Special in this issue

20. State Personal Income, Revised Estimates for 1982–97

The annual estimates of State personal income for 1995–97 were revised to incorporate the results of the recent annual revision of the national income and product accounts (NIPA's), as well as newly available State-level source data; in addition, the State estimates were revised back to 1982 to incorporate the NIPA redefinition of personal dividend income. The revisions to the State estimates generally reflected the downward revisions to the national estimates; among the States, the relative rates of change in personal income and the relative rankings of State per capita personal income changed little.

Regular features

1. Business Situation

Real GDP increased 1.8 percent in the second quarter of 1998, according to the “final” estimate; the “preliminary” estimate issued last month had shown a 1.6-percent increase. The largest upward revision was to consumer spending. Corporate profits decreased \$8.6 billion in the second quarter after increasing \$8.4 billion in the first; profits of domestic nonfinancial corporations decreased after no change, and profits of domestic financial corporations and from the rest of the world turned down.

42. U.S. International Transactions, Second Quarter 1998

The U.S. current-account deficit increased \$9.8 billion, to \$56.5 billion, in the second quarter of 1998. A substantial increase in the deficit on goods and an increase in the deficit on investment income more than offset a small increase in the surplus on services and a small decrease in net unilateral transfers. In the capital account, capital outflows increased less than capital inflows. U.S. assets abroad increased \$97.5 billion after increasing \$45.6 billion, and foreign assets in the United States increased \$163.4 billion after increasing \$95.5 billion.

71. U.S. International Sales and Purchases of Private Services: U.S. CrossBorder Transactions in 1997 and Sales by Affiliates in 1996

In 1997, U.S. cross-border sales (exports) of private services increased less than U.S. cross-border purchases (imports) of private services. In 1996, sales of services in the United States by U.S. affiliates of foreign companies increased less than sales of services abroad by foreign affiliates of U.S. companies. Nevertheless, the U.S. continued to register sizable surpluses on both cross-border and affiliate services transactions, reflecting the U.S. comparative advantage in the provision of services.

BUSINESS SITUATION

Ralph W. Morris prepared the first section of this article, and Daniel Larkins prepared the section on corporate profits.

REAL GROSS domestic product (GDP) increased 1.8 percent in the second quarter of 1998, according to the "final" estimates of the national income and product accounts (NIPA's) (table 1 and chart 1).¹ The deceleration from a 5.5-percent increase in the first quarter was more than accounted for by a downturn in inventory investment and by a slowdown in business spending for equipment.

1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data. Real estimates are calculated using a chain-type Fisher formula with annual weights and expressed both as index numbers (1992=100) and as chained (1992) dollars. Price indexes (1992=100) also are calculated using a chain-type Fisher formula.

Table 1.—Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers

[Seasonally adjusted at annual rates]

	Billions of chained (1992) dollars					Percent change from preceding quarter			
	Level	Change from preceding quarter				1997		1998	
		1998		1997		III	IV	I	II

Farm	8.7	28.8	3.8	52.4	32.5
Government consumption expenditures and gross investment	1,294.8	4.5	.3	-6.2	11.8	1.4	-.1	-1.9	3.7
Federal	454.1	-1.5	-2.4	-10.4	8.0	-1.2	-2.1	-8.8	7.3
National defense	300.3	-1.5	-1.5	-15.4	7.0	-1.8	-2.0	-18.5	9.9
Nondesign	152.9	0	-9	4.6	1.0	-1	-2.3	13.1	2.6
State and local	840.9	5.9	2.8	4.2	3.8	2.9	1.3	2.1	1.8
Addenda:									
Final sales to domestic purchasers	7,676.4	109.7	44.1	120.1	124.2	6.2	2.4	6.6	6.7
Final sales of domestic product	7,456.4	100.8	38.5	77.7	83.9	5.8	2.1	4.3	4.6

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1992) dollar levels and residuals, which measure the extent of nonadditivity in each table, are in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are in NIPA table 8.1.

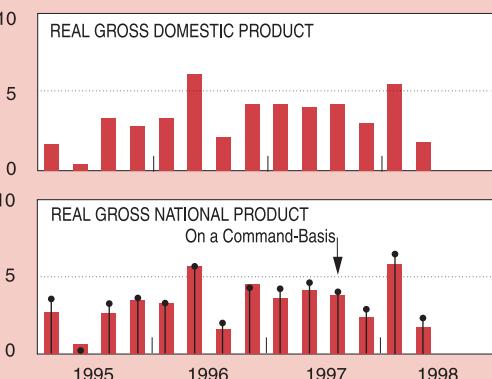

The "final" estimate of the change in real GDP is 0.2 percentage point higher than the 1.6-percent increase indicated by the "preliminary" estimate reported in the September "Business Situation" (table 2). The revision is close to the average revision—0.3 percentage point, without regard to sign—from the preliminary estimate to the final estimate for 1978–97. Revisions to the components of GDP were small. Upward revisions to consumer spending, net exports, and business spending for equipment more than offset a downward revision to inventory investment. The largest revision was to consumer spending; the revision mainly reflected the incorporation of revised Census Bureau retail sales data and newly available Federal Deposit Insurance Corporation data on bank service charges. In net exports, the incorporation of revised Census Bureau and BEA data on international trade in goods and services resulted in a larger downward revision to imports than to exports. (Imports are subtracted from final expenditures in the calculation of GDP.)

Real final sales of domestic product increased 4.6 percent in the second quarter, 0.2 percentage

CHART 1

Selected Product Measures: Change From Preceding Quarter

Percent

Note.—Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

point more than the preliminary estimate.² Real gross domestic purchases increased 3.9 percent, 0.1 percentage point more than the preliminary estimate.³

The price index for gross domestic purchases increased 0.4 percent, the same as the preliminary estimate; in the first quarter, the index decreased 0.2 percent. The price index for GDP increased 0.9 percent, 0.1 percentage point more than the preliminary estimate; in the first quarter, the index also increased 0.9 percent. The larger second-quarter increase in GDP prices than in gross domestic purchases prices was due to

2. Final sales of domestic product equals GDP less change in business inventories.

3. Gross domestic purchases a measure of purchases by U.S. residents regardless of where the purchased goods and services were produced is calculated as GDP less exports of goods and services plus imports of goods and services.

GDP price index8	.9	.1

NOTE.—The final estimates for the second quarter of 1998 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Revised retail sales for June, hospital expenses for May, residential electricity usage for May, residential volume gas usage for May, and data on bank service charges for the second quarter.

Nonresidential fixed investment: Revised construction put in place for May and June and revised manufacturers' shipments of machinery and equipment for June.

Residential fixed investment: Revised construction put in place for May and June.

Change in business inventories: Revised manufacturing and trade inventories for June.

Exports and imports of goods and services: Revised data on exports and imports of goods for June and revised balance-of-payments data on exports and imports of goods and services for the second quarter.

Government consumption expenditures and gross investment: Revised State and local construction put in place for May and June.

Wages and salaries: Revised employment, average hourly earnings, and average weekly hours for April through June.

GDP prices: Revised export and import prices for April through June, revised values and quantities of petroleum imports for June, and revised prices of single-family homes under construction for the second quarter.

a larger decrease in the prices of imports than in the prices of exports. (Import prices are included in gross domestic purchases prices but not in GDP prices, and export prices are included in GDP prices but not in gross domestic purchases prices.)

Real disposable personal income (DPI) increased 2.6 percent, 0.3 percentage point less than the preliminary estimate. The downward revision reflected an upward revision to personal tax and nontax payments. (Disposable personal income is personal income less personal tax and nontax payments.) The upward revision to personal tax and nontax payments reflected newly available data on State and local tax receipts from the Census Bureau. The personal saving rate was 0.4 percent, 0.2 percentage point less than the preliminary estimate.

Gross national product (GNP).—In the second quarter, real GNP—goods and services produced by labor and property supplied by U.S. residents—increased 1.7 percent, 0.1 percentage point less than real GDP ([chart 1](#) and [table 3](#)).⁴

4. GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world.

Table 3.—Relation of Real Gross Domestic Product, Real Gross National Product, and Real Command-Basis Gross National Product

[Seasonally adjusted at annual rates]

	Billions of chained (1992) dollars					Percent change from preceding quarter

Addendum:											
Terms of trade ¹	105.7	.1	.1	1.6	.5	.4	.4	6.3	1.9		

1. Calculated as the ratio of the implicit price deflator for the sum of exports of goods and services and of receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Levels of these series are in NIPA tables 1.10 and 1.11.

Receipts of factor income from the rest of the world were unchanged, and payments of factor income increased; more than half of the increase in payments was in interest income. The revised estimate of the growth in second-quarter GNP is 0.1 percentage point higher than the preliminary estimate.

Real GNP on a command basis, which measures the goods and services produced by the U.S. economy in terms of their purchasing power, increased more than real GNP—2.0 percent, compared with 1.7 percent—reflecting an improvement in the terms of trade.⁵ In the first quarter, real GNP on a command-basis increased considerably more than real GNP—6.9 percent, compared with 5.8 percent—reflecting a substantial improvement in the terms of trade.

Corporate Profits

Profits from current production decreased \$8.6 billion in the second quarter after increasing \$8.4 billion in the first (table 4).⁶ Profits of domestic nonfinancial corporations decreased \$6.1 billion after no change, as a decrease in unit profits more than offset an increase in a real product; the decrease in unit profits, in turn, resulted from an increase in unit costs, while unit prices were unchanged. Profits of domestic financial corporations decreased \$1.2 billion after increasing \$1.8 billion. Profits from the rest of the world decreased \$1.3 billion after increasing \$6.6 billion; payments increased, and receipts changed little.⁷

Cash flow from current production, a profits-related measure of internally generated funds

5. In the estimation of command-basis GNP, the current-dollar value of the sum of exports of goods and services and of receipts of factor income is deflated by the implicit price deflator (IPD) for the sum of imports of goods and services and of payments of factor income.

The terms of trade is a measure of the relationship between the prices that are received by U.S. producers for exports of goods and services and the prices that are paid by U.S. purchasers for imports of goods and services. It is measured by the following ratio, with the decimal point shifted two places to the right: In the numerator, the IPD for the sum of exports of goods and services and of receipts of factor income; in the denominator, the IPD for the sum of imports of goods and services and of payments of factor income.

Changes in the terms of trade reflect the interaction of several factors, including movements in exchange rates, changes in the composition of the traded goods and services, and changes in producers' profit margins. For example, if the U.S. dollar depreciates against a foreign currency, a foreign manufacturer may choose to absorb this cost by reducing the profit margin on the product it sells to the United States, or it may choose to raise the price of the product and risk a loss in market share.

6. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown as corporate profits with inventory valuation and capital consumption adjustments in NIPA tables 1.9, 1.14, 1.16, and 6.16C (which are part of the "Selected NIPA Tables," which begin on page D-2 of this issue).

7. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates are derived from BEA's international transactions accounts.

available for investment, decreased \$5.8 billion after increasing \$21.9 billion. The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, decreased for the fourth consecutive quarter (and for the ninth time in the last 11 quarters), to 84.8 percent from 87.3 percent.⁸ The ratio, which averaged 91.9 percent in 1991–97, was last below 85 percent in the fourth quarter of 1990.

Industry profits and related measures.—Industry profits decreased \$13.0 billion after increasing \$3.6 billion.⁹ Profits of domestic nonfinancial

8. The recent annual revision of the NIPA's included a redefinition of dividend payments; see Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," SURVEY OF CURRENT BUSINESS 78 (August 1998): 29. This redefinition raised undistributed corporate profits (calculated as profits after tax less dividends), which are a major component of cash flow. Accordingly, cash flow was raised, as was the ratio of cash flow to nonresidential fixed investment. Prior to the annual revision, the ratio's level in the first quarter of 1998 was 80.1 percent, and its average for 1991–97 was 85.5 percent.

9. Industry profits, which are estimated as the sum of corporate profits before tax and the inventory valuation adjustment, are shown in NIPA table 6.16C (on page D-16 of this issue). Estimates of the capital consumption

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

corporations decreased more than in the first quarter, reflecting weakness in the nonmanufacturing industries: The transportation and public utilities group (which includes communications) turned down, retail trade was unchanged after an increase, and "other" nonfinancial corporations decreased more than in the first quarter. In contrast, manufacturing profits decreased much less than in the first quarter; the improvement mainly reflected upturns in industrial machinery and equipment, in fabricated metal products, and in food and kindred products. Profits of domestic financial corporations and profits from the rest of the world both decreased after increasing.

adjustment are available only for total financial and total nonfinancial industries.

Profits before tax (PBT) increased \$4.4 billion after falling \$17.3 billion. The difference between the \$4.4 billion increase in PBT and the \$8.6 billion decrease in profits from current production was more than accounted for by smaller inventory losses, as reflected in a \$17.5 billion decrease in the inventory valuation adjustment.¹⁰

¹⁰. As prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits—a capital-gains-like element in profits—result from an increase in inventory prices, and inventory losses—a capital-loss-like element in profits—result from a decrease in inventory prices. In the NIPA's, inventory profits or losses are used to adjust corporate profits before tax and nonfarm proprietors' income (both of which are mainly based on data from tax returns). Inventory profits are shown as the inventory valuation adjustment with the sign reversed.

Upcoming Comprehensive Revision of the NIPA's

Next year, BEA will undertake its 11th comprehensive, or benchmark, revision of the national income and product accounts (NIPA's).

Comprehensive revisions are prepared about every 5 years and incorporate three major types of improvements: (1) Definitional and classificational changes that update the accounts to more accurately portray the evolving U.S. economy, (2) statistical changes that update the accounts to reflect the introduction of new and improved methodologies and the incorporation of newly available and revised source data, and (3) presentational changes that update the NIPA tables to reflect the aforementioned changes and to make the tables more informative.

Comprehensive revisions, and to a lesser extent annual revisions, provide the opportunity to introduce the major changes that are outlined in BEA's strategic plan for maintaining and improving its economic accounts. BEA periodically updates its strategic plan, which is available on our Web site at <www.bea.doc.gov>; click on "What's New."

For the upcoming comprehensive revision, BEA is considering several major improvements—including the capitalization of invest-

ments in computer software, the treatment of government retirement plans symmetrically with private plans, and the integration of BEA's wealth estimates with the NIPA estimates. However, constraints on time, resources, and source data will play a role in deciding which improvements will be implemented.

During the next year, BEA will provide additional information on the comprehensive revision and will solicit input through comments on the SURVEY OF CURRENT BUSINESS articles that preview the proposed changes and through discussions at group meetings of experts. If you have comments or suggestions on the strategic plan or on the comprehensive revision, please contact

BUSINESS SITUATION

Ralph W. Morris prepared the first section of this article, and Daniel Larkins prepared the section on corporate profits.

REAL GROSS domestic product (GDP) increased 1.8 percent in the second quarter of 1998, according to the "final" estimates of the national income and product accounts (NIPA's) (table 1 and chart 1).¹ The deceleration from a 5.5-percent increase in the first quarter was more than accounted for by a downturn in inventory investment and by a slowdown in business spending for equipment.

1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data. Real estimates are calculated using a chain-type Fisher formula with annual weights and expressed both as index numbers (1992=100) and as chained (1992) dollars. Price indexes (1992=100) also are calculated using a chain-type Fisher formula.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1992) dollar levels and residuals, which measure the extent of nonadditivity in each table, are in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are in NIPA table 8.1.

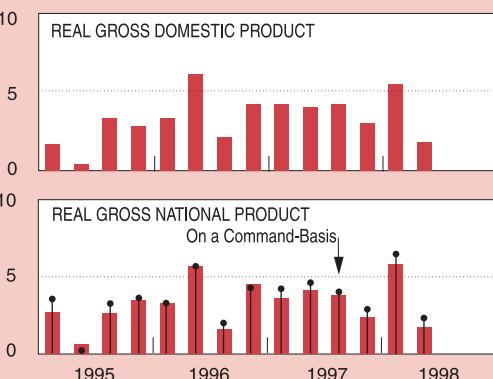

The "final" estimate of the change in real GDP is 0.2 percentage point higher than the 1.6-percent increase indicated by the "preliminary" estimate reported in the September "Business Situation" (table 2). The revision is close to the average revision—0.3 percentage point, without regard to sign—from the preliminary estimate to the final estimate for 1978–97. Revisions to the components of GDP were small. Upward revisions to consumer spending, net exports, and business spending for equipment more than offset a downward revision to inventory investment. The largest revision was to consumer spending; the revision mainly reflected the incorporation of revised Census Bureau retail sales data and newly available Federal Deposit Insurance Corporation data on bank service charges. In net exports, the incorporation of revised Census Bureau and BEA data on international trade in goods and services resulted in a larger downward revision to imports than to exports. (Imports are subtracted from final expenditures in the calculation of GDP.)

Real final sales of domestic product increased 4.6 percent in the second quarter, 0.2 percentage

CHART 1

Percent

Note.—Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

point more than the preliminary estimate.² Real gross domestic purchases increased 3.9 percent, 0.1 percentage point more than the preliminary estimate.³

The price index for gross domestic purchases increased 0.4 percent, the same as the preliminary estimate; in the first quarter, the index decreased 0.2 percent. The price index for GDP increased 0.9 percent, 0.1 percentage point more than the preliminary estimate; in the first quarter, the index also increased 0.9 percent. The larger second-quarter increase in GDP prices than in gross domestic purchases prices was due to

2. Final sales of domestic product equals GDP less change in business inventories.

3. Gross domestic purchases a measure of purchases by U.S. residents regardless of where the purchased goods and services were produced is calculated as GDP less exports of goods and services plus imports of goods and services.

a larger decrease in the prices of imports than in the prices of exports. (Import prices are included in gross domestic purchases prices but not in GDP prices, and export prices are included in GDP prices but not in gross domestic purchases prices.)

Real disposable personal income (DPI) increased 2.6 percent, 0.3 percentage point less than the preliminary estimate. The downward revision reflected an upward revision to personal tax and nontax payments. (Disposable personal income is personal income less personal tax and nontax payments.) The upward revision to personal tax and nontax payments reflected newly available data on State and local tax receipts from the Census Bureau. The personal saving rate was 0.4 percent, 0.2 percentage point less than the preliminary estimate.

NOTE.—The final estimates for the second quarter of 1998 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Revised retail sales for June, hospital expenses for May, residential electricity usage for May, residential volume gas usage for May, and data on bank service charges for the second quarter.

Nonresidential fixed investment: Revised construction put in place for May and June and revised manufacturers' shipments of machinery and equipment for June.

Residential fixed investment: Revised construction put in place for May and June.

Change in business inventories: Revised manufacturing and trade inventories for June.

Exports and imports of goods and services: Revised data on exports and imports of goods for June and revised balance-of-payments data on exports and imports of goods and services for the second quarter.

Government consumption expenditures and gross investment: Revised State and local construction put in place for May and June.

Wages and salaries: Revised employment, average hourly earnings, and average weekly hours for April through June.

GDP prices: Revised export and import prices for April through June, revised values and quantities of petroleum imports for June, and revised prices of single-family homes under construction for the second quarter.

4. GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world.

Table 3.—Relation of Real Gross Domestic Product, Real Gross National Product, and Real Command-Basis Gross National Product

Addendum:											
Terms of trade ¹	105.7	.1	.1	1.6	.5	.4	.4	6.3	1.9		

1. Calculated as the ratio of the implicit price deflator for the sum of exports of goods and services and of receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Levels of these series are in NIPA tables 1.10 and 1.11.

Receipts of factor income from the rest of the world were unchanged, and payments of factor income increased; more than half of the increase in payments was in interest income. The revised estimate of the growth in second-quarter GNP is 0.1 percentage point higher than the preliminary estimate.

Real GNP on a command basis, which measures the goods and services produced by the U.S. economy in terms of their purchasing power, increased more than real GNP—2.0 percent, compared with 1.7 percent—reflecting an improvement in the terms of trade.⁵ In the first quarter, real GNP on a command-basis increased considerably more than real GNP—6.9 percent, compared with 5.8 percent—reflecting a substantial improvement in the terms of trade.

Corporate Profits

Profits from current production decreased \$8.6 billion in the second quarter after increasing \$8.4 billion in the first (table 4).⁶ Profits of domestic nonfinancial corporations decreased \$6.1 billion after no change, as a decrease in unit profits more than offset an increase in a real product; the decrease in unit profits, in turn, resulted from an increase in unit costs, while unit prices were unchanged. Profits of domestic financial corporations decreased \$1.2 billion after increasing \$1.8 billion. Profits from the rest of the world decreased \$1.3 billion after increasing \$6.6 billion; payments increased, and receipts changed little.⁷

Cash flow from current production, a profits-related measure of internally generated funds

5. In the estimation of command-basis GNP, the current-dollar value of the sum of exports of goods and services and of receipts of factor income is deflated by the implicit price deflator (IPD) for the sum of imports of goods and services and of payments of factor income.

The terms of trade is a measure of the relationship between the prices that are received by U.S. producers for exports of goods and services and the prices that are paid by U.S. purchasers for imports of goods and services. It is measured by the following ratio, with the decimal point shifted two places to the right: In the numerator, the IPD for the sum of exports of goods and services and of receipts of factor income; in the denominator, the IPD for the sum of imports of goods and services and of payments of factor income.

Changes in the terms of trade reflect the interaction of several factors, including movements in exchange rates, changes in the composition of the traded goods and services, and changes in producers' profit margins. For example, if the U.S. dollar depreciates against a foreign currency, a foreign manufacturer may choose to absorb this cost by reducing the profit margin on the product it sells to the United States, or it may choose to raise the price of the product and risk a loss in market share.

6. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown as corporate profits with inventory valuation and capital consumption adjustments in NIPA tables 1.9, 1.14, 1.16, and 6.16C (which are part of the "Selected NIPA Tables," which begin on page D-2 of this issue).

7. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates are derived from BEA's international transactions accounts.

available for investment, decreased \$5.8 billion after increasing \$21.9 billion. The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, decreased for the fourth consecutive quarter (and for the ninth time in the last 11 quarters), to 84.8 percent from 87.3 percent.⁸ The ratio, which averaged 91.9 percent in 1991–97, was last below 85 percent in the fourth quarter of 1990.

Industry profits and related measures.—Industry profits decreased \$13.0 billion after increasing \$3.6 billion.⁹ Profits of domestic nonfinancial

8. The recent annual revision of the NIPA's included a redefinition of dividend payments; see Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," SURVEY OF CURRENT BUSINESS 78 (August 1998): 29. This redefinition raised undistributed corporate profits (calculated as profits after tax less dividends), which are a major component of cash flow. Accordingly, cash flow was raised, as was the ratio of cash flow to nonresidential fixed investment. Prior to the annual revision, the ratio's level in the first quarter of 1998 was 80.1 percent, and its average for 1991–97 was 85.5 percent.

9. Industry profits, which are estimated as the sum of corporate profits before tax and the inventory valuation adjustment, are shown in NIPA table 6.16C (on page D-16 of this issue). Estimates of the capital consumption

CCAdj Capital consumption adjustment

corporations decreased more than in the first quarter, reflecting weakness in the nonmanufacturing industries: The transportation and public utilities group (which includes communications) turned down, retail trade was unchanged after an increase, and "other" nonfinancial corporations decreased more than in the first quarter. In contrast, manufacturing profits decreased much less than in the first quarter; the improvement mainly reflected upturns in industrial machinery and equipment, in fabricated metal products, and in food and kindred products. Profits of domestic financial corporations and profits from the rest of the world both decreased after increasing.

adjustment are available only for total financial and total nonfinancial industries.

Profits before tax (PBT) increased \$4.4 billion after falling \$17.3 billion. The difference between the \$4.4 billion increase in PBT and the \$8.6 billion decrease in profits from current production was more than accounted for by smaller inventory losses, as reflected in a \$17.5 billion decrease in the inventory valuation adjustment.¹⁰

¹⁰. As prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits—a capital-gains-like element in profits—result from an increase in inventory prices, and inventory losses—a capital-loss-like element in profits—result from a decrease in inventory prices. In the NIPA's, inventory profits or losses are used to adjust corporate profits before tax and nonfarm proprietors' income (both of which are mainly based on data from tax returns). Inventory profits are shown as the inventory valuation adjustment with the sign reversed.

Upcoming Comprehensive Revision of the NIPA's

Next year, BEA will undertake its 11th comprehensive, or benchmark, revision of the national income and product accounts (NIPA's).

Comprehensive revisions are prepared about every 5 years and incorporate three major types of improvements: (1) Definitional and classificational changes that update the accounts to more accurately portray the evolving U.S. economy, (2) statistical changes that update the accounts to reflect the introduction of new and improved methodologies and the incorporation of newly available and revised source data, and (3) presentational changes that update the NIPA tables to reflect the aforementioned changes and to make the tables more informative.

Comprehensive revisions, and to a lesser extent annual revisions, provide the opportunity to introduce the major changes that are outlined in BEA's strategic plan for maintaining and improving its economic accounts. BEA periodically updates its strategic plan, which is available on our Web site at <www.bea.doc.gov>; click on "What's New."

For the upcoming comprehensive revision, BEA is considering several major improvements—including the capitalization of invest-

ments in computer software, the treatment of government retirement plans symmetrically with private plans, and the integration of BEA's wealth estimates with the NIPA estimates. However, constraints on time, resources, and source data will play a role in deciding which improvements will be implemented.

During the next year, BEA will provide additional information on the comprehensive revision and will solicit input through comments on the SURVEY OF CURRENT BUSINESS articles that preview the proposed changes and through discussions at group meetings of experts. If you have comments or suggestions on the strategic plan or on the comprehensive revision, please contact

Annual NIPA Revision: Newly Available Tables

THIS PRESENTATION OF national income and product accounts (NIPA's) tables 3.15-3.20 and 9.1-9.6 completes the **annual NIPA revision** presented in the August 1998 SURVEY OF CURRENT BUSINESS. That issue included an article describing the revision and most of the full set of NIPA tables. The September issue presented an **updated summary** of the NIPA methodologies, including tables showing the principal source data and estimating methods used, and **table 8.26**.

The full set of "annual only" NIPA tables for 1982 forward is available as downloadable files on BEA's

Web site at <www.bea.doc.gov>; click on Catalog of Products and look under National, National Income and Product Accounts. The set is also available on diskette from BEA: Product number NDN-0209, price \$20.00. To order using MasterCard or Visa, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666). To order by mail, send a check payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk (BE-53), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

1. Total current expenditures and gross investment (line 1) and total current expenditures (line 23) include Federal Government current expenditures less grants-in-aid to State and local governments plus State and local government current expenditures. Total current expenditures and gross investment and total current expenditures include compensation of employees on a disbursement basis. The estimates by function include compensation of employees on an accrual basis. Wage accruals less disbursements (in millions of dollars) is zero for 1994 through 1997.

2. Excludes interest received by State and local social insurance funds, which is netted against expenditures for the appropriate functions.

1. Total current expenditures and gross investment and total current expenditures include compensation of employees on a disbursement basis. Expenditures by type and function include compensation of employees on an accrual basis. Wage accruals less disbursements is zero for 1994 through 1997.

2. Excludes interest received by social insurance funds, which is netted against expenditures for the appropriate functions.

1. Consists largely of contributions for social insurance by residents of U.S. territories and Puerto Rico.

2. Taxes received from the rest of the world are included in the budget and netted against expenditures (transfer payments) in the national income and product accounts.

3. Consists largely of proprietary receipts that are netted against outlays in the budget and classified as receipts in the national income and product accounts.

4. Consists largely of Treasury receipts from sales of foreign currencies to Government agencies.

5. Consists largely of transfer payments, subsidies, and grants-in-aid to residents of U.S. territories and Puerto

Rico.

6. Consists of agencies such as the Postal Service and the Federal Financing Bank which, in some time periods, were not included in the budget. Also includes net purchases of silver and minor coin metal. Also, since 1992, consists of financing disbursements from credit programs which are off-budget transactions that record all cash flows arising from direct loan obligations and loan guarantee commitments.

7. Consists largely of net expenditures of foreign currencies.

1. The Bureau of the Census measures of State and local government receipts and expenditures (lines 1 and 18) represent a combination of fiscal years. Virtually all States and many localities use July 1-June 30 fiscal years; the rest use varying fiscal years. The national income and product account (NIPA) measures shown in this table are for the fiscal year ending June 30. The differences that arise from restating the Census data to a year ending June 30 are included in lines 13, 14, and 15 (receipts) and line 28 (expenditures).

2. Prior to 1985, capital gains, net of losses, of retirement systems is included in line 5.

3. Prior to 1968, dividends received is included in interest received (lines 9 and 23).

Annual NIPA Revision: Newly Available Tables

THIS PRESENTATION OF national income and product accounts (NIPA's) tables 3.15-3.20 and 9.1-9.6 completes the **annual NIPA revision** presented in the August 1998 SURVEY OF CURRENT BUSINESS. That issue included an article describing the revision and most of the full set of NIPA tables. The September issue presented an **updated summary** of the NIPA methodologies, including tables showing the principal source data and estimating methods used, and **table 8.26**.

The full set of "annual only" NIPA tables for 1982 forward is available as downloadable files on BEA's

Web site at <www.bea.doc.gov>; click on Catalog of Products and look under National, National Income and Product Accounts. The set is also available on diskette from BEA: Product number NDN-0209, price \$20.00. To order using MasterCard or Visa, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666). To order by mail, send a check payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk (BE-53), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

1. Total current expenditures and gross investment (line 1) and total current expenditures (line 23) include Federal Government current expenditures less grants-in-aid to State and local governments plus State and local government current expenditures. Total current expenditures and gross investment and total current expenditures include compensation of employees on a disbursement basis. The estimates by function include compensation of employees on an accrual basis. Wage accruals less disbursements (in millions of dollars) is zero for 1994 through 1997.

2. Excludes interest received by State and local social insurance funds, which is netted against expenditures for the appropriate functions.

1. Total current expenditures and gross investment and total current expenditures include compensation of employees on a disbursement basis. Expenditures by type and function include compensation of employees on an accrual basis. Wage accruals less disbursements is zero for 1994 through 1997.

2. Excludes interest received by social insurance funds, which is netted against expenditures for the appropriate functions.

1. Consists largely of contributions for social insurance by residents of U.S. territories and Puerto Rico.

2. Taxes received from the rest of the world are included in the budget and netted against expenditures (transfer payments) in the national income and product accounts.

3. Consists largely of proprietary receipts that are netted against outlays in the budget and classified as receipts in the national income and product accounts.

4. Consists largely of Treasury receipts from sales of foreign currencies to Government agencies.

5. Consists largely of transfer payments, subsidies, and grants-in-aid to residents of U.S. territories and Puerto

Rico.

6. Consists of agencies such as the Postal Service and the Federal Financing Bank which, in some time periods, were not included in the budget. Also includes net purchases of silver and minor coin metal. Also, since 1992, consists of financing disbursements from credit programs which are off-budget transactions that record all cash flows arising from direct loan obligations and loan guarantee commitments.

7. Consists largely of net expenditures of foreign currencies.

1. Consists largely of foreign currency transactions.

1. The Bureau of the Census measures of State and local government receipts and expenditures (lines 1 and 18) represent a combination of fiscal years. Virtually all States and many localities use July 1-June 30 fiscal years; the rest use varying fiscal years. The national income and product account (NIPA) measures shown in this table are for the fiscal year ending June 30. The differences that arise from restating the Census data to a year ending June 30 are included in lines 13, 14, and 15 (receipts) and line 28 (expenditures).

2. Prior to 1985, capital gains, net of losses, of retirement systems is included in line 5.

3. Prior to 1968, dividends received is included in interest received (lines 9 and 23).

Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 1994:IV–1998:II

THE FOLLOWING TABLES present revised quarterly and monthly estimates of real inventories, sales, and inventory-sales ratios for manufacturing and trade beginning with the fourth quarter of 1994. The estimates incorporate revised annual and quarterly weights into the calculation of the chain-type measures of real output and prices, and they are consistent with those published in [NIPA table 5.13](#) in the August 1998 SURVEY OF CURRENT BUSINESS.

Data availability

Quarterly estimates for 1977–92 of real manufacturing and trade inventories, sales, and inventory-sales ratios and of real manufacturing inventories by stage of fab-

rication were published in the May 1996 SURVEY, and for [1993–94](#) in the October 1997 SURVEY.

The estimates for 1959–98:I are available as downloadable files on BEA's Web site at <www.bea.doc.gov>; click on Catalog of Products and look under National, National Income and Product Accounts.

The estimates are also available from BEA on the underlying NIPA historical data diskette: Product number NDN-O211, price \$60.00. To order using Visa or MasterCard, call the BEA Order Desk at 1-800-704-0415 (outside the United States, (202) 606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk (BE-53), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

¹ Preliminary.

¹ Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

² Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

³ Prior to 1981, inventories and sales of auto and home supply stores are included in motor vehicle dealers. Beginning with 1981, these inventories are included in "other durable goods."

NOTES.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory.

Chained (1992) dollar inventory series are calculated as the product of the chain-type quantity index and the average of the end-of-year fixed-weighted inventories for 1991 and 1992, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

^a Preliminary.

1. Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

3. Prior to 1981, inventories and sales of auto and home supply stores are included in motor vehicle dealers.

Beginning with 1981, these inventories are included in "other durable goods."

NOTES.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory.

Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 3.—Real Inventory-Sales Ratios for Manufacturing and Trade, Seasonally Adjusted

^p Preliminary.

1. Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

NOTES—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory.

Chained (1992) dollar inventory series are calculated as the product of the chain-type quantity index and the average of the end-of-year fixed-weighted inventories for 1991 and 1992, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

State Personal Income, Revised Estimates for 1982–97

By Wallace K. Bailey

THIS ARTICLE presents the revised annual estimates of State personal income for 1982–97. These estimates provide State-by-State information on personal income and disposable personal income, including per capita measures and information on the sources of personal income.

This annual revision of the estimates of State personal income incorporates the estimates of personal income from the annual revision of the national income and product accounts (NIPA's) that was released in July 1998. For 1995–97, the revision to the NIPA's reflected the use of new source data and other statistical changes.¹ In addition, the national estimates of personal dividend income for 1982–97 were redefined to exclude capital gains distributions of regulated investment companies—that is, mutual funds.²

1. For a description of the NIPA revision, see Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," SURVEY OF CURRENT BUSINESS 78 (August 1998): 7–32.

2. As a result of this redefinition, all identifiable forms of capital gains and losses have been excluded from personal income. For a more detailed description of this redefinition and its effect on other NIPA components, see Seskin, "Annual Revision," 29.

The revisions of the national estimates of personal income were –0.7 percent for 1993 and –0.6 percent for 1994, reflecting the large downward revisions to personal dividend income. For 1995–97, the revisions to personal income ranged from –1.1 percent to –1.3 percent, reflecting the large downward revisions to personal dividend income and substantial downward revisions to other labor income and to personal interest income.

This article describes the sources and effects of the revisions, discusses the revised estimates of change in personal income and per capita personal income for 1997, and provides the definitions of the major personal income aggregates. Tables 1–4 at the end of the article present the revised estimates of personal income and per capita personal income and of disposable personal income and per capita disposable personal income for 1992–97, and table 5 presents the revised estimates of personal income by component and of earnings by industry for 1995–97. (For information on the revised estimates for earlier years, see the box "Data Availability" on page 22.)

Acknowledgments

The revised estimates of State personal income were prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. Hugh W. Knox, Associate Director for Regional Economics, provided general guidance.

Estimates of nonfarm wages and salaries and other labor income and of personal tax and nontax payments were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, Lisa C. Ninomiya, Michael G. Pilot, John A. Rusinko, and James M. Scott. Contributing staff members were Susan P. Den Herder, Ann E. Dunbar, Lisa B. Emerson, John D. Laffman, Lela S. Lester, Russell C. Lusher, Richard A. Lutyk, Paul K. Medzerian, Mauricio Ortiz, Michael Phillips, Adrienne T. Pilot, William E. Reid, Jr., Victor A. Sahadachny, Elizabeth F. Stell, and Jaime Zenzano.

Estimates of farm wages and salaries and other labor income and of proprietors' income, property income, transfer payments, personal contributions for social insurance, and the adjustment for residence were prepared by the Regional Income Branch. Major responsibilities were assigned to Charles A. Jolley and James M. Zavrel. Contributing staff members were Elaine M. Briccetti, Carrie L. Case, Daniel R. Corrin, Toan A. Ly, W. Tim McKeel, Jeffrey L. Newman, Suet M. Ng, James P. Stehle, Ellen M. Wright, and Marianne A. Ziver.

The public use tabulations and data files were assembled and the tables for this article were prepared by the Regional Economic Information System Branch. Major responsibilities were assigned to Kathy A. Albetski and Gary V. Kennedy. Contributing staff members were H. Steven Dolan, Michael J. Paris, Albert Silverman, Nancy E. Smith, Callan S. Swenson, Monique B. Tyes, and Mary C. Williams.

Sources of the revisions to the State estimates

The revised estimates of State personal income incorporate the revised NIPA estimates through the use of the national estimates of more than 400 subcomponents as control totals for the State estimates. The revised State estimates also incorporate newly available State-level source data that are more current, more detailed, and otherwise more appropriate than the source data they replace. In addition, the estimates of non-farm proprietors' income incorporate a change in methodology.

Newly available State-level source data.—The State estimates of wage and salary disbursements, other labor income, and personal contributions for social insurance for 1997 incorporate newly available tabulations from the Bureau of Labor Statistics (BLS) of wages and salaries of employees covered by State unemployment insurance (UI) for the fourth quarter of 1997 and revised tab-

ulations for the previous quarters. Previously, the estimates for 1997 reflected UI data for the first three quarters and extrapolations for the fourth quarter that were based on data from BLS's monthly Current Employment Survey.

For farm proprietors' income, the estimates incorporate revised national and State estimates of farm income for 1995–96 from the U.S. Department of Agriculture (USDA) and new USDA estimates of farm income for 1997.

For dividends, interest, and rent, the estimates incorporate newly available tabulations from the Internal Revenue Service (IRS) of individual income tax returns for 1996. Previously, the 1996–97 estimates were based on extrapolations of tabulations for 1995; the 1997 estimates are now based on extrapolations of the tabulations for 1996.

For transfer payments, the estimates incorporate newly available tabulations for 1997 of the benefits disbursed from the agencies that

Relation of Personal Income in the National Income and Product Accounts (NIPA's) and in the State Personal Income Series

The level of the annual estimates of personal income in the NIPA's differs from that of the national totals of State personal income because of differences in coverage, in the methodologies used to produce the estimates, and in the timing of the availability of the source data. The table below shows the relation of the NIPA estimates and the State estimates of personal income by component and by source of difference; almost all of the difference is accounted for by the estimates of net earnings.

The largest source of difference is the overseas adjustment, which excludes the earnings of Federal civilian and military personnel stationed abroad and of certain employees of U.S. corporations on temporary foreign assignment from the State estimates. In the NIPA's, personal income is a measure of the income of U.S. residents and thus includes the income of some U.S. residents who are living

abroad temporarily. In the State estimates, the national total of personal income is a measure of the income of the residents of the 50 States and of the District of Columbia, and the place of residence is the State in which they live currently. This difference affects the estimates of wage and salary disbursements, of other labor income, and of personal contributions for social insurance.

The next largest source of difference between the two series is a difference in the methodologies used to estimate farm proprietor's income. For both series, the estimates of farm proprietors' income are derived from U.S. Department of Agriculture (USDA) estimates of net farm income, but the methodologies used for the derivation differ. For the NIPA's, data from the Internal Revenue Service on the income of farm corporations are subtracted from the USDA estimates of net farm income in order to derive farm proprietors' income. For the State series, the USDA estimates of farm gross income and expenses are disaggregated into corporate and noncorporate portions in proportion to establishment data from the Census of Agriculture. A portion of the differing results of the two methodologies is attributable to the use of data for enterprises—farm corporations—in the NIPA methodology and for establishments—corporate farms—in the State methodology.

The two series also differ because of differences in the timing of the availability of source data. These differences are highly variable and are usually relatively small. Specifically, revised wage and salary data from the Bureau of Labor Statistics and revised USDA estimates of net farm income sometimes become available after the NIPA estimates have been prepared but in time to be incorporated into the State estimates.

Finally, a small difference between the two series is due to a coverage adjustment to the NIPA estimate of transfer payments. In the State series, this adjustment removes the unemployment benefits paid by State employment security agencies to individuals living in the outlying U.S. areas, mainly in Puerto Rico.

1. Net earnings is the sum of wage and salary disbursements, other labor income, and proprietors' income, less personal contributions for social insurance.

administer the benefit programs, such as the Social Security Administration for benefits under the social security retirement and supplemental security income programs and the Health Care Financing Administration for benefits under the medicare and medicaid programs. Previously, the estimates for 1997 for these benefits and for most other subcomponents of transfer payments were based on extrapolations of tabulations for 1996; tabulations for 1997 were available only for unemployment compensation.

Methodological change.—For nonfarm proprietors' income, the methodology used to prepare the estimates for 1995 was changed because tabulations from the 1995 income tax returns of sole proprietors and partnerships were not available from the IRS in time to be used for the estimates. Instead, the estimates are based on extrapolations of the 1994 tabulations by the relative change in the number of small establishments in each industry from the Census Bureau's annual *County Business Patterns*. In accordance with the established methodology, the revised estimates for 1996–97 are based on extrapolations of the 1995 estimates by the relative change in the pre-revision estimates of nonfarm State personal income.

Effects of the revisions on the State estimates

This section describes the effects of the revisions on the State estimates for 1994–97, on the average annual rates of change in the estimates from 1994 to 1997, and on the levels and ranks of the estimates of per capita personal income for 1997. Although the series reflects moderate downward revisions to the estimates for most States, the major comparative features of the series—including the relative rates of change among the States and the rankings of State per capita personal income—changed little.

Revisions to the estimates for 1994–97.—The revisions to the estimates for the States and BEA regions generally reflect the downward revisions to the national estimates (table A). For 1994, the only component of personal income for which the national estimate was revised was personal dividend income. The variation in the percent revisions among the States and regions reflects only the variation in the relative proportions of dividends to personal income.

For 1995 and for 1996, the national estimates of all of the components of personal income were revised, and new State-level source data were used for many of the components. The

Data Availability

This article presents a summary of the estimates of personal income, per capita personal income, disposable personal income, and per capita disposable personal income for 1992–97 and estimates of personal income by major source and earnings by industry for 1995–97. These estimates, together with more detailed and supplemental estimates, are on the newly available CD-ROM "State Personal Income, 1929–97" (price \$35.00, product number RCN-0208). This CD-ROM also includes gross state product for 1977–96 and the methodology used to prepare the estimates of State personal income. To order the CD-ROM using Visa or MasterCard, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

These estimates are also available on BEA's Web site; go to <www.bea.doc.gov>, and click on Regional, Data, Recent annual tables. The estimates are organized into the following sets of files.

- Personal income, per capita personal income, disposable personal income, per capita disposable personal income, and population for 1929–57 and for 1958–97
- Personal income by major source and earnings by Standard Industrial Classification (SIC) two-digit industry for 1958–68 and for 1969–97

- Personal income by major source and earnings by SIC division (the "one-digit" level of classification) for 1929–57

- Wage and salary disbursements by SIC two-digit industry for 1958–68 and for 1969–97

- Wage and salary disbursements by SIC division for 1929–57

- Economic profiles that include a selection of data from several of the other tables and component detail for dividends, interest, and rent for 1958–68 and for 1969–97

- Transfer payments by major program for 1948–57, for 1958–68, and for 1969–97

- Farm income and expenses that include the major categories of gross receipts and expenses for all farms and four measures of farm income for 1969–97

- Personal tax and nontax payments by level of government and by type for 1948–57, for 1958–68, and for 1969–97

- Employment by type and by SIC two-digit industry for 1969–97

- Wage and salary employment by SIC two-digit industry for 1969–97

For more information about these estimates, call BEA's Regional Economic Information System at 202-606-5360, fax 202-606-5322, or E-mail <reis.remd@bea.doc.gov>.

percent revisions for the States and regions do not vary greatly from the percent revisions to the national estimates. The estimates for all States and regions—like the national estimates—were revised down, and the only percent revision that deviates by 1 percentage point or more from the national revision is the downward revision of 2.4 percent for Michigan in 1996.

For 1997, the national estimates of all of the components of personal income were revised,

and new State-level source data were used for most of the components. The percent revisions to personal income for the States and regions show more variation for 1997 than for the previous years. In six States, the percent revisions deviate by 1 percentage point or more from the 1.2-percent downward revision to the national estimate (table B). The estimates for Arkansas and Iowa were revised up, the estimates for Texas, Colorado, and Wyoming were revised

1. Revision as a percentage of the previously published estimate.

down much less than the national estimate, and the estimate for Michigan was revised down substantially more than the national estimate.

For Arkansas and Iowa, the upward revisions to personal income reflect upward revisions to several components of personal income, especially to farm proprietors' income, that more than offset the downward revisions to dividends, interest, and rent. For Texas the downward revision to dividends, interest, and rent is more than offset by an upward revision to nonfarm proprietors' income.

For Colorado and Wyoming, the downward revisions to dividends, interest, and rent are largely offset by upward revisions to nonfarm proprietors' income and to wages and salaries in both States and to transfer payments in Colorado.

For Michigan, the 2.2-percent downward revision is attributable to a large downward revision to other labor income, which resulted from a sharp downward revision to the national estimate of that component for the motor vehicle manufacturing industry, and to the downward revision to dividends, interest, and rent.³

Rewvisions to the rates of change for 1994–97.—The revisions to the average annual rates of change of personal income from 1994 to 1997 for the BEA regions and the States were generally close to the downward revision of 0.2 percentage point to the national estimate (table C). The Rocky Mountain region was the only region with an upward revision to its personal income rate of change. Arkansas, Iowa, and Wyoming are the only States with upward revisions of more than 0.2 percentage point, and Michigan is the only State with a downward revision of more than 0.5 percentage point.

3. The downward revision to other labor income was mostly accounted for by a revision to employer contributions for private pension and profit-sharing plans. For further information, see Seskin, "Annual Revision," 19.

The four States with the highest rates of change before the revisions—Nevada, Arizona, Utah, and Colorado—continue to have the four highest rates; Texas replaces Oregon as the State with the fifth highest rate of change. The four States with the lowest rates of change before the revisions—Hawaii, Alaska, West Virginia, and North Dakota—continue to have the four lowest rates; Michigan and Indiana replace Rhode Island and Wyoming as the States with the fifth lowest rates of change.

Rewvisions to per capita personal income for 1997.

—Because the estimates of population that are used to calculate per capita personal income have not been revised, the revisions to per capita personal income are in proportion to the revisions to personal income. The revisions did not affect the rankings of most of the States (table D). The rank of only five States changed by more than one position: Iowa and Rhode Island are each two positions higher, and Minnesota, Pennsylvania, and Vermont are each two positions lower.

After the revisions, the nine States with the highest ranks are the same as those before the revisions, but Maryland and Delaware exchange fifth and sixth places; Nevada replaces Minnesota as the tenth highest. The nine States with the lowest ranks are the same, but several of these States have changed ranks; Louisiana replaces Kentucky as the tenth lowest.

Changes in personal income in 1997

U.S. personal income increased \$362.0 billion, or 5.6 percent in 1997 after increasing 5.8 percent in 1996 (table 1). The largest increases were in the Southeast and Far West regions; although the rate of increase slowed in both of these regions, the Southeast region accounted for 22 percent of the increase in U.S. personal income, and the Far West region accounted for 19 percent. The

Table B.—Rewvisions to Personal Income for Selected States by Major Component for 1997

Wyoming	-2	.5	-.2	0	.6	-1.0	0	.1	0

1. Wage and salary disbursements, other labor income (OLI), and personal contributions for social insurance by employees, which account for most of the total contributions, are estimated by place of work. For the derivation of personal income, the net sum of these components (wages plus OLI less contributions) is converted to a place-of-residence basis through the addition of the adjustment for residence, which is not calculated for each component. The other components of personal income are estimated by place of residence.

2. The revisions to the adjustment for residence reflect the revisions to the estimates of wage and salary disbursements, other labor income, and personal contributions for social insurance by employees.

NOTE.—The revisions to the estimates of personal income for these States differ from the revision to the national estimate by 1.0 percentage point or more.

increase in the Southeast region was largely accounted for by Florida, North Carolina, Georgia, and Virginia, and that in the Far West region, by California.

Among States, California accounted for 13 percent—the largest share—of the increase in U.S. personal income in 1997; it has accounted for the largest share since 1995. Texas accounted for 10 percent—the second largest share—of the increase in U.S. personal income in 1997, up from

an 8-percent share in 1993; it has accounted for the second largest share since 1993.

Rates of change in per capita personal income in 1997

States with the largest increases.—In 1997, the five States with the largest percentage increases in per capita personal income were Connecticut (6.3 percent), Texas (6.1 percent), Washington (5.8 percent), Kentucky (5.8 percent), and

Massachusetts (5.6 percent). Of these States, Connecticut, Massachusetts, and Washington had per capita personal incomes that were above the U.S. average of \$25,298 (table D).

In all five States, the rates of increase in personal income were above the U.S. average of 5.6 percent, and except in Texas and Washington, the rates of increase in population were below the U.S. average of 0.9 percent (chart 1).

In all five States, net earnings by place of residence was the major contributor to the in-

crease in personal income. In Kentucky, transfer payments also contributed substantially.

By industry, in all five States, earnings in services and in manufacturing were the largest contributors to the increase in earnings by place of work. In addition, earnings increased rapidly in finance, insurance, and real estate and in wholesale trade in Connecticut; in wholesale trade and farms in Texas; in transportation and public utilities in Washington; in farms and construction in Kentucky; and in farms and in finance, insurance, and real estate in Massachusetts.

States with decreases or with the smallest increases.

—In 1997, the six States with decreases or with the smallest percentage increases in per capita personal income were North Dakota (−0.5 percent), Hawaii (2.3 percent), Alaska (2.6 percent), Nevada (2.6 percent), South Dakota (3.3 percent), and Nebraska (3.3 percent). Of these States, North Dakota, Alaska, South Dakota, and Nebraska had per capita personal incomes that were below the U.S. average.

In all these States except Nevada, the increase in personal income was less than the U.S. average. In Nevada, the small increase in per capita personal income reflected a large increase in population that largely offset the above-average increase in personal income (chart 1).

In all the States except Nevada, the increase in personal income was damped by a decline or by small increases in net earnings by place of residence.

By industry, large declines in farm earnings—from unusually high levels in 1996—contributed to the decrease or small increases in earnings in North Dakota, South Dakota, and Nebraska. Increases in earnings were damped by a decline in construction in Hawaii and by declines in mining and manufacturing in Alaska.

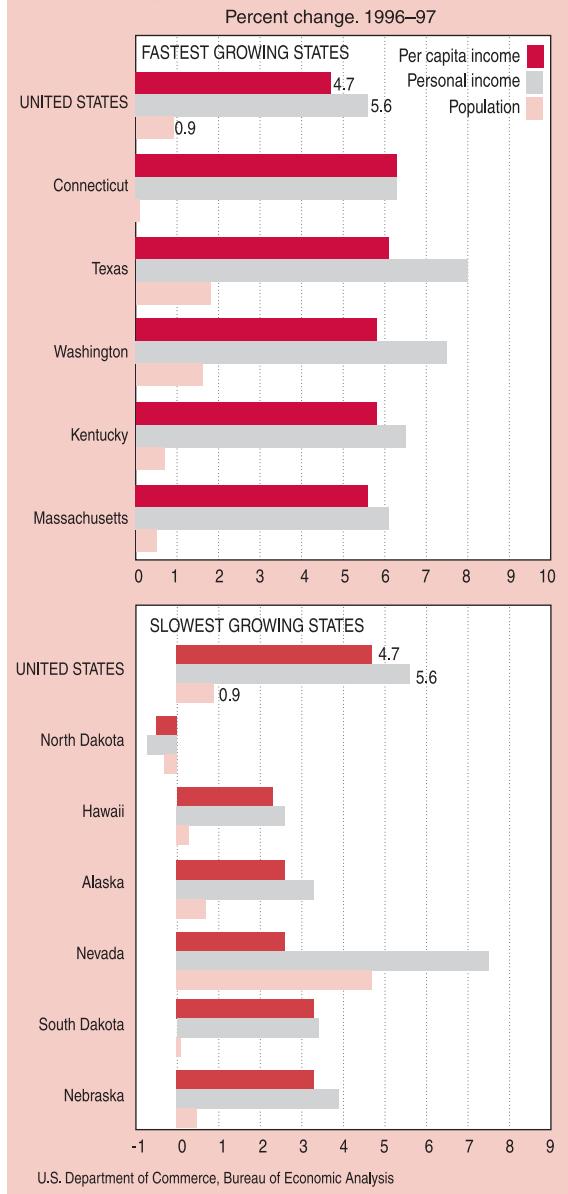

Definitions of personal income, disposable personal income, and earnings

Personal income is the income received by persons from participation in production, from government and business transfer payments, and from government interest. "Persons" consists of individuals, nonprofit institutions that primarily serve individuals, private noninsured welfare funds, and private trust funds.

Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, personal dividend income, personal interest income,

CHART 1

States with the Fastest and Slowest Growth in Per Capita Personal Income, 1997

and transfer payments to persons, less personal contributions for social insurance.

State per capita personal income is calculated as the personal income of the residents of a State divided by the resident population of the State on July 1.

Disposable personal income is the portion of personal income that is available to persons for spending or saving; it is calculated as personal income less personal tax and nontax payments. Personal tax and nontax payments is tax payments (net of refunds) by a State's residents that are not chargeable to business expense and certain other payments to government agencies (except government enterprises) that are treated like taxes. Personal taxes includes taxes on income, including realized net capital gains; on

transfers of estates and gifts; and on personal property. Nontaxes includes donations and fees, fines, and forfeitures.

State per capita disposable personal income is calculated as the disposable personal income of the residents of a State divided by the resident population of the State on July 1.

In the State personal income series, earnings is the sum of wages and salaries, other labor income, and proprietors' income; it is estimated on a place-of-work basis and is available by industry. Net earnings by place of residence—which is not available by industry—is earnings less personal contributions for social insurance plus the adjustment for residence (the net inflow of the earnings of interstate commuters).

Tables 1 through 5 follow. 

Publication and Revision Schedules for the State and Local Area Estimates

Publication schedule.—The quarterly State estimates of total and non-farm personal income are published in the February, May, August, and November issues of the SURVEY OF CURRENT BUSINESS.

The preliminary annual State estimates of total and per capita personal income and of total and per capita disposable personal income are published in the May SURVEY. The revised annual estimates of State personal income by major type and of earnings by industry are published in the September or October SURVEY.

The local area estimates of total and per capita personal income, which are prepared annually, are published in the May SURVEY.

Preparation and revision schedule.—The quarterly estimates of State personal income are prepared about 4 months after the end of the quarter. The preliminary annual State estimates are prepared about 4 months after the end of the year, and the revised State estimates are prepared about 8 months after the end of the year. The annual estimates of local area personal income are prepared about 16 months after the end of the year.

In January, the estimates of State personal income for the third quarter of the previous year are prepared, and the estimates of the first and second quarters are revised.

In April, the annual and quarterly State estimates for the 3 years before the previous year are revised in order to incorporate the newly available data for wages and salaries that are used to prepare the county estimates for those years and to reflect the county-level estimation of the adjustment for residence. In addition, the State estimates for the fourth quarter of the previous year are prepared, and the estimates for the first three quarters are revised. Further, the

preliminary annual State estimates for the previous year are prepared by averaging the quarterly estimates for the year.

In May, the estimates of local area personal income for the year before the previous year are prepared, and the estimates for the 2 years before that are revised.

In July, the State estimates for the first quarter of the year are prepared, and the estimates for the four quarters of the previous year are revised.

In August or September, the annual State estimates for the previous year are revised through the use of the annual, rather than the quarterly, methodology, and the annual estimates for the 2 years before that are revised.

In October, the State estimates for the second quarter of the year are prepared and the estimates for the first quarter are revised. Further, the estimates for the quarters of the previous 3 years are revised for consistency with the revised annual estimates that were released in August or September.

The State and local area estimates are normally revised again only after a comprehensive, or benchmark, revision of the national income and product accounts (NIPA's) to reflect the revisions to the national estimates of personal income, which is an aggregate in the NIPA's; comprehensive revisions of the NIPA's are made approximately every 5 years, most recently in 1996. The revised national estimates are incorporated into the State and county estimates as part of comprehensive revisions of the State estimates and of the local area estimates. The most recent comprehensive revision of State personal income was released in 1996, and that of local area personal income, in 1997.

^r Revised.

1. The personal income level shown for the United States is derived as the sum of the State estimates; it differs from the national income and product accounts estimate of personal income.

For more information, see the box "Relation of Personal Income in the National Income and Product Accounts (NIPA's) and in State Personal Income."

2. Percent change was calculated from unrounded data.

Table 2.—Per Capita Personal Income by State and Region, 1992–97

SURVEY OF CURRENT BUSINESS

October 1998 • 41

and Earnings by Industry¹, 1995–97—Continued

5. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers and for certain temporary and migratory workers; Wage and salary disbursements to U.S. residents commuting or working temporarily outside U.S. borders less wage and salary disbursements to foreign residents commuting or working temporarily inside U.S. borders.

6. Rental income of persons includes the capital consumption adjustment.

7. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

8. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations.

U.S. International Transactions, Second Quarter 1998

By Douglas B. Weinberg

THE U.S. current-account deficit—the combined balances on trade in goods and services, investment income, and net unilateral transfers—increased to \$56.5 billion in the second quarter from \$46.7 billion (revised) in the first (table A, chart 1).¹ Most of the increase was accounted for by a large increase in the deficit on goods; the deficit on investment income also increased. These changes more than offset a small increase in the surplus on services and a small decrease in net unilateral transfers.

In the capital account, net recorded capital inflows—the difference between changes in net U.S. assets abroad and changes in net foreign assets in the United States—were \$65.9 billion in

the second quarter, up from \$49.9 billion (revised) in the first. Capital inflows for foreign assets in the United States accelerated more than capital outflows for U.S. assets abroad.

The statistical discrepancy—errors and omissions in recorded transactions—was a negative \$9.4 billion in the second quarter, compared with a negative \$3.1 billion in the first.

The following are highlights for the second quarter of 1998:

- The deficit on goods increased sharply, mostly as a result of a large drop in exports.
- Net U.S. purchases of foreign securities stepped up after slowing in the previous two quarters.
- Net foreign transactions in U.S. Treasury securities shifted to net foreign purchases from net foreign sales.

CHART 1**U.S. Current-Account Balance and Its Components**

U.S. Department of Commerce, Bureau of Economic Analysis

- Net foreign purchases of U.S. securities other than U.S. Treasury securities decreased but remained strong.
- U.S. bank claims and U.S. bank liabilities both increased, following first-quarter decreases.

U.S. dollar in exchange markets

The developments described above both influenced and, in turn, were influenced by movements of the U.S. dollar in foreign exchange markets. Although economic fundamentals—relative rates of economic growth, inflation, and interest—were important in the markets' valuation of currencies, other factors also played a role. These factors included market participants' changing perceptions of the seriousness of financial difficulties in Asian countries, including Japan, and the course of Europe's movement to Economic and Monetary Union (EMU).

In the second quarter, the U.S. dollar was unchanged on a trade-weighted quarterly average basis against the currencies of 10 industrial countries (table B, chart 2). The dollar depreciated slightly against most major European currencies and appreciated strongly against the Japanese yen.

The dollar depreciated slightly against most major European currencies, as market sentiment towards EMU and European currencies became increasingly favorable with the approach of the formal selection of the EMU's eleven first-round members. European currencies were also boosted by indications that economic growth in Germany remained strong and that growth in some other European countries was picking up.

The dollar appreciated sharply against the Japanese yen, rising to its highest level in nearly 8 years on June 15. The dollar's surge was partly

attributable to indications that the Japanese economy was continuing to contract, while the U.S. economy was continuing to grow, albeit more slowly. The Japanese economy continued to be burdened by weak domestic demand and problems in the financial sector. Plans announced by the Japanese Government during the quarter to stimulate domestic demand and restore the health of the financial sector failed to boost the yen. On June 17, U.S. and Japanese monetary authorities intervened in the foreign exchange market to support the yen, but the yen's fall was only temporarily halted.

The U.S. dollar appreciated against the Canadian dollar and the Mexican peso, partly as a result of concern that declining commodity prices would depress Canadian and Mexican export revenues.

The dollar appreciated against the currencies of several other Asian countries, and prices in those countries' financial markets fell sharply. Contributing factors included concerns that the sharp depreciation of the yen might make the exports of Asian countries other than Japan less competitive in world markets, the deterioration of economic conditions in many Asian countries, and political uncertainties.

Current Account**Goods and services**

The deficit on goods and services increased to \$44.0 billion in the second quarter from \$35.0 billion in the first. The large increase was accounted for by an increase in the deficit on goods, to \$64.8 billion from \$55.7 billion. The surplus on services edged up to \$20.9 billion from \$20.7 billion.

Goods.—The deficit on goods increased \$9.1 billion, to \$64.8 billion, in the second quarter. The increase resulted from a large drop in exports in combination with a rise in imports.

Exports.—Exports decreased \$6.8 billion, or 4 percent, to \$164.7 billion in the second quarter. Quantities decreased 3 percent, and prices decreased 1 percent (table C). In value, exports to many areas of the world have grown less strongly or declined since the third quarter of 1997 (chart 3). The second-quarter decrease, the largest percentage decrease since the fourth quarter of 1982, was broad-based by commodity type and by geographic region and partly reflected slowing economic growth in Asia, appreciation of the dollar against some developing countries' currencies, and declining U.S. export prices.

Nonagricultural exports decreased \$5.7 billion, or 4 percent, to \$151.7 billion; quantities decreased 3 percent, and prices decreased 1 percent. In value, most major commodity categories decreased. Capital goods decreased the most, as a result of declines in nearly all capital goods components. Among capital goods, semiconductors and computers, peripherals, and parts fell for the third consecutive quarter; the second-quarter decrease in semiconductors was mainly to Singapore and to Taiwan, and the decrease in computers, peripherals, and parts was mainly to Western Europe. Telecommunications equipment fell sharply as a result of declines to Asia and Latin America, and civilian aircraft dropped after a first-quarter surge. Nonagricultural industrial supplies and materials decreased amid falling prices for many commodities; the largest decreases were in precious metals, petroleum and products, chemicals, and building materials. Automotive products also decreased, largely as a result of a strike at a motor vehicle manufacturer that temporarily reduced exports of automotive parts and engines to Canada and Mexico.

Agricultural exports decreased \$1.1 billion, or 8 percent, to \$13.0 billion; quantities decreased 7 percent, and prices decreased 1 percent. In value, most of the decrease was accounted for by declines in soybeans, mostly to Western Europe, and in other bulk food and feed products. Soybean exports have fallen sharply since the fourth quarter of 1997.

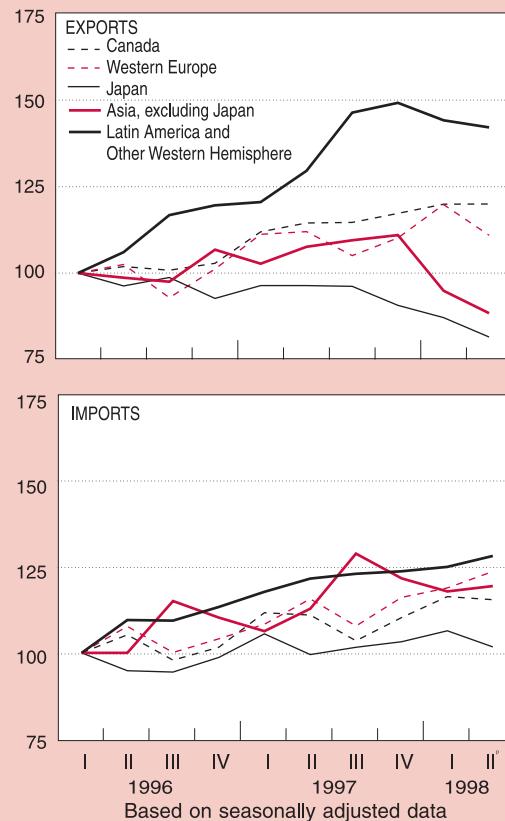

Imports.—Imports increased \$2.3 billion, or 1 percent, to \$229.5 billion in the second quarter. Quantities increased 3 percent, and prices decreased 2 percent (table C). In value, imports have increased only 1 percent for the past four quarters; the weak growth was largely attributable to declining U.S. import prices, particularly petroleum prices.

Nonpetroleum imports increased \$2.4 billion, or 1 percent, to \$215.9 billion; quantities increased 2 percent, and prices decreased 1 percent. Consumer goods accounted for most of the increase in value, partly reflecting the strong growth in personal consumption expenditures in the U.S. economy. Among consumer goods, the largest increases were in textile apparel and

^p Preliminary.

1. Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.

household goods, household and kitchen appliances, and television and video receivers. Capital goods increased as a result of a surge in civilian aircraft, engines, and parts from Western Europe. Among other capital goods, semiconductors from Japan and other Asian countries fell sharply, and computers, peripherals, and parts and electric generating machinery also decreased. Nonpetroleum industrial supplies and materials were boosted by surges in iron and steel products and in precious metals other than gold. Most other industrial supplies and materials decreased. Automotive products decreased as a result of a drop in completed vehicles from Canada.

Petroleum imports decreased \$0.1 billion, or 1 percent, to \$13.6 billion. The decrease was more than accounted for by a decline in prices, which fell to an average of \$12.52 per barrel from \$13.89. The average number of barrels imported daily increased to 11.92 million from 10.82 million. Petroleum prices continued to fall as a result of abundant petroleum supplies, weak demand from countries that had slower economic growth or economic contraction, and elevated inventories worldwide.

Balances by area.—The deficit on goods with Asia, excluding Japan, increased to \$30.0 billion in the second quarter from \$27.1 billion in the first; the deficit with these countries has increased \$9.7 billion since the second quarter of 1997, largely as a result of financial and economic difficulties in some Asian countries.² The deficit with Western Europe increased sharply to \$9.8 billion from \$4.8 billion. The deficit with Latin America and Other Western Hemisphere increased to \$2.0 billion from \$0.6 billion, as a result of a large increase in the deficit with Mexico. In contrast, the deficit with Japan decreased to \$16.3 billion from \$16.8 billion.

Services.—The surplus on services increased \$0.2 billion, to \$20.9 billion, in the second quarter. Receipts increased to \$65.5 billion from \$65.1 billion, and payments increased to \$44.6 billion from \$44.4 billion.

Travel receipts increased to \$18.2 billion from \$18.0 billion. The increase, the first since the second quarter of 1997, was mostly accounted for

by an increase in receipts from overseas visitors to the United States. Travel payments increased slightly, to \$13.4 billion from \$13.3 billion. The increase was accounted for by increases in expenditures by U.S. travelers in overseas countries and in Canada.

Passenger fare receipts increased to \$5.3 billion from \$5.2 billion, and passenger fare payments were unchanged at \$4.7 billion.

“Other” transportation receipts decreased slightly, to \$6.4 billion from \$6.5 billion. The decrease was more than accounted for by a decline in ocean freight receipts that reflected a decrease in export tonnage transported by U.S.-operated vessels. “Other” transportation payments increased slightly to \$7.4 billion from \$7.3 billion. The increase was more than accounted for by a rise in ocean freight payments that reflected an increase in import volumes.

Receipts for “other” private services increased to \$22.4 billion from \$21.9 billion, partly as a result of a rise in financial service receipts. Payments for “other” private services increased to \$12.8 billion from \$12.5 billion. The increase was partly attributable to a rise in service payments made by both U.S. affiliates and U.S. parent companies to affiliated parties abroad.

Investment income

The deficit on investment income increased to \$3.2 billion in the second quarter from \$2.2 billion in the first. Receipts of income on U.S. assets abroad were unchanged at \$62.5 billion, and payments of income on foreign assets in the United States increased to \$65.7 billion from \$64.8 billion.

Direct investment income.—Receipts of income on U.S. direct investment abroad increased slightly to \$26.5 billion in the second quarter from \$26.4 billion in the first. The increase was more than accounted for by an increase in the earnings of European affiliates. Earnings in most other geographic regions decreased. Decreases in Japan and other Asian countries, which were widespread by industry type, were partly attributable to the economic slowdown in Asia.

Payments of income on foreign direct investment in the United States increased to \$11.3 billion from \$10.8 billion, as a result of an increase in net interest payments. Increases in the earnings of petroleum and “other” affiliates offset a decrease in the earnings of manufacturing affiliates, which was mostly attributable to a decline in the earnings of chemical affiliates.

2. Seasonally adjusted estimates for areas and countries are derived by applying seasonal factors for total U.S. agricultural and nonagricultural exports to the unadjusted agricultural and nonagricultural exports for areas and countries and by applying seasonal factors for total U.S. petroleum and nonpetroleum imports to the unadjusted petroleum and nonpetroleum imports for areas and countries. (The seasonal factors are derived from the seasonal adjustment of U.S. exports and U.S. imports by five-digit end-use commodity category.) The components are then summed to derive seasonally adjusted exports and imports for areas and countries.

"Other" private and U.S. Government income.—"Other" private income receipts decreased to \$35.0 billion in the second quarter from \$35.3 billion in the first. The decrease was mostly attributable to decreases in receipts of dividends on foreign stocks and in receipts of interest on nonbank claims that reflected lower average yields.

"Other" private income payments increased to \$31.5 billion from \$31.3 billion. The increase was more than accounted for by an increase in payments on U.S. securities that reflected higher average holdings. U.S. Government income payments increased to \$23.0 billion from \$22.7 billion.

Unilateral transfers

Net unilateral transfers were \$9.3 billion in the second quarter, compared with \$9.5 billion in the first. The decrease was more than accounted for by a decline in U.S. Government grants.

Capital Account

Net recorded capital inflows were \$65.9 billion in the second quarter, up from \$49.9 billion (revised) in the first. Capital inflows for net foreign assets in the United States accelerated more than capital outflows for net U.S. assets abroad.³

U.S. assets abroad

Net U.S. assets abroad increased \$97.5 billion in the second quarter, following an increase of \$45.6 billion in the first. The step-up was accounted for by an increase in bank claims in the second quarter after a first-quarter decrease, by an acceleration in net U.S. purchases of foreign securities,

and by an increase in net capital outflows for U.S. direct investment abroad.

U.S. official reserve assets.—Net U.S. official reserve assets increased \$1.9 billion in the second quarter, following an increase of \$0.4 billion in the first (table D). The second-quarter increase was more than accounted for by increases in the U.S. reserve position in the International Monetary Fund and in U.S. holdings of foreign currencies. U.S. holdings of foreign currencies were boosted by intervention purchases of Japanese yen by U.S. monetary authorities.

Claims reported by banks.—U.S. claims on foreigners reported by U.S. banks increased \$25.0 billion in the second quarter, in contrast to a decrease of \$3.1 billion in the first.

Banks' own claims payable in dollars increased \$39.4 billion, in contrast to a decrease of \$20.6 billion. The turnaround was partly attributable to the resumption of lending to foreign banks by U.S. banks after foreign banks had repaid previous borrowings in the first quarter. Second-quarter lending to Western Europe partly resulted from continued economic growth in Western Europe, which bolstered the demand for bank credit. Claims, particularly on Caribbean banking centers, were also boosted substantially by the transfer of claims by recently merged banks to U.S. domestic offices from foreign offices. Banks' claims on nonbank foreigners increased, mostly as a result of lending to private foreigners in Western Europe and in the Caribbean.

Banks' own claims payable in foreign currencies decreased \$9.1 billion, in contrast to an increase of \$0.1 billion. The decrease was more than accounted for by a decrease in claims on Japan.

Banks' domestic customers' claims decreased \$5.3 billion, in contrast to an increase of

^r Revised.

^p Preliminary.

¹ Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

² Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes

Ecuador beginning January 1993 and Gabon beginning in January 1995.

³ Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.

\$17.4 billion. The turnaround was attributable to a decrease in foreign commercial paper outstanding in the United States after a very large first-quarter increase and to a much smaller increase in U.S. dollar deposits abroad than in the first quarter.

Foreign securities.—Net U.S. purchases of foreign securities were \$23.4 billion in the second quarter, up sharply from \$7.0 billion in the first. Net U.S. purchases of foreign bonds were \$22.5 billion, up from \$3.6 billion, and net U.S. purchases of foreign stocks were \$1.0 billion, down from \$3.4 billion (**chart 4**).

Net U.S. purchases of foreign bonds rebounded strongly after slowing in the fourth quarter of 1997 and the first quarter of 1998. New foreign issues in the United States surged early in the quarter, when borrowers were concerned that U.S. interest rates might soon increase. Issues by

Latin American borrowers, which investors considered less risky than high-yield bonds issued by most Asian borrowers, were strong, and issues by Western European borrowers accelerated. There was also a large issue by the Republic of Korea. Net U.S. purchases of outstanding bonds in the London market were strong.

In contrast, U.S. demand for foreign stocks remained weak. Net U.S. sales of European stocks more than tripled, as European stock prices rose less strongly than in the first quarter. Transactions in Japanese stocks shifted to net U.S. sales, amid concerns that Japanese economic activity would remain weak in the near future. U.S. demand for other Asian stocks was restrained by sharply falling Asian stock prices.

Direct investment.—Net capital outflows for U.S. direct investment abroad were \$40.3 billion in the second quarter, up from \$34.3 billion in the first. The increase was more than accounted for by increases in net equity capital outflows and in reinvested earnings. Net equity capital outflows were strong for the third consecutive quarter, largely as a result of merger and acquisition activity. Second-quarter net equity capital outflows were boosted by acquisitions in the United Kingdom and in Australia. Net intercompany debt outflows decreased, mostly as a result of a slowdown in lending to foreign affiliates.

Foreign assets in the United States

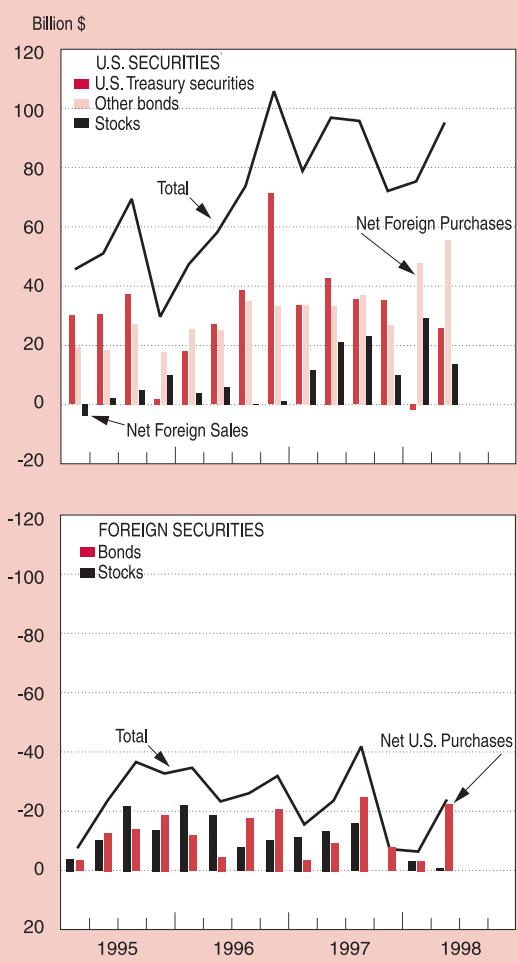

Net foreign assets in the United States increased \$163.4 billion in the second quarter, following an increase of \$95.5 billion in the first. The step-up was more than accounted for by an increase in bank liabilities after a large first-quarter decrease and by a shift to net foreign purchases of U.S. Treasury securities. Net foreign official assets in the United States decreased after a first-quarter increase, and net foreign purchases of U.S. securities other than U.S. Treasury securities slowed but remained strong.

Foreign official assets.—Net foreign official assets in the United States decreased \$10.5 billion in the second quarter, in contrast to an increase of \$11.3 billion in the first (**table D**). Most of the decrease was accounted for by a decrease in the assets of industrial countries that partly reflected foreign exchange market intervention by foreign monetary authorities. Assets of developing countries and of members of OPEC changed little.

Liabilities reported by banks.—U.S. liabilities reported by U.S. banks, excluding U.S. Treasury

Securities Transactions

1. Excluding transactions of foreign official agencies.

U.S. Department of Commerce, Bureau of Economic Analysis

securities, increased \$40.9 billion in the second quarter, in contrast to a decrease of \$50.5 billion in the first.

Banks' own liabilities payable in dollars increased \$42.5 billion, in contrast to a decrease of \$41.4 billion. The turnaround was partly attributable to the resumption of foreign borrowing by U.S. banks to support lending activity abroad after U.S. banks had repaid previous borrowings in the first quarter. In addition, the supply of funds from abroad was stimulated, in part, by a heightened preference for dollar-denominated bank deposits arising from the depreciation of several Asian currencies. Liabilities, particularly to Caribbean banking centers, were also boosted substantially by the transfer of liabilities by the recently merged banks to U.S. domestic offices from foreign offices. Banks' liabilities to nonbank foreigners decreased, partly as a result of the repayment of funds borrowed from international bond mutual funds in the Caribbean.

Bank-reported liabilities payable in foreign currencies decreased \$5.0 billion, following a decrease of \$16.4 billion. The second-quarter decrease was more than accounted for by a decrease in liabilities to Japan.

Banks' custody liabilities payable in dollars increased \$3.3 billion, following an increase of \$7.3 billion.

U.S. Treasury securities.—Net foreign transactions in U.S. Treasury securities shifted to net foreign purchases of \$25.7 billion in the second quarter from net foreign sales of \$1.7 billion in the first. U.S. Treasury bond prices increased in the second quarter, as U.S. long-term interest rates sank to historically low levels. The rise in prices was partly attributable to continued low U.S. in-

flation, the continued reduction in the supply of U.S. Treasury securities, and heightened demand for less risky investments arising from the renewed decline in some Asian financial markets. The shift to net foreign purchases of U.S. Treasury securities was more than accounted for by a shift to net purchases by international bond mutual funds in the Caribbean. Transactions by Japanese investors also shifted to net purchases, partly in response to an increase in the attractiveness of yields available on U.S. Treasury securities in comparison with those available on Japanese Government bonds and to the appreciation of the dollar against the yen, which boosted capital gains for these investors (table B). These shifts to net capital inflows more than offset a sharp decline in net purchases by European investors.

U.S. currency.—U.S. currency shipments were \$2.3 billion in the second quarter, up from \$0.7 billion in the first. Shipments accelerated as foreign demand for U.S. banknotes picked up.

Other U.S. securities.—Net foreign purchases of U.S. securities other than U.S. Treasury securities decreased to \$69.5 billion in the second quarter from \$77.0 billion in the first, but they were still strong. Net foreign purchases of U.S. corporate and other bonds accelerated to a record \$55.7 billion from \$47.7 billion, while net foreign purchases of U.S. stocks decreased to \$13.8 billion from \$29.3 billion.

Net foreign purchases of U.S. corporate and other bonds were bolstered, in part, by a heightened demand for bonds with high credit quality as economic conditions in Asia worsened. New U.S. corporate issues abroad were encouraged by historically low U.S. dollar long-term interest

Data Availability

The current and historical estimates for tables 1–10a of the U.S. international transactions accounts are available as downloadable files on BEA's Web site at <www.bea.doc.gov>; click on Catalog of Products, and look under International Accounts Products, Balance of Payments.

The estimates are also available on diskette from BEA as follows:

- **U.S. International Transactions.** The most recently released annual and quarterly estimates are available by a 1-year subscription (four installments); also included as part of the subscription is the diskette of the historical estimates (see below)—product number IDN-0001, price \$80.00.

- **U.S. International Transactions, Second Quarter 1998.** Annual estimates for 1997 and quarterly estimates for 1997:I–1998:II are available on a single diskette—product number IDN-0212, price \$20.00.

- **U.S. International Transactions, Historical Series.** The historical annual and quarterly estimates that begin with the earliest period available for individual tables are available on a single diskette—product number IDN-0204, price \$20.00.

To order using MasterCard or Visa, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk (BE-53), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

rates. Net foreign purchases of outstanding bonds were exceptionally strong, more than doubling the already strong net foreign purchases in the first quarter. Net foreign purchases of U.S. federally sponsored agency bonds decreased but remained strong; new agency issues in international bond markets were substantial for the second consecutive quarter.

Net foreign purchases of U.S. stocks declined, following record net foreign purchases in the first quarter. Foreign demand for U.S. stocks weakened, as U.S. stock prices rose less strongly and became more volatile than in the first quarter. Net purchases from Western Europe slowed, and transactions by investors from the Caribbean shifted to net sales.

Direct investment.—Net capital inflows for foreign direct investment in the United States were \$22.0 billion in the second quarter, down from \$25.9 billion in the first. Net equity capital inflows, reinvested earnings, and net intercompany debt inflows all decreased. In net equity capital inflows, the decrease was mostly attributable to a slowdown in equity capital inflows to existing U.S. affiliates. In reinvested earnings, the decrease resulted from an increase in the share of earnings that was distributed by U.S. affiliates. In net intercompany debt inflows, the decrease resulted largely from the repayment by U.S. affiliates of previous borrowings.

SURVEY OF CURRENT BUSINESS

FOOTNOTES TO U.S. INTERNATIONAL TRANSACTIONS TABLES 1-10

General notes for all tables: *P* Preliminary. *R* Revised. *Less than \$500,000 (\pm)

D Suppressed to avoid disclosure of data of individual companies.

Table 1:

1. Credits, +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.

Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign official assets in the United States.

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.

3. Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 18, and fuels purchased by airline and steamship operators in lines 7 and 21.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. For all areas, amounts outstanding June 30, 1998, were as follows in millions of dollars: Line 34, 71,162; line 35, 11,047; line 36, 10,001; line 37, 18,946; line 38, 31,169. Data are preliminary.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

13. Conceptually, the sum of lines 71 and 63 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation and Other Special Tables" section in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the August issue of the SURVEY).

Additional footnotes for historical data in July issues of the SURVEY:

14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.

15. For 1978-83, includes foreign currency-denominated notes sold to private residents abroad.

16. Break in series. See Technical Notes in the June 1989, June 1990, June 1992, June 1993, June 1995, and July 1996-98 issues of the SURVEY.

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 SURVEY), except for 1974-81, when they represent transactions values, f.a.s. foreign port of exportation (see June issues of the SURVEY for historical data).

From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes in the December 1985 SURVEY).

Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 Survey, in the June 1988 Survey, and in the June 1991 Survey). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975-80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.

2. Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports.

3. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.

4. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10, line 4 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures).

5. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the SURVEY for historical data).

6. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair; and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974-81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the SURVEY for historical data).

7. For 1988-89, correction for the understatement of crude petroleum imports from Canada.

8. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: *Industrial countries*: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; *Members of OPEC*: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (Excludes Ecuador beginning in January 1993 and Gabon beginning in January 1995.); *Other countries*: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."

9. Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.

10. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."

11. Includes nuclear fuel materials and fuels.

Table 3:

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

Table 4:

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93-199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A3B and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A39 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A45.

2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.

4. Line A35 includes foreign currency collected as interest and line A40 includes foreign currency collected as principal, as recorded in lines A13 and A14, respectively.

5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

Table 5:

1. Beginning with 1991, payments and receipts of interest related to interest rate and foreign currency swaps between affiliates and parents are netted and are shown as either net payments or net receipts. Receipts and payments of other types of interest are shown on a gross basis.

2. Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking); insurance and real estate; services; and other industries—agriculture, forestry, and fishing; mining; construction; transportation, communication, and public utilities; and retail trade.

3. Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.

4. Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings.

Table 6:

1. Primarily provincial, regional, and municipal.

2. Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).

3. Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in line A30.

Table 7:

1. Estimates of transactions other than those with U.S. banks' Caribbean branches and with financial intermediaries (F.I.s) are not available. Preliminary estimates of transactions with F.I.s, by area, are commingled in "other" to avoid disclosure of individual companies' area data.

2. Deposits (line A5) include other financial claims (line A7) for some countries due to the commingling of these categories in foreign source data.

3. Primarily mortgages, loans, and bills and notes drawn on foreigners.

4. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

5. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

6. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in January 1993.

Table 8:

1. Includes central governments and their agencies and corporations; state, provincial, and local governments and their agencies and corporations; and international and regional organizations.

2. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.

3. Commercial paper issued in the U.S. market by foreign incorporated entities; excludes commercial paper issued through foreign direct investment affiliates in the United States.

4. Negotiable and readily transferable instruments other than commercial paper, payable in dollars; consists largely of negotiable certificates of deposit.

5. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

6. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

7. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in January 1993.

8. Includes Eastern Europe and international and regional organizations.

Table 9:

1. Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits.

2. Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits.

3. Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.

4. Mainly International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Monetary Fund.

5. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' liabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.

6. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

7. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.

8. Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Excludes Ecuador beginning in January 1993.

9. Includes Eastern Europe and international and regional organizations.

Table 10: For footnotes 1-13, see table 1.

14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; before 1996, small transactions in business services that are not reported by country; and net U.S. currency flows, for which geographic source data are not available.

17. Details not shown separately; see totals in lines 49 and 56.

18. Details not shown separately are included in line 62.

U.S. International Sales and Purchases of Private Services

- U.S. Cross-Border Transactions in 1997
- Sales by Affiliates in 1996

Michael A. Mann and Laura L. Brockenbaugh prepared the section on cross-border transactions. Sylvia E. Bargas prepared the section on sales by affiliates.

IN 1997, U.S. cross-border sales of private services grew slower, at 7 percent, than U.S. cross-border purchases of private services, at 10 percent (table A). In contrast, over the decade of 1986–96, U.S. sales grew faster—11 percent (average annual rate)—than purchases—8 percent (chart 1). This longer term pattern is consistent with the United States' comparative advantage in the provision of services, as evidenced by the growing surplus in private services for most years in the past quarter century and for every year since 1985. Despite the faster growth in purchases in 1997, this surplus reached a record

\$83.0 billion. The largest surplus was in royalties and license fees, which represent receipts and payments for intellectual property rights, such as patents, trademarks, and copyrights. Large surpluses were also recorded for travel; business, professional, and technical services; financial services; and education. The surplus in services contrasted sharply with the U.S. deficit

n.a. Not available.

1. The figures shown in this column for 1986–88 have been adjusted, for the purposes of this article, to be consistent with those for 1989 forward, which reflect definitional and methodological improvements made in the 1989 Benchmark Survey of U.S. Direct Investment Abroad. The primary improvement was that investment income of affiliates in finance and insurance was excluded from sales of services. The adjustment was made by assuming that investment income of finance and insurance affiliates in 1986–88 accounted for the same share of sales of services plus investment income as in 1989.

on trade in goods, which increased to a record \$198.0 billion.

The United States' strong competitive position in the provision of services is also evidenced by the services sold by majority-owned affiliates of multinational companies. In 1996, the most recent year for which data are available, as well as in every year since 1987, the value of services sold abroad by majority-owned foreign affiliates of U.S. companies exceeded the value of services sold in the United States by majority-owned U.S. affiliates of foreign companies. The strong competitive position of U.S. companies in the provision of services may reflect the state of development of the U.S. economy, with its high share of services in gross domestic product and an abundance of firms that are capable of competing on a global scale, whether through

cross-border trade or through locally established affiliates. In 1996, sales of services abroad by foreign affiliates grew faster than sales of services in the United States by U.S. affiliates for the third consecutive year; sales by foreign affiliates grew 16 percent, while sales by U.S. affiliates grew 8 percent.

This article presents detailed estimates of U.S. cross-border sales and purchases of private services and of U.S. sales and purchases of services through nonbank majority-owned affiliates of multinational companies. Cross-border sales and purchases are transactions between U.S. residents and foreign residents. They represent international trade in the conventional sense—exports and imports—and are recorded, in summary form, in the U.S. international transactions ac-

Channels of Delivery of Services Sold in International Markets: Cross-Border Transactions and Sales by Affiliates

Services are sold in international markets through two distinct channels. The first channel is cross-border transactions in services that are sold by residents of one country to residents of another country. These transactions consist of both trade within multinational companies (intrafirm trade) and trade between unaffiliated parties. They are recorded in the international transactions accounts of both countries—as exports of services by the seller's country and as imports by the buyer's country.

The second channel of delivery is sales by affiliates of multinational companies, which from the U.S. viewpoint, are sales to foreigners by foreign affiliates of U.S. companies or U.S. purchases from other countries' U.S. affiliates. These sales are not considered U.S. international transactions because, under the residency principle of balance-of-payments accounting, affiliates of multinational companies are regarded as residents of the countries where they are located rather than of the countries of their owners. Thus, sales abroad by foreign affiliates are transactions between foreign residents, and sales in the United States by U.S. affiliates are transactions between U.S. residents. However, the direct investors' shares of the profits earned on these sales are recorded as U.S. international transactions.

Since 1986, a majority of U.S. sales of services to foreigners appear to have been delivered through cross-border transactions (data on bank affiliate sales are not available), but sales for the two channels were about equal in 1996. In contrast, since 1989, a majority of U.S. purchases of services from foreigners have been from the foreigners' affiliates located in the United States.

Both channels may sometimes be involved in the delivery of a particular service. For example, if an affiliate sells services abroad and if the affiliate's parent does some of the work and bills the cost to the affiliate, the amount received by the affiliate from the foreign customer is recorded under sales by affiliates, and the funds received by the parent from the affiliate for its share of the work is recorded as intrafirm trade in cross-border transactions. However, because the parent's receipts are recorded under both channels—directly in the cross-border transactions and implicitly embodied in the sales by affiliates—the data for the two channels

may be duplicated and therefore cannot simply be added together.¹

The two channels of delivery typically differ in their effect on an economy. For example, U.S. cross-border exports usually have a greater effect on the U.S. economy than the otherwise equivalent sales through foreign affiliates, because most or all of the income generated by the production of the services generally accrues to U.S.-supplied labor and capital. In contrast, for sales by foreign affiliates, only the U.S. parent company's share in profits accrues to the United States (and is recorded as a U.S. international transaction); the other income generated by production—including compensation of employees—accrues to foreigners.

Some services can be delivered equally well through either channel, but the channel of delivery is often largely predetermined by the nature of the service. For example, travel services are inherently delivered through the cross-border channel; in contrast, many business, professional, and technical services are delivered mainly through the affiliate channel because of the need for close and continuing contact between the service providers and their customers.

For specific services, the relative importance of the two channels is difficult to gauge because the available data on U.S. cross-border transactions are generally classified by type of service, whereas the data on sales of services by affiliates are classified by primary industry of the affiliate. The difference in classification reflects BEA's effort, in designing its direct investment surveys, to strike a reasonable and appropriate balance between the needs of data users for detailed data and the concerns of respondents about the burdens imposed. A disaggregation of affiliate sales by type of service would be useful, but this detail would add significantly to the burden imposed on respondents.

1. At an aggregate level and for transactions in goods as well as in services, BEA has provided a duplication-free economic-accounting framework for integrating data on cross-border trade with data on sales by affiliates; however, because of differences in the basis of classification and for other technical reasons, this framework cannot be extended to the level of detail reflected in this article. See J. Steven Landefeld, Obie G. Whichard, and Jeffrey H. Lowe, "Alternative Frameworks for U.S. International Transactions," SURVEY OF CURRENT BUSINESS 73 (December 1993): 50–61; and Obie G. Whichard and Jeffrey H. Lowe, "An Ownership-Based Disaggregation of the U.S. Current Account, 1982–93," SURVEY 75 (October 1995): 52–61.

counts.¹ Sales of services through nonbank majority-owned affiliates of multinational companies represent services sold in international markets through the channel of direct investment.² (See the box "Channels of Delivery of Services Sold in International Markets.") The data are drawn from larger data sets on af-

filiate operations that are presented in annual articles on the operations of U.S. multinational companies and of U.S. affiliates of foreign companies.³

In 1996, the most recent year for which data are available for both cross-border transactions and sales through affiliates, for both channels of delivery, U.S. sales of services to foreigners expanded more rapidly than U.S. purchases of services from foreigners. For cross-border transactions, U.S. sales increased 10 percent, and U.S. purchases increased 7 percent; for services sold by

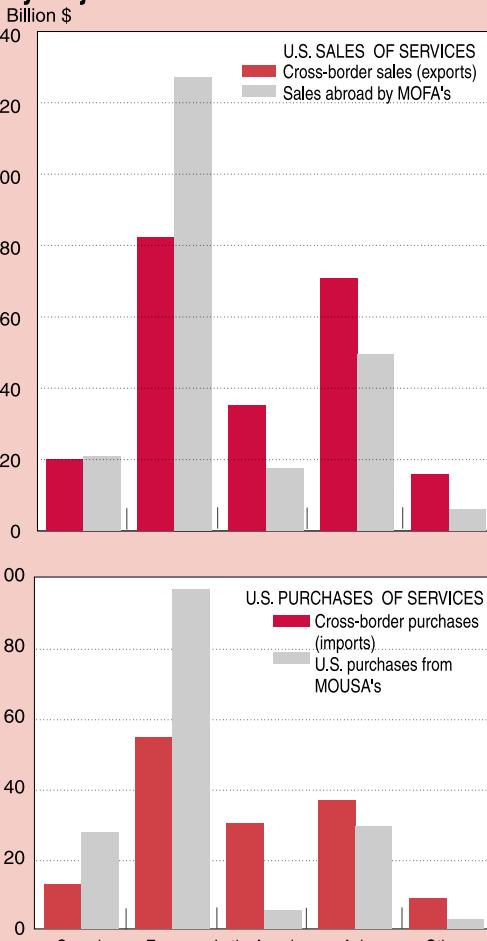

1. See tables 1 and 3 in the quarterly article on the U.S. international transactions in this issue. In table 1, cross-border exports of private services are presented in lines 5–9, and cross-border imports, in lines 19–23. In table 3, additional detail is provided.

2. These data cover all sales of services by nonbank majority-owned affiliates, irrespective of the percentage of foreign ownership. The data are limited to nonbank affiliates because the surveys used to collect the data do not cover banking affiliates. The data exclude minority-owned affiliates because data on sales of services by foreign affiliates are collected only for affiliates that are majority-owned by U.S. direct investors. However, the exclusion of minority-owned affiliates may also be preferred for another reason: Since the direct investor may own as little as 10 percent of a minority-owned affiliate, the principal interest in the affiliate's sales may lie with local investors.

3. See Raymond J. Mataloni, Jr., "U.S. Multinational Companies: Operations in 1996," SURVEY OF CURRENT BUSINESS 78 (September 1998): 47–73, and Mahnaz Fahim-Nader and William J. Zeile, "Foreign Direct Investment in the United States: New Investment in 1997 and Affiliate Operations in 1996," SURVEY 78 (June 1998): 39–67.

U.S. Department of Commerce, Bureau of Economic Analysis

majority-owned affiliates, U.S. sales increased 16 percent, and U.S. purchases increased 8 percent.⁴

Additional highlights for 1996 include the following:

- The excess of U.S. sales over U.S. purchases was greater for services sold across the U.S. border than for services sold through affiliates. Cross-border exports exceeded cross-border imports by \$82.0 billion, or 58 percent, while sales abroad by foreign affiliates exceeded sales in the United States by U.S. affiliates by \$60.1 billion, or 37 percent (table A).
- For U.S. sales of services to foreigners, the cross-border and affiliate channels of delivery were roughly equal: U.S. exports of services were \$224.2 billion, and sales of services through foreign affiliates were \$221.1 billion (chart 1). For U.S. purchases of services, the affiliate channel was somewhat more important than the cross-border channel of delivery: Purchases of services from U.S. affiliates were \$161.0 billion, 13 percent more than U.S. cross-border imports of services, at \$142.3 billion.
- For Europe, both sales and purchases were predominantly through the affiliate channel (chart 2). For Latin America and for Asia and Pacific, both sales and purchases were predominantly through the cross-border channel.
- For the United Kingdom and Germany, the affiliate channel predominated for both sales and purchases. For Japan, most sales were through the cross-border channel, but most purchases were through the affiliate channel. For Canada, sales through the two channels were about equal, but purchases were mainly through the affiliate channel (chart 3).

The remainder of this article is presented in two parts. The first part discusses cross-border sales and purchases, and it presents preliminary estimates for 1997 and revised estimates for 1986–96. The second part discusses sales through majority-owned affiliates, and it presents preliminary estimates for 1996 and revised estimates for 1995.

4. The estimate presented in this article for U.S. cross-border sales (exports) in 1996 is approximately \$2 billion higher than the estimate in the international transactions accounts. This new estimate, which is based on a correction to the previously published value for business, professional, and technical services, will be incorporated into the accounts next June as part of the annual revision.

U.S. Cross-Border Transactions in 1997

In 1997, U.S. exports of private services (receipts) increased 7 percent, to \$239.2 billion, following a 10-percent increase in 1996. U.S. imports of private services (payments) increased 10 percent, to \$156.2 billion, following a 7-percent increase in 1996. The U.S. surplus on private services edged up 1 percent in 1997, to \$83 billion, compared with a 16-percent increase in 1996.

Additional highlights for 1997 are as follows:

- Transactions in all major categories of services increased. In percentage terms, the fastest growing categories of exports were "other private services" (such as education, financial, insurance, telecommunications, and business, professional, and technical services) and travel and passenger fares. The fastest growing categories of imports were royalties and license fees and "other private services."

	Percent change from prior year			
	Exports		Imports	
	1996	1997	1996	1997
Private services	10	7	7	10
Travel and passenger fares	10	4	7	9
Other transportation	0	3	1	6
Royalties and license fees	8	3	14	20
Other private services	15	12	8	12

- In dollar terms, the largest increase in exports was in "other private services"; within this category, increases in financial services were particularly large. The largest increases in imports were in travel and passenger fares and in "other private services."

	Change from prior year in millions of dollars			
	Exports		Imports	
	1996	1997	1996	1997
Private services	19,984	15,002	8,906	13,975
Travel and passenger fares	7,860	3,999	4,287	5,589
Other transportation	-7	837	369	1,546
Royalties and license fees	2,534	853	935	1,557
Other private services	9,597	9,313	3,315	5,283

- By country, U.S. exports of services to Japan continued to substantially exceed those to any other country. The U.S. surplus on trade in services with Japan decreased to \$19.7 billion; it partly offset the \$57.1 billion deficit on trade in goods with Japan. U.S. imports of services from the United Kingdom continued to exceed those from any other country.

and increased at a faster rate than those of any other country. In dollar terms, U.S. exports and imports of services with the United Kingdom increased more than those of any other country: Exports increased \$3.2 billion, and imports increased \$4.8 billion.

The following two sections discuss cross-border transactions in services in 1997 by type of service and by geographic area. These sections, along with the accompanying tables, provide information for more types of services and more geographic areas than are available in the quarterly U.S. international transactions accounts. The estimates of cross-border transactions incorporate recent reclassifications and improvements in source data (see the box "Revisions to the Estimates of Cross-Border Services Transactions"). The transactions covered are those between U.S.

residents and both affiliated and unaffiliated foreign residents.⁵

Affiliated transactions consist of intrafirm trade by multinational companies—specifically, the transactions between U.S. parent companies and their foreign affiliates and between U.S. affiliates and their foreign parent groups. (Cross-border transactions between affiliated enterprises should not be confused with sales by affiliates, which are discussed in the second half of this article.) In this article, new detail by type of service for these transactions is presented (see the box below).

By type of service

Cross-border services transactions are classified under the same five broad categories used in the

5. The term "affiliated" refers to a direct investment relationship—that is, a relationship in which an investor in one country directly or indirectly owns or controls 10 percent or more of the voting stock of an incorporated business, or an equivalent interest of an unincorporated business, in another country.

New Detail on Intrafirm Trade in Cross-Border Transactions in Services

As part of its initiative to improve the source data used in preparing the estimates of U.S. international transactions in private services, BEA has begun collecting more detailed data by type of service on cross-border sales and purchases of services between U.S. parents and their foreign affiliates and between foreign parents and their U.S. affiliates. These affiliated (intrafirm) services transactions previously were included in the cross-border estimates of "other private services," but the data were not collected in a form that could be disaggregated by type of service.

The expanded detail was first collected in BEA's 1994 benchmark survey of U.S. direct investment abroad (USDIA) and has since been reported once a year on BEA's quarterly sample survey of USDIA. This detail is also being collected on surveys of foreign direct investment in

the United States, beginning with the benchmark survey for 1997, which is currently being processed.

In the surveys, respondents disaggregate their affiliated services transactions into five categories of services and a residual category: Insurance services, financial services, transportation services, computer and information services, communications services, and all other services.¹ The five categories were selected partly to conform with the services categories in cross-border transactions and partly on the basis of the classifications for services recommended in the fifth edition of the International Monetary Fund's *Balance of Payments Manual*.

Preliminary estimates of the transactions between U.S. parents and their foreign affiliates for 1994–97 are now available (see the accompanying table). The estimates for 1994 incorporate the 1994 benchmark survey data; the estimates for 1995–97 were extrapolated from the benchmark data on the basis of movements in the data reported on the quarterly sample surveys.

As shown in the table, more than three-fourths of receipts and more than two-thirds of payments are in the "Other services" category. A significant portion of the transactions in "Other services" is believed to be accounted for by overhead expenses, such as management services and research and development assessments, that are allocated among the various divisions or parts of an enterprise.

The new detail on affiliated services by type of service will be published annually in this article. In the coming year, BEA will be considering how best to incorporate the new detail into the cross-border estimates.

1. The transactions reported for insurance services are limited to those not already collected on other surveys—specifically, to purchases of primary insurance (and the related recovery of losses) by U.S. parent companies from foreign affiliates in insurance.

New Detail on Sales and Purchases of Services Between U.S. Parents and Their Foreign Affiliates, by Type, 1994–97—Preliminary Estimates

¹ Less than \$50 million.

² Included in U.S. parents' transactions under "other private services," affiliated, in table 1. (That item also includes receipts and payments of rentals for the use of tangible property and of film and television tape rentals.)

Revisions to the Estimates of Cross-Border Services Transactions

The estimates of cross-border services transactions were revised to incorporate several reclassifications and improvements in source data. The revised estimates were first presented in summary form in tables 1 and 3 of "U.S. International Transactions, Revised Estimates for 1986-97" in the July 1998 SURVEY OF CURRENT BUSINESS. That article also discussed the sources of the revisions, which are summarized below.

Transportation services.—"Other" freight receipts and payments for the transportation of U.S. goods exports by truck between the United States and Canada were revised to incorporate new source data from Statistics Canada. A new analysis by Statistics Canada of some of the key components of the U.S. estimates of receipts and payments for truck transportation indicated that these estimates were overstated.

The estimates of operational leasing of transportation equipment *without crew* were reclassified from the "other" transportation accounts to the "other" private services accounts. Concurrently, operational leasing of transportation equipment *with crew*, which is closer in nature to the provision of transportation services than to equipment rentals, was retained in the transportation account, but it was reclassified to the freight component from the "other" component. As a result, "other" transportation receipts and payments each now have two components—freight services and port services—in tables 3.1-3.4 of this article, rather than the three shown previously.

Affiliated transactions.—Receipts and payments of royalties and license fees and of "other" private services between U.S. parents and their foreign affiliates were revised to incorporate the results of BEA's benchmark survey of U.S. direct investment abroad for 1994. Revisions from the quarterly follow-on surveys for 1995-97 were also incorporated.

Royalties and license fees.—Beginning with 1992, computer software royalties and fees were reclassified to royalties and license fees from

NOTE.—Details may not add to totals because of rounding.

"other" private services. The reclassification better reflects the acquisitions and sales of rights to use or reproduce computer software as transactions involving intangible, nonproduced, nonfinancial assets and proprietary rights (such as patents, copyrights, trademarks, industrial processes, and franchises) and combines them with other, similar transactions.

"Other" private services.—The estimates of business, professional, and technical services were revised to incorporate the final results of BEA's 1996 Benchmark Survey of Selected Services Transactions with Unaffiliated Foreign Persons; preliminary results of this survey for most of these services were introduced into the accounts last year. The final results were also incorporated into the detailed estimates of transactions for telecommunications, advertising receipts, computer and data processing receipts, and database and other information receipts that are collected only in the quinquennial benchmark surveys (see the accompanying table).

This year, operational leasing and merchanting services were introduced into the accounts as components of "business, professional, and technical services."¹ The coverage of receipts and payments for operational leasing of equipment is now more comprehensive as a result of the expanded coverage on BEA's 1996 benchmark survey of selected services.

The 1996 survey provided data that filled gaps in several new and growing services categories, such as operational leasing services and "other business, professional, and technical services," which include language translation services, merchanting services, security services, collection services, actuarial services, salvage services, selling agent services, satellite photography services, and oil spill and toxic waste cleanup services. Preliminary estimates for most of these services were introduced into the accounts last year.

Estimates for business, professional, and technical services transactions that fall below the exemption levels for reporting on the benchmark and annual follow-on surveys were introduced into the accounts this year. The amounts, though small, have been growing, and their inclusion in the universe estimates eliminates a source of understatement. On the benchmark survey, all U.S. individuals, companies, and other organizations whose sales or purchases of a service exceeded \$500,000 are required to file a report. On the annual follow-on surveys, the threshold is \$1 million. For 1996, \$140 million was added to receipts and \$82 million was added to payments; for 1997, \$155 million was added to receipts, and \$100 million was added to payments.

In addition, the data from respondents whose total transactions in some types of services were at or below the threshold for reporting have been distributed by country and area. These respondents may voluntarily report the total receipts and total payments for each service but without a disaggregation by country. A newly developed estimation procedure is used to distribute the data that were previously included in the "Unallocated" area category; the procedure distributes the data using proportions based on reports from respondents who do provide a disaggregation by country. For 1996, receipts of \$60 million and payments of \$70 million were distributed by country, and for 1997, receipts of \$65 million and payments of \$105 million were distributed; total receipts and payments were not affected by this distribution.

1. Merchanting services consist of buying goods (such as crude oil, grain, and other commodities) abroad and reselling them to unaffiliated foreign persons. The goods do not undergo significant processing between the time they are purchased and the time they are sold. The transaction is reported as the difference between the cost of the goods and the resale price of the goods.

U.S. international transactions accounts: Travel, passenger fares, other transportation, royalties and license fees, and other private services.

Travel.—This category covers purchases of goods and services by U.S. persons traveling abroad and by foreign persons traveling in the United States for business or personal reasons for less than 1 year. The types of goods and services most likely to be purchased are lodging, food, recreation and entertainment, local transportation, and gifts. U.S. travel transactions with both Canada and Mexico include border transactions, which often involve stays of less than 24 hours.

U.S. receipts for travel increased 5 percent in 1997, to \$73.3 billion, following a 10-percent increase in 1996. Travelers from Central and South America accounted for 60 percent of the increase in 1997, although they accounted for only 16 percent of total travel receipts.

Travelers from the Asia and Pacific area—mainly from Japan and the Republic of Korea—accounted for 30 percent of receipts from overseas travel (all countries except Canada and Mexico) in 1997 after accounting for 32 percent in 1996. Receipts from Japan decreased 6 percent and those from Korea decreased 12 percent; these decreases are attributable partly to decelerations in

Data Sources and Availability

Data sources

Most of the estimates of the transactions in private services are based primarily on data from the surveys conducted by BEA. However, the estimates for some services are based on a variety of other sources, including surveys conducted by other Federal Government agencies, data provided by private sources, customs data, and data from partner countries.

BEA conducts 11 surveys of cross-border transactions with unaffiliated foreigners, that is, with foreigners that neither own nor are owned by the U.S. party to the transaction. These surveys cover the following six categories of services: (1) Selected services (mainly miscellaneous business, professional, and technical services), (2) construction, engineering, architectural, and mining services, (3) insurance, (4) financial services, (5) royalties and license fees, and (6) transportation. Each of these categories is covered by a separate survey or by a group of surveys.

More detailed information on these surveys is available in the recently published *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis*. The *Guide* presents general information about the classification, definition, and release schedules of all the surveys, and it provides details for each survey on the transactions covered, the frequency of the surveys, the numbers of respondents, and the methods that were used to prepare the estimates.

The *Guide* is available on BEA's Web site at <www.bea.doc.gov>, or by writing to the International Investment Division, BE-50, Bureau of Economic Analysis, Washington, DC 20230. For further information, call 202-606-9804.

Data on cross-border transactions with affiliated foreigners and on sales by majority-owned affiliates are collected in BEA's surveys of U.S. direct investment abroad and of foreign direct investment in the United States; the methodologies for these surveys are described in *U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results* (Washington, DC: U.S. Government Printing Office, 1998) and in *Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final*

Results (Washington, DC: U.S. Government Printing Office, 1995).

For additional information on the methodology used to prepare the estimates of cross-border transactions—both affiliated and unaffiliated—and on the balance-of-payments concepts, see *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (Washington, DC: U.S. Government Printing Office, 1990). For changes in methodology that have been made since 1990, see the section "Technical Notes" in the quarterly articles on the U.S. international transactions in the June 1990 and 1991 issues of the SURVEY OF CURRENT BUSINESS, the section "Revised Estimates for 1976-91" in the June 1992 issue, and the annual articles on the revised estimates of U.S. international transactions in the June 1992-95 issues and in the July 1996-98 issues.

These methodologies and the SURVEY articles for July 1996-98 are available on BEA's Web site at <www.bea.doc.gov>.

Data availability

The estimates of cross-border transactions for 1986-97 and of transactions by majority-owned affiliates for 1989-96 are available as "U.S. International Private Services, 1986-97," product number IDN-0215.¹

This product is available as a downloadable file for free on BEA's Web site at <www.bea.doc.gov> and as a diskette for \$20.00 from BEA. To access the file on the Web site, click on Catalog of Products, and look under International Accounts Products, Balance of Payments. To order the diskette using MasterCard or Visa, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666). To order by mail, send a check or money order payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

1. The estimates for 1986-91 do not include the expanded country detail. Some estimates of transactions by majority-owned affiliates are available for years before 1989, but they are not comparable with the estimates beginning with 1989.

the growth rates of the two economies and partly to depreciation of those countries' currencies against the dollar.

Travel receipts from Canada, which accounted for 9 percent of travel receipts, were unchanged in 1997, following a 10-percent increase in 1996. Reflecting the appreciation of the U.S. dollar against the Canadian dollar, the number of travelers from Canada to the United States—most of whom are same-day auto travelers—declined 1.8 million in 1997. Receipts from Mexico increased 14 percent in 1997, following a 5-percent increase in 1996, but they were still well below those before the large devaluation of the peso in late 1994.

U.S. payments for travel increased 7 percent in 1997, to \$51.2 billion, following a 7-percent increase in 1996. Payments of U.S. travelers overseas accounted for most of the increase in 1997. U.S. travelers to Western Europe accounted for two-thirds of the increase, although they accounted for only one-third of total travel payments. U.S. payments to Canada increased 5 percent after increasing 8 percent, and payments to Mexico increased 8 percent after increasing 12 percent.

Passenger fares.—This category covers fares paid by residents of one country to airline and vessel operators that reside in another country. Exports consist of fares received by U.S. operators for transporting foreign residents between the United States and a foreign country and between foreign countries. Imports consist of fares paid to foreign operators by U.S. residents for travel to and from the United States.

U.S. passenger fare receipts increased 2 percent in 1997, to \$20.9 billion, following an 8-percent increase in 1996. The slowdown, which continues a trend that began in 1995, reflects a smaller increase in the number of foreign travelers coming to the United States on U.S. airlines. U.S. passenger fare payments increased 15 percent in 1997, to \$18.2 billion, following an 8-percent increase.

Other transportation.—This category primarily covers transactions for freight and port services for the transportation of goods by ocean, air, and truck to and from the United States. Freight receipts of U.S. carriers are for transporting U.S. goods exports and for transporting goods between two foreign points; freight payments to foreign carriers are for transporting U.S. goods imports.⁶ Port services receipts are the value of

the goods and services procured by foreign carriers in both U.S. sea and air ports; port services payments are the value of goods and services procured by U.S. carriers in foreign sea and air ports.

U.S. receipts for "other transportation" increased 3 percent in 1997, to \$26.9 billion, following virtually no change in 1996. Receipts increased 6 percent for freight services and 1 percent for port services. The increase in freight receipts was almost entirely accounted for by air freight receipts, which were boosted by a 9-percent increase in the export tonnage transported by U.S. air carriers. Ocean freight receipts decreased 3 percent; a decline in the export revenues earned by U.S. liner vessels offset an increase in the export revenues earned by U.S. tanker vessels, and the export revenues earned by U.S. tramp vessels decreased slightly.⁷ In recent years, the increase in ocean freight receipts has been tempered by stagnant freight rates on some routes and by the reflagging of some U.S. vessels to foreign registry.

U.S. trucking firms' freight receipts for transporting goods from the U.S.-Canadian border to destinations in Canada and from origins in Canada to the border increased 3 percent to \$1.3 billion. U.S. cross-border trucking transactions with Mexico are insignificant due to the restrictions on such transactions in both countries. The North American Free Trade Agreement provides for progressive relaxation of these restrictions, but implementation has been delayed until a number of safety-related issues can be resolved.

Port services increased slightly, as a small increase in air port services was partly offset by a decrease in ocean port services. Ocean port services receipts decreased 2 percent, as a decline in the export volumes of foreign vessels and lower average costs in U.S. ports more than offset an increase in the import volumes of foreign vessels.

U.S. payments for "other transportation" increased 6 percent in 1997, to \$28.9 billion, following a 1-percent increase in 1996. Payments for freight services increased 7 percent, and payments for port services increased 4 percent. The increase in freight payments was the result of an increase in the import tonnage transported by foreign ocean and air carriers. Payments to Cana-

6. By balance-of-payments accounting convention, the importer is deemed to assume ownership of the goods when they cross the border of the exporting country and to bear all subsequent transportation costs. Thus,

receipts of U.S. carriers for transporting U.S. imports are excluded from U.S. transportation receipts because, by this convention, they represent transactions between U.S. importers and U.S. vessel, airline, and truck operators. Similarly, payments to foreign carriers for transporting U.S. exports are excluded from U.S. payments because they represent transactions between foreign importers and foreign carriers.

7. Liner vessels carry dry cargo on a schedule; tanker vessels carry liquid cargo; and tramp vessels carry dry cargo on an unscheduled basis.

dian carriers for transporting goods by truck in the United States increased 6 percent.

Payments for port services increased 4 percent, mostly as the result of a 6-percent increase in air port services that was attributable to increases in the import and export volumes of U.S. air carriers. Ocean port services payments decreased 2 percent, as a decline in the import and export tonnage transported by U.S. liner vessels more than offset increases in the import and export tonnage transported by U.S. tanker and tramp vessels.

Royalties and license fees.—This category covers transactions with foreign residents that involve patented and unpatented techniques, processes, formulas, and other intangible property rights used in the production of goods; transactions involving copyrights, trademarks, franchises, broadcast rights, and other intangible rights; the rights to distribute, use, and reproduce computer software; and the rights to sell products under a particular trademark, brand name, or signature.

Receipts of royalties and license fees increased 3 percent in 1997, to \$33.7 billion, following an 8-percent increase in 1996. The increase in 1997 was largely attributable to a 3-percent increase in receipts of U.S. parent companies from their foreign affiliates. Receipts from unaffiliated foreigners increased less than 1 percent in 1997. Receipts from the sale or use of industrial processes decreased 6 percent; in contrast, receipts from software licensing fees increased 13 percent.

Payments of royalties and license fees increased 20 percent in 1997, to \$9.4 billion, following a 14-percent increase in 1996. The increase in 1997 was

more than accounted for by an increase in affiliated transactions, primarily payments by U.S. affiliates to their foreign parents. Royalty and license fee payments to unaffiliated foreigners were virtually unchanged in 1997, reflecting large, nearly offsetting shifts in the various components. Payments for the rights to broadcast and record live events were \$0.1 billion in 1997, down sharply from \$0.5 billion in 1996 when large payments were made to the International Olympic Committee for broadcast rights to the Summer Olympic Games. "Other" unaffiliated payments were \$0.6 billion in 1997, up from \$0.3 billion in 1996; the large amount in 1997 was primarily attributable to software licensing fee payments in Europe.

Other private services.—This category consists of a variety of services: Education; financial services; insurance; telecommunications; business, professional, and technical services; and other affiliated and unaffiliated services.

Receipts for "other private services" increased 12 percent in 1997, to \$84.5 billion, following a 15-percent increase in 1996. Affiliated services receipts increased 11 percent, to \$26.3 billion, reflecting increased receipts by U.S. affiliates from their foreign parents and by U.S. parents from their foreign affiliates. Unaffiliated services receipts increased 13 percent, to \$58.1 billion, reflecting increases across most services categories.

Payments for "other private services" increased 12 percent in 1997, to \$48.4 billion, following an 8-percent increase in 1996. Payments to affiliated foreigners increased 10 percent, to \$18.3 billion; the increase was mostly attributable to a

Acknowledgments

The estimates of cross-border transactions were prepared by the following staff members of the Balance of Payments and International Investment Divisions.

Travel and passenger fares—Joan Bolyard and Laura Brokenbaugh

Other transportation—Patricia Watts and Ed Dozier

Royalties and license fees and other private services—affiliated, Gregory G. Fouch (for transactions of U.S. affiliates) and Mark W. New (for transactions of U.S. parents); unaffiliated, David H. Galler, Shirley J. Davis, Christopher J. Emond, Rafael I. Font, Pamela Aiken, Debra Blagburn, Annette Boyd, Faith Brannam, Hope Jones, Eddie L. Key, Christine Locke-Paddon, Steven Muno, John Sondheimer, Jane Newstedt, and Robert Becker.

The estimates of sales of services by affiliates were prepared by staff members of the International Investment Division. The estimates of sales by foreign affiliates were prepared by the staff of the Annual and Benchmark Section of the Direct Investment Abroad Branch; the estimates of sales by U.S. affiliates were prepared by the staff of the Annual and Benchmark Section of the Foreign Direct Investment in the United States Branch.

The information in tables 1, 2, 3, and 5 was consolidated by John Sondheimer, assisted by Robert Becker. Computer programming for data estimation and the generation of the remaining tables was provided by Arnold Gilbert and Angela Roberts, assisted by Neeta Kapoor.

16-percent increase in payments by U.S. parents to their foreign affiliates. Payments to unaffiliated foreigners increased 14 percent, to \$30.1 billion, following a 3-percent increase in 1996.

"Education" receipts consist of expenditures for tuition and living expenses by foreign students enrolled in U.S. colleges and universities; payments consist of tuition and living expenses of U.S. students for study abroad. Education receipts increased 5 percent to \$8.3 billion, and payments increased 8 percent to \$1.3 billion, as the number of foreign students studying in the United States increased less than the number of U.S. students studying abroad.

"Financial services" covers a variety of services, including funds management, credit card services, explicit fees and commissions on transactions in securities, fees on credit-related activities, and other miscellaneous financial services; implicit fees paid and received on bond trading are also covered. In 1997, receipts for financial services increased 32 percent to \$11.1 billion, and payments increased 30 percent to \$3.9 billion; both increases reflect stepped-up activity in U.S. and foreign financial markets. The strong growth in receipts reflected an acceleration in trading by foreigners in U.S. securities: Foreigners purchased record amounts of U.S. stocks and near-record amounts of U.S. corporate bonds and U.S. Treasury bonds. Payments were bolstered by substantial U.S. trading in foreign securities.

"Insurance" includes premiums earned and paid for primary insurance and for reinsurance; losses paid by U.S. insurers and losses recovered from foreign insurers are netted against the premiums. Primary insurance consists of life insurance, accident and health insurance, and property and casualty insurance. Each type of primary insurance may be reinsured; reinsurance is the ceding of a portion of a premium to another insurer, who then assumes a corresponding portion of the risk. Reinsurance is one way of providing coverage for events with so high a degree of risk or liability that a single insurer is unwilling or unable to underwrite insurance against their occurrence.

In 1997, net insurance receipts increased 21 percent to \$2.4 billion. The increase was largely attributable to a reduction in losses paid for both primary insurance and reinsurance, as premiums received were virtually unchanged. Net insurance payments increased 38 percent to \$5.2 billion; the increase was largely the result of a sharp fall in the losses recovered from foreign insurers.

"Telecommunications" consists of settlements between U.S. and foreign communications companies for the transmission of messages between the United States and other countries; channel leasing; telex, telegram, and other jointly provided (basic) services; value-added services, such as electronic mail and video conferencing; and telecommunications support services. Receipts for telecommunications services increased 15 percent to \$3.8 billion in 1997, and payments decreased 2 percent to \$8.1 billion. The United States continues to run a large trade deficit in telecommunications services because the outgoing minutes of calls from the United States exceed the incoming minutes of calls to the United States.⁸ The large number of outgoing calls from the United States reflect several factors, including the relatively low international calling rates from the United States, the relative wealth of the United States, and the large immigrant population.

"Business, professional, and technical services" covers a wide variety of services. Receipts increased 8 percent to \$21.3 billion in 1997, following an increase of about 20 percent in 1996. The strong increase in 1996 reflected sizable increases in all the subcategories of these services. The 1996 increase in "construction, engineering, architectural, and mining services" was particularly strong and was largely accounted for by a high level of construction activity in the Middle East, which continued in 1997.

Receipts for legal services and for "management, consulting, and public relations services"—two of the fastest growing categories of business, professional, and technical services—each surpassed \$2.0 billion in 1997. Strong receipts in the latter category reflect U.S. expertise in areas such as business process re-engineering.

Receipts for "computer and data processing services" were virtually unchanged, at \$1.6 billion, from those in 1996. Cross-border sales of these services were dwarfed by sales of these services through foreign affiliates.⁹ Computer-related services are also delivered from the United States to foreign markets through software-licensing agreements. As mentioned in the section "Royalties and license fees," computer-

8. Under the current settlements-based system for international telecommunications transactions, a carrier in one country agrees on a price (an accounting rate) for handling a call with a carrier from another country. If a carrier originates more minutes of calls to a foreign carrier than it completes, it periodically makes a settlement payment to the foreign carrier.

9. Sales of computer and data processing services are not only made through foreign affiliates in the industry that provides these services, but also in several other industries, including machinery manufacturing and wholesale trade.

software-licensing fee receipts were nearly \$2.5 billion in 1997.

Payments for business, professional, and technical services increased 18 percent in 1997, to \$6.6 billion, following a 15-percent increase in 1996. "Miscellaneous disbursements" increased 32 percent to \$1.1 billion; the step-up was largely accounted for by a 40-percent increase, to \$0.5 billion, in the production costs of motion picture companies and of companies producing broadcasts other than news broadcasts. (Miscellaneous disbursements also covers outlays to fund news-gathering costs of broadcasters and the print media; disbursements to maintain tourism and business promotion offices; and disbursements for participating in foreign trade shows.)

Receipts for "other unaffiliated services" mainly consists of expenditures by foreign governments for services related to maintaining embassies and consulates in the United States; expenditures of international organizations—such as the United Nations, the International Monetary Fund, and the World Bank—headquartered in the United States; receipts from unaffiliated foreigners for sales and rentals of U.S. motion picture and television films and tapes; and expenditures of foreign residents employed temporarily in the United States. Payments primarily consist of earnings of foreign residents who are employed temporarily in the United States and of payments by U.S. film distributors to unaffiliated foreign residents for purchases and rentals of motion picture and television films and tapes. In 1997, receipts for "other unaffiliated services" increased 11 percent to \$11.3 billion; payments increased 8 percent to \$5.0 billion.

By area

Twelve countries accounted for 61 percent of U.S. cross-border exports and for 63 percent of U.S. cross-border imports (table B). The top seven of these countries for both exports and imports of U.S. services—Japan, the United Kingdom, Canada, Germany, Mexico, France, and South Korea—accounted for roughly one-half of both exports and imports of U.S. services and for 42 percent of the U.S. surplus on private services. By area, Europe and Asia and Pacific together accounted for two-thirds of exports and for slightly less than two-thirds of imports (chart 4).

Europe.—Europe accounted for 36 percent of exports and for 40 percent of imports of private services in 1997. The U.S. services surplus with Europe decreased 14 percent, to \$24.1 billion, fol-

lowing a 38-percent increase in 1996. Imports of private services increased 14 percent in 1997, while exports increased 4 percent. In contrast, imports increased only 2 percent in 1996, while exports increased 12 percent.

The United Kingdom accounted for 10 percent of all U. S. exports of services in 1997, compared with 9 percent in 1996, and ranked second to Japan as a destination of U.S. exports of services. Exports to the United Kingdom grew 16 percent in 1997, more than twice the growth in total U.S. exports of private services. The strong growth reflected a step-up in "other private services" that was largely accounted for by a nearly 50-percent increase in exports of financial services.

The United Kingdom accounted for 14 percent of all U.S. imports of services in 1997, compared with 12 percent in 1996, and ranked as the leading source of U. S. imports of services. Imports from the United Kingdom grew 29 percent in 1997, nearly three times the growth in total U.S. imports of private services. Payments by U.S.

1. Ranked by trade in dollar amounts.

residents for travel and passenger fares to the United Kingdom increased 21 percent. Net insurance payments to the United Kingdom also increased sharply, reflecting a falloff in losses recovered through reinsurance. These recoveries were relatively low in 1997, reflecting an absence of catastrophic events that would have triggered large payments from foreign reinsurers. The U.S. services surplus with the United Kingdom was \$2.4 billion in 1997.

In both 1996 and 1997, Germany accounted for 6 percent of U.S. exports of services and for 5 percent of U.S. imports of services. In 1997, exports to Germany decreased 1 percent, and imports from Germany grew 3 percent—one-third of the growth in total U.S. imports of services. The U.S. services surplus with Germany fell 5 percent, to \$5.5 billion, following a 12-percent increase.

Excluding the United Kingdom, U.S. exports of private services to Europe increased 1 percent, and U.S. imports from Europe increased 7 percent. These countries accounted for 26 percent of all U.S. exports and imports of services and for \$21.8 billion of the U.S. services surplus.

Asia and Pacific.—This area accounted for 31 percent of exports and for 25 percent of imports of private services in 1997. The U.S. services surplus with Asia and Pacific, the largest for any area, decreased 1 percent in 1997, to \$33.9 billion, following an 8-percent increase in 1996. In 1997, exports of private services increased 8 percent after increasing 7 percent, and imports of pri-

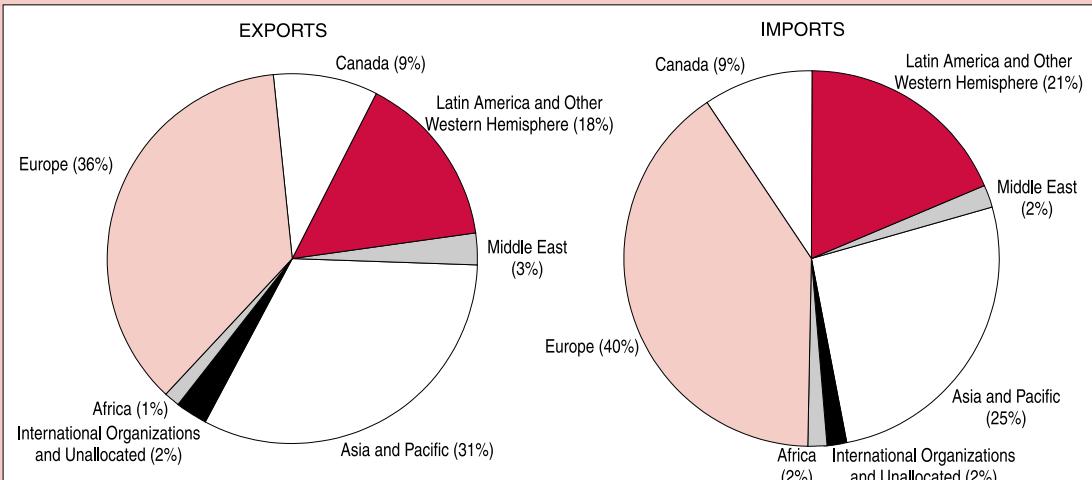

vate services increased 4 percent after increasing 6 percent.

Japan accounted for 14 percent of total U.S. exports of services in 1997, down slightly from 15 percent in 1996, but still ranked first as a destination of U.S. exports of services. Japan accounted for 12 percent of "other transportation" receipts, for 9 percent of "other private services" receipts, and for 20 percent of royalties and license fees receipts in 1997. Mainly because of weakness in the Japanese economy, U.S. services exports to Japan grew only 1 percent, considerably less than the 7-percent increase in total U.S. exports of services and the 6-percent growth in exports to the Asia and Pacific area excluding Japan. Receipts for travel and passenger fares from Japanese visitors to the United States fell by more than \$1.0 billion, to \$16.5 billion.

Japan accounted for 9 percent of total U.S. imports of services in 1996 and 1997 and ranked second as a source of U.S. imports of services. This growth in imports kept pace with the growth in total U.S. imports of services in 1997. Reflecting a surge in payments by U.S. affiliates to their foreign parents, royalty and license fee payments to Japan increased 45 percent in 1997, compared with an 8-percent decrease in 1996. The U.S. services surplus with Japan decreased 4 percent in 1997, to \$19.7 billion, compared with a 5-percent increase in 1996. This pattern, which is consistent with the increase in the trade deficit in goods with Japan in 1997 after the decrease in 1996, re-

CHART 4

U.S. Cross-Border Services Transactions: Share By Area in 1997

flects the strength of the U.S. economy relative to that of Japan in 1997.¹⁰

Excluding Japan, exports of private services to Asia and Pacific increased 6 percent in 1997, to \$39.6 billion, and imports increased 8 percent, to \$25.4 billion; the U.S. services surplus was \$14.2 billion.

Latin America and Other Western Hemisphere.—This area accounted for 18 percent of exports and for 21 percent of imports of private services in 1997. The U.S. services surplus with the area nearly doubled, reaching \$9.6 billion, as U.S. exports to most of the major countries in this area increased much more rapidly than imports. More than one-half of the surplus was attributable to travel and passenger fares.

Mexico accounted for 4 percent of total U.S. exports of services and for 8 percent of total U.S. imports of services in 1997. Mexican visitors to the United States accounted for 5 percent of total U.S. travel and passenger fare receipts, while U.S. visitors to Mexico accounted for 10 percent of travel and passenger fare payments. U.S. exports to Mexico increased 15 percent in 1997, to \$9.3 billion, following a 10-percent increase in 1996. U.S. imports from Mexico increased 11 percent to \$13.1 billion. The U.S. services deficit with Mexico increased to \$3.8 billion—of which \$2.9 billion was attributable to travel and passenger fares.

Excluding Mexico, exports of private services to Latin America and Other Western Hemisphere increased 22 percent, and imports increased 6 percent. The U.S. services surplus was \$13.4 billion; travel and passenger fares accounted for more than one-half of the increase in this surplus.

Canada.—Canada accounted for 9 percent of both U.S. exports and U.S. imports of private services in 1997. U.S. imports from Canada increased more rapidly than exports to Canada, reflecting the strengthening U.S. dollar. The U.S. services surplus with Canada decreased 10 percent in 1997, to \$6.4 billion, compared with a 9-percent increase in 1996. Nearly one-half of the surplus in 1997 was attributable to travel and passenger fares. Partly reflecting the high volume of goods shipped by truck, pipeline, and inland waterway between the United States and Canada, both U.S. exports to and imports from Canada of “other transportation” services ranked second to those of Japan. U.S. exports and imports of

“other private services” with Canada were second only to those with the United Kingdom.

Other.—The remaining areas—Africa, the Middle East, and “International organizations and unallocated”—combined accounted for 7 percent of exports and for 5 percent of imports of private services in 1997. Exports to these areas increased 7 percent and kept pace with the worldwide growth in exports. In contrast, imports from these areas decreased 5 percent. Payments (imports) to international organizations had been boosted to an unusually high level in 1996 by a large payment for the rights to broadcast the 1996 Summer Olympic Games.

Sales by Affiliates in 1996

In 1996, the latest year for which data are available, worldwide sales of private services by nonbank majority-owned foreign affiliates of U.S. companies were \$235.8 billion, up 16 percent from 1995 (table C).¹¹ Worldwide sales of services by nonbank majority-owned U.S. affiliates of foreign companies were \$171.1 billion, up 8 percent.

11. In this section, sales of services are defined as sales of the types of services that are usually sold by establishments classified in the industries listed in the footnote to table C.

Table C.—Sales of Services by Nonbank Majority-Owned Foreign Affiliates of U.S. Companies and by Nonbank Majority-Owned U.S. Affiliates of Foreign Companies, 1995–96

	[Millions of dollars]	
	1995	1996
Sales by foreign affiliates		
Total	202,950	235,789
To affiliated persons	23,419	27,752
To unaffiliated persons	179,531	208,037
To U.S. persons	12,893	14,728
To U.S. parents	7,825	8,947
To unaffiliated U.S. persons	5,068	5,781
To foreign persons	190,057	221,061
To other foreign affiliates	15,593	18,806
To unaffiliated foreign persons	174,463	202,255
Local sales	169,212	189,386
To other foreign affiliates	7,166	6,386
To unaffiliated foreigners	162,046	183,000
Sales to other countries	20,845	31,675
To other foreign affiliates	8,427	12,420
To unaffiliated foreigners	12,418	19,255
Sales by U.S. affiliates		
Total	159,026	171,114
To U.S. persons	149,663	160,990
To foreign persons	9,362	10,125
To the foreign parent group	4,682	6,032
To foreign affiliates	243	390
To other foreigners	4,438	3,702

NOTE.—Sales of services in this table are those characteristic of establishments in the following industries: Industries in the “services” division of the Standard Industrial Classification: finance (except depository institutions), insurance, and real estate; agricultural, mining, and petroleum services; and transportation, communication and public utilities. Depository institutions are excluded from this listing because data on them are not available.

10. Real gross domestic product (GDP) in the United States grew 3.9 percent in 1997 and 3.4 percent in 1996; real GDP in Japan grew 0.9 percent in 1997, and 3.9 percent in 1996.

Sales of services by affiliates tend to be predominantly local transactions, reflecting the importance of proximity to the customer in the delivery of many services. In 1996, sales in the country of the affiliate (local sales) accounted for 80 percent of worldwide sales of services by foreign affiliates, well above the corresponding share—63 percent—for sales of goods. Sales of services to other foreign countries accounted for 13 percent of worldwide sales by foreign affiliates of U.S. companies. Only 6 percent of sales by foreign affiliates were to U.S. persons, and most of these sales were to the U.S. parents of the affiliate making the sale. Partly reflecting the large U.S. market, local sales accounted for 94 percent of sales by U.S. affiliates of foreign companies.

Sales by foreign affiliates to foreign persons and sales by U.S. affiliates to U.S. persons both represent services delivered to international markets through the channel of direct investment. Unlike cross-border transactions, which are generally classified by type of service, these sales are classified by the primary industry of the affiliate; they are shown by country of affiliate or by ultimate beneficial owner (UBO) in *table 8*.¹² The sales by foreign affiliates in *table 9* and by U.S. affiliates in *table 10* are shown by industry of affiliate cross-classified by country.

Foreign affiliates' sales to foreign persons

In 1996, foreign affiliates' sales of services to foreign persons were \$221.1 billion. By area, affiliates in Europe accounted for 58 percent of these sales, and affiliates in Asia and Pacific accounted for 22 percent. By industry, affiliates classified in the "services" division of the Standard Industrial Classification (SIC) system accounted for 38 percent of the total, and affiliates in insurance accounted for 19 percent.¹³

Foreign affiliates' sales increased \$31.0 billion, or 16 percent, in 1996, following a 19-percent increase in 1995. Sales grew strongly in 1996 despite a 4-percent rise in the trade-weighted value of the U.S. dollar against the currencies of 10 major trading partners (which also are major host countries for U.S. direct investment);

the rise reduced the dollar value of foreign-currency-denominated sales by foreign affiliates. The growth resulted from strong demand for computer services (traditionally regarded as an area in which U.S. multinational companies have a competitive advantage), from favorable economic conditions in most host countries, and from foreign acquisitions by U.S. multinational companies. In particular, U.S. utility companies acquired a number of overseas providers of electricity and telephone services, largely in response to the new investment opportunities created by the privatizations of Government-owned utilities abroad.¹⁴

By area, sales of services to foreign persons by affiliates increased in all the major areas. Sales by affiliates in Europe rose \$22.1 billion and accounted for 71 percent of the total increase. Half of the increase in Europe and more than a third of the total increase were accounted for by affiliates in the United Kingdom—particularly by affiliates classified in computer-related activities and by affiliates that are public utilities; the remainder was concentrated among affiliates in Germany and in the Netherlands.

Foreign sales of services by affiliates in the Asia and Pacific area rose \$4.9 billion—16 percent of the total increase. Affiliates in Australia—particularly public utilities—accounted for nearly half of the increase in Asia and Pacific. Sales by affiliates in Japan were virtually unchanged, partly because of the 12-percent appreciation of the dollar against the yen, which reduced the value of sales in terms of U.S. dollars. In Canada, sales increased \$2.2 billion—7 percent of the total increase. In Latin America and Other Western Hemisphere, sales increased \$1.6 billion—5 percent of the total increase; nearly two-thirds of the increase in this area was accounted for by affiliates in Argentina and in Brazil.

By industry, sales increased in all major industries except wholesale trade, which decreased slightly. Sales by affiliates in "services" rose \$11.4 billion, accounting for 37 percent of the total increase. Sales by affiliates in "other industries" increased \$8.9 billion—29 percent of the total increase—and sales by affiliates in manufacturing increased \$5.4 billion—18 percent of the total increase. Reflecting strong overseas demand for computer-related services, the increase in "services" was mainly accounted for by affiliates that primarily provide computer and data processing

12. The UBO of a U.S. affiliate is that person (in the broad legal sense, including a company), proceeding up the affiliate's ownership chain beginning with the foreign parent, that is not owned more than 50 percent by another person. The UBO ultimately owns or controls the affiliate and derives the benefits associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

13. In the SIC, the "services" division includes a variety of business and personal services (see the group "services" in *tables 9* and *10*), but it excludes several industries—such as finance, insurance, transportation, and communication—that are classified as services-producing industries in this article in order to disaggregate total sales into sales of goods and sales of services.

14. For additional information about U.S. direct investment abroad in 1996, see Sylvia E. Bargas, "Direct Investment Positions for 1996: Country and Industry Detail," *SURVEY* 77 (July 1997): 34–41, and Mataloni, "Operations in 1996."

services, and the increase in manufacturing, by affiliates that primarily manufacture computers and related equipment.¹⁵ Within "other industries," public utilities and communications accounted for almost all of the increase, partly because of the acquisitions of overseas providers of electricity and telephone services.

U.S. affiliates' sales in the United States

In 1996, sales of services to U.S. businesses and individuals by U.S. affiliates of foreign companies were \$161.0 billion. By area, affiliates with UBO's in Europe accounted for 60 percent of the total. Affiliates with UBO's in the Asia and Pacific area accounted for 18 percent, and affiliates with UBO's in Canada accounted for 17 percent. By industry, affiliates in insurance accounted for 35 percent of the total, and affiliates in "services" and in "other industries" accounted for 24 percent and 13 percent, respectively.

U.S. affiliates' sales in the United States increased \$11.3 billion, or 8 percent, in 1996, following a 3-percent increase in 1995. More than three-fourths of the increase was accounted for by net additions to the affiliate universe—following a record number of new direct investments by foreign multinational companies—rather than by growth in sales by affiliates already in the affiliate universe.¹⁶

By area, sales by affiliates with UBO's in Europe rose \$6.6 billion—58 percent of the total increase. Nearly two-thirds of the increase for Europe and more than a third of the total increase were accounted for by affiliates with UBO's in Germany—particularly insurance affiliates; the remainder was concentrated among affiliates with UBO's in Switzerland and in Norway.

15. The "services" and manufacturing industries in which foreign affiliates are likely to sell computer-related services are, respectively, "computer and data processing services" and "computer and office equipment manufacturing" (part of "machinery" in table 9). Sales of services to foreigners by affiliates classified in these two industries increased \$10.5 billion in 1996—a third of the total increase. Not all services sold by affiliates in these industries are computer and data processing services, but most of them probably are. In addition, some computer and data processing services may be sold by affiliates classified in other industries.

16. According to data from BEA's survey of new foreign direct investments, foreign direct investors' outlays to acquire or establish U.S. businesses were a record \$79.9 billion in 1996. See Fahim-Nader and Zeile, "Foreign Direct Investment in the United States."

Sales by affiliates with UBO's in the Asia and Pacific area rose \$3.0 billion—27 percent of the total increase. Japan had the largest increase, followed by Australia. Sales by affiliates with UBO's in Latin America and Other Western Hemisphere rose \$0.9 billion. Almost all of this increase was accounted for by countries in Other Western Hemisphere—particularly the Netherlands Antilles, Bahamas, and Bermuda; sales by affiliates with UBO's in South and Central America were virtually unchanged. Sales by affiliates with UBO's in Canada rose \$0.7 billion.

By industry, sales by affiliates in "other industries" increased \$5.0 billion; almost all of this increase was in communications. Sales by affiliates in insurance increased \$4.4 billion as a result of a number of acquisitions of U.S. insurers that were motivated by foreign insurance companies' desire to consolidate into larger, more efficient units and to become better able to spread risks. Life insurers, particularly those with UBO's in the United Kingdom and the Netherlands, accounted for three-fourths of the increase in insurance; property and casualty insurers, particularly those with UBO's in Germany, accounted for most of the remainder.

As a result of several acquisitions of U.S. financial companies, sales by affiliates in "finance, except depository institutions" rose \$4.2 billion, two-thirds of which was accounted for by affiliates with UBO's in Japan. These acquisitions were motivated by foreign financial institutions' desire to broaden their range of services, to spread the cost of new technology across a broader base, to acquire U.S. expertise in particular financial services areas, and to improve access to the large U.S. capital market.

The largest decrease—\$1.9 billion—was in "services." Within "services," sales by affiliates in the motion picture industry fell \$3.7 billion as a result of liquidations and of changes in industry classification. In contrast, sales by affiliates in health services rose \$1.9 billion, following a number of acquisitions by foreign companies seeking access to the growing and profitable medical care market.

1. Prior to 1990, this line includes data only for the Federal Republic of Germany. Beginning in 1990, this line also includes the former German Democratic Republic.

2. The European Union comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom, Austria, Finland, and Sweden. The last three countries joined the Union on January 1, 1995. The estimates prior to 1995 do not reflect the addition of these three countries.

3. Eastern Europe comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

NOTE.—The full country and area detail shown in the stub is available only since 1992.

* Less than \$500,000.

^D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1994, net receipts of \$2,474 million were derived as gross operating revenues of \$4,834 million less merchandise exports of \$690 million and foreign expenses of \$1,670 million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports

and wages and other expenses, and no estimates are made because they are believed to be small.

2. Consists of accounting, auditing, and bookkeeping services, agricultural services, mailing, reproduction, and commercial art, management of health care facilities, medical services, miscellaneous disbursements, operational leasing, personnel supply services, sports and performing arts, training services, and other business, professional, and technical services (see footnote 1, table 1).

3. See table 2, footnote 2.

4. See table 2, footnote 3.

* Less than \$500,000.

^D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1995, net receipts of \$2,550 million were derived as gross operating revenues of \$4,788 million less merchandise exports of \$787 million and foreign expenses of

\$1,451 million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 7.1, footnote 2.

3. See table 2, footnote 2.

4. See table 2, footnote 3.

* Less than \$500,000.

^D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1997, net receipts of \$4,084 million were derived as gross operating revenues of \$8,513 million less merchandise exports of \$1,788 million and foreign expenses

of \$2,641 million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 7.1, footnote 1.

3. See table 2, footnote 2.

4. See table 2, footnote 3.

^D Suppressed to avoid disclosure of data of individual companies.

1. For MOFA's, "country" is the country of the affiliate; for MOUSA's, it is the country of the affiliate's ultimate beneficial owner.

2. Foreign affiliates classified in "International" are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment.

3. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

4. See table 2, footnote 2.

5. See table 2, footnote 3.

U.S. Direct Investment Abroad: Detail for Historical-Cost Position and Related Capital and Income Flows, 1997

THE FOLLOWING TABLES present detailed estimates of the U.S. direct investment position abroad on a historical-cost, or book-value, basis and of the related capital and income flows. These tables supplement an article in the July 1998 SURVEY OF CURRENT BUSINESS that summarized developments in the direct investment positions at historical cost in 1997.¹ The estimates for 1997 are preliminary; those for 1994–96 are revised.

The estimates in tables 3–18 differ in two respects from those for comparable items in the international investment position of the United States and in the U.S. international transactions accounts.² First, the estimates in these tables are on a historical-cost basis, which is the only basis on which detailed estimates by country and industry are available; in contrast, the aggregate estimates of the direct investment position that are included in the international investment position of the United States are presented on both a current-cost and a market-value basis, and the aggregate estimates of direct investment income and capital flows in the U.S. international transactions accounts are presented on a current-cost basis. Second, the estimates of direct investment income and services in these tables, unlike those in the U.S. international transactions accounts, are net (after deduction) of U.S. and foreign withholding taxes; estimates gross of withholding taxes are not available by country or by industry.

1. See Sylvia E. Bargas, "Direct Investment Positions for 1997: Country and Industry Detail," SURVEY 78 (July 1998): 35–45.

2. See Russell B. Scholl, "The International Investment Position of the United States in 1997," SURVEY 78 (July 1998): 24–34; and Anthony J. DiLullo, "U.S. International Transactions, First Quarter 1998," SURVEY 78 (July 1998): 59–103. The latter article includes annual estimates of international transactions from 1965–97. Estimates of international transactions through the second quarter of 1998 appear in this issue in Douglas B. Weinberg, "U.S. International Transactions, Second Quarter 1998."

Acknowledgments

The survey from which the data for U.S. direct investment position abroad and the related capital and income flows were drawn was conducted under the supervision of Mark W. New, assisted by Laura A. Downey, Javier J. Hodge, Marie K. Laddomada, Sherry Lee, Leila C. Morrison, Gary M. Solomon, and Dwayne Torney. Computer programming for estimation and the generation of tables was provided by Marie Colosimo and Arnold Gilbert. The text was prepared by Jeffrey H. Lowe.

Table 1 presents the total U.S. direct investment position abroad and a comparable rate of return on the position on all three valuation bases (historical cost, current cost, and market value); **table 2** presents a reconciliation of the estimates in tables 3–18 with those in the U.S. international transactions accounts.

The estimates presented here incorporate two major changes compared with those published in September 1997: (1) They incorporate the results of BEA's 1994 benchmark survey of U.S. direct investment abroad (USDIA); and (2) they reflect a reclassification of intercompany debt and associated interest transactions of foreign affiliates that are primarily engaged in financial intermediation. Both of these changes are discussed in the technical note that follows.³ In addition, the estimates reflect updated source data—that is, the inclusion of late and revised reports from BEA's quarterly survey of USDIA and information from the annual survey of USDIA that supplements the quarterly survey data. Finally, the estimates reflect the following change in industry groupings: The industry that was previously designated "banking" is now designated "depository institutions" and now includes savings institutions and credit unions as well as banks, and the industry that was previously designated "finance, except banking" is now designated "finance, except depository institutions." Because few U.S. parents or foreign affiliates are savings institutions or

3. These changes were introduced in the international transactions and international investment position accounts earlier this year and described in somewhat less detail in Christopher L. Bach, "U.S. International Transactions, Revised Estimates for 1986–97," SURVEY 78 (July 1998): 47–57.

Data Availability

Tables 10–17 in this statistical presentation are also available on BEA's Web site. Go to <www.bea.doc.gov>, and click on International, Data, U.S. Direct Investment Abroad. Estimates of the U.S. direct investment position abroad and of the balance of payments transactions between U.S. parents and their foreign affiliates for 1982–97 are available as downloadable files on the BEA Web site and on diskette from BEA. To obtain the data files from the Web site, click on Catalog of Products, and look under International Accounts Products, U.S. Direct Investment Abroad.

The estimates are on a single diskette (product number IDN-0137) for \$20. To order using Visa or MasterCard, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

credit unions, this change has negligible statistical effect.

Technical Note

The direct investment position and related capital flow and income estimates have been revised to incorporate (1) the results of the 1994 benchmark survey of **USDIA** and (2) the reclassification of intercompany debt and associated interest transactions with financial intermediaries from the direct investment accounts to the accounts for U.S. nonbanking concerns' transactions with unaffiliated foreigners. This note discusses these two changes and the impact of the changes and of the updated source data on the estimates.

Incorporation of the results of the 1994 benchmark survey

The estimates of the U.S. direct investment position abroad for 1994–96 and the estimates of capital flows, income, royalties and license fees, and charges for other services for 1994–97 have been revised to incorporate the results of **BEA's** 1994 benchmark survey of **USDIA**; previously, these estimates were linked to the 1989 benchmark survey.

Benchmark surveys are normally conducted every 5 years and cover virtually the entire universe (in terms of value) of foreign affiliates of U.S. direct investors.⁴ In the 1994 survey, reports were required for affiliates that had total assets, sales, or net income (or loss) greater than \$3 million in their 1994 fiscal year. These affiliates accounted for only about 75 percent of the number, but for virtually all of the assets and sales, of foreign affiliates in 1994.⁵

To reduce the reporting burden in nonbenchmark years, a quarterly cut-off sample survey is used to estimate the direct investment position and balance of payments flows. This survey, which has higher exemption levels, collects data on existing affiliates and on affiliates that were established or acquired since the last benchmark survey.⁶ For affiliates that are reported in the benchmark survey and that are not required to be reported in the sample survey, the data from the

4. A foreign affiliate is a foreign business enterprise in which a single U.S. investor owns at least 10 percent of the voting securities, or the equivalent.

5. Affiliates that were exempt from being reported in the benchmark survey were required to file an exemption claim on which the value of their total assets, sales, and net income were indicated. Of the universe of 29,660 foreign affiliates, 22,332 were required to be reported, and 7,328 were exempt. The exempt affiliates accounted for only 0.1 percent of total assets and 0.3 percent of total sales.

For a detailed description of the methodology underlying the **USDIA** statistics, including basic concepts and definitions, see U.S. Department of Commerce, Bureau of Economic Analysis, *U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results* (Washington, DC: U.S. Government Printing Office, May 1998); for order information, see the inside back cover of this issue.

6. Affiliates that have assets, sales, or net income above \$20 million are required to be reported on the quarterly survey. Affiliates that are acquired or established following a benchmark survey and that are below the exemption levels for the quarterly survey are not included in the estimates until they are reported on the next benchmark survey.

benchmark survey are extrapolated based on movements in the data for affiliates that were reported in the sample survey.

The benchmarking procedure's main focus was to reconcile the data reported in the quarterly sample surveys with the data reported in the 1994 benchmark survey. First, data were reconciled for affiliates that were reported in both the 1994 quarterly surveys and the 1994 benchmark survey. Significant discrepancies were investigated and resolved, usually in favor of the benchmark survey data, which are reported later than the quarterly survey data and which are more comprehensive and integrated, so they can be more thoroughly edited and cross-checked.

As part of this reconciliation process, the benchmark survey data were adjusted from a fiscal year basis to a calendar year basis—that is, from the basis on which the data were reported to the basis on which the U.S. international transactions accounts and the international investment position of the United States are compiled. For about two-thirds of the affiliates, the fiscal year coincided with the calendar year, so no adjustment was necessary.⁷ For those remaining affiliates that were reported on both the quarterly surveys and the benchmark survey, the sum of the quarterly survey data for the four quarters of the affiliate's 1994 fiscal year was reconciled with the fiscal year total reported in the benchmark survey. The calendar year estimates for these affiliates were derived by adding the reconciled quarterly data for the quarters that fell in both fiscal and calendar year 1994 to the data based on the quarterly survey for the calendar quarters not covered by the benchmark survey.

Next, data were removed from the quarterly estimates for any affiliates that the benchmark survey indicated had been sold, liquidated, or consolidated into other affiliates since the 1989 benchmark survey (and whose exit or consolidation had not already been captured in the quarterly and annual surveys of **USDIA**).

Finally, the estimates for affiliates that reported in the benchmark survey but not in the quarterly survey were added to the quarterly estimates. For these affiliates, the data from the benchmark survey for fiscal year 1994 were distributed evenly among the four calendar quarters for 1994.

The estimates for 1995 forward incorporate the results of the 1994 benchmark survey and the data collected in **BEA's** quarterly surveys of **USDIA**. These estimates are generally derived from (1) data reported in the quarterly surveys for the affiliates that were above the exemption level and that were reported in the 1994 benchmark survey, (2) data reported in the quarterly surveys for affiliates that were acquired or established since the 1994 benchmark survey and that met the reporting criteria for the quarterly survey,

7. The fiscal year data for the direct investment position, capital flows, income, royalties and license fees, and charges for other services were published in *U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results*.

and (3) estimates for affiliates that were reported in the 1994 benchmark survey, but not in the quarterly surveys.⁸

To ensure that coverage of the estimates in non-benchmark years is as complete as that in the 1994 benchmark survey, estimates are prepared for affiliates that reported in the 1994 benchmark survey but that did not report in the quarterly surveys. The estimates are derived by extrapolating the benchmark survey data based on movements in the data reported in the subsequent quarters for a matched sample of affiliates.

This procedure is applied to all data items except intercompany debt flows; the estimates of these flows are derived as the quarter-to-quarter changes in the data for the intercompany debt positions reported in the quarterly surveys, supplemented in some cases with data from the annual survey of USDIA.

Reclassification of intercompany debt and associated interest transactions with financial intermediaries

In recent years, a substantial portion of the movement in direct investment capital flows has been accounted for by changes in the intercompany debt balances of foreign affiliates that are primarily engaged in financial intermediation. These affiliates are established mainly to facilitate the foreign securities and financing businesses of their U.S. parents or to facilitate foreign borrowing by their U.S. parents, and the capital flows resulting from these activities have been both sizable and volatile. Although these financial intermediary flows occur within multinational enterprises, the affiliate typically serves as a conduit for funds obtained from, or loaned to, unaffiliated parties. Thus, it is more meaningful to record these flows as if they were between the U.S. parent and unaffiliated foreign residents, rather than as a part of direct investment, which conceptually involves a lasting interest in a business enterprise in another country and is motivated by a desire to influence the management of that enterprise.

Beginning with 1994, the positions and transactions associated with intercompany debt between parents and foreign financial affiliates that are not depository institutions but are primarily engaged in financial intermediation are reclassified from the direct investment accounts to the accounts for U.S. nonbanking concerns' transactions with unaffiliated foreigners.⁹ Similarly, interest receipts and payments associated with these debt transactions are reclassified from the direct investment income account to the "other" private income account. Other types of capital transactions—equity capital and reinvested earnings—with these financial intermediaries and the associated

8. In some cases, the estimates for 1995 forward also incorporate information from BEA's annual survey of USDIA.

9. See Christopher L. Bach, "U.S. International Transactions, Revised Estimates for 1986-97," SURVEY 78 (July 1998): 47-57.

earnings receipts continue to be classified as direct investment.¹⁰

This new treatment is similar to the long-standing treatment of nonpermanent debt investment and associated income transactions between affiliated depository institutions, and it is consistent with the standards recommended in the International Monetary Fund's *Balance of Payments Manual* (fifth edition). These standards recommend that direct investment positions in, and transactions with, affiliated depository institutions and other financial intermediaries be defined to include only the parents' permanent investment in these affiliates. All other positions and transactions with these affiliates—that is, those associated with their activities as financial intermediaries—should be excluded from direct investment accounts and instead be included in the accounts that cover transactions between unaffiliated firms.

As a practical matter, because data on the parents' permanent investment in nonbank financial intermediaries are not collected separately, permanent investment in these affiliates has been defined to be equivalent to the parents' equity investment in the affiliates.

The industrial classification system that was used to classify these affiliates provides a separate classification for depository institutions, but not for other financial intermediaries.¹¹ Instead, it classifies financial intermediaries and other nonbank financial affiliates in the "other finance" industry. A review of the affiliates in that industry identified three groups of affiliates that have characteristics of financial intermediaries: (1) Financial affiliates located in the Netherlands Antilles, (2) financial affiliates whose U.S. parents are depository institutions, and (3) financial affiliates whose U.S. parents are securities dealers.¹²

The Netherlands Antilles affiliates were identified as financial intermediaries because, according to international guidelines, financial intermediaries include foreign affiliates set up to raise funds abroad and channel them to their parent companies, and this typically has been the sole function of these affiliates. Until mid-1984, U.S. parents often borrowed funds from foreign capital markets, indirectly through nonbank financial affiliates in the Netherlands Antilles rather than directly from unaffiliated foreign lenders, because the interest payments on their borrowings from affiliates were exempt from U.S. withholding taxes under a tax treaty between the United States and the

10. The reclassification of the financial intermediary data had no impact on the royalties and license fees or the charges for other services accounts.

11. This system was adapted from the 1987 Standard Industrial Classification system. Recently, BEA has developed a new system, adapted from the North American Industrial Classification System, 1997, that contains distinct classifications for affiliates that are financial intermediaries and thus provides for more direct and precise identification of these affiliates. This new system is being introduced in the 1997 Benchmark Survey of Foreign Direct Investment in the United States. For USDIA, it will be introduced in conjunction with the 1999 Benchmark Survey of U.S. Direct Investment Abroad.

12. Outside sources were used to determine which U.S. parents were securities dealers because the industrial classification system used in the 1994 benchmark survey did not provide a separate classification for them.

Netherlands Antilles. The repeal of the withholding tax in 1984 caused most borrowing from these affiliates to cease and the repayments of previous borrowing to increase, but some U.S. parents continue to borrow indirectly through their nonbank financial affiliates in the Netherlands Antilles.

Revisions to the estimates

Table A presents detail on the revisions that resulted from benchmarking to the 1994 benchmark survey of USDIA, reclassifying the intercompany debt and associated interest transactions of financial intermediaries, and incorporating updated source data.

Estimates for 1994.—The direct investment position on a historical-cost basis was revised down \$27.4 billion, to \$612.9 billion. Benchmarking accounted for \$11.4 billion of the downward revision, and the reclassification of intercompany debt balances of financial intermediaries accounted for \$16.0 billion. The reductions due to benchmarking were largely accounted for by corrections for affiliates that were reported in the quarterly surveys but whose position data were overstated, according to information from the benchmark survey.

Capital outflows for USDIA were revised up \$5.0 billion, to \$73.3 billion. An upward revision of \$6.3 billion due to benchmarking was partly offset by a

* Less than \$500,000 (±).

^D Suppressed to avoid disclosure of data of individual companies.

NOTE.—Details may not add to totals because of rounding.

downward revision of \$1.3 billion due to the reclassification. The upward revision due to benchmarking mainly reflected previously unreported equity capital contributions to existing affiliates.

Income changed little, edging up \$0.4 billion, to \$69.0 billion. A \$1.0 billion upward revision due to benchmarking was mostly offset by a downward revision due to the reclassification.

Net receipts for royalties and license fees were revised up \$2.2 billion, to \$17.9 billion, and net charges for other services were revised up \$0.3 billion, to \$6.5 billion; the revisions were due to benchmarking.

The revisions by major area and industry are shown in *table B*. By country, nearly all of the downward revision in the position was accounted for by affiliates in Europe, particularly those in the United Kingdom. Most of this decline resulted from the reclassification of financial intermediaries. There was also a sizable reduction in Canada, mainly from the benchmarking of the data for manufacturing affiliates. The increase

in capital outflows was also centered in Europe, but it was more widespread and mainly resulted from benchmarking. The small increase in income reflected upward revisions in Canada and Latin America that were largely offset by a reduction in Asia and Pacific. The upward revisions in royalties and license fees and in charges for other services were concentrated in Europe.

Estimates for 1995–97.—The position was revised down for 1995 and 1996; downward revisions due to the reclassification were partly offset by upward revisions due to updated source data. Capital outflows were revised up for 1995 and down for 1996 and 1997; the revisions for 1995 and 1996 primarily were due to updated source data. In 1997, a decrease due to updated source data was largely offset by an increase due to the reclassification. Income was revised down for all 3 years; the revisions were largest for 1996 and 1997.

Tables 1 through 18 follow. 

General Notes to the Tables

- Detail may not add to totals, because of rounding.
- An asterisk “(*)” indicates a value between -\$500,000 and \$500,000.
- A “(D)” indicates that the data in the cell have been suppressed to avoid disclosure of data of individual companies.
- The country category “International” consists of affiliates that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, or offshore oil and gas drilling.
- “Eastern Europe” comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Roma-

nia, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

- The European Union (12) comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, and the United Kingdom.
- The European Union (15) comprises the European Union (12) and the three countries—Austria, Finland, and Sweden—that joined the Union in 1995.
- OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. Before 1995, Gabon was also a member.

1. On a historical-cost basis, direct investment income excludes capital gains and losses and is computed without a current-cost adjustment to earnings; it equals the sum of lines 9 and 14 of table 2. The rate of return based on historical cost equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures shown in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest. However, it differs from the measure disaggregated by country and industry in subsequent tables, which is recorded net (after deduction) of withholding taxes, because withholding tax data are not available by country or industry.

2. On a current-cost basis, direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings; the latter adjusts depreciation, depletion, and expensed exploration and development

costs to reflect current-period prices, and to more closely align income earned in a given period with charges against income in the same period, as required for the national and international economic accounts. Income on a current-cost basis equals line 1 of table 2. The rate of return based on current cost equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

3. On a market-value basis, direct investment income measures financial return to investors; thus, it includes capital gains and losses but excludes the current-cost adjustment, which is an economic accounting adjustment, and currency translation adjustments, which in company financial statements are taken directly to an equity account without passing through the income statement. It is derived as line 1 minus line 8 of table 2, plus the total in column 12 of table 5. The rate of return based on market value equals this measure of income divided by the average of the beginning- and end-of-year direct investment positions at market value.

1. Withholding taxes on "other" services transactions between U.S. parents and their foreign affiliates are assumed to be negligible, and no estimates of them are made. Therefore, there is no difference between the before-tax estimates shown in the international transactions accounts and the after-tax estimates shown in the accompanying tables.

NOTE.—This table reconciles the estimates for which country and industry detail are presented in this report with the aggregate estimates presented in the U.S. international transactions accounts in the July 1998 SURVEY OF CURRENT BUSINESS (see "U.S. International Transactions, First Quarter 1998," SURVEY 78 (July 1998): 59–103). In the international transactions accounts, the earnings component of direct investment income and the reinvested earnings component of capital outflows are adjusted to a current-cost basis, and direct investment current-account items are adjusted to be gross (before deduction) of U.S. and foreign withholding taxes. These adjustments are not made to the estimates in tables 3–18 in this report, because the source data needed to make the adjustments by country and industry are not available.

1. An increase in U.S. parents' payables is a decrease in intercompany debt and, thus, a capital inflow.

2. Represents gains or losses that arise because of changes from the end of one accounting period to the next in exchange rates applied in translating affiliates' assets and liabilities from foreign currencies into dollars.

NOTE.—In this table, unlike in the international transactions accounts, reinvested earnings are shown without a current-cost adjustment.

1. Reinvested earnings divided by earnings.

2. Reinvestment ratio is not defined because reinvested earnings are negative.

NOTE.—In this table, distributed earnings are shown before deduction of withholding taxes. Unlike in the international transactions accounts, earnings and reinvested earnings are shown without a current-cost adjustment.

1. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals. In 1997, U.S. parents' receipts of service charges were \$12,577 million, receipts of rentals for the use of tangible property were \$1,201 million, and receipts of film and television tape rentals were \$2,386 million; U.S. parents' pay-

ments were \$8,991 million, \$411 million, and \$4 million, respectively.

NOTE.—In this table, unlike in the international transactions accounts, royalties and license fees and charges for other services are shown net of withholding taxes.

1. The data for direct investment position, capital outflows, and income reflect a discontinuity between 1993 and 1994 due to the reclassification from direct investment to other investment accounts of intercompany debt flows and associated income payments between parent companies and affiliates that are nondepository financial intermediaries. There is no discontinuity in the royalties and license fees or the charges for other services accounts.

2. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals.

NOTE.—In this table, unlike in the international transactions accounts, income, royalties and license fees, and charges for other services are shown net of withholding taxes, and capital outflows, reinvested earnings, and income are shown without a current-cost adjustment.

National Data

A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on September 24, 1998 and include the "final" estimates for the second quarter of 1998.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. Most of the "annual only" NIPA tables were presented in the August 1998 SURVEY OF CURRENT BUSINESS; table 8.26 is presented in the September 1998 SURVEY; and the remaining "annual only" tables—tables 3.15–3.20 and 9.1–9.6—are presented in this issue.

The news release on gross domestic product (GDP) is available at the time of release, and the "Selected NIPA Tables" are available later that day, on STAT-USA's Economic Bulletin Board and Internet services; for information, call STAT-USA on 202-482-1986. In addition, the GDP news release is available the afternoon of the day of the release, and the "Selected NIPA Tables" a day or two later, on BEA's Web site <www.bea.doc.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order NIPA subscription products using Visa or MasterCard, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

1. National Product and Income

Table 1.1.—Gross Domestic Product

[Billions of dollars]

	1996	1997	Seasonally adjusted at annual rates					
			1997				1998	
			I	II	III	IV	I	II

Non defense	146.2	148.6	150.7	148.2	148.2	147.3	151.9	152.9
State and local	802.7	827.1	821.5	824.2	830.1	832.9	837.1	840.9
Residual	-1.5	-7.3	-5.0	-6.7	-8.9	-8.9	-14.2	-8.4

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines. Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Chain-type quantity indexes for the series in this table appear in table 7.1.

General government	883.6	912.9	904.2	910.7	916.3	920.5	930.1	936.3				
Federal	279.2	281.3	282.9	282.4	281.0	278.8	282.1	281.2				
State and local	604.4	631.7	621.3	628.3	635.3	641.7	648.0	655.2				

1. Gross domestic business product equals gross domestic product less gross product of households and institutions and of general government. Gross nonfarm product equals gross domestic business product less gross farm product.

2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.7.

Table 1.4.—Real Gross Domestic Product by Major Type of Product

Nondurable goods	1,464.2	1,509.6	1,505.6	1,499.7	1,512.7	1,520.4	1,541.6	1,541.6				
Final sales	1,451.5	1,475.1	1,476.9	1,463.9	1,477.1	1,482.4	1,495.2	1,505.4				
Change in business inventories	10.5	31.5	26.4	33.2	32.3	34.2	44.1	34.1				
Services	3,701.7	3,798.7	3,752.3	3,784.9	3,816.4	3,841.4	3,854.8	3,907.3				
Structures	588.5	612.5	610.3	607.9	614.6	617.2	625.2	632.1				
Residual	-4.6	-11.5	-8.2	-10.4	-13.7	-13.9	-22.3	-18.6				
Addenda:												
Motor vehicle output	246.3	260.8	253.8	249.6	265.1	274.7	268.5	260.7				
Gross domestic product less motor vehicle output	6,748.4	7,008.8	6,912.8	6,986.8	7,046.0	7,089.7	7,195.9	7,237.6				

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in business inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in business inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Percent changes from preceding period for selected items in this table are shown in table 8.1. Chain-type quantity indexes for the series in this table appear in table 7.17.

Table 1.6.—Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers

[Billions of chained (1992) dollars]

Gross domestic product	6,994.8	7,269.8	7,166.7	7,236.5	7,311.2	7,364.6	7,464.7	7,498.6			
Business	5,903.5	6,164.9	6,067.9	6,133.3	6,203.0	6,255.6	6,352.5	6,382.6			
Nonfarm	5,824.3	6,074.3	5,979.7	6,042.3	6,109.2	6,165.8	6,260.4	6,290.5			
Nonfarm less housing	5,236.0	5,470.5	5,039.2	5,438.9	5,504.4	5,559.6	5,655.9	5,680.5			
Housing	588.7	604.5	601.0	604.0	605.6	607.3	606.2	611.5			
Farm	78.6	90.3	87.9	90.7	93.7	88.8	91.1	91.4			
Households and institutions	311.8	321.5	317.5	320.2	323.1	325.1	326.7	327.7			
Private households	10.5	10.2	10.4	10.3	10.2	10.0	9.8	9.9			
Nonprofit institutions	301.3	311.3	307.2	310.0	313.0	315.1	316.9	317.9			
General government	781.2	786.2	783.7	785.7	788.1	787.3	789.6	792.2			
Federal	240.7	235.4	237.4	236.3	235.5	232.5	232.4	231.9			
State and local	540.8	551.3	546.8	549.9	553.2	555.5	557.9	561.1			
Residual	-1.8	-3.7	-3.2	-3.6	-4.4	-4.2	-5.5	-5.6			

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Percent changes from preceding period for selected items in this table are shown in table 8.1. Chain-type quantity indexes for the series in this table appear in table 7.17.

1. Gross domestic business product equals gross domestic product less gross product of households and institutions and of general government. Gross nonfarm product equals gross domestic business product less gross farm product.

2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table appear in table 7.17.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

NOTE.—Except as noted in footnotes 1 and 2, chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Chain-type quantity indexes for the series in this table appear in table 7.3.

Table 1.11.—Command-Basis Real Gross National Product

[Billions of chained (1992) dollars]

	1996	1997	Seasonally adjusted at annual rates					
			1997				1998	
I	II	III	IV	I	II			
Gross national product	7,008.4	7,266.2	7,167.8	7,239.3	7,307.0	7,350.7	7,455.2	7,485.9
Less: Exports of goods and services and receipts of factor income from the rest of the world	1,075.2	1,208.2	1,157.4	1,205.2	1,234.2	1,235.8	1,232.8	1,213.7
Plus: Command-basis exports of goods and services and receipts of factor income ¹	1,095.2	1,246.7	1,183.3	1,246.0	1,277.2	1,280.2	1,296.5	1,283.4
Equals: Command-basis gross national product	7,028.3	7,304.7	7,193.7	7,280.1	7,350.1	7,395.1	7,518.9	7,555.6
Addendum:								
Terms of trade ²	101.9	103.2	102.2	103.4	103.5	103.6	105.2	105.7

1. Exports of goods and services and receipts of factor income deflated by the implicit price deflator for imports of goods and services and payments of factor income.

2. Ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Percent changes from preceding period for selected items in this table are shown in table 8.1.

Chain-type quantity indexes for the series in this table appear in table 7.3.

Net domestic product ³ ...	3,540.5	3,759.8	3,667.5	3,724.9	3,801.3	3,845.5	3,899.9	3,934.3

1. Chained-dollar gross domestic product of nonfinancial corporate business equals the current-dollar product deflated by the implicit price deflator for goods and structures in gross domestic product.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net domestic product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

2. Personal Income and Outlays

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table appear in table 7.4.

3. Government Receipts, Current Expenditures, and Gross Investment

Table 3.1.—Government Receipts and Current Expenditures

Federal	211.3	213.5	214.9	214.3	213.4	211.5	215.0	214.6
State and local	547.0	571.2	562.0	568.2	574.6	579.9	585.6	592.2

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table appear in table 7.11.

See footnotes to table 3.7.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addendum.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Addendum:										
Compensation of general government employees ³	117.2	112.9	114.3	113.2	112.9	111.4	110.6	109.5		

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the line in the addendum.

Chain-type indexes for the series in the table appear in table 7.12.

See footnotes to table 3.10.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following the detail for exports is the difference between the aggregate "exports of goods and services" and the sum of the detailed lines for exports of goods and export of services. The residual line following the detail for imports is the difference between the aggregate "imports of goods and services" and the detailed lines for imports of goods and imports of services.

Chain-type quantity indexes for the series in this table appear in table 7.10.

See footnotes to table 4.3.</

Residual	-34.4	-69.1	-50.6	-62.1	-77.8	-85.5	-117.2	-143.7

1. Includes new computers and peripheral equipment only.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table appear in table 7.6.

1. Beginning with 1982, this series is derived from the Census Bureau series "current cost inventories." For earlier periods, it is derived from the Census Bureau "book value inventories" series. The series differ in the treatment of inventories reported on a last-in, first-out (LIFO) basis: The series prior to 1982 is a mix of LIFO and non-LIFO inventories; the series beginning with 1982 is entirely on a non-LIFO basis.

2. Beginning with 1973, the inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (first-in, first-out; last-in, first-out; etc.) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics. Prior to 1973, the two IVA's are the same because information required for separate estimates is not available.

3. Prior to 1981, inventories of auto and home supply stores are included in motor vehicle dealers. Beginning with 1981, these inventories are included in "other durable goods."

Residual	-.4	0	.3	-.9	.1	.9	-1.2	-1.5

NOTE.—Chained (1992) dollar series for real change in business inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures	4.03	4.05	4.02	4.04	4.01	3.99

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates; whereas, CBI is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

Table 5.13.—Real Inventories and Real Domestic Final Sales of Business by Industry Group

[Billions of chained (1992) dollars]

	Seasonally adjusted quarterly totals					
	1997				1998

Ratio of inventories to final sales of domestic business						
Inventories to final sales	2.45	2.47	2.46	2.48	2.49	2.48
Nonfarm inventories to final sales	2.24	2.26	2.25	2.26	2.28	2.26
Nonfarm inventories to final sales of goods and structures	4.01	4.05	4.01	4.05	4.04	4.03

1. Inventories are as of the end of the quarter. Quarter-to-quarter changes calculated from this table are at quarterly rates, whereas, the change in the business inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

NOTE.—Chained (1992) dollar inventory series are calculated as the product of the chain-type quantity index and the average of the end-of-year fixed-weighted inventories for 1991 and 1992, divided by 100. Chained (1992) dollar final sales series are calculated as the product of the chain-type index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

NOTE.— Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-

dollar output multiplied by 100.

Percent changes from preceding period for items in this table are shown in table 8.1. Contributions to the percent change in real gross domestic product are shown in table 8.2.

Table 7.2.—Quantity and Price Indexes for Gross Domestic Product, Final Sales, and Purchases

[Index numbers, 1992=100]

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new force-account construction and related expenditures

for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Domestic output of new autos ¹	110.8	110.3	109.5	108.0	113.3	110.4	105.3	97.3
Sales of imported new autos ²	52.9	57.5	58.1	55.7	58.6	57.5	62.3	65.6

1. Consists of final sales and change in business inventories of new autos assembled in the United States.

2. Consists of personal consumption expenditures, producers' durable equipment, and gross government investment.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table appear in table 7.18.

1. The current-dollar statistical discrepancy equals gross domestic product (GDP) measured as the sum of expenditures less gross domestic income—that is, GDP measured as the costs incurred and profits earned in domestic production. The chained (1992) dollar statistical discrepancy equals the current-dollar discrepancy deflated by the implicit price deflator for gross domestic product.

2. Equals GDP in chained (1992) dollars less the statistical discrepancy and the sum of GPO of the detailed

industries.

NOTE—Estimates are based on the 1987 Standard Industrial Classification. The table is derived from tables 7 and 10 in "Gross Product by Industry, 1947–96" in the November 1997 SURVEY OF CURRENT BUSINESS.

The 1998 annual revision of the NIPA's will be incorporated into these estimates next month.

1. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premise.

2. Includes luggage.

3. Consists of watch, clock, and jewelry repairs, costume and dress suit rental, and miscellaneous personal services.

4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

5. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

6. Consists of transient hotels, motels, clubs, schools, and other group housing.

7. Consists of refrigerators and freezers, cooking ranges, dishwashers, laundry equipment, stoves, room air conditioners, sewing machines, vacuum cleaners, and other appliances.

8. Includes such house furnishings as floor coverings, comforters, quilts, blankets, pillows, picture frames, mirrors, art products, portable lamps, and clocks. Also includes writing equipment and hand, power, and garden tools.

9. Consists largely of textile house furnishings, including piece goods allocated to house furnishing use. Also includes lamp shades, brooms, and brushes.

10. Consists of maintenance services for appliances and house furnishings, moving and warehouse expenses, postage and express charges, premiums for fire and theft insurance on personal property less benefits and dividends and miscellaneous household operation services.

11. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

12. Consists of osteopathic physicians, chiropractors, private duty nurses, chiropodists, podiatrists, and others providing health and allied services, not elsewhere classified.

13. Consists of (1) current expenditures (including consumption of fixed capital) of nonprofit hospitals and nursing homes, and (2) payments by patients to proprietary and government hospitals and nursing homes.

14. Consists of (1) premiums, less benefits and dividends, for health, hospitalization, and accidental death and dismemberment insurance provided by commercial insurance carriers, and (2) administrative expenses (including consumption of fixed capital) of nonprofit and self-insured health plans.

15. Consists of premiums, less benefits and dividends, for income loss insurance.

16. Consists of premiums, less benefits and dividends, for privately administered workers' compensation.

17. Consists of (1) operating expenses of life insurance carriers and private noninsured pension plans, and (2) premiums, less benefits and dividends, of fraternal benefit societies. Excludes expenses allocated by commercial carriers to accident and health insurance.

18. Consists of current expenditures (including consumption of fixed capital) of trade unions and professional associations, employment agency fees, money order fees, spending for classified advertisements, tax return preparation services, and other personal business services.

19. Consists of premiums, less benefits and dividends, for motor vehicle insurance.

20. Consists of baggage charges, coastal and inland waterway fares, travel agents' fees, and airport bus fares.

21. Consists of admissions to professional and amateur athletic events and to racetracks.

22. Consists of dues and fees excluding insurance premiums.

23. Consists of billiard parlors; bowling alleys; dancing, riding, shooting, skating, and swimming places; amusement devices and parks; golf courses; sightseeing buses and guides; private flying operations; casino gambling; and other commercial participant amusements.

24. Consists of net receipts of lotteries and expenditures for purchases of pets and pet care services, cable TV, film processing, photographic studios, sporting and recreation camps, video cassette rentals, and recreational services, not elsewhere classified.

25. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and less expenditures for research and development financed under contracts or grants. For government institutions, equals student payments of tuition.

26. For private institutions, equals current expenditures (including consumption of fixed capital) less receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures. For government institutions, equals student payments of tuition. Excludes child day care services, which are included in religious and welfare activities.

27. Consists of (1) fees paid to commercial, business, trade, and correspondence schools and for educational services, not elsewhere classified, and (2) current expenditures (including consumption of fixed capital) by research organizations and foundations for education and research.

28. For nonprofit institutions, equals current expenditures (including consumption of fixed capital) of religious, social welfare, foreign relief, and political organizations, museums, libraries, and foundations. The expenditures are net of receipts—such as those from meals, rooms, and entertainments—accounted for separately in consumer expenditures, and excludes relief payments within the United States and expenditures by foundations for education and research. For proprietary and government institutions, equals receipts from users.

29. Beginning with 1981, includes U.S. students' expenditures abroad; these expenditures were \$0.3 billion in 1981.

30. Beginning with 1981, includes nonresidents' student and medical care expenditures in the United States; student expenditures were \$2.2 billion and medical expenditures were \$0.4 billion in 1981.

NOTE.—Consumer durable goods are designated (d.), nondurable goods (n.d.), and services (s.). Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table B.5.—Private Purchases of Structures by Type

	Billions of dollars			Billions of chained (1992) dollars		
	1995	1996	1997	1995	1996	1997

Residual	-1	0	-5

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.

2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.

3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.

5. Consists primarily of dormitories and fraternity and sorority houses.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Table B.6.—Private Purchases of Producers' Durable Equipment by Type

	Billions of dollars			Billions of chained (1992) dollars

Transportation services	14,443	14,995	16,321	11,981	12,505	13,692							

1. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.

2. Includes Coast Guard.

3. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory

workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

Compensation equals wage and salary accruals plus supplements to wages and salaries. "Supplements" are listed in table 8.15 of the August 1998 SURVEY OF CURRENT BUSINESS.

Rest of the world	-2,702	-2,732	-3,082	-2,702	-2,732	-3,082
Receipts from the rest of the world	1,284	1,298	1,252	1,284	1,298	1,252
Less: Payments to the rest of the world ³	3,986	4,030	4,334	3,986	4,030	4,334

1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.

2. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.

3. Includes Coast Guard.

4. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

2. Consists of museums, botanical and zoological gardens; engineering and management services; and services,

not elsewhere classified.

3. Includes Coast Guard.

4. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

Table B.10.—Farm Sector Output, Gross Product, and National Income

	Billions of dollars			Billions of chained (1992) dollars		
	1995	1996	1997	1995	1996	1997

1. Consists of office buildings, except those occupied by electric and gas utility companies.

2. Consists primarily of stores, restaurants, garages, service stations, warehouses, and other buildings used for commercial purposes.

3. Consists of buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

4. Consists primarily of streets, dams, reservoirs, sewer and water facilities, parks, and airfields.

5. Consists primarily of dormitories and fraternity and sorority houses.

NOTE.—The data in this table are from "Fixed Reproducible Tangible Wealth in the United States: Revised Estimates for 1995-97 and Summary Estimates for 1925-97" in the September 1998 SURVEY OF CURRENT BUSINESS.

n.e.c. Not elsewhere classified.

C. Historical Tables

The tables in this section are derived from the "Summary National Income and Product Series" tables that were published in the August 1998 issue of the SURVEY OF CURRENT BUSINESS and from the "Selected NIPA Tables" that are published in this issue. (Changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1.—Historical Measures of Real Gross Domestic Product, Real Gross National Product, and Real Gross Domestic Purchases
 [Quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	Billions of chained (1992) dollars			Percent change from preceding period		Chain-type price indexes		Implicit price deflators		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product			Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price index	Gross domestic purchases	Gross domestic product	Gross national product

^p Preliminary.

^r Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

13. Conceptually, the sum of lines 71 and 63 is equal to "net foreign investment" in the national income and

product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in the "Reconciliation of the Other Foreign Transactions" section in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4 of the full set of NIPA tables (published annually in the August issue of the SURVEY).

14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also

includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; small transactions in business services that are not reported by country; and net U.S. currency flows, for which geographic source data are not available.

17. Details not shown separately; see totals in lines 49 and 56.

18. Details not shown separately are included in line 62.

Note.—The data in tables F.2 and F.3 are from tables 1 and 10 in "U.S. International Transactions, Second Quarter 1998" in this issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the balance of payments accounts.

^p Preliminary.^r Revised.

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign govern-

ments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

NOTE.—The data in table F.4 are from table 3 in "U.S. International Transactions, Second Quarter 1998" in this issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the balance of payments accounts.

43	U.S. liabilities reported by U.S. banks, not included elsewhere	828,248	148,059	-6,299	248,491	

^p Preliminary.^r Revised.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These de-monetizations/monetizations are not included in international transactions capital flows.

5. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

NOTE.—The data in this table are from table 1 in "International Investment Position of the United States in 1997" in the July 1998 issue of the SURVEY OF CURRENT BUSINESS.

NOTE.—In this table, unlike in the international transactions accounts, income and capital inflows are shown without a current-cost adjustment, and income is shown net of withholding taxes. In addition, unlike in the international investment position, the direct investment position is valued at historical cost.

The data in this table are from tables 16 and 17 in "Foreign Direct Investment in the United States: Detail for Historical-Cost Position and Related Capital and Income Flows, 1997" in the September 1998 issue of the SURVEY OF CURRENT BUSINESS.

1. Index of weighted average exchange value of U.S. dollar against currencies of other G-10 countries. March 1973-100. Weights are 1972-76 global trade of each of the 10 countries. Series revised as of August 1978. For description and back data, see: "Index of the weighted-average exchange value of the U.S. dollar: Revision" on page 700 of the August 1978 *Federal Reserve Bulletin*.

NOTE.—All exchange rates are from the Board of Governors of the Federal Reserve System. U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. All other data (including U.S. consumer prices and U.S. share prices, both of which have been rebased to 1990 to facilitate comparison) are © OECD, September 1998, *OECD Main Economic Indicators* and are reproduced with permission of the OECD.

Appendix A

Additional Information About BEA's NIPA Estimates

Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. (Similar formulas are used to calculate the quarterly indexes for the most recent quarters, called the "tail" period, and for the indexes for the other quarters, called the "historical period.") For example, the 1996–97 annual percent change in real GDP uses prices for 1996 and 1997 as weights, and the 1996–97 annual percent change in price uses quantities for 1996 and 1997 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. The Fisher formula also produces changes in quantities and prices that are not affected by the choice of base periods. In addition, because the changes in quantities and prices calculated in this way are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1992) dollar estimates." These estimates are computed by multiplying the 1992 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1992 and if real output for this component increased by 10 percent in 1993, then the "chained (1992) dollar" value of this component in 1993 would be \$110 (\$100 × 1.10). Note that percentage changes in the chained

(1992) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1992) dollar estimates for detailed GDP components *do not add* to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. NIPA table 8.2 provides accurate measures of the contributions of the major components to the percentage change in real GDP for all periods. the composition of GDP growth than the chained-dollar estimates.

BEA also publishes the "implicit price deflator (IPD)," which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{X_t}{X_o} \right)^{m/n} - 1 \right] \times 100,$$

where r is the percent change at an annual rate;
 X_t is the level of activity in the later period;
 X_o is the level of activity in the earlier period;
 m is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and
 n is the number of periods between the earlier and later periods (that is, $t - o$).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

Reconciliation Tables

Table 1.—Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings
 [Percent change from preceding period]

	Seasonally adjusted at annual rates								
	1995	1996	1997	1997			1998		
				II	III	IV	I	II	
BEA-derived compensation per hour of all persons in the nonfarm business sector (less housing)	2.3	3.5	3.7	2.6	3.9	5.0	4.9	4.0	
Less: Contribution of supplements to wages and salaries per hour	-.7	-1.1	-.6	-.2	-.6	-.7	0	-.4	
Plus: Contribution of wages and salaries per hour of persons in housing and in nonprofit institutions	-.1	-.1	-.2	-.2	-.6	-.6	-.2	.1	
Less: Contribution of wages and salaries per hour of persons in government enterprises, unpaid family workers, and self-employed	0	.1	.2	0	.3	.1	-.2	.1	
Equals: BEA-derived wages and salaries per hour of all employees in the private nonfarm sector	2.9	4.4	3.9	2.6	3.7	5.0	4.9	4.4	
Less: Contribution of wages and salaries per hour of nonproduction workers in manufacturing	.1	-.2	.2	.4	.6	.5	.1	-.1	
Less: Other differences ¹	0	1.2	-.1	-1.2	-.9	-.2	.9	-.1	
Equals: BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls	2.8	3.4	3.9	3.5	4.0	4.6	3.9	4.6	
Addendum: BLS estimates of compensation per hour in the nonfarm business sector ²	2.4	3.5	3.7	2.6	3.9	4.9	4.6	4.0	

1. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include differences in seasonal adjustment procedures.

2. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

Table 2.—Relation of Net Exports of Goods and Services and Net Receipts of Factor Income in the NIPA's to Balance on Goods, Services, and Income in the BPA's

[Billions of dollars]

	Line	1996	1997	Seasonally adjusted at annual rates						
				1997				1998

1. Consists of statistical revisions in the NIPA's that have not yet been incorporated into the BPA's (1998:II) and statistical revisions in the BPA's that have not yet been incorporated in the NIPA's (1998:I-1998:II).

BPA's Balance of payments accounts

Appendix B

Suggested Reading

Mid-Decade Strategic Plan

BEA has published the following articles in the SURVEY OF CURRENT BUSINESS on the development and implementation of its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts.

“*Mid-Decade Strategic Review of BEA’s Economic Accounts: Maintaining and Improving Their Performance*” (February 1995)

“*Mid-Decade Strategic Review of BEA’s Economic Accounts: An Update*” (April 1995)

“*BEA’s Mid-Decade Strategic Plan: A Progress Report*” (June 1996)

Mid-Decade Strategic Review of BEA’s Economic Accounts: Background Papers (1995) presents seven background papers that evaluate the state of the U.S. economic accounts and that identify the problems and the prospects for improving the accounts.

Methodology

BEA has published a wealth of information about the methodology used to prepare its national, regional, and international estimates.

National

National income and product accounts (NIPA’s)

NIPA Methodology Papers: This series documents the conceptual framework of the NIPA’s and the methodology used to prepare the estimates.

An Introduction to National Economic Accounting (NIPA Methodology Paper No. 1, 1985) [Also appeared in the March 1985 issue of the SURVEY]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (NIPA Methodology Paper No. 2, 1985)

Foreign Transactions (NIPA Methodology Paper No. 3, 1987) [Revised version forthcoming]

GNP: An Overview of Source Data and Estimating Methods (NIPA Methodology Paper No. 4, 1987) [Largely superseded by “*A Guide to the NIPA’s*” (March 1998 SURVEY)]

Government Transactions (NIPA Methodology Paper No. 5, 1988)

Personal Consumption Expenditures (NIPA Methodology Paper No. 6, 1990)

The methodologies described in these papers are subject to periodic improvements that are typically introduced as part of the annual and comprehensive revisions of the NIPA’s; these improvements are

described in the SURVEY articles that cover these revisions.

“*Annual Revision of the U.S. National Income and Product Accounts*”: This series of SURVEY articles, the latest of which was published in the August 1998 issue, describes the annual NIPA revisions and the improvements in methodology.

“*Completion of the Comprehensive Revision of the National Income and Product Accounts, 1929–96*” (May 1997) is the last in a series of SURVEY articles that describe the most recent comprehensive revision of the NIPA’s.

“*A Guide to the NIPA’s*” (March 1998 SURVEY) provides the definitions of the major NIPA aggregates and components; discusses the measures of real output and prices; explains how production is classified and how the NIPA’s are presented; describes the statistical conventions that are used; and lists the principal source data and methods used to prepare the estimates of gross domestic product (GDP).

Information on the sources and methods used to prepare the national estimates of personal income, which provide the basis for the State estimates of personal income, can be found in *State Personal Income, 1929–93* (1995).

“*Gross Domestic Product as a Measure of U.S. Production*” (August 1991 SURVEY) briefly explains the difference between GDP and gross national product.

“*BEA’s Chain Indexes, Time Series, and Measures of Long-Term Economic Growth*” (May 1997) is the most recent in a series of SURVEY articles that describe the conceptual basis for the chain-type measures of real output and prices used in the NIPA’s.

“*Reliability and Accuracy of the Quarterly Estimates of GDP*” (October 1993 SURVEY) evaluates GDP estimates by examining the record of revisions in the quarterly estimates.

Availability

Most of the items listed here are available on BEA’s Web site at <<http://www.bea.doc.gov>>. In addition, see the *inside back cover* of this issue for the availability of some of the publications.

The Catalog of BEA Products is available on BEA’s Web site; a printed copy can be obtained by writing to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or by calling 202-606-9900.

Wealth and related estimates

“Improved Estimates of Fixed Reproducible Tangible Wealth, 1929–95” (May 1997 SURVEY) describes the most recent comprehensive revision of the estimates of fixed reproducible tangible wealth.

Gross product by industry

“Improved Estimates of Gross Product by Industry, 1959–94” (August 1996 SURVEY) describes the most recent comprehensive revision of the estimates of gross product by industry.

“Gross Product by Industry, 1947–96” (November 1997 SURVEY) presents the most recent revision to the estimates of gross product by industry and briefly describes changes in methodology.

Input-output accounts

“Benchmark Input-Output Accounts for the U.S. Economy, 1992” (November 1997 SURVEY) describes the preparation of the 1992 input-output accounts and the concepts and methods underlying the U.S. input-output accounts.

Satellite accounts

Satellite accounts that extend the analytical capacity of the national accounts by focusing on a particular aspect of activity are presented in the following SURVEY articles.

“Integrated Economic and Environmental Satellite Accounts” and “Accounting for Mineral Resources: Issues and BEA’s Initial Estimates” (April 1994)

“A Satellite Account for Research and Development” (November 1994)

“U.S. Transportation Satellite Accounts for 1992” (April 1998)

“U.S. Travel and Tourism Satellite Accounts for 1992” (July 1998)

International

Balance of payments accounts (BPA’s)

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used in preparing the estimates in the BPA’s and of the international investment position of the United States. These methodologies are subject to periodic improvements that are typically introduced as part of the annual revisions of the BPA’s.

“U.S. International Transactions, Revised Estimates”: This series of SURVEY articles, the latest of which was published in the July 1998 issue, describes

the annual BPA revisions and the improvements in methodology.

Direct investment

The coverage, concepts, definitions, and classifications used in the benchmark surveys of U.S. direct investment abroad and of foreign direct investment in the United States are presented in the publications of the final results of the following benchmark surveys.

U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results (1998)

Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results (1995)

The types of data on direct investment that are collected and published by BEA and the clarifications of the differences between the data sets are presented in the following SURVEY articles.

“A Guide to BEA Statistics on U.S. Multinational Companies” (March 1995)

“A Guide to BEA Statistics on Foreign Direct Investment in the United States” (February 1990)

Surveys of international services

U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) provides information on the 11 surveys that BEA conducts on these transactions—including classifications, definitions, release schedules, and methods used to prepare the estimates—and samples of the survey forms.

Regional

Personal income

State Personal Income, 1929–93 (1995) includes a description of the methodology used to prepare the estimates of State personal income. [Also available on the CD-ROM “State Personal Income, 1929–97”]

Local Area Personal Income, 1969–92 (1994) includes a description of the methodology used to prepare the estimates of local area personal income. [Also available on the CD-ROM “Regional Economic Information System, 1969–96”]

Gross state product

“Comprehensive Revision of Gross State Product by Industry, 1977–94” (June 1997 SURVEY) summarizes the sources and methods for BEA’s estimates of gross state product.

“Gross State Product by Industry, 1977–96” (June 1998 SURVEY) presents the most recent revision to the estimates of gross state product by industry and briefly describes changes in methodology.
