.9 billion from \$18.9 billion. Lower reinvested earnings in Europe were more than offset by higher reinvested earnings in Latin America, especially Brazil, and in Australia.

Foreign assets in the United States.—Foreign assets in the United States increased \$120.4 billion in 1992, compared with an increase of \$67.0 billion in 1991.

Foreign official assets.-Foreign official assets in the United States increased \$40.3 billion in 1992, compared with an increase of \$18.4 billion (table C). Dollar assets of industrial countries increased \$16.0 billion. In the first half of the year, assets increased strongly, particularly in the second quarter when European monetary authorities, on occasion, purchased dollars in exchange markets. In the second half, assets were reduced by substantial amounts in September when European monetary authorities countered a crisis in their exchange markets. After reserve positions of European authorities were rebuilt in October, they were reduced sharply again in November to counter another currency crisis. At times during the fourth quarter, European authorities were substantial sellers of dollars against the German mark. Dollar assets of OPEC members increased \$5.4 billion. Dollar assets of other countries increased \$18.9 billion as a result of sizable inflows from Asia and Latin America in the first half.

Liabilities reported by banks.—U.S. liabilities to foreigners reported by U.S. banks, excluding U.S. Treasury securities, increased \$14.7 billion in 1992, in contrast to a \$13.7 billion decrease in 1991. Borrowing of funds from abroad was limited in the first half of the year but picked up in the second half, when foreign-owned banks in the United States borrowed to fund some U.S. loan expansion and purchases of U.S. Government securities (tables P and Q).

In the first half of the year, weak U.S. and foreign loan demand for bank credit held down borrowing from abroad. In addition, there was little incentive to place deposits in the United States because of a further widening of already large, adverse interest-rate differentials, dollar depreciation, and strong preferences for longer term fixed-income securities due to a steepening yield curve in the United States.

In the second half, the pickup was related to special factors, none of which appeared to reflect any fundamental recovery in overall interbank activity. In the third quarter, several developments reduced liabilities in July and August and sharply boosted them in September. First, in July and August, U.S.-owned banks sharply scaled back their interoffice liabilities to Caribbean financial centers. Second, largely in August, foreignowned banks in the United States borrowed from abroad to fund a pickup in U.S loan demand that was created when a few large U.S. corporations switched their borrowing to the bank credit market from the commercial paper market. Third, throughout September, Japanese-owned banks in the United States borrowed from abroad in order to fund parent banks in Japan to improve asset quality, to meet accounting requirements for the fiscal half-year close, and to fund credit demands in response to developments in exchange markets among European currencies. Fourth, to meet temporary funding requirements, foreign-owned banks substituted overnight borrowing from the Eurodollar markets for funds previously obtained in the U.S. federal funds market.

In the fourth quarter, inflows were partly to fund U.S. loan demand of foreign-owned banks; other inflows were related to turbulence in the European currency markets, which generated sizable inflows from France, Italy, and other European countries, as well as Caribbean offices, as

a result of tensions between the French franc and German mark.

Banks' liabilities payable in foreign currencies decreased \$2.1 billion. The quarterly patterns and amounts of these liabilities closely matched those of banks' claims payable in foreign currencies.

Banks' custody liabilities increased \$6.3 billion, mostly in the second half, as some loans were booked at banks overseas, where loan rates declined faster than U.S. loan rates.

U.S. Treasury securities.—Net foreign purchases of U.S. Treasury securities were a record \$35.1 billion in 1992, up from \$16.2 billion in 1991; the previous record was \$29.6 billion in 1989 (table P). Demand from the United Kingdom was exceptionally strong, particularly in the fourth quarter, when there were instabilities among the European currencies and the dollar appreciated sharply. Japanese demand was strong throughout the year. "Other" Asian countries also stepped up their purchases.

Other U.S. securities.---Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$29.9 billion in 1992, down from \$34.9 billion in 1991. A shift to net sales of U.S. stocks from net purchases accounted for the decrease. Net foreign purchases of U.S. corporate and agency bonds accelerated, partly offsetting a selloff of U.S. stocks (table P).

Table R.---New International Bond Issues by U.S. Borrowers

P Preliminary

1. Includes banks and bank holding companies

3. Generally, repayment of principal in dollars, with initial issue and interest paid in foreign

Transactions in U.S. stocks shifted to net sales of \$4.7 billion from strong net purchases of \$9.2 billion. Net sales dominated during the first three quarters of the year; for much of this period, the dollar depreciated sharply and there was considerable uncertainty about the pace of

U.S. economic activity. In the fourth quarter, foreigners shifted back to net purchases of U.S. stocks, as U.S. economic activity picked up, as European markets experienced considerable uncertainties due to currency crises, and as foreign economic activity slowed further.

^r Revised.

Preliminary

Less than \$500,000 (±).
 OPEC members are Algeria. Ecuador. Gabon. Indonesia. Iran, Iraq, Kuwait. Libya. Nigeria. Qatar. Saudi Arabia, United Arab Emirates, and Venezuela. Individual country information is not available for all accounts; therefore some

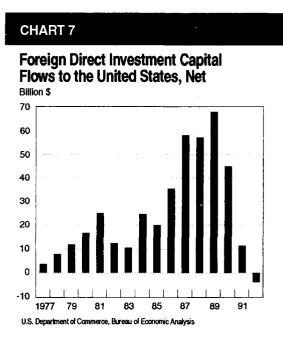

accounts are estimated from regional data.

accounts are estimated from regional data. 2. Begining in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. 3. Break in series. See Technical Notes in June 1989 and June 1990 SURVEY.

Net foreign purchases of U.S. corporate and other bonds increased to \$34.6 billion from \$25.7 billion.

New bond issues sold abroad by U.S. corporations increased to \$23.4 billion from \$20.9 billion (table R). The volume of new issues was strong throughout the year, but particularly in the first half, when Eurobond rates fell to their lowest level in several years, and the U.S.-Eurobond interest-rate differential widened further in favor of borrowing in the Eurobond market. This decline in interest rates, together with a large volume of maturing issues, spurred considerable refinancing activity; little new borrowing appeared to be associated with the pickup in the U.S. economy. Most of the step-up in new issues was by nonbank financial corporations and by banking corporations; new issues of the retail and service sectors dropped sharply.

Straight fixed-rate bonds accounted for \$15.2 billion in new issues, unchanged from the previous year. Floating-rate notes became popular again, at \$3.6 billion, as floating-rate yields were higher than fixed-rate yields. Euro medium-term notes, at \$3.1 billion, were unchanged.

New issues denominated in dollars totaled \$11.9 billion and accounted for 51 percent of U.S. offshore new issues, down from \$12.2 billion and 58 percent in 1991. Demand for dollar issues remained strong, particularly in the second and third quarters, as problems with the proposed European monetary union contributed to instabilities among several European currencies. New issues denominated in marks surged in the fourth quarter following the collapse of the European currency unit sector and the liberalization of new-issue rules by the Bundesbank.

Net foreign purchases of U.S. agency bonds increased to \$14.3 billion from \$8.8 billion, as investors were attracted by rising U.S. bond prices and the quality of agency issues. Investors from Western Europe accounted for most of the increase; investors from Japan slowed their net purchases substantially.

Direct investment.—Capital transactions for foreign direct investment in the United States shifted to net outflows of \$3.9 billion in 1992 from net inflows of \$11.5 billion in 1991. The shift is a continuation of the substantial reduction in capital inflows that has occurred since 1989, when inflows peaked at \$67.9 billion; equity capital and intercompany debt each accounted for about half of the reduction (table M, chart 7).

Net equity capital inflows decreased to \$16.7 billion from \$27.9 billion. The decline in 1992 reflected recessions in many major industrial countries and the reluctance of foreign companies to commit additional funds for expansion of U.S. operations. Japan, the United Kingdom, and continental Europe each accounted for large shares of the overall decrease in equity capital.

Net intercompany debt shifted to net outflows of \$6.6 billion from net inflows of \$3.6 billion. Western Europe accounted for a large share of the shift, which was dominated by insurance affiliates.

Reinvested earnings were -\$14.1 billion, compared with -\$20.0 billion; the change reflected a sizable reduction in operating losses.

 Table 1:
 1. Credits. +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase

 1. Credits. +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in U.S. official reserve assets; increase in foreign
 in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.

Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign offical assets in the United States.

official assets in the United States.

 Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, overage, and liming) of Census statistics to balance of payments basis; see table 2.
 Includes some goods: Manily military augiment in line 4; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship nearetore in line 41.

petroleum products purchased auroad by U.S. military agencies in mile ro, and users purchased by anime and sceamang operators in lines 7 and 21. 4. Includes transfers of goods and services under U.S. military grant programs. 5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from force on parente. foreign parents.

Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign Deglining in 1902, the other transition composition to the U.S. Government.
 For all areas, amounts outstanding Dec. 31, 1992, were as follows in millions of dollars: Line 34, 71,324; line 35, 11.056; line 36, 8.503; line 37, 11.759; line 38, 40,005. Data are preliminary.

 Includes sales of foreign obligations to foreigners.
 Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies. 11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other

transactions arranged with or through foreign official agencies; see table 4. 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and

12. Collisits of investments in 0.05 corporate stock of an effective memory of the national income and product local governments.
13. Conceptually, the sum of lines 69 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension of the balance on goods. plans, except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the SURVEY).

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Surver). Unadjusted data are as published by the Bureau of the Census. Seasonally adjusted data reliect the application of seasonal factors developed jointly by Census and BEA, and are the same totals except for six series which use quarterly factors; these series are not seasonally adjusted by Census (see Technical Notes in the June 1991 Surver).

adjusted by Census (see Technical Notes in the June 1991 Survery). 2. Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. Import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports. 3. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the merchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. 4. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10, line 4 (fransfers under U.S. military agency sales contracts): the imports are included in tables 1 and 10, line 18 (direct defense expenditures). contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures). 5. Addition of electrical energy: deduction of exposed motion picture film for rental rather than sale; net change in

5. Addition of electrical energy: deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area.
6. Deduction of foreign charges for repairs of U.S. evessels abroad, which are included in tables 1 and 10, line 21 (other transportation); coverage adjustments for special situations in which shipments were omitted from Census data; and the deduction of the value of repairs and alterations to U.S. owned equipment shipped abroad for means.
7. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa are included in "Other countries in Asia and Africa," 8. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Inlestat. The memoranda are defined as follows: Industrial countries: Westeries Turope. Canada, Jaana. Australia, New Zealand, and South Africa.

Fund, transiers of an to the method and the Council (Tro), and safes of satemines to methad. The Memoratod are defined as follows: Industrial countries: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; Members of OPEC: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Catar, United Arab Emirates, Indonesia. Algeria, Libya, Nigeria, and Gabon; Other countries: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."

9. Includes nuclear fuel materials and fuels

Table 3:

Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.
3. Other unafiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

Table 4:

Lable 4: 1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199. section 4. and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A38 and C8: this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military

sales contracts for the recipient countries and is applied directly to lines A39 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A45.

 Transactions under military sales contracts are those in which the Department of Defense sells and transfers
military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each

The formulation of transactions interiming and the provided as interest and line A40 includes foreign currency collected as principal, as recorded in lines A13 and A14, respectively.
 Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign numbers from liability to make repayment.

purchasers from liability to make repayment. 6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

8. Lines A16 and A19 exclude offsetting amounts for the receipt and near immediate conversion into dollars of cash contributions in foreign currencies from two coalition partners for Persian Gulf operations. The amounts were \$6,475 million in 1991.1 and \$2,147 million in 1991.11.

Table 5:

 Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petro-chemicals." "Other" industries includes wholesaie trade; banking; innance (except banking), insurance, and real estate: services; and other industries—agriculture, forestry, and tishing; mining; construction; transportation, communication, and induces and other industries—agriculture, forestry, and tishing; mining; construction; transportation, communication, and public utilities; and retail trade.

Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.
 Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings.

Table 6:

 Primarily provincial, regional, and municipal.
 Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (ADB). Development Bank (IDB).

 Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in line A30

Table 7:

To popsits include other financial claims for the United Kingdom, Canada, Bahamas, and British West Indies (Cayman Islands) due to the commingling of these categories in foreign source data. 2. Primarily mortgages, toans, and bills and notes drawn on foreigners. 3. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa. 4. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

- 5. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.

Table 8:

1. Includes central governments and their agencies and corporations; state, provincial, and local governments and their agencies and corporations, and international and regional organizations. 2. U.S. owned banks are mainly U.S. chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers'

accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. 3. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.

6. Includes Eastern Europe and international and regional organizations.

Table 9:

 Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits. 2. Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits

 Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.
 Mainly International Bank for Reconstruction and Development (IBRD). International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Tord to the International Viework (IDB). and the Trust Fund of the International Monetary Fund.

and the Trust Fund of the international Monetary Fund. 5. U.S.-womed banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' fiabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. 6. Western Europe, Canada. Japan, Australia, New Zealand, and South Africa. 7. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.
 Includes Eastern Europe and international and regional organizations.

Table 10:

For footnotes 1–13, see table 1. 14. The "European Communities (12)" includes the "European Communities (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal.

Greece, spain, and Poiluga.
15. The "European Communities (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.
16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in

international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld, current-cost adjustments associated with U.S. and foreign direct investment, and small transactions in

business services that are not reported by country.
17. Details not shown separately: see totals in lines 49 and 56.
18. Details not shown separately are included in line 61.

FIXED REPRODUCIBLE TANGIBLE WEALTH IN THE UNITED STATES, 1925-89

This report presents BEA's latest official estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States. The report provides annual estimates of gross and net stocks, depreciation, discards, and average ages of gross and net stocks in historical-cost, constant-cost, and current-cost valuations, as follows:

- Fixed nonresidential private capital owned by each two-digit Standard Industrial Classification(SIC) establishment-based industry for 1947-89, based on the 1987 SIC;
- Fixed nonresidential private capital, by type of equipment and structures and by legal form of organization, for 1925-89;
- Residential capital, by type of equipment and structures, by legal form of organization, by industry, and by tenure group, for 1925-89;
- Durable goods owned by consumers, by type of goods, for 1925-89;
- Government-owned fixed capital, by type of equipment and structures, separately for the Federal Government and for State and local government, for 1925-89.

The report also includes the investment series and service lives used to derive the wealth estimates and a detailed statement of methodology. BEA's fixed capital and investment estimates are used by economists, academics, public officials, private business leaders, students, and others. The estimates are used in studies of industry, productivity, and economic growth, in econometric models, and in studies of business taxation. *Order your copy today!*

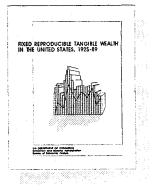

The estimates are also available in other media; for information, call BEA at (202) 523-0822.

L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unclassified) at reference cycle peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.

- ‡ Cyclical indicator series denoted by ‡ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.
- + Cyclical indicator series denoted by + are smoothed by an autoregressive-moving-average filter developed by Statistics Canada.

For information on composite indexes and other concepts used in this section, see "Composite Indexes of Leading, Coincident, and Lagging Indicators" in the November 1987 SURVEY OF CURRENT BUSINESS and "Business Cycle Indicators: Revised Composite Indexes" in the January 1989 SURVEY.

References to series in this section use the prefix "BCI-" followed by the series number. Unless otherwise noted, series are seasonally adjusted.

- Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3-month changes are placed in the 3d month, 6-month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarter, and 4-quarter changes are placed in the 3d quarter.
- Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Diffusion index data are centered within the spans: 1-month indexes are placed in the ending month and 6-month indexes are placed in the 4th month.
- High values reached by cyclical indicators since the last reference cycle trough (March 1991) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs.

Sources for series in this section are shown on pages C-47 and C-48 in the October 1992 SURVEY.

Page C-1

Note.---Major data revisions:

Series based on personal income (BCI-51, -62, and -95)-see note for page C-4.

Manufacturing and trade sales in 1987 dollars (BCI-57)-see note for page C-2.

Ratio, manufacturing and trade inventories to sales in 1987 dollars (BCI-77)--see note for page C-2. * Preliminary March 1993 values: BCI-19 = 449.96 and BCI-109 = 6.00.

Data include initial claims made under the July 1992 Emergency Unemployment Compensation

amendments. Data exclude Puerto Rico, which is included in figures published by the source agency. 2. Copyrighted. This series may not be reproduced without written permission from the University

of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248. 3. Excludes BCI-57, for which data are not available.

4. Excludes BCI-77 and BCI-95, for which data are not available.

Page C-2

NOTE .- Major data revisions:

The insured unemployment rate (BCI-45) has been revised from 1980 forward to incorporate new source data and a new seasonal adjustment. For further information, contact the U.S. Department of Labor, Employment and Training Administration, Office of Administration Management, Washington, DC 20210.

Sales of retail stores in 1987 dollars (BCI-59) has been revised from 1987 forward to incorporate revisions in current-dollar retail sales. The series on manufacturing and trade sales in 1987 dollars (BCI-57) and the ratio of manufacturing and trade inventories to sales in 1987 dollars (BCI-77) have been revised from 1987 forward to incorporate the revised retail sales data. For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

* Anticipated 2d quarter 1993 values: BCI-61 = 591.20 and BCI-100 = 566.54.

1. Data include initial claims made under the July 1992 Emergency Unemployment Compensation amendments. Data exclude Puerto Rico, which is included in figures published by the source agency.

 Data exclude Puerto Rico, which is included in figures published by the source agency.
 Copyrighted. This series may not be reproduced without written permission from McGraw-Hill Information Systems Company, F.W. Dodge Division, Paramount Plaza, 13th Floor, 1633 Broadway, New York, NY 10020.

Page C-3

Note.—Major data revision: Ratio, manufacturing and trade inventories to sales in 1987 dollars (BCI-77)—see note for page C-2.

* Preliminary March 1993 value: BCI-23 = 267.5.

 Copyrighted. This series may not be reproduced without written permission from Knight-Ridder Financial Publishing, 30 South Wacker Drive, Suite 1820, Chicago, IL 60606-5271.

Page C-4

Note.---Major data revisions:

Real average hourly compensation of all employees in the nonfarm business sector (BCI-346) has been revised from 1988 forward to incorporate recent revisions in the CPI-U deflator. (See note for page C-3 in the February 1993 SURVEY.) For further information, contact the U.S. Department of Labor, Bureau of Labor Statistics, Office of Productivity and Technology, Division of Productivity Research, Washington, DC 20212.

Series based on personal income (BCI-51, -52, -53, -62, -95, and -108) have been revised for the period prior to 1959 to complete the comprehensive revision of this data. (See the December 1991 SURVEY.) For further information, contact the U.S. Department of Commerce, Bureau of Economic Analysis, Business Outlook Division, Washington, DC 20230.

* Preliminary March 1993 values: BCI-122 = 62.6, BCI-123 = 76.8, and BCI-85 = 0.16.

 Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

 Copyrighted. This series may not be reproduced without written permission from the American Bankers Association, 1120 Connecticut Avenue, NW, Washington, DC 20036.

Page C-5

Noτε.--Major data revision: Ratio, consumer installment credit outstanding to personal income (BCI-95)--see note for page C-4.

[•] Preliminary March 1993 values: BCI-119 = 3.06, BCI-114 = 2.97, BCI-116 = 7.38, BCI-115 = 6.63, BCI-117 = 5.64, BCI-109 = 6.00, BCI-19 (1941-43=10) = 449.96, BCI-19 (1967=100) = 449.5, BCI-748 = 1,240.9, BCI-745 = 300.7, BCI-746 = 948.2, BCI-742 = 1,358.8, BCI-747 = 366.1, BCI-743 = 405.3, BCI-750 = 93.81, BCI-753 = 1.17.16, BCI-755 = 1.6507, BCI-756 = 5.6089, BCI-752 = 0.6867, BCI-757 = 1,589.65, and BCI-753 = 1.2464.

 Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).

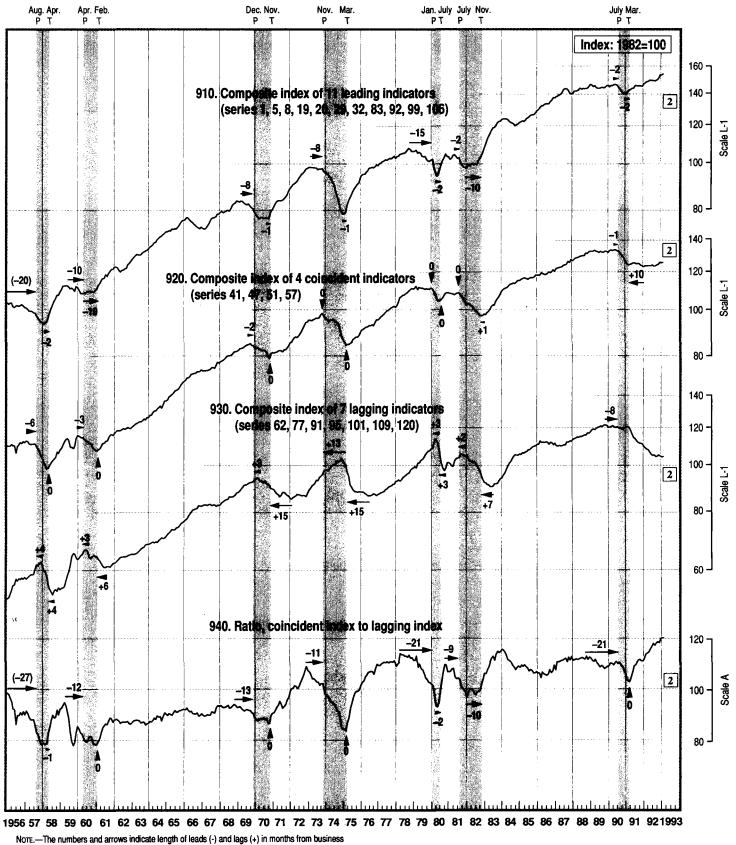

2. Organisation for Economic Co-operation and Development.

3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972–76 global trade. For a description of this index, see the August 1978 *Federal Reserve Bulletin* (p. 700).

 This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

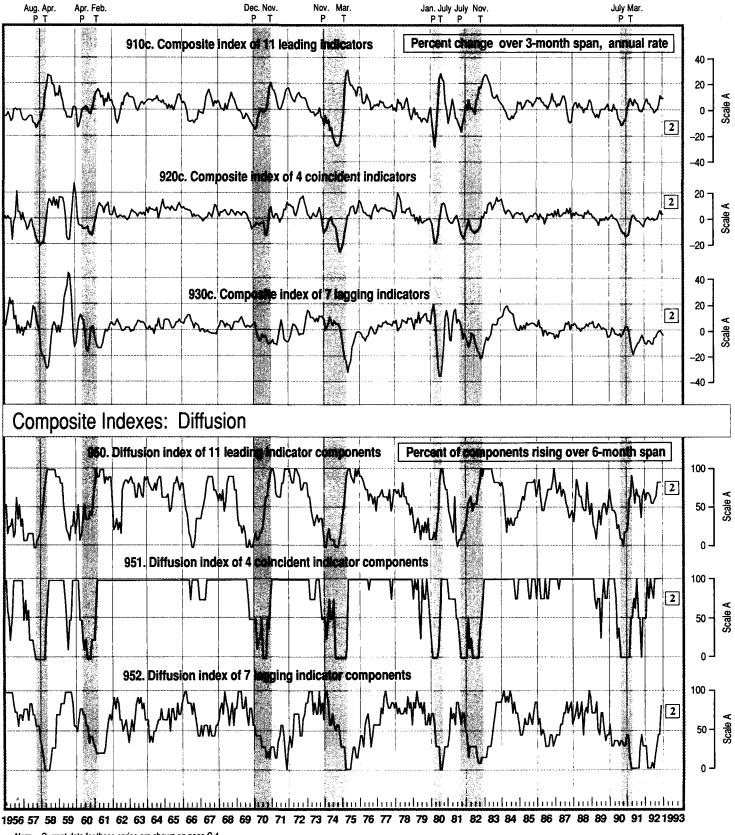

5. For an explanation of this index, see "The Composite Index of Coincident Indicators and Alternative Coincident Indexes" in the June 1992 SURVEY.

Page S-1

† Revised series. See Tables 2.8–2.11 in the July 1992 SURVEY for revised estimates for 1989–91. Also see the article on the comprehensive revision of the national income and product accounts that appears in the December 1991 issue of the SURVEY.

‡ Includes inventory valuation and capital consumption adjustments.

§ Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

.

Page S-2

1. Based on data not seasonally adjusted.

Includes data not shown separately.

§ Revised series. Estimates in constant 1987 dollars will soon be available back to 1967.

Page S-3

\$ Revised series. Estimates in constant 1987 dollars will soon be available back to 1967.

includes data for items not shown separately.

† Effective with the July 1992 SURVEY, M3 data have been revised to benchmark the data to the 1989 and 1990 Annual Surveys of Manufactures, and to reflect updated seasonal factors.

Page S-4

1. Based on data not seasonally adjusted.

Includes data for items not shown separately.

‡ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

♦ For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

† See note "†" for p. S-3.

Page S-5

1. Based on data not seasonally adjusted.

@ Compiled by Dun & Bradstreet, Inc.

Includes data for items not shown separately.

§ Ratio of prices received to prices paid (parity index).

1 See note "1" for p. S-4.

† In the Feb. and July issues of the SURVEY each year, data for the most recent six to eight years are subject to revise and are available upon request.

tt See note "t" for p. S-3.

Page S-6

1. Based on data not seasonally adjusted.

§ For producer price indexes of individual commodities, see respective commodities in the Industry section beginning p. S-19. All indexes subject to revision four months after original publication.

Includes data for items not shown separately. ‡ Effective with the Feb. 1993 SURVEY, data have been revised back to Jan. 1988 and are available

upon request.

Page S-7

1. Computed from cumulative valuation total.

2. Index as Mar. 1, 1993: building, 431.5; construction, 475.4.

LEflective July 1992 SURVEY, data have been revised back to 1987. Effective July 1991 SURVEY, data were revised back to 1986. Effective July 1990 SURVEY, data were revised back to 1985. Revised data are available from the Construction Statistics Division at the Bureau of the Census, Washington, DC 20233.

Includes data for items not shown separately.

§ Data for Mar., May, Aug., and Nov. 1990, and Jan., May, Aug., and Oct. 1991 are for five weeks; other months four weeks.

* The fixed-weighted price index is a weighted average of the individual price index series used to dellate the Value of New Construction Put in Place (VIP) series. In calculating the index, the weights (the composition of current dollar VIP in 1987 by category of construction) are held constant. Consequently, the index reflects only changes in prices. The implicit price deflator is a derived ratio of total current to constant dollar VIP (multiplied by 100). It is the average of the individual price indexes used in the deflation of VIP, but the prices are weighted by the composition of VIP each period. As a result, the implicit price deflator reflects not only changes in prices. but also changes in the composition of VIP, and its use as a measure of price change is discouraged. Effective July 1992 SURVEY, data have been revised back to 1989.

§§ Effective March 1992 Survey, the Construction Contracts Valuation Index has a new base year of 1987. Data have been revised back to 1983 and are available upon request.

Address requests for data to:

Business Statistics Branch Business Outlook Division (BE–52) Bureau of Economic Analysis U.S. Department of Commerce Washington, D.C. 20230

Page S-8

Advance estimate.

2. Beginning with Feb. 1989 data, associations in conservatorship are excluded.

♦ Home mortgage rates are under money and interest rates on p. S-14.

§ Data include guaranteed direct loans sold.

Includes data for items not shown separately.

@ Data are for closed mortgage loans of thrift institutions insured by the Savings Association Insurance Fund (SAIF)—FSLIC-insured institutions prior to Sept. 1989.

† Effective June 1992 SURVEY. estimates of wholesale sales have been revised back to January 1989 and wholesale inventories have been revised back to December 1990. Revised data and a summary of changes appear in the report *Revised Monthly Wholesale Trade, Sales and Inventories January* 1986–March 1992. BW:91–RV, available from the Bureau of the Census, Washington, DC 20233.

‡ Effective March 1993 SURVEY, retail trade data have been revised. Estimates of retail sales have been revised back to January 1987 and inventories have been revised back to January 1988.

Page S-9

1. Advance estimate.

includes data for items not shown separately.

♦ Effective with the Jan. 1993 Sunvey, the seasonally adjusted labor force series have been revised back to Jan. 1988. The Jan. 1993 issue of *Employment and Earnings* contains the new seasonal adjustment factors, a description of the current methodology, and revised data for the most recent 13 months or calendar quarters. Revised monthly data for the 1988–92 revision period will appear in the Feb. 1993 issue of *Employment and Earnings*.

† The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is civilian employment as a percent of the civilian noninstitutional population, 16 years and over.

@ Data include resident armed forces

‡ See note "‡" for p. S-8.

Page S-10

♦ See note "♦" for p. S-9.

[‡] The unemployment rates are the number of unemployed in each group as a percent of the civilian labor force in that group.

§ Effective with June 1992 SURVEY, data have been revised, back to April 1990, unadjusted, and back to Jan. 1987, seasonally adjusted, to reflect new benchmarks and seasonal adjustment factors. The June 1992 issue of *Employment and Earnings* contains a detailed description of the effects of inese revisions. All of the revised historical series are published in a special supplement to *Employment and Earnings*. United States. 1909–90 comprises the full historical series on national data obtained from the establishment survey.

Page S-11

§ See note "§" for p. S-10.

↓ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision. ◇ Production and nonsupervisory workers.

Page S-12

§ See note "§" for p. S-10.

Production and nonsupervisory workers.

Learnings in 1982 dollars reflect changes in purchasing power since 1982 by dividing by Consumer Price Index. Effective Feb. 1993 issue of the SURVEY, this series has been revised back to 1988 to reflect new seasonal factors for the CPI-W. Revised data are available upon request.

§§ Wages as of Mar. 1, 1993: Common, \$19.81; Skilled, \$25.89.

† Excludes farm, household, and Federal workers.

Page S-13

 Effective Feb. 28. 1989, there was a break in the series due to the enlargement of the panel of reporting dealers to 17 and of reporting direct issuers to 36. End of month figures on the old basis are as follows: All issuers, 481,734; financial companies, 373,717; dealer placed, 172,330; directly placed, 201,387; and nonfinancial companies, 108,017.

2. Average for Dec.

Includes data for items not shown separately.

§ Excludes loans and federal funds transactions with domestic commercial banks and includes valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

1 Covers the 50 States and the District of Columbia. Puerto Rico and the Virgin Islands are excluded effective with Mar. 1993 SURVEY. Data in earlier SURVEYs incorrectly included both. Only regular benefits are included.

@ Average weekly insured unemployment for 12-month period divided by average monthly covered employment (lagging 4 full quarters for annual figure and 2 full quarters for monthly figure).

Page S-14

1. Data are for fiscal years ending Sept. 30 and may include revisions not distributed to the months. 2. Weighted by number of loans.

3. Outstanding loans for mobile homes are included with other credit.

4. Beginning Sept. 1991, the Federal debt series are net of premium and discount.

§ Effective June 1992 SURVEY, data have been revised to reflect new benchmark and seasonal adjustments and are available from the Banking and Money Market Statistics Section of the Division of Monetary Affairs at the Federal Reserve Board, Washington, DC 20551.

Includes data for items not shown separately.

Excludes loans to commercial banks in the U.S.

‡ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent.

@ Average effective rate

† Effective June 1992 SURVEY, the consumer installment credit series have been revised back to 1985 to incorporate new information and updated seasonal adjustment factors. These revisions are available from the Mortgage and Consumer Finance Section, Mail Stop 93 at the Federal Reserve Board, Washington, DC 20551.

Page S-15

1. Money market deposit accounts are included with savings deposits.

11 Includes ATS and NOW balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions.

Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

@ Small time deposits are those issued in amounts of less than \$100,000. Large time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions

Includes data for items not shown separately.

Page S-16

1. Beginning with Jan. 1992 data, the data include the republics of the former USSR, excluding Estonia, Latvia, and Lithuania.

@ Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because the revisions to the totals are not reflected in the component items.

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

‡ For bonds due or callable in 10 years or more.

Includes data for items not shown separately.

♦ The March through August 1991 issues of the SURVEY showed month-end yields for 1991 rather than monthly averages.

Page S-17

1. See note "1" for p. S-16.

@ See note "@" for p. S-16.

includes data not shown separately.

> Data include undocumented exports to Canada, which are based on official Canadian import totals

Page S-18

1. Reported annual total; quarterly or monthly revisions are not available.

2. For month shown.

@ Effective with the March 1993 SURVEY, the export and import price indexes are on a 1990=100 base. Beginning with indexes for Jan. 1993, 1990 trade weights are used.

includes data for items not shown separately.

§ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service. ‡ The threshold for Class I railroad status is adjusted annually by the Interstate Commerce Commission to compensate for inflation.

Average daily rent per room occupied, not scheduled rates.

Data represent entries to a national park for recreational use of the park, its services, conveniences, and/or facilities.

† Before extraordinary and prior period items.

Page S-19

1. Reported annual total; monthly or quarterly revisions are not available.

2. Figure suppressed because it did not meet Census publication standards.

3. Data are partially estimated for first three guarters of 1991 and are not available. Value for 4th quarter 1991 is based on partially estimated production data. Data for 1992 were not published because they would have disclosed individual company operations.

4. Data withheld to avoid disclosing figures for individual companies.

Includes data for items not shown separately.

§ Data are reported on the basis of 100 percent content of the specified material unless otherwise

indicated.

♦ Data for 1991 are reported quarterly.

Page S-20

1. Reported annual total; monthly or quarterly revisions are not available.

2. Quarterly data are no longer available.

§ Data are not wholly comparable from year to year because of changes in classification.

@ Includes less than 500 electric generation customers not shown separately.

Page S-21

1. Previous year's crop. New crop is not reported until Sept. (crop year: Sept. 1-Aug. 31).

2. Crop estimate for the year.

3. Stocks as of June 1.

Stocks as of June 1 and represents previous year's crop; new crop not reported until June (beginning of new crop year).

5. Stock estimates are available once a year as June 1 stocks and shown here in the May column and (as previous year's crop) in the annual column.

6. Stocks as of Dec. 1.

§ Excludes pearl barley.

@ Quarterly data represent the 3-month periods Dec.-Feb., Mar.-May, June-Aug., and Sept.-Nov. Annual data represent Dec.--Nov.

† Coverage for 21 selected States, representing approximately 85 percent of U.S. production.

Page S-22

§ Cases of 30 dozen.

Series first shown in the Jan. 1991 SURVEY.

Page S-23

1. Crop estimate for the year.

2. Reported annual total; revisions not distributed to the months.

3. Effective with January 1993 SURVEY, data have been revised back to 1990, and are available upon request.

Totals include data for items not shown separately.

Page S-24

1. Reported annual total; monthly revisions are not available.

Page S-25

1. Reported annual total; monthly revisions are not available.

2. For month shown.

@ Includes domestic and foreign ores.

§ Source: Metals Week.

Page S-26

- 1. Reported annual total; monthly revisions are not available.
- 2. Less than 50 tons

3. Break in comparability beginning Jan. 1, 1991, because of a change in the Metals Week pricing series for zinc.

4. Monthly data not available for 1990 and 1991.

♦ Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.

‡ Source for monthly data: American Bureau of Metal Statistics. Source for annual data: Bureau

of Mines.

Includes data not shown separately.

@@ Price represents North American Mean.

Page S-27

1. Annual total includes revisions not distributed to the months or quarters.

- # Includes data for items not shown separately.
- § Includes nonmarketable catalyst coke

Includes small amounts of "other hydrocarbons and alcohol new supply (field production)," not shown separately

11 March, June, September and December are five-week months. All others consist of four weeks.

Page S-28

1. Reported annual total; revisions not allocated to the months.

1. Reported annual total; revisions not allocated to the months.

Compiled by the American Newspaper Publishers Association.

1. Reported annual total; revisions not allocated to the months.

3. Data cover five weeks; other months, four weeks.

5. Jan. 1, 1993 estimate of the 1992 crop.

Includes data for items not shown separately.

Cumulative ginnings to the end of month indicated.

6. Total for crop year, 1990/1991. 7. Average for calendar year 1992.

§ Bales of 480 lbs.

2. Figure suppressed because it did not meet Census publication standards.

4. Beginning Jan. 1989, sales of industrial plasters are included with building plasters.

2. Beginning May 1991, the leaded gasoline price is not statistically valid for publication.

Page S-29

Page S-30

Includes data for items not shown separately

Page S-31

- 1. Annual total includes revisions not distributed to the months.
- 2. Weighted average for crop year, Aug. 1-Jul. 31.
- 3. Spot market average for crop year, Aug. 1-Jul. 31.
- 4. For five weeks; other months four weeks.
- 5. No price because the Australian market was shut down for the month of July.
- 6. Weighted average for Aug. 1992–Jan. 1993.
- 7. Based on the average of Aug. 1992–Jan. 1993.
- 8. Data withheld to avoid disclosing figures for individual companies.

♦ Based on 480-lb. bales, preliminary price reflects sales as of the 15th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).

§ Bales of 480 lbs.

† The total may include some miscellaneous wool imports.

Page S-32

1. Annual total includes revisions not distributed to the months.

 Production of new vehicles (thous. of units) for Jan. 1993: passenger cars, 453; trucks and buses, 361.

- 3. Data are reported on an annual basis only.
- 4. Beginning in 1992, data are available only on a quarterly basis.

 Beginning Jan. 1989, shipments of trailer bodies are included with trailer chassis to avoid disclosure of data from individual firms.

6. Effective with the Dec. 1991 SURVEY, data have been revised back to 1988 and are available upon request.

- 7. Data withheld to avoid disclosing figures for individual companies.
- # Total includes backlog for nonrelated products and services and basic research.

§ Domestics comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.

♦ Courtesy of R.L. Polk & Co.; republication prohibited. Because data for some States are not available, month-to-month comparisons are not strictly valid.

* Effective with the July 1992 SURVEY, seasonally adjusted retail sales for trucks and buses have been revised back to 1989, and are available upon request.

† Includes some imported trucks over 10,000 lbs. GVW.

± Excludes railroad-owned private refrigerator cars and private line cars.

@ Effective with the Mar. 1993 SURVEY, seasonally adjusted retail inventories for trucks and buses have been revised back to 1966, and are available upon request.

BEA INFORMATION

BEA's economic information is available in publications, on computer tapes, on diskettes, and through a variety of other products and services. Most of these are described in A User's Guide to BEA Information. For a copy, send a self-addressed stamped envelope (81/2 by 11 inches, with 75 cents postage) to Public Information Office, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

Recent Publications from GPO

ORDER FROM: Superintendent of Documents, p.o. Box 371954, Pittsburgh, PA 15250-7954. Payment may be by check (made payable to Superintendent of Documents) or charged to a GPO deposit account number, VISA, or MasterCard. Phone (202) 783-3238 or fax (202) 512-2250.

Business Statistics, 1963-91. (1992) Provides monthly or quarterly data for 1988–91 and annual data for 1963–91 for the more than 1,900 series that appear in the S-pages (blue pages) of the SURVEY OF CUR-RENT BUSINESS. Contains definitions of terms, sources of data, and methods of compilation for these series. Also includes guarterly and annual data for 1960–91 for selected series from BEA's national income and product accounts and U.S. international transactions accounts. 344 pp. \$20.00 (дро stock no. 003-010-00229-8).

National Income and Product Accounts of the United States. (1992-93) Two volumes. Presents the full set of national income and product accounts (NIPA) estimates for 1929-88 that resulted from the most recent comprehensive, or benchmark, revision. Text describes the statistical conventions used in the NIPA's and the definitions and classifications underlying the accounts.

New Vol. 1: 1929-58. 264 pp. \$15.00 (GPO STOCK NO. 003-010-00236-1).

Vol. 2: 1959-88. 424 pp. \$25.00 (GPO STOCK NO. 003-010-00231-0). NIPA Methodology Paper No. 6: Personal Consumption Expenditures. (1990) Presents the conceptual basis and framework of personal consumption expenditures in the national income and product accounts. Describes the presentation of the estimates and the sources and methods used to prepare them. 92 pp. \$4.50 (GPO STOCK NO. 003-010-00200-0).

Fixed Reproducible Tangible Wealth in the United States, 1925-89. (1993) Contains annual estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States for 1925-89. Estimates are for fixed nonresidential private capital by major industry group, for residential capital by tenure group, for government-owned fixed capital by type of government, and for 11 types of durable goods owned by consumers. 460 pp. \$25.00. (GPO STOCK NO. 003-010-00235-2).

The 1982 Benchmark Input-Output Accounts of the United States. (1991) Presents tables for 541 industries/commodities showing the production of commodities (goods and services) by each industry, the use of commodities by each industry, the commodity composition of GNP, and the industry distribution of value added. Prepared primarily on the basis of data collected in the 1982 Economic Censuses. 368 pp. \$19.00 (GPO STOCK NO. 003-010-00226-3).

BEA Regional Projections to 2040. (1990) Three volumes. Presents regional projections for selected economic and population variables for 1995, 2000, 2005, 2010, 2020, and 2040. Includes projections for employment and earnings by industry and for personal income, as well as a statement of methodology.

Vol. 1: States. Out of print at GPO. Call BEA at (202) 523-0971 for availability.

- Vol. 2: Metropolitan Statistical Areas. 352 pp. \$17.00 (GPO STOCK NO. 003-010-00211-5).
- Vol. 3: BEA Economic Areas. 200 pp. \$10.00 (GPO STOCK NO. 003-010-00212-3).

Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (RIMS II). (1992) Presents updated tables of regional input-output (1-0) multipliers by industry, for output, earnings, and employment, for all States and the District of Columbia. Multipliers are shown on a direct-effect and a final-demand basis. Explains how to obtain multipliers for over 500 industries for any geographic area composed of one or more U.S. counties or county equivalents. Includes case studies. 124 pp. \$13.00 (GPO STOCK NO. 003-010-00227-1).

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures. (1990) Describes in detail the methodology used in constructing the balance of payments estimates for the United States. Explains underlying principles, and describes the presentation of the estimates. Includes a comprehensive list of data sources. 160 pp. \$8.50 (GPO STOCK NO. 003-010-00204-2).

Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies. (1992) Two publications containing results for 1989 and 1990 from BEA's annual survey covering the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. Data are classified by industry of U.S. affiliate, by country and industry of ultimate beneficial owner, and, for selected data, by State. 92 pp. \$5.50 each. Preliminary 1990 Estimates: GPO STOCK NO. 003-010-00233-6; Revised 1989 Estimates: GPO STOCK NO. 003-010-00232-8.

Foreign Direct Investment in the United States: 1987 Benchmark Survey, Final Results. (1990) Contains information for 1987 on the financial structure and operations of U.S. affiliates of foreign direct investors, on the foreign direct investment position in the United States, and on balance of payments transactions between U.S. affiliates and their foreign parents. Data are classified by industry of affiliate, by country and industry of ultimate beneficial owner or foreign parent, and, for selected data, by State. Also contains a complete methodology and copies of survey forms and instructions. 284 pp. \$14.00 (GPO STOCK NO. 003-010-00210-7).

Foreign Direct Investment in the United States: Establishment Data for 1987. (1992) A joint effort by BEA and the Bureau of the Census, this publication provides new data on operations of U.S. affiliates of foreign direct investors in much greater industry detail than has been available in the past. Over 800 4-digit s1C industries are covered. Presents the number, employment, payroll, and shipments or sales of the establishments. Data are disaggregated by industry, by State, and by country of ultimate beneficial owner. 696 pp. \$36.00 (GPO STOCK NO. 003-010-00228-0).

U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results. (1992) Presents final results of the latest benchmark survey of the worldwide operations of U.S. multinational companies. Contains detailed 1989 data on the financial structure and overall operations of U.S. parent companies and their foreign affiliates in 263 tables organized by industry of parent or by country and industry of affiliate. Also contains a complete methodology and copies of survey forms and instructions. 448 pp. \$25.00 (GPO STOCK NO. 003-010-00234-4).

U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates, Preliminary 1990 Estimates. (1992) Presents preliminary results of BEA's 1990 annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. 100 pp. \$6.00 (GPO STOCK NO. 003-010-00230-1).
