Survey of Current Business

Table of Contents
November 2000

Regular features

1. Business Situation

The growth in the U.S. economy slowed in the third quarter of 2000, while inflation remained moderate. Real GDP increased 2.7 percent, less than half as much as the average increase in the preceding four quarters; the price index for gross domestic purchases increased 2.4 percent, about the same as the average increase in the preceding four quarters.

7. Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income: New Estimates for 1998 and Revised Estimates for 1997

BEA's estimates of personal income and the IRS estimates of adjusted gross income (AGI)--two widely used measures of household income--are reconciled through a series of adjustments for definitional differences between the two measures. This year's reconciliation reflects the recent annual revision of the national income and product accounts and recent updates to the AGI estimates.

14. Reconciliation of the U.S.-Canadian Current Account, 1998 and 1999

Each year, the U.S. and Canadian current-account estimates are reconciled to show how they would appear if both countries used the same definitions, methodologies, and data sources. After the reconciliation, the U.S. current-account deficits with Canada are larger than those that are shown in the U.S.-published accounts: For 1998, the deficit on the reconciled basis is \$9.6 billion, compared with the U.S.-published deficit of \$4.4 billion; for 1999, the reconciled deficit is \$19.5 billion, compared with the published deficit of \$15.1 billion.

30. State Personal Income, Second Quarter 2000

Personal income in the Nation increased 1.7 percent in the second quarter of 2000 after increasing 1.6 percent in the first quarter. In the second quarter, personal income grew the fastest in Nevada, Delaware, and Iowa. Personal income grew the slowest in Connecticut, Arizona, North Dakota, and New Hampshire.

Reports and statistical presentations

D-1. BEA Current and Historical Data

BUSINESS SITUATION

This article was prepared by Daniel Larkins, Larry R. Moran, and Ralph W. Morris.

REAL gross domestic product (GDP) increased 2.7 percent in the third quarter of 2000, according to the "advance" estimates of the national income and product accounts (NIPA's), after increasing 5.6 percent in the second quarter (table 1 and chart 1).¹ The growth of real gross domestic purchases also slowed, to 2.9 percent from 6.5 percent. These slowdowns largely reflected a sharp slowdown in private inventory investment and a downturn in government spending.² For both GDP and gross domestic purchases, third-quarter

growth rates were below the average rates in the current expansion, when GDP has grown at an average annual rate of 3.7 percent, and gross domestic purchases, 4.1 percent.³

The price index for gross domestic purchases increased 2.4 percent in the third quarter after increasing 2.1 percent in the second. Real disposable personal income slowed to a 2.5-percent increase from a 3.7-percent increase. The personal saving rate swung to a negative 0.2 percent from a positive 0.3 percent.

The largest contributors to the third-quarter increase in real GDP were personal consumption expenditures (PCE), exports, and nonresidential fixed investment (table 2). PCE increased 4.5 percent and contributed 3.0 percentage points to GDP

1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.

Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters; real estimates are expressed both as index numbers (1996 = 100) and as chained (1996) dollars. Price indexes (1996 = 100) are also calculated using a chain-type Fisher formula.

2. In the NIPA's, private inventory investment is shown as change in private inventories, and government spending is shown as government consumption expenditures and gross investment.

3. The current expansion began in the second quarter of 1991.

Table 1.—Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers

Nondefense	198.4	6.6	-1.7	8.2	-5.2	14.4	-3.3	17.8	-9.9
State and local	1,024.6	14.8	16.2	-2.8	0	6.1	6.6	-1.1	0
Addendum: Final sales of domestic product	9,296.7	138.7	147.5	87.3	61.4	6.4	6.7	3.9	2.7

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1996) dollar levels and residuals, which measure the extent of nonadditivity in each table, are shown in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are shown in NIPA table S.1. (See "Selected NIPA Tables", which begin on page D-2 in this issue.)

CHART 1

Selected Measures: Change From Preceding Quarter

Percent

Note.—Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

U.S. Department of Commerce, Bureau of Economic Analysis

growth; about half of the growth in PCE was accounted for by expenditures for services. Exports increased 16.2 percent, its biggest increase in more than 3 years, and contributed 1.7 percentage points; the increase was attributable to all the major end-use categories, but nonautomotive capital goods contributed the most. Nonresidential fixed investment increased 6.9 percent and contributed 0.9 percentage point to GDP growth; the increase was accounted for by information processing equipment and software. These increases in consumer spending, exports, and fixed investment

were partly offset by an increase in imports that subtracted 1.9 percentage points from GDP growth and by a decrease in government spending that subtracted 0.6 percentage point.

The biggest contributors to the deceleration in GDP growth from the second quarter to the third were private inventory investment and Federal Government spending; inventory accumulation did not change much in the third quarter after surging in the second, and Federal Government spending decreased after increasing. A downturn in nonresidential fixed investment also contributed to the GDP deceleration.

Third-Quarter 2000 Advance GDP Estimate: Source Data and Assumptions

The "advance" GDP estimate for the third quarter is based on preliminary and incomplete source data; as more and better data become available, the estimate will be revised. The advance estimate is based on the following major source data. (The number of months for which data were available is shown in parentheses.)

Personal consumption expenditures: Sales of retail stores (3) and unit auto and truck sales (3);

Nonresidential fixed investment: Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (2), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);

Residential investment: Construction put in place (2) and single-family housing starts (3);

Change in private inventories: Manufacturing and trade

inventories (2) and unit auto and truck inventories (3);

Net exports of goods and services: Exports and imports of goods and services (2);

Government consumption expenditures and gross investment: Some Federal outlays were available for 2 months, others for 3, State and local construction put in place (2), State and local employment (3), and the employment cost index for the quarter;

GDP prices: Consumer price index (3), producer price index (3), U.S. import and export price indexes (3), and values and quantities of petroleum imports (2).

BEA made assumptions for source data that were not available. Table A shows the assumptions for key series; a more comprehensive list is available from BEA's Web site at <www.bea.doc.gov> and from STAT-USA's Web site at <www.stat-usa.gov>.

Table A.—Summary of Major Data Assumptions for Advance Estimates, 2000:III

[Billions of dollars, seasonally adjusted at annual rates]

	2000					
	April	May	June	July	August	September ¹
Fixed investment:						
Nonresidential structures:						
Buildings, utilities, and farm:						
Value of new nonresidential construction put in place	214.6	215.6	213.6	216.0	216.8	217.0
Equipment and software:						
Manufacturers' shipments of complete civilian aircraft	41.3	50.7	36.6	38.3	43.1	40.6
Manufacturers' shipments of nondefense capital goods other than aircraft	632.2	637.7	642.6	647.7	655.0	665.8
Residential structures:						
Value of new residential construction put in place:						
1-unit structures	238.6	237.7	233.2	228.1	227.0	226.9
2-or-more-unit structures	29.5	28.3	28.3	26.5	27.3	27.4
Change in private inventories nonfarm:						
Change in inventories for manufacturing and trade (except nonmerchant wholesalers) for industries other than motor vehicles and equipment in trade	52.2	87.8	77.0	64.9	68.9	59.1
Net exports:²						
Exports of goods:						
U.S. exports of goods, balance-of-payments basis	750.8	753.0	797.6	781.2	815.6	816.7
Excluding nonmonetary gold	747.5	750.3	792.5	778.5	811.5	809.5
Imports of goods:						
U.S. imports of goods, balance-of-payments basis	1,193.5	1,190.7	1,240.0	1,243.4	1,252.5	1,271.6
Excluding nonmonetary gold	1,191.1	1,188.3	1,235.8	1,241.0	1,249.1	1,264.4
Net exports of goods (exports less imports)	-442.7	-437.7	-442.3	-462.3	-436.9	-454.9
Excluding nonmonetary gold	-443.7	-438.1	-443.3	-462.5	-437.7	-454.9
Government consumption expenditures and gross investment:						
State and local:						
Structures:						
Value of new construction put in place	173.1	168.8	160.4	157.3	160.6	163.6

1. Assumed.

2. Nonmonetary gold is included in balance-of-payments-basis exports and imports but is not used directly in the estimation of NIPA exports and imports.

Motor vehicles.—Real motor vehicle output decreased 17.6 percent in the third quarter after decreasing 4.5 percent in the second; the bigger drop in the third quarter reflected a sharp downturn in truck output (table 3). Final sales of motor vehicles

to domestic purchasers increased slightly after decreasing.

Purchases of motor vehicles by consumers and by government increased after decreasing. Purchases by businesses (private fixed investment) decreased less than in the second quarter.

Factors frequently considered in analyses of consumer spending were mixed in the third quarter: The growth in real disposable personal income slowed; the Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center) decreased but remained at a high level; and the unemployment rate was unchanged at 4.0 percent, its lowest level since 1969. Among factors specific to motor vehicles purchases, interest rates on new-car loans at commercial banks increased, and prices of new motor vehicles were unchanged.

Imports of motor vehicles increased substantially after a slight increase, and exports decreased after increasing.

Motor vehicle inventory investment decreased after increasing. The decrease reflected a swing from accumulation to liquidation in truck inventories; auto inventories increased more than in the second quarter. The inventory-sales ratio for new domestic autos, which is calculated from units data, edged up to 2.5 at the end of the third quarter from 2.3 at the end of the second; the traditional industry target is 2.4.

Table 2.—Contributions to Percent Change in Real Gross Domestic Product

Addenda:									
Personal consumption expenditures	268.8	3.5	17.4	-13.0	3.5	5.6	29.5	-17.4	5.4
Private fixed investment	155.7	-3.6	4.4	-8.0	-3.1	-8.4	11.4	-17.8	-7.5
Gross government investment	12.7	1.3	-1.3	-.9	.2	45.2	-31.6	-23.9	7.0

NOTE.—See note to table 1 for an explanation of chained (1996) dollars. Truck output includes new trucks only; auto output includes new cars and used cars. Chained (1996) dollar levels for motor vehicle output, auto and truck output, and residuals, which measure the extent of nonadditivity in each table, are in NIPA tables 1.4 and 8.9B.

Prices

The price index for gross domestic purchases, which measures the prices paid for goods and services purchased by U.S. residents, increased 2.4 percent in the third quarter after increasing 2.1 percent in the second (table 4). In the current expansion, these prices have increased at an average annual rate of 1.9 percent. In the third quarter, prices of gross domestic purchases less food and energy increased 1.9 percent after increasing 1.7 percent (chart 2).

PCE prices increased 2.2 percent after increasing 2.1 percent. Prices of food increased more than in the second quarter, and prices of energy goods and services increased less.⁴ Food prices increased 3.7 percent after increasing 2.3 percent; the acceleration partly reflected upturns in the prices of fresh fruits and of juices and nonalcoholic drinks that were only partly offset by decelerations in the prices of fresh vegetables, of beef and veal, and of pork. Energy prices increased 8.7 percent after increasing 13.0 percent. The slowdown reflected a deceleration in prices of gasoline and oil; in contrast, prices of fuel oil and coal turned up, and prices of electricity and gas increased more than in the second quarter. Prices of PCE less food and en-

4. "Energy goods and services" consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Table 4.—Price Indexes

[Percent change at annual rates; based on seasonally adjusted index numbers (1996=100)]

	1999		2000	
	IV	I	II	III
Gross domestic product	1.6	3.3	2.4	2.0
Less: Exports of goods and services	2.7	1.9	1.9	.9
Plus: Imports of goods and services	5.3	5.6	.2	3.9
Equals: Gross domestic purchases	1.9	3.8	2.1	2.4
Less: Change in private inventories
Equals: Final sales to domestic purchasers	2.0	3.8	2.1	2.4
Personal consumption expenditures	2.2	3.5	2.1	2.2
Food	2.3	2.4	2.3	3.7
Energy goods and services ¹	11.7	35.1	13.0	8.7
Personal consumption expenditures less food and energy	1.7	2.2	1.4	1.5
Private nonresidential fixed investment	-8	1.8	1.6	1.9
Structures	3.6	4.7	3.7	3.2
Equipment and software	-2.1	.9	1.0	1.6
Private residential investment	2.6	5.2	2.6	2.5
Government consumption expenditures and gross investment	3.0	6.4	2.7	3.7
Federal	2.2	7.7	.6	2.8
National defense	2.4	7.1	.8	2.9
Nondefense	1.9	8.9	.4	2.5
State and local	3.5	5.7	3.8	4.2
Addendum: Gross domestic purchases less food and energy	1.5	2.8	1.7	1.9

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE: Percent changes in major aggregates are in NIPA table 8.1. Index number levels are in tables 7.1, 7.2, and 7.4.

ergy increased 1.5 percent after increasing 1.4 percent.

Prices of private nonresidential fixed investment increased 1.9 percent, about the same as in the preceding two quarters. These increases, which followed 18 consecutive quarterly decreases, largely reflected increases in the prices of software and of transportation equipment and smaller-than-usual decreases in computer prices.

Prices of government consumption expenditures and gross investment increased 3.7 percent after increasing 2.7 percent. Prices paid by the Federal Government increased 2.8 percent after increasing 0.6 percent. Prices paid by State and local governments increased 4.2 percent after increasing 3.8 percent.

The GDP price index, which measures the prices paid for goods and services produced in the United States, increased 2.0 percent after increasing 2.4 percent. The GDP price index, unlike the price index for gross domestic purchases, includes the prices of exports and excludes the prices of imports. Export prices increased 0.9 percent after increasing 1.9 percent, and import prices increased 3.9 percent after a 0.2-percent increase; the step-up in import prices reflected an acceleration in petroleum prices.

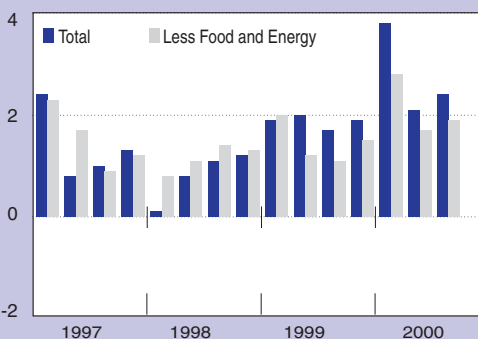

Personal income

Growth of real disposable personal income (DPI) slowed to 2.5 percent in the third quarter from 3.7 percent in the second; its average annual rate of growth over the current expansion has been 2.9 percent (chart 3). The personal saving rate (saving as a percentage of current-dollar DPI) continued

CHART 2

Gross Domestic Purchases Prices: Change From Preceding Quarter

Percent

Note—Percent change at annual rate from preceding quarter; based on seasonally adjusted index numbers (1996=100).

U.S. Department of Commerce, Bureau of Economic Analysis

its long downtrend, as it swung to a negative 0.2 percent in the third quarter from a positive 0.3 percent in the second. Saving from current income may be negative when outlays are financed by borrowing (including borrowing through credit cards or home equity loans), by selling investments or other assets, or by using savings from previous periods.

Personal income increased \$112.0 billion after increasing \$136.3 billion (table 5). The slowdown was more than accounted for by wage and salary disbursements and by transfer payments.

Wage and salary disbursements slowed to a \$64.9 billion increase after increasing \$79.7 billion. The slowdown was widespread but was most pronounced in government and in the service industries. In government, the slowdown partly reflected a downturn in the number of temporary

workers for Census 2000. In private industries, the slowdown was primarily accounted for by a downturn in average weekly hours.

Transfer payments slowed to an \$8.1 billion increase after increasing \$19.2 billion. The large second-quarter increase included benefit payments of \$9.2 billion (annual rate) that resulted from the Senior Citizens' Freedom to Work Act of 2000, which eliminated the "retirement earnings test" and allowed social security beneficiaries aged 65 and older to receive full benefits regardless of their earnings.

CHART 3

Selected Personal Income and Saving Measures

Billion \$

Percent

Percent

Note—Changes are from preceding quarter; based on seasonally adjusted annual rates.

Personal interest income increased \$14.1 billion after increasing \$19.7 billion. The slowdown primarily reflected a deceleration in interest rates.

Proprietors' income increased \$17.1 billion after increasing \$15.6 billion. The income of farm proprietors increased more than in the second quarter, and the income of nonfarm proprietors increased less. Farm proprietors' income increased \$10.9 billion after increasing \$2.4 billion; the acceleration largely reflected the quarterly pattern of Federal subsidy payments. Nonfarm proprietors' income increased \$6.1 billion after increasing \$13.3 billion; the slowdown was primarily accounted for by slowdowns in

real estate brokers' commissions and in construction.

Rental income of persons decreased \$1.8 billion after decreasing \$4.8 billion. The decreases reflected the quarterly pattern of Federal farm subsidy payments to owners of leased farm land (nonoperator landlords).

Personal contributions for social insurance, which is subtracted in the calculation of personal income, increased \$4.4 billion after increasing \$5.4 billion, and personal tax and nontax payments increased \$31.0 billion after increasing \$37.9 billion. 

Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income

New Estimates for 1998

Revised Estimates for 1997

By *Thae S. Park*

This article presents a comparison of the Bureau of Economic Analysis (BEA) measure of personal income and the Internal Revenue Service (IRS) measure of adjusted gross income (AGI) of individuals by type of income. The article explains the major definitional and statistical differences between the BEA and the IRS measures, describes the various uses of the two measures, and presents a partial reconciliation of the two measures that is prepared by converting BEA's measure of personal income by type of income to the same definitional basis as the IRS measure. It also discusses the sources of the "AGI gap"—the unexplained difference remaining between the BEA estimate of AGI and the IRS AGI—the trends in the AGI gap for 1959–98, and the sources of the revision to the AGI gap for 1997.¹

BEA's measure of personal income and the IRS measure of AGI are two widely used measures of household income. Personal income, which is prepared as an integral part of the national income and product accounts (NIPA's), is often used in assessing trends in output, consumer spending, saving, and investment.² AGI, which is the income concept used in the Federal income tax, is often used to estimate individual income tax revenue and income tax burden of households. By definition, personal income and AGI each include items that the other omits.

In general, personal income—the current in-

come received by persons from all sources—is the more comprehensive measure. It includes income that is generally taxed, such as wages and salaries, income from rent, self-employment earnings, dividends, and interest; income that is partly taxed, such as social security benefit payments; and several types of income that are not taxed, such as tax-exempt interest and nontaxable transfer payments, including medicare, medicaid, and welfare benefit payments. Personal income includes income whether or not it is properly reported to the IRS. In order to provide a comprehensive measure of personal saving, personal income also includes other types of income, such as employer contributions to private and government employee retirement plans, the investment income of these plans, and imputed income related to home ownership. Personal income excludes net gains from the sale of assets, pension benefit payments, and personal contributions for social insurance.

AGI—an income concept defined by tax law—consists of taxable sources of income (net of specific adjustments) received by individuals as reported on IRS Form 1040. It includes wages and salaries, income from rent, self-employment earnings, dividends, interest, pension benefit payments, net gains from the sale of assets, and other types of income not expressly exempt from taxation.

Although the two series are based on different concepts and serve different purposes, they are often used in conjunction with one another. In particular, personal income, which is available much sooner than AGI, is frequently used as an extrapolator for AGI (this article provides information that can be used to adjust the BEA measure to bring it closer in definition to AGI). In addition, the AGI gap can be used as a rough indicator of the noncompliance by individuals with the Federal tax code.

The new and revised estimates reflect the incorporation of the results of the annual revision of the

1. Annual and quarterly estimates of BEA personal income are published monthly in table 2.1 of the national income and product accounts (NIPA's) in the section "BEA Current and Historical Data" of the SURVEY OF CURRENT BUSINESS (monthly estimates are shown in table B.1). Estimates of IRS AGI are published annually in *Statistics of Income—Individual Income Tax Returns*. The estimates of the relationship between total personal income and total AGI are presented annually in NIPA table 8.28, most recently for 1996–98 in "Annual NIPA Revision: Newly Available Tables" in the September 2000 SURVEY. All the estimates are available on BEA's Web site at <www.bea.doc.gov> and on STAT-USA's Web site at <www.stat-usa.gov>. The reconciliation by type of income for 1959–96 is available on request; for information, write to the Government Division (BE-57), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

2. "Persons" in the NIPA's consists of individuals, nonprofit institutions that primarily serve individuals, private noninsured welfare funds, and private trust funds.

NIPA's that was released in July 2000 and of updated estimates of AGI from the *Statistics of Income Bulletin*.³ The AGI gap for 1997 was revised down, reflecting the revisions to personal income, to the reconciliation items, and to the IRS estimate of AGI (see the section "Sources of the Revision to the AGI Gap for 1997").

BEA Estimates of AGI

The preparation of BEA estimates of AGI, "BEA-derived AGI," begins with the NIPA estimates of personal income. Personal income consists of the current income received by persons from all sources—that is, from participation in current production and from government and business transfer payments. It is calculated as the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments to persons, less personal contributions for social insurance.

The IRS measure of AGI is defined as the sum of all the items of "total income" less the specific adjustments to total income that are authorized by legislation. Total income includes all income that is received in the form of money, property, and services and that is not expressly exempt from taxation; it excludes, for example, interest on tax-exempt State and local government bonds, voluntary contributions to thrift savings plans, and nontaxable social security benefit payments. The adjustments to total income include subtractions for contributions to individual retirement accounts and Keogh plans, for alimony paid, for moving expenses, and for several items related to self-employment income.

Table 1 and table 2 show the reconciliation between personal income and AGI, by type of income, for 1997–98. The reconciliation items that convert personal income to AGI are shown in two groups: First, those items that are included in personal income but not in AGI, and second, items included in AGI but not in personal income. A third group of reconciliation items, "intercomponent reallocations," reallocates certain income

components so that the BEA estimates of AGI are comparable with the IRS estimates.⁴

The AGI Gap

The estimates of the BEA-derived AGI differ significantly from the IRS estimates of AGI. The "AGI gap" is the difference between the total BEA-derived AGI (line 22) and total IRS AGI (line 23), and the AGI gap for each type of income (line 29) is the difference between the BEA-derived AGI for that type of income (line 22) and the reallocated IRS AGI for that type of income (line 28). The percent distribution of the AGI gap by type of income is shown in line 30, and the relative AGI gap for each type of income, which is the AGI gap for that type of income (line 29) as a percentage of the BEA-derived AGI for that type of income (line 22), is shown in line 31.

The AGI gap results from several sources. First, there are errors in the source data used to estimate the personal income components.⁵ Second, there are errors in the IRS measure of total AGI and its components because the estimates are based on a probability sample. Third, there are errors in reconciliation items because (1) reliable data are unavailable to estimate some known items, such as income earned by individuals who are not required to file income tax returns,⁶ (2) some of the source data used to estimate known items contain errors, and (3) some of the differences between the definition of personal income and AGI are unknown. Fourth, the estimates of BEA-derived AGI include both explicit and implicit adjustments for tax-return misreporting—that is, noncompliance. Explicit adjustments are made for the effects of tax-return misreporting on the source data used to prepare the estimates of wage and salary disburse-

4. For a discussion of the specific items that are included in each group, see Thae S. Park, "Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income," SURVEY 80 (February 2000): 18.

5. AGI data are used only for the estimates of nonfarm sole proprietors' income and royalty payments in rental income of persons. For these components of personal income, BEA adjusts for misreporting of tax return information by taxpayers. Thus, the AGI gap for these components largely reflects the explicit misreporting adjustments (line 32 in tables 1 and 2) added to the source data; other errors in the source data do not contribute to the AGI gap, because these errors are also in the personal income components. The principal source data used to prepare other components of personal income are not based on AGI data. For additional detail, see "Updated Summary NIPA Methodologies," SURVEY 80 (October 2000): 18–40 and the text on the CD-ROM *State Personal Income, 1929–98*. Information on methodology is also available on BEA's Web site.

6. Although some individuals who are not required to file tax returns do so mostly to secure refunds of withheld tax or to receive refunds from earned income tax credit, income earned by low-income individuals who are not required to file returns is probably the largest known missing reconciliation item. The filing requirements are generally based on gross income, filing status, marital status, age, and to a lesser extent, on dependency and blindness.

3. For a discussion of the annual NIPA revision, see Eugene P. Seskin and David F. Sullivan, "Annual Revision of the National Income and Product Accounts: Annual Estimates, 1997–99 and Quarterly Estimates, 1997:1–2000:1," SURVEY 80 (August 2000): 6–33. For AGI data, see Internal Revenue Service, *Statistics of Income Bulletin* (Washington, DC: U.S. Government Printing Office, Spring 2000).

ments, nonfarm proprietors' income, royalty income, and personal interest income (line 32).⁷ Implicit adjustments are also embedded in the

source data used for some components of personal income because the source data are from the payers of the income.⁸ The IRS estimates of AGI are based on unaudited tax returns that are not adjusted for misreporting (however, the sample returns are edited for consistent statistical definitions and for incorrect or missing entries in or-

7. The major source data for these adjustments are the 1988 Taxpayer Compliance Measurement Program and Census Bureau "exact-match" files for 1990. For additional information about the calculation of these adjustments, see Robert P. Parker, "Improved Adjustments for Misreporting of Tax Return Information Used To Estimate the National Income and Product Accounts, 1977," SURVEY 64 (June 1984): 17-25; "The Comprehensive Revision of the U.S. National Income and Product Accounts: A Review of Revisions and Major Statistical Changes," SURVEY 71 (December 1991): 39-40; and "Improved Estimates of the National Income and Product Accounts for 1959-95: Results of the Comprehensive Revision," SURVEY 76 (January/February 1996): 24-25.

8. For example, the estimates of transfer payments in personal income are based on budget data from the Federal Government and from State and local governments. Information from IRS audit studies shows misreporting of these payments on individual income tax returns.

1. Taxable social security benefits also include the social security equivalent benefit portion of tier 1 railroad retirement benefits.

2. Consists primarily of other labor income and the nontaxable transfer payments to persons, less personal contributions for social insurance.

3. Consists of tier 2 railroad retirement benefits that are taxed in the same manner as benefits paid under private employer retirement plans.

4. Consists of the imputations included in personal income shown in NIPA table 8.21 (line 53), except for employer contributions for health and life insurance premiums (line 146). In this table, these premiums are included in line 4.

5. Consists of imputed interest received by persons from life insurance carriers shown in NIPA table 8.20 (line 53) and investment income of private and government employee pension plans.

6. Statutory adjustments or specific adjustments ("above-the-line deductions") from gross income taken to arrive at AGI.

7. Consists of the taxable portion of private and government employee retirement plan benefit payments.

8. Consists of partnership income retained by fiduciaries.

9. Adjusted gross income gap (line 29) as a percentage of the BEA-derived AGI (line 22).

AGI Adjusted gross income
BEA Bureau of Economic Analysis
CCA_{adj} Capital consumption adjustment
IVA Inventory valuation adjustment
IRS Internal Revenue Service
NIPA National income and product accounts

be considered a rough indicator of the noncompliance rate in the reporting of income included in AGI.⁹

The AGI Gap by Type of Income for 1959–98

Table 3 shows the estimates of the AGI gap for total income and for each type of income for 1959–98, and table 4 shows the relative AGI gap for total income and for each type of income for 1959–98. Over this period, the relative AGI gap for total income averaged about 11 percent: It declined from 10 percent in 1959 to a low of about 9 percent in the late 1960's, increased to a high of 13½ percent

in 1984, and then moved irregularly downward to about 11 percent in 1998.

The relative AGI gap for wage and salary disbursements is the smallest among the types of income, primarily because income tax withholding at the source is required for wage and salary disbursements. The relative AGI gap for wage and salary disbursements averaged about 3 percent over the period; it declined from 3 percent in 1959 to a low of 1 percent in 1982 and then increased to 5½ percent in 1998.

The trends in the relative AGI gaps for nonwage incomes partly offset each other (see the addenda in table 4). For nonwage incomes subject to the requirements for filing information returns, the trend in the combined relative AGI gap is generally

9. Misreporting adjustments shown in line 32 of tables 1 and 2 exclude misreporting on income items that are excluded from personal income—such as capital gain, income from small business corporations, and alimony.

AGI Adjusted gross income
BEA Bureau of Economic Analysis
IRS Internal Revenue Service

downward.¹⁰ The combined relative AGI gap for nonwage incomes subject to the filing requirements declined from about 39 percent in 1959 to 14 percent in 1998.¹¹

10. Personal dividend income and personal interest income are the primary examples of nonwage incomes subject to the requirements for filing information returns. In recent years, estimating the AGI gap for these types of income has been difficult because the taxable portion of interest received by individuals from mutual funds is reallocated from personal interest income to personal dividend income (line 19 in tables 1 and 2), because the allocation of income received from private noninsured pension plans (part of line 6) between interest and dividends is based on incomplete data, and because some individuals may have inadvertently reported income from mutual funds as interest rather than as dividends on their tax returns. Thus, tables 3 and 4 show the AGI gap for personal dividend and personal interest income combined as well as the AGI gaps for each of these types of income.

11. Beginning with 1984, taxes have been withheld on taxable pension benefit payments unless the recipient elects not to have the tax withheld and on interest and dividends if the recipient fails to furnish a correct taxpayer identification number or has interest or dividends that were underreported on past returns.

The combined relative AGI gap for incomes not subject to the filing requirements (the **second addenda item in table 4**) averaged about 50 percent over the period; it increased from about 32 percent in 1959 to about 80 percent—its highest level—in 1984, decreased to about 48 percent in 1990, and then increased to about 56 percent in 1998.

Sources of the Revision to the AGI Gap for 1997

Table 5 shows the revisions to personal income, reconciliation items, BEA-derived AGI, AGI of IRS, and the AGI gap for 1997. The \$6.0 billion downward revision to the AGI gap for 1997 (line 29) resulted from \$9.8 billion of revisions to personal income that carried through to increase the

1. Consists of personal dividend income, personal interest income, taxable pensions, taxable unemployment compensation, and taxable social security benefits. These types of income have been subject to varying degrees of withholding since 1984.

2. Consists of farm proprietors' income, nonfarm proprietors' income, and rental income of persons.

NOTE.—The relative AGI gap is the AGI gap as a percentage of the BEA-derived AGI and is shown in line 31 of tables 1 and 2.

AGI Adjusted gross income
BEA Bureau of Economic Analysis

AGI gap, from \$27.1 billion of revisions to reconciliation items unrelated to the revisions to personal income or to AGI that carried through to reduce the AGI gap, and from \$11.3 billion of revisions to AGI components that carried through to increase the AGI gap.

Total personal income was revised down \$14.1 billion for 1997 (line 1). The downward revision reflected \$9.8 billion of upward revisions to personal income components that carried through to increase the BEA-derived AGI and the AGI gap and \$23.9 billion of downward revisions that resulted in offsetting revisions to reconciliation items. The offsetting revisions to reconciliation items included revisions to nontaxable transfer payments (line 3), other labor income except fees (line 4), part of differences in accounting treatment between NIPA's and tax regulations (line 8), part of other personal income exempt or excluded

from AGI (line 9), and personal contributions for social insurance (line 11).

Reconciliation items unrelated to personal income or to AGI were revised down \$27.1 billion. Other things being equal, revisions to the unrelated reconciliation items are all carried through to the BEA-derived AGI and the AGI gap. Revisions to unrelated reconciliation items included revisions to investment income of pension plans (part of line 6), investment income received by nonprofit institutions or retained by fiduciaries (line 7), part of other personal income exempt or excluded from AGI (line 9), taxable pensions (line 13), and part of other types of income (line 15).¹²

The reconciliation items shown in lines 6, 7, and 9 are components of personal income, but they are derived in aggregate in the estimation of personal income; similarly, several reconciliation items included in line 15 are components of AGI, but they are also derived in aggregate in the estimation of AGI. Separate estimates of these reconciliation items are prepared only for reconciliation purposes. Thus, revisions to the separately estimated reconciliation items are unrelated to the revisions to personal income or to AGI, so they are carried through to the AGI gap.

Total AGI was revised down \$3.7 billion for 1997 (line 23). The \$3.7 billion downward revision to total AGI reflected \$11.3 billion of downward revisions that carried through to increase the AGI gap and \$7.6 billion of upward revisions that resulted in offsetting revisions to reconciliation items. The offsetting revisions to reconciliation items included revisions to gains, net of losses, from sale of property (line 12), small business corporation income (line 14), and most of other types of income (line 15).

The incorporation of the results of this year's annual NIPA revision resulted in no change in the relative AGI gap for total income (line 31). 

Table 5.—Sources of Revision to the AGI Gap, 1997

[Billions of dollars]

Line ¹		1997
1	Personal income	-14.1
2	Less: Portion of personal income not included in adjusted gross income	-3.5
3	Nontaxable transfer payments1

1. Line numbers in this table correspond to those in table 1.

AGI Adjusted gross income

BEA Bureau of Economic Analysis

IRS Internal Revenue Service

NIPA's National income and product accounts

12. Taxable pensions (line 13) include benefit payments from private and government employee retirement plans. Pension benefit payments is not a component of personal income. The taxable portion of these payments is an unrelated reconciliation item because a separate estimate is prepared only for reconciliation purposes.

Reconciliation of the U.S.-Canadian Current Account, 1998 and 1999

By Anthony DiLullo and Hugh Henderson

Anthony DiLullo is the Assistant Chief of BEA's Balance of Payments Division. Hugh Henderson is Chief, Current Account, in Statistics Canada's Balance of Payments Division. This article will also be published in *Canada's Balance of International Payments, Third Quarter 2000*.

On a reconciled basis, the U.S. deficit, or Canadian surplus, is \$9.6 billion for 1998 and \$19.5 billion for 1999 (chart 1, table 1).¹ The U.S.-published current-account balance with Canada is a U.S. deficit of \$4.4 billion for 1998 and a U.S. deficit of \$15.1 billion for 1999. The corresponding Canadian-published balance is a Canadian surplus (U.S. deficit) of \$7.7 billion for 1998 and a Canadian surplus (U.S. deficit) of \$21.8 billion for 1999.

This article presents the results of the reconciliation of the bilateral current-account estimates of Canada and the United States for 1998 and 1999.² The details of the current-account reconciliation for 1998 and 1999 are presented in the tables that follow this article. Tables 2.1 and 2.2 show the details of the major types of reconciliation adjustments—definitional, methodological, and statisti-

cal—that were made to the major current-account components. Tables 3.1 and 3.2 present the published estimates, the estimates on a common basis (after the estimates have been adjusted for definitional and methodological differences), the reconciled estimates, and the amounts of the adjustments for each major current-account component. Tables 4–7 present the reconciliation details for goods, services, and investment income.³

1. The reconciled estimates are intended to show how the current-account estimates would appear if both countries used the same definitions, methodologies, and data sources.

In this article, all values are expressed in U.S. dollars.

2. The reconciliation of the current account has been undertaken each year since 1970. Summary results of the reconciliations were published in the United States in the following issues of the SURVEY OF CURRENT BUSINESS: June 1975, September 1976 and 1977, December 1979, June 1981, and each December of 1981–91. Complete details of the reconciliations for 1990 forward were published in the following issues of the SURVEY: November 1992, each October of 1993–95, and each November of 1996–99. In Canada, the results were published in the following issues of *Canada's Balance of International Payments* (catalogue 67-001), a publication of Statistics Canada: Fourth Quarter 1973, Second Quarter 1976 and 1977, Third Quarter 1978 and 1979, First Quarter 1981, and each Third Quarter 1981–99.

3. For reconciliation, some of the details presented in the tables in this article differ from those presented in balance-of-payments tables regularly published by BEA and by Statistics Canada.

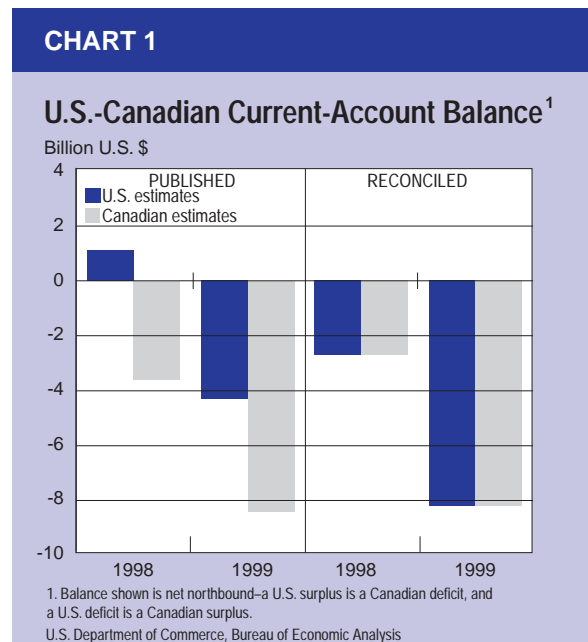

Table 1.—Major U.S.-Canadian Balances

Services	5.8	-3.9	4.6	-4.6
Income	14.4	-16.4	17.3	-17.3
Current unilateral transfers	-0.6	1.6	-0.5	0.5
Current account	-15.1	21.8	-19.5	19.5

NOTE.—A U.S. surplus (+) is a Canadian deficit (-), and a Canadian surplus (+) is a U.S. deficit (-).

Details may not add to totals because of rounding.

Reconciled Current-Account Balances

In the U.S. current account, the reconciliation adjustments resulted in an increase of \$5.2 billion in the U.S. deficit for 1998 and an increase of \$4.4 billion in the U.S. deficit for 1999. In both years, the changes reflect larger adjustments to the U.S. southbound estimates than to the northbound estimates (tables 2.1 and 2.2).⁴ The largest increases in the U.S. southbound estimates result from the addition of Canadian reexports to U.S. goods imports (a definitional adjustment), from the valuation of U.S. natural gas imports to include inland freight (a definitional adjustment), and from an increase for undercoverage of some southbound services (a statistical adjustment). The largest increases in the U.S. northbound estimates result from upward adjustments to investment income for undercoverage of income on U.S. holdings of Canadian bonds (a statistical adjustment).

In the Canadian current account, the reconciliation adjustments resulted in an increase of \$1.9

billion in the 1998 Canadian surplus and in a decrease of \$2.3 billion in the 1999 Canadian surplus. In 1998, the increase reflects larger downward adjustments to the Canadian northbound estimates than to the Canadian southbound estimates. In 1999, the decrease reflects smaller downward adjustments to the Canadian northbound estimates than to the Canadian southbound estimates. In both years, the Canadian southbound estimates were adjusted downward to account for definitional differences, mainly in unilateral transfers; for methodological differences, mainly in investment income; and for statistical differences, mainly in "other" services and in investment income. In the Canadian northbound estimates, downward adjustments for definitional and methodological differences were mainly in "other" investment income. Downward adjustments for statistical differences in 1998 were mainly in services; in 1999, downward statistical adjustments to services were partly offset by upward statistical adjustments to income.

Expanded Presentation of the Reconciliation

The presentation of the reconciliation tables has been expanded this year. Additional information is now included in tables 2.1 and 2.2. The details of

Note on the U.S.-Canadian Current-Account Reconciliation

The U.S.-Canadian current-account reconciliation, which explains the differences between the estimates of the bilateral current account published by the Bureau of Economic Analysis (BEA) and those published by Statistics Canada, is undertaken because of the extensive economic links between Canada and the United States. The reconciled estimates are intended to assist analysts who use both countries' statistics and to show how the current-account estimates would appear if both countries used common definitions, methodologies, and data sources.¹

In principle, the bilateral current account of one country should mirror the bilateral current account of the other country. Differences occur in the published estimates of the U.S. and Canadian current accounts because of variations in the definitions, methodologies, and statistical sources that are used by each agency. In addition, some of the differences for 1999 are in components of the current account for which data are still preliminary and subject to revision; these differences may be eliminated when final data for these components become available.

The longstanding Canadian-U.S. current-account reconciliation is among the leading examples of the benefits of international data sharing. As a result of the reconciliation process and the exchange of data, the accuracy of the published estimates of transactions between Canada and the United States and the efficiency in producing the estimates have increased. The exchange of data between Canada and the United States—for transactions such as trade in goods, travel, passenger fares, Canadian and U.S. Government transactions, and some large transportation transactions—covers more than 80 percent of the value of the Canadian and U.S. current account and has eliminated some of the differences in the Canadian- and U.S.-published estimates.

Although the U.S.- and Canadian-published estimates are reconciled and there is extensive exchange of data between Canada and the United States, differences in the published estimates remain. Complete substitution of reconciled estimates for published estimates and complete exchange of data are not feasible for several reasons. For trade in goods, imports in the U.S. accounts would be affected because the United States attributes Canadian reexports to the country of origin rather than to Canada, the last country of shipment. For some accounts, the protection of the confidentiality of the source data bars the exchange of data. Finally, a few differences are attributable to different requirements for integrating the international and national (domestic) accounts in each country.

1. A detailed article on the methodology was published by BEA in "Reconciliation of the U.S.-Canadian Current Account" in the November 1992 *SURVEY* and by Statistics Canada in *Reconciliation of the Canadian-United States Current Account, 1990-91*. Statistics Canada also published a shortened version in the December 1992 *Canadian Economic Observer* and in *Canada's Balance of International Payments, Third Quarter 1992*.

the definitional, methodological, and statistical adjustments for each major account are now shown, whereas only the total adjustments were previously shown.

In tables 3–7, columns have been added that show the current-account estimates on a common basis—that is, after they have been adjusted for definitional and methodological differences; the remaining adjustments that are needed to reach the reconciled values are the statistical adjustments. The common-basis estimates, which were initiated by Statistics Canada, provide a useful means to analyze the differences between the U.S.- and Canadian-published estimates. These estimates, though compiled in the past, were not published, because some of the definitional and methodological adjustments were arbitrary. The method of compiling the common-basis estimates has been changed to conform to the international standards published in the International Monetary Fund's *Balance of Payments Manual* (fifth edition) and to reflect the recent improvements to the U.S.- and Canadian-published estimates. The U.S.- and Canadian-published estimates now largely conform to the international standards, but some differences with the international standards—and between the U.S. and Canadian estimates—persist

because of data limitations, difficulties in determining country attribution, and differences in classification.

In the expanded presentation, the tables of the individual accounts (tables 4–7) continue to identify the type of adjustments made to the published estimates. The definitional adjustments mainly reflect data limitations and differences in country attribution. For example, as part of the reconciliation, U.S. published estimates of imports of goods from Canada are adjusted to include Canadian reexports to the United States (goods imported by Canada from third countries and then reexported to the United States without substantial change) because U.S. imports of goods are recorded on a country-of-origin basis. Another example of a definitional adjustment is that the Canadian estimates, mainly investment income, are adjusted to a “net of withholding taxes” basis because the U.S. withholding tax estimates—which are included on a global basis in the U.S.-published accounts—cannot be allocated by country for comparison with the Canadian estimates.

The methodological adjustments mainly reflect differences in classification. For example, parts of the U.S. estimates of film rentals and courier services are recorded in different accounts; for reconciliation, they are reclassified to a single account (part of business services). A few U.S. and Canadian income accounts are adjusted to a net or gross basis for comparability.

Statistical differences reflect the use of different source data in the United States and Canada, the difficulty in determining country attribution because of insufficient data, the preliminary nature of some of the data, particularly for the most recent year, and the use of sample data between benchmarks. For the northbound estimates, most of the statistical differences are in the U.S. and Canadian estimates of “other” private services and of “other” investment income. For the southbound estimates, most of the statistical differences are in the U.S. and Canadian estimates of “other” private services and of direct investment income.

Acknowledgments

The reconciliations were carried out under the direction of Hugh Henderson, Chief, Current Account, in Statistics Canada's Balance of Payments Division, and Anthony DiLullo, Assistant Chief of BEA's Balance of Payments Division. At Statistics Canada, Denis Caron, Christian Lajule, Éric Simard, and Robert Théberge participated in the reconciliation of the Canadian accounts, with collaboration and assistance from Art Ridgeway, Barry Mersereau, and Laura Petts. Denis Caron was responsible for the production and coordination of the reconciliation tables. At BEA, Russell Scholl was responsible for reconciling the U.S. portfolio income accounts; Mark New, for the accounts related to U.S. direct investment in Canada; Gregory Fouch, for the accounts related to Canadian direct investment in the United States; Kwok Lee, for goods; Michael Mann, for services; and Edward Dozier, for transportation.

State Personal Income, Second Quarter 2000

By Duke Tran

The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.

THIS article presents new estimates of State personal income for the second quarter of 2000 and revised estimates for the first quarter of 1997 through the first quarter of 2000 that incorporate the annual revision of State personal income that was released in September 2000.

In the second quarter of 2000, U.S. personal income increased \$136.2 billion, or 1.7 percent.¹

- All 50 States had growth rates that were equal to, or above, the 0.5-percent increase in prices for the Nation.
- Personal income grew the fastest in Nevada, Delaware, Iowa, Michigan, Wisconsin, and Utah.
- Personal income grew the slowest in Connecticut, Arizona, North Dakota, New Hampshire, Massachusetts, and Wyoming.

From the second quarter of 1999 to the second quarter of 2000, U.S. personal income grew 6.7 percent; U.S. earnings by place of work grew in all major nonfarm industries.

- California, Massachusetts, Washington, New Hampshire, and Colorado had the fastest growth in personal income; all these States have had above-average growth in both personal income and population in recent years.
- Alabama, Louisiana, Hawaii, Mississippi, and West Virginia had the slowest growth in personal income; all these States have had below-average growth in both personal income and population in recent years.

Table 1 at the end of this article presents the quarterly estimates of personal income for each State and region, beginning with the first quarter of 1997. **Table 2** presents detailed quarterly estimates of personal income by major source and of

earnings by industry, beginning with the fourth quarter of 1998.

Growth in the second quarter of 2000

In the second quarter of 2000, U.S. personal income grew 1.7 percent, the same rate as in the first quarter. By type of income, net earnings grew 1.7 percent after growing 1.6 percent in the first quarter; dividends, interest, and rent grew 1.3 percent after growing 1.9 percent; and transfer payments grew 1.8 percent after growing 1.9 percent.² The slowdown in dividends, interest, and rent partly reflected a decrease in interest income of persons.

U.S. earnings by place of work grew 1.7 percent in the second quarter. Earnings grew in all major industries, but the primary contributors to earnings growth were earnings in services, in transportation and public utilities, in government, and in manufacturing.

The 1.7-percent increase in U.S. personal income was substantially above the 0.5-percent increase in prices paid by U.S. consumers (as measured by the price index for personal consumption expenditures). All 50 States had growth rates in personal income that were equal to, or above, the 0.5-percent increase in prices; in the District of Columbia, personal income grew 0.3 percent.

2. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Net earnings by industry is not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Department of Commerce, Bureau of Economic Analysis, *State Personal Income, 1929-97* (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <www.bea.doc.gov/bea/mp.htm>, and look under "Regional programs" for "State Personal Income, 1929-97."

1. In this article, percent changes from the preceding quarter are expressed at quarterly rates.

The six States with the fastest growth in personal income were Nevada (2.5 percent), Delaware (2.4 percent), Iowa (2.4 percent), Michigan (2.3 percent), Wisconsin (2.2 percent), and Utah (2.2 percent) (table A). The rapid growth in Nevada, Michigan, and Utah was a continuation of recent strong growth. In contrast, the rapid growth in Delaware, Iowa, and Wisconsin was a rebound from declines or slow growth in the first quarter.

The six States with the slowest growth in personal income were Connecticut (0.5 percent), Arizona (0.7 percent), North Dakota (0.8 percent), New Hampshire (0.8 percent), Massachusetts (1.0 percent), and Wyoming (1.0 percent). In all these States except North Dakota, personal income growth slowed substantially from the first quarter and was well below recent trends.

Growth in the past four quarters

From the second quarter of 1999 to the second quarter of 2000, U.S. personal income increased

\$515 billion, or 6.7 percent (table B).³ By type of income, net earnings, which accounted for about 70 percent of personal income, grew 6.9 percent; dividends, interest, and rent, which accounted for about 20 percent, grew 6.9 percent; and transfer payments, which accounted for about 10 percent, grew 5.3 percent.

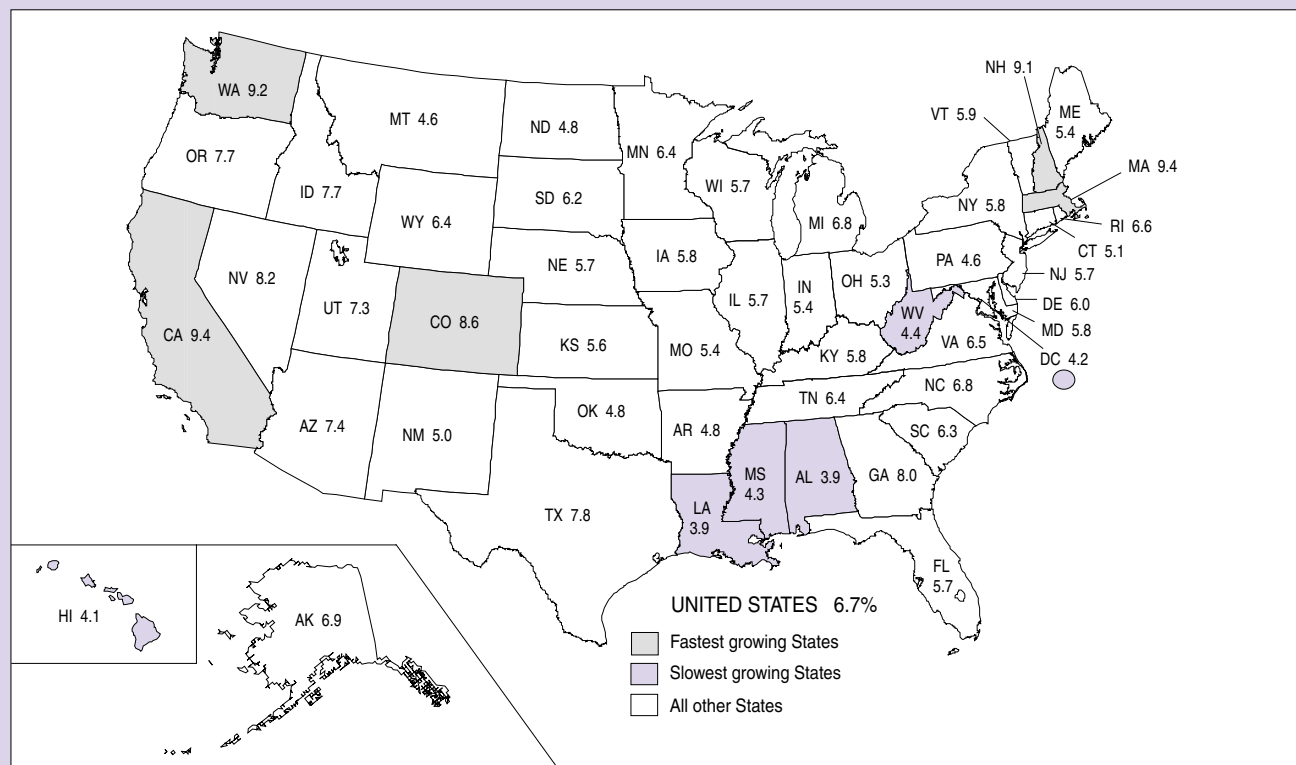

The increase in U.S. personal income considerably outpaced the 2.4-percent increase in prices paid by U.S. consumers. All 50 States and the District of Columbia had growth rates in personal income that were above the increase in prices. Personal income growth ranged from 9.4 percent in California and Massachusetts to 3.9 percent in Alabama and Louisiana.

By industry, U.S. earnings by place of work grew in all major industries except farms. Farm earnings declined 7.6 percent, partly reflecting reductions in Federal farm subsidy payments.

3. In this section, percent changes are expressed at annual rates.

CHART 1

Personal Income: Percent Change, 1999:II–2000:II

Fastest growing States.—The five States with the fastest growth in personal income were California (9.4 percent), Massachusetts (9.4 percent), Washington (9.2 percent), New Hampshire (9.1 percent), and Colorado (8.6 percent) ([chart 1](#)). The fast growth in these States mainly reflected strength in net earnings.

The strong growth in these States reflected a continuation of the rapid growth in personal income and population in recent years. In addition, all five States had per capita personal incomes that were above the national average.⁴

By industry, the fast growth in earnings in these States reflected strength in all major industries, but the major contributors to earnings growth were earnings in services and except in Washington, earnings in finance, insurance, and real estate ([tables C and D](#)).

In California, Massachusetts, and New Hampshire, earnings in manufacturing also contributed substantially to earnings growth, partly reflecting growth in high-tech manufacturing, such as industrial machinery and computer equipment (which includes computer and related hardware manufacturing).

Earnings in the following industries also contributed substantially to growth: Retail trade in California, Washington, and New Hampshire; gov-

ernment in California and New Hampshire; transportation and public utilities in Massachusetts and Washington; and construction in Colorado.

Slowest growing States.—The five States with the slowest growth in personal income were Hawaii (4.1 percent) and four States in the Southeast—Alabama (3.9 percent), Louisiana (3.9 percent), Mississippi (4.3 percent), and West Virginia (4.4 percent). In all five States, the slow growth reflected weakness in net earnings; in Hawaii, a decline in dividends, interest, and rent also contributed to the slow growth.

The slow growth in these States reflected continued weak growth or declines in personal income and population in recent years. In addition, all five States had per capita personal incomes that were below the national averages.

By industry, the slow growth in earnings in these States reflected weaknesses in most major industries; earnings either declined or grew at below-average rates in manufacturing, services, and trade. In addition, growth in high-tech manufacturing and business services was relatively less important. The slow growth also reflected declines in farm earnings in all the States except Hawaii and declines in mining earnings in all the States except Louisiana. In Alabama and Louisiana, weaknesses in earnings in government also contributed.

4. See the section "Personal Income and Per Capita Personal Income for 1999" in "Comprehensive Revision of State Personal Income: Revised Estimates for 1969–98 and Preliminary Estimates for 1999," SURVEY OF CURRENT BUSINESS 80 (June 2000): 65–67.

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income. Percent changes are expressed at annual rates.

2. Also includes mining and agricultural services, forestry, and fishing.

3. Not meaningful.

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income. Percent changes are expressed at annual rates.

2. Also includes mining and agricultural services, forestry, and fishing.

3. Not meaningful.

National Data

A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on October 27, 2000, and include the "advance" estimates for the third quarter of 2000.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly; in most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the "Selected NIPA Tables" are available later that day, on BEA's Web site <www.bea.doc.gov> and on STAT-USA's Web site <www.stat-usa.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order NIPA subscription products, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

S. Summary Tables

Table S.1.—Summary of Percent Change From Preceding Period in Real Gross Domestic Product and Related Measures

[Percent]

	1998	1999	Seasonally adjusted at annual rates					
			1999			2000		
			II	III	IV	I	II	III
Gross domestic product	4.4	4.2	2.5	5.7	8.3	4.8	5.6	2.7
Personal consumption expenditures	4.7	5.3	5.6	5.0	5.9	7.6	3.1	4.5
Durable goods	10.6	12.4	15.0	8.0	13.0	23.6	-5.0	7.5

Government consumption expenditures and gross investment	1,486.4	1,536.1	1,519.9	1,537.8	1,569.5	1,565.1	1,583.7	1,569.4
Federal	526.9	540.1	532.1	541.0	558.1	537.1	558.8	544.2
National defense	341.7	348.5	340.3	350.4	360.9	341.5	355.1	345.7
Nondefense	185.2	191.5	191.6	190.5	197.1	195.4	203.6	198.4
State and local	959.2	995.6	987.5	996.4	1,011.2	1,027.4	1,024.6	1,024.6
Residual	.5	-6	2.8	.1	-5.2	-8.0	-10.6	-14.7

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Chain-type quantity indexes for the series in this table are shown in table 7.1.

Table 1.9.—Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income

[Billions of dollars]

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.
2. Gross national income deflated by the implicit price deflator for gross national product.

NOTE.—Except as noted in footnotes 1 and 2, chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

The chain-type quantity index for gross national product is shown in table 7.3.

Table 1.11.—Command-Basis Real Gross National Product

[Billions of chained (1996) dollars]

Gross national product	8,515.1	8,868.3	8,776.7	8,895.4	9,075.0	9,187.7	9,313.7
Less: Exports of goods and services and income receipts from the rest of the world	1,282.2	1,327.4	1,303.0	1,345.0	1,385.6	1,418.6	1,477.5
Plus: Command-basis exports of goods and services and income receipts from the rest of the world ¹	1,336.8	1,374.0	1,354.3	1,385.3	1,418.9	1,443.4	1,508.9
Equals: Command-basis gross national product	8,569.7	8,915.0	8,828.1	8,935.7	9,108.3	9,212.5	9,345.1
Addendum:								
Terms of trade ²	104.3	103.5	103.9	103.0	102.4	101.7	102.1

1. Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.

2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Percent changes from preceding period for gross national product are shown in table 8.1.

Chain-type quantity indexes for the series in this table are shown in table 7.3.

1. Effective with the estimates scheduled for release on November 29, 2000, chained-dollar gross product of nonfinancial corporate business for 1997 to 2000 will be revised to reflect revisions to the gross product price indexes for nonfinancial industries.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-type quantity indexes for the series in this table are shown in table 7.9.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

3. Inventories of auto and home supply stores are included in "other durable goods."

1. Inventories of auto and home supply stores are included in "other durable goods."

NOTE.—Chained (1996) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures	3.54	3.57	3.56	3.50	3.53	3.54

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Inventories of auto and home supply stores are included in "other durable goods."

3. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

Nonfarm inventories to final sales of goods and structures	3.69	3.68	3.65	3.57	3.60	3.61

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas, the change in private inventories component of GDP is stated at annual rates.

2. Inventories of auto and home supply stores are included in "other durable goods."

3. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

NOTE.—Chained (1996) dollar inventory series are calculated to ensure that the chained (1996) dollar change in inventories for 1996 equals the current-dollar change in inventories for 1996 and that the average of the 1995 and 1996 end-of-year chain-weighted and fixed-weighted inventories are equal. Chained (1996) dollar final sales are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

Domestic output of new autos ²	97.99	100.70	99.59	101.90	100.85	105.06	101.48	101.24
Sales of imported new autos ³	123.41	144.38	144.11	145.99	152.66	152.30	150.64	149.40

1. Except for exports and imports, consists of new trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

Table B.10.—Farm Sector Output, Gross Product, and National Income

	Billions of dollars			Billions of chained (1996) dollars		
	1997	1998	1999	1997	1998	1999
Farm output	226.3	214.6	208.4	237.5	238.4	243.9
Cash receipts from farm marketings	208.6	198.2	190.7	218.7	220.5	224.3
Crops	112.0	104.0	95.3	121.2	122.2	123.7
Livestock	96.6	94.2	95.4	97.6	98.3	100.6
Farm housing	6.4	6.7	7.0	6.0	5.9	5.7
Farm products consumed on farms5	.5	.5	.5	.5	.5
Other farm income	7.8	8.6	10.4	8.2	9.6	12.4
Change in farm inventories	2.9	.6	-0.2	3.2	1.2	0
Crops	3.3	.9	.5	3.5	1.5	.9
Livestock	-4	-3	-7	-4	-3	-7
Less: Intermediate goods and services purchased	138.1	133.9	134.2	134.4	138.0	138.4
Intermediate goods and services, other than rent	122.1	118.8	120.1	119.0	122.4	124.0
Rent paid to nonoperator landlords	16.0	15.1	14.1	15.5	15.7	14.4
Equals: Gross farm product	88.3	80.8	74.2	103.6	100.2	106.3
Less: Consumption of fixed capital	26.3	27.4	29.2	25.9	26.6	28.1
Equals: Net farm product	61.9	53.4	45.0	78.1	73.5	78.2
Less: Indirect business tax and nontax liability	5.2	5.2	5.6
Plus: Subsidies to operators	6.3	10.3	17.6
Equals: Farm national income	63.1	58.5	56.9
Compensation of employees	17.6	18.7	19.4
Wage and salary accruals	15.1	16.2	16.6
Supplements to wages and salaries	2.4	2.5	2.9
Proprietors' income and corporate profits with inventory valuation and capital consumption adjustments	35.8	29.8	27.2
Proprietors' income	29.7	25.4	25.3
Corporate profits	6.1	4.4	1.9
Net interest	9.7	10.0	10.3

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table B.11.—Housing Sector Output, Gross Product, and National Income

	Billions of dollars			Billions of chained (1996) dollars		
	1997	1998	1999	1997	1998	1999
Housing output ¹	778.0	823.2	868.7	756.1	775.5	795.0
Nonfarm housing	771.6	816.6	861.7	750.1	769.6	789.4
Owner-occupied	585.5	622.7	661.1	569.0	586.7	605.7
Tenant-occupied	186.1	193.8	200.6	181.0	182.9	183.7
Farm housing	6.4	6.7	7.0	6.0	5.9	5.7
Less: Intermediate goods and services consumed	106.0	115.4	118.6	102.0	107.9	107.1
Equals: Gross housing product	672.0	707.9	750.2	654.0	667.6	687.9
Nonfarm housing	666.7	702.3	744.3	649.0	662.6	683.1
Owner-occupied	504.0	534.0	570.8	490.3	503.3	523.6
Tenant-occupied	162.6	168.3	173.5	158.7	159.4	159.5
Farm housing	5.3	5.6	5.9	5.0	5.0	4.8
Less: Consumption of fixed capital	126.5	133.7	143.7	122.7	125.8	130.1
Capital consumption allowances	67.6	72.0	77.5
Less: Capital consumption adjustment	-58.8	-61.7	-66.2
Equals: Net housing product	545.5	574.2	606.5	531.3	541.7	557.8
Less: Indirect business tax and nontax liability plus business transfer payments	124.2	129.9	135.6
Plus: Subsidies less current surplus of government enterprises	23.7	23.7	24.2
Equals: Housing national income	445.0	468.0	495.2
Compensation of employees	8.8	9.5	10.1
Proprietors' income with inventory valuation adjustment and capital consumption adjustment	21.3	20.7	20.2
Rental income of persons with capital consumption adjustment	109.0	119.0	126.4
Corporate profits with inventory valuation adjustment and capital consumption adjustment	4.7	4.5	4.4
Net interest	301.2	314.4	334.1

1. Equals personal consumption expenditures for housing less expenditures for other housing as shown in table B.4.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

^r Preliminary.^r Revised.

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and inter-

national organizations in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film rentals.

NOTE.—The data in this table are from table 3 in "U.S. International Transactions, Second Quarter 2000" in the October 2000 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the U.S. international transactions accounts.

^p Preliminary.^r Revised.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

5. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

NOTE.—The data in this table are from table 1 in "International Investment Position of the United States at Yearend 1999" in the July 2000 issue of the SURVEY OF CURRENT BUSINESS.

NOTE.—In this table, unlike in the international transactions accounts, income and capital outflows are shown without a current-cost adjustment, and income is shown net of withholding taxes. In addition, unlike in the international investment position, the direct investment position is valued at historical cost.

The data in this table are from tables 16 and 17 in "U.S. Direct Investment Abroad: Detail for Historical-Cost Position and Related Capital and Income Flows, 1999" in the September 2000 issue of the SURVEY OF CURRENT BUSINESS.

Table G.3.—Selected Financial and Operating Data for Nonbank Foreign Affiliates and Majority-Owned Nonbank Foreign Affiliates of U.S. Companies by Country and by Industry of Affiliate, 1998

1. All exchange rates are from the Board of Governors of the Federal Reserve System.
2. As of January 1, 1999, the euro is reported in place of the individual euro-area currencies. These currency rates can be derived from the euro rate by using the following conversion rates: 1 euro = 6.55957 French francs, 1.95583 German marks, and 1936.27 Italian lire.
3. The rate shown for the United States is an index of the weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of major U.S. trading partners, January 1997=100 and

reflects revised trade weights. For more information on the exchange rate indexes, see "New Summary Measures of the Foreign Exchange Value of the Dollar," *Federal Reserve Bulletin*, vol. 84 (October 1998), pp. 811-18.

NOTE.—U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. GDP growth rates for other countries are calculated from levels published by those countries. All other data (including U.S. consumer prices and U.S. share prices, both of which have been rebased to 1995 to facilitate comparison) are © OECD and are reproduced with permission.

1. Per capita personal income and per capita disposable personal income were computed using midyear population estimates from the Bureau of the Census.

NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the

estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

Source: Tables 1 and 2 in "State Personal Income, Revised Estimates for 1997–99" in the October 2000 SURVEY OF CURRENT BUSINESS.

NOTE.—Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy. In addition, GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and

for military equipment, except office equipment. Also, GSP and GDP have different revision schedules.

K. Local Area Table

Table K.1.—Personal Income and Per Capita Personal Income by Metropolitan Area, 1996–98

Table with multiple columns: Area name, Personal income (Millions of dollars, Percent change), Per capita personal income (Dollars, Rank in U.S.), Area name, Personal income (Millions of dollars, Percent change), Per capita personal income (Dollars, Rank in U.S.). Rows include United States, Metropolitan portion, Nonmetropolitan portion, Consolidated Metropolitan Statistical Areas, and Metropolitan Statistical Areas.

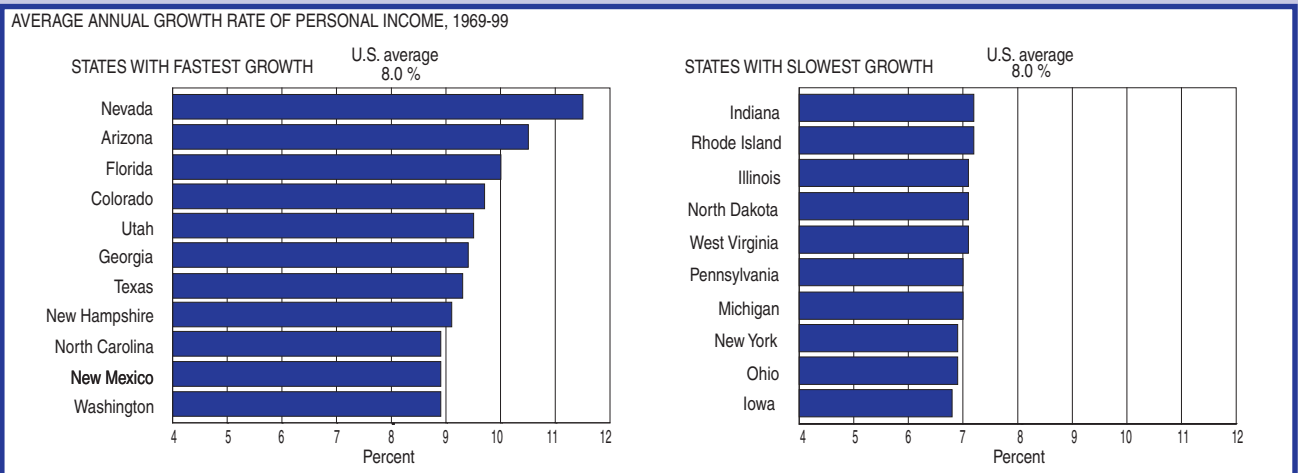

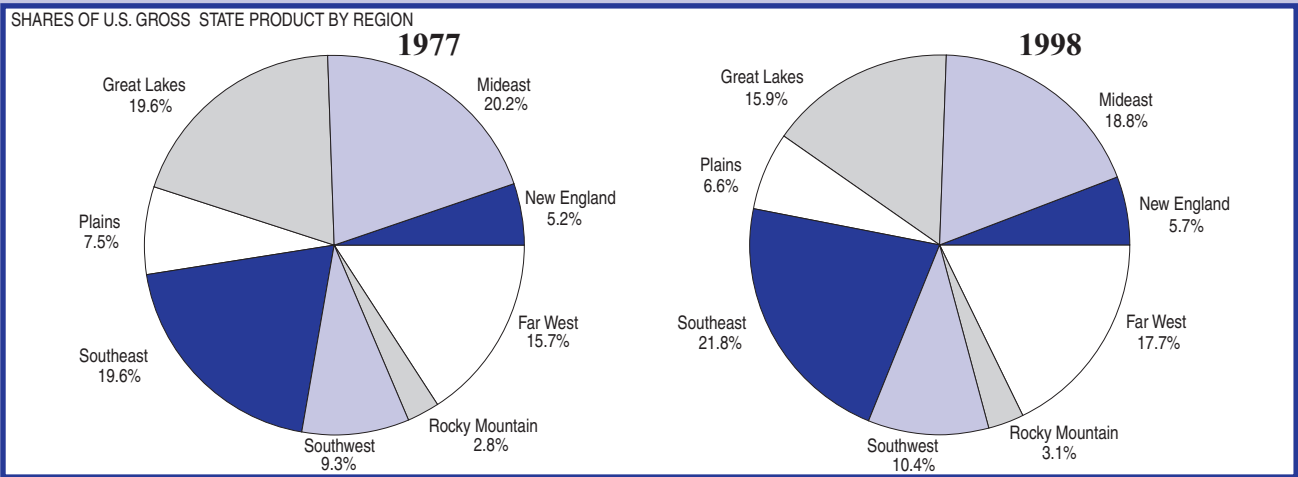

See footnotes at the end of the table.

Appendix A

Additional Information About the NIPA Estimates

Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in “real GDP.”) For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997–98 uses prices for 1997 and 1998 as weights, and the 1997–98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula.¹ These annual changes are “chained” (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated “chained (1996) dollar estimates.” These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component

increased by 10 percent in 1997, then the “chained (1996) dollar” value of this component in 1997 would be \$110 ($\100×1.10). Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A “residual” line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2–8.6.

BEA also publishes the “implicit price deflator” (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding “chain-type” price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100,$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_o is the level of activity in the earlier period; m is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and n is the number of periods between the earlier and later periods (that is, $t - o$).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.

Reconciliation Tables

Table 1.—Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings

[Percent change from preceding period]

	1998	1999	Seasonally adjusted at annual rates					
			1999			2000		
			II	III	IV	I	II	III ^p
BEA-derived compensation per hour of all persons in the nonfarm business sector (less housing) ¹	5.1	4.8	5.0	5.5	4.2	3.9	5.8	5.8
Less: Contribution of supplements to wages and salaries per hour	-5	-3	-4	-5	-4	.1	.1	-1
Plus: Contribution of wages and salaries per hour of persons in housing and in nonprofit institutions	-3	-1	-3	-5	-3	-1	-1	-1
Less: Contribution of wages and salaries per hour of persons in government enterprises, unpaid family workers, and self-employed	-1	0	-1	-1	-1	-1	-3	-1
Equals: BEA-derived wages and salaries per hour of all employees in the private nonfarm sector	5.5	5.0	5.1	5.5	4.4	3.7	5.9	5.8
Less: Contribution of wages and salaries per hour of nonproduction workers in manufacturing	-1	-1	.4	.4	0	.2	.4	.4
Less: Other differences ²	1.5	1.4	1.0	1.4	1.3	-3	1.6	1.7
Equals: BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls	4.1	3.6	3.7	3.7	3.1	3.8	3.9	3.8
Addendum: BLS estimates of compensation per hour in the nonfarm business sector ³	5.3	5.0	5.0	5.5	4.2	3.9	7.0	5.8

^p Preliminary.

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid family workers.

2. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include

differences in seasonal adjustment procedures.

3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

1. Consists of statistical revisions in the NIPA's that have not yet been incorporated into the ITA's (2000:II) and statistical revisions in the ITA's that have not yet been incorporated into the NIPA's (2000:I-2000:II).

ITA's International transactions accounts
NIPA's National income and product accounts

Appendix B

Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, regional, and international accounts.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product), the estimates of wealth and related estimates, gross product by industry, the input-output accounts, and the satellite accounts.

National income and product accounts (NIPA's). This series of papers documents the conceptual framework of the NIPA's and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 SURVEY]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (1985)

Foreign Transactions (1987) [A revised version is forthcoming.]

GNP: An Overview of Source Data and Estimating Methods (1987) [Most of the information in this paper has been superseded by "A Guide to the NIPA's" (March 1998 SURVEY).]

Government Transactions (1988)

Personal Consumption Expenditures (1990)

These methodologies have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPA's. The most recent revisions are described in the following SURVEY articles.

"A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts" **Definitional and Classificational Changes** (August 1999)

New and Redesigned Tables (September 1999)

Statistical Changes (October 1999)

"Improved Estimates of the National Income and Product Accounts: Results of the Comprehensive Revision"

For 1959-98 (December 1999)

For 1929-99 (April 2000)

"Annual Revision of the U.S. National Income and Product Accounts" (August 2000)

"A Guide to the NIPA's" (March 1998) provides the definitions of the major NIPA aggregates and components, discusses the measures of real output and prices, explains how production is classified and how the NIPA's are presented, describes the statistical conventions that are used, and lists the principal source data and methods that are used to prepare the estimates of gross domestic product (GDP).

Information about the sources and methods that are used to prepare the national estimates of personal income, which are the basis for the State estimates, is in *State Personal Income, 1929-97* (1999).

"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of articles that describe the conceptual basis for the chain-type measures of real output and prices that are used in the NIPA's.

"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998) evaluates these estimates by examining the record of revisions to them.

Wealth and related estimates. *Fixed Reproducible Tangible Wealth in the United States, 1925-94* (1999) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925-98" (April 2000) describes the definitional and statistical improvements that were incorporated in the comprehensive revision of the estimates.

Gross product by industry. "Improved Estimates of

Mission and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts are available on BEA's Web site at <www.bea.doc.gov>. For information about the development and the implementation of the plan, see these SURVEY articles.

"Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)

"Mid-Decade Strategic Review of BEA's Economic Accounts: An Update" (April 1995)

"BEA's Mid-Decade Strategic Plan: A Progress Report" (June 1996)

Gross Product by Industry for 1947-98" (June 2000) describes the most recent comprehensive revision of these estimates.

Input-output accounts. "Benchmark Input-Output Accounts for the U.S. Economy, 1992" (November 1997) describes the preparation of the 1992 accounts and the concepts and methods that underlie the accounts.

"Annual Input-Output Accounts of the U.S. Economy, 1996" (January 2000) presents annual tables for 1996 that update the 1992 benchmark accounts.

Satellite accounts. These accounts extend the analytical capacity of the national accounts by focusing on one aspect of economic activity.

"Integrated Economic and Environmental Satellite Accounts" and "Accounting for Mineral Resources: Issues and BEA's Initial Estimates" (April 1994)

"A Satellite Account for Research and Development" (November 1994)

"U.S. Transportation Satellite Accounts"

For 1992 (April 1998)

For 1996 (May 2000)

"U.S. Travel and Tourism Satellite Accounts"

For 1992 (July 1998)

For 1996 and 1997 (July 2000)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITA's). *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITA's and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITA's.

"U.S. International Transactions, Revised Estimates" is a series of articles about the annual ITA revisions and the improvements in methodology; the latest article is published in the July 2000 issue.

Direct investment. *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

"Methodology for U.S. Direct Investment Abroad," which is also available in *U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results* (1998)

"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 SURVEY

"Methodology for Foreign Direct Investment in the United States," which is also available in *Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results* (1995)

"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 SURVEY

International services. *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.

"Comprehensive Revision of State Personal Income for 1969-99" (June 2000) summarizes the changes in the methodology that is used to prepare the estimates. The detailed methodology is available on the CD-ROM *State Personal Income, 1969-98*.

"Comprehensive Revision of Local Area Personal Income for 1969-98" (July 2000) summarizes the changes in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM *Regional Economic Information System, 1969-98*.

Gross state product. "Comprehensive Revision of Gross State Product by Industry, 1977-94" (June 1997 SURVEY) summarizes the sources and the methods that are used to prepare the estimates. "Gross State Product by Industry, 1977-98" (October 2000) describes the most recent comprehensive revision of these estimates.

Availability

Most of the items listed here are available on our Web site at <www.bea.doc.gov>; in particular, look under "Methodologies." Our online *Catalog of Products* provides descriptions of both our printed and electronic publications. The *Catalog* also includes links to compressed files of our diskette products that can be downloaded for free.

For specific information about the availability of our most recently released estimates and products, see "Getting BEA's Estimates" on the inside back cover.
