Articles

1. GDP and the Economy: Second Estimates for the Second Quarter of 2009

Real GDP fell 1.0 percent after falling 6.4 percent in the first quarter. Business investment and exports fell less than in the first quarter. Consumer spending turned down. Corporate profits increased \$67.6 billion after increasing \$59.1 billion.

11. Government Receipts and Expenditures: Second Quarter of 2009

Net government saving decreased \$300.1 billion to -\$1,305.8 billion. Net federal government saving decreased \$325.8 billion to -\$1,294.9 billion. Net state and local government saving increased \$25.7 billion to -\$10.9 billion.

15. Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision

The picture of the economy shown by the revised estimates is similar to the picture shown by previous estimates.

42. National Income and Product Accounts Tables

Annual, quarterly, and monthly statistics from the 2009 comprehensive revision, second estimates for the second quarter of 2009, and preliminary estimates for July 2009.

183. GDP and Other Major NIPA Series for 1929–Second Quarter of 2009

Historical statistics on GDP and its components in current dollars, chained dollars, and chain-type quantity and price indexes, including statistics on national income and personal income.

208. Direct Investment for 2006–2008: Detailed Historical-Cost Positions and Related Capital and Income Flows

Statistics on (1) the direct investment positions and international transactions of U.S. and foreign multinational companies and (2) the composition of investment by U.S. companies abroad and foreign companies in the United States.

213. U.S. Direct Investment Abroad Tables

248. Foreign Direct Investment in the United States Tables

284. Personal Income for Metropolitan Areas for 2008

Growth in personal income slowed in 322 of the nation's 366 metropolitan areas. It increased in 42 areas, remained unchanged in 2 areas, and fell in 5 areas.

Upcoming in the Survey...

State Personal Income. Comprehensive revision of annual and quarterly estimates for 1969–2008 and for the first and second quarters of 2009.

Director's Message

As many of you know, the Bureau of Economic Analysis (BEA) released its 2009 comprehensive revision of the national income and product accounts—also known as the GDP accounts—in late July. In support of that release, we've presented a lot of material. This month's SURVEY OF CURRENT BUSINESS includes a more detailed look at the impact of the revised statistics across the entire time series. This year's comprehensive revision did not change the overall picture of the economy over the years. For 2008, however, growth was revised to 0.4 percent from 1.1 percent.

All material produced in support of the comprehensive revision is available at www.bea.gov/national/an1.htm.

Elsewhere in this issue, we present estimates of metropolitan area personal income for 2008. Personal income growth slowed in 322 metropolitan areas, increased in 42 areas, and remained unchanged in 2 areas. In five metropolitan areas, personal income declined. On average, metropolitan area personal income grew 3.3 percent in 2008, down from 6.0 percent in 2007.

This month, we also provide a look at government receipts and expenditures for the second quarter of 2009. We also detail the second estimates of the GDP accounts for the second quarter.

I'd also like to encourage you to take advantage of our frequently updated FAQ service, which has become our main way of conveying information about our statistics. It offers a wealth of information about topical issues. Among the recent entries: how the Consumer Assistance to Recycle and Save Act of 2009 (the CARS program) will be accounted for in the GDP accounts. The FAQ service is available on our home page at www.bea.gov.

J. Steven Landefeld
Director, Bureau of Economic Analysis

Taking Account...

BEA's Strategic Plan for 2009–2013

The mission of the Bureau of Economic Analysis (BEA) is to promote a better understanding of the U.S. economy by providing the most timely, relevant, and accurate economic accounts data in an objective and cost effective manner.

In support of that mission, BEA develops an annual strategic plan that details the specific milestones that the agency aims to achieve over the next several years. BEA's strategic plans in turn support the Department of Commerce's strategic goals.

BEA's most recent strategic plan has been posted on its Web site at www.bea.gov/about/pdf/strategic_plan_matrix_2009-2013.pdf.

The 2009–2013 strategic plan lists more than 170 milestones; each one is designed to contribute to one or more of BEA's main objectives in the following areas:

- **Customers.** BEA aims to make its accounts and services more responsive to customers and partners. This will be achieved through new communications vehicles and better online tools among other things.
- **Employees.** BEA aims to maintain its status as one of the federal government's leading employers as well as one of the world's leading statistical agencies. To this end, the agency has developed plans to continue to attract,

develop, and retain a highly qualified and diverse workforce prepared to innovate and improve BEA's statistics.

- **Management.** The agency intends to better manage its resources through the use of technology and other resources to improve its efficiency and flexibility.
- **Statistics.** BEA intends to improve its economic statistics by incorporating new methodologies, utilizing better source data, and developing better technologies.

Progress that BEA has made against previous strategic plan milestones is also reported on BEA's Web site. BEA met 172 out of a total of 177 milestones detailed in the 2008 strategic plan.

See www.bea.gov/about/pdf/report_card_bea_fy2008.pdf.

New Catalog of Major Revisions to the ITAs

BEA has released a new online tool that catalogues and summarizes the major statistical and methodological improvements to the U.S. international transactions accounts (ITAs) between 1976 and 2008.

Through annual revisions, BEA introduces new and improved definitions and classifications, newly available and more complete source data, improved estimation procedures, and new and updated presentations. These changes are designed to improve the reliability and consistency of the ITAs and to address important new devel-

opments in the United States and overseas.

Over the years, BEA has made numerous improvements. Detailed discussions of these improvements were previously presented when the revisions were introduced. Typically, annual revisions are discussed once a year in an article in the *SURVEY OF CURRENT BUSINESS* in July. But the discussion each year is limited to that year's revisions.

The new online tool lists the most significant changes by year and subject matter and provides an index of these improvements.

The listing is presented chronologically, but users can also choose to view the improvements grouped by the following categories: goods, services, income, current transfers, capital account, direct investment, portfolio investment, bank and nonbank investment, and geography and presentation.

Users can also choose to view the improvements that were introduced in a specific year. The listings within each year and category are approximately in order of importance.

Each item includes a reference to the original issue of the *SURVEY* in which the revisions are discussed in detail; most of these articles include information on the size of the revisions.

A summary of the most significant revisions across all years is also available as a PDF.

The new tool is available at www.bea.gov/methodologies/revcat/index.cfm.

GDP and the Economy

Second Estimates for the Second Quarter of 2009

REAL GROSS domestic product (GDP) decreased at an annual rate of 1.0 percent in the second quarter of 2009, according to the “second” estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).¹ In the first quarter, real GDP decreased 6.4 percent.

The estimates reflect the recent comprehensive NIPA revision. See “Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision” in this issue.

The much smaller decrease in real GDP in the second quarter than in the first quarter primarily reflected much smaller decreases in nonresidential fixed investment and in exports, an upturn in federal government spending, smaller decreases in inventory investment and in residential fixed investment, and an upturn in state and local government spending. In contrast, imports decreased much less than in the first quarter, and consumer spending turned down.²

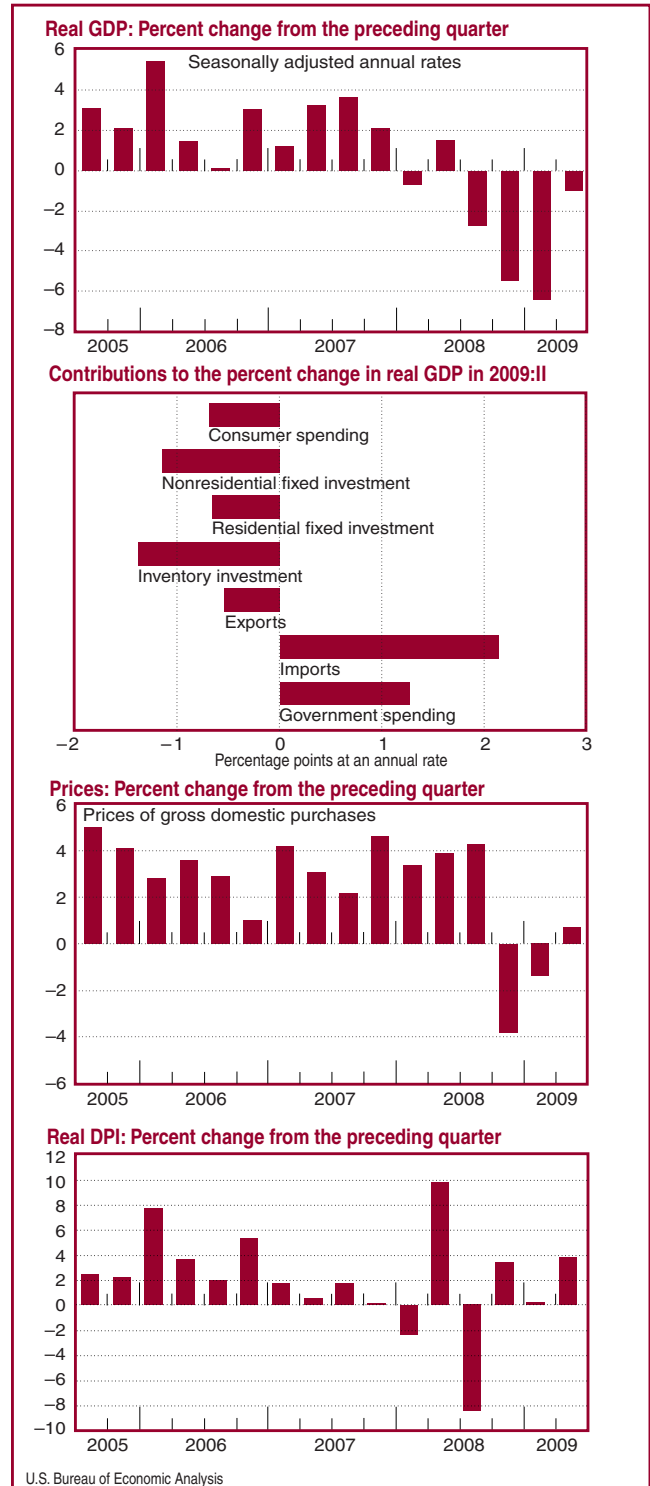

- Prices of goods and services purchased by U.S. residents increased 0.5 percent after decreasing 1.4 percent (see page 8). Energy prices decreased less and food prices decreased more. Excluding food and energy, gross domestic purchases prices increased 0.8 percent after increasing 0.2 percent.
- Real disposable personal income (DPI) increased 3.8 percent after increasing 0.2 percent (revised). The acceleration primarily reflected an upturn in current-dollar DPI that mainly resulted from a sharp upturn in personal income that was partly offset by a smaller decrease in personal current taxes.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 5.0 percent in the second quarter; in the first quarter, it was 3.7 percent (revised).

1. “Real” estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data. More information can be found at www.bea.gov/about/infoqual.htm and www.bea.gov/faq/national/gdp_accuracy.htm. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, “consumer spending” refers to “personal consumption expenditures,” “inventory investment” refers to “change in private inventories,” and “government spending” refers to “government consumption expenditures and gross investment.”

Christopher Swann prepared this article.

1. The estimates of GDP under the contribution columns are also percent changes.

NOTE: Percent changes are from NIPA table 1.2.1, contributions are from NIPA table 1.2.2, and shares are calculated from NIPA table 1.2.5.

Consumer spending turned down in the second quarter, subtracting 0.69 percentage point from the percent change in real GDP. Downturns in spending for both durable goods and nondurable goods were partly offset by an upturn in spending for services.

Nonresidential fixed investment decreased much less than in the first quarter, subtracting 1.15 percentage points from the percent change in real GDP after subtracting 5.29 percentage points.

Residential fixed investment also decreased less than in the first quarter, subtracting 0.66 percentage point from the percent change in real GDP after subtracting 1.33 percentage points.

Inventory investment reduced the second-quarter percent change in real GDP by 1.39 percentage points after subtracting 2.36 percentage points.

Exports decreased much less than in the first quarter, reflecting smaller decreases in both exports of goods and services. The largest contributors were an upturn in industrial supplies and materials and a smaller decrease in automotive vehicles, engines, and parts.

Imports decreased much less than in the first quarter. All categories of goods imports except petroleum and products and imports of "other" goods contributed to the smaller decrease.

Federal government spending turned up, reflecting upturns in national defense and in nondefense spending.

State and local government spending also turned up, primarily reflecting an upturn in structures investment.

Real final sales of domestic product, real GDP less inventory investment, increased 0.4 percent in the second quarter after decreasing 4.1 percent in the first quarter.

Motor vehicle output turned up, increasing 13.9 percent after decreasing 64.5 percent.

Final sales of computers turned down, decreasing 8.9 percent after increasing 11.2 percent.

Consumer Spending

Less: Receipts from sales of goods and services by NPISHs ⁴	8.0	-2.1	0.7	4.5	1.2	-0.16	0.05	0.35	0.09

Spending for goods turned down, reflecting downturns in spending for both durable and nondurable goods.

The downturn in durable goods reflected downturns in recreational goods and vehicles, in motor vehicles and parts, and in "other" durable goods (such as jewelry and watches and therapeutic medical equipment).

The downturn in nondurable goods reflected downturns in "other" nondurable goods (such as personal care products) and in gasoline and other energy goods and a larger decrease in clothing and footwear. Food and beverages for off-premises consumption picked up.

Spending for services turned up. Final consumption expenditures of nonprofit institutions serving households (NPISHs) decreased less in the second quarter than in the first quarter, and spending for financial services accelerated.

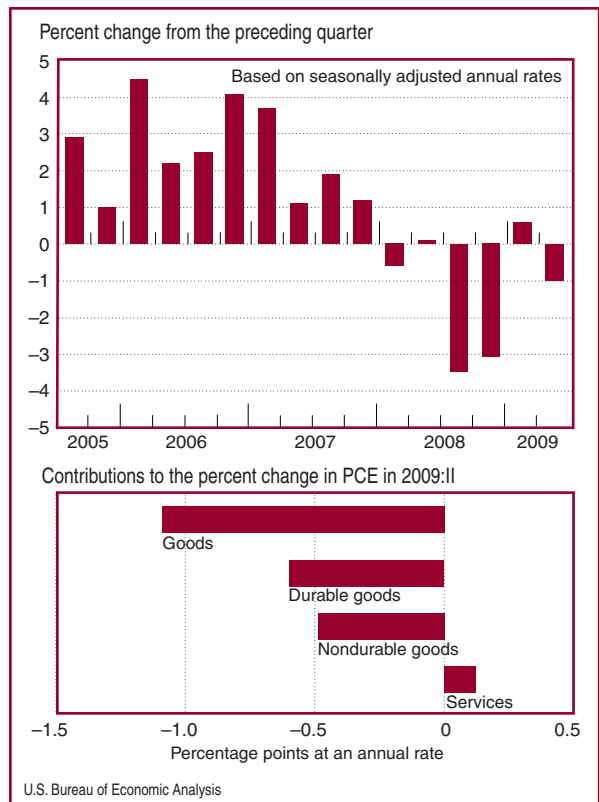

1. The estimates under the contribution columns are also percent changes.
 2. Net of expenses, or gross operating expenses less primary sales to households.
 3. Net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
 4. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
 NOTE: Percent changes are from NIPA table 2.3.1, and contributions, from NIPA table 2.3.2; shares are calculated from NIPA table 2.3.5.
 NPISHs Nonprofit institutions serving households

Changes in Consumer Spending Categories

The comprehensive NIPA revision incorporated a new classification system for consumer spending, which defined new categories of expenditures by type of product and by function. Prominent among these changes are the separate identification within services of household consumption from nonprofit consumption, the addition of new major product categories (such as insurance), and the reclassification of purchased meals and beverages from nondurable goods to services under food services and accommodations.

See "Preview of the 2009 Comprehensive NIPA Revision: New Classification for Personal Consumption Expenditures" in the May 2008 SURVEY OF CURRENT BUSINESS.

Other structures ⁶	12.2	-2.2	-6.3	-13.9	-5.7	-0.24	-0.59	-1.40	-0.68		
Equipment	0.5	-13.7	-16.2	-7.1	-10.0	-0.07	-0.07	-0.03	-0.05		

1. The estimates of fixed investment under the contribution columns are also percent changes.
 2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.
 3. Excludes software "embedded," or bundled, in computers and other equipment.
 4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photography and related equipment, and office and accounting equipment.
 5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.
 6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.
 NOTE. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

Private fixed investment decreased much less in the second quarter than in the first quarter, reflecting much smaller decreases in both nonresidential fixed investment and residential fixed investment.

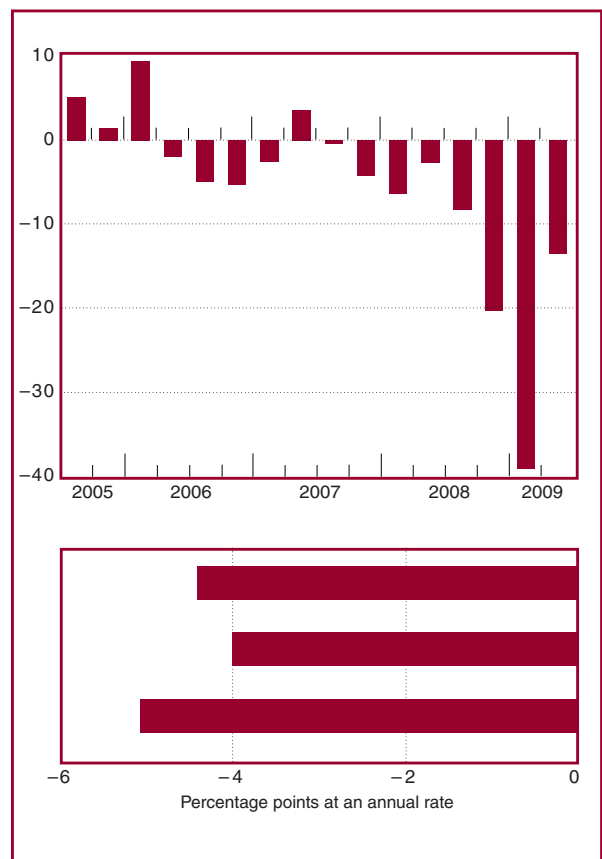

Nonresidential fixed investment decreased 10.9 percent after decreasing 39.2 percent. The much smaller decrease reflected much smaller decreases both in equipment and software and in structures.

The smaller decrease in structures primarily reflected a smaller decrease in mining exploration, shafts, and wells, an upturn in power and communication, and smaller decreases in commercial and health care and in "other" structures.

The smaller decrease in equipment and software mainly reflected an upturn in transportation equipment and much smaller decreases in information processing equipment and software and in industrial equipment.

The smaller decrease in residential fixed investment mainly reflected a smaller decrease in single-family structures.

Residual ²	0.3	-8.0	-1.9	5.3	2.7	-8.3	6.1	7.2	-2.6	
Addenda: Ratios of private inventories to final sales of domestic business:³										
Private inventories to final sales.....	2.38	2.40	2.44	2.44	2.39	
Nonfarm inventories to final sales....	2.18	2.21	2.24	2.23	2.18	
Nonfarm inventories to final sales of goods and structures.....	3.96	4.02	4.15	4.18	4.10	

1. The levels are from NIPA table 5.6.6B.

2. The residual is the difference between the first line and the sum of the most detailed lines. It reflects that chained-dollar estimates are usually not additive, because they are based on quantity indexes that use weights of more than one period.

3. The ratios are from NIPA table 5.7.6B.

Real inventory investment decreased \$45.3 billion in the second quarter after decreasing \$76.5 billion in the first quarter.

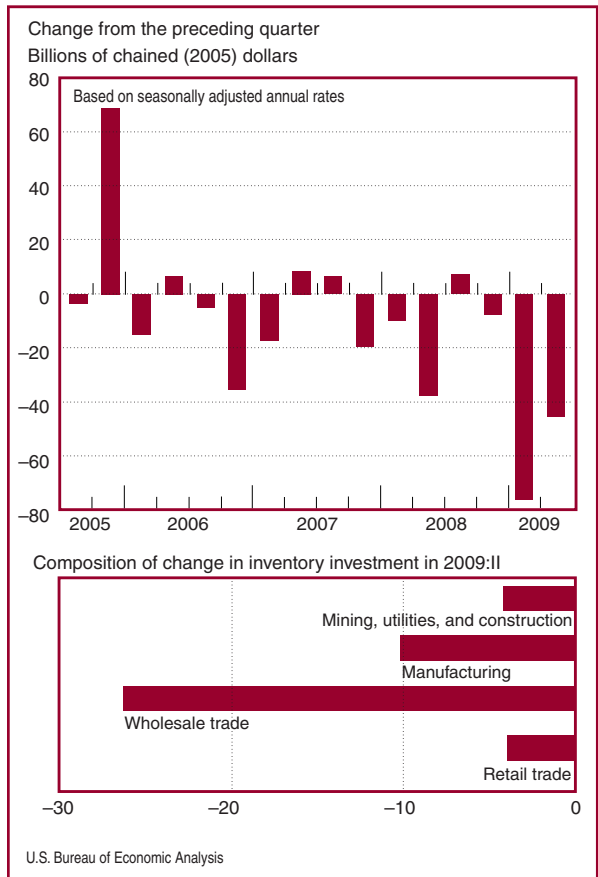

Inventory investment in manufacturing industries decreased \$10.2 billion after decreasing \$37.1 billion, reflecting larger second-quarter drawdowns in both durable-goods and nondurable-goods industries.

Inventory investment in wholesale trade industries decreased \$26.3 billion after decreasing \$25.5 billion, primarily reflecting a second-quarter drawdown in nondurable-goods industries after a first-quarter accumulation.

Inventory investment in retail trade industries decreased \$4.0 billion after decreasing \$25.7 billion. A larger drawdown by "other" retail stores and a drawdown in inventories by food and beverage stores after an accumulation were partly offset by smaller drawdowns by general merchandise stores and by motor vehicle and parts dealers.

The ratio of private inventories to final sales decreased to 2.39, a 2.0 percent decrease at a quarterly rate and the largest since the third quarter of 2003.

Chart 4. Real Private Inventory Investment

Inventory Investment

The real change in private inventories, often called real private inventory investment, represents the change in the physical stock of goods held by businesses. It includes finished goods, goods at various stages of production, and raw materials.

The change in private inventories is a key component of gross domestic product (GDP), which aims to measure output derived from current production. To include the value of currently produced goods that are not yet sold and to exclude the value of goods produced in previous periods, change in private inventories must be included in the GDP calculation.

Thus, GDP can also be seen as the sum of final sales of domestic product and the change in private inventories (table 2).

For most industries, the estimates of change in private inventories are prepared by revaluing book-value estimates of inventories from the Census Bureau to a replacement-cost basis and calculating the change over a quarter or year. BEA does not always have complete data for every industry.

Exports and Imports

Table 6. Real Exports and Imports of Goods and Services

[Seasonally adjusted at annual rates]

	Share of current-dollar exports and imports (percent)	Change from preceding period (percent)					Contribution to percent change in real exports and imports (percentage points)			
		2008		2009			2008		2009

Other	4.6	-10.5	-10.7	-11.7	-12.5	-0.27	-0.31	-0.35	-0.57	
Imports of services²	20.2	6.1	-0.9	-11.5	-9.0	0.90	0.01	-1.72	-1.78	
Addenda:										
Exports of agricultural goods ³	6.8	-8.6	-0.6	-17.8	12.1	
Exports of nonagricultural goods	58.8	-1.1	-27.6	-38.6	-8.9	
Imports of nonpetroleum goods	67.4	-5.5	-26.0	-44.9	-15.5	

1. The estimates under the contribution columns are also percent changes.

2. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Note: Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

Exports of goods and services decreased 5.0 percent in the second quarter after decreasing 29.9 percent, reflecting smaller decreases in both goods and services.

Exports of goods decreased 7.0 percent after decreasing 36.9 percent. Industrial supplies and materials turned up, and automotive vehicles, engines, and parts decreased much less than in the first quarter. Foods, feeds, and beverages also turned up, and non-automotive consumer goods and nonautomotive capital goods decreased less than in the first quarter.

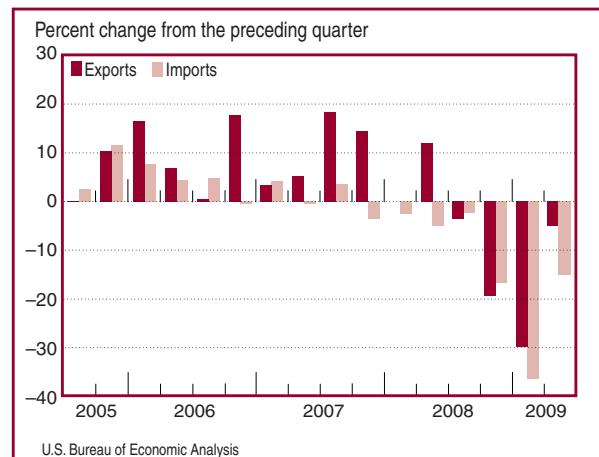

Exports of services decreased 1.0 percent after decreasing 13.6 percent. "Other" transportation, passenger fares, and other private services turned up, and travel and royalties and license fees decreased less than in the first quarter.

Imports of goods and services decreased 15.1 percent after decreasing 36.4 percent, reflecting smaller decreases in both goods and services.

Imports of goods decreased 16.5 percent after decreasing 41.0 percent, reflecting smaller decreases in automotive vehicles, engines, and parts, in nonautomotive capital goods, in nonautomotive consumer goods, in nonpetroleum industrial supplies and materials, and in foods, feeds and beverages that were partly offset by larger decreases in petroleum and products and in "other" goods imports.

Imports of services decreased 9.0 percent after decreasing 11.5 percent. Upturns in "other" private services and in passenger fares and smaller decreases in "other" transportation and in royalties and license fees were partly offset by a downturn in direct defense expenditures and a larger decrease in travel.

1. The estimates under the contribution columns are also percent changes.
NOTE: Percent changes are from NIPA table 3.9.1, contributions from NIPA table 3.9.2, and shares are calculated from NIPA table 3.9.5.

Government spending turned up, increasing 6.4 percent in the second quarter after decreasing 2.6 percent in the first quarter, reflecting upturns in federal government spending and in state and local government spending.

The upturn in federal government spending reflected upturns in national defense and nondefense spending. The main contributors to the upturn in national defense spending were upturns in consumption expenditures and in investment in equipment and software. The primary contributors to the upturn in nondefense spending were an upturn in investment in equipment and software and an acceleration in consumption expenditures.

The upturn in state and local government spending primarily reflected an upturn in investment in structures.

Government Spending

“Government consumption expenditures and gross investment,” or “government spending,” consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

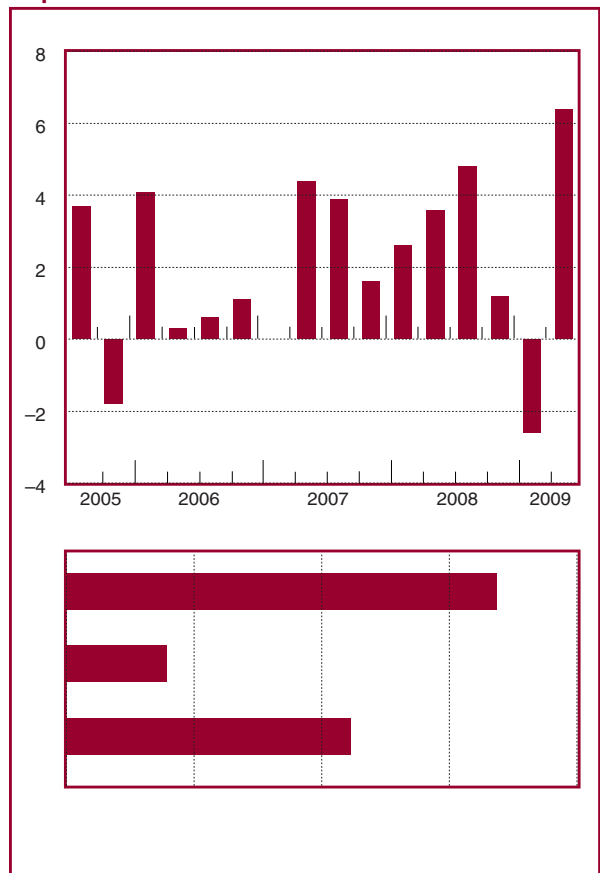

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government’s gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital.¹

Gross investment consists of new and used structures (such as highways and dams) and of equipment and software purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

1. Consumption of fixed capital represents a partial measure of the services provided by government-owned fixed capital.

Chart 6. Real Government Consumption Expenditures and Gross Investment

Prices

Table 8. Prices for Gross Domestic Purchases

(Percent change at annual rates; based on seasonally adjusted index numbers (2005=100))

	Change from preceding period (percent)				Contribution to percent change in gross domestic purchases prices (percentage points)

Excluding food and energy	2.7	1.5	1.9	2.3
Gross domestic product	4.0	0.1	1.9	0.0

1. The estimates under the contribution columns are also percent changes

NOTE: Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions are from NIPA table 1.6.8.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, increased 0.5 percent in the second quarter after decreasing 1.4 percent in the first quarter. In the first quarter, the federal pay raise for civilian and military personnel added 0.3 percentage point to the percent change; the pay raise is treated as an increase in the price of employee services purchased by the federal government.

Consumer prices increased 1.3 percent after decreasing 1.5 percent, primarily reflecting an upturn in the prices of gasoline and other energy goods. Prices paid for durable goods also turned up.

Prices paid for nonresidential fixed investment decreased more than in the first quarter. Prices paid for structures decreased more in the second quarter, and prices paid for equipment and software turned down.

Prices paid for residential investment decreased 5.4 percent after decreasing 4.9 percent.

Prices paid by government turned up, reflecting an upturn in prices paid by state and local government for consumption expenditures.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, accelerated, increasing 2.0 percent after increasing 1.1 percent. This measure has been redefined so it now includes purchased meals and beverages, such as restaurant meals, and pet food.

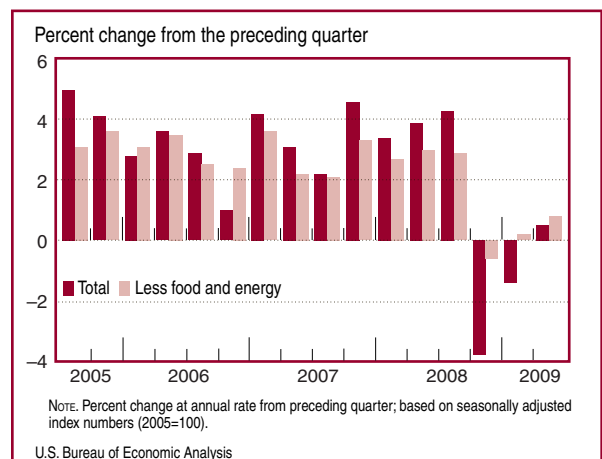

The percent change in the GDP price index was unchanged in the second quarter, but the price index for gross domestic purchases increased 0.5 percent. The difference reflects a larger increase in import prices than in export prices.

Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between the imports prices (included in the gross domestic purchases index) and the exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the dollar depreciation [FAQ Answer ID 498](#) on BEA's Web site.

Chart 7. Gross Domestic Purchases Prices

GDP price index	0.2	0.0	-0.2			

1. The estimates for GDP under the contribution columns are also percent changes.

The “second” estimate of the second-quarter decrease in real GDP is the same as the advance estimate, reflecting upward revisions to exports, to residential fixed investment, to consumer spending, and to government spending that were offset by downward revisions to inventory investment and to nonresidential fixed investment. The average revision (without regard to sign) between the advance estimate and the “second” estimate is 0.5 percentage point.

The upward revision to consumer spending primarily reflected an upward revision to motor vehicles and parts.

The downward revision to nonresidential fixed investment reflected a downward revision to structures.

The upward revision to residential fixed investment reflected an upward revision to residential structures that was based on a revised one-unit deflator.

The downward revision to inventory investment primarily reflected revisions to wholesale trade inventories and to manufacturing durable-goods inventories.

The upward revision to exports was to both goods and services. The largest contributors to goods were industrial supplies and materials and civilian aircraft, engines, and parts. The largest contributor to services was “other” private services.

The upward revision to government spending primarily reflected an upward revision to state and local investment in structures.

Source Data for the Second Estimates

Personal consumption expenditures: Retail sales for May and June (revised). Motor vehicle registrations for April and May (revised) and June (new). Retail natural gas sales for May (new).

Nonresidential fixed investment: Construction spending (value put in place) for April and May (revised) and June (new). Manufacturers’ shipments (M3) of machinery and equipment for May and June (revised). Exports and imports for May (revised) and June (new).

Residential investment: Construction spending (value put in place) and one-unit deflator for April and May (revised) and June (new).

Change in private inventories: Manufacturers’ inventories for May and June (revised) and trade inventories for May (revised) and June (new).

Exports and imports of goods and services: International transactions for May (revised) and June (new).

Government consumption expenditures and gross investment: State and local construction spending (value put in place) for April and May (revised) and June (new).

Personal Income for the First Quarter of 2009

With the release of the second estimates of GDP, BEA also releases revised estimates of various income-related measures for the previous quarter. This revision reflects the incorporation of newly available first-quarter tabulations from the Quarterly Census of Employment and Wages from the Bureau of Labor Statistics.

Wage and salary disbursements decreased \$235.7 billion, a downward revision of \$31.1 billion. Personal current taxes decreased \$247.0 billion, a downward revision of \$5.3 billion. Contributions for government social insurance, which are subtracted in calculating personal income, decreased \$23.6 billion, a downward revision of \$4.2 billion.

- Personal income decreased \$280.8 billion, a downward revision of \$29.1 billion.
- Disposable personal income decreased \$33.7 billion, a downward revision of \$23.8 billion.
- Personal saving decreased \$6.1 billion, a downward revision of \$23.8 billion.
- The personal saving rate was 3.7 percent, a downward revision of 0.3 percentage point.

IVA Inventory valuation adjustment
CCAdj Capital consumption adjustment

Profits from current production increased \$67.6 billion, or 5.7 percent at a quarterly rate, in the second quarter after increasing \$59.1 billion in the first quarter.

Domestic profits of financial corporations increased \$39.7 billion, or 16.7 percent, after increasing \$115.9 billion.

Domestic profits of nonfinancial corporations increased \$28.4 billion, or 4.5 percent, after decreasing \$40.2 billion.

Profits from the rest of the world decreased \$0.6 billion, or 0.2 percent, after decreasing \$16.6 billion. In the second quarter, receipts decreased \$1.3 billion, and payments decreased \$0.7 billion.

Taxes on corporate income increased \$40.8 billion, or 15.1 percent, after increasing \$47.0 billion.

Profits after tax increased \$26.8 billion, or 2.9 percent, after increasing \$12.0 billion.

Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) increased \$73.8 billion, or 25.1 percent, after increasing \$63.7 billion.

Net cash flow from current production, a profits-related measure of internal funds available for investment, decreased \$26.9 billion, or 1.7 percent, after increasing \$16.2 billion.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Cen-

sus Bureau quarterly financial reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

Government Receipts and Expenditures

Second Quarter of 2009

NET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was $-\$1,305.8$ billion in the second quarter of 2009, decreasing $\$300.1$ billion from $-\$1,005.7$ billion in the first quarter.

Net federal government saving was $-\$1,294.9$ billion in the second quarter, decreasing $\$325.8$ billion from $-\$969.1$ billion in the first quarter (see page 12). Current receipts decreased less than in the first quarter, and current expenditures increased more.

Net state and local government saving was $-\$10.9$ billion in the second quarter, increasing $\$25.7$ billion from $-\$36.6$ billion in the first quarter (see page 13). Current receipts accelerated, and current expenditures turned up.

Net borrowing was $\$1,657.4$ billion in the second quarter, increasing $\$257.7$ billion from $\$1,399.7$ billion in the first quarter. Federal government net borrowing was $\$1,534.5$ billion in the second quarter, increasing $\$276.3$ billion from $\$1,258.2$ billion in the first quarter. State and local government net borrowing was $\$122.9$ billion in the second quarter, decreasing $\$18.6$ billion from $\$141.5$ billion in the first quarter.

Government receipts and expenditures in the second quarter were affected by The American Recovery and Reinvestment Act of 2009 and by continued capital injections into financial enterprises (see the box on page 12).

Personal current taxes decreased less as a result of a smaller decrease in nonwithheld income taxes. In contrast, withheld income taxes decreased more in the second quarter, reflecting the impact of the “Making Work Pay” tax credit provision of the ARRA (see the box below).

Taxes on production and imports turned up, reflecting an acceleration in excise taxes and a smaller decrease in customs duties. Tobacco excise taxes turned up sharply, reflecting an increase in tobacco excise tax rates that took effect on April 1, 2009.

Taxes on corporate income accelerated, reflecting an upturn in profits for Federal Reserve banks.

Government social benefits to persons accelerated, reflecting increased spending for provisions of the ARRA. Benefit payments for Medicare and unemployment insurance also accelerated in the second quarter.

Grants-in-aid to state and local governments accelerated, reflecting an acceleration in Medicaid and education grants authorized by the ARRA.

Other current transfer payments to the rest of the world turned up, reflecting economic support payments to Egypt and Israel and grants to Puerto Rico and the U.S. territories to finance the 2009 “Making Work Pay” tax credit provision of the ARRA.

Interest payments turned up, reflecting higher inflation expense payments on Treasury Inflation-Protected Securities (TIPS).

Capital transfer payments decreased more as a result of smaller capital injections in the financial industry. The federal government provided \$25.1 billion to Fannie Mae and Freddie Mac and about \$13 billion to other financial institutions in the second quarter. Of these amounts, \$22.6 billion (\$90.4 billion at an annual rate) to Fannie Mae and Freddie Mac and \$11.7 billion (\$46.9 billion at an annual rate) to financial institutions are treated as capital transfers.

American Recovery and Reinvestment Act (ARRA) of 2009

ARRA-authorized federal expenditures accelerated in the second quarter. Grants-in-aid to state and local governments were boosted \$20.7 billion (\$82.6 billion at an annual rate), primarily to fund Medicaid and education grants. Government social benefits to persons were boosted \$20.8 billion (\$83.2 billion at an annual rate) to fund one-time payments of \$250 to recipients of social security and veterans' pension and railroad retirement benefits, additional unemployment benefits, and increased Supplemental Nutrition Assistance Program payments.

The “Making Work Pay” tax credit provision reduced federal withheld income taxes \$12.5 billion (\$49.8 billion at

an annual rate). For qualified residents of the U.S. territories, these tax credits are funded through territorial grants, including a disbursement of \$0.6 billion (\$2.6 billion at an annual rate) to Puerto Rico and American Samoa. For 2009, the total impact of this provision is estimated to be \$38.3 billion.

The ARRA also modified an existing federal program providing interest-free loans to first-time home buyers. For homes purchased after January 1, 2009, these loans were converted into tax credits that would not need to be repaid. Outlays related to these tax credits accelerated, increasing capital transfers to businesses \$7.3 billion.

State and Local Government

Table 3. State and Local Government Current Receipts and Expenditures

[Billions of dollars, seasonally adjusted at annual rates]

Net lending or net borrowing (-)	-122.9	-29.5	10.1	16.1	18.6	

Personal current taxes decreased less in the second quarter of 2009 as a result of a smaller decrease in personal income taxes.

Taxes on production and imports decreased less than in the first quarter, reflecting a smaller decrease in severance taxes, which was partly offset by a larger decrease in sales taxes.

Taxes on corporate income decelerated in the second quarter as a result of a deceleration in corporate profits.

Federal grants-in-aid accelerated, reflecting an acceleration in Medicaid and education grants due to the American Recovery and Reinvestment Act of 2009.

Consumption expenditures turned up, reflecting an upturn in spending for nondurable goods.

Government social benefit payments accelerated, reflecting an acceleration in Medicaid payments.

Capital transfer receipts turned up, reflecting an upturn in federal investment grants to state and local governments.

Gross government investment turned up as a result of an upturn in investment for structures.

Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available

annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available in underlying NIPA tables at www.bea.gov/national/nipaweb/nipa_underlying/Index.asp. For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from *Government Finances*, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.¹ These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); see “Newly Available NIPA Tables” in the October 2009 SURVEY.

1. Bruce E. Baker, “Receipts and Expenditures of State Governments and of Local Governments,” SURVEY 85 (October 2005): 5–10.

Improved Estimates of the National Income and Product Accounts Results of the 2009 Comprehensive Revision

By Eugene P. Seskin and Shelly Smith

ON JULY 31, 2009, the Bureau of Economic Analysis (BEA) released the initial results from the 13th comprehensive revision of the national income and product accounts (NIPAs), beginning with revised estimates for 1929; the results of the last comprehensive revision were released in December 2003.

In many important respects, the picture of the economy shown by the revised estimates is similar to the picture shown by the previously published estimates. The similarities and some of the differences in detail can be seen in the following:

- The long-run growth rates of real gross domestic product (GDP) are similar to those in the previously published estimates. For 1929–2008, the average annual growth rate of real GDP is 3.4 percent, 0.1 percentage point higher than in the previously published estimates. For the more recent period, 1997–2008, the growth rate is 2.8 percent, also 0.1 percentage point higher than in the previously published estimates (table 1).
- The current recession is steeper than previously estimated. From the fourth quarter of 2007 to the first quarter of 2009, real GDP decreases 2.8 percent at an average annual rate; in the previously published estimates, it had decreased 1.8 percent.
- The revised estimate of real GDP for 2008 increases 0.4 percent; the previously published estimate of real GDP had increased 1.1 percent.
- The average rate of change in the prices paid by U.S. residents for 1997–2008 is the same as in the previously published estimates (2.4 percent).
- Upward revisions to disposable personal income (DPI) beginning with 1994 are larger than upward revisions to personal outlays, resulting in upward revisions to personal saving and to the personal saving rate (personal saving as a percentage of DPI) (table 2).

The revised estimates incorporate a number of changes in classifications and definitions as well as statistical improvements that are designed to better measure the ever-changing U.S. economy. These improvements were previewed in a series of articles in the SURVEY OF CURRENT BUSINESS.

Alyssa E. Holdren contributed to this article.

Changes in classifications, definitions, and presentations were described in the May 2008 and March 2009 issues.¹ They include the following:

- An updated classification system for personal consumption expenditures (PCE) in order to present categories that are more useful for analysis of spending by households and nonprofit institutions serving households.
- A change in the treatment of disasters to better reflect the distinctions between current transactions, capital transactions, and events that directly affect balance sheets. Under the new treatment, disaster-related damages to fixed assets are recorded as “other changes in the volume of assets,” and disaster-related insurance payouts are recorded as capital transfers.
- A reclassification of transactions between the federal government and the U.S. territories and com-

1. Personal saving as a percentage of disposable personal income.
2. Gross saving as a percentage of gross national income.

monwealths in order to improve consistency with the treatment of similar private-sector transactions.

- A change in the treatment of insurance services provided by government enterprises in order to improve consistency with the treatment of the services provided by private property and casualty insurance companies.
- A new presentation of the estimates of private fixed investment in structures for 1929–96 that is consistent with the estimates for 1997 forward.
- A change in the reference year—from 2000 to 2005—for the chain-type quantity and price indexes and for the chained-dollar estimates.
- A change in the terminology used to describe two of the vintages of the current quarterly GDP estimates. The three vintages of quarterly GDP estimates are now “advance” (unchanged), “second” (previously known as “preliminary”), and “third” (previously known as “final”).

The statistical changes were described in the May 2009 issue.² They include the following:

- The incorporation of information from BEA’s 2002 benchmark input-output (I-O) accounts, which provide the most thorough and detailed information on the structure of the U.S. economy. These accounts are used to benchmark the expenditures components of GDP and some of the income components.
- Improved estimates of PCE for consumer electronics using new retail point-of-sale scanner data.
- Improved estimates of wages and salaries that incorporate new information on employee “cafeteria plans.” Under these plans, employees may use a portion of their salaries on a pretax basis to pay for health insurance and to contribute to “flexible spending arrangements,” which reimburse them for medical care and dependent care expenses.
- Improved estimates of proprietors’ income and wages and salaries that incorporate updated “misreporting adjustments”—adjustments for underreporting and nonreporting of income—using recent data from the Internal Revenue Service (IRS) and the Census Bureau that were not available for the previous comprehensive revision.

The revised estimates also reflect the incorporation of newly available and revised source data (see the box “New and Revised Source Data”).

This article discusses the major sources of the revisions that are attributable to the various changes in classifications, definitions, as well as statistical

2. See Clinton P. McCully and Steven Payson, “Preview of the 2009 Comprehensive Revision of the NIPAs: Statistical Changes,” SURVEY 89 (May 2009): 6–16.

improvements for each of the major NIPA aggregates and their components. Specifically, it discusses the following:

- Revisions to the annual current-dollar estimates in detail.
- Revisions to the annual estimates of real GDP and real gross domestic income (see page 30).
- Revisions to annual prices (see page 33).
- Revisions to the quarterly estimates of real GDP (see page 34).

Annual Current-Dollar Estimates

The revisions to current-dollar GDP reflect only the statistical changes incorporated in this comprehensive revision. None of the changes in definitions affects GDP (table 3).

The revisions to national income for most years primarily reflect the statistical changes, although the changes in definitions also affect national income. The revisions are mostly downward and less than \$3 billion through 1979. For 1980–91, the revisions remain downward but are somewhat larger; the largest downward revision is about \$31 billion for 1986. Beginning with 1992, the revisions are upward and grow rapidly from about \$4.5 billion to almost \$300 billion for 2005 before falling somewhat for 2006–2008. The change in definition that has the most impact on national income is the new treatment of disasters, especially for years with catastrophic events such as 1992, 1994, 2001, 2004, 2005, and 2008; by far the largest impact (about \$102.5 billion) is for 2005, reflecting the damages associated with Hurricanes Katrina, Rita, and Wilma. The two statistical changes that have the most impact on national income (and personal income) are the improved adjustments to wages and salaries and nonfarm proprietors' income for misreporting of income and the improved estimates of wages and salaries from the incorporation of new information on "cafeteria plans." The improved adjustments of income misreporting lower the revisions to national and personal income for 1984–95 and raise the revisions beginning with 1996. The incorporation of the new information on "cafeteria plans" results in upward revisions to national and personal income beginning with 1986.

The revisions to personal income are primarily downward and are less than \$10 billion through 1983. For 1984–92, the revisions remain downward and are somewhat larger. Beginning with 1993, the revisions are upward, growing rapidly from about \$10 billion to about \$274 billion for 2006; the revisions are somewhat smaller for 2007 and 2008. The change in definition that has the most impact on the revisions is the

new treatment of disasters, although the magnitude of the impact is far less than for national income; for example, the impact on the revision to personal income for 2005 is \$25.5 billion.

Additional detail on GDP, gross domestic income, and other NIPA aggregates and their major components is presented below. The accompanying tables show the revisions for 1992, 1997, 2002, and, 2005–2008 allocated among the changes in definition and the statistical improvements. Table A presents the revised current-dollar estimates for 2002, 2005, and

2008, the revisions in level for 2002–2008, and summarizes the major source data incorporated for selected detailed components.

The remainder of this section on revisions to the annual current-dollar estimates is organized according to the seven-account framework for the NIPAs. The discussion focuses on the following:

- Domestic income and product, account 1, which shows the consolidated production of all sectors of the economy as the sum of goods and services sold to final users and as the sum of incomes generated by the production of those goods and services.
- Private enterprise income, account 2, which provides additional information on the sources and uses of income by private enterprises.
- Personal income and outlays, account 3.
- Government current receipts and expenditures, account 4.
- Foreign transactions, accounts 5 and 7, including receipts and expenditures of the foreign sector (account 5) and capital transactions with the rest of the world (account 7).
- Saving and investment, account 6, of the domestic sectors of the economy.

Domestic income and product (account 1)

GDP. Before 1978, the revisions to GDP are very small and never exceed \$1 billion in absolute value. Between 1979 and 1991, GDP is revised down for each year by less than \$4 billion. Beginning with 1992, GDP is generally revised up by increasingly larger amounts. As a percentage of the previously published level of GDP, the largest revision is 2.0 percent of GDP for 2007.

Gross domestic income (GDI) and the statistical discrepancy. Before 1979, the revisions to GDI are very small, never exceeding \$1 billion in absolute value. Between 1979 and 1992, GDI is revised down; as a percentage of the previously published level of GDI, the largest downward revision is 0.7 percent for 1985. Beginning with 1993, GDI is revised up by generally increasing amounts. As a percentage of the previously published level of GDI, the largest upward revision during this period is 2.1 percent for 2006; the upward revisions for 2007 and for 2008 are each 1.5 percent.

The statistical discrepancy—GDP less GDI—is revised down less than \$2 billion until 1979.³ For 1979–83, upward revisions to the statistical discrepancy are less than \$6 billion. Beginning with 1984, the revisions to the statistical discrepancy generally become larger; for 1984–91, downward revisions to GDP are smaller than those to GDI, and the statistical discrepancy is revised up. For 1992, GDP is revised up and GDI is revised down, and the statistical discrepancy is also revised up. Beginning with 1993, upward revisions to GDP are smaller than upward revisions to GDI, and the statistical discrepancy is revised down except for 2007. For 1979–2008, the revised estimates (without regard to sign) of the statistical discrepancy average 0.9 percent of GDP, the same as in the previously published estimates.

3. In theory, GDP should equal GDI; in practice, GDP and GDI differ because their components are estimated using largely independent and less-than-perfect source data. See the box “The Statistical Discrepancy” in Robert P. Parker and Eugene P. Seskin, “Annual Revision of the National Income and Product Accounts,” SURVEY 77 (August 1997): 19.

sions to the statistical discrepancy generally become larger; for 1984–91, downward revisions to GDP are smaller than those to GDI, and the statistical discrepancy is revised up. For 1992, GDP is revised up and GDI is revised down, and the statistical discrepancy is also revised up. Beginning with 1993, upward revisions to GDP are smaller than upward revisions to GDI, and the statistical discrepancy is revised down except for 2007. For 1979–2008, the revised estimates (without regard to sign) of the statistical discrepancy average 0.9 percent of GDP, the same as in the previously published estimates.

Product-side components

Personal consumption expenditures (PCE). The new classification system does not, by itself, affect the overall level of current-dollar PCE (table 4). The new classification system, however, does shift the composition of PCE, resulting in a substantial upward revision to PCE for services, mainly reflecting the reclassification of “purchased meals and beverages” (restaurant meals) from nondurable goods to services. The new classification system also results in an upward revision to durable goods, reflecting the reclassification of luggage (from nondurable goods to durable goods) and eye examinations (from services to durable goods); eye examinations are now included with eyeglasses and contact lenses.

Because the composition of the components of PCE (durable goods, nondurable goods, and services) changes as part of the new classification system for PCE, comparisons of the revised estimates for components of PCE with the previously published estimates are difficult to interpret.

The revisions to total current-dollar PCE reflect only statistical changes (the incorporation of new source data and estimating methodologies). For 1979–91, downward revisions to PCE are \$6 billion or less. Beginning with 1992, PCE is revised up by

generally increasing amounts, peaking at an upward revision of about \$125 billion for 2005, with somewhat smaller upward revisions for 2006 and 2007, and an upward revision of \$72 billion for 2008.

Notable revisions to total PCE begin in the mid-1990s. PCE for housing and utilities services is revised up, reflecting the incorporation of new data on owner-occupied nonfarm housing from the 2001 Residential Finance Survey and the 2000 Census of Housing. The incorporation of the 2002 benchmark I-O accounts results in upward revisions to securities commissions, to air transportation services, and to services from non-profit higher education and religious organizations, and in downward revisions to health care services and to food services and accommodations. The incorporation of data from the 2002 benchmark I-O accounts also results in upward revisions to several categories of PCE for durable goods and in downward revisions to several categories of PCE for nondurable goods. For 2006–2008, the revisions also reflect Census Bureau data on retail trade for 2006 (revised) and 2007 (preliminary), and on services for 2006 and 2007 (revised) and 2008 (preliminary).

Nonresidential structures. This component of private fixed investment is revised up, beginning with 1999. The revisions primarily reflect the incorporation of data from the 2002 benchmark I-O accounts and revised data from Census Bureau surveys of construction spending (value put in place) as well as upward revisions to petroleum structures for 2003–2008 that reflect the incorporation of revised data on capital expenditures from the Census Bureau and on footage drilled from a trade source.

Equipment and software. This component of private fixed investment is revised up, beginning with 1998. The revisions tend to become increasingly large. The major contributors to the revisions are upward revisions to software, to transportation equipment, and to “other” equipment. For all three categories, the revisions reflect the incorporation of data from the 2002 benchmark I-O accounts. The revised estimates also reflect the incorporation of newly available preliminary shipments data from the 2007 Economic Census. In addition, the revisions to software reflect the incorporation of revised and newly available data from the Census Bureau Service Annual Survey (SAS) for recent years. The revisions to transportation equipment also reflect the incorporation of revised shipments and foreign trade data from the Census Bureau and revised motor vehicle units data and price data from trade sources. The revisions to “other” equipment also reflect the incorporation of revised shipments data from the Census Bureau.

Residential fixed investment. Upward revisions to this component begin with 1999 and remain less than \$6 billion through 2006. For 2007, there is a small downward revision, and for 2008, there is a downward revision of about \$10 billion. The major contributor to the revision is “residential improvements,” reflecting the incorporation of data from the 2002 benchmark I-O accounts and of revised data from Census Bureau surveys of construction spending (value put in place).

Change in private inventories. This component is calculated by adjusting inventories reported by businesses on a book-value basis to a current-period, replacement-cost basis by removing inventory profits and losses. The inventory valuation adjustment (IVA), which is calculated as the change in private inventories less the change in book values, reflects inventory price changes by revaluing reported inventories to current period prices.

The revisions to change in farm inventories begin with 1991 and are less than \$1 billion in absolute value through 2006. For 2007 and 2008, there are downward revisions of about \$2 billion and \$4.5 billion, respectively. The revisions through 2007 reflect the incorporation of revised data on crop inventory change and on livestock inventory change from the U.S. Department of Agriculture (USDA), and the revision for 2008 reflects the incorporation of newly available USDA data.⁴

The revisions to change in private nonfarm inventories begin with 1997 and are downward through 2001 and upward beginning with 2002. The largest revisions are for 2006–2008. For 2006 and 2008, the revisions are mostly to mining, utilities, and construction inventories, primarily reflecting the incorporation of data from Internal Revenue Service (IRS) tabulations of business tax returns for 2006 and 2007, from revised Census Bureau Quarterly Financial Report data for mining industries for 2008, from revised and newly available utilities inventory data from the Energy Information Administration for 2008, and from revised Census Bureau surveys of construction spending (value put in place) for 2008. For 2007, the revision is mostly to retail trade motor vehicle inventories and to manufacturing inventories, primarily reflecting the incorporation of newly available motor vehicle inventory data from the Annual Retail Trade Survey for 2007 and of preliminary Census Bureau Economic Census data for 2007, respectively. The revisions to private nonfarm inventories also reflect the incorporation of newly available and revised Census Bureau data on inventory book values, of new commodity weights from the 2002

4. Farm inventories are measured on a current-market-price basis; therefore the IVA is not needed.

benchmark I-O accounts, of newly available and revised Census Bureau data on the accounting methods used in inventory reporting, of revised BEA unit labor cost indexes, and of revised producer price indexes from the Bureau of Labor Statistics (BLS).

Net exports of goods and services. The revisions to net exports begin with 1986 and are less than \$1 billion in absolute value through 1997. Beginning with 1998, the revisions are downward, and by 2005, they become larger than \$5 billion. The revisions primarily reflect revised estimates from the international transactions accounts (ITAs).⁵

The revisions to exports of goods begin with 2002 and reflect a change in the ITA methodology for estimating foreign military sales transactions, which are excluded from goods exports. In addition, the revisions beginning with 2004 reflect an analysis of the aircraft industry by the Census Bureau that results in notable revisions for 2006–2008. The revisions to imports of goods begin with 1997 and are upward and less than \$5.5 billion except for 2008, which is revised up about \$11 billion; the revisions primarily reflect the incorporation of Census Bureau data and updated ITA adjustments, including an adjustment that raises the value of imports of computer software to include the value of intellectual property.

The revisions to exports of services are downward and less than \$1 billion through 1997. Beginning with 1998, the revisions remain downward except for 2007 and become larger, reaching about \$12 billion for 2008. The revisions reflect the incorporation of updated results from BEA's benchmark survey of selected international services for 2006, of updated results from BEA's quarterly surveys of international services beginning with 2007, and of newly available information on transfers under U.S. military agency sales contracts beginning with 2006. The revisions to imports of services are downward and less than \$2 billion through 1997. Beginning with 1998, the revisions remain downward and tend to become somewhat larger; the largest revisions are about \$5 billion for 2001 and for 2002, primarily to "other" private services. The revisions to imports of services, which reflect the incorporation of revised ITA estimates, include revised estimates of insurance premium supplements and the introduction of medical services payments in "other" private services.

Government consumption expenditures and gross investment. The revisions to this component (hereafter referred to as "government spending") are negli-

5. The annual revisions of the ITAs are usually published in the July issue of the SURVEY, most recently in Anne Flatness, Erin M. Whitaker, and Robert E. Yuskavage. "Annual Revision of the U.S. International Accounts," SURVEY 89 (July 2009): 35–51.

ble through 1988 (table 5). Beginning with 1989, the revisions to government spending are upward and peak at about \$22 billion for 2002 before diminishing to less than \$1 billion for 2008. For 1989–2006, the upward revisions are primarily accounted for by state and local government spending. For 2007, an upward revision to state and local government spending is partly offset by a downward revision to federal government spending. For 2008, an upward revision to federal government spending is mostly offset by a downward revision to state and local government spending.

For state and local government spending, the revisions for 1989–2000 primarily reflect upward revisions to consumption expenditures. For 2001–2007, the revisions reflect upward revisions to consumption expenditures that are partly offset by downward revisions to gross investment. For 2008, the revision reflects downward revisions to both consumption expenditures and gross investment. The revisions to consumption expenditures reflect upward revisions to employee compensation and downward revisions to "sales to other sectors" (primarily tuition and related educational charges and health and hospital charges), which are subtracted in the derivation of consumption expenditures. These revisions are partly offset through 2007 by downward revisions to intermediate purchases.⁶ The revisions to employee compensation primarily reflect the incorporation of the new information on employee "cafeteria plans." The revisions to sales to other sectors and to intermediate purchases primarily reflect the incorporation of data from the 2002 benchmark I-O accounts and from revised and newly available Census Bureau annual surveys of state and local government finances (hereafter referred to as

6. Government consumption expenditures, which is a measure of the value of services produced by general governments, is gross output less own-account investment and sales to other sectors. Gross output is measured by the cost of inputs, including compensation of employees, consumption of fixed capital, and intermediate goods and services purchased.

“government finances data”). The revisions to government investment primarily reflect the incorporation of data from the 2002 benchmark I-O accounts, from revised and newly available Census Bureau government finances data, and from revised Census Bureau surveys of construction spending (value put in place).

For federal government spending—national defense spending and nondefense spending—the revisions are less than \$3 billion in absolute value through 2006. For 2007, a downward revision primarily reflects a downward revision to nondefense consumption expenditures. Within national defense spending for 2007, a downward revision of about \$5 billion to consumption expenditures is offset by an upward revision of about \$5 billion to gross investment. For 2008, an upward revision of about \$10.5 billion primarily reflects upward revisions to nondefense consumption expenditures and to national defense gross investment. The upward revision to national defense gross investment is partly offset by a downward revision to national defense consumption expenditures. The revisions to federal government spending primarily reflect the incorporation of revised federal budget data for fiscal year 2008 and of newly available data from the Department of Defense for 2008.

Income-side components

Compensation of employees, paid. This aggregate shows the income accruing to employees for their work for domestic production; it includes compensation paid to the rest of the world and excludes compensation received from the rest of the world.⁷

The revisions to compensation reflect revisions to wage and salary disbursements and to supplements to wages and salaries (table 6). Revisions to wage and salary disbursements begin with 1978 and are downward and remain less than \$10 billion through 2000, except

for 1984–90, when the revisions are between \$10 billion and \$15 billion. For 2001–2007, the revisions are upward and tend to become larger; for 2008, the revision is relatively small and downward. Throughout the entire period, 1978–2008, the revisions reflect downward revisions to the adjustments for the misreporting of income that tend to become larger over time and result from the incorporation of newly available data from the Internal Revenue Service and the Census Bureau. In addition, throughout the entire period, 1986–2008, the revisions also reflect upward revisions as a result of the incorporation of the new information on “cafeteria plans” that raise wages and salaries, based on data from the Agency for Healthcare Research and Quality Medical Expenditure Panel Survey (MEPS) and on trade source data. The downward revision for 2008 also reflects the incorporation of BLS tabulations of revised wage and salary data for the full year for private-sector employees and state and local government employees from the BLS Quarterly Census of Employment and Wages (QCEW).⁸

The revisions to supplements to wages and salaries begin with 1987 and are less than \$1 billion in absolute value through 1990. For 1991–2000, 2002, and 2004–2006, the revisions are upward and below \$8 billion; for 2001 and 2003, the upward revisions are much larger. For 2007, supplements is revised down about \$3 billion, and for 2008, supplements is revised down about \$8 billion. Through 2005, the upward revisions are primarily to employer contributions for pension and insurance funds. For 2006 and 2007, there are notable offsetting downward revisions to employer contributions for government social insurance. Within pension and insurance funds, employer contributions for health insurance is revised up for 1996–2006 and revised down for 2007, primarily reflecting the incorporation of data from the MEPS. Employer contributions for private pension and profit-sharing plans is revised up for 1990–98 and is revised down for 1999–2007 except for 2001 and 2003, which have two large upward revisions—all reflecting the incorporation of pension data from the Department of Labor. Employer contributions for private workers’ compensation is also revised up for 1997–2008, reflecting the incorporation of data from a trade source. Employer contributions for government social insurance

7. This measure of compensation differs from the measure that is a component of national income. The national income measure excludes compensation paid to the rest of the world and includes compensation received from the rest of the world.

8. For the “second” GDP estimate for each quarter, QCEW data for the preceding quarter are incorporated; however, subsequent revisions to the wage and salary estimates occur during annual and comprehensive revisions for at least three reasons: (1) the QCEW data for the government sector and for the households and institutions sector are not incorporated until the annual and comprehensive revisions to avoid revising GDP for the preceding quarter, (2) the QCEW data may be revised, and (3) revised seasonal factors are incorporated.

is revised down for 2007 and 2008, reflecting the incorporation of newly available tabulations of state and local government finances data for fiscal year 2007 and of the QCEW for 2008.

Taxes on production and imports. The revisions to this component are below \$1 billion in absolute value through 2004. For 2005, the taxes are revised up by \$2 billion, and for 2006–2008, they are revised up by between \$10 billion and \$13.5 billion (table 7). For 2006–2008, the revisions reflect upward revisions to state and local general sales taxes, and for 2007 and 2008, the revisions also reflect upward revisions to state and local property taxes, based primarily on the incorporation of revised and newly available Census Bureau government finances data.

Subsidies. The revisions to this component are less than \$2 billion in absolute value for all years except 2001, 2002, 2007, and 2008, when it is revised up by between \$2 billion and \$3.5 billion (table 8). The notable revisions are more than accounted for by the change in definition that recognizes subsidies paid from the federal government to federal insurance enterprises—specifically, subsidies paid to the Federal Crop Insurance Corporation.

Net operating surplus. This component is a profits-like measure that shows business income after subtracting the costs of compensation of employees, “taxes on production and imports, less subsidies,” and consumption of fixed capital from gross value added but before subtracting financing costs (such as net interest) and business transfer payments. Net operating surplus

consists of net operating surplus of private enterprises and the current surplus of government enterprises.

Current surplus of government enterprises. The revisions to this component begin with 1977 (table 9). Through 1987, the revisions are generally downward and \$1 billion or less. Beginning with 1988, the revisions are upward and range from less than \$1 billion to about \$10 billion for 2005. The revisions are primarily to state and local government enterprises, reflecting the incorporation of revised and newly available Census Bureau government finances data. In addition, the relatively large upward revision for 2005 also reflects the new treatment of disasters because the current surplus is no longer reduced by the impacts of Hurricanes Katrina, Rita, and Wilma that were previously recorded in consumption of fixed capital.

Consumption of fixed capital (CFC). This component is the charge for the using up of private and government fixed capital; it is revised less than \$1 billion in absolute value through 1957 and is revised less than \$5 billion in absolute value from 1958–80. The revisions tend to be larger beginning with 1981 and of mixed sign (table 10). The revisions are mostly accounted for by revisions to the private component (comprising businesses, households, and nonprofit institutions serving households); these revisions primarily reflect the incorporation of revised estimates of fixed investment and prices.⁹ The new treatment of disasters, which reclassifies the value of catastrophic losses from depreciation to “other changes in volume of assets,” contributes to the downward revisions for several years that had catastrophic events (particularly 1992, 1994, 2001, 2004, and 2005).¹⁰

9. The estimates of investment and prices are direct inputs into the calculation of both private and government net capital stocks, which are used to calculate CFC.

10. For more information on the new treatment of disasters, see Seskin and Smith, 11–15.

Capital consumption allowances (CCA)—that is, tax-return-based depreciation for corporations and nonfarm proprietorships and BEA estimates of historical-cost depreciation (using consistent service lives) for farm proprietorships and rental income of persons—shows a mixed pattern of revisions. Through 2005, the most notable revisions are downward, reflecting the new treatment of disasters. For 2006–2008, CCA is revised up, primarily reflecting the incorporation of revised IRS tabulations of tax returns of corporations for 2006 and of newly available tabulations for 2007.

Private capital consumption adjustment (CCAdj) converts depreciation that is on a historical-cost (book-value) basis—CCA—to depreciation that is on a current-cost (replacement) basis—CFC—and it is derived as the difference between private CCA and private CFC. Revisions to the CCAdj are of mixed sign and tend to be larger beginning with 1985, reflecting revisions to both CCA and CFC.

Private enterprise income (account 2)

Private enterprises consist of private businesses, owner-occupied housing, and (for purposes of estimating monetary and imputed interest payments and imputed interest receipts) nonprofit institutions serving households.

Proprietors' income with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj). For farm proprietors' income the revisions

are below \$2 billion in absolute value through 1999 (table 11). For 2000–2006 and 2008, the revisions are larger and upward, ranging from about \$7 billion to about \$14 billion; for 2007, the revision is downward about \$4.5 billion. The revisions primarily reflect the incorporation of revised and newly available data from the U.S. Department of Agriculture (USDA), including revised corporate farm ratios that are used to derive the proprietorships' share of farm income and are also based on USDA data.

For nonfarm proprietors' income, the revisions remain below \$2 billion in absolute value through 1983. For 1984–93, the revisions are larger and downward, primarily reflecting the incorporation of updated adjustments for the misreporting of income using data from the IRS and the Census Bureau that were not available for the last comprehensive revision. Beginning with 1994, the revisions are upward and become larger over time, reaching more than \$100 billion for 2002–2006, also primarily reflecting the incorporation of the updated adjustments for the misreporting of income. For 2007 and 2008, the upward revisions are smaller—about \$45 billion and \$20 billion, respectively, primarily reflecting the incorporation of new IRS tabulations of tax return data for sole proprietorships and partnerships for 2007. In addition, the new treatment of disasters results in additional upward revisions for years with catastrophic events (such as 1994, 2004, 2005, and 2008).

Rental income of persons with CCAdj. Through 1991, the revisions to this component are mostly downward and less than \$2 billion. Beginning with 1992, the revisions are upward and become more notable, generally increasing over time and reaching \$146 billion by 2008 (table 12). The revisions for 1992–2008 primarily reflect upward revisions to nonfarm permanent-site owner-occupied space rent, based on the incorporation of newly available data from the 2001 Residential Finance Survey (RFS) and of data from the BLS Consumer Expenditure Survey for 2002–2007,

which are used to extrapolate the RFS data. The revisions also reflect downward revisions to property taxes (an expense that is subtracted in the calculation of rental income) based on the incorporation of newly available data from the 2001 RFS. In addition, the upward revisions for 1992–2008 also reflect the incorporation of certain housing subsidies that were previously not captured in the estimates of rental income. For 2007 and 2008, the overall revisions also reflect downward revisions to closing costs (also expenses that are subtracted in the calculation of rental income) based on the incorporation of newly available data on mortgage originations from Freddie Mac for 2007. Finally, the new treatment of disasters also results in upward revisions for years with catastrophic events (such as 1992, 2004, and especially 2005 because of Hurricanes Katrina, Rita, and Wilma).

Corporate profits with IVA and CCAdj. Through 1990, the revisions to this component are generally downward and never exceed \$6 billion in absolute value. For 1991–2001, the revisions are upward and range from about \$2 billion to about \$28 billion. For 2002–2005, the revisions are of mixed sign and never exceed \$16 billion in absolute value. For 2006–2008, the revisions are downward and much larger, reaching about \$116 billion for 2008 (table 13). Beginning with

1987, an improved treatment of expenses for nondeductible business meals and entertainment raises the revisions, and beginning with 1988, improved estimates of capital gains and indirect commissions of securities brokers and dealers lower the revisions.¹¹ In addition, the new treatment of disasters raises the revisions for years with catastrophic events (especially 1992, 1994, 2001, 2004, 2005, and 2008). For 2006–2008, the primary source of the revisions is the incorporation of revised IRS tabulations of corporate tax return data for 2006 and newly available IRS tabulations for 2007 as well as of revised regulatory agency and public financial reports for 2008.

As discussed in the section on CFC, the revisions to the CCAdj are of mixed sign and reflect the revisions to CCA and CFC discussed above.

For 1998–2002, the IVA is revised down by \$5 billion or less, and for 2003–2008, the IVA is revised up by about \$10 billion or less. The revisions reflect the use of revised commodity weights from the 2002 benchmark I-O accounts and revised price data.

Net interest and miscellaneous payments. Through 1993, the revisions to this component are \$2 billion or less in absolute value. For 1994–2005, the revisions are downward and range from about \$4 billion to about \$30 billion. For 2006–2008, the revisions are upward, with large revisions for 2007 and 2008 of about \$75 billion and about \$132.5 billion, respectively. The revisions reflect the incorporation of Census Bureau tabulations of mortgage interest payments from the 2001 Residential Finance Survey, data from BEA's international transactions accounts (ITAs), revised and newly available trade source data on the investment income of life insurance carriers, and revised 2006 and newly available 2007 IRS tabulations of business income tax returns. Beginning with 1985, the revisions also reflect the removal of mortgage-backed securities from the calculation of the reference rate that is used to derive estimates of imputed interest paid by and received from commercial banks.¹²

Business current transfer payments (net). This component consists of “transfer payments to persons (net),” “business transfer payments to government (net),” and “business transfer payments to the rest of the world (net).”

The revisions to “business current transfer payments (net)” through 2000 are less than \$2 billion in absolute value (table 14). For 2001–2008, the revisions

11. For more information on these improvements, see McCully and Payson, 12–14.

12. This treatment was introduced in the 2005 NIPA annual revision and is now being implemented for the entire historical period impacted by the change. See Eugene P. Seskin, Shelly Smith, and Teresa L. Weadock, “Annual Revision of the National Income and Product Accounts,” SURVEY 85 (August 2005): 32–33.

are of mixed sign and magnitude, reflecting the revisions to the three subcomponents, which are sometimes offsetting. Payments to persons are revised down for 2001–2008, primarily reflecting the new treatment of disasters for years with catastrophic events (such as 1992, 1994, 2001, 2004, 2005, and 2008). Payments to government are revised up throughout this period except for 2001, which is revised down \$1.5 billion, primarily reflecting the new treatment of disasters. The revisions also reflect the new treatment of insurance services provided by government enterprises.¹³ The notable revisions to payments to the rest of the world during this period also reflect the new treatment of disasters.

Personal income and outlays (account 3)

Personal income. Revisions of \$1 billion or larger in absolute value begin with 1978. For 1978–92, the revisions are downward, the largest of which is about \$32 billion for 1990. Beginning with 1993, the revisions are upward and generally increase over time to about \$274 billion for 2006. For 2007 and 2008, the revisions are somewhat smaller, about \$231 billion and \$138 billion, respectively (table 15). The revisions partly reflect the revisions to the components of national income that are included in personal income (wage and salary disbursements, supplements to wages and salaries, proprietors' income, and rental income of persons) and to the components of personal income (personal interest income and personal dividend income) that are derived from related components of national income. The revisions also reflect revisions to “personal current transfer receipts” and to “contributions for government social insurance, domestic.”

13. For more information on the new treatment of insurance services, see Seskin and Smith, 17.

Compensation of employees, received. This component consists of wage and salary disbursements and

supplements to wages and salaries received by U.S. residents, including wages and salaries received from the rest of the world. The major sources of revision to this aggregate are the same as those already discussed in the section “Compensation of employees, paid.” Differences primarily reflect the exclusion of the adjustment “wage accruals less disbursements” (WALD).¹⁴

Personal income receipts on assets. This aggregate consists of personal interest income and personal dividend income. Personal interest income consists of monetary and imputed interest received by persons from all sources, and it is calculated as net interest plus interest paid by persons and interest paid by government less interest received by government. Revisions to personal interest income begin with 1985 and are

14. WALD is the difference between wages earned, or accrued, and wages paid, or disbursed. In the NIPAs, wages accrued is the appropriate measure for national income, and wages disbursed is the appropriate measure for personal income. To estimate WALD, BEA converts annual disbursements data based on BLS tabulations of wages and salaries to an accrual basis. WALD primarily consists of BEA estimates of bonus payments that are declared at the end of a year but that are actually paid the next year.

downward through 2005 and tend to increase in magnitude during this period, peaking at \$35 billion for 2001. For 2006–2008, the revisions are upward: about \$2 billion for 2006, about \$52 billion for 2007, and \$99.5 billion for 2008. Revisions over the entire period, 1995–2008, reflect the revisions to net interest (described above) and the incorporation of revised data on consumer debt outstanding from the Federal Reserve Board that are used to estimate interest paid by persons. For 2006–2008, the revisions also reflect the incorporation of revised and newly available Census Bureau government finances data on monetary interest received by state and local governments. Additionally, for 2008, the revision reflects revised estimates of monetary interest paid by the federal government, based on the incorporation of revised and newly available federal budget data.

The revisions to personal dividend income begin with 1992 and are less than \$4 billion in absolute value through 2003. For 2004–2007, the revisions are of mixed sign and range from an upward revision of

New and Revised Source Data

The 2009 comprehensive revision of the national income and product accounts (NIPAs) incorporated a wide array of new and revised source data.

The most important source data that affect the estimates prior to 2006 are BEA’s benchmark 2002 input-output accounts. The revised estimates also incorporate data on inventories, on receipts and expenses of business establishments and of governments, on sales by detailed commodity and by product line, and on final industry and product shipments from the 2002 Economic Census, and on trade margins from both the 2002 Economic Census and the 2002 annual surveys of merchant wholesale and retail trade.

The revised estimates also reflect data on housing from the 2000 decennial Census of Housing and the 2001 Residential Finance Survey. In addition, estimates that are based on BEA’s international transactions accounts (ITAs)—primarily net exports of goods and services and rest-of-the-world income receipts and payments—are revised to reflect improvements to the ITAs that have been introduced since 2003.

Estimates of nonreported income are updated using newly available data from the Census Bureau’s 2003–2007 “exact-match” studies, and estimates of underreported income are revised using data from the IRS National Research Program for 2001 and from the IRS Taxpayer Compliance Measurement Program reports for 1988 and 1996.

Other data that are incorporated include revised data on the expenditures and receipts of state and local gov-

ernments for fiscal years 2001–2005 from the Census Bureau and revised data on employer pension and profit-sharing plans for 1996–2006 from the Department of Labor.

The revised estimates for 2006–2008 also reflect the incorporation of newly available and revised source data that became available after the last annual NIPA revision in July 2008. The most important of these data sources are the following:

- Census Bureau annual surveys of state and local governments for fiscal year 2006 (revised) and fiscal year 2007 (preliminary), of manufacturers for 2006 (revised), of merchant wholesale trade and of retail trade for 2006 (revised) and 2007 (preliminary), and of services and of construction spending (value put in place) for 2006 and 2007 (revised) and 2008 (preliminary)
- Preliminary economic census “advance summary statistics” shipments and inventories for 2007
- Federal government budget data for fiscal years 2008 and 2009
- ITAs data for 2006–2008 (revised)
- Bureau of Labor Statistics Quarterly Census of Employment and Wages for 2006–2008 (revised)
- Internal Revenue Service tabulations of corporate tax returns for 2006 (revised) and 2007 (preliminary) and of sole proprietorship and partnership tax returns for 2007
- U.S. Department of Agriculture farm statistics for 2006–2008 (revised)

about \$11.5 billion for 2004 to downward revisions of about \$20 billion for 2005 and for 2007. For 2008, there is a very large downward revision of about \$142.5 billion. For 2004 and 2006, the revisions are more than accounted for by upward revisions to dividends from the rest of the world, reflecting the incorporation of newly available estimates from the ITAs. For 2007, the revision reflects a downward revision to domestic dividends based on the incorporation of newly available IRS tabulations of corporate tax return data that is partly offset by an upward revision to dividends from the rest of the world based on the incorporation of the newly available estimates from the ITAs. For 2008, the large revision primarily reflects the incorporation of data from an expanded sample of public financial reports.

Personal current transfer receipts. This aggregate consists of government social benefits and “business current transfer payments to persons (net).” The revisions begin with 1988 and are less than \$1 billion in absolute value through 1991. For 1992–2005, the revisions are generally downward; the largest downward revision is about \$12 billion for 2005. There are small upward revisions for 1993 and 1995. For 2006–2008, the revisions are upward, ranging from \$2 billion to about \$7 billion. Through 2005, the revisions mostly reflect the pattern of revisions to “other current transfer receipts, from business (net)” and result from the new treatment of disasters. For 2006–2008, upward revisions to government social benefits dominate the revisions, reflecting upward revisions to health insurance benefits, based on the incorporation of revised data from the Centers for Medicare and Medicaid Services (CMS) for 2006 and 2007 and newly available CMS data for 2008.

Contributions for government social insurance, domestic. This component is deducted in the calculation of personal income and consists of both personal and employer contributions. The revisions begin with 1993 and are below \$1 billion in absolute value through 1999. For 2000–2003, the revisions are upward and less than \$3.5 billion, and for 2004–2008, the revisions are downward and less than \$6 billion.

Personal current taxes. The revisions to this component are less than \$3.5 billion in absolute value through 2007. For 2008, these taxes are revised down about \$25 billion, reflecting the incorporation of tax collections data from the Treasury Department and of preliminary taxable wage data from the Social Security Administration.

Disposable personal income (DPI). The pattern of revisions to DPI (which is equal to personal income less personal current taxes) reflects the revisions to

these two components. Through 1978, the revisions to DPI do not exceed \$1 billion in absolute value. For 1979 forward, the revisions tend to be larger, with downward revisions through 1992 and upward revisions thereafter. The largest downward revision is about \$32 billion for 1990, and the largest upward revision is \$275 billion for 2006.

Personal outlays. This component consists of personal consumption expenditures (PCE), personal interest payments, and personal current transfer payments. The revisions to personal outlays are downward and below \$10 billion in absolute value through 1991 and upward thereafter; the largest upward revision is about \$120 billion for 2005. The revisions primarily reflect the revisions to PCE.

Personal saving. This component equals the difference between DPI and personal outlays. Through 1978, the revisions do not exceed \$1 billion in absolute value. For 1979–92, the revisions are larger and downward; the largest is a downward revision of about \$26.5 billion for 1985. For 1993–2008, the revisions are upward and generally become larger over time; the largest is an upward revision of about \$164 billion for 2006. The revisions to personal saving result in corresponding revisions to the personal saving rate—personal saving as a percentage of DPI. Through 1980, the revisions to the saving rate do not exceed 0.2 percentage point in absolute value. For 1981–92, the saving rate is revised down by between 0.3 percentage point and 0.8 percentage point. The saving rate is unrevised for 1993, and beginning with 1994, it is revised up, on average, about 1.0 percentage point.

Government current receipts and expenditures (account 4)

Government current receipts is the sum of current tax receipts, contributions for government social insurance, income receipts on assets, current transfer receipts, and current surplus of government enterprises. Current expenditures is the sum of consumption expenditures, current transfer payments, interest payments, and subsidies, less wage accruals less disbursements. Net government saving is the difference between current receipts and current expenditures.

Federal government. Current receipts is revised less than \$1 billion in absolute value each year through 1982 and less than \$2 billion in absolute value for 1983–95. Beginning with 1996, the revisions are upward except for 2008, which is revised down about \$94.5 billion (table 16). The upward revisions from 1996 to 2007 range from about \$2.5 billion to about \$23 billion for 2005 and are mostly statistical, reflecting the incorporation of revised and newly available

source data. However, for 2005, the upward revision primarily reflects the new treatment of disasters, which raises current transfer receipts from business. For 2008, the downward revision primarily reflects downward revisions to taxes on corporate income, based on the revised estimate for corporate profits (discussed above), and to personal current taxes (discussed above).

Federal government current expenditures is revised less than \$1 billion in absolute value through 1973. For 1974–95, the revisions are upward and generally grow over time to \$10.5 billion for 1995. For 1996–2008, the revisions remain upward and range from about \$7.5 billion for 1997 and 2000 to about \$23.5 billion for 2008. The revisions reflect upward revisions from the reclassification of transactions between the federal government and the U.S. territories and commonwealths—specifically, government social benefits and other current transfer payments to the rest of the world.

Federal government net saving is revised less than \$1 billion in absolute value through 1974. Beginning with 1975, the upward revisions to current expenditures tend to be greater than the upward revisions to current receipts, and as a result, the revisions to federal government net saving are downward except for 2005,

(that upward revision reflects the new treatment of disasters). The downward revisions do not exceed \$10 billion except for 2008, which is revised down \$117.5 billion (discussed above).

State and local government. Current receipts is unrevised through 1988. For 1989–2004, the revisions to current receipts are upward and are below \$7 billion in absolute value. For 2005–2008, the revisions remain upward, but grow larger, reaching about \$39 billion for 2008. For the most part, the upward revisions are statistical, reflecting the incorporation of revised and newly available source data. For 2001, 2004, and 2005, the revisions also reflect the new treatment of disasters.

State and local current expenditures is unrevised through 1985. For 1986–2007, the revisions to current expenditures are upward, generally increasing over time and reaching \$22.5 billion for 2002 before gradually becoming smaller and reaching about \$13 billion for 2007. The revision is slightly downward for 2008. For the most part, the revisions are statistical, reflecting the incorporation of revised and newly available source data. However, beginning with 1986, the revisions also reflect improved estimates of state and local government wages and salaries that incorporate the new information on “cafeteria plans” (discussed above).

Through 1989, the revisions to state and local government net saving are less than \$1 billion in absolute value. For 1990–2005, the revisions are downward, reflecting upward revisions to state and local government current expenditures that exceed upward revisions to current receipts. For 2006 and 2007, state and local government net saving is revised up, reflecting upward revisions to current receipts that exceed upward revisions to current expenditures. For 2008, a relatively large upward revision to net government saving reflects the relatively large upward revision to current receipts.

The statistical revisions to current receipts and current expenditures mainly reflect the incorporation of the 2002 benchmark I-O accounts, revised and newly available Census Bureau government finances data, and revised data from Census Bureau surveys of construction spending (value put in place).

Foreign transactions (accounts 5 and 7)

Current receipts from the rest of the world. This aggregate consists of exports of goods and services and income receipts from the rest of the world. The revisions to exports were discussed above. The revisions to income receipts begin with 1986 and are downward and less than \$1 billion through 1992. For 1993–2000, the revisions remain downward and range from about \$1 billion to about \$7 billion; for 2001–2004, the revisions

are upward and range from about \$0.5 billion to \$16.5 billion, and for 2005–2008, the revisions are both downward and upward and range from less than \$1 billion to about \$11 billion (table 17). These revisions reflect the incorporation of revised estimates from the ITAs.

Current payments to the rest of the world. This aggregate consists of imports of goods and services, income payments, and “current taxes and transfer payments to the rest of the world (net).” The revisions to imports were discussed above. The revisions to income payments also begin with 1986 and are less than \$1 billion in absolute value through 1994. For 1995–99, the revisions are upward and never exceed \$5 billion. For 2000–2002, the revisions are downward and range from about \$1 billion to about \$10.5 billion. For 2003–2008, the revisions follow a mixed pattern and range from \$1.5 billion to about \$13.5 billion in absolute value. These revisions again reflect the incorporation of revised estimates from the ITAs.

The revisions to “current taxes and transfer payments to the rest of the world (net)” are all upward; they remain below \$1 billion through 1974. For 1975–2001, the revisions generally grow over time, reaching \$10 billion for 2000 and jumping to about \$25.5 billion for 2001. For 2002 to 2008, the upward revisions range from \$9 billion to about \$24.5 billion. Beginning with 1951, these revisions reflect the reclassification of transactions between the federal government and the U.S. territories and commonwealths; by

2008, this reclassification adds about \$12.5 billion to the overall revision (about \$24 billion). In addition, beginning with 1992, the revisions reflect the new treatment of disasters; for years with catastrophic events, such as 2001 and 2005, the new treatment adds about \$13 billion and \$15.5 billion, respectively, to the overall revisions.

Saving and investment (account 6)

Gross saving consists of net saving and consumption of fixed capital (CFC). Net saving consists of net private saving and net government saving. Through 1978, the revisions to gross saving do not exceed \$2 billion in absolute value (table 18). For 1979–92, the revisions

are downward and larger, especially after 1983. For 1993, gross saving is revised down \$4 billion, and beginning with 1994, the revisions are all upward and generally become large—the largest being about \$136 billion for 2006. Beginning with 1978, except for 1991–93, the revisions to net private saving generally dominate the revisions to net government saving and to CFC, including the relatively large downward revisions to CFC for 2005 and to net government saving for 2008 (discussed above).

For 1980–91, the downward revisions to net private saving mainly reflect revisions to personal saving. For 1992, the downward revision to personal saving is largely offset by an upward revision to undistributed corporate profits with IVA and CCAdj. For 1993, an upward revision to net private saving is more than offset by a downward revision to net government saving. For 1994–2001 and for 2004, 2005, and 2008, the upward revisions to net private saving reflect upward revisions to both personal saving and undistributed corporate profits with IVA and CCAdj. For 2002 and 2003 and for 2006 and 2007, upward revisions to personal saving are partly offset by downward revisions to undistributed corporate profits with IVA and CCAdj.

“Net lending or net borrowing, NIPAs” (hereafter referred to as “net lending”) is the difference between the sum of gross saving and the statistical discrepancy and the sum of gross domestic investment and capital account transactions (net). Through 1978, the revisions to “net lending” are less than \$2.5 billion in absolute value. For 1979–1992, the revisions are downward and generally increase in magnitude to around \$7.5 billion, primarily reflecting downward revisions to gross saving that are partly offset by upward revisions to the statistical discrepancy. For 1993, a downward revision to “net lending” primarily reflects downward revisions to both gross saving and the statistical discrepancy. For 1994–2008, the revisions to “net lending” remain downward except for

2002 and 2004, generally reflecting downward revisions to the statistical discrepancy and upward revisions to gross domestic investment that are partly offset by upward revisions to gross saving. For 2001, 2005, and 2008, downward revisions to capital account transactions—reflecting the new treatment of disasters—are also notable offsets to the downward revisions to “net lending.”

Annual Estimates of Real GDP and Real DPI

Real GDP

Revisions to year-to-year growth rates of real GDP are generally small: for 70 of the 79 years since 1929, the revision is between –0.1 percentage point and 0.1 percentage point (table 19 and chart 1).

The revisions to real GDP result from the following:

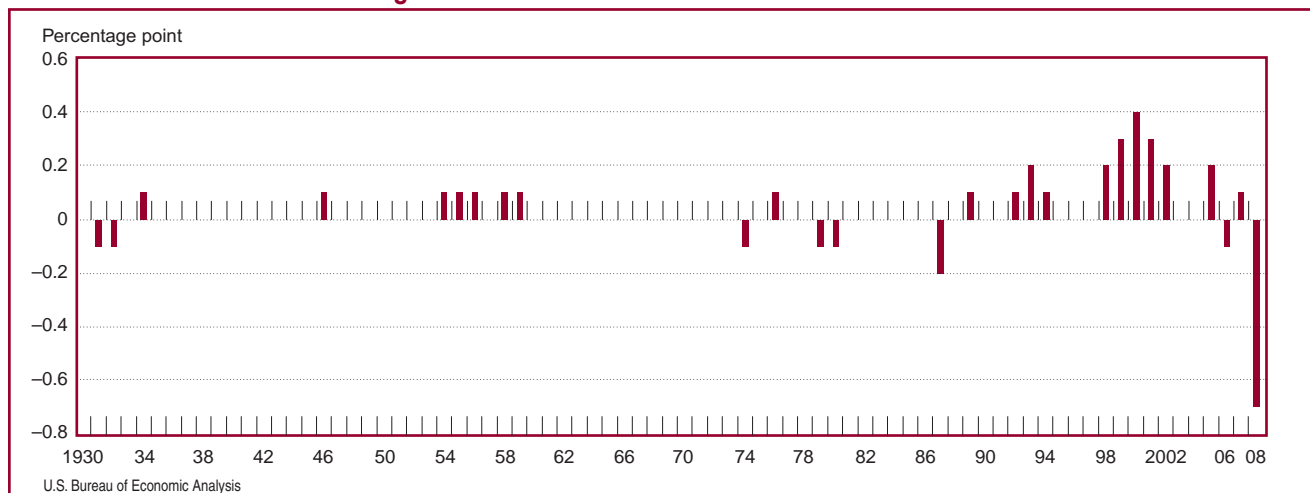

- Revisions to the current-dollar components of GDP for which chained-dollar estimates are prepared by deflation.
- Revisions to the prices used to estimate components of real GDP by deflation.
- Revisions to the quantities used to estimate the components of real GDP by extrapolation or direct valuation.

In contrast, changing the reference year (from 2000 to 2005) does not affect the percent changes in real

Table 19. Distribution of Revisions to Percent Change in Real Gross Domestic Product

Size of revision (percentage point)	Number of revisions
–0.7	1
–0.2	1
–0.1	6
0.0	52
0.1	12

0.3	2
0.4	1

Chart 1. Revision to Percent Change in Real GDP

GDP. (Neither does it affect the percent changes in the price indexes.)

For 19 years, the rate of growth of real GDP is revised up. Seven of the revisions are larger than 0.1 percentage point; the largest revision, at 0.4 percentage point (from 3.7 percent to 4.1 percent), is for 2000. Upward revisions to the change in current-dollar GDP play a role in these seven revisions; downward revisions to prices play a role in three of these revisions.

For 8 years, the rate of growth of real GDP is revised down. Two of the revisions are larger than 0.1 percentage

point; the largest revision, at 0.7 percentage point (from 1.1 percent to 0.4 percent), is for 2008. A downward revision to the change in current-dollar GDP plays a role in one of these revisions, and an upward revision to prices plays a role in the other revision.

For 52 years, the rate of growth of real GDP is unrevised.

For 1929–2008, the average annual growth rate of real GDP is revised up 0.1 percentage point (from 3.3 percent to 3.4 percent) (table 20). The period 1929–2008 can be usefully divided into three subperiods: 1929–59,

1959–97, and 1997–2008. For 1929–59 and for 1959–97, the average rates of growth of the revised estimates are the same as in the previously published estimates. For 1997–2008, the average rate of growth of real GDP in the revised estimates is revised up 0.1 percentage point (from 2.7 percent to 2.8 percent.) For 1929–59 and 1959–97, the average rates of growth for the major components of real GDP are also unrevised. For 1997–2008, the average rates of growth of PCE and of nonresidential fixed investment are revised up, the rates of growth of residential fixed investment and of exports of goods and services are revised down, and the rates of growth of imports of goods and services and of government spending are unrevised.

Nonzero revisions are more common for the most recent subperiod than for the two earlier ones (table 21). For 1997–2008, the revisions to 9 of 11 (about 82 percent) of the year-to-year growth rates are nonzero; for 1929–59, the revisions to 9 of 30 (30 percent) of the growth rates are nonzero, and for 1959–97, the revisions to 9 of 38 (about 24 percent) of the growth rates are nonzero. The nonzero revisions are not only more common for 1997–2008 than for the earlier subperiods, but they also tend to be somewhat larger.

For 1929–59, in all but one case, the revisions to the contributions that the major components make to the percent change in real GDP are zero (table 22).¹⁵ PCE contributes 0.01 percentage point more on average to GDP growth in the revised estimates than in the previ-

15. This excludes the downward revisions to the contributions from PCE for nondurable goods that are mostly offset by upward revisions to the contributions for PCE for services, which reflect the new PCE classification introduced in this comprehensive revision.

Table 21. Summary of Revisions to Year-to-Year Growth Rates of Real Gross Domestic Product for Selected Periods

ously published estimates.

For 1959–97, on average, nonresidential fixed investment contributes 0.01 percentage point more to real GDP growth, while imports of goods contributes 0.01 percentage point less to real GDP growth in the revised estimates than in the previously published estimates.

For 1997–2008, the revisions to the contributions are slightly larger. On average, equipment and software investment contributes 0.07 percentage point more to GDP growth in the revised estimates than in the previously published estimates, and nonresidential structures and PCE each contribute 0.02 percentage point more to real GDP growth. In contrast, on average, exports of goods and services contributes 0.02 percentage point less in the revised estimates than in the previously published estimates. The revisions to the contributions of the other major GDP components are equal to or less than 0.01 percentage point in absolute value.

Real DPI

For 1929–2008, the average annual rate of growth of real disposable personal income (DPI) is 3.3 percent, 0.1 percentage point higher than in the previously published estimates (table 20). The average annual

rates of growth for 1929–59 (3.0 percent) and for 1959–97 (3.4 percent) are the same as those previously published. For 1997–2008, the average annual rate of growth of real DPI is 3.1 percent, 0.1 percentage point higher than in the previously published estimates.

The revisions to real DPI result from the following:

- Revisions to the current-dollar DPI.
- Revisions to the implicit price deflator for PCE, which is used to deflate current-dollar DPI.

The revisions to the growth rate of real DPI exceed 0.1 percentage point (in absolute value) for 21 years (of the 79 years). For all but one of these 21 years (1934), the revisions to current-dollar DPI play a role; the revisions to the implicit price deflator for PCE play a role for 7 of the 21 years.

1929–59. The growth rate of real DPI is revised up for 7 years, and it is revised down for 6 years. The average revision is zero, and the average of the absolute values of the revisions is 0.1 percentage point. Only two of the revisions are larger than 0.1 percentage point in absolute value: the upward revisions for 1934 and 1946 are each 0.2 percentage point.

1959–97. The growth rate of real DPI is revised up for 13 years, and it is revised down for 10 years. The average revision is zero, and the average of the absolute values of the revisions is 0.3 percentage point. The largest upward revision is 0.7 percentage point for 1993. The upward revision for 1994 is 0.5 percentage point, the upward revisions for 1991 and 1996 are each 0.3 percentage point, and the upward revisions for 1986 and 1995 are each 0.2 percentage point. For 15 years, the growth rate of real DPI is unrevised. The largest downward revision, 0.4 percentage point, is for 1984. The downward revision for 1985 is 0.3 percent-

age point, and the downward revisions for 1979 and 1980 are each 0.2 percentage point.

1997–2008. The growth rate of real DPI is revised up for 6 years, and it is revised down for 4 years. The average revision is zero, and the average of the absolute values of the revisions is 0.6 percentage point. The largest upward revisions, 0.5 percentage point, are for 2001 and 2006. The upward revisions for 2000 and 2003 are each 0.3 percentage point, and the upward revisions for 1998 and 2002 are each 0.2 percentage point. For 1 year, the growth rate of real DPI is unrevised. The largest downward revision, 0.8 percentage point, is for 2008. The downward revision for 2007 is 0.6 percentage point, and the downward revision for 2004 is 0.2 percentage point.

Annual Prices

The revisions to the percent changes in the chain-type price indexes result from the incorporation of revised and newly available source data and of revised weights into the chain formula.

For 1929–2008 and for the subperiods 1929–59 and 1997–2008, the revised estimates of the average annual rates of change in the price index for gross domestic purchases are the same as those in the previously published estimates. For the 1959–97 subperiod, the revised estimates for the price index for gross domestic purchases prices show an average annual growth rate of 4.2 percent, an upward revision of 0.1 percentage point. For 1929–2008 and for all three subperiods, the revised estimates of the average annual rates of change in the price index for GDP prices are the same as those in the previously published estimates (table 23).

There are notable revisions to the prices of several

major components of GDP for the subperiod 1997–2008:

- Prices of nonresidential structures are revised up 0.6 percentage point, primarily reflecting the incorporation of revised and new expenditure data and cost per foot data for petroleum and natural gas well drilling.
- Prices of residential fixed investment and of federal government spending are revised up 0.1 percentage point.
- In contrast, prices of exports of services are revised down 0.2 percentage point, and prices of PCE and of imports of services are revised down 0.1 percentage point.

Quarterly Real GDP

The revisions to the quarterly (and monthly) NIPA estimates reflect the revisions to the annual estimates, the incorporation of new and revised monthly and quarterly source data (including the updating of seasonal factors), and the introduction of changes in methodology.

This section focuses on the effect of the revisions on business cycles that are measured by the turning points in quarterly real GDP (table 24) with an emphasis on the current and preceding contractions (table 25). These turning points do not always coincide with the business-cycle turning points determined by the

National Bureau of Economic Research (NBER). The NBER considers a number of monthly indicators—such as employment, personal income, and industrial production—as well as the change in quarterly GDP growth for dating business cycles. Therefore, while declines in quarterly real GDP often track closely with recessions, the movements of monthly indicators (especially employment) that the NBER also considers may affect the relationship between the pattern of change in real GDP and the identification of recessions.¹⁶

In the revised estimates for the 10 complete contractions since 1947, 4 have slightly steeper declines than in the previously published estimates—the contractions beginning in the fourth quarter of 1973, in the first quarter of 1980, in the third quarter of 1981, and in the third quarter of 1990. For the remaining six complete contractions, three have slightly less steep declines—the contractions beginning in the fourth quarter of 1948, in the third quarter of 1957, and in the first quarter of 1960. For two of the three remaining complete contractions, the average annual rates of change for real GDP are unrevised—for the contraction beginning in the second quarter of 1953 and the contraction beginning in the third quarter of 1969. In the revised estimates for the contraction that began in the fourth quarter of 2000 and ended in the third quarter of 2001, real GDP now increases at an annual rate of 0.1 percent; in the previously published estimates, it had *decreased* at a rate of 0.2 percent.

For the second quarter of 2001, the percent change in real GDP is revised up 1.4 percentage points, from an increase of 1.2 percent to an increase of 2.6 percent.

Table 24. Revisions to Cyclical Fluctuations in Real Gross Domestic Product, 1948–2009

1. The current contraction is shown through the first quarter of 2009.

16. More information about NBER business-cycle dating is available at www.nber.org/cycles/jan08bcdc_memo.

Table 25. Rates of Growth of Real Gross Domestic Product

	Revised	Previously published	Revision
2001:I–2001:III			
2001:I.....	-1.3	-0.5	-0.8
2001:II.....	2.6	1.2	1.4
2001:III.....	-1.1	-1.4	0.3
	Revised	Previously published	Revision
2008:I–2009:I			
2008:I.....	-0.7	0.9	-1.6
2008:II.....	1.5	2.8	-1.3
2008:III.....	-2.7	-0.5	-2.2
2008:IV.....	-5.4	-6.3	0.9
2009:I.....	-6.4	-5.5	-0.9

As a result of this large upward revision to the second quarter, the first quarter of 2001 is now considered the cyclical “GDP” trough for this contraction. (In the previously published estimates, the trough had been the third quarter of 2001.)

In the revised estimates for the current contraction that began in the fourth quarter of 2007, real GDP decreases at an average annual rate of 2.8 percent through the first quarter of 2009; in the previously published estimates, it had decreased at a rate of 1.8 percent. The percent change in real GDP is revised down for four quarters, and is revised up for one.

For the fourth quarter of 2007, the percent change in real GDP is revised up 2.3 percentage points, from a decrease of 0.2 percent to an increase of 2.1 percent. As a result, the fourth quarter of 2007 is the cyclical peak for the last expansion.

In the revised estimates for the ten expansions since 1947, three have slightly stronger increases than in the previously published estimates—the expansions beginning in the first quarter of 1958, in the first quarter of 1991, and in the third quarter of 2001. For the remaining seven expansions, the average annual rates of growth for real GDP are unrevised.

Acknowledgments

Carol E. Moylan, Chief of the National Income and Wealth Division, supervised the preparation of this comprehensive revision of the national income and product accounts. Pamela A. Kelly, Chief of the Government Division, directed major parts of the revision. Brent R. Moulton, Associate Director for National Economic Accounts, provided overall supervision. David F. Sullivan—together with Alyssa E. Holdren, Arnold J. Katz, Robert J. Kornfeld, Clinton P. McCully, Steven Payson, and Shelly Smith—coordinated and conducted the estimation and review process.

Eugene P. Seskin and Shelly Smith wrote the article with the assistance of Alyssa E. Holdren. Shelly Smith and Alyssa E. Holdren prepared the tables for the article. Jack Drewry, Duane G. Hackmann, Virginia H. Mannering, Kristina L. Maze, and David F. Sullivan prepared analyses and other review materials for both the article and the news release. Michael J. Boehm, Benjamin D. Cowan, Sung H. Lee, Ross F. Metzger, Lisa C. Ninomiya, Andrew J. Pinard, and James J. Raley III, under the direction of Robert J. Kornfeld, developed and operated the computer systems that were used to compile, check, analyze, and report the final estimates.

Other BEA staff who made significant contributions to the revision are listed below.

Personal consumption expenditures: Michael Armah. *Goods:* Tony Choi, Harvey L. Davis, Jr., Yukun Fung, Everette P. Johnson, Richard E. Kane, Matthew D. Tschetter. *Services:* Brendan J. Leary, Kyle J. Brown, Robert N. Ganz III, Christina D. Hovland, Briana E. Petyo, Clinton P. McCully, Teresita D. Teensma.

Investment and foreign transactions: Paul R. Lally. *Inventories, foreign transactions, and prices:* Jennifer A. Ribarsky, Marissa J. Crawford, Harry Johnson, Jr., Kate L. Shoemaker, Enrico Tan. *Structures, equipment and software:* Jeffrey W. Crawford, Aya Hamano, Velma P. Henry, Lolita V. Jamison, Todd P. Siebeneck, Linden L. Webber.

Federal government: Benjamin A. Mandel, Peter G. Beall, Andrew P. Cairns, Monica D. Carpio, Andrea L. Cook, Raymen G. LaBella, Mark S. Ludwick, Kyle D. Mulgrew, Farah Naz, Michelle D. Robinson, Mary L. Roy, Benyam Tsehaye, Andrew E. Vargo, Bryan Williams.

State and local government: Bruce E. Baker, Karla L. Allen, Steven J. Andrews, Benjamin D. Cowan, Michelle S. Grier, Angela C. Padalecki, Brian E. Parks.

Personal income: Kurt Kunze, Dennis R. Weikel. *Employee compensation:* Janet H. Kmitch, Elizabeth C. Bernstein, Jennifer T. Mykijewycz, James E. Rankin, Martin L. Simmons, Brian J. Smith. *Business income:* Howard I. Krakower, Andrew W. Hodge, M. Greg Key, Charles S. Robinson, Martin L. Simmons, Jerry L. Stone, Garth K. Trinkl. *Property income:* Michael N. Hayes, Alyssa E. Holdren, Denise A. McBride, Andrew G. Schmidt, Elizabeth M. Terroni.

Consumption of fixed capital: Private: David B. Wasshausen, Michael T. Cusick, Michael D. Glenn, Bonnie A. Retus, Nadia F.P. Sadée. *Government:* Jennifer A. Bennett, Debasis Chaudhuri, Christopher B. Mbu.

Computer systems and operations: Michael J. Boehm, Wanda Y. Chambers, Scott G. He, Douglas J. Klear, Ethan C. Lincoln, Sandip Mehta, Michael J. Ocasio, Andrew J. Pinard, James J. Raley III, Michael D. Randall, Karl V. Rohrer, David Rozenshtein.

NIPA information: Debra M. Blagburn, Lisa S. Mataloni.

Secretarial and program assistance: Esther M. Carter, Katherine Dent, Virginia H. Mannering, Angela P. Pointer.

Other contributors to the definitional and statistical improvements include the following: John E. Broda, Robert L. Brown, Sharon C. Carnevale, Ann E. Dunbar, Dennis J. Fixler, Bruce T. Grimm, Tina C. Highfill, David G. Lenze, Nicole M. Mayerhauser, Marshall B. Reinsdorf, John A. Rusinko, James M. Scott, Brian K. Sliker.

Table A follows.

1. In these descriptions, "new" indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and "revised" indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.

2. Revisions to this subcomponent of personal consumption expenditures (PCE) are not shown because the composition of this component has changed as part of the new classification system that was adopted for PCE.

3. This series has been redefined as part of the new PCE classification system; the redefinition accounts for part of the 2002 revision.

4. The statistical discrepancy is gross domestic product (GDP) less gross domestic income (GDI); it is also the difference between gross national product (GNP) and gross national income (GNI), which is GDI plus net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GDP and GNP are estimated independently from the income-side measures of GDI and GNI.

5. Net interest is the sum of monetary interest paid by domestic business and by the rest of the world and

imputed interest paid by domestic financial corporate business, less monetary interest received by domestic business and by the rest of the world and imputed interest received by domestic business and by the rest of the world.

National Income and Product Accounts Tables

This set of national income and product accounts (NIPAs) tables presents the most recent estimates of gross domestic product and its components, which were released on August 27, 2009. These estimates include the “second” estimate for the second quarter of 2009. Tables in this section also incorporate estimates from the 2009 comprehensive revision of the NIPAs that were released beginning on July 31, 2009. The tables present revised annual estimates for 2005–2008, revised quarterly estimates for the first quarter of 2006 through the second quarter of 2009, and revised monthly estimates for January 2005 through June 2009 and preliminary estimates for July 2009.

For additional information, see the article “Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision” in this issue. All currently available NIPA series estimates are on BEA’s Web site at www.bea.gov.

Some tables from the comprehensive revision will be published in upcoming issues of the Survey of Current Business. Tables 3.15–3.23, 5.9, and 7.15 are scheduled for publication in the October 2009 issue, and tables 2.9 and 7.20 will appear in the November 2009 issue.

Revised historical estimates of gross domestic product are presented in “GDP and Other Major NIPA Series, 1929–2009:II” in this issue.

Summary Tables

A.	Summary National Income and Product Accounts, 2008	48
1. Domestic Product and Income

1.1.7.	Percent Change From Preceding Period in Prices for Gross Domestic Product	53
1.1.8.	Contributions to Percent Change in the Gross Domestic Product Price Index	53
1.1.9.	Implicit Price Deflators for Gross Domestic Product	54
1.1.10.	Percentage Shares of Gross Domestic Product	54
1.2.1.	Percent Change From Preceding Period in Real Gross Domestic Product by Major Type of Product	55
1.2.2.	Contributions to Percent Change in Real Gross Domestic Product by Major Type of Product	55
1.2.3.	Real Gross Domestic Product by Major Type of Product, Quantity Indexes	56
1.2.4.	Price Indexes for Gross Domestic Product by Major Type of Product	56
1.2.5.	Gross Domestic Product by Major Type of Product	57
1.2.6.	Real Gross Domestic Product by Major Type of Product, Chained Dollars	57
1.3.1.	Percent Change From Preceding Period in Real Gross Value Added by Sector	58
1.3.3.	Real Gross Value Added by Sector, Quantity Indexes	58
1.3.4.	Price Indexes for Gross Value Added by Sector	58
1.3.5.	Gross Value Added by Sector	59
1.3.6.	Real Gross Value Added by Sector, Chained Dollars	59
1.4.1.	Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers	59
1.4.3.	Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Quantity Indexes	60

1.4.4.	Price Indexes for Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers	60
1.4.5.	Relation of Gross Domestic Product, Gross Domestic Purchases, and Final Sales to Domestic Purchasers.....	60
1.4.6.	Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Chained Dollars	60
1.5.1.	Percent Change From Preceding Period in Real Gross Domestic Product, Expanded Detail	61
1.5.2.	Contributions to Percent Change in Real Gross Domestic Product, Expanded Detail	62
1.5.3.	Real Gross Domestic Product, Expanded Detail, Quantity Indexes	63
1.5.4.	Price Indexes for Gross Domestic Product, Expanded Detail	64
1.5.5.	Gross Domestic Product, Expanded Detail	65
1.5.6.	Real Gross Domestic Product, Expanded Detail, Chained Dollars.....	66
1.6.4.	Price Indexes for Gross Domestic Purchases.....	67
1.6.7.	Percent Change From Preceding Period in Prices for Gross Domestic Purchases	68
1.6.8.	Contributions to Percent Change in the Gross Domestic Purchases Price Index.....	69
1.7.1.	Percent Change From Preceding Period in Real Gross Domestic Product, Real Gross National Product, and Real Net National Product.....	70
1.7.3.	Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Quantity Indexes	70
1.7.4.	Price Indexes for Gross Domestic Product, Gross National Product, and Net National Product.....	70
1.7.5.	Relation of Gross Domestic Product, Gross National Product, Net National Product, National Income, and Personal Income.....	71
1.7.6.	Relation of Real Gross Domestic Product, Real Gross National Product, and Real Net National Product, Chained Dollars	72
1.8.3.	Command-Basis Real Gross National Product, Quantity Indexes.....	72
1.8.6.	Command-Basis Real Gross National Product, Chained Dollars	72
1.9.3.	Real Net Value Added by Sector, Quantity Indexes.....	73
1.9.4.	Price Indexes for Net Value Added by Sector	73
1.9.5.	Net Value Added by Sector.....	73
1.9.6.	Real Net Value Added by Sector, Chained Dollars.....	73
1.10.	Gross Domestic Income by Type of Income	74
1.11.	Percentage Shares of Gross Domestic Income.....	74
1.12.	National Income by Type of Income	75
1.13.	National Income by Sector, Legal Form of Organization, and Type of Income.....	76

3.23.	State and Local Government Current Receipts and Expenditures, Not Seasonally Adjusted.....	*

4. Foreign Transactions

4.1.	Foreign Transactions in the National Income and Product Accounts.....	122
4.2.1.	Percent Change From Preceding Period in Real Exports and in Real Imports of Goods and Services by Type of Product.....	123
4.2.2.	Contributions to Percent Change in Real Exports and in Real Imports of Goods and Services by Type of Product.....	124
4.2.3.	Real Exports and Imports of Goods and Services by Type of Product, Quantity Indexes.....	125
4.2.4.	Price Indexes for Exports and Imports of Goods and Services by Type of Product.....	126
4.2.5.	Exports and Imports of Goods and Services by Type of Product.....	127
4.2.6.	Real Exports and Imports of Goods and Services by Type of Product, Chained Dollars.....	128
4.3B.	Relation of Foreign Transactions in the National Income and Product Accounts to the Corresponding Items in the International Transactions Accounts.....	129

5. Saving and Investment

5.1.	Saving and Investment.....	130
5.2.3.	Real Gross and Net Domestic Investment by Major Type, Quantity Indexes.....	131
5.2.5.	Gross and Net Domestic Investment by Major Type.....	131
5.2.6.	Real Gross and Net Domestic Investment by Major Type, Chained Dollars.....	132
5.3.1.	Percent Change From Preceding Period in Real Private Fixed Investment by Type.....	133
5.3.2.	Contributions to Percent Change in Real Private Fixed Investment by Type.....	134
5.3.3.	Real Private Fixed Investment by Type, Quantity Indexes.....	135
5.3.4.	Price Indexes for Private Fixed Investment by Type.....	136
5.3.5.	Private Fixed Investment by Type.....	137
5.3.6.	Real Private Fixed Investment by Type, Chained Dollars.....	138
5.4.1.	Percent Change From Preceding Period in Real Private Fixed Investment in Structures by Type.....	139
5.4.2.	Contributions to Percent Change in Real Private Fixed Investment in Structures by Type.....	139
5.4.3.	Real Private Fixed Investment in Structures by Type, Quantity Indexes.....	140
5.4.4.	Price Indexes for Private Fixed Investment in Structures by Type.....	140

* This table is scheduled to be published in an upcoming issue. Please see the introduction.

5.4.5	Private Fixed Investment in Structures by Type.....	141
5.4.6	Real Private Fixed Investment in Structures by Type, Chained Dollars.....	141
5.5.1.	Percent Change From Preceding Period in Real Private Fixed Investment in Equipment and Software by Type	142
5.5.2.	Contributions to Percent Change in Real Private Fixed Investment in Equipment and Software by Type.....	142
5.5.3.	Real Private Fixed Investment in Equipment and Software by Type, Quantity Indexes.....	142
5.5.4.	Price Indexes for Private Fixed Investment in Equipment and Software by Type.....	142
5.5.5.	Private Fixed Investment in Equipment and Software by Type	143
5.5.6.	Real Private Fixed Investment in Equipment and Software by Type, Chained Dollars	143
5.6.5B	Change in Private Inventories by Industry	144
5.6.6B	Real Change in Private Inventories by Industry, Chained Dollars.....	144
5.7.5B	Private Inventories and Domestic Final Sales by Industry	145
5.7.6B	Real Private Inventories and Real Domestic Final Sales by Industry, Chained Dollars	146
5.7.9B	Implicit Price Deflators for Private Inventories by Industry	146
5.8.3B	Real Gross Government Fixed Investment by Type, Quantity Indexes.....	147
5.8.4B	Price Indexes for Gross Government Fixed Investment by Type	147
5.8.5B	Gross Government Fixed Investment by Type	148
5.8.6B	Real Gross Government Fixed Investment by Type, Chained Dollars.....	148
5.9.	Changes in Net Stock of Produced Assets (Fixed Assets and Inventories)	*
5.10.	Capital Transfers Paid and Received, by Sector and by Type.....	149

6. Income and Employment by Industry

6.1D.	National Income Without Capital Consumption Adjustment by Industry	150
6.2D.	Compensation of Employees by Industry	151
6.3D.	Wage and Salary Accruals by Industry.....	152
6.4D.	Full-Time and Part-Time Employees by Industry	153
6.5D.	Full-Time Equivalent Employees by Industry.....	154
6.6D.	Wage and Salary Accruals Per Full-Time Equivalent Employee by Industry	155
6.7D.	Self-Employed Persons by Industry	156
6.8D.	Persons Engaged in Production by Industry	157

Table A. Summary National Income and Product Accounts, 2008

[Billions of dollars]

Account 1. Domestic Income and Product Account

Line			Line		
1	Compensation of employees, paid	8,044.8	15	Personal consumption expenditures (3-3)	10,129.9
2	Wage and salary accruals	6,548.2	16	Goods	3,403.2
3	Disbursements (3-12 plus 5-11)	6,553.2	17	Durable goods	1,095.2
4	Wage accruals less disbursements (4-9 plus 6-13)	-5.0	18	Nondurable goods	2,308.0
5	Supplements to wages and salaries (3-14)	1,496.6	19	Services	6,726.8
6	Taxes on production and imports (4-16)	1,047.3	20	Gross private domestic investment	2,136.1
7	Less: Subsidies (4-8)	53.5	21	Fixed investment (6-2)	2,170.8
8	Net operating surplus	3,454.8	22	Nonresidential	1,693.6
9	Private enterprises (2-19)	3,461.7	23	Structures	609.5
10	Current surplus of government enterprises (4-26)	-6.9	24	Equipment and software	1,084.1
11	Consumption of fixed capital (6-13)	1,847.1	25	Residential	477.2
12	Gross domestic income	14,340.4	26	Change in private inventories (6-4)	-34.8
13	Statistical discrepancy (6-21)	101.0	27	Net exports of goods and services	-707.8
			28	Exports (5-1)	1,831.1
			29	Imports (5-9)	2,538.9
			30	Government consumption expenditures and gross investment (4-1 plus 6-3)	2,883.2
			31	Federal	1,082.6
			32	National defense	737.9
			33	Nondefense	344.7
			34	State and local	1,800.6
14	GROSS DOMESTIC PRODUCT	14,441.4	35	GROSS DOMESTIC PRODUCT	14,441.4

Account 2. Private Enterprise Income Account

Line			Line		
1	Income payments on assets	3,460.9	19	Net operating surplus, private enterprises (1-9)	3,461.7
2	Interest and miscellaneous payments (3-20 and 4-21)	3,293.8	20	Income receipts on assets	2,795.0
3	Dividend payments to the rest of the world (5-14)	112.1	21	Interest (3-20)	2,250.8
4	Reinvested earnings on foreign direct investment in the United States (5-15)	55.0	22	Dividend receipts from the rest of the world (5-6)	258.7
5	Business current transfer payments (net)	118.8	23	Reinvested earnings on U.S. direct investment abroad (5-7)	285.6
6	To persons (net) (3-24)	32.6			
7	To government (net) (4-24)	78.8			
8	To the rest of the world (net) (5-19)	7.3			
9	Proprietors' income with inventory valuation and capital consumption adjustments (3-17)	1,106.3			
10	Rental income of persons with capital consumption adjustment (3-18)	210.4			
11	Corporate profits with inventory valuation and capital consumption adjustments	1,360.4			
12	Taxes on corporate income	292.2			
13	To government (4-17)	263.3			
14	To the rest of the world (5-19)	28.9			
15	Profits after tax with inventory valuation and capital consumption adjustments	1,068.2			
16	Net dividends (3-21 plus 4-22)	689.9			
17	Undistributed corporate profits with inventory valuation and capital consumption adjustments (6-12)	378.3			
18	USES OF PRIVATE ENTERPRISE INCOME	6,256.7	24	SOURCES OF PRIVATE ENTERPRISE INCOME	6,256.7

Account 3. Personal Income and Outlay Account

Line			Line		
1	Personal current taxes (4-15)	1,432.4	10	Compensation of employees, received	8,042.4
2	Personal outlays	10,520.0	11	Wage and salary disbursements	6,545.9
3	Personal consumption expenditures (1-15)	10,129.9	12	Domestic (1-3 less 5-11)	6,542.8
4	Personal interest payments (3-20)	237.7	13	Rest of the world (5-3)	3.0

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

Gross housing value added	12	1,054.0	1,098.6	1,136.8	1,154.0	1,086.4	1,099.8	1,107.7	1,100.3	1,115.1	1,128.0	1,146.0	1,158.1	1,152.3	1,160.6	1,153.0	1,150.1	1,152.1	1,141.6

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE: Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and services and income payments.

2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 1.9.3. Real Net Value Added by Sector, Quantity Indexes

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Note: The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

IVA Inventory valuation adjustment
CCAadj Capital consumption adjustment

Table 1.16. Sources and Uses of Private Enterprise Income

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Consists of gasoline and other energy goods and of electricity and gas.

5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Consists of gasoline and other energy goods and of electricity and gas.

5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

6. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Consists of gasoline and other energy goods and of electricity and gas.

5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Consists of gasoline and other energy goods and of electricity and gas.

5. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

6. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Electricity and gas											

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

Notes: The figures in parentheses are the line numbers of the corresponding items in table 2.5.6.

Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

First-class postal service by U.S. Postal Service (USPS)	69	100.000	96.041	95.893	89.486						

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
 2. Consists of shoes and other footwear, and of repair and hire of footwear.
 3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
 5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
 6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
 7. Consists of dishes, flatware, and non-electric cookware and tableware.
 8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
 9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
 10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
 11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
 12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
 13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
 14. Consists of four operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
 15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
 16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels,

dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
 17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
 18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
 19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
 20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
 21. Consists of premiums less benefits for income loss insurance.
 22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
 23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
 24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
 25. Consists of jewelry, watches, luggage, and similar personal items.
 26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
 27. Consists of tax preparation and other related services, employment agency services, and other personal business services.
 28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
 30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees

First-class postal service by U.S. Postal Service (USPS)	69	100.000	105.359	107.966	111.581						

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.
 2. Consists of shoes and other footwear, and of repair and hire of footwear.
 3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.
 4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.
 5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.
 6. Consists of major household appliances, small electric household appliances, and repair of household appliances.
 7. Consists of dishes, flatware, and non-electric cookware and tableware.
 8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.
 9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.
 10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.
 11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.
 12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).
 13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.
 14. Consists of four operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.
 15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.
 16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels,

dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.
 17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.
 18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.
 19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).
 20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.
 21. Consists of premiums less benefits for income loss insurance.
 22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.
 23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.
 24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.
 25. Consists of jewelry, watches, luggage, and similar personal items.
 26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.
 27. Consists of tax preparation and other related services, employment agency services, and other personal business services.
 28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
 29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).
 30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

First-class postal service by U.S. Postal Service (USPS)	69	7.3	7.4	7.5	7.3						

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.

2. Consists of shoes and other footwear, and of repair and hire of footwear.

3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.

6. Consists of major household appliances, small electric household appliances, and repair of household appliances.

7. Consists of dishes, flatware, and non-electric cookware and tableware.

8. Consists of household supplies; domestic services; moving, storage and freight service; and other household service.

9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.

11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, and blood and organ bank services.

12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).

13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.

14. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.

15. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.

16. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels,

dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages consumed both on- and off-premises.

17. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.

18. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.

19. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).

20. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.

21. Consists of premiums less benefits for income loss insurance.

22. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.

23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.

24. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.

25. Consists of jewelry, watches, luggage, and similar personal items.

26. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.

27. Consists of tax preparation and other related services, employment agency services, and other personal business services.

28. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

29. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).

30. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

						Residual	135	0.5	-3.3	-13.8	-23.6

1. Consists of household purchases of goods and services from business, government, nonprofit institutions, and the rest of the world.

2. Consists of shoes and other footwear, and of repair and hire of footwear.

3. Consists of space rent (see footnote 4) and rent for appliances, furnishings, and furniture.

4. Consists of rent for space and for heating and plumbing facilities, water heaters, lighting fixtures, kitchen cabinets, linoleum, storm windows and doors, window screens, and screen doors, but excludes rent for appliances and furniture and purchases of fuel and electricity.

5. Includes clocks, lamps, lighting fixtures, and other household decorative items; also includes repair of furniture, furnishings, and floor coverings.

6. Consists of major household appliances, small electric household appliances, and repair of household appliances.

7. Consists of dishes, flatware, and non-electric cookware and tableware.

8. Consists of household supplies; domestic services; moving, storage and freight services; and other household services.

9. Excludes drug preparations and related products dispensed by physicians, hospitals, and other medical services.

10. Consists of offices of physicians, health maintenance organization medical centers, and freestanding ambulatory surgical and emergency centers.

11. Includes podiatrists, chiropractors, mental health practitioners (except physicians), physical, occupational and speech therapists, audiologists, all other health practitioners, ambulance services, kidney dialysis centers, blood and organ bank services.

12. Consists of nonprofit hospitals, proprietary hospitals, and government hospitals. Consists of primary sales of these hospitals for personal consumption. Expenses of nonprofit hospitals are included in the expenditures of nonprofit institutions serving households (NPISHs).

13. Includes railway transportation, taxicab services, school and employee services, limousine services, and airport bus fares.

14. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series.

15. Consists of tour operators' and travel agents' margins. Purchases of travel and accommodations included in tours are accounted for separately in other personal consumption expenditures categories.

16. Consists of fees paid to business schools and computer and management training, technical and trade schools, other schools and instruction, and educational support services.

17. Consists of purchases (including tips) of meals and beverages from retail, service, and amusement establishments, hotels, dining and buffet cars, schools, school fraternities, institutions, clubs, and industrial lunchrooms. Includes meals and beverages

consumed both on- and off-premises.

18. Consists of transient hotels, motels, other traveler accommodations, clubs, and housing at schools.

19. Consists of operating expenses of commercial life insurance carriers and fraternal benefit life insurance. For commercial life insurance carriers, excludes expenses for accident and health insurance and includes profits of stock companies and services furnished without payment by banks, credit agencies, and investment companies.

20. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for insurance on personal property (except motor vehicles).

21. Consists of premiums less benefits for health, hospitalization, and accidental death and dismemberment insurance.

22. Consists of premiums less benefits for income loss insurance.

23. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for privately administered workers' compensation.

24. Consists of premiums plus premium supplements less normal losses and dividends paid to policyholders for motor vehicle and other transportation insurance.

25. Consists of cosmetics and toiletries, electric appliances for personal care, hairdressing salons, and miscellaneous personal care services.

26. Consists of jewelry, watches, luggage, and similar personal items.

27. Consists of household purchases of goods and services from business, government, and nonprofit institutions providing social services and religious activities. Purchases from nonprofit establishments exclude unrelated sales, secondary sales, and sales to businesses, government, and the rest of the world, but include membership dues and fees.

28. Consists of tax preparation and other related services, employment agency services, and other personal business services.

29. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

30. Gross output is net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world; excludes own-account investment (construction and software).

31. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity indexes and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity index uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Consists of nonmortgage interest paid by households.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

3. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of the estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

1. Consists of gasoline and other energy goods and of electricity and gas.

2. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Consists of gasoline and other energy goods and of electricity and gas.

2. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Table 3.11.4. Price Indexes for National Defense Consumption Expenditures and Gross Investment by Type

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Consists of payments for medical services for dependents of active duty military personnel at nonmilitary facilities.

2. Consists of mustering out pay, terminal leave pay, and adjusted compensation benefits.

3. Prior to October 2008, benefits for the Supplemental Nutrition Assistance Program were called Food Stamp benefits.

4. Consists largely of payments to nonprofit institutions, aid to students, and payments for medical services for retired military personnel and their dependents at nonmilitary facilities.

5. Consists of general medical assistance and state child health care programs.

6. Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996.

7. Consists of expenditures for food under the supplemental program for women, infants, and children; foster care; adoption assistance; and payments to nonprofit welfare institutions.

8. Consists largely of veterans benefits, Alaska dividends, and crime-victim payments.

9. Consists of federal government social benefits to the rest of the world and includes benefits paid to individuals in the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

Plus: Adjustment for U.S. territories and Puerto Rico (38-42)	48	8.5	6.4	4.0	2.5
Equals: Balance on current account, NIPAs (39-43)	49	-740.5	-798.4	-724.7	-707.2

1. Exports and imports of gold in the NIPAs differ from those in the ITAs. ITA gold exports (line 2) and imports (line 19) are excluded from the NIPAs; imports of gold in the NIPAs (line 21) is the excess of the value of gold in gross domestic purchases over the value of U.S. production of gold.

2. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs and statistical revisions to the NIPAs that have not yet been incorporated into the ITAs. From 1986 through 1991, the NIPAs include estimates of insurance premium supplements that are not accounted for in the ITAs until 1992.

3. Consists of transactions between the United States and its territories, Puerto Rico, and the Northern Mariana Islands. The treatment of U.S. territories, Puerto Rico, and the Northern Mariana Islands in the NIPAs differs from that in the ITAs. In the NIPAs, they are included in the rest of the world; in the ITAs, they are treated as part of the United States.

4. Beginning with 1988, the ITAs classify certain military grants as services that the NIPAs do not. In the NIPAs these transactions are excluded from exports and included in transfer payments from government.

5. In the ITAs, income transactions between parents and affiliates are recorded on a net basis. In ITA exports, U.S. parents' receipts from foreign affiliates for interest are net of such payments by U.S. parents to foreign affiliates. In ITA imports, U.S. affiliates' payments to foreign parents for interest are net of such receipts by U.S. affiliates from foreign parents. In the NIPAs, these transactions are recorded on a gross basis. The amount of the adjustment is identical in income payments and in income receipts and, thus, does not affect NIPA net income receipts or balance on current account.

ITAs International transactions accounts

1. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets.

2. Consists of damages to fixed assets.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

Note: Chain-type quantity indexes for net investment are computed from chained (2005) dollar estimates of net investment by scaling the chained-dollar estimates to 100 in the reference year (2005). Chained (2005) dollar estimates of net investment appear in table 5.2.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

Note: Most chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chained (2005) dollar estimates of net investment are calculated by subtracting consumption of fixed capital from gross investment.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded" or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded" or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded" or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Residual	37	-0.3	-1.1	-3.4	-6.1

1. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.5.2 and real growth rates are shown in table 5.5.1.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes net purchases of used vehicles; additional detail is available in table 7.2.6B.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note: Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

1. Consists of general government and government enterprise expenditures for fixed assets.
2. Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
3. Consists of Department of Defense new structures, except family housing.
4. Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.
5. Consists of lodging, communication, and manufacturing.

1. Consists of general government and government enterprise expenditures for fixed assets.
2. Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.
3. Consists of Department of Defense new structures, except family housing.
4. Consists of lodging, religious, communication, sewage and waste disposal, water supply structures, and manufacturing.
5. Consists of lodging, communication, and manufacturing.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

1. Consists of federal government investment grants for highways, transit, air and water transportation, and water treatment plants.

2. Consists of the implied subsidy cost of government acquisition of assets such as shares of preferred stock or warrants from private business.

3. Consists of maritime construction subsidies.

4. Beginning with October 2002, consists of payments to the Uniformed Services Retiree Health Care Fund to amortize the unfunded liability.

5. Consists of forgiveness of debts owed by foreign governments to the U.S. government, and the December 1999 transfer to the Republic of Panama of the U.S. government's assets in the Panama Canal Commission. Includes capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands, and the implied subsidy cost of government acquisition of preferred stock and warrants from banks in Puerto Rico through the Troubled Asset Relief Program.

6. Income and Employment by Industry

Warehousing and storage.....	51	27,870	28,517	31,188	31,975						

1. NAICS crop and animal production.

2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.

3. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and

development services; advertising and related services; and other professional, scientific, and technical services.

6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.

7. Includes Coast Guard.

8. Employees of Indian tribal governments are classified in state and local government.

9. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. NAICS crop and animal production.

2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.

3. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and

development services; advertising and related services; and other professional, scientific, and technical services.

6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices. Includes Coast Guard.

7. Employees of Indian tribal governments are classified in state and local government.

8. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

2. NAICS crop and animal production.

3. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.

4. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

5. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

6. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

7. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.

8. Includes Coast Guard.

9. Employees of Indian tribal governments are classified in state and local government.

10. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. NAICS crop and animal production.

2. Consists of furniture and home furnishings stores; electronics and appliance stores; building material and garden equipment and supplies dealers; health and personal care stores; gasoline stations; clothing and clothing accessories stores; sporting goods, hobby, book, and music stores; miscellaneous store retailers; and nonstore retailers.

3. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

4. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

5. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related

services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

6. Consists of offices of bank and other holding companies and of corporate, subsidiary, and regional managing offices.

7. Includes Coast Guard.

8. Employees of Indian tribal governments are classified in state and local government.

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

1. NAICS crop and animal production.

2. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

3. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

4. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

5. Consists of bank and other holding companies.

6. Consists of receipts by all U.S. residents, including both corporations and persons, of dividends from foreign corporations, and, for U.S. corporations, their share of reinvested earnings of their incorporated foreign affiliates, and earnings of unincorporated foreign affiliates (line 82), net of corresponding payments (line 83).

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

Pipeline transportation	43	253	34								

1. NAICS crop and animal production.

2. Consists of scenic and sightseeing transportation; transportation support activities; and couriers and messengers.

3. Intangible assets include patents, trademarks, and franchise agreements, but not copyrights.

4. Consists of accounting, tax preparation, bookkeeping, and payroll services; architectural, engineering, and related

services; specialized design services; management, scientific, and technical consulting services; scientific research and development services; advertising and related services; and other professional, scientific, and technical services.

5. Consists of bank and other holding companies.

NOTE: Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

Domestic output of new autos ²	45	107.8	108.3	104.8	99.9	114.5	107.9	105.7	105.0	104.3	102.3	103.5	109.0	108.1	98.4	106.8	86.5	41.6	48.2
Sales of imported new autos ³	46	86.4	95.3	99.1	88.8	93.7	93.6	96.2	97.7	99.2	100.3	98.4	98.6	94.0	102.1	87.5	71.5	67.4	67.5

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Equals: Net housing value added	13	814.3	852.1	884.4	897.4

1. Equals personal consumption expenditures for housing excluding expenditures for group housing as shown in table 2.5.6.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Farm ¹	15	-5.5	-6.0	-6.4	-6.8
Nonfarm.....	16	94.3	103.7	113.6	175.5
For consistent accounting at historical cost.....	17	121.3	135.5	147.5	210.2
For current-cost valuation.....	18	-27.0	-31.8	-33.9	-34.7
Other private business ¹	19	-15.5	-17.0	-17.4	-16.7
Rental income of persons.....	20	-14.8	-16.2	-16.6	-15.8
Nonfarm tenant-occupied housing.....	21	-13.9	-15.2	-15.5	-14.7
Farm tenant-occupied housing.....	22	-0.2	-0.2	-0.2	-0.2
Farms owned by nonoperator landlords.....	23	-0.2	-0.3	-0.3	-0.2
Nonfarm nonresidential properties.....	24	-0.5	-0.5	-0.6	-0.6
Proprietors' income.....	25	-0.6	-0.7	-0.8	-0.9

1. Except for farm proprietorships and partnerships (line 15) and other private business (line 19), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, to consistent service lives and empirically based depreciation schedules. The adjustment for current-cost valuation converts the historical-cost series with consistent accounting to a series valued at current cost. For farm proprietorships and partnerships and for other private business, the historical-cost series is based on consistent service lives and empirically based depreciation schedules, so the adjustment reflects only a conversion to current-cost valuation.

Table 7.7. Business Current Transfer Payments by Type

[Billions of dollars]

	Line	2005	2006	2007	2008

1. Excludes interest paid or received by government enterprises, which is included in the government sector.

2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.

3. Consists of nonmortgage interest paid by households.

4. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 32.

5. Beginning with October 2002, includes the Uniformed Services Retiree Health Care Fund.

6. Includes nonprofit institutions primarily serving households.

NOTE: In this table, imputed interest paid (line 41) is the sum of (1) premium supplements paid to property and casualty insurance carriers by households and institutions, governments, domestic business, and the rest of the world as a measure of imputed services provided to these sectors by the property and casualty insurance providers, (2) the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, households and institutions, governments, and the rest of the world, and (3) the imputed services provided to these sectors in the role of borrowers of financial services; these services are included as negative amounts paid by the borrowers and received by the financial intermediaries.

						228	9,665.4	10,469.8	11,066.6	11,323.2	

1. Residential dwellings owned and used by nonprofit institutions serving households are included in owner-occupied housing categories.

2. Includes financial services furnished without payment to government employee retirement plans.

3. Classified as a service in exports, and as an income payment to the rest of the world.

4. Classified as a service in exports, and as an income receipt from the rest of the world.

5. For general government employees, recorded as compensation of employees (wages and salaries) and as a sale; does not affect government consumption expenditures. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

6. Health insurance premiums paid by employers are included in the calculation of the "net health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calculation of the "life insurance" category of PCE.

7. Consists of the programs for which a social insurance fund is imputed, and for which contributions are set equal to benefits paid. These payments are funded directly out of the current budget. The specific programs consist of workers' compensation, unemployment insurance, and medical services for the dependents of active duty military personnel at nonmilitary facilities. Source data are not available for the corresponding treatment for similar state and local government programs. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

8. Consists of owner-occupant purchases of new single-family dwellings, including manufactured homes, expenditures

on improvements, and payments of commissions on new and existing residential dwellings, less sales of dwellings to government. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.

9. Excludes investment by nonprofit institutions serving households in residential properties, which is included in owner-occupant investment (see footnote 1) and in sales of existing structures to governments. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.4.5 because the series shown in that table reflect total purchases by private business.

10. The consumption of fixed capital (CFC) of government enterprises is not included in government consumption expenditures; it is deducted in the calculation of the current surplus of government enterprises and is recorded as part of total government CFC.

11. Includes gross investment of government enterprises.

NOTE: "Imputations" are transactions recorded in the national income and product accounts that are not transactions of the market economy. In this table, the imputations shown in the "specific imputations" section are those that affect gross domestic product (GDP). In table 7.11, imputed interest paid by life insurance carriers (line 46) consists of the property incomes earned on life insurance and pension reserves. These incomes are considered to be incomes received by persons and not by the insurance carriers; this reclassification is not considered an imputation for purposes of table 7.12, because it does not affect GDP.

1. Consists of intangible assets that the IRS allows to be amortized.
 2. Consists of depreciation or amortization of the following items: Breeding, dairy, and work animals; motion picture films; rental videocassettes; and rental clothing.
 3. Consists of depreciation of employees' motor vehicles reimbursed by business and depreciation of business motor vehicles charged to current expense.
 4. Beginning with 1981, included in IRS depreciation (line 1).
 5. Consists of depreciation of assets owned by Federal Reserve banks, federally sponsored credit agencies, credit unions, and nonprofit institutions serving business; depreciation of interest paid by public utilities for own-account investment prior to 1987 (beginning with 1987, included in line 1).
 6. Consists of depreciation or amortization of rental videocassettes and rental clothing.

1. Consists largely of an adjustment to expense all meals and entertainment, of oilwell bonus payments written off, of adjustments for insurance carriers and savings and loan associations, of amortization of intangible assets, and of tax-exempt interest income.

2. Consists of the Farm Credit System and the Federal Home Loan Banks.

3. Consists of nonprofit organizations serving business and of credit unions.

4. Consists of disaster losses valued at historic-cost less net insurance receipts for disaster-related losses valued at replacement-cost.

5. Includes the imputed financial service charge paid by corporations to domestic securities dealers who do not charge an explicit commission.

6. Beginning with 1984, the investment tax credit is included in other tax credits (line 27).

7. Consists largely of an adjustment to remove capital gains distributions of regulated investment companies.

1. Total annual wages of workers covered by state unemployment insurance (UI) laws and by the Unemployment Compensation for Federal Employees program. Data for the most recent year are preliminary.

2. Consists of unreported wages and salaries paid by employers and of unreported tips.

BLS Bureau of Labor Statistics

NIPAs National income and product accounts

GDP and Other Major NIPA Series, 1929–2009: II

The historical series from the national income and product accounts (NIPAs) have been updated to present revised estimates from the 2009 benchmark revision and the “second” estimates for the second quarter of 2008.

Table 1 presents current-dollar estimates of gross domestic product (GDP) and its components. Table

2A presents estimates of real GDP and its components in chained dollars, and table 2B presents estimates of real GDP and its components in chain-type quantity indexes. Table 3 presents price indexes. Table 4 presents national income and personal income.

The estimates are available on BEA’s Web site at www.bea.gov.

Table 1. Gross Domestic Product—Continues

See the note at the end of the table.

NOTE. Chain-type estimates provide the best available method for comparing the level of a given series at two points in time. Chained-dollar estimates are obtained by multiplying the chain-type quantity index for an aggregate by its value in current dollars in the reference year (currently 2005) and dividing by 100. For an analysis of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and the chain-type quantity indexes are the same. Thus, chained-dollar estimates can be used to compute "real" (that is, inflation-adjusted) rates of growth. However, comparisons of two or more different chained-dollar series must be made with caution, because the prices used as weights in the chained-dollar calculations usually differ from the prices in the reference period, and the resulting chained-dollar values for detailed GDP components usually do not sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided in most chained-dollar tables by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed

components in the table.

It is usually best to make comparisons of aggregate series in current dollars or to use BEA's estimates of contributions to percent change. Measures of the contributions of components to the percentage change in real GDP and to the percentage change in other major aggregates are provided in NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, 5.3.2, 5.4.2, and 5.5.2. In general, the use of chained-dollar estimates to calculate component shares or component contributions may be misleading for periods away from the reference year; component shares of GDP are provided in table 1.1.10. In the November 2003 SURVEY, the article "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" discussed the advantages of using chain-weighted indexes and the challenges of using chained dollars. To assist users in undertaking historical analysis, BEA provides supplemental tables that present estimates for selected timespans in chained 1937, 1952, 1972, and 1987 dollars (see tables 1.1.6A, 1.1.6B, 1.1.6C, and 1.1.6D).

Table 2A. Real Gross Domestic Product—Continues

[Billions of chained (2005) dollars; quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	Gross domestic product	Personal consumption expenditures	Gross private domestic investment	Exports and imports of goods and services		Government consumption expenditures and gross investment	Residual	Final sales of domestic product	Gross domestic purchases	Final sales to domestic purchasers	Gross national product	Percent change from preceding period				
				Exports	Imports							Gross domestic product	Final sales of domestic product	Gross domestic purchases	Final sales to domestic purchasers	Gross national product

Direct Investment, 2006–2008

Detailed Historical-Cost Positions and Related Capital and Income Flows

By Jeffrey H. Lowe

THIS ARTICLE presents detailed statistics on direct investment positions at historical cost (book value) and related capital and income flows for U.S. direct investment abroad and foreign direct investment in the United States. Summary estimates of services transactions with foreign affiliates and foreign parent companies are also presented.¹ (For definitions, see the box “Key Terms.”) The statistics for both U.S. direct investment abroad and for foreign direct investment in the United States cover 2006–2008. These statistics complement the statistics presented in two articles in the July 2009 SURVEY OF CURRENT BUSINESS by providing more detail by country, industry, and account.²

For both U.S. direct investment abroad—or “outward direct investment”—and foreign direct investment in the United States—or “inward direct investment”—the statistics for 2006 forward reflect the incorporation of new or revised data from BEA’s quarterly surveys of transactions between parents (both U.S. and foreign) and their affiliates and annual surveys of financial and operating data of U.S. parent companies, their foreign affiliates and U.S. affiliates of foreign companies.

Tables

After this article, two sets of tables are presented—one for outward direct investment and one for inward direct investment.³ In each set, tables 1–15 present similar data.

1. Global totals (all countries and all industries) for royalties and license fees and other private services are shown in table 2 (page 216). Breakdowns by country and by industry are not included in this presentation. Country detail and detail by type of service or intangible asset will be available in the October SURVEY OF CURRENT BUSINESS article on U.S. international services.

2. See Marilyn Ibarra and Jennifer Koncz, “Direct Investment Positions for 2008: Country and Industry Detail,” SURVEY 89 (July 2009): 20–34 and Anne Flatness, Erin M. Whitaker, and Robert E. Yuskavage, “Annual Revision of the U.S. International Accounts,” SURVEY 89 (July 2009): 35–47.

3. Because of the deletion of a table from previous articles, table numbers have changed. For details, see the headnotes to “U.S. Direct Investment Abroad Tables” and “Foreign Direct Investment in the United States Tables” following this article.

- Table 1 shows the direct investment positions and rates of return at historical cost, current cost, and market value.
- Table 2 presents the position and related flows for 1997–2008 at historical cost and as they are presented in the international investment position accounts and international transactions accounts.
- Tables 3–16 for outward direct investment and 3–17 for inward direct investment present the direct investment positions and international transactions by country of foreign affiliate or foreign parent, by industry of affiliate, and by account. For outward direct investment, table 16 presents estimates that are also classified by industry of U.S. parent. For inward direct investment, table 16 presents estimates that are classified not only by country of foreign parent but also by country of ultimate beneficial owner (UBO).
- Table 17 for inward direct investment provides a breakdown of the foreign direct investment position in the United States by the industry of the UBO of

Data Availability

Detailed statistics of the direct investment positions and of transactions between parents and their affiliates that enter the U.S. international transactions (balance of payments) accounts are available on BEA’s Web site. To access the series featured in this report, go to www.bea.gov and under “International,” click on “Operations of Multinational Companies.” Under either “U.S. direct investment abroad” or “Foreign direct investment in the United States,” click on the link to either “Selected Tables” or “Interactive Tables,” which appears next to the “Balance of payments and direct investment position data.” The interactive tables allow users to access detailed balance of payments and direct investment position data as well as data on the operations of multinational companies.

the U.S. affiliate. It shows the value of investments owned by private entities (businesses and individuals, estates, and trusts) as well as the value owned by foreign governments and government enterprises.

The statistics in this report differ from some of the counterpart statistics in the international investment position and international transactions accounts.⁴

- The statistics in this report are at historical cost, the only way detailed statistics by country and industry are available. In contrast, the statistics on the direct investment position in the international investment position accounts are presented at current cost and market value.
- The statistics in this report are presented without a current-cost adjustment. In contrast, the statistics on direct investment income (in the current account) and capital flows (in the financial account) in the U.S. international transactions accounts are presented with a current-cost adjustment.

4. See Elena L. Nguyen, "The International Investment Position of the United States at Yearend 2008," SURVEY 89 (July 2009): 10–19 and Douglas B. Weinberg and Gregory A. Tenentes, "U.S. International Transactions: First Quarter of 2009," SURVEY 89 (July 2009): 56–105.

Revisions

Outward direct investment

The revised statistics on the U.S. direct investment position abroad at yearend, capital flows, and income reflect the incorporation of revised data from quarterly surveys of transactions between U.S. parents and their foreign affiliates and annual surveys of financial and operating data of foreign affiliates.

As noted in the July 2009 SURVEY article on direct investment positions for all areas, the outward direct investment position at historical cost was revised up \$22.6 billion for 2006 and \$125.7 billion for 2007 (table A). The upward revision for 2006 mostly resulted from a large revision to valuation adjustments from negative to positive and a small upward revision to capital outflows without current-cost adjustment. (Capital outflows without current-cost adjustment, which increase the U.S. direct investment position abroad, consist of reinvested earnings without current-cost adjustment and equity capital and intercompany debt transactions. Capital inflows reduce the position.) The upward revision for 2007 was the result of the upward revision to the position for 2006, an upward

1. The only accounts for which 2008 statistics were previously available by country were capital outflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct invest-

ment positions for 2008 are preliminary and were first published in the July 2009 SURVEY OF CURRENT BUSINESS. NOTE: The statistics in the "revised" columns were presented in the July 2009 SURVEY.

revision to 2007 capital outflows, and an upward revision to 2007 valuation adjustments.

Capital outflows without current-cost adjustment were revised up \$2.6 billion for 2006, \$64.6 billion for 2007, and \$13.2 billion for 2008. In all 3 years, the revisions mainly resulted from upward revisions to equity capital investment; for 2008, an upward revision to reinvested earnings also contributed. For 2006 and 2007, downward revisions to reinvested earnings were partly offsetting.

Income without current-cost adjustment was revised down for all 3 years—\$4.8 billion for 2006, \$5.8 billion for 2007, and \$1.5 billion for 2008. In all 3 years, the revisions resulted from downward revisions to earnings; for 2007 and 2008, upward revisions to net interest receipts were partly offsetting.

Inward direct investment

The revised statistics of the foreign direct investment position at yearend, capital flows, and income reflect the incorporation of revised data from quarterly surveys of transactions between U.S. affiliates and their foreign parents and annual surveys of financial and operating data of U.S. affiliates.

As noted in the July 2009 SURVEY article on direct investment positions, for all areas, the inward direct investment position at historical cost was revised down \$3.4 billion for 2006 and up \$16.8 billion for 2007 (table B). The downward revision for 2006 was

Acknowledgments

The survey used to collect the data from which the statistics related to outward direct investment were derived was conducted under the supervision of Mark W. New, who was assisted by Iris Branscome, Laura A. Downey, David L. Grayton, Marie K. Laddomada, Sherry Lee, Louis C. Luu, Leila C. Morrison, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo.

The survey used to collect the data from which the statistics related to inward direct investment were derived was conducted under the supervision of Gregory G. Fouch, who was assisted by Peter J. Fox, Barbara C. Huang, Susan M. LaPorte, Robert L. Rosholt, and Helen P. Yiu. Computer programming for data estimation and tabulation was provided by Karen E. Poffel and Paula D. Brown.

1. The only accounts for which 2008 statistics were previously available by country were capital inflows without current-cost adjustment and income without current-cost adjustment. The estimates of the direct invest-

ment positions for 2008 are preliminary and were first published in the July 2009 SURVEY OF CURRENT BUSINESS. NOTE: The statistics in the "revised" columns were presented in the July 2009 SURVEY.

attributable to a downward revision to valuation adjustments. The upward revision for 2007 was the result of the upward revision to capital inflows, which was partly offset by a downward revision to valuation adjustments and the downward revision to the 2006 position. (Capital inflows without current-cost adjustment, which increase the foreign direct investment position in the United States, consist of reinvested earnings without current-cost adjustment and

equity capital and intercompany debt transactions. Capital outflows reduce the position.)

Capital inflows without current-cost adjustment were revised up \$0.4 billion for 2006, up \$38.3 billion for 2007, and were revised down \$4.8 billion for 2008. The upward revision for 2006 was accounted for by an upward revision to intercompany debt investment that was partly offset by downward revisions to equity capital investment and reinvested earnings. The upward

Key Terms—Continues

For a more detailed discussion of the terms in this box, see *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* and *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey*. These methodologies are available on BEA's Web site at www.bea.gov.

Direct investment

This is investment in which a resident (in the broad legal sense, including a company) of one country obtains a lasting interest in, and a degree of influence over a business enterprise in another country. In the United States (and in international statistical guidelines), the criterion used to define direct investment is ownership of at least 10 percent of the voting securities of an incorporated business enterprise or the equivalent interest in an unincorporated business enterprise.

U.S. direct investment abroad (outward direct investment) represents the ownership or control, directly or indirectly, by one U.S. resident (**U.S. parent**) of at least 10 percent of a foreign business enterprise, which is called a **foreign affiliate**.

Foreign direct investment in the United States (inward direct investment) represents the ownership or control, directly or indirectly, by one foreign resident (**foreign parent**) of at least 10 percent of a U.S. business enterprise, which is called a **U.S. affiliate**. Foreign direct investment includes equity and net debt investments by the foreign parent, as well as net debt investments by any other members of the **foreign parent group**. The foreign parent group consists of (1) the foreign parent, (2) any foreign person (including a company), proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the **ultimate beneficial owner (UBO)**, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

The UBO of a U.S. affiliate is the first person that is not more than 50 percent-owned by another person in the affiliate's ownership chain beginning with the foreign parent. The UBO ultimately owns or controls the affiliate

and derives the benefits and assumes the risks associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

Direct investment position

This is the value of direct investors' equity in, and net outstanding loans to, their affiliates. The direct investment position may be viewed as the direct investors' net financial claims on their affiliates. BEA prepares estimates of the positions for U.S. direct investment abroad and foreign direct investment in the United States at historical cost, current cost, and market value. In this report, the **historical-cost measure** is featured. This valuation is principally derived from the books of affiliates and generally reflect the acquisition cost of the investments, cumulative reinvested earnings, and cumulative depreciation of fixed assets. Historical-cost statistics are consistent with U.S. generally accepted accounting principles (GAAP) in most areas. GAAP, however, values the holdings of most financial instruments at current-period prices rather than at historical cost. See the box "Alternative Measures of the Direct Investment Positions" in Ibarra and Koncz, 23.

Direct investment capital flows arise from transactions that change financial claims (assets) and liabilities between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parents. Capital **outflows** arise from transactions that increase U.S. assets or decrease U.S. liabilities. Capital **inflows** arise from transactions that decrease U.S. assets or increase U.S. liabilities. Direct investment capital flows consist of equity capital investment, intercompany debt investment, and reinvested earnings. **Equity capital investment** is the difference between equity capital increases and decreases. Equity capital increases arise from (1) parents' establishments of new affiliates, (2) payments by parents to unaffiliated parties for the purchase of capital stock or other equity interests when they acquire an existing business, (3) payments made to acquire additional ownership interests in their affiliates, and (4) capital contributions to their affiliates. Equity capital

revision for 2007 resulted from an upward revision to intercompany debt investment; an upward revision to equity capital investment also contributed. A downward revision to reinvested earnings was partly offsetting. The downward revision for 2008 was the result of a sizable downward revision to intercompany debt investment that was partly offset by upward revisions to

equity capital investment and reinvested earnings.

Income without current-cost adjustment was revised up \$5.6 billion for 2006, down \$7.8 billion for 2007, and up \$18.2 billion for 2008. The revisions for all years were almost entirely attributable to revisions to affiliates' earnings. For 2008, a downward revision to interest payments was partly offsetting.

Key Terms

decreases are the funds parents receive when they reduce their equity interest in their affiliates.

Intercompany debt investment results from changes in net outstanding loans between parents (or other foreign parent group members) and their affiliates, including loans by parents to affiliates and loans by affiliates to parents.

Reinvested earnings (without current-cost adjustment) are the parents' share of the current-period operating earnings of their affiliates, less distributions of earnings that affiliates make to their parents. A related measure of reinvested earnings is featured in the international transactions accounts; this measure includes a **current-cost adjustment** that reflects current-period prices. This adjustment converts depreciation charges to a current-cost, or replacement-cost, basis; it adds charges for depletion of natural resources back to income and reinvested earnings because these charges are not treated as production costs in the national income and product accounts; it reallocates expenses for mineral exploration and development across periods, so that they are written off over their economic lives rather than all at once.

Various **valuation adjustments** to the historical-cost position are made to account for the differences between changes in the historical-cost positions, which are measured at book value, and direct investment capital flows, which are measured at transaction value. (Unlike the positions on current-cost and market-value bases, the historical-cost position is not usually adjusted to account for changes in the replacement cost of the tangible assets of affiliates or in the market value of parent companies' equity in affiliates.)

Valuation adjustments to the historical-cost position consist of **currency-translation adjustments** and **"other" adjustments**. Currency-translation adjustments account for changes in the exchange rates that are used to translate affiliates' foreign-currency-denominated assets and liabilities into U.S. dollars. "Other" valuation adjustments are made to account for (1) differences between the proceeds from the sale or liquidation of foreign affli-

ates and their book values, (2) differences between the purchase prices of affiliates and their book values, (3) writeoffs resulting from uncompensated expropriations of affiliates, (4) the reclassification of investment positions between direct investment and other investment, and (5) capital gains and losses (excluding currency-translation adjustments) on transactions, such as the sale of assets (excluding inventories) or capital gains and losses that represent the revaluation of the assets of ongoing foreign affiliates for reasons other than exchange-rate changes, such as the writedown of assets. In addition, for individual industries, offsetting valuation adjustments may be made to effect changes in the industry classification of an affiliate. For individual countries, offsetting adjustments are made when the political boundaries of countries change. In addition, for foreign direct investment in the United States, offsetting adjustments are made when transactions between foreign residents result in a change in the country of foreign parent.

Direct investment income (without current-cost adjustment)

This is the return on the direct investment position. It consists of (1) earnings, that is, the parents' shares in the net income from the operations of their affiliates and (2) net interest received by parents (or parent group) from affiliates from outstanding loans and trade accounts. As in the case of reinvested earnings (see above), a related measure including a current-cost adjustment is featured in the international transactions accounts.

Services transactions

Receipts and payments between parents and their affiliates for services provided by one to the other. They consist of **royalties and license fees** for the use or sale of intangible property or rights (including patents, trademarks, and copyrights) and **other private services** (consisting of service charges, including management fees and allocated expenses, rentals for tangible property, and film and television tape rentals).

U.S. direct investment abroad tables 1–16 and foreign direct investment in the United States tables 1–17 follow.

U.S. Direct Investment Abroad Tables

Beginning this year, the tables in this section no longer include a table reconciling the statistics on U.S. direct investment abroad shown here with those shown in the international transactions accounts. In previous years, this reconciliation appeared in table 2.

The reconciliation was discontinued because, except for the difference in valuation, the differences between the series have been eliminated. In particular, beginning with the statistics for 2006, the statistics presented here are now shown before the deduction of U.S. and foreign withholding taxes, making them consistent with statistics in the international transactions accounts. The direct investment income and capital flows in this series continue to be measured on a historical-cost basis, whereas in the international transactions accounts, they are measured on a current-cost basis. In the new table 2, statistics at both historical cost and current cost are presented.

General Notes to the Tables

- Detail may not add to totals, because of rounding.
- An asterisk “(*)” indicates a nonzero value between -\$500,000 and \$500,000 or between -0.5 percent and

0.5 percent.

- A “(D)” indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (25) comprises Austria, Belgium, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. The European Union (27) comprises the European Union (25) and the two countries—Bulgaria and Romania—that joined in 2007.
- OPEC is the Organization of Petroleum Exporting Countries. In 1997-2006, its members were Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. In 2007, Angola became a member. Ecuador reactivated its membership in OPEC in November 2007, and it is included as a member for 2008 in these annual tabulations.

Tables 1 through 16 follow.

1. Historical-cost capital outflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value capital outflows include reinvested earnings with the adjustment.

2. Historical-cost direct investment income excludes capital gains and losses and the current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest, but for years prior to 2006, it differs from the measures disaggregated by country and by industry in subsequent tables, which are recorded net (after deduction) of withholding taxes. However, for 2006 forward, income is recorded gross of withholding taxes in the subsequent tables.

3. Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum exploration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. Current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

4. Market-value direct investment income measures the financial return to investors, so it includes capital gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustments. The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions.

Table 2. U.S. Direct Investment Abroad: Position and Balance of Payments Flows, 1997–2008

[Millions of dollars]

Position, capital outflows, and income as shown in tables 3–16	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006 ¹	2007	2008

1. For years prior to 2006, the income, royalties and license fees, and other private services statistics in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these statistics are presented gross, or before deduction, of U.S. and foreign withholding taxes.

2. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals. Note: See the text for details on how the statistics shown in the top panel differ from those in the international investment position accounts and the international transactions accounts.

1. For years prior to 2006, income is presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, income is presented gross, or before deduction, of U.S. and foreign withholding taxes.

2. For 2008, the "Euro area" includes Austria, Belgium, Cyprus, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovenia and Spain. For 2008, the U.S. direct investment position in the "Euro area" was \$1,128,529 million; capital outflows without current-cost adjustment were

\$113,840 million; and direct investment income without current-cost adjustment was \$110,923 million.

3. For years prior to 2007, data for Monaco are included in France. Beginning with 2007, data for Monaco are shown separately.

OWH Other Western Hemisphere

Foreign Direct Investment in the United States Tables

Beginning this year, the tables in this section no longer include a table reconciling the statistics on foreign direct investment in the United States shown here with those shown in the international transactions accounts. In previous years, this reconciliation appeared in table 2.

The reconciliation was discontinued because, except for the difference in valuation, the differences between the series have been eliminated. In particular, beginning with the statistics for 2006, the statistics presented here are now shown before the deduction of U.S. and foreign withholding taxes, making them consistent with statistics in the international transactions accounts. The direct investment income and capital flows in this series continue to be measured on a historical-cost basis, whereas in the international transactions accounts, they are measured on a current-cost basis. In the new table 2, statistics at both historical cost and current cost are presented.

General notes to the tables

- Detail may not add to totals, because of rounding.
- An asterisk “(*)” indicates a nonzero value between -\$500,000 and \$500,000 or between -0.5 percent and

0.5 percent.

- A “(D)” indicates that the data in the cell have been suppressed to avoid the disclosure of data of individual companies.
- The European Union (25) comprises Austria, Belgium, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. The European Union (27) comprises the European Union (25) and the two countries—Bulgaria and Romania—that joined in 2007.
- OPEC is the Organization of Petroleum Exporting Countries. In 1997–2006, its members were Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. In 2007, Angola became a member. Ecuador reactivated its membership in OPEC in November 2007, and it is included as a member for 2008 in these annual tabulations.

Tables 1 through 17 follow.

1. Historical-cost capital inflows include reinvested earnings without the current-cost adjustment, and current-cost and market-value capital inflows include reinvested earnings with the adjustment.

2. Historical-cost direct investment income excludes capital gains and losses and the current-cost adjustment to earnings. The historical-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year historical-cost direct investment positions. In accordance with international guidelines, this measure of income, like the other measures in this table, is recorded gross (before deduction) of U.S. and foreign withholding taxes on distributed earnings and interest, but for years prior to 2006, it differs from the measures disaggregated by country and by industry in subsequent tables, which are recorded net (after deduction) of withholding taxes. However, for 2006 forward, income is recorded gross of withholding taxes in the subsequent tables.

3. Current-cost direct investment income excludes capital gains and losses and includes a current-cost adjustment to earnings that adjusts depreciation, depletion, and expensed petroleum exploration and development costs to reflect current-period prices and to more closely align income earned in a period with charges against income in the same period, as required for the national and international economic accounts. Current-cost rate of return equals this measure of income divided by the average of the beginning- and end-of-year current-cost direct investment positions.

4. Market-value direct investment income measures the financial return to investors, so it includes capital gains and losses of the affiliate but excludes the current-cost adjustment and currency-translation adjustments. The market-value rate of return equals this measure of income divided by the average of the beginning- and end-of-year market-value direct investment positions.

1. Prior to 2006, the income, royalties and license fees, and other private services statistics in the top panel are presented net, or after deduction, of U.S. and foreign withholding taxes. Beginning with 2006, these statistics are presented gross, or before deduction, of U.S. and foreign withholding taxes.

2. Consists of service charges, rentals for the use of tangible property, and film and television tape rentals. Note. See the text for details on how the statistics in the top panel differ from those in the international investment position accounts and the international transactions accounts.

1. An increase in U. S. affiliates' receivables is a decrease in net intercompany debt and a capital outflow.

2. Other valuation adjustments account for differences between the proceeds from the sale or liquidation of U.S. affiliate

and their book values and for differences between the purchase price of affiliates and their book values. For individual industries, adjustments may also be made to effect changes in the industry classification of a U.S. affiliate.

1. An increase in U.S. affiliates' receivables is a decrease in net intercompany debt and a capital outflow.

2. Other valuation adjustments account for differences between the proceeds from the sale or liquidation of U.S. affiliates and their book values and for differences between the purchase price of affiliates and their book values. For individual industries, adjustments may also be made to effect changes in the industry classification of a U.S. affiliate.

Table 6. Foreign Direct Investment in the United States: Earnings Without Current-Cost Adjustment and Reinvestment Ratios, 2005–2008—Continues

[Millions of dollars or ratio]

	2005				2006				2007			
	Earnings without current-cost adjustment			Reinvestment ratio ¹	Earnings without current-cost adjustment			Reinvestment ratio ¹	Earnings without current-cost adjustment			Reinvestment ratio ¹

1. Reinvested earnings without current-cost adjustment divided by earnings without current-cost adjustment.
 Note: In this table, earnings and distributed earnings are shown before deduction of withholding taxes.

n.d. Reinvestment ratio is not defined because reinvested earnings without current-cost adjustment are negative.

1. The ultimate beneficial owner is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The country of ultimate beneficial owner is often the same as that of the foreign parent, but it may be a different foreign country or the United States.

Personal Income for Metropolitan Areas for 2008

By David G. Lenze

CURRENT-DOLLAR personal income growth slowed in 2008 in most of the nation’s metropolitan statistical areas, according to statistics from the Bureau of Economic Analysis.¹ Personal income growth slowed in 322 metropolitan areas, increased in 42 areas, and remained unchanged in 2 areas. In five metropolitan areas, personal income declined. On average, metropolitan area personal income grew 3.3 percent in 2008, down from 6.0 percent in 2007. In 2008, metropolitan areas accounted for 88 percent of U.S. personal income.

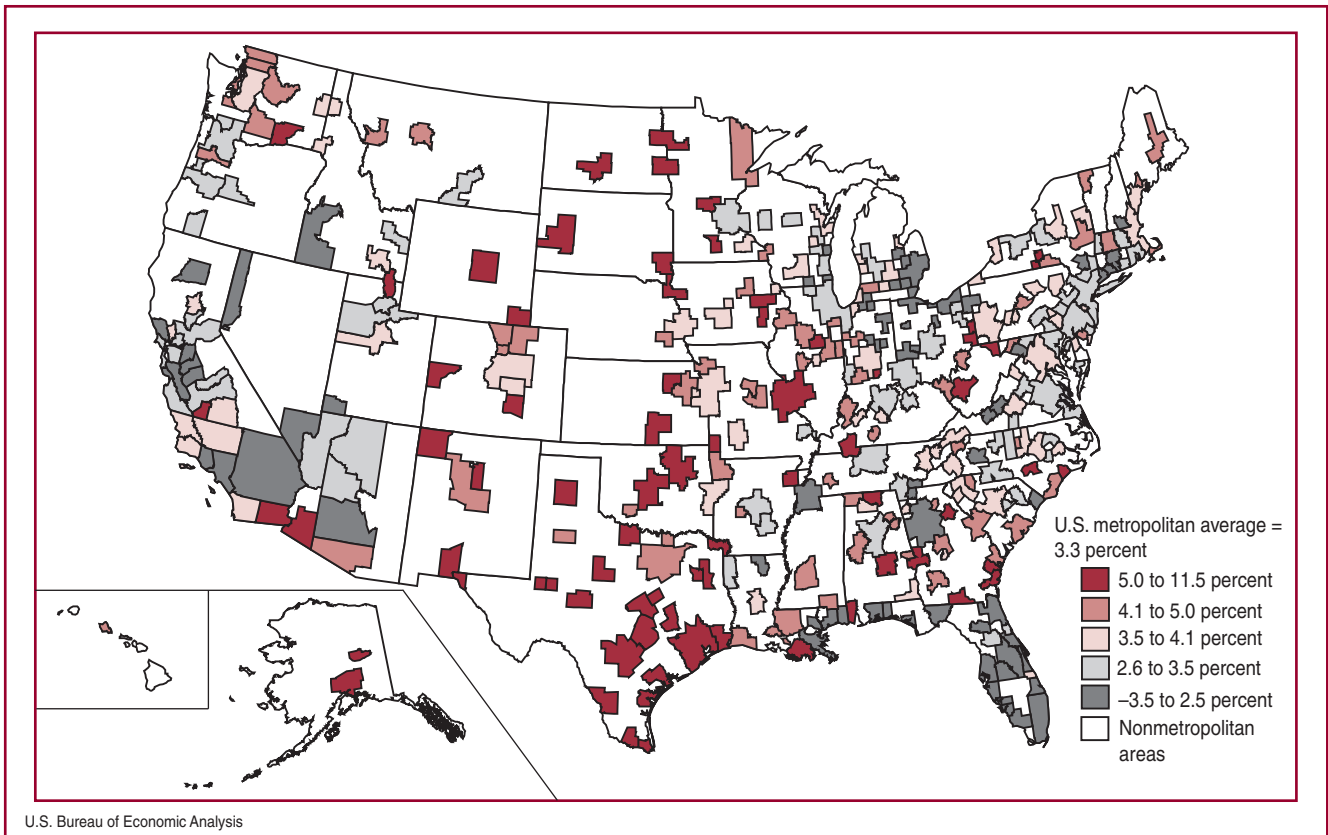

1. Personal income is defined as the income received by all persons from all sources in current dollars. It is the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. Net earnings is earnings by place of work (the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors’ income) less contributions for government social insurance plus a residence adjustment to convert earnings by place of work to earnings by place of residence. Personal income is measured before the deduction of personal income taxes and other personal taxes.

Highlights for 2008 include the following:

- Metropolitan areas in the central portion of the United States tended to be in the highest quintiles when ranked by the percent change in personal income, while areas in the bottom quintiles tended to be in the east or west (chart 1).
- Some of the fastest growing areas benefited from high oil prices. In contrast, areas with declining personal income were hit hard by sluggishness in manufacturing.
- Per capita personal income growth in the metropolitan portion of the United States averaged 2.2 percent.
- BEA prepared statistics for three new metropolitan areas designated by the Office of Management and Budget.² All three are relatively small.

2. “Metropolitan Statistical Areas have at least one urbanized area of 50,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.... Metropolitan Statistical Areas are defined in terms of whole counties (or equivalent entities).” See Office of Management and Budget, “Appendix,” *Bulletin No. 09-01* (November 20, 2008): 2.

Chart 1. Personal Income Growth Rates in Quintiles for 366 Metropolitan Areas in 2008

Areas with declining personal income or slow growth

Personal income fell in five metropolitan areas in 2008. In four of these areas (Dalton, GA, Monroe, MI, Elkhart, IN, and Kokomo, IN), manufacturing was the major industry contributing to the decline. Personal income also fell in Gulfport, MS; the decline was accounted for by a tapering off in federal payments to rebuild residences destroyed or damaged by Hurricane Katrina. (Such payments made Gulfport the fastest growing metropolitan area in 2007.)

Four of the five slowest growing metropolitan areas with populations of at least 1 million were in the Sunbelt: San Jose, CA, Phoenix, AZ, Jacksonville, FL, and Tampa, FL. The other was in the Midwest: Detroit, MI. Although these areas sustained large declines in compensation in 2008, total personal income in each area increased because of growth in other components of personal income, namely, in transfer receipts and property income. As in the other slowest growing small metropolitan areas (with populations of less than 1 million), the weakness in San Jose, CA, and Detroit was accounted for by manufacturing. In Phoenix, AZ, Jacksonville, FL, and Tampa, FL, construction accounted for the weakness.

Areas with the fastest growth

The fastest growing metropolitan areas in 2008 benefited from the high oil prices of the first half of the year (Midland, TX, Odessa, TX, and Grand Junction, CO) or from the military's "Grow the Force" initiative (Jacksonville, NC, Manhattan, KS, and Hinesville, GA). Personal income grew 9 percent or more in these areas. All are relatively small, with populations of less than 200,000.

Five of the six fastest growing large metropolitan areas were in Texas and Oklahoma. Oil and gas extraction (mining) or construction made important contributions to growth in four of these areas: Oklahoma City, OK, Houston, TX, San Antonio, TX, and Dallas, TX. Austin, the state capital of Texas, had relatively strong growth in the state and local government and the services industries and avoided the declines in retailing and construction that hurt many other metropolitan areas. St. Louis, MO, which ranked third among the fastest growing large areas, owed its strong performance to severance pay and other types of compensation associated with a recent business acquisition.

Per capita personal income

Per capita personal income growth rates ranged from 12.0 percent in Hinesville, GA, to -3.7 percent in Gulfport, MS. Average metropolitan area per capita personal income growth was 2.2 percent. Per capita

personal income growth is a measure that highlights differences in economic conditions across metropolitan areas by removing the effect of differential population growth rates. The labor market conditions previously described account for many areas on either end of the growth-rate range.

In addition, the two Alaskan areas, Fairbanks and Anchorage, had relatively high per capita income growth because of the 98 percent increase in the Alaska Permanent Fund dividend to \$3,269 per person. A portion of oil lease rents and royalties received by the state are deposited in this fund.

The Economic Stimulus Act of 2008 also boosted per capita personal income. Because the income tax rebates authorized by the Act were targeted toward lower income families, the contribution of these rebates to per capita personal income growth varied inversely with per capita incomes. For example, the rebates contributed 1.7 percentage points to personal income growth in McAllen, TX, in 2008 (the metropolitan area with the lowest per capita income in the nation), but the rebates contributed only 0.1 percentage point to growth in Bridgeport, CT, (the area with the nation's highest per capita income).

Other industry highlights

Among industries, health care and state and local governments were the primary sources of personal income growth for the metropolitan portion of the United

Acknowledgments

The advance estimates of personal income for metropolitan areas were prepared by the Regional Income Division under the direction of Robert L. Brown, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance.

Nonfarm compensation statistics were prepared by Tina C. Highfill and Michael G. Pilot under the supervision of Sharon C. Carnevale, Chief of the Compensation Branch. All other components of personal income were prepared by Brian J. Maisano (with assistance from Carrie L. Litkowski and Michelle A. Harder on the farm income components) under the supervision of James M. Zavrel, Chief of the Regional Income Branch. Methodological research and analysis of the estimates were provided by David G. Lenze, Assistant to the Chief of the Regional Income Division. The database and tables were prepared by Gary V. Kennedy, Michael J. Paris, Callan S. Swenson, and Jonas D. Wilson under the supervision of Kathy A. Albettski, Chief of the Regional Economic Information System Branch.

States in 2008 (table A). Each contributed about 0.4 percentage point, about average for the last 3 years. Professional services was the other major contributor to personal income growth, but its contribution of 0.4 percentage point in 2008 was lower than its contribution in the previous 2 years.

State and local	0.47	0.49	0.44

NOTE: An industry's contribution to percent change in personal income equals the dollar change in that industry's compensation divided by personal income in the previous year times 100.

Six industries subtracted from personal income growth. Construction, durable-goods manufacturing, nondurable-goods manufacturing, retail trade, finance, and real estate reduced personal income growth 0.3 percentage point in 2008. As recently as 2006, these six industries contributed 1.5 percentage points to growth.

Other sources of change

Economic stimulus payments. In BEA's personal income statistics, the income tax rebates authorized by the Economic Stimulus Act of 2008 for individuals who pay no income taxes (or for whom the rebate would exceed the amount of the income taxes they do pay) are treated as personal current transfer receipts.³ These rebates amounted to \$24.7 billion for the metropolitan portion of the United States in 2008, contributing only 0.2 percentage point to growth (table B on pages 289 and 290).

Homeowner assistance programs. The amounts distributed under the federal homeowner assistance programs to rebuild residences destroyed or damaged by Hurricane Katrina declined in 2008 in all Louisiana and Mississippi areas except Houma-Bayou Cane-Thi-

bodaux, LA (table C). This reduced personal income growth by 3.1 percentage points in New Orleans, LA, 7.4 percentage points in Gulfport, MS, and 7.7 percentage points in Pascagoula, MS. These were the three fastest growing metropolitan areas in 2007 because of the federal payments; in 2008, they were among the slowest growing metropolitan areas.

Table C. Homeowner Assistance Payments by Metropolitan Area in Louisiana and Mississippi

	Homeowner assistance payments		Contribution to personal income growth	
	Millions of dollars		Percentage points	
	2007	2008	2007	2008
Louisiana				
Alexandria	12	(L)	0.3	-0.2

Pascagoula	503	122	11.9	-7.7

(L) Less than \$500,000

NOTE: The contribution of homeowner assistance payments to metropolitan area personal income growth equals the change in the amount of those payments divided by personal income in the previous year times 100.

Special Hurricane Ike adjustments. The estimates of personal income for Beaumont-Port Arthur, TX, and several other areas reflect the effects of Hurricane Ike, which landed in Texas on September 13, 2008 (table D).⁴ In Beaumont, TX, rental income of persons was reduced \$300 million, and nonfarm proprietors'

4. The metropolitan area personal income estimates will not be revised to be consistent with the 2009 comprehensive revision of the national income and product accounts until next spring. Under the new treatment of natural disasters introduced by the comprehensive revision, personal income will no longer be affected by uninsured losses of residential and business property or by net insurance settlements. See Eugene P. Seskin and Shelly Smith, "Preview of the 2009 Comprehensive Revision of the NIPAs: Changes in Definitions and Presentations," SURVEY 89 (March 2009): 10-20. For details of the old treatment see the articles on state personal income in the January and April 2006 issues of the SURVEY.

Table D. Special Hurricane Ike Adjustments to Selected Metropolitan Area Personal Income for 2008

	Adjustments				Contribution to personal income growth	
	Millions of dollars, annual rate				Percentage points	
	Nonfarm proprietors' income	Rental income	Transfer receipts	Total	Nonfarm proprietors' income plus rental income	Transfer receipts
Beaumont-Port Arthur, TX	-98	-300	303	-94	-3.2	2.4
Houston-Sugar Land-Baytown, TX	-413	-1,266	1,280	-398	-0.6	0.5
Owensboro, KY	-5	-15	15	-5	-0.6	0.5
Dayton, OH	-21	-65	66	-21	-0.3	0.2
Lake Charles, LA	-4	-13	14	-4	-0.3	0.2
Cincinnati-Middletown, OH-KY-IN	-43	-132	134	-42	-0.2	0.2
Springfield, OH	-2	-5	6	-2	-0.2	0.1
Other metropolitan areas	-84	-259	262	-81	(L)	(L)

(L) Less than 0.05 percent.

NOTE: The other metropolitan areas are in Arkansas, Illinois, Indiana, Kentucky, Louisiana, Missouri, Ohio, Pennsylvania, and Texas.

3. For details, see the box "Economic Stimulus Act of 2008" SURVEY OF CURRENT BUSINESS 88 (October 2008): 134.

income was reduced \$98 million; both reductions reflect uninsured losses of residential and business property. Transfer receipts from business were boosted \$303 million to reflect net insurance benefits paid to persons. The combined effect of these adjustments was to lower 2008 personal income \$94 million.

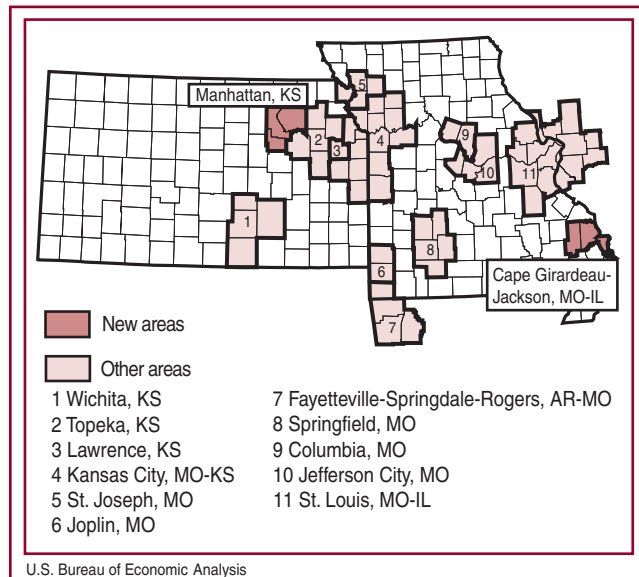

Adjustments in Houston, TX, were larger when measured in dollars but smaller relative to the component of income that was adjusted. Adjustments were also made to the personal income of several metropolitan areas that are far from the Gulf Coast, such as Owensboro, KY, and Dayton OH. As the remnants of Hurricane Ike moved across the United States, they caused severe damage in these areas. However, because other effects of the hurricane are embedded in the source data, BEA did not attempt to quantify their impact.

New metropolitan areas

The Office of Management and Budget designated three new metropolitan areas in November 2008 (charts 2 and 3): Cape Girardeau-Jackson, MO-IL (consisting of Alexander County, IL, Bollinger County, MO, and Cape Girardeau County, MO); Manhattan, KS (consisting of Geary, Pottawatomie, and Riley counties in Kansas); and Mankato-North Mankato, MN (consisting of Blue Earth and Nicollet counties in Minnesota). This brings the total number of metropolitan areas to 366.

Because these areas are defined in terms of counties and because BEA publishes estimates of income and employment for all counties back to 1969, a statistical portrait of the new metropolitan areas as of 2008 and a description of the rural-to-metropolitan evolution of the areas were easily assembled.

Chart 2. Location of Newly Designated Metropolitan Areas in Kansas and Missouri

The new areas are small, especially when population rather than employment or total personal income is the measure of size. Manhattan, KS, has the largest population of the three, with nearly 122,000 residents in 2008. Manhattan, KS, ranked 305 according to population, while Cape Girardeau-Jackson, MO-IL, ranked 350, and Mankato-North Mankato, MN, ranked 352 (table E). These areas rank a bit higher when wage and salary employment is the measure of size: Manhattan's 72,000 jobs ranked 249 in 2007.⁵

Per capita personal income in 2008 was below average for all three; Cape Girardeau ranked 297, with \$30,051, Mankato ranked 181, with \$34,570, and Manhattan ranked 124 with \$36,987. The average for all metropolitan areas was \$41,455. Average wages per job in 2007 were also below the U.S. average of \$45,846; average wages were \$31,147 in Cape Girardeau, \$31,616 in Mankato, and \$34,607 in Manhattan.

5. The most recent employment data are for 2007.

Chart 3. Location of Newly Designated Metropolitan Area in Minnesota

The industrial compositions of the three areas are distinctive. Cape Girardeau is a medical hub for south-east Missouri and southern Illinois. Its health care sector accounts for more than 21.5 percent of earnings in the area, compared with 9.8 percent for the metropolitan portion of the United States. Transportation and warehousing is also relatively large, accounting for more than 6.0 percent of earnings, compared with 3.2 percent for the United States.

Manhattan's economy is dominated by Fort Riley and other government activities. The military accounted for 39 percent of earnings, compared with 1.7 percent for the United States. The state and local government sector accounted for 17.0 percent, compared with 11.4 percent. And the federal civilian government accounted for 7.1

percent, compared with 3.2 percent. In total, the government sector accounted for more than 63 percent of earnings in the Manhattan area.

Mankato-North Mankato, MN, has a rather large farm sector, accounting for 6.0 percent of earnings, compared with 0.3 percent for the United States. It also has relatively large manufacturing sector (16.5 percent, compared with 11.1 percent), health care sector (more than 13.4 percent, compared with 9.8 percent), and state and local government sector (16.1 percent, compared with 11.4 percent).

Manhattan, KS, has grown relatively rapidly over 1997–2007. Wage and salary employment growth has averaged 1.8 percent per year, well above the 1.2 percent growth rate for the United States. Per capita personal income growth has averaged 6.3 percent per year, compared with 3.9 percent. The area has managed above average growth while growing demographically at the same 1.1 percent pace as the United States.

In contrast, Cape Girardeau-Jackson, MO-IL, and Mankato-North Mankato, MN, have had below average population growth and personal income growth. In employment growth, the two areas differ. Over the past 10 years, Cape Girardeau grew slightly slower (1.1 percent) than the United States, but Mankato grew faster (1.8 percent).

 1. A portion of the estimate is suppressed to avoid disclosure of confidential information.

Data Availability

This article presents summary advance statistics of metropolitan area personal income and per capita personal income for 2008 and previously published statistics for 2006–2007. More detailed statistics for 1969–2008 are also available.

The following estimates for metropolitan areas are at www.bea.gov/bea/regional/reis:

- Metropolitan area income and employment summary statistics, featuring personal income, per capita personal income, the derivation of personal income for 1969–2008, and employment totals, which are available only for 1969–2007
- Compensation of employees by industry by North American Industry Classification System (NAICS) subsectors for 2001–2007, by NAICS sectors for 2008, and by Standard Industrial Classification System (SIC) two-digit industries for 1998–2000
- Personal income by major source and earnings by NAICS subsectors for 2001–2007, by NAICS sectors for 2008, and by SIC two-digit industries for 1969–2000

For more information, call BEA's Regional Economic Information System at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

1. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February

2004, March 2005, December 2005, December 2006, November 2007, and November 2008) for federal statistical purposes.

Table 1. Personal Income and Per Capita Personal Income by Metropolitan Area, 2006–2008—Continues

Area	Personal income					Per capita personal income ¹					
	Millions of dollars			Percent change from preceding period ²		Dollars			Rank in United States	Percent change from preceding period

p Preliminary

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, December 2006, November 2007, and November 2008) for federal

statistical purposes.

NOTE: The personal income level shown for the United States is derived as the sum of the metropolitan area estimates and an estimate for the nonmetropolitan portion of the United States. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Industry Data

E. Industry Table

The statistics in this table were published in tables 3a and 5a in "Annual Industry Accounts: Advance Statistics on GDP by Industry for 2008" in the May 2009 SURVEY OF CURRENT BUSINESS.

Table E.1. Percent Changes in Chain-Type Quantity and Price Indexes for Value Added by Industry for 2006–2008

Line		Chain-type quantity indexes			Chain-type price indexes			Line		Chain-type quantity indexes			Chain-type price indexes		
		2006	2007	2008	2006	2007	2008			2006	2007	2008	2006	2007	2008

p Preliminary

r Revised

1. Reflects adjustments necessary to bring Census Bureau data in line with the concepts and definitions used by BEA

to prepare international and national accounts.

2. Contains goods that cannot be separately identified.

Source: Bureau of Economic Analysis and Census Bureau.

p Preliminary

r Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

p Preliminary

r Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

p Preliminary

r Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

p Preliminary

r Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

r Revised

⁴ Less than \$500,000 (+/-)⁵ Not applicable

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes in coverage due to year-to-year changes in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, and 24, 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).

5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. The movement of exchange rates does not affect this valuation.

10. Also includes claims/liabilities reported by U.S. securities brokers.

11. Primarily U.S. government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

Table G.2. U.S. Direct Investment Abroad: Selected Items, by Country and by Industry of Foreign Affiliate, 2005-2008

THE U.S. IN THE INTERNATIONAL ECONOMY

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary

r Revised

1. Per capita personal income was computed using midyear population estimates of the Census Bureau.
 2. Percent change from the preceding period was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
 Source: Table 2 in the "Regional Quarterly Report" in the April 2009 Survey of Current Business.

Table I.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

p Preliminary

r Revised

1. Per capita disposable personal income was computed using midyear population estimates of the Census Bureau.
 2. Percent change from the preceding period was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
 Source: Table 3 in the "Regional Quarterly Report" in the April 2009 SURVEY OF CURRENT BUSINESS.

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2008

[Millions of dollars]

State and region	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

NOTE: Totals shown for the United States differ from the national income and product account statistics of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules. Source: This table reflects the GDP-by-state statistics for 2008 that were released on June 2, 2009.

J. Local Area Table

Table J.1. Personal Income and Per Capita Personal Income by Metropolitan Area, 2006–2008—Continues

p Preliminary

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, December 2006, November 2007, and November 2008) for federal statistical purposes.

NOTE: The personal income level shown for the United States is derived as the sum of the metropolitan area estimates and an estimate for the nonmetropolitan portion of the United States. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 1 "Personal Income for Metropolitan Areas for 2008" in the September 2009 SURVEY OF CURRENT BUSINESS.

Table J.2. Gross Domestic Product (GDP) by Metropolitan Area for Industries, 2006—Continues

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006–2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2005) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (\$100 × 1.10). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t - 0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.

ITAs International transactions accounts

NIPAs National income and product accounts

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates.

Concepts and Methods of the U.S. National Income and Product Accounts (Introductory Chapters 1-4) (2008)

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

An Introduction to National Income and Product Accounts (2007)

Measuring the Economy: A Primer on GDP and the National Income and Product Accounts (2007)

The following SURVEY articles describe the 2009 comprehensive revision of the NIPAs.

“Initial Results of the 2009 Comprehensive NIPA Revision (August 2009)”

“Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision” (September 2009)

Preview of the 2009 Comprehensive NIPA Revision Changes in Definitions and Presentations (March 2009)

New Classifications for Personal Consumption Expenditures (May 2008)

Statistical Changes (May 2009)

Initial Results of the 2009 Comprehensive NIPA Revision (August 2009)

“Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes” (March 2008)

In addition, see the following articles.

“Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“Reliability of the NIPA Estimates of U.S. Economic Activity” (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

“Gross Domestic Product: Revisions and Source Data” (February 2006) describes the categories of data that are used for the advance, preliminary, and final quarterly estimates of GDP.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925-97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 1925-2002” (May 2004) describes the improvements that were incorporated into these estimates as part of the 2003 comprehensive NIPA revision.

“Fixed Assets and Consumer Durable Goods for 1998-2007” (September 2008) provides estimates that reflect the incorporation of the most recent annual NIPA revision.

Satellite accounts. These accounts extend the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

“Research and Development Satellite Account”

For 1959-2002 (December 2006)

For 1959-2004 (October 2007)

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under “About BEA.”

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross-domestic-product-by-industry accounts), the benchmark input-output accounts, and one satellite account.

Annual industry accounts. “Improved Annual Industry Accounts for 1998–2003” (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

“Annual Industry Accounts” (December 2008) presents the annual revision of these accounts and describes the source data and any changes in the methods that are used to prepare the estimates.

“Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts” (March 2004) provides the details about the comprehensive revision.

Benchmark input-output accounts. “Preview of the Benchmark Input-Output Accounts for 2002” (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

“U.S. Benchmark Input-Output Accounts, 2002” (October 2007)

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”

For 2002–2005 (June 2006)

For 1998–2006 (June 2007)

For 2004–2007 (June 2008)

For 2005–2008 (June 2009)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts. *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the international transactions accounts.

The annual revisions of the international transactions accounts are described in a series of articles, the latest of which was published in the July 2009 SURVEY.

Direct investment. *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a collection of previously published articles on U.S. di-

rect investment abroad and foreign direct investment in the United States. It includes “A Guide to BEA Statistics on U.S. Multinational Companies,” which is also available in the March 1995 SURVEY, and “A Guide to BEA Statistics on Foreign Direct Investment in the United States,” which is also available in the February 1990 SURVEY.

In addition, the updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey* (2004) and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

International services. *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product. The following methodologies are available on BEA’s Web site at www.bea.gov/regional/methods.cfm.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income (2007) describes the improvements in the methodology that are used to prepare the estimates.

Local Area Personal Income (2007) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan divisions and areas, micropolitan areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

“Gross Domestic Product by State” (June 2009) presents the most recent annual revision.

“Introducing New Measures of the Metropolitan Economy: Prototype GDP-by-Metropolitan-Area Estimates for 2001–2005” (November 2007) describes the potential uses of the estimates and the methodology used to prepare them.
