Bureau of Economic Analysis

Volume 93 Number 10

- iii. Director's Message
- iv. Taking Account

Articles

1. GDP and the Economy: Third Estimates for the Second Quarter of 2013

Real GDP rose 2.5 percent after rising 1.1 percent in the first quarter of 2013. Business investment and exports turned up. Inventory investment and consumer spending slowed.

6. Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2009 to the Second Quarter of 2013

These statistics, including those for inventories for manufacturing by stage of fabrication, have been updated to reflect the 2013 comprehensive NIPA revision.

10. Fixed Assets and Consumer Durable Goods for 2003–2012: Results of the 2013 Comprehensive Revision of the NIPAs

These statistics on the net stock of equipment and software, on business and government structures, and on consumer durable goods have been updated to reflect the 2013 comprehensive NIPA revision.

25. U.S. International Services: Cross-Border Trade in 2012 and Services Supplied Through Affiliates in 2011

In 2012, the surplus on the cross-border trade in private services was \$213.5 billion. In 2011, services supplied by foreign affiliates of U.S. multinational companies exceeded the services supplied by the U.S. affiliates of foreign multinational companies by \$533.1 billion.

68. U.S. International Transactions: Second Quarter of 2013

The current-account deficit decreased \$6.0 billion to \$98.9 billion. In the financial account, net financial inflows increased \$32.7 billion to \$73.1 billion.

102. U.S. International Investment Position at the End of the Second Quarter of 2013

The position decreased \$267.6 billion to -\$4,504.1 billion for the second quarter, reflecting a decrease of \$338.2 billion in the value of foreign-owned assets in the United States and a decrease of \$605.8 billion in the value of U.S.-owned assets abroad.

105. Gross Domestic Product by Metropolitan Area: Advance Statistics for 2012 and Revised Statistics for 2001–2011

Real GDP increased in 305 of the nation's 381 metropolitan areas, reflecting growth in durable-goods manufacturing, wholesale and retail trade, and financial activities.

Upcoming in the Survey...

Summary of NIPA Methodologies. Updated source data and methods used to prepare current-dollar and real gross domestic product and current-dollar gross domestic income.

State Personal Income. The results of the 2013 comprehensive revision that reflect the comprehensive NIPA revision.

Operations of U.S. Multinational Companies. A look at the value added, employment, and capital expenditures of these companies in 2011.

Director's Message

The recent shutdown of the federal government, which caused the Bureau of Economic Analysis to cease activity from October 1 to October 16, affected this issue of the SURVEY OF CURRENT BUSINESS. We are publishing it 2 weeks later than usual, and we are publishing it only on our Web site. There will not be a "hard-copy" version of this month's issue.

The shutdown affected other BEA products as well. We have provided updated information on our Web site about planned statistical releases and how they have been delayed.

In this issue of the SURVEY, we look at international transactions and the international investment position for the second quarter of 2013. Also, we present detailed statistics on services traded across borders *and* services delivered via affiliates of multinational companies, thus taking a broad view of services provided to and by the United States in international markets. Cross-border trade statistics are presented for 2012. Services provided through affiliates are presented for 2011.

Another article details the advance statistics on gross domestic product (GDP) by metropolitan area. In 2012, real GDP increased in 305 of 381 metropolitan areas. In October, we usually provide an article that looks at the state personal income statistics for the second quarter of the year. That article is now scheduled to appear in the November issue.

As usual in October, an article looks at the third estimates of the GDP accounts for the second quarter. Statistics on inventories and sales as well as on fixed assets and consumer durable goods are also presented. Both sets of statistics reflect the 2013 comprehensive revision of the national income and product accounts.

J. Steven Landefeld
Director, Bureau of Economic Analysis

Taking Account...

BEA study derives industry R&D price indexes

Research and development (R&D) and other intangibles are widely understood to make significant contributions to economic output and growth. Estimating R&D for national economic accounting purposes calls for R&D price indexes suitable to deflate nominal measures of R&D output.

A recent paper by Bureau of Economic Analysis (BEA) economists Carol Robbins, Olympia Belay, Matthew Donahoe, and Jennifer Lee describes the construction of experimental industry-specific R&D price indexes to deflate nominal R&D output and investment in the absence of market prices and quantity measures.

Indexes were constructed for pharmaceutical manufacturing, semiconductor manufacturing, motor vehicle manufacturing, computer system design and related services, and scientific R&D services.

Building from a standard input cost approach recommended by the Organization for Economic Co-operation and Development (OECD) for intangible capital, the authors constructed price indexes that included an adjustment for the unobserved productivity of the innovator.

Their model holds that the growth rate of R&D output can, on average, be best understood by the growth rate of R&D inputs plus the growth rate of

R&D productivity. The challenge is to identify the growth rate of this R&D productivity using data available on an ongoing basis.

The experimental indexes are based on industry cost weights from National Science Foundation (NSF) R&D expenditure data, wages from the Bureau of Labor Statistics (BLS), and intermediate input data from BEA. These cost weights encompass wages for scientists and engineers, wages for support personnel, materials and supplies costs, current-cost depreciation, and other R&D costs.

To adjust for the unobserved productivity in the knowledge-creation process, the authors use BLS multifactor productivity for the nonfarm business sector.

The study also compared the authors' data-intensive approach that estimates R&D costs separately for the five specific industries with an approach that uses a common deflator.

The authors calculated that the weighted average of productivity-adjusted input cost indexes for R&D increased at an average annual of 1.2 percent between 1998 and 2007. This compares with a growth rate of R&D input costs of 2.7 percent and a growth rate of the gross domestic product (GDP) price index of 2.4 percent.

The authors also concluded that using a common deflator for the R&D of different industries matters for growth measurement primarily at the

industry level. Not surprisingly, the use of a common deflator for R&D investment implies more rapid R&D investment growth for industries that have experienced relatively rapid increases in input costs, compared with an industry-specific deflator.

For use in deflating R&D for the national accounts, the authors concluded that at the macro level, the impact on R&D investment and GDP is not greatly affected by the choice of industry-specific or aggregate deflators. Given the tradeoff between computational complexity and precision, an aggregate deflator for business R&D has substantial appeal.

However, the impact of choosing industry-specific or aggregate deflators is more pronounced at the industry level. Because the authors used a single productivity adjustment for all industries, the variation across industries in the price indexes is a function of input cost variation.

This variation in input costs was substantial: their input cost index for semiconductor-related R&D rose at an average annual rate of 2.1 percent between 1997 and 2007 while the input cost index for scientific R&D services rose at a rate of 3.1 percent.

The greatest difference between industry-specific and aggregate deflators shows up in industries where labor and other input costs have a different growth rate from the single index chosen.

GDP and the Economy

Third Estimates for the Second Quarter of 2013

REAL GROSS domestic product (GDP) increased 2.5 percent at an annual rate in the second quarter of 2013, according to the third estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).¹ In the first quarter, real GDP increased 1.1 percent.

The third estimate of real GDP growth for the second quarter is the same as the second estimate released last month and primarily reflects downward revisions to inventory investment and to exports that were offset by an upward revision to state and local government spending.²

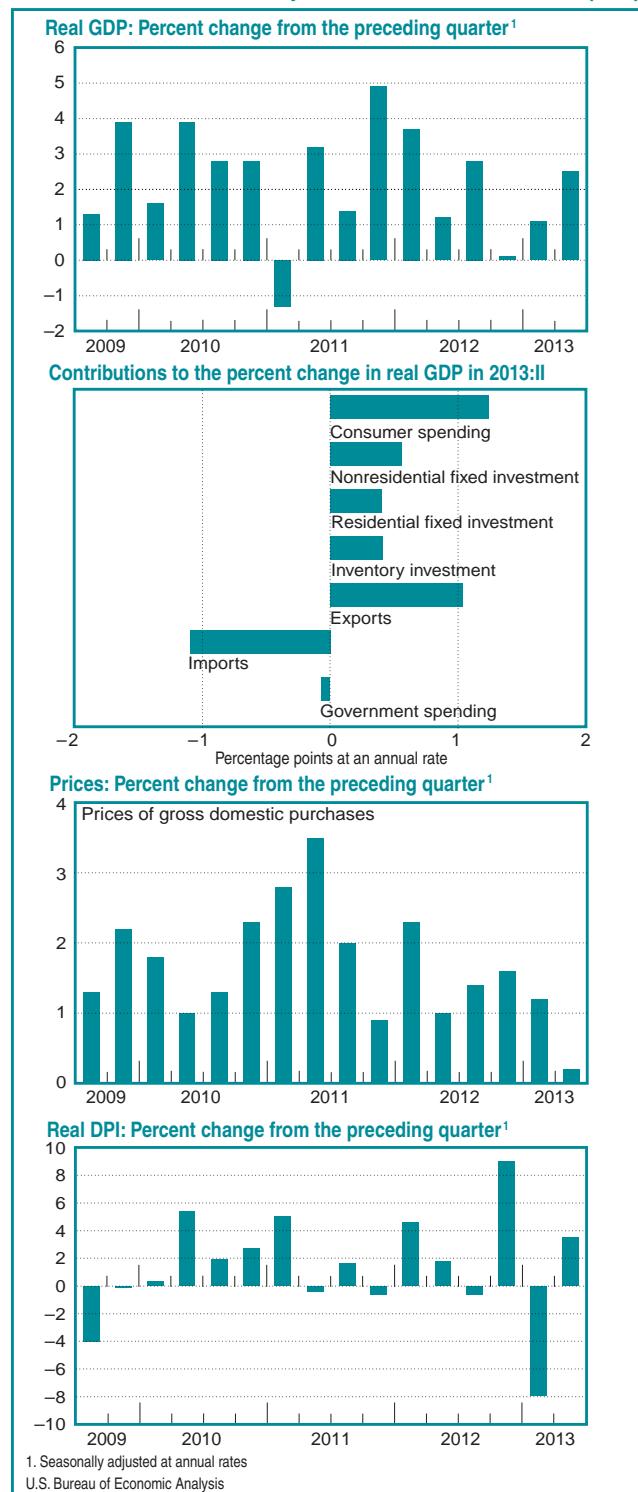

The acceleration in real GDP in the second quarter primarily reflected upturns in exports and in nonresidential fixed investment, a smaller decrease in federal government spending, and an upturn in state and local government spending that were partly offset by an acceleration in imports and decelerations in inventory investment and in consumer spending.

- Prices of goods and services purchased by U.S. residents, as measured by the gross domestic purchases price index, increased 0.2 percent in the second quarter, 0.1 percentage point less than the second estimate; in the first quarter, this index increased 1.2 percent. Energy prices decreased more in the second quarter than in the first quarter. Food prices slowed. Excluding food and energy, prices increased 0.8 percent after increasing 1.4 percent.
- Real disposable personal income (DPI) increased 3.5 percent in the second quarter after decreasing 7.9 percent in the first quarter. Current-dollar DPI increased 3.4 percent after decreasing 7.0 percent; the upturn reflected a sharp upturn in personal income and a deceleration in personal current taxes. The personal saving rate, personal saving as a percentage of current-dollar DPI, was 4.5 percent in the second quarter; in the first quarter, the rate was 4.1 percent.
- Corporate profits from current production increased \$66.8 billion in the second quarter after decreasing \$26.6 billion in the first quarter (see table 3).

1. "Real" estimates are in chained (2009) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see "[Revisions to GDP, GDI, and Their Major Components](#)" in the July 2011 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

Lisa S. Mataloni prepared this article.

Real GDP Overview

Table 1. Real Gross Domestic Product (GDP) and Related Measures
 [Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)					Contribution to percent change in real GDP (percentage points)

Research and development (R&D)	2.6	1.7	0.4	-0.2	1.9	0.04	0.01	0.00	0.05		
GDP excluding R&D	97.4	2.8	0.1	1.2	2.5	2.74	0.13	1.15	2.43		
Gross domestic income (GDI)²	0.9	4.9	2.4	2.6		

1. The estimates of GDP under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP.

Note. For GDP and its components, percent changes are from NIPA tables 1.1.1 and 1.2.1, contributions to percent change are from NIPA tables 1.1.2 and 1.2.2, and shares are from NIPA table 1.1.10, or they are calculated from table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

Consumer spending slowed in the second quarter, reflecting slowdowns in both services and goods.

The slowdown in spending for goods primarily reflected downturns in food and beverages purchased for off-premises consumption, in motor vehicles and parts, and in gasoline and other energy goods.

The slowdown in spending for services was more than accounted for by a slowdown in household spending that primarily reflected a downturn in electricity and gas that was partly offset by a pickup in spending for health care services and by an upturn in cellular telephone services.

Nonresidential fixed investment turned up, primarily reflecting an upturn in structures that was partly offset by a downturn in intellectual property products (primarily software). The upturn in structures reflected an upturn in power and communication structures.

Residential fixed investment picked up, primarily reflecting a pickup in "other" structures (mainly improvements and brokers' commissions) that was partly offset by a slowdown in single-family structures.

Exports added 1.04 percentage points to real GDP growth after subtracting 0.18 percentage point; the upturn primarily reflected an upturn in exports of goods, primarily nonautomotive capital goods (civilian aircraft, engines, and parts).

Imports picked up, subtracting 1.10 percentage points from real GDP growth after subtracting 0.10 percentage point. The pickup primarily reflected an upturn in goods imports, especially automotive vehicles, engines, and parts.

Federal government spending decreased less than in the first quarter, primarily reflecting a smaller decrease in defense spending.

State and local government spending turned up after declining for three quarters, primarily reflecting an upturn in gross investment spending.

Real final sales of domestic product, real GDP less inventory investment, increased 2.1 percent after increasing 0.2 percent, as inventory investment slowed.

Real gross domestic income, which measures the output of the economy as the incomes earned and costs incurred in production, increased 2.6 percent after increasing 2.4 percent.

Revisions to GDP

Table 2. Second and Third Estimates for the Second Quarter of 2013
 [Seasonally adjusted at annual rates]

	Change from preceding quarter (percent)			Contribution to percent change in real GDP (percentage points)

Gross domestic purchases price index	0.3	0.2	-0.1
GDP price index.....	0.8	0.6	-0.2

1. The estimates under the contribution columns are also percent changes.

The third estimate of the second-quarter change in real GDP was the same as the second estimate. Downward revisions to inventory investment and to exports were partly offset by an upward revision to state and local government spending. For 1983–2012, the average revision (without regard to sign) between the second estimate and the third estimate is 0.3 percentage point.

Consumer spending was revised up slightly; the revision reflected an upward revision to spending for services that was partly offset by a downward revision to spending for goods.

The upward revision to nonresidential fixed investment reflected upward revisions to structures and to equipment that were partly offset by a downward revision to intellectual property products.

The downward revision to inventory investment primarily reflected downward revisions to retail trade industries, primarily food and beverage stores, and to “other” industries, primarily information industries.

The downward revision to exports reflected downward revisions to both goods and services. In goods, the largest contributor to the revision was “other” goods. In services, the largest contributors to the revision were “other” private services and “other” transportation.

The upward revision to state and local government spending was more than accounted for by an upward revision to state and local government gross investment, primarily structures.

Source Data and Methodologies

For the details about the source data and the methodologies that are used for the estimates, see *Concepts and Methods of the U.S. National Income and Product Accounts* at www.bea.gov/methodologies/index.htm.

Source data for the third estimate. The third estimate of GDP for the second quarter of 2013 incorporated the following source data.

Consumer spending: Census Bureau retail sales for June (revised), Quarterly Services Survey data for the second quarter (new), and Federal Deposit Insurance Corporation *Call Report* data for the second quarter (new).

Nonresidential fixed investment: Census Bureau construction spending data (value put in place) for May and June (revised) and Quarterly Services Survey data for the second quarter (new).

Residential fixed investment: Census Bureau construction spending data for May and June (revised).

Inventory investment: Census Bureau manufacturers' and trade inventories for June (revised) and farm income statistics (revised) from the Economic Research Service of the U.S. Department of Agriculture.

Exports and imports: Bureau of Economic Analysis international transactions accounts data for April, May, and June (revised).

Government spending: Census Bureau construction spending data for May and June (revised).

GDP prices: export and import prices for April, May, and June (revised) and Federal Reserve Board *Call Report* data for the second quarter (new).

Corporate Profits

Net dividends.....	1,037.3	7.1	120.9	-103.8	273.5	1.0	16.2	-12.0	35.8	
Undistributed profits from current production.....	631.9	-2.6	-80.1	102.1	-216.6	-0.3	-9.7	13.7	-25.5	
Net cash flow.....	2,053.3	11.3	-91.2	140.7	-205.3	0.5	-4.1	6.6	-9.1	

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.

Profits from current production increased \$66.8 billion, or 3.3 percent at a quarterly rate, in the second quarter after decreasing \$26.6 billion, or 1.3 percent, in the first quarter.

Domestic profits of financial corporations increased \$24.5 billion, or 5.7 percent, after decreasing \$4.1 billion, or 0.9 percent.

Domestic profits of nonfinancial corporations increased \$37.8 billion, or 3.2 percent, after decreasing \$3.1 billion, or 0.3 percent.

Profits from the rest of the world increased \$4.6 billion, or 1.2 percent, after decreasing \$19.6 billion, or 4.7 percent. In the second quarter, receipts increased \$1.2 billion, and payments decreased \$3.4 billion.

Taxes on corporate income increased \$10.0 billion, or 2.4 percent, after decreasing \$25.0 billion, or 5.8 percent, in the first quarter.

Net dividends increased \$273.5 billion, or 35.8 percent, after decreasing \$103.8 billion, or 12.0 percent. The large second-quarter increase primarily reflected dividends paid by Fannie Mae to the federal government under the stock purchase agreement authorized by the Housing and Economic Recovery Act of 2008.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including the

Census Bureau *Quarterly Financial Report*, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service (IRS) data when these data are available for two reasons: the IRS data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

Corporate Profits by Industry

Table 4. Corporate Profits by Industry
[Seasonally adjusted]

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.
IVA Inventory valuation adjustment
CCAdj Capital consumption adjustment

Profits with inventory valuation adjustment (IVA) increased \$68.6 billion, or 3.1 percent, in the second quarter after decreasing \$41.1 billion, or 1.8 percent, in the first quarter.

Profits of domestic industries increased \$64.0 billion, or 3.6 percent, after decreasing \$21.5 billion, or 1.2 percent.

Profits of domestic financial industries increased \$25.0 billion, or 5.1 percent, after decreasing \$5.2 billion, or 1.0 percent.

Profits of domestic nonfinancial industries increased \$39.0 billion, or 3.0 percent, after decreasing \$16.3 billion, or 1.2 percent. The increase primarily reflected increases in retail trade, in utilities, and in information that were partly offset by a decrease in manufacturing.

Profits from the rest of the world increased \$4.6 billion, or 1.2 percent, in the second quarter after decreasing \$19.6 billion, or 4.7 percent, in the first quarter.

Chart 2. Corporate Profits With Inventory Valuation Adjustment: Change From the Preceding Quarter, 2013:II

1. "Other" nonfinancial corporations include the agriculture, mining, construction, and services industries.

NOTE. Based on seasonally adjusted estimates.

U.S. Bureau of Economic Analysis

Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of price changes on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAdj) for

each industry. However, estimates of the CCAdj are only available for two broad categories: total financial industries and total nonfinancial industries. For more information about BEA's methodology, see "Corporate Profits" in *Concepts and Methods of the U.S. National Income and Product Accounts* at www.bea.gov/methodologies/index.htm.

Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 2009:IV–2013:II

The quarterly estimates that are presented in this report incorporate the results of the recent comprehensive revision of the national income and product accounts. Monthly estimates for January 2013 to April 2013 have also been revised; the estimates for May and June are new, and the estimates for July are preliminary.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates, which are now valued in chained (2009) dollars. Table 1B presents inventories. Table 2B presents sales. Table 3B presents the inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to

changes in demand; these ratios supplement the quarterly current-dollar and real estimates of ratios of inventories to final sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.8.5B and 5.8.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at www.bea.gov. Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying Detail Tables" and then on "Section 0. Real Inventories and Sales."

p Preliminary

Note: Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2009) dollar inventory series are calculated to ensure that the chained (2009) dollar change in inventories for 2009 equals the

current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

^p Preliminary

Note. Estimates in this table are based on the North American Classification System (NAICS).

Chained (2009) dollar sales are calculated as the product of the chain-type quantity index and the 2009 current-dollar

value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 3B. Inventory-Sales Ratios for Manufacturing and Trade, Seasonally Adjusted
 [Ratio, based on chained (2009) dollars]

p Preliminary

Note. Estimates in this table are based on the North American Classification System (NAICS).
 Sclar (2000) lists nine categories which make up the bulk of the national (2000) U.S.

Chained (2009) dollar inventory series are calculated as the product of the chained (2009) dollar change in inventories

for 2009 equals the current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Fixed Assets and Consumer Durable Goods for 2003–2012

Results of the 2013 Comprehensive Revision of the NIPAs

The Bureau of Economic Analysis (BEA) produces statistics on fixed assets and consumer durable goods as part of its efforts to measure the wealth of the nation. Fixed assets are produced assets that are used repeatedly, or continuously, in processes of production for more than a year; consumer durable goods are tangible commodities purchased by consumers that can be used repeatedly and continuously over a period of 3 or more years.

New statistics on fixed assets and consumer durable goods for 2012 and revised statistics for 2003–2011 are

presented in this report. The statistics incorporate the results of the 2013 comprehensive revision of the national income and product accounts (NIPAs), which was released on July 31, 2013.¹ These statistics cover (1) the net stock of equipment, structures, and intellectual property products owned by business and by government and (2) the net stock of durable goods owned by consumers. The statistics are presented in current dollars and in chain-type quantity indexes in tables 1–14. In addition, table 15 presents the statistics in chained (2009) dollars.

The statistics are available interactively by industry and by asset type on BEA's Web site at www.bea.gov. The statistics on net stock and depreciation (consumption of fixed capital) of net stocks for 1925–2012 and on fixed investment for 1901–2012 are also available on the Web site.

Acknowledgments

Robert J. Kornfeld prepared this report. Robert J. Kornfeld and Marlyn Rodriguez supervised the preparation of the statistics on private fixed assets and consumer durable goods. Jennifer A. Bennett supervised the preparation of the statistics on government fixed assets. Mark Bailey, Michael T. Cusick, Michael D. Glenn, Mark A. Ledbetter, Christopher B. Mbu, and Nadia Sadée prepared the statistics.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Consists of brokers' commissions on the sale of residential structures and underlying land, title insurance, state and local documentary stamp taxes, attorney fees, title abstract and escrow fees, and fees for surveys and engineering services. Ownership transfer costs include both acquisition costs, such as brokers' commissions paid by buyers, and disposal costs, such as brokers' commissions paid by sellers. The depreciation of acquisition costs begins at the time of ownership transfer. The depreciation of disposal costs begins at the time

of the initial purchase and before the eventual sale (disposal) of the dwelling by the purchaser. Because the depreciation of expected disposal costs begins before the eventual sale of the dwelling by the purchaser, the current-cost net stock of disposal costs and total ownership transfer costs may be negative in some years. The average ages of ownership transfer costs are not shown in the tables but are included in the estimates of average ages of relevant aggregates, such as residential structures.

6. Consists primarily of dormitories and of fraternity and sorority houses.

7. Excludes software "embedded" or bundled in computers and other equipment.

8. Research and development (R&D) asset types are defined by the type of funder.

9. R&D net stock excludes software development, which is included in software net stock on line 78.

10. Includes private universities and colleges. Public universities and colleges are included in state and local government fixed assets.

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Consists of brokers' commissions on the sale of residential structures and underlying land, title insurance, state and local documentary stamp taxes, attorney fees, title abstract and escrow fees, and fees for surveys and engineering services. Ownership transfer costs include both acquisition costs,

1. Consists of office buildings, except those constructed at manufacturing sites and those constructed by power utilities for their own use. Includes all financial buildings.

2. Includes buildings and structures used by the retail, wholesale and selected service industries. Consists of auto dealerships, garages, service stations, drug stores, restaurants, mobile structures, and other structures used for commercial purposes. Bus or truck garages are included in transportation.

3. Consists primarily of railroads.

4. Includes water supply, sewage and waste disposal, public safety, highway and street, and conservation and development.

5. Consists of brokers' commissions on the sale of residential structures and underlying land, title insurance, state and local documentary stamp taxes, attorney fees, title abstract and escrow fees, and fees for surveys and engineering services. Ownership transfer costs include both acquisition costs, such as brokers' commissions paid by buyers, and disposal costs, such as brokers' commissions paid by sellers. The depreciation of acquisition costs begins at the time of ownership transfer. The depreciation of disposal costs begins at the time

of the initial purchase and before the eventual sale (disposal) of the dwelling by the purchaser. Because the depreciation of expected disposal costs begins before the eventual sale of the dwelling by the purchaser, the current-cost net stock of disposal costs and total ownership transfer costs may be negative in some years. The average ages of ownership transfer costs are not shown in the tables but are included in the estimates of average ages of relevant aggregates, such as residential structures.

6. Consists primarily of dormitories and of fraternity and sorority houses.

7. Excludes software "embedded" or bundled in computers and other equipment.

8. Research and development (R&D) asset types are defined by the type of funder.

9. R&D net stock excludes software development, which is included in software net stock on line 78.

10. Includes private universities and colleges. Public universities and colleges are included in state and local government fixed assets.

n.e.c. Not elsewhere classified

NOTE. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series divided by 100. Because the formula for the chain-type quantity

indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

U.S. International Services

Cross-Border Trade in 2012 and Services Supplied Through Affiliates in 2011

By Alexis Grimm and Charu Sharma

TO PROVIDE a broad perspective on services provided by and to the United States in international markets, this article presents information on services traded, both in the conventional sense—that is, services that cross borders and are included in the U.S. international transactions accounts (ITAs) as exports and imports—and on services supplied through the channel of direct investment by affiliates of multinational companies (MNCs). This approach recognizes the importance of proximity to customers in the delivery of services; many MNCs serve foreign markets, partly or wholly, through their affiliates that are located in, but owned outside of, the markets they serve.

In 2011, as in previous years, the majority of services both delivered and obtained by the United States internationally was through affiliates (table A and chart 1).¹

In 2012, U.S. cross-border exports of private services were \$628.1 billion and U.S. cross-border imports were \$414.7 billion, resulting in a private services trade surplus of \$213.5 billion (chart 2).² In 2012,

the United States retained its position as the world's leader in exports and imports of private services.³ In 2011, services supplied to foreign markets through majority-owned foreign affiliates of U.S. multinational

companies were \$1,287.0 billion, and services supplied to the United States through majority-owned U.S. affiliates of foreign multinationals were \$754.0 billion.⁴

U.S. Cross-Border Trade in 2012

In 2012, the cross-border private services surplus increased 8 percent, to \$213.5 billion, after increasing 19 percent in 2011. In contrast to the persistent U.S. deficit on trade in goods, which was \$741.5 billion in 2012, the United States has historically recorded a surplus on trade in services (chart 2). Growth in both exports and

4. The term "affiliates" refers to majority-owned affiliates. The statistics on services supplied through affiliates cover the full value of services provided by majority-owned affiliates, irrespective of the percentage of ownership. For more information, see the box "Measuring Services Supplied Through Affiliates."

Chart 2. U.S. International Private Services Trade Surplus, 2003–2012

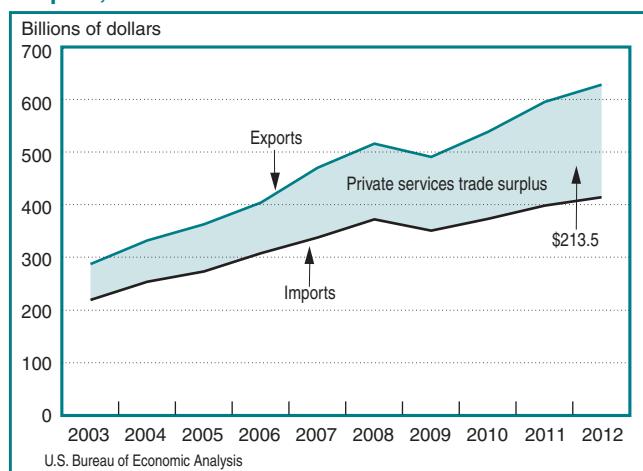

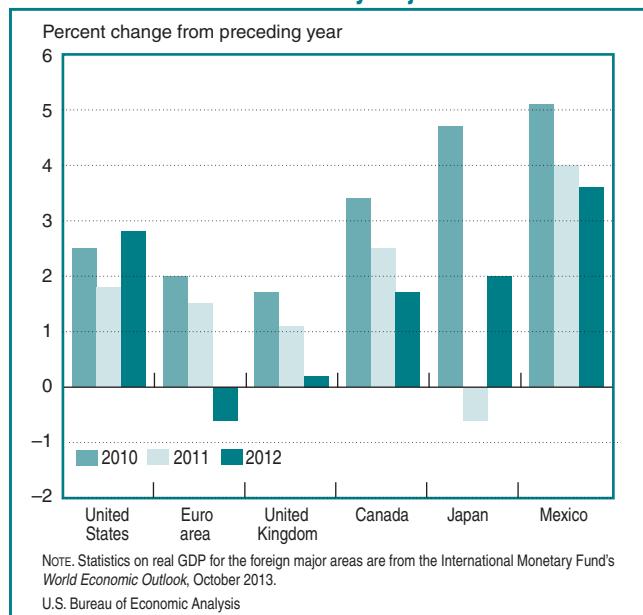

Chart 3. Growth in Real GDP by Major Area

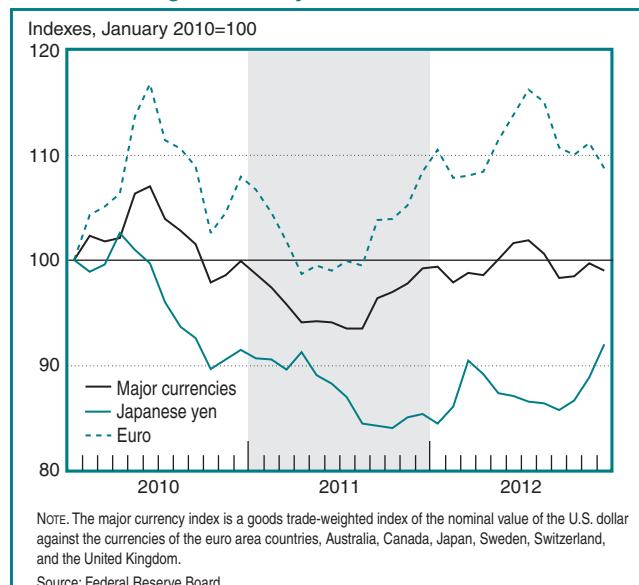

imports decelerated from the relatively high rates of 2010 and 2011 (table A). This slowdown occurred as the real gross domestic product (GDP) of many major U.S. trading partners grew at a slower rate in 2012 than in 2010 and 2011. GDP in the United States, by contrast, grew at a faster rate in 2012 than in 2010 and 2011 (chart 3). In addition, the U.S. dollar appreciated against the currencies of many major trading partners (chart 4).

Growth in cross-border exports slowed to 5 percent in 2012 from 11 percent in 2011. Most of the deceleration was due to slower growth in royalties and license fees and in other private services, particularly financial services. Growth in imports slowed to 4 percent in 2012 from 7 percent in 2011. Most of the deceleration was due to slower growth in other private services, particularly in insurance and in other transportation, which was affected by a deceleration in U.S. imports of goods.

Despite the slower growth in 2012, both exports and imports reached their highest level on record. All

Data Availability

The cross-border trade statistics for 1986–2012 and the statistics on services supplied through majority-owned affiliates for 1989–2011 can be accessed on BEA's Web site. To access these files, go to www.bea.gov, and under "International," click on "International Services," and then select "International Services Statistics."

major types of services contributed to the increase in 2012, but the relative strength of the growth varied by type of service. For exports, all categories grew, with the largest increases in percentage terms in travel, 9 percent, and passenger fares, 7 percent (table B). The increases in travel and in passenger fares reflected an increase in visitors to the United States. The increase in passenger fares was due to an increase in average airfares attributed to higher fuel prices.⁵ For imports, all categories grew with the largest increases in percentage terms in royalties and license fees, 15 percent, and in passenger fares, 12 percent. The increase in payments of royalties and license fees largely reflected increases in payments for industrial processes, rights to broadcast and record live events, such as those related to the 2012 London Summer Olympic Games, and for general-use computer software. The increase in passenger fare imports reflected an increase in average airfares and an increase in the number of U.S. travelers abroad (for details, see pages 30–34).

By area, Europe remained the largest market for U.S. services exports, followed by the Asia and Pacific region. By country, the top 10 markets for U.S. exports in 2012 were unchanged from 2011, though the rank changed in some cases (table C). China moved up to the fourth-largest market from the fifth-largest, and Mexico moved up to sixth-largest market from seventh, reflecting the importance of emerging markets to U.S. exporters. Canada, the United Kingdom, and Japan maintained their positions as the top three markets for U.S. exports. Exports to Canada increased in

most major categories, with the strongest increases in other private services—primarily in business, professional, and technical services—and in travel. Exports to the United Kingdom increased in all major categories except other private services; royalties and license fees increased the most. Exports to Japan increased in all categories except royalties and license fees, with significant increases in travel and in other private services, particularly in business, professional, and technical services.

Europe and the Asia and Pacific region were also the largest sources of U.S. imports. By country, the top 10 sources of U.S. imports in 2012 were unchanged from 2011, though the rank changed in some cases. The United Kingdom remained the top provider of services to the United States as imports from the United Kingdom increased in most major categories, particularly royalties and license fees. Canada replaced Bermuda as the second-largest provider of services, with increases in all categories except royalties and license fees and a large increase in other private services, primarily in business, professional, and technical services. Japan moved up, also surpassing Bermuda, to

1. Ranked by dollar value of total exports or imports.

become the third-largest provider of services, with increases in all categories except other private services, and a large increase in royalties and license fees. Imports of other private services from Bermuda decreased, particularly imports of insurance services, which contributed to Bermuda falling to the fourth-largest provider.

Trade within multinational corporations (affiliated trade) accounted for 29 percent of exports in 2012, the same as in 2011. Affiliated trade also accounted for 29 percent of imports in 2012, up 1 percentage point from 2011. For exports, both affiliated and unaffiliated trade decelerated in 2012. Affiliated trade rose 5 percent in 2012, compared with 12 percent in 2011, and unaffiliated trade rose 6 percent in 2012, compared with 10 percent in 2011. For imports, affiliated trade rose 8 percent in 2012, compared with 17 percent in 2011, and unaffiliated trade rose 3 percent in 2012, the same as in 2011.

Services Supplied Through Affiliates in 2011

U.S. international services delivered via the channel of direct investment consist of (1) services supplied to local and other foreign markets by foreign affiliates of U.S. multinational companies (MNCs), and (2) services supplied to the U.S. market by U.S. affiliates of foreign MNCs. In 2011, services supplied by U.S. MNCs to foreign markets through their affiliates increased to \$1,287.0 billion, and services supplied by foreign MNCs to the United States through their affiliates increased to \$754.0 billion. The difference between international services supplied through affiliates to foreign markets and to U.S. markets was \$533.1 billion in 2011, compared with \$454.0 billion in 2010. (For details, see pages 35–38.)

Services supplied abroad by foreign affiliates of U.S. MNCs grew 11 percent in 2011 after growing 8 percent in 2010. Growth in services supplied increased despite somewhat weaker global economic growth, especially in the markets that have traditionally accounted for the largest share of services supplied by foreign affiliates (chart 3). Economic growth in high-income countries slowed in 2011. In Europe, growth was weak, slowing to less than 1 percent in the United Kingdom and to just over 1 percent in the Euro area. Canada's real GDP growth remained higher than that of Europe, but it also slowed. In Japan, real GDP contracted in 2011 after a year of strong growth in 2010, at least partly as a result of the March 2011 earthquake and tsunami. Growth in emerging markets, such as Mexico, slowed

slightly but continued to outpace growth in advanced nations. The dollar value of services provided by affiliates in several important markets was increased by the dollar's slight weakening against many major currencies, including the euro and the yen, at the start of 2011 (chart 4).

Affiliates in Europe, in the Asia and Pacific region and to a lesser extent, in South and Central America were responsible for most of the increase in services supplied through affiliates (table J). Despite sluggish European economic growth, services supplied by affiliates in Europe increased 9 percent. The largest increases in Europe were in information services, such as services provided by software publishers, and in wholesale trade, particularly in durable goods. Among European affiliates, growth was highest in Ireland, Switzerland, and Germany. In Asia and Pacific, higher sales volumes increased distributive services by affiliates in wholesale trade, particularly in Singapore and Hong Kong, and especially in durable goods. Services supplied by affiliates in South and Central America climbed 15 percent in 2011 partly because of a 27 percent increase in Brazil. The increase in South and Central America was widespread by industry, but the largest changes were in information services and in professional, scientific, and technical services.

Services supplied by foreign affiliates of U.S. MNCs increased in most major industry categories. Among the industries with relatively large increases were wholesale trade, information services, and professional, scientific, and technical services (table I). Wholesale trade surpassed its prerecession level because of increased sales volumes at a variety of types of wholesalers, especially wholesalers of durable goods. Likewise, an increase in the sales of general merchandise stores and products sold by nonstore retailers, particularly online retailers, resulted in an increase in services supplied by affiliates in retail trade. Higher sales of high-technology services accounted for much of the increase in services supplied by affiliates in "other information services," such as those that provide internet search and social networking services, and software publishers, especially by new and existing affiliates in Ireland. In professional, scientific, and technical services, the largest increase was in computer systems design and related services.

In 2011, services supplied to the United States by U.S. affiliates of foreign MNCs grew 8 percent despite slightly slower U.S. economic growth, up from 5 percent in 2010 (chart 3). Affiliates with ultimate beneficial owners (UBOs) in Europe and in Asia and Pacific

accounted for three-quarters of the growth in services supplied through affiliates (table L).⁶ For European-headquartered companies, higher sales volume, particularly of durable goods, increased the distributive services provided by U.S. wholesaling affiliates. Services supplied by European affiliates in finance and insurance also increased strongly, led by increases in nonlife insurance and in commodities and financial securities trading. Among U.S. affiliates with UBOs in Europe, the largest increases were for affiliates with UBOs in France, the United Kingdom, and the Netherlands. For companies headquartered in Asia and Pacific, an increase in services supplied by affiliates in wholesale trade accounted for more than half of the overall in-

6. The UBO of a U.S. affiliate is that person, proceeding up the affiliate's ownership chain, beginning with and including the foreign parent, that is not owned by more than 50 percent by another person. Unlike the foreign parent, the UBO of an affiliate may be located in the United States. The UBO of each affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affiliate and therefore ultimately derives the benefits from ownership or control.

crease for the region. For companies with UBOs in Other Western Hemisphere, new acquisitions of U.S. affiliates in mining also significantly contributed to the overall increase in services supplied to the U.S. market.

Services supplied increased in many major industries, but more than two-thirds of the growth was in mining, finance and insurance, and wholesale trade (table K). Services supplied in mining increased 86 percent, mostly because of acquisitions of U.S. affiliates by Caribbean companies. The increase in finance and insurance was concentrated among affiliates of Canadian and European companies; the largest increases were in nonlife insurance, commodities and financial securities trading, and life insurance. Increased sales by durable-goods wholesalers, particularly wholesalers of motor vehicles and motor vehicles parts and supplies, resulted in an increase in services supplied in wholesale trade. In contrast, services supplied in transportation and warehousing, real estate and rental and leasing, and utilities decreased.

Comparing Cross-Border Trade and Services Supplied Through Affiliates

The statistics on cross-border trade and services supplied through affiliates represent services provided to, and received from, international markets through two distinct channels. Cross-border trade covers transactions between a U.S. resident and a nonresident. These transactions are recorded as U.S. exports and U.S. imports in the international transactions accounts (ITAs), or balance of payments accounts. Services supplied through affiliates cover transactions between foreign affiliates of U.S. companies and foreign residents and those between U.S. affiliates of foreign companies and U.S. residents. These transactions are not considered U.S. exports or U.S. imports in the ITAs because under the residency principle of balance-of-payments accounting, affiliates of multinational companies are considered residents of the countries where they are located rather than of the country of their owners.

The cross-border trade statistics and the services-supplied statistics together present a more complete picture of services provided to and received from international markets. However, differences in coverage and classification make it difficult to precisely compare cross-border trade in services with services supplied through affiliates. An example of a difference in coverage is the inclusion of

distributive services in services supplied through affiliates but not in the cross-border trade statistics. The distributive services associated with importing and exporting goods are included, but not separately identifiable, in the value of trade in goods. The difference in classification is that the statistics on cross-border trade in services are collected and published by type of service, but those on services supplied through affiliates are collected and published by the affiliate's primary industry.¹ Despite the difficulties in comparing U.S. cross-border transactions in services and those supplied through affiliates, the large difference in value between the two indicates that the latter is the larger channel of delivery of services in international markets (chart 1 on page 25).

1. For example, computer-related services may be delivered via cross-border services transactions; through affiliates in several industries, including those classified in computer systems design and related services or in other industries that have secondary activities in computer services; by individuals who are employees of a nonresident employer (the wages of these individuals are recorded in compensation receipts in the international transactions accounts); or may be embedded in the value of goods. For more on the delivery of computer-related services in international markets, see the FAQ "[Where can I find information about computer services supplied to foreign markets by U.S. companies or individuals?](#)" on BEA's Web site at www.bea.gov.

Travel receipts increased 9 percent as the number of foreign visitors to the United States increased.

Travel receipts from Japan increased 12 percent in 2012 after a slight decrease in 2011. The number of Japanese visitors to the United States increased 14 percent after a 4 percent decrease, likely because of the impact of the earthquake and tsunami in March 2011.

Travel receipts from Brazil slowed, increasing 11 percent after increasing 31 percent. The number of visitors from Brazil has more than tripled in 2004–2012.

Travel payments increased 7 percent in 2012 after increasing 4 percent because of faster growth in the number of U.S. travelers abroad in 2012.

Mexico remained the largest market for U.S. travel abroad in 2012. Travel payments increased 13 percent as the result of an increase in average expenditures; the number of travelers was practically unchanged.

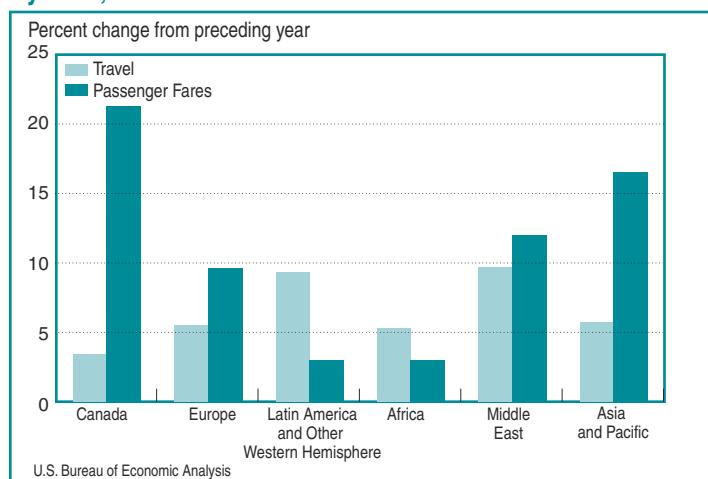

Travel payments to the United Kingdom increased 13 percent after increasing 6 percent in 2011. The number of travelers to the United Kingdom increased 8 percent in 2012.

Passenger fare receipts slowed, increasing 7 percent after increasing 19 percent in both 2011 and 2010. This slowdown partly reflected a 3 percent increase in the price of jet fuel in 2012 after large increases in 2009–2011 that averaged 23 percent. Jet fuel prices directly influence the cost of airfares.

Passenger fare payments increased 12 percent reflecting an increase in average airfares and an increase in U.S. travelers abroad. For most areas, passenger fare payments grew much faster than travel payments as airfares increased (chart 5).

Payments to “other” countries grew 11 percent in 2012. Payments to Japan, Mexico, and Canada increased notably.

Chart 5. Growth in Travel and Passenger Fare Payments by Area, 2012

U.S. Cross-Border Trade—Other Transportation

Table E. Other Transportation Receipts and Payments
[Millions of dollars]

	2010	2011	2012	Change 2011– 2012

China	2,896	3,073	3,142	69
Other countries	31,467	33,502	33,981	479

Other transportation receipts increased 2 percent. Despite increases since 2009, receipts remain slightly below the peak reached in 2008. Because transportation receipts largely stem from the transportation of goods, they are highly correlated with U.S. goods exports (chart 6).

“Other” freight receipts increased 12 percent mostly because of an increase in satellite launch services.

Receipts for air port services decreased 4 percent, reflecting large decreases in receipts from Mexico and South Korea.

Receipts from Canada decreased 2 percent reflecting a decrease in receipts of U.S. ocean carriers for transporting goods between two foreign ports.

Other countries with notable increases in receipts include Luxembourg, France, and Taiwan.

Other transportation payments increased 1 percent, mainly because of an increase in ocean freight services. A 2 percent increase in U.S. goods imports also contributed to the increase. The growth in other transportation payments is highly correlated with the growth in U.S. goods imports (chart 7).

China replaced South Korea in the top five countries with the largest payments. Payments to China have doubled since 2003.

Other countries with notable increases in payments include Taiwan, Switzerland, and Norway.

Chart 6. Growth in Other Transportation Receipts and U.S. Goods Exports

1. Other countries also includes "international organizations and unallocated," and royalties and license fees payments to international organizations are often substantial.

Chart 8. Royalties and License Fees Receipts by Type

Receipts for the rights to distribute U.S. movies and television programs increased 11 percent in 2012 as overseas audiences continued their strong demand for U.S.-produced entertainment. Increases in receipts from the United Kingdom and from the Asia and Pacific region were particularly large.

Receipts from Ireland decreased 11 percent, reflecting decreases in industrial processes and in general-use computer software.

Receipts from the United Kingdom increased 20 percent in 2012 after increasing 11 percent in 2011. In both years, the largest increases were in rights to distribute U.S. movies and television programs.

Payments for rights related to industrial processes continued to increase as U.S. manufacturing, particularly automobile and pharmaceutical manufacturing, continued to increase.

Payments for the rights to distribute foreign movies and television programs increased 28 percent, mainly reflecting increased payments to the United Kingdom and to South and Central America.

Payments for general-use computer software increased, mostly reflecting increased payments to Germany, Switzerland, and China.

"Other" payments increased, reflecting an increase in payments to international organizations for the rights to broadcast and record live events. These payments spike in years of major international sporting events, such as in 2012, when U.S. firms paid to broadcast the Summer Olympic Games in London.

Payments to Japan increased 27 percent. Payments by U.S. affiliates to foreign parent groups for industrial processes increased as Japanese-owned affiliates in the United States increased production.

Payments to the United Kingdom increased 23 percent, mostly because of increases in industrial processes and increases in rights to distribute foreign movies and television programs.

1. Includes securities lending, electronic funds transfer, and other financial services.

Chart 9. Growth in Other Private Services Receipts by Type

Receipts for education rose 8 percent, reflecting increases in the number of foreign students studying in the United States and in their tuition payments; the number of international students increased 6 percent, and average tuition payments increased 2 percent. In 2012, China accounted for 25 percent of these students, and India, for 13 percent.

Receipts for underwriting services decreased 50 percent. Weak activity in global initial public offerings contributed to this decrease.

Insurance services increased 7 percent, reflecting an increase in reinsurance services that was due to an 18 percent increase in premiums; primary insurance decreased.

Receipts for telecommunications rose 9 percent, primarily because of an increase in receipts by U.S. parents from their foreign affiliates. Affiliated receipts increased 20 percent, and unaffiliated receipts decreased 1 percent. Affiliated transactions accounted for 64 percent of telecommunications receipts in 2012, up from 28 percent in 2006. Receipts for these services grew more rapidly than all other major types of other private services in both 2012 and 2011 (chart 9).

Receipts for other business, professional, and technical services increased 14 percent, mainly because of an increase in unaffiliated receipts.

Receipts for architectural, engineering, and other technical services, the difference between revenues and foreign expenses and disbursements, rose 30 percent, reflecting an increase in revenues and a decrease in foreign expenses and disbursements.

Affiliated receipts increased 9 percent, reflecting an 8 percent increase in receipts by U.S. parents from their foreign affiliates and a 9 percent increase in receipts by U.S. affiliates from their foreign parent groups.

The United Kingdom maintained its position as the largest market for U.S. exports of other private services despite a 1 percent decrease in receipts that was mainly due to a decrease in financial services.

Receipts from China increased 10 percent, reflecting strong growth in education services.

Other countries	91,125	100,478	103,262	2,784

1. Includes securities lending, electronic funds transfer, and other financial services.

Payments for financial services decreased 3 percent in 2012 after increasing in 2010 and 2011 (chart 10). Payments for credit-related services, electronic funds transfer services, and other financial services decreased from highs in 2011.

Financial advisory services, which include services related to mergers and acquisitions, increased 11 percent after declining in 2010 and 2011.

Insurance services decreased 6 percent, the third straight annual decrease following a peak in 2009. As with prior years, the decrease was the result of a fall in reinsurance services.

Payments for operational leasing increased 23 percent, mainly reflecting strong growth in payments to Switzerland.

Payments for installation, maintenance, and repair of equipment decreased 17 percent after peaking in 2011.

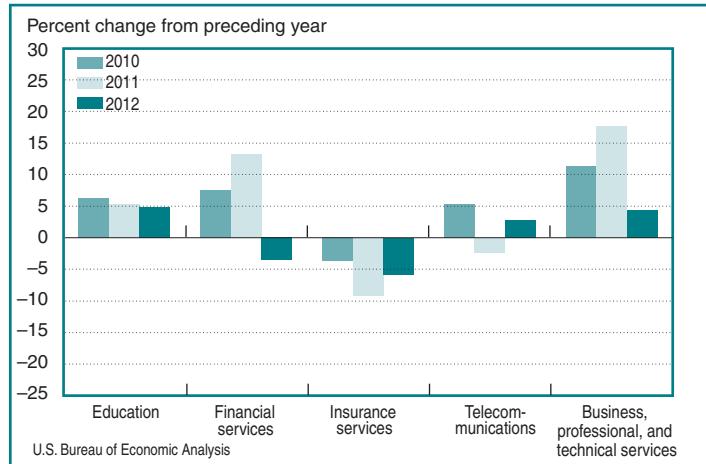

Payments for legal services increased 11 percent; the largest increases were in Europe.

In recent years, affiliated payments have increased faster than unaffiliated payments. In 2012, affiliated payments accounted for 46 percent of other private services payments, up from 37 percent in 2009.

Payments to Bermuda decreased 11 percent, mainly because of a decrease in insurance services. Payments to Bermuda for reinsurance services fell 12 percent in 2012 and have fallen more than one-fourth since 2009.

Payments to Switzerland increased 10 percent in 2012, mainly because of an 11 percent increase in insurance services and a 10 percent increase in business, professional, and technical services.

MNCs Multinational companies

The largest increase in services supplied was in wholesale trade. This increase was mostly due to larger sales volumes for durable goods, especially professional and commercial equipment and supplies. The increases in electrical and electronic goods and machinery, equipment, and supplies were also large.

In retail trade, the increase was largest for affiliates in general merchandise and nonstore retail, particularly online retailers. The increase was due to higher sales at existing affiliates and the acquisition of new affiliates and was geographically widespread.

In publishing industries, the increase was driven by higher sales of software, particularly in Ireland.

In finance and insurance, most of the increase was in finance and was partly due to a rise in fees and commissions earned on commodities trading, especially in precious metals.

In real estate and rental and leasing, the increase largely reflected growth in intellectual property licensing activities, which is included in “lessors of nonfinancial intangible assets.”

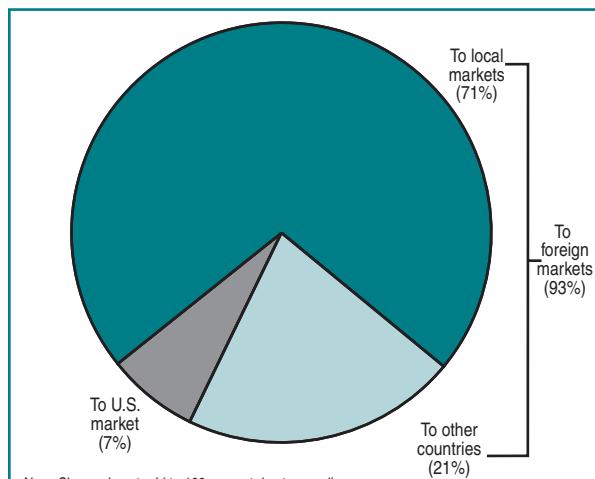

In computer systems design and related services, the increase was geographically widespread and mainly at existing affiliates.

In administration, support, and waste management, much of the increase was accounted for by growth in administrative and support services.

Services Supplied by U.S. MNCs and Proximity to Foreign Markets

Services supplied to foreign markets through the channel of direct investment include both services provided by U.S. multinationals' affiliates to the local market and to other foreign markets. Transactions with parties in the same country tend to dominate affiliates' transactions in services as well as in goods. In 2011, transactions with parties in the local market accounted for 71 percent of services and 56 percent of goods supplied by the foreign affiliates of U.S. companies. The larger share of local market transactions for services reflects the greater importance of proximity to customers in the delivery of services compared with goods. Services supplied to foreign markets accounted for 93 percent, and services supplied to the U.S. market accounted for 7 percent of affiliates' \$1,389.0 billion in services supplied worldwide (chart 11).

MNCs Multinational companies

In Canada, the largest increases were in professional, scientific and technical services and in retail trade.

In France, newly acquired affiliates in administrative and support services accounted for much of the increase. Services supplied also increased in wholesale trade and in manufacturing.

In Ireland, the increase was due to a rise in information services. The increase was particularly large for affiliates that provide internet search and social networking services and that publish software.

In Switzerland, the largest increases were in finance and in professional, scientific, and technical services.

In the United Kingdom, the increase was due to increases in most major categories of services. These increases offset a large drop in finance that reflected a decrease in demand for investment banking services that resulted from the European debt crisis and resulting economic slowdown.

In Brazil, the increase was widespread across industries, but the largest increases were in information, especially in telecommunications, in finance and insurance, and in professional, scientific, and technical services.

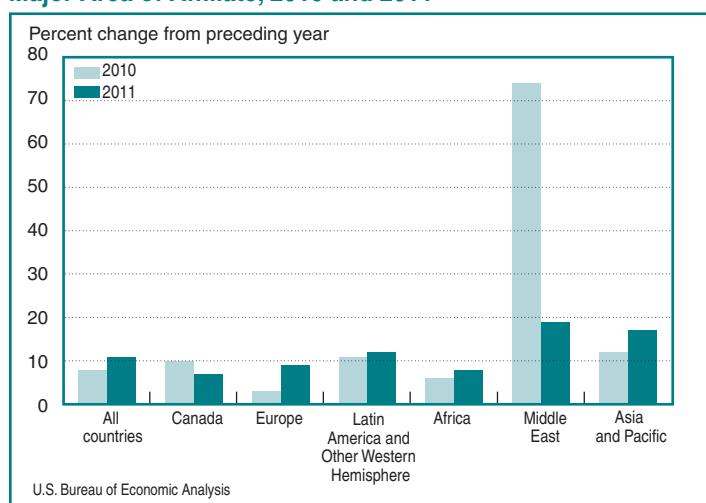

In the Middle East, growth remained strong, albeit slower than in 2010.

In Japan, the increase was largely due to an increase in sales of supplemental health insurance products. Services in wholesale trade also increased, particularly in durable goods.

In Singapore, the increase was widespread across industries, especially in wholesale trade and in finance. Services supplied by affiliates in accommodation and food services also increased notably.

In Taiwan, the decrease in services supplied was largely due to the sale of some affiliates in life insurance to foreign owners.

MNCs Multinational companies

Services supplied to the U.S. market by foreign affiliates of foreign MNCs surpassed its prerecession level. Increases were spread across many industries.

In transportation equipment manufacturing, services supplied increased in secondary activities, especially wholesaling. This increase was due to U.S. auto sales, which grew 8 percent in 2011.

In wholesale trade, increases were widespread across subindustries. The largest increase was in motor vehicles and motor vehicle parts and supplies, which reflected an increase in U.S. auto sales. Growth in electrical goods wholesalers was also strong.

In finance and insurance, the largest increase was in finance. In insurance, the increase was augmented by the growth in premiums earned by existing affiliates and by newly acquired affiliates.

In professional, scientific, and technical services, services supplied grew in all major subindustries. The increase was led by affiliates in computer systems design and related services, mainly as a result of higher sales by existing affiliates.

In mining, the near doubling of services supplied in 2011 resulted partly from acquisitions of new affiliates and from consolidations of affiliates in other industries with mining affiliates.

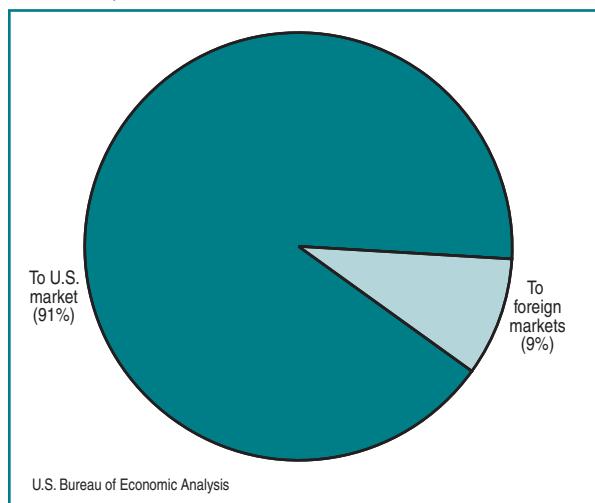

In transportation and warehousing, services supplied decreased in pipeline transportation of crude oil, refined petroleum products, and natural gas and in water transportation.

Services Supplied by Foreign MNCs and Proximity to the U.S. Market

Foreign multinationals supply services to the United States via the channel of direct investment through U.S. affiliates. In 2011, as in other recent years, local transactions accounted for a large share of services and goods supplied by the U.S. affiliates of foreign companies, reflecting the dominant size of the U.S. market, compared with the size of other nearby economies (chart 13). In 2011, local market transactions accounted for 91 percent of U.S. affiliates' \$831.8 billion in services supplied worldwide; local transactions accounted for 88 percent of goods supplied.¹

1. The estimates of the shares of local and foreign sales of goods for U.S. affiliates of foreign companies were based on exports of goods shipped because data on U.S. affiliates' sales of goods are not collected by destination. In 2011, exports accounted for 12 percent of goods supplied by U.S. affiliates.

Measuring Services Supplied Through Affiliates

Services supplied through affiliates corresponds to sales of services reported by multinational companies for industries other than wholesale and retail trade, insurance, and banking, for which adjustments are made to sales of services to better measure services output.¹ Sales of services are defined as sales of intangible outputs and, therefore, generally exclude the sales by establishments in manufacturing, mining (except support activities), agriculture, forestry, fishing, and hunting (except support activities), and construction, which typically produce and sell tangible goods. In cases where a sale consists of both tangible and intangible output that cannot be unbundled, sales are classified based on whichever accounts for the majority of value.

Although intangible outputs are typically associated with activities in certain industries, affiliates in any industry can be providers of services because the classification of an affiliate reflects the affiliate's primary industry of sales. Affiliates classified in industries that typically produce goods may have secondary activities in services industries. For example, an affiliate classified in manufacturing may have secondary service activities in wholesale trade or in repair and maintenance.

1. For more detailed information about the computation of services supplied for affiliates in wholesale and retail trade, insurance, and banking, see "Revisions and Improvements" in Jennifer Koncz-Bruner and Anne Flatness, SURVEY OF CURRENT BUSINESS 89 (October 2009): 37.

For Canada, the increase in 2011 was more than accounted for by growth in finance and insurance. The largest contributions were in life insurance and in banking, which increased partly because of newly acquired affiliates.

For France, the increase was led by insurance. Advertising also grew as a result of growth in sales by existing affiliates and new acquisitions.

For Other Western Hemisphere, most of the increase was accounted for by acquisitions and consolidations in mining.

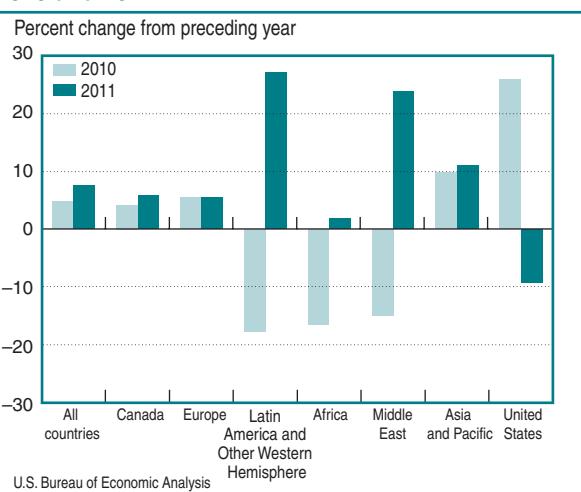

For the Middle East, the increase was largely due to an increase in petroleum refiners' secondary activities in retail trade that resulted from improved profit margins and acquisitions of new affiliates. Services supplied in real estate and pipeline transportation of crude oil also increased strongly. The total increase in services supplied represented a reversal in growth from negative growth in 2010. Similar reversals also occurred for Latin America and Other Western Hemisphere and for Africa (chart 14).

For Australia, the largest decrease was in real estate, as some affiliates were sold to U.S. companies.

For Japan, nearly two-thirds of the increase was in wholesale trade. Growth in distributive services for motor vehicles and motor vehicle parts and supplies wholesaling was particularly strong as U.S. auto sales increased.

For the United States, much of the decrease was in wired telecommunications carriers and in professional and commercial equipment and supplies wholesalers. These decreases resulted in part from corporate restructuring.

Chart 14. Growth in Services Supplied to U.S. Persons by Major Area of Ultimate Beneficial Owner, 2010 and 2011

Revisions

The revised statistics published in this article supersede those presented in the October 2012 SURVEY OF CURRENT BUSINESS.

Cross-border trade. The revised statistics on cross-border trade in services published in this article are consistent in both value and presentation with the less detailed statistics by type of service that were published in the July 2013 SURVEY.¹

Cross-border exports and imports for 2003–2011 were revised. The revisions for 2010 and 2011 mainly reflect newly available and revised source data (table M), some of which reflect the incorporation of the results from the Benchmark Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons (BE-120). The revisions for 2003–2009 mostly reflect additional reporting from a limited number of companies. Revisions also reflect an improved methodology for capturing the expenditures of short-term workers employed abroad; for details, see the section of “Improving the International Services Statistics” on pages 40 and 41.

Exports and imports for both 2010 and 2011 were revised upward slightly. The largest revision was in exports for 2011, revised upward 1.5 percent. Imports were revised upward 1.4 percent in 2011. For 2010, exports were revised upward 0.2 percent, and imports were revised

1. For additional information see Barbara H. Berman and Jeffrey R. Bogen “Annual Revision of the U.S. International Transactions Accounts” SURVEY OF CURRENT BUSINESS 93 (July 2013): 43–54.

upward 1.3 percent. For exports, the main contributor to the upward revisions in both 2010 and 2011 was other private services, particularly business, professional, and technical services and financial services. For imports, the main contributors to the upward revisions in 2010 and 2011 were other private services, particularly business, professional, and technical services and royalties and license fees.

Services supplied through affiliates. The statistics for services supplied through affiliates for 2011 are preliminary. The statistics for 2010 were revised to incorporate newly available and revised source data to correct errors or omissions.

For 2010, services supplied to foreign persons through their majority-owned foreign affiliates were revised upward 2.2 percent (\$24.7 billion). Services supplied to the United States through their majority-owned U.S. affiliates were revised upward 0.7 percent (\$5.2 billion).

Data Sources

The statistics in this article are primarily based on data collected from surveys conducted by the Bureau of Economic Analysis (BEA). Statistics for some services are based on data from a variety of other sources, including U.S. Customs and Border Protection, surveys conducted by other federal government agencies, private sources, and partner countries.

BEA conducts mandatory surveys of trade in services; some surveys are targeted to specific services industries. For cross-border trade, data on the majority of types of other private services and royalties and license fees are collected on the Quarterly Survey of Transactions in Selected Services and Intellectual Property With Foreign Persons (BE-125) and on the related benchmark survey (BE-120). All of the surveys of international services and a guide to reporting requirements for the surveys are available on BEA's Web site at www.bea.gov under “International,” “Sur-

vey Forms and Related Materials,” and then “U.S. international services transactions.” For additional information on these surveys and on the cross-border trade in private services statistics, see *U.S. International Transactions Accounts: Concepts and Estimation Methods*.

The data on services supplied through majority-owned affiliates are collected on BEA's surveys of the operations of multinational companies. For the methodologies for these surveys, see *Foreign Direct Investment in the United States: 2007 Benchmark Survey, Final Results* and *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey*.

Both the *U.S. International Transactions Accounts: Concepts and Estimation Methods* and the methodologies for the benchmark surveys can be accessed at www.bea.gov. Under “International,” click on the tab “Methodologies” at the top of the page.

Improving the International Services Statistics

BEA continues to improve its international services statistics, with some changes now implemented and others underway.¹

Expenditures by border, seasonal, and other short-term workers employed outside their countries of residence

Beginning with statistics for 2003, BEA has implemented an improved methodology for estimating expenditures by foreign workers temporarily employed in the United States and U.S. residents employed temporarily abroad, which are recorded in other services within other private services. Previously, these expenditures were estimated as a fixed percentage of compensation based on historical studies. Now, expenditures for short-term seasonal workers and foreign professionals are derived from the U.S. Department of Labor's Consumer Expenditure Survey. This survey provides detailed statistics on expenditures that BEA uses to calculate average expenditures as a percentage of compensation by income group. BEA uses the percentages for the compensation levels of seasonal agricultural and nonagricultural workers, border workers, and foreign professionals working less than a year in the United States to calculate estimates for the expenditures of these workers. These expenditure estimates are then refined using information from the Department of Labor's National Agricultural Workers Survey (NAWS), H-4 visa statistics from the U.S. State Department, and other studies. The NAWS provides employment and migration profiles for seasonal farm workers that BEA uses to refine the estimate of expenditures by seasonal agricultural and nonagricultural workers. The H-4 visa statistics are used to refine the estimate for expenditures by foreign professionals, such as engineers, doctors, and computer programmers, who visit the United States to perform high-skilled work. Expenditures by U.S. residents employed abroad for less than 1 year are now estimated using the same expenditure share of compensation calculated for foreign professionals working in the United States. These improved estimation methodologies resulted in relatively small revisions to

other services within other private services exports and imports.

Improvements to the BE-120 Benchmark Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons

In the October 2012 article, "Cross-Border Trade in 2011 and Services Supplied Through Affiliates in 2010," the "Improving the International Services Statistics" section discussed the inclusion of two new sets of questions related to intellectual property and manufacturing services on BEA's 2011 Benchmark Survey of Transactions in Selected Services and Intellectual Property With Foreign Persons. BEA's objective in asking these questions was to use the information gained from these questions to (1) present a more complete and clear picture of trade in services and to (2) classify certain types of services in a way that more closely conforms with international guidelines as presented in the *International Monetary Fund's Balance of Payments and International Investment Position Manual (BPM6)*, thereby facilitating the comparability of BEA's data with data published by other countries.

The first set of questions will allow BEA to place the transactions for the rights to use intellectual property into separate accounts: rights to use intellectual property, such as software, should be recorded with the relevant service item, the rights to reproduce and redistribute intellectual property should be recorded under "charges for the use of intellectual property" (the new title for royalties and license fees beginning in 2014), and the outright sale or purchase of intellectual property should be recorded as a capital-account transaction or with the relevant service item depending on the type of intellectual property.

The second set of questions addresses contract manufacturing services which includes services such as processing, assembly, labeling, and packing. Examples of processes that are undertaken under arrangements for contract manufacturing services include oil refining, liquefaction of natural gas, assembly of clothing, electronics and other goods, and labeling and packing (excluding those incidental to transport). International guidelines recommend that countries publish data covering contract manufacturing services. However, these services are not currently covered in the U.S. international transactions accounts (ITAs).

BEA is assessing the information collected on the survey to determine if, and how, BEA can use the informa-

1. For a summary of changes and improvements to the international accounts, including cross-border services statistics, see the "Catalog of Major Revisions to the U.S. International Accounts, 1976–2008" on BEA's Web site at www.bea.gov. For changes implemented in 2009, 2010, and 2011, see the appendixes on improvements included in each October SURVEY OF CURRENT BUSINESS article in this series. For additional information on these changes, see Barbara H. Berman and Jeffrey R. Bogen "Annual Revision of the U.S. International Transactions Accounts" SURVEY 93 (July 2013): 43–54.

Improving the International Services Statistics

tion to improve the U.S. international transactions accounts. These changes do not impact the statistics published in this article, but may impact the statistics that will be published in future years.

Changes to the benchmark survey of insurance transactions

BEA plans to make several changes to the Benchmark Survey of Insurance Transactions by U.S. Insurance Companies with Foreign Persons (BE-140) that will allow BEA to improve the estimates of insurance services. The 2013 Benchmark Survey will ask companies to report additional detail on unusually large insurance contracts. These large, one-time, premium transactions can result in significant variations in insurance services that may not be related to activity in the period covered by the benchmark survey and the related quarterly surveys.² This additional information on large premium transactions will allow BEA to improve the measurement of insurance services in the ITAs. The changes do not impact the statistics published in this article, but may impact the statistics that will be published in future years.

Implementing new international standards for travel

As part of BEA's ongoing efforts to bring the international accounts into closer alignment with BPM6 guidelines, BEA will introduce changes to its standard presentation and definition of travel statistics in the 2014 annual revision of the ITAs. The new presentation will

2. For additional detail on how BEA estimates insurance, see "Insurance Services" in the "Other Private Services" section of *U.S. International Transactions Accounts: Concepts and Estimation Methods* at www.bea.gov.

introduce additional detail for travel by distinguishing between business and personal travel. The definition of travel will also be expanded to encompass medical and education services—which will be renamed health-related and education-related travel, respectively—as well as "expenditures by border, seasonal, and other short-term workers," all currently classified under other private services. Under the new presentation in this annual publication, business travel will be divided into two subcategories: (1) expenditures by border, seasonal, and other short-term workers and (2) other business travel. Personal travel will be divided into three subcategories: (1) education-related travel, (2) health-related travel, and (3) other personal travel. In BEA's quarterly ITA release, only total business travel will be presented; total personal travel will be presented along with two subcategories: (1) education-related travel and (2) health-related and other personal travel.

BPM6 prototype tables

To meet international guidelines as presented in BPM6, BEA will present tables in new formats in next year's version of this article to be published in October 2014. Detailed prototypes of these tables will be available to the public for the first time at www.bea.gov under "International Services." The changes in these tables largely reflect the reclassification and renaming of categories. For example, education and medical services will now be included in travel services (see "Implementing new international standards for travel"); royalties and license fees will be renamed "charges for the use of intellectual property."

Acknowledgments

The estimates of cross-border trade and services supplied through affiliates were prepared by the following staff members of the Balance of Payments Division and the Direct Investment Division.

The estimates of cross-border trade were prepared under the guidance of Michael Mann and Mark Xu. Travel and passenger fares estimates were prepared by Laura Brokenbaugh, Edward Dozier, and Charu Sharma. Other transportation estimates were prepared by Edward Dozier, Julie Gressley, Steven J. Muno, and Gregory Tenentes. Royalties and license fees and "other private services" estimates were prepared by Pamela Aiken, Suhail Ally, Felix Anderson, Stacy Ansell, Damon C. Battaglia, Jeffrey Bogen, Annette Boyd, Faith M. Brannam, Lori Chang, Jamela Des Vignes, Anne Flatness, Julie Gressley, Hope R. Jones, C. Omar Keb-

beh, Eddie L. Key, Kiesha Middleton, Steven J. Muno, Mark Samuel, Charu Sharma, John Sondheimer, Gregory Tenentes, and Clifton Tillman.

The information in tables 1–7 was compiled by Anne Flatness and John Sondheimer and in tables 8–10 by Neeta B. Kapoor. Computer programming for data estimation and suppression as well as the generation of the tables was provided by Marie Colosimo, Carole J. Henry, Neeta B. Kapoor, Fritz H. Mayhew, Dan Powell, Gary Sowers, and Greg Tenentes.

The processing of the survey data used to prepare the estimates of services supplied through majority-owned affiliates was conducted by staff members of the Direct Investment Division under the guidance of Mark D. Goddard and Christopher J. Stein.

1. In addition to transactions with its foreign parent, a U.S. affiliate's exports and imports include transactions with other members of its foreign parent group. The foreign parent group is defined as (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the foreign person below it, up to and including the ultimate beneficial owner, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

2. Travel consists of expenditures by individuals who travel to foreign countries, so these transactions are between unaffiliated parties.

3. Passenger fares consist of fares paid by residents of one country to nonresident carriers, so they are transactions between unaffiliated parties.

4. Other royalties and license fees consist of rights to books, records, and tapes; broadcasting and recording of live events; franchise fees; trademarks; general use computer software; and other intangibles.

5. Education consists of expenditures for tuition and living expenses by foreign students enrolled in U.S. colleges or universities and by U.S. students studying abroad, so these are transactions between unaffiliated parties.

6. Insurance services transactions are deemed to be unaffiliated even when they are between affiliated companies because the services are deemed to be provided to the policyholders who pay the insurance premiums and who are unaffiliated with either company.

7. Transactions in basic telecommunications services are deemed to be unaffiliated, even when the services flow through affiliated channels, because they represent the distribution of revenues collected from unaffiliated customers. Other types of telecommunications services, such as value-added services, may flow through either affiliated or unaffiliated channels, and are recorded accordingly. Prior to 2006, data on other types of unaffiliated transactions are included under telecommunications; data on affiliated transactions are not separately available and are included in affiliated other business, professional, and technical services. Beginning in 2006, data on "other types" of affiliated telecommunications services are included in affiliated telecommunications.

8. For 2002–2005, includes data on affiliated telecommunications transactions, see footnote 7.

9. Transactions in medical services consist of expenditures by patients in foreign countries for treatment, so these are transactions between unaffiliated parties.

10. Receipts for mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2010, mining services net receipts of \$2,200 million were derived as gross operating revenue of \$3,145 million less merchandise exports of \$4 million and foreign expenses of \$940 million. In 2011, mining services net receipts of \$2,388 million were derived as gross operating revenues of \$3,280 million less merchandise exports of \$10 million and foreign expenses of \$883 million. In 2012, mining services net receipts of \$2,240 million were derived as gross operating revenues of \$4,229 million less merchandise exports of \$21 million and foreign expenses of \$968 million. Payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

11. Trade-related services consist of auction services, Internet or online sales services, and services provided by independent sales agents. For exports, "merchandising" services are also included; these exports are measured as the difference between the cost and resale prices of goods that are purchased and resold abroad without significant processing. For imports, the value of these services is included in the value of the goods. Merchandise services exports were \$411 million in 2010, \$581 million in 2011, and \$670 million in 2012.

12. This category includes all trade in services not specified elsewhere.

13. Other services largely covers the U.S. expenditures of foreign residents employed in the United States for less than 1 year, of foreign embassies, and of international organizations based in the United States (receipts), and the foreign expenditures of U.S. residents employed abroad for less than 1 year (payments), so these transactions are between unaffiliated parties.

14. Data on total trade are not available because data on affiliated trade are not available. For royalties and license fees, data on unaffiliated trade by type of intangible asset for 1986–2005, as well as detail by type and affiliation for 2006 forward, are available on BEA's Web site, http://www.bea.gov/international/international_services.htm under "Table 4: Royalties and license fees." For other private services, data on unaffiliated trade by type of service for 1986–2005 as well as detail by type and affiliation for 2006 forward, are available on BEA's Web site under "Table 1: Trade in services; Supplemental information."

Note. See www.bea.gov; under "International" "International Services Statistics," and then "What are they?"

By U.S. affiliates from/to their foreign parents					266	172	924	91				19,646

Note. Insurance services consist of: (1) Risk-pooling services, which are measured as the share of premiums remaining after settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums averaged over several years, (2) auxiliary insurance services, such as agents commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim; this income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. This treatment results in a discrepancy between the share of premiums for the settlement of normal losses and actual losses recovered. BEA accounts

for this discrepancy in two ways in the U.S. international transactions accounts. For most insured events, BEA records the difference between the portion of premiums allocated to loss settlement and the amount of losses recovered—sometimes termed "net insurance settlements"—in unilateral current transfers. A positive (negative) amount for net insurance settlements occurs if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2011, net insurance settlements were \$7,181 million (losses paid were \$7,630 million greater than normal and losses recovered were \$14,810 million greater than normal). For major disasters, however, BEA records the total value of losses recovered in the capital account.

* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. The components of the total are as follows: Construction services—receipts of \$1,067 million were derived as gross operating revenues of \$3,379 million less merchandise exports of \$131 million and foreign expenses of \$2,181 million. Architectural and engineering services—receipts of \$7,913 million were derived as gross operating revenues of \$11,960 million less merchandise exports of \$94 million and foreign expenses of \$3,953 million. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 1 for additional detail on the components of other business, professional, and technical services.

3. See table 1, footnote 1.

4. See table 2, footnote 1.

* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. The components of the total are as follows: Construction services—receipts of \$1,189 million were derived as gross operating revenues of \$3,427 million less merchandise exports of \$92 million and foreign expenses of \$2,146 million. Architectural and engineering services—receipts of \$10,314 million were derived as gross operating revenues of \$14,028 million less merchandise exports of \$159 million and foreign expenses of \$3,556 million. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 1 for additional detail on the components of other business, professional, and technical services.

3. See table 1, footnote 1.

4. See table 2, footnote 1.

D Suppressed to avoid disclosure of data of individual companies.

1. For MOFAs, "country" is the country of the affiliate; for MOUSAs, it is the country of the affiliate's ultimate beneficial owner.

2. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

3. The European Union comprises Austria, Belgium, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. Beginning with 2007, it also includes Bulgaria and Romania.

Note: In this table, services supplied through affiliates are generally defined to be economic outputs that are intangible. Services supplied corresponds to sales in most service industries except for wholesale and retail trade, insurance, and banking, which are based on measures that better capture output in those industries. In cases where a sale consists of both tangible goods and intangible services that cannot be unbundled, sales are classified based on whichever accounts

for the majority of value. Intangible outputs are typically associated with establishments in the following industry sectors based on the North American Industrial Classification System: utilities; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional, scientific, and technical services; management of companies and enterprises; administrative and support and waste management and remediation services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; other services (except public administration); and public administration. Additionally, the output of establishments that provide support activities for agriculture and forestry or mining is typically intangible.

MNCs Multinational companies

MOFAs Majority-owned foreign affiliates

MOUSAs Majority-owned U.S. affiliates

* More than zero and less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Because sales resulting from construction are recorded as goods rather than sales of services, the sales of services through MOFAs represent sales in secondary, nonconstruction industries. In 2010, sales of goods to foreign residents

through MOFAs classified in construction were \$17.5 billion.

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. In 2010, sales of goods to U.S. residents by MOUSAs in construction were \$38.5 billion. These sales of goods were estimated by

subtracting exports of goods from the total amount of goods supplied.

(*) More than zero and less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. The sales of goods to U.S. residents by MOUSAs in construction were not computed here to avoid disclosure of data of individual

companies. In 2011, the total amount of goods supplied worldwide was \$39.2 billion.

MNCs Multinational companies

MOUSAs Majority-owned U.S. affiliates

UBO Ultimate beneficial owner

U.S. International Transactions

Second Quarter of 2013

THE U.S. CURRENT-ACCOUNT deficit—a net measure of transactions between the United States and the rest of the world in goods, services, income, and unilateral current transfers—decreased to \$98.9 billion (preliminary) in the second quarter from \$104.9 billion (revised) in the first quarter (see pages 70–73).¹ The deficit decreased to 2.4 percent of current-dollar gross domestic product (GDP)—its lowest percentage since the second quarter of 1998—from 2.5 percent in the first quarter.² The decrease in the deficit reflected a decrease in the deficit on goods, an increase in the surplus on income, and an increase in the surplus on services. These changes were partly offset by an increase in net outflows of unilateral current transfers.

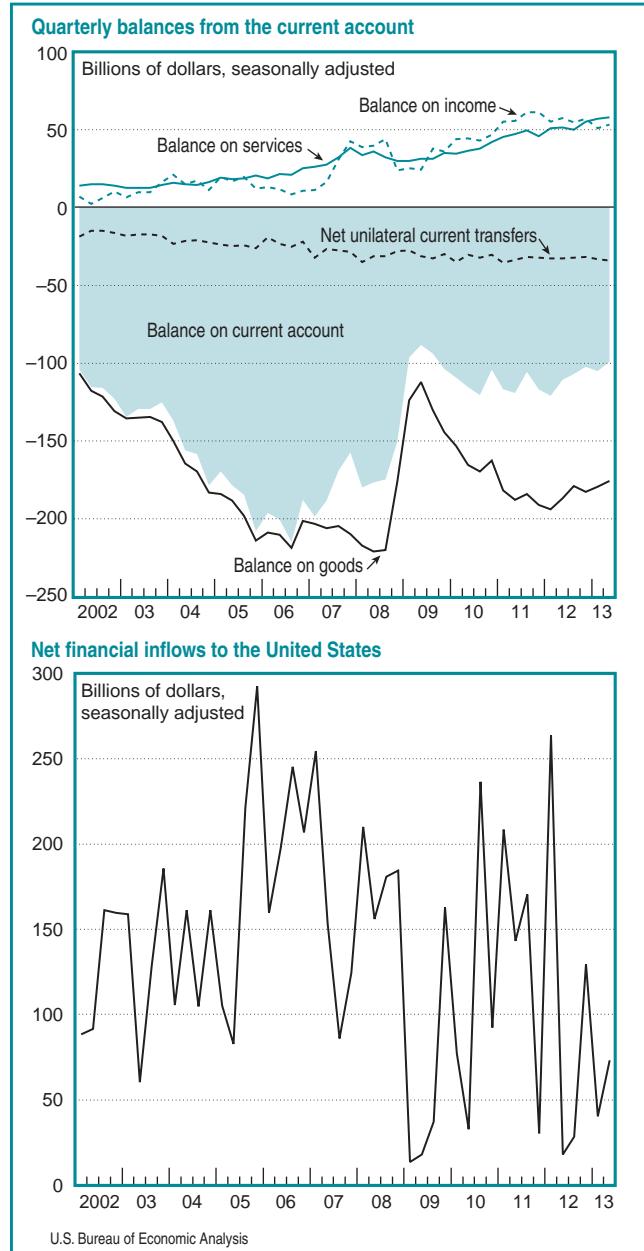

In the financial account, net financial inflows to the United States increased to \$73.1 billion in the second quarter from \$40.4 billion in the first quarter (see pages 74–75). Net financial flows reflect combined transactions in U.S.-owned assets abroad, foreign-owned assets in the United States, and financial derivatives. U.S.-owned assets abroad and foreign-owned assets in the United States both increased, but by less than in the first quarter. Net inflows of financial derivatives decreased in the second quarter.

The statistical discrepancy—the amount that balances the sum of the recorded credits and debits across all the accounts in the international transactions accounts—was \$25.8 billion in the second quarter, compared with \$64.5 billion in the first quarter.

1. Quarterly statistics are seasonally adjusted when series demonstrate statistically significant seasonal patterns; seasonally adjusted statistics are cited in this article when available.

2. Current-dollar GDP is used to provide a consistently scaled comparison across time. In this context, its use does not imply that these international transactions accounts statistics are components of GDP.

Chart 1. U.S. Current-Account Balance and Its Components and Net Financial Flows

Sarah P. Scott and Thomas Anderson prepared this article.

^p Preliminary ^r Revised n.a. Not available

1. Excludes transactions in financial derivatives.

2. Excludes capital account transactions.

3. Change from prior period, not the sum of changes in components.

4. Sum of U.S.-owned assets abroad, foreign-owned assets in the United States, and financial derivatives.

Note: The statistics, except for net financial flows, are presented in table 1 in this article and on BEA's Web site.

Data Availability and Methodology

Detailed statistics for U.S. international transactions are presented in tables 1–12 in this article. The statistics and a description of the estimation methods used to compile them are available at www.bea.gov under “International.” For the statistics, click on “Detailed estimates.” For the methods, see “U.S. International Transactions Accounts: Concepts and Estimation Methods” under “Methodologies.”

Current-account highlights

- The deficit on goods decreased more than in the first quarter. In the second quarter, goods exports increased more than goods imports.
- The surplus on services increased less than in the previous two quarters. The second-quarter increase reflected a larger increase in services exports than in services imports.
- The surplus on income increased after decreasing in the first quarter. In the second quarter, income receipts increased and income payments decreased.

Financial-account highlights

- Both U.S.-owned assets abroad and foreign-owned assets in the United States increased for the fourth straight quarter. In the second quarter, both increased less than in the first quarter. Outflows of U.S.-owned assets abroad were down more than inflows of foreign-owned assets in the United States.
- The smaller increase in U.S.-owned assets abroad mostly reflected a larger decrease in U.S. claims reported by U.S. banks and securities brokers than in the first quarter.
- The smaller increase in foreign-owned assets in the United States reflected shifts to net official and private sales of U.S. Treasury securities after net purchases in the first quarter. These were partly offset by increased inflows of U.S. liabilities reported by U.S. banks and securities brokers.
- Net inflows of financial derivatives were smaller than in the first quarter.

Revisions

The preliminary statistics for U.S. international transactions for the first quarter that were published in the July 2013 SURVEY OF CURRENT BUSINESS have been revised to reflect new or revised source data.

Preliminary and Revised First-Quarter 2013 Statistics

[Millions of dollars, seasonally adjusted]

	Preliminary	Revised
Balance on goods	-179,137	-179,457
Balance on services	55,479	56,824
Balance on income	51,976	50,881
Unilateral current transfers, net	-34,463	-33,143
Current-account balance	-106,145	-104,895
Net financial flows	80,671	40,422

p Preliminary r Revised

n.e.c. Not elsewhere classified

NOTE. The statistics are presented in table 2 after this article and on BEA's Web site.

Exports of goods increased more than in the first quarter. Among major commodity categories, the largest increases were in capital goods and in consumer goods. The largest decrease was in foods, feeds, and beverages.

Foods, feeds, and beverages decreased for the third straight quarter after increasing for two straight quarters. The changes over this period mostly reflected changes in the exports of soybeans.

Industrial supplies and materials decreased after increasing for two straight quarters. The decrease was more than accounted for by a decrease in metals and nonmetallic products, mostly in nonmonetary gold and steelmaking materials. The decrease was partly offset by an increase in petroleum and products.

Capital goods exports increased after decreasing for two straight quarters. The increase was largely due to an increase in civilian aircraft, engines, and parts.

Automotive vehicles, parts, and engines increased more than in the first quarter. All major subcategories increased in the second quarter; the largest increase was in engines, parts, and accessories.

Consumer goods exports increased after decreasing slightly in the first quarter. The increase was mostly accounted for by an increase in durable goods. More than half of the increase in durable goods was in gems, jewelry, and collectibles, a component of "other" durable goods. Nondurable goods also increased, reflecting an increase in medicinal, dental, and pharmaceutical products.

Table C. Growth in Real Goods Exports and Imports

[Percent change from preceding period in chained-dollar exports and imports, seasonally adjusted]

	2012		2013			
	I ^r	II ^r	III ^r	IV ^r		
Exports, balance of payments basis	0.6	1.1	-0.1	-0.6	-0.2	2.2
Imports, balance of payments basis	0.1	0.7	0.1	-0.7	-0.6	1.6

p Preliminary r Revised

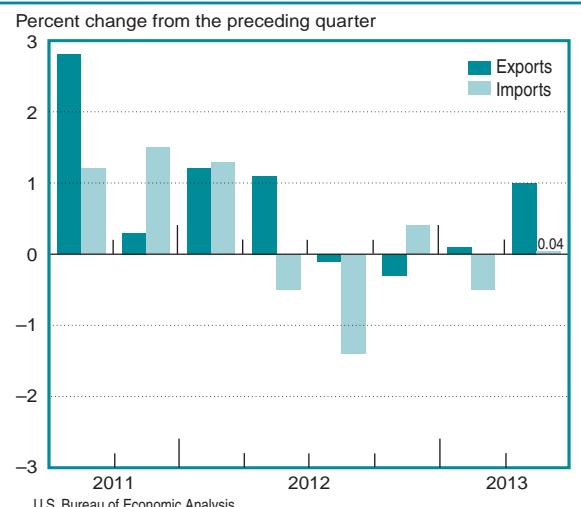

Note. Real goods exports and imports are calculated using price indexes from "Table 4.2.4. Indexes for Exports and Imports of Goods and Services by Type of Product" in the national income and product accounts.

Trends in the Trade in Goods

The deficit on goods has decreased \$18.0 billion since its recent peak in the first quarter of 2012. During this period, goods exports increased 1.9 percent and goods imports decreased 1.9 percent. As a percentage of current-dollar GDP, the goods deficit decreased to 4.2 percent from 4.8 percent.

Both real exports and real imports shifted to growth in the second quarter after decreasing in recent quarters. Real exports grew more rapidly than real imports (table C).

p Preliminary r Revised n.e.c. Not elsewhere classified

NOTE. The statistics are presented in table 2 in this article and on BEA's Web site.

Goods Deficit by Area and Type of Product

The goods deficit decreased \$3.8 billion in the second quarter after decreasing \$2.9 billion in the first quarter. The second-quarter decrease was more than accounted for by a substantial decrease in the deficit with Canada. Deficits with Europe and Latin America and Other Western Hemisphere also decreased. In contrast, deficits increased with Asia and Pacific—reflecting a substantial increase in the deficit with China—with Africa, and with the Middle East.

Petroleum products. The deficit on petroleum products decreased after increasing slightly in the first quarter (chart 3). The decrease resulted mainly from a drop in imports, but an increase in exports also contributed. The second-quarter deficit was \$28.7 billion—or 33 percent—lower than the recent high in the second quarter of 2011.

Imports of goods increased slightly after decreasing in the first quarter. Most of the major commodity categories increased. The largest increase was in automotive vehicles, parts, and engines. The increases were nearly offset by a substantial decrease in industrial supplies and materials.

Imports of foods, feeds, and beverages increased for the fourth straight quarter. The largest second-quarter increases were in green coffee and in fish and shellfish.

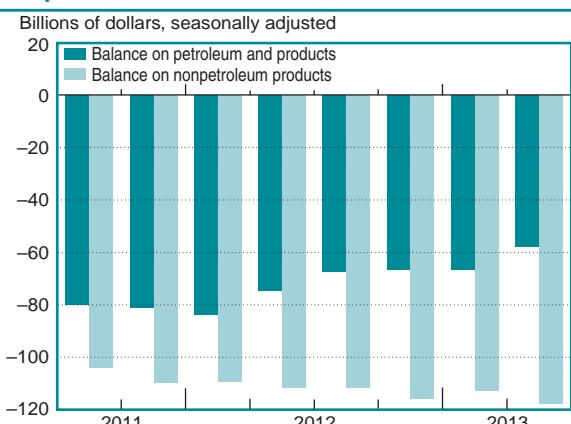

Industrial supplies and materials decreased more than in the first quarter; the second-quarter decrease was the sixth decrease in the last eight quarters. The second-quarter decrease was largely the result of a decrease in petroleum and products.

Capital goods imports increased slightly. The small increase reflected nearly offsetting changes across subcategories. The largest increase was in semiconductors and the largest decrease was in computers, peripherals, and parts.

Automotive vehicles, parts, and engines increased in the second quarter after decreasing in the first quarter. More than half the increase reflected an increase in passenger cars.

Consumer goods increased for the fifth straight quarter; the second-quarter increase was larger than the previous four. The second-quarter increase was more than accounted for by an increase in durable goods. In durable goods, the increase was more than accounted for by an increase in cell phones, which is a component of “other” household goods. Nondurable goods were down slightly.

Chart 3. Balance on Total Petroleum and Nonpetroleum Products

Note. The balance on petroleum and products equals exports of petroleum and products less imports of petroleum and products, which are components of the major end-use category of industrial supplies and materials. The balance on nonpetroleum products equals the balance on goods less the balance on petroleum and products.

^p Preliminary ^r Revised

NOTE. The statistics are presented in tables 1 and 3 in this article and on BEA's Web site. For additional information on services, including definitions, see Alexis Grimm and Charu Sharma, "U.S. International Services: Cross-Border Trade in 2012 and Services Supplied Through Affiliates in 2011" in this issue of the SURVEY OF CURRENT BUSINESS.

Exports of services increased for the third straight quarter. The largest increase was in "other" private services, primarily in financial services and business, professional, and technical services.

Travel exports—purchases of goods and services by foreign travelers in the United States—increased for the sixth straight quarter.

Passenger fares decreased slightly after increasing in the first quarter.

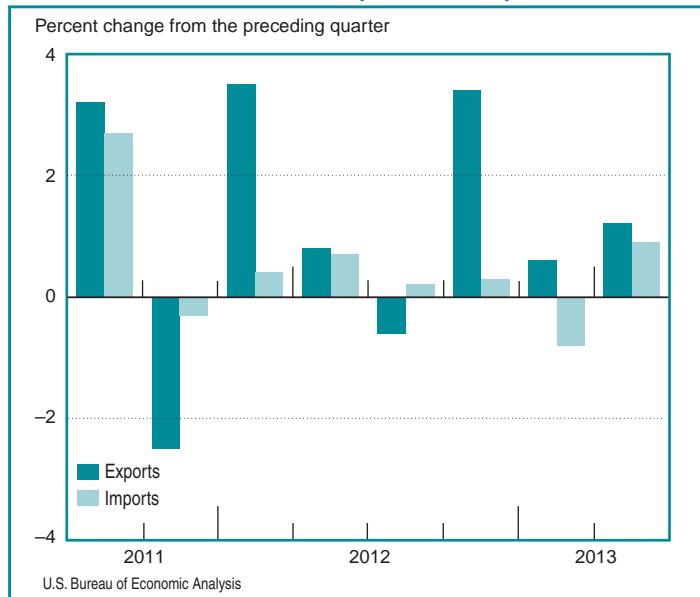

"Other" transportation exports decreased slightly after increasing in the first quarter. Port services accounted for most of the decrease.

Imports of services increased after decreasing in the first quarter. The largest increases were in travel and other transportation.

Travel imports—purchases of goods and services by U.S. travelers abroad—increased for the second straight quarter.

Passenger fares increased less than in the first quarter.

"Other" transportation imports increased for the sixth straight quarter. The second-quarter increase was mostly accounted for by an increase in freight services.

Chart 4. Growth in Services Exports and Imports

Trends in the Trade in Services

The surplus on services increased to \$57.9 billion in the second quarter from \$56.8 billion in the first quarter. The increase is the fifth increase in the last six quarters. The second-quarter increase was smaller than the increases in the two previous quarters.

Services exports increased 1.2 percent in the second quarter; services imports increased 0.9 percent. In dollar-terms, the second-quarter increase in services exports was twice that of services imports. Both exports and imports of services have increased in five of the last six quarters (chart 4).

The services surplus was 1.4 percent of current-dollar GDP in both the first and second quarters, higher than any other percentage on record.

^p Preliminary ^r Revised

Note: The statistics are presented in tables 1, 4, and 7 after this article and on BEA's Web site.

Income receipts on U.S. direct investment abroad decreased less than in the first quarter. The decrease was more than accounted for by lower foreign affiliate earnings in wholesale trade.

"Other" private income receipts increased for the third straight quarter. The second-quarter increase reflected larger U.S. holdings of foreign stocks and higher average interest yields on foreign bonds.

U.S. government receipts decreased in the second quarter after increasing in the first quarter.

Income payments on foreign direct investment in the United States decreased after increasing. The decrease reflected decreased earnings that were widespread across industry groups, including information, banking, and manufacturing.

"Other" private income payments increased more than in the first quarter. The second-quarter increase reflected higher average interest yields on U.S. corporate bonds and higher foreign holdings of U.S. corporate stocks.

U.S. government payments decreased for the seventh straight quarter. The second-quarter decrease was the largest since the first quarter of 2011 and was mostly due to a decrease in foreign holdings of U.S. agency bonds.

Trends in Income

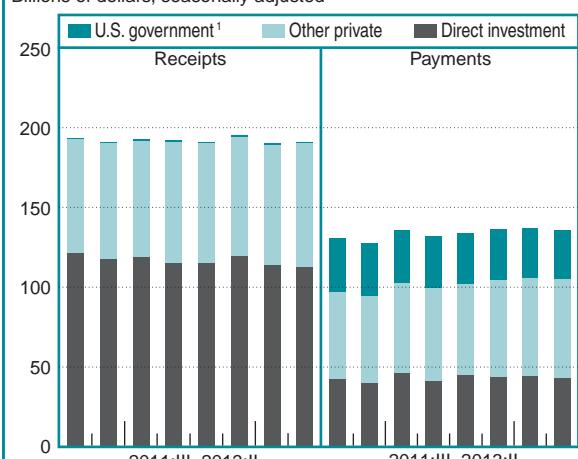

The surplus on income increased to \$53.1 billion in the second quarter from \$50.9 billion. Since its historic peak in the third quarter of 2011, the surplus on income has decreased \$8.0 billion, but the trend has not been stable over the last six quarters. As a percentage of U.S. current-dollar GDP, the surplus was 1.3 percent in the second quarter of 2013, up from 1.2 percent in the first quarter, but down from 1.6 percent in the third quarter of 2011.

As shown in chart 5, income receipts on U.S.-owned assets abroad increased in the second quarter, representing the third increase in seven quarters. The slight second-quarter increase was more than accounted for by an increase in "other" private receipts, mostly from higher income on U.S. holdings of foreign securities.

Income payments on foreign-owned assets in the United States decreased in the second quarter after increasing for three straight quarters. The decrease reflected decreases in direct investment payments and U.S. government payments. An increase in "other" private payments reflected higher income on foreign holdings of U.S. corporate securities.

^p Preliminary ^r Revised

1. Excludes transactions in financial derivatives.

Note. Under balance-of-payments conventions, increases in U.S.-owned assets abroad are shown with a negative sign, and decreases are shown with a positive sign. The statistics are presented in tables 1, 7, 8, and 10 in this article and on BEA's Web site.

U.S. official reserve assets decreased after increasing in the first quarter. The decrease was more than accounted for by a decrease in the U.S. reserve position in the International Monetary Fund.

U.S. government assets other than official reserve assets decreased after increasing in the first quarter. The decrease reflects a decrease in central bank liquidity swaps between the U.S. Federal Reserve System and foreign central banks.

U.S. direct investment abroad was higher than in the first quarter. The rise in the second quarter was more than accounted for by an increase in equity investment, reflecting increased acquisitions and reduced divestitures by U.S. companies.

U.S. purchases of foreign securities exceeded U.S. sales, but by less than in the first quarter. Net purchases of foreign bonds fell significantly. Net purchases of foreign stocks were up slightly and were the largest since the fourth quarter of 1998.

U.S. claims on foreigners reported by nonbanks increased. The increase was more than accounted for by an increase in deposits of U.S. nonbanks at foreign banks.

U.S. claims on foreigners reported by U.S. banks and securities brokers—such as U.S. residents' deposits at foreign banks and loans to foreigners—decreased more than in the previous two quarters. The second-quarter decrease reflected a decrease in claims for own accounts—particularly in deposits and loans by U.S.-owned banks with foreign banks and private nonbanks in the United Kingdom, Caribbean, and Japan—which more than offset an increase in claims for customer accounts.

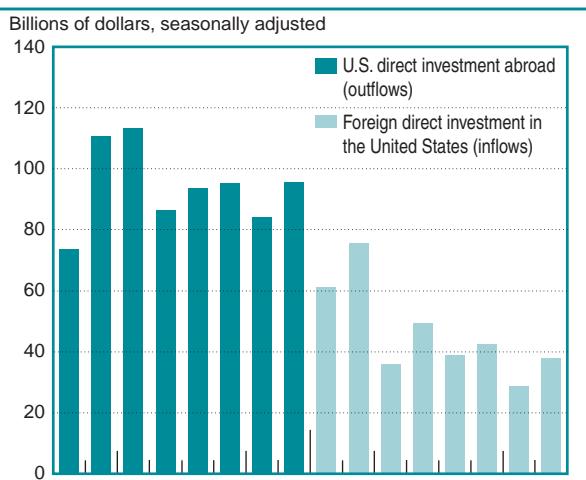

Developments in the Financial Account

U.S.-owned assets abroad increased for the fourth straight quarter after decreasing in the first two quarters of 2012 (tables A and G). The second-quarter increase was smaller than in the first quarter mostly as a result of a substantially larger decrease in U.S. claims reported by U.S. banks and securities brokers. Lower U.S. private net purchases of foreign bonds also contributed to the smaller increase in U.S.-owned assets abroad.

Foreign-owned assets in the United States also increased for the fourth consecutive quarter (tables A and H). The second-quarter increase was smaller than in the first quarter, reflecting a shift to a decrease in foreign official assets in the United States—the first decrease since the second quarter of 2001—that was partly offset by a larger increase (relative to the first quarter) in foreign private assets in the United States. The larger increase in foreign private assets was due to a larger increase in U.S. liabilities reported by U.S. banks and securities dealers and a shift from a decrease to an increase in U.S. liabilities reported by U.S. nonbanking concerns.

Indications that the U.S. Federal Reserve would slow its purchases of U.S. Treasury and agency debt in the future caused prices of U.S. debt to fall in the second quarter. In this environment, foreign official agencies and foreign private investors shifted to net sales of U.S. Treasury securities; private foreign investors also increased net sales of other U.S. securities.

^p Preliminary ^r Revised

1. Excludes transactions in financial derivatives.

NOTE. The statistics are presented in tables 1, 7, 8, and 11 in this article and on BEA's Web site.

Chart 7. Transactions in U.S. Claims and Liabilities Reported by Banks and Brokers, Excluding Transactions in Foreign Official Assets

Foreign official assets in the United States decreased for the first time since the second quarter of 2001. The decrease was more than accounted for by net sales of U.S. government securities.

Foreign direct investment in the United States was higher than in the first quarter, reflecting lower net outflows of intercompany debt investment and increased reinvested earnings.

Sales of U.S. Treasury securities by private foreigners exceeded purchases by a slight margin after net purchases in the first quarter. The shift to net sales was due to a shift to net sales of U.S. Treasury bills and certificates and lower net purchases of U.S. Treasury bonds and notes.

Sales of other U.S. securities by private foreigners exceeded purchases more than in the first quarter. The increase in net sales reflected a decrease in net purchases of U.S. corporate bonds and an increase in net sales of U.S. stocks.

U.S. liabilities to foreigners reported by nonbanks increased after four consecutive quarters of decrease. The increase reflected increases in "other" liabilities, such as loans.

U.S. liabilities to foreigners reported by U.S. banks and securities brokers increased more than in the first quarter. The second-quarter increase was more than accounted for by an increase in liabilities for own accounts. The increase in own accounts reflected increases in deposits and brokerage balances and "other" liabilities (loans).

Chart 8. Transactions in U.S. Debt Securities, Excluding Transactions in Foreign Official Assets

Footnotes to U.S. International Transactions Tables 1–12

General notes for all tables: ^p Preliminary. ^r Revised. 0 Transactions are possible, but are zero for a given period. (*) Transactions are less than \$500,000(±). ^D Suppressed to avoid disclosure of data of individual companies. n.a. Transactions are possible, but data are not available. Not applicable, or for data periods 1960–1997, transactions that are 0, “not available,” or “not applicable.” Quarterly estimates are not annualized and are expressed at quarterly rates.

Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. See table 2 footnotes for explanations of the various balance of payments adjustments made to convert goods on a Census-basis to goods on a balance of payments basis. The adjustments are made to improve coverage, eliminate duplication and align the goods data with national and international accounting guidelines.

3. Includes some goods: Mainly military equipment and supplies in lines 5 and 22 that are commingled in the source data and cannot be separately identified. Beginning with statistics for 1999, line 5 excludes equipment and supplies exported under the U.S. Foreign Military Sales program that can be separately identified, and line 22 excludes purchases of goods abroad by U.S. military agencies that can be separately identified.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the “other transfers” component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. At the present time, all U.S. Treasury-owned gold is held in the United States.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 6.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

13. Conceptually, the sum of line 77 and line 39 is equal to “net lending or net borrowing” in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

14. Beginning with 2003, includes securities brokers' claims on their foreign affiliates. Prior to 2003, they are included in the claims of nonbanking concerns.

15. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates. Prior to 2003, they are included in the liabilities of nonbanking concerns.

16. Calculated excluding capital account transactions, net (line 39).

17. Equals the sum of capital account transactions, net for the first, second, and third quarters of the year. May appear with the preliminary release of annual statistics for a given year.

Additional footnotes for historical data in July issues of the SURVEY:

18. For 1974, includes extraordinary U.S. Government transactions with

India. See “Special U.S. Government Transactions,” June 1974 SURVEY, p. 27.

19. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.

20. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2010 issues of the SURVEY.

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation; imports, Census basis, represent Customs values. Seasonally adjusted data reflect the application of seasonal factors developed jointly by BEA and the U.S. Census Bureau (CENSUS).

2. For exports, difference between transactions included in primary source data provided to BEA by the U.S. Department of Defense (DOD) and transactions included in the Census trade data. Negative values may result from timing differences for transactions recorded in the two data sets. For imports, addition for purchases of goods abroad by U.S. military agencies provided to BEA by DOD. The Census data only include imports of goods by U.S. military agencies that enter the U.S. customs territory.

3. Addition for low-value (below reporting threshold) transactions for 1999–2009 to phase in a revised low-value methodology that was implemented by CENSUS beginning with statistics for 2010.

4. Addition of electric energy exports to Mexico; deduction of exposed motion picture film for sale or rental; net change in stock of U.S.-owned grains in storage in Canada; valuation of software exports at market value; and coverage adjustments for special situations where certain exports are not included in the Census data.

5. Addition of electric energy imports from Mexico; deduction of exposed motion picture film for sale or rental; deduction of the value of repairs of U.S. vessels abroad; and coverage adjustments for special situations where certain imports are not included in the Census data.

6. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 12, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council, and sales of satellites to Intelsat. Members of OPEC include Algeria, Angola (beginning with the first quarter of 2007), Ecuador (beginning with the fourth quarter of 2007), Indonesia (ending with the fourth quarter of 2008), Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

7. Lines B24, B83, and B142 include CENSUS's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published by Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.–Canadian reconciliation, are included in Census basis data shown in line A1.

Table 3:

1. Royalties and license fees and “other private services” by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, distribution of film and television recordings and other intellectual property rights.

4. Other services receipts (exports) include mainly expenditures of foreign residents working temporarily in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

Table 4:

1. Beginning with 2003, includes interest on securities brokers' claims on their foreign affiliates. Prior to 2003, it is included in the interest on claims of nonbanking concerns.

2. Beginning with 2003, gross interest receipts on U.S. holdings of special drawing rights (SDRs) are included in U.S. government receipts. Prior to 2003, interest receipts on U.S. holdings of SDRs, net of interest payments on U.S. allocations of SDRs, are included in U.S. government receipts.

3. Beginning with 2003, includes interest on securities brokers' liabilities to their foreign affiliates. Prior to 2003, it is included in the interest on liabilities of nonbanking concerns.

4. Beginning in 2003, gross interest payments on U.S. allocations of SDRs are included in U.S. government payments. Prior to 2003, interest receipts on U.S. holdings of SDRs, net of interest payments on U.S. allocations of SDRs, are included in U.S. government receipts.

Table 5:

1. Complete instrument detail is only available beginning with 2003.
2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

Table 6:

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.

2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.

4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.

5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contra-entry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

9. Beginning in the fourth quarter of 2007, includes drawings and repayments under temporary reciprocal currency arrangements between the U.S. Federal Reserve System and foreign central banks that do not meet the strict definition of U.S. reserve assets.

10. Includes allocations of special drawing rights (SDRs) in the third quarter of 2009.

Table 7:

1. Interest on intercompany debt between financial parent companies and their financial affiliates is excluded from direct investment income. Prior to 2007, interest on the permanent debt investment of bank parent companies in their bank affiliates was included in direct investment income.

2. Intercompany debt investment between financial parent companies and their financial affiliates is excluded from direct investment financial flows. Prior to 2007, the permanent debt investment of bank parent companies in their bank affiliates was included in direct investment financial flows.

Table 8:

1. Beginning with 2005, source data for new issue estimates are no longer separately available. New issues continue to be included in net purchases.

2. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

Table 9:

1. Prior to 2003, securities brokers' claims on and liabilities to their foreign affiliates are included in the estimates. They are excluded beginning in 2003.

2. Complete instrument detail is only available beginning with 2003.

3. Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parent groups), where both the U.S. and foreign firms are classified in a finance industry, but the firms are neither banks nor securities brokers.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

Table 10:

1. Beginning with 2003, includes securities brokers' claims on their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.

4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.

6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.

7. Prior to 2003, includes only deposits.

8. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

Table 11:

1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and prior to 2011, Netherlands Antilles. Beginning with 2011, also includes the islands of the former Netherlands Antilles.

Table 12:

For footnotes 1–15, see table 1.

16. At the global level, the statistical discrepancy, which is the amount that balances the sum of recorded credits and debits, represents net errors and omissions in recorded transactions. For individual countries and regions, it also represents discrepancies that arise when transactions with one country or region are settled through transactions with another country or region or when transactions cannot be separately identified for individual countries or regions.

17. Details not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

19. Estimates of financial derivatives for several countries are not available separately. Estimates for Luxembourg are included in Other Euro area. Estimates for Argentina, Brazil, Mexico, and Venezuela are included in Other South and Central America. Estimates for China, Hong Kong, India, Korea, Singapore, and Taiwan are included in Other Asia and Pacific. Estimates for South Africa are included in Other Africa. In addition, estimates for the Middle East are combined with estimates for Asia and Pacific and included in Other Asia and Pacific.

20. Calculated excluding capital account transactions, net (line 39).

21. Equals the sum of capital account transactions, net for the first, second, and third quarters of the year. May appear with the preliminary release of annual statistics for a given year.

22. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated U.S. direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.

NOTE. Definitions for geographic areas are available on BEA's Web site at www.bea.gov. Country data are based on information available from U.S. reporting sources. In some instances, the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. goods export statistics reflect country of reported destination; in many cases the goods may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of securities transactions reflects the country with which transactions occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

The International Investment Position of the United States at the End of the Second Quarter of 2013

By Elena L. Nguyen

THE NET international investment position of the United States at the end of the second quarter of 2013 was $-\$4,504.1$ billion (preliminary), compared with $-\$4,236.6$ billion (revised) at the end of the first quarter (chart 1, table 1).¹ The $\$267.6$ billion decrease in the net position reflected a $\$605.8$ billion decrease in the value of U.S.-owned assets abroad that exceeded a $\$338.2$ billion decrease in the value of foreign-owned assets in the United States. The net position decreased 6 percent in the second quarter, compared with a 10 percent decrease in the first quarter and an average quarterly decrease of 8 percent from the first quarter of 2011 through the first quarter of 2013.

U.S.-owned assets abroad. U.S.-owned assets

abroad were $\$20,984.3$ billion at the end of the second quarter, compared with $\$21,590.1$ billion at the end of the first quarter (chart 2). The $\$605.8$ billion decrease reflected a $\$423.3$ billion decrease in the value of financial derivatives and a $\$182.5$ billion decrease in the value of U.S.-owned assets abroad excluding financial derivatives.

U.S.-owned assets abroad excluding financial derivatives were $\$18,159.2$ billion at the end of the second quarter, compared with $\$18,341.7$ billion at the end of the first quarter. The $\$182.5$ billion decrease reflected a $\$292.1$ billion decrease resulting from valuation changes that was partly offset by a $\$109.6$ billion increase resulting from financial outflows.² Valuation

1. For comprehensive international investment position statistics, including annual statistics beginning with 1976 and quarterly statistics beginning with the fourth quarter of 2005, see the table "International Investment Position, 1976–2003" at www.bea.gov.

2. For statistics on financial flows, see the financial account transactions in table 1 in the "U.S. International Transactions" article in this issue of the SURVEY OF CURRENT BUSINESS. Detailed valuation changes such as price, exchange rate, and other changes are only available for annual statistics.

Chart 1. U.S. Net International Investment Position, 2006:IV–2013:II

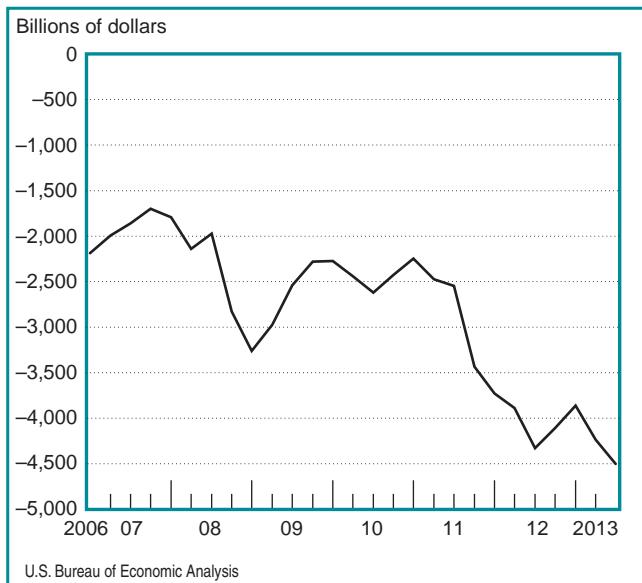

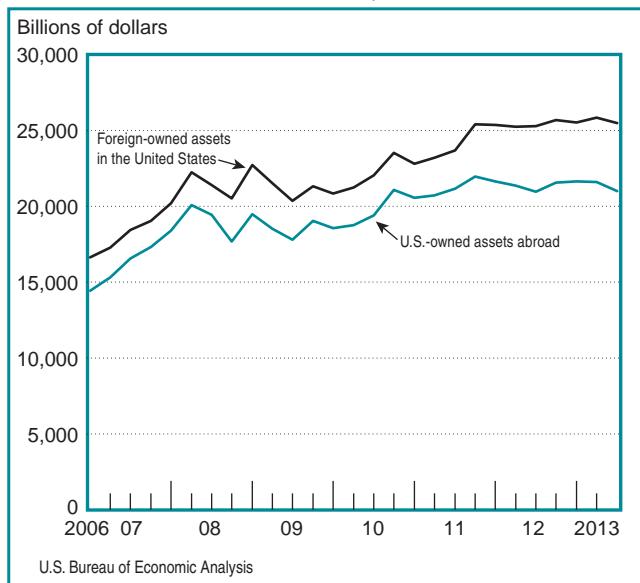

Chart 2. Foreign-Owned Assets in the United States and U.S.-Owned Assets Abroad, 2006:IV–2013:II

changes were mostly attributable to decreases in gold prices that lowered the market value of U.S. government gold and decreases in foreign stock and bond prices that lowered the value of U.S. holdings of foreign securities.

Foreign-owned assets in the United States. Foreign-owned assets in the United States were \$25,488.4 billion at the end of the second quarter, compared with \$25,826.6 billion at the end of the first quarter. The \$338.2 billion decrease reflected a \$442.6 billion decrease in the value of financial derivatives that was

partly offset by a \$104.4 billion increase in the value of foreign-owned assets in the United States excluding financial derivatives.

Foreign-owned assets in the United States excluding financial derivatives were \$22,722.7 billion at the end of the second quarter compared with \$22,618.3 billion at the end of the first quarter. The \$104.4 billion increase reflected a \$179.3 billion increase resulting from financial inflows that was partly offset by a \$74.9 billion decrease resulting from valuation changes. Valuation changes were mostly attributable to decreases in

p Preliminary

r Revised

1. The statistics for each quarter are the values as of the last day of the quarter; the first quarter ends on March 31; the second quarter ends on June 30; the third quarter ends on September 30; and the fourth quarter ends on December 31 of the year.

2. U.S. official gold stock is valued at market price.

3. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

4. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

5. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. Changes in exchange rates do not affect this valuation.

6. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

Source: Bureau of Economic Analysis

U.S. bond prices that were partly offset by increases in U.S. stock prices.

Revisions

The U.S. net international investment position at the end of the first quarter was revised to -\$4,236.6 billion from a previously published value of -\$4,277.1 billion. The \$40.6 billion upward revision to the net position reflected a \$69.1 billion downward revision to foreign-owned assets in the United States that exceeded a \$28.5

billion downward revision to U.S.-owned assets abroad.

U.S.-owned assets abroad at the end of the first quarter were revised to \$21,590.1 billion from \$21,618.6 billion. Foreign-owned assets in the United States were revised to \$25,826.6 billion from \$25,895.7 billion. These revisions reflect revised source data from the Treasury International Capital reporting system and from BEA's quarterly surveys of direct investment.

Valuing the Components of the U.S. International Investment Position

Investment positions for long-term portfolio securities are based on market values from monthly, annual, and benchmark surveys conducted by the Treasury International Capital (TIC) reporting system of the U.S. Department of the Treasury. Investment positions for financial derivatives are based on fair market values from quarterly surveys conducted by the TIC reporting system. Investment positions for claims and liabilities reported by banks, securities brokers, and other nonbanks are based on contractual (face) values of instruments as reported by financial institutions for both their own accounts and the accounts of their customers on the monthly and quarterly TIC surveys with supplementary data for U.S. nonbanks from foreign central banks.

Investment positions for direct investment are valued at current-period prices based on a revaluation of book values. Book values are reported by U.S. multinational companies on surveys conducted by BEA. Direct invest-

ment at current cost is BEA's featured measure of direct investment at current-period prices.¹ The current-cost method values the U.S. and foreign parent shares of their affiliates' investment in (1) plant and equipment using the current cost of capital equipment, (2) land using general price indexes, and (3) inventories using estimates of their replacement cost.²

1. BEA publishes direct investment at market value as an alternative current-period price measure with owners' equity revalued using indexes of stock market prices. BEA also publishes direct investment at historical cost with owners' equity at the book value reported on BEA's surveys. Country and industry detail for direct investment are available only on a historical-cost basis; these statistics are available in interactive tables at www.bea.gov under "International."

2. For additional information on the current-cost and market-value methods, see J. Steven Landefeld and Ann M. Lawson, "[Valuation of the U.S. Net International Investment Position](#)," SURVEY OF CURRENT BUSINESS 71 (May 1991): 40–49.

Gross Domestic Product by Metropolitan Area

Advance Statistics for 2012 and Revised Statistics for 2001–2011

By Sharon D. Panek, Jacob R. Hinson, and Frank T. Baumgardner

ECONOMIC GROWTH was widespread across 305 of the nation's 381 metropolitan areas (chart 1), according to the advance statistics from the Bureau of Economic Analysis (BEA). In 2011, real GDP increased in 277 metropolitan areas (chart 2).¹ For the United States as a whole, real GDP by metropolitan area—the sum of current-dollar GDP for all metropolitan areas deflated by a national price measure—increased 2.5 percent in 2012 after increasing 1.7 percent in 2011 (table 1).

GDP by metropolitan area—the metropolitan area counterpart to GDP in the national income and product accounts (NIPAs)—is the most comprehensive measure of overall economic activity in a metropolitan area. In September, BEA released advance current-dollar and chained-dollar (real) statistics on GDP by metropolitan area for 2012.² Additional highlights for 2012 include the following:

- Durable-goods manufacturing led the economic growth in many metropolitan areas, especially in the Great Lakes region.
- Wholesale and retail trade growth was widespread, particularly in the Southwest region where it grew for the third consecutive year.
- Financial activities was a strong contributor to growth in many metropolitan areas.
- Construction contributed to growth in 2012 in many areas after 8 consecutive years of contraction, increasing 3.1 percent nationally.
- Agriculture, forestry, fishing, and hunting detracted from growth in many metropolitan areas.

After providing an overview of the industry composition of metropolitan areas by population size, this article will discuss the industries that drove national economic growth and the metropolitan areas where

these industries were concentrated. It will then examine patterns in per capita real GDP by metropolitan area before concluding with a discussion of revisions to the statistics on GDP by metropolitan area.

Overview of Metropolitan Areas by Population

The new statistics reveal that metropolitan areas of different sizes differed also in terms of economic growth. Much of this can be explained by the industries that are typically concentrated in the areas. GDP for the group of large metropolitan areas, which includes areas with populations greater than 2 million, ranges from \$1.4 trillion (New York-Newark-Jersey City, NY-NJ-PA) to \$92.0 billion (San Antonio-New Braunfels, TX). The average wage per job for this group was \$33,882 in 2011, which was notably higher than that of the U.S. metropolitan area total (\$28,912).³ The 31 metropolitan areas in this group have above average concentrations in arts, entertainment, and recreation; real estate, rental and leasing; and information. The strongest industry concentration among large metropolitan areas in 2011 was in Las Vegas-Henderson-Paradise, NV, where accommodation is 16.7 times more concentrated, relative to the nation.⁴

The medium-size group of metropolitan areas, which includes areas with populations between 500,000 and 2 million, comprises 73 metropolitan areas. GDP for this group ranges from \$173.9 billion (San Jose-Sunnyvale-Santa Clara, CA) to \$13.5 billion (Deltona-Daytona Beach-Ormond Beach, FL). This group's average wage per job was \$27,811 in 2011, slightly lower than that of the U.S. metropolitan area total.

Metropolitan areas in this group have above average concentrations in health care and social assistance and both durable-goods and nondurable-goods manufacturing. The strongest industry concentration among

1. The Bureau of Economic Analysis (BEA) used the county-based definitions of metropolitan statistical areas developed by the Office of Management and Budget (OMB) for federal statistical purposes that was updated on February 28, 2013. As a result of these changes, the number of metropolitan areas increased from 363 to 381.

2. See the box "Advance Statistics on Gross Domestic Product (GDP) by Metropolitan Area for 2012."

3. The average wages are based on wage and salary disbursements from BEA's November 26, 2012, release of local area personal income.

4. Subsector industry detail is not available for advance statistics.

Chart 1. Percent Change in Real Gross Domestic Product (GDP) by Metropolitan Area, 2012

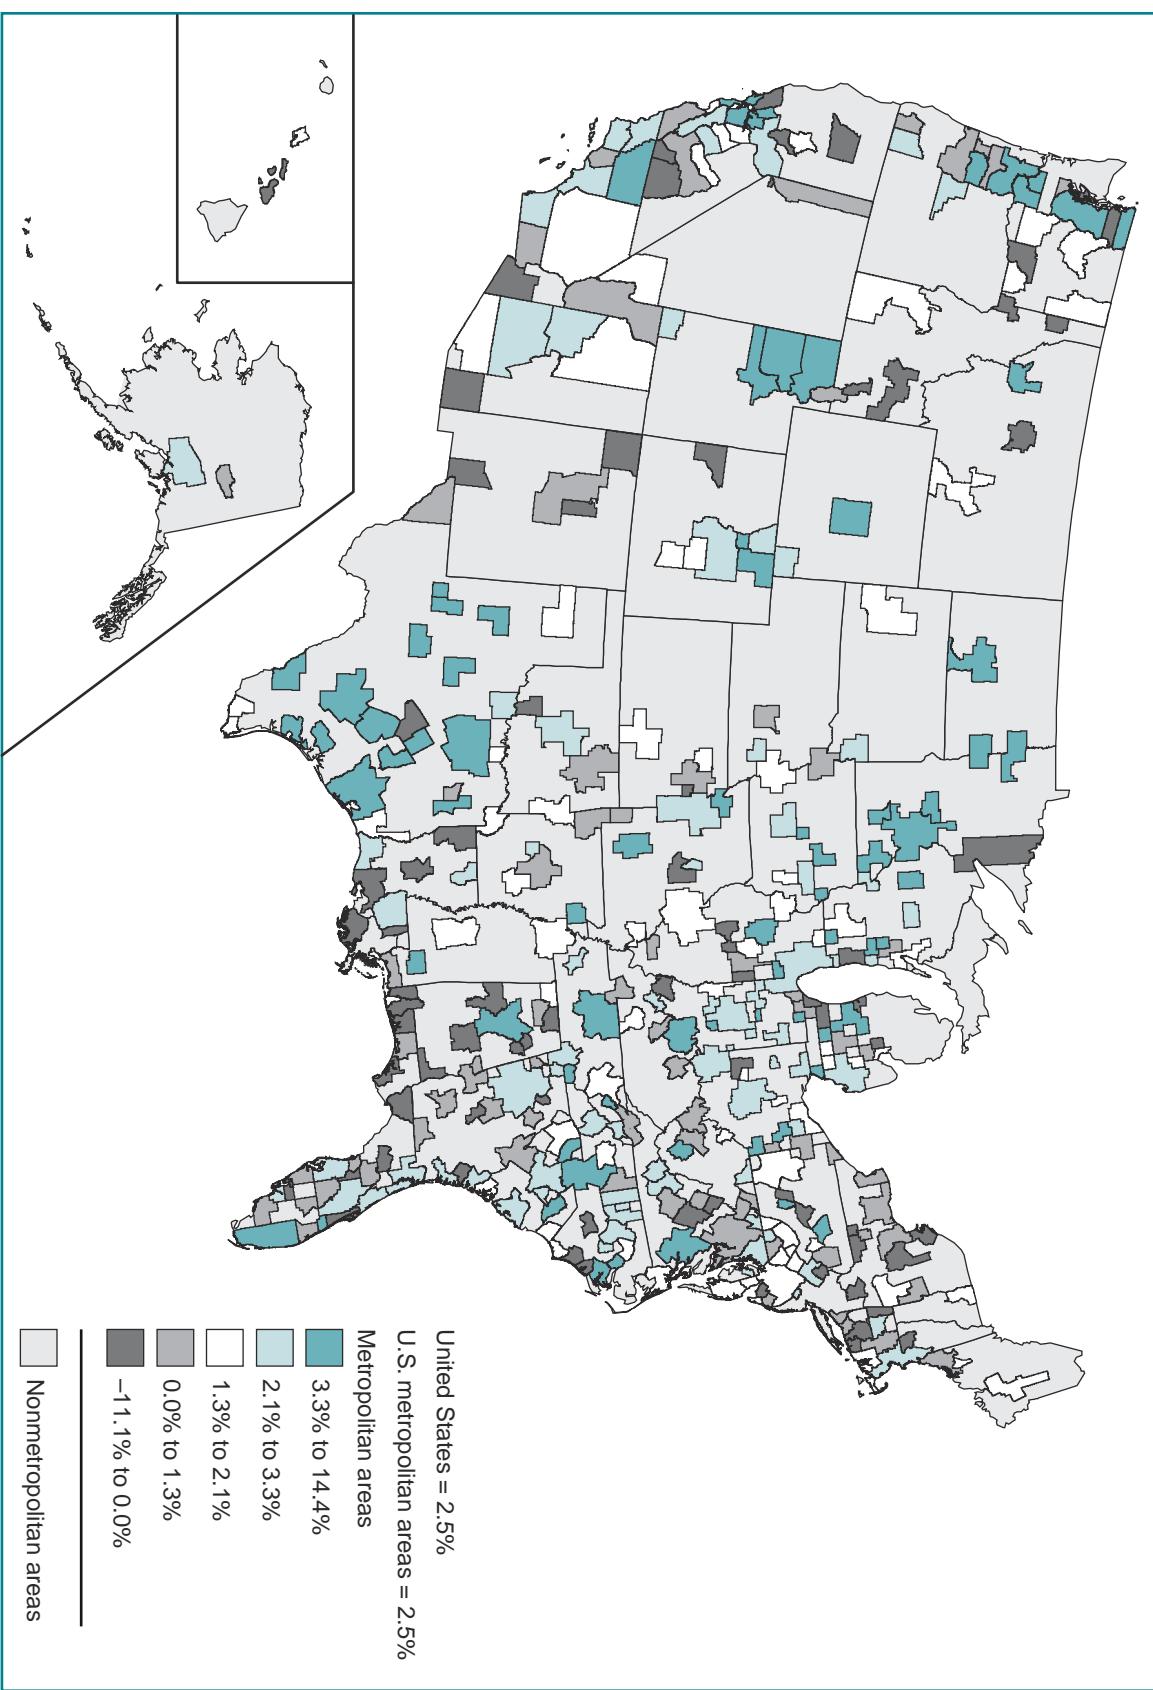

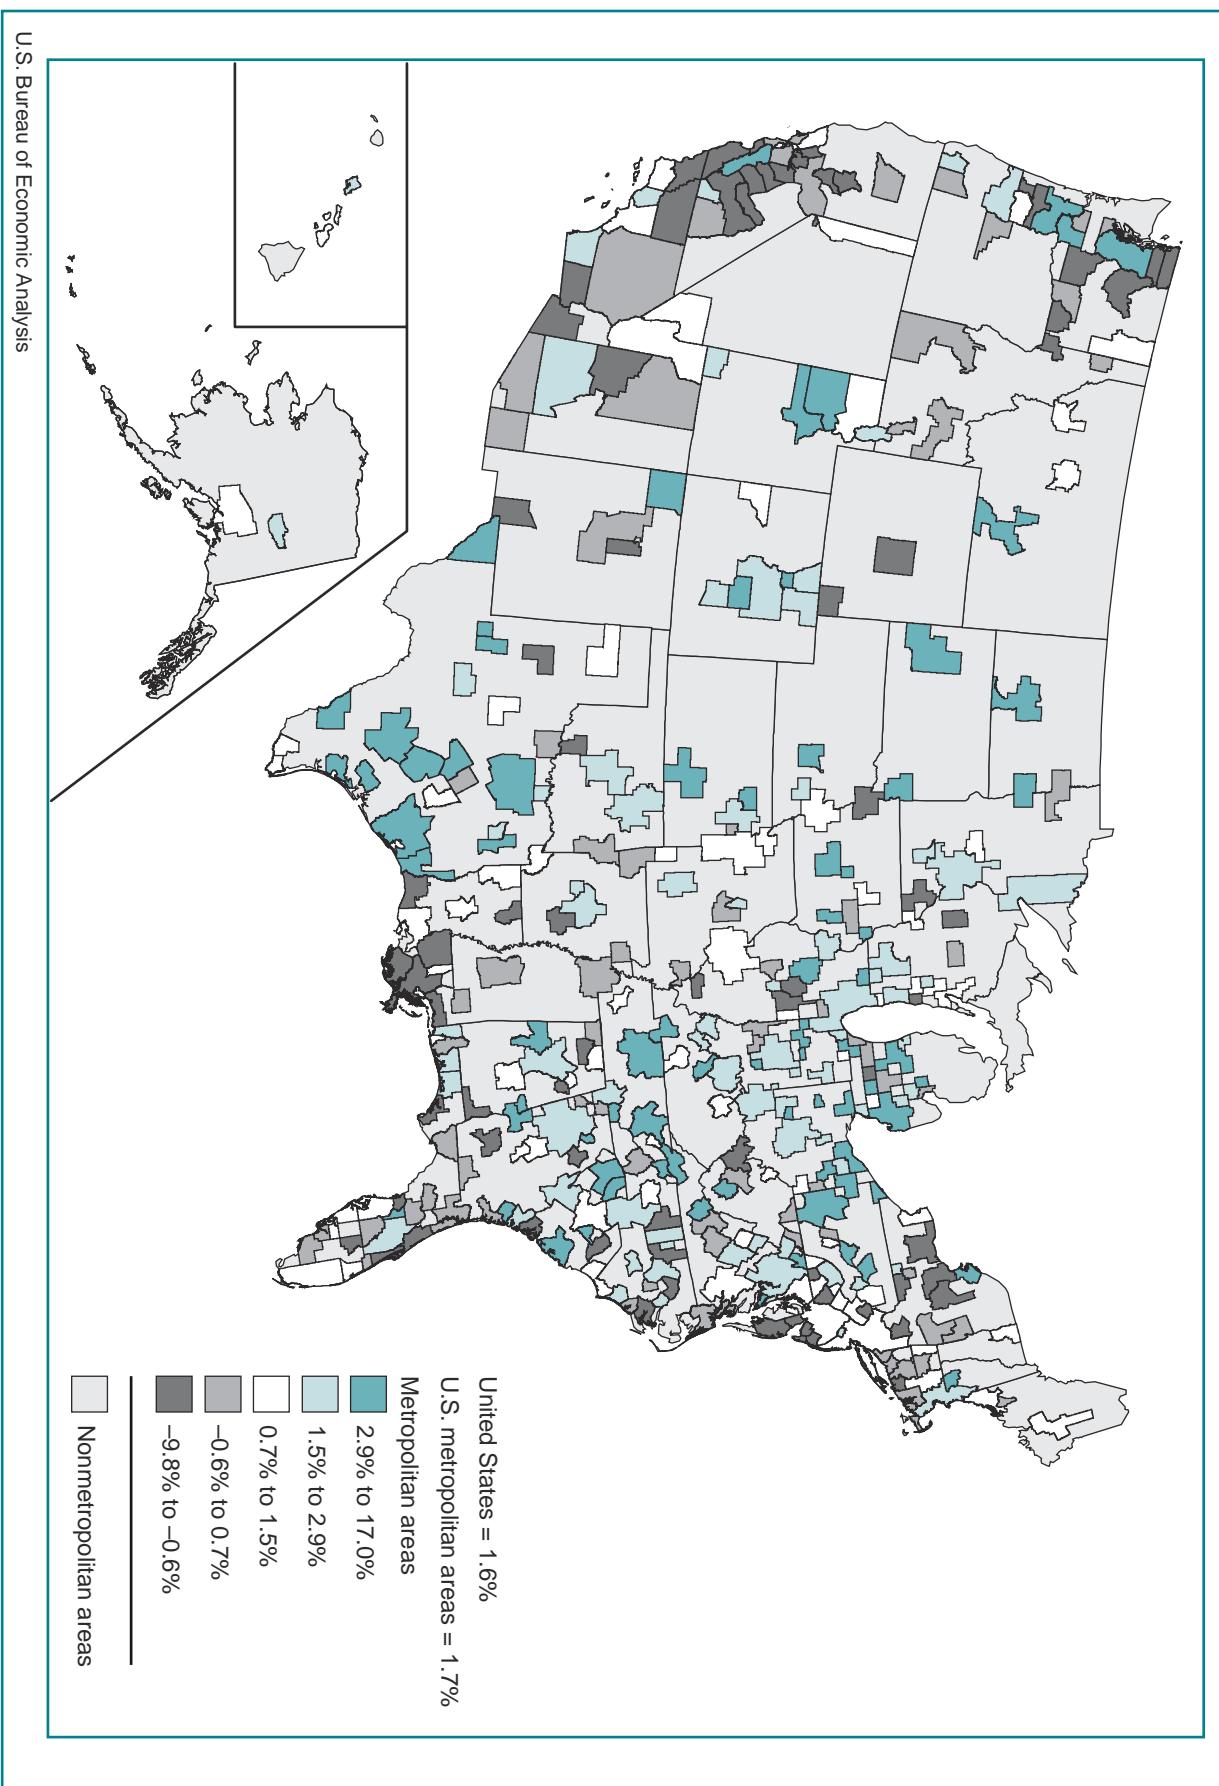

Chart 2. Percent Change in Real Gross Domestic Product (GDP) by Metropolitan Area, 2011

medium-size metropolitan areas was in Grand Rapids-Wyoming, MI, where furniture and related product manufacturing is heavily concentrated.

Most metropolitan areas (277) fall within the small-size group, which includes areas with populations of less than 500,000. GDP for small metropolitan areas ranges from \$28.6 billion (Anchorage, AK) to \$1.8 billion (Grants Pass, OR). The average wage per job for this group was \$22,584 in 2011, which was notably lower than that of the U.S. metropolitan area total. Metropolitan areas in this group have above average concentrations in health care and social assistance; government; and agriculture, forestry, fishing, and hunting. The strongest industry concentration among small metropolitan areas in 2011 was in Dalton, GA where textile and textile product mills is 264.5 times more concentrated, relative to the nation.

Industry Contributions to Regions and Metropolitan Areas

Growth in real GDP across U.S. metropolitan areas in 2012 was primarily attributable to growth in durable-goods manufacturing, wholesale and retail trade, and financial activities. For the nation, durable-goods manufacturing grew 9.1 percent in 2012 after growing 6.8 percent in 2011; trade grew 4.3 percent in 2012 after growing 1.5 percent in 2011; and financial activities grew 2.1 percent in 2012 after growing 0.3 percent in 2011. The growth in these industries was similar for total real GDP for U.S. metropolitan areas.⁵

Real GDP in the 10 largest metropolitan areas accounted for 38.1 percent of U.S. metropolitan area GDP (table A). Collectively, these metropolitan areas averaged growth of 3.1 percent in 2012 after growing 1.9 percent in 2011.

Table A. Ten Largest Metropolitan Areas Ranked by Real Gross Domestic Product (GDP), 2012

Rank		Real GDP [millions of chained (2005) dollars]
1	New York-Newark-Jersey City, NY-NJ-PA	1,173,487
2	Los Angeles-Long Beach-Anaheim, CA	670,974
3	Chicago-Naperville-Elgin, IL-IN-WI	488,974
4	Washington-Arlington-Alexandria, DC-VA-MD-WV	389,320
5	Houston-The Woodlands-Sugar Land, TX	385,683
6	Dallas-Fort Worth-Arlington, TX	372,652
7	Philadelphia-Camden-Wilmington, PA-NJ-DE-MD	311,787
8	San Francisco-Oakland-Hayward, CA	309,847
9	Boston-Cambridge-Newton, MA-NH	295,829
10	Atlanta-Sandy Springs-Roswell, GA	256,357

The three areas with the fastest real GDP growth in 2012 were New Orleans-Metairie, LA (7.6 percent),

San Francisco-Oakland-Hayward, CA (7.4 percent), and Austin-Round Rock, TX (6.5 percent) (table B).

The fastest growing regions in 2012 were the Southwest region (4.1 percent) and the Far West region (3.3 percent); trade was the largest contributor to growth in both regions.

Table B. Ten Fastest Growing Large Metropolitan Areas, 2012

Rank		Percent change
1	San Francisco-Oakland-Hayward, CA	7.4
2	Houston-The Woodlands-Sugar Land, TX	5.3
3	Dallas-Fort Worth-Arlington, TX	4.3
4	Los Angeles-Long Beach-Anaheim, CA	3.1
5	Atlanta-Sandy Springs-Roswell, GA	2.6
6	Chicago-Naperville-Elgin, IL-IN-WI	2.4
7	Boston-Cambridge-Newton, MA-NH	2.3
8	Philadelphia-Camden-Wilmington, PA-NJ-DE-MD	1.5
9	New York-Newark-Jersey City, NY-NJ-PA	1.4
10	Washington-Arlington-Alexandria, DC-VA-MD-WV	0.7

Advance Statistics on Gross Domestic Product (GDP) by Metropolitan Area for 2012

As part of the 5-month acceleration in the release of the Bureau of Economic Analysis' 2012 local area personal income statistics, the August release of advance metropolitan area personal income was discontinued. The loss of this data source necessitated a delay in the release of 2011 advance GDP by metropolitan-area statistics until February 2013. To improve the timeliness of the release of these advance statistics and to return to the previous release date (September), a new data source was identified and the advance GDP methodology was modified.

As with the previous releases of advance statistics, the 2012 advance statistics are based on source data that are incomplete or subject to further revision by the source agency. Revised statistics, based on more complete data, will be released in September 2014.

The advance statistics are prepared at the sector level of the North American Industry Classification System. The advance 2012 statistics use subsector-level industry detail for unpublished county wages for metropolitan areas from the Bureau of Labor Statistics' Quarterly Census of Employment and Wages, and the advance 2012 current-dollar statistics on GDP by state, which were released on June 6, 2013. The annual percent change in county wages from 2011 to 2012 was calculated and then applied to the county GDP statistics underlying the statistics on GDP by metropolitan area for 2011. These extrapolated statistics for all sectors were scaled to the advance statistics on GDP by state for 2012 by allocating the difference between the two measures among the counties. The resulting county statistics were then summed to their related metropolitan areas to yield GDP by metropolitan area.

5. See the box "Relation of Gross Domestic Product (GDP) by Metropolitan Area to National GDP".

Durable-goods manufacturing

In 2012, durable-goods manufacturing contributed to real GDP growth in 356 of the nation's 381 metropolitan areas and in all BEA regions. This industry accounted for 6.2 percent of total GDP in 2012 and contributed more than any other industry to growth in real GDP (0.52 percentage point) (table 2).

Growth in durable-goods manufacturing was most prominent in the Great Lakes region, where 7 of the industry's 10 largest contributions to growth occurs and where the industry contributed to growth in 52 of the region's 55 metropolitan areas. The industry's largest contributions to growth occurred in Elkhart-Goshen, IN, and Columbus, IN, where the industry added more than 8 percentage points to real GDP growth in 2012. These two areas were among the fastest growing small metropolitan areas in 2012 (table C).

Table C. Ten Fastest Growing Small Metropolitan Areas, 2012

Rank		Percent change
1	Odessa, TX.....	14.1
2	Elkhart-Goshen, IN.....	11.4
3	St. Joseph, MO-KS.....	9.8
4	Columbus, IN.....	9.6
5	Victoria, TX.....	8.7
6	Bismarck, ND.....	8.5
7	Kokomo, IN	8.4
8	Greenville, NC.....	5.6
9	Beckley, WV.....	5.6
10	Longview, WA.....	5.6

Durable-goods manufacturing also drove growth in other regions. Of the 8 metropolitan areas across the nation in which growth in this industry was more than \$2 billion, 4 were in the Far West region. That region included the 3 metropolitan areas with the largest growth in durable-goods manufacturing. Durable-goods manufacturing contributed more than 2 percentage points to growth in real GDP in the Far West metropolitan areas of Portland-Vancouver-Hillsboro, OR-WA (3.51 percentage points), Grants Pass, OR (2.64 percentage points), and Albany, OR (2.49 percentage points).

Wholesale and retail trade

In 2012, wholesale and retail trade contributed to real GDP growth in 363 of the nation's 381 metropolitan areas and in all BEA regions. Trade industries accounted for 11.9 percent of total GDP and contributed 0.51 percentage point to growth in real GDP. Trade industries were the largest contributor to growth in 39 metropolitan areas in 2012. The effect of growth in trade industries was strongest in the Southwest and Plains regions. These industries contributed 3 percentage points or more to GDP growth in Victoria, TX (3.26 percentage points) and Odessa, TX (3.10 percentage points).

Financial activities

In 2012, financial activities contributed to real GDP growth in 231 of the nation's 381 metropolitan areas and in 7 of the 8 BEA regions. The industry accounted for 21.4 percent of total GDP in 2012 and contributed 0.45 percentage point to growth in real GDP. It was the largest contributor to growth in 17 metropolitan areas nationwide, including 5 metropolitan areas in the Mideast, most notably in Ocean City, NJ, where financial activities contributed 2.03 percentage points to growth. The industry contributed 2 percentage points or more to growth in several other areas: Missoula, MT (3.36 percentage points); Eau Claire, WI (2.35 percentage points); Bloomington, IL (2.32 percentage points); and Minneapolis-St. Paul-Bloomington, MN-WI (2.04 percentage points).

Although financial activities was the third largest contributor to growth to the nation's metropolitan areas, it subtracted from growth in 150 metropolitan areas. The industry's decline was most pronounced in the Southeast, where the industry subtracted from growth in 47 metropolitan areas, most notably Hammond, LA (6.69 percentage points); Punta Gorda, FL (4.90 percentage points); and Gainesville, GA (3.18 percentage points).

Construction

After 8 consecutive years of decline, construction rebounded in 2012, making a positive contribution to

Relation of Gross Domestic Product (GDP) by Metropolitan Area to National GDP

The statistics of GDP by metropolitan area that were released on September 17, 2013, are consistent with the GDP by state statistics released in June 2013 and incorporate revisions to national GDP by industry released by the Bureau of Economic Analysis (BEA) in December 2012. However, these statistics do not incorporate the 2013 comprehensive revision to the national income and product accounts, which was released in July. The comprehensive revision included the capitalization of research and development expenditures and artistic originals and improved measures of transactions for defined benefit pensions; these improvements will be included in the September 2014 release of GDP by metropolitan area statistics. Changes in GDP will likely be concentrated in metropolitan areas where industries affected by these revisions account for a notable portion of total GDP. For more information, see "Preview of the 2013 Comprehensive Revision of the Industry Economic Accounts" in the June 2013 issue of the SURVEY OF CURRENT BUSINESS.

growth in real U.S. GDP by metropolitan area. This industry contributed to growth in all 8 BEA regions and in 248 metropolitan areas. Its largest contributions to growth occurred in Odessa, TX (2.62 percentage points) and Brunswick, GA (2.05 percentage points).

Agriculture, forestry, fishing, and hunting

In contrast to construction, agriculture, forestry, fishing, and hunting subtracted from real GDP growth in 2012. This industry subtracted from real GDP growth in 6 of the 8 BEA regions and in 269 metropolitan areas. It offset real GDP growth in several metropolitan areas in California, which was affected by drought conditions in 2012.

Per Capita Real GDP by Metropolitan Area

Per capita real GDP for metropolitan areas was \$45,604 in 2012, 6.6 percent higher than the national average.⁶ The five metropolitan areas with the highest per capita real GDP in 2012 were Midland, TX; San Jose-Sunnyvale-Santa Clara, CA; Bridgeport-Stamford-Norwalk, CT; Casper, WY; and San Francisco-Oakland-Hayward, CA (table 3). Midland, TX, had the highest per capita real GDP in the nation at \$100,178, which was 134 percent higher than the national average. A strong concentration in the mining industry contributed greatly to real GDP per capita in this area.

The five metropolitan areas with the lowest per cap-

6. Per capita real GDP by metropolitan area was computed using Census Bureau midyear population estimates.

ita real GDP in 2012 were The Villages, FL; Lake Havasu City-Kingman, AZ; Sebring, FL; McAllen-Edinburg-Mission, TX; and Punta Gorda, FL. The Villages, FL, had the lowest per capita real GDP in the nation, at \$15,198, which was 64 percent lower than the national average.

Revisions

The statistics on GDP by metropolitan area for 2001–2011 that were released in February have been revised. The revisions are consistent with the annual revision of GDP by state for 2009–2011 released on June 6, 2013.⁷ In addition, the revisions for 2009–2011 reflect revisions to underlying source data.

Current-dollar statistics

The revisions to the current-dollar GDP statistics, measured as a percentage of the previously published statistics, were modest for most metropolitan areas (table 4). The mean absolute revision for metropolitan areas (in which the composition of metropolitan areas did not change) was 1.1 percent for 2009–2011. The mean absolute revision was less than 5.0 percent for all areas except Mount Vernon-Anacortes, WA (8.9 percent); Lake Charles, LA (8.3 percent); Bellingham, WA (6.4 percent); and Waterloo-Cedar Falls, IA (5.9 percent).

7. See “Gross Domestic Product by State: Advance Statistics for 2012 and Revised Statistics for 2009–2011,” SURVEY OF CURRENT BUSINESS 93 (July 2013): 115–120.

Gross Domestic Product (GDP) by Metropolitan Area Statistics

Metropolitan (statistical) areas defined by the U.S. Office of Management and Budget are standardized county-based areas that have at least one urbanized area with a population of 50,000 or more and adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

GDP by metropolitan area is the most comprehensive measure of overall economic activity in a metropolitan area—it is the metropolitan area counterpart to the nation’s GDP. The methodology developed for these statistics is relatively simple and allows for the production of timely statistics.

GDP by metropolitan area is derived as the sum of the value added originating in all of the industries in the metropolitan area. Real GDP by metropolitan area is an inflation-adjusted measure based on national prices for the goods and services produced within that area. The statistics on real GDP by metropolitan area and on quantity indexes with a base year of 2005 were derived by applying national chain-type price indexes to the statistics on current-dollar GDP by metropolitan area for 61

industry subsectors based on the 2002 North American Industry Classification System. Then, the chain-type index formula that is used in the national accounts is used to calculate the statistics on total real GDP by metropolitan area and on real GDP by metropolitan area at more aggregated industry levels.

The statistics on GDP by metropolitan area are consistent with those on GDP by state released on June 6, 2013, which are based on the annual revision of the national income and product accounts (NIPAs) released in July 2012 and the national GDP by industry statistics released on April 25, 2013. The growth rate of real GDP in the nation’s metropolitan areas usually differs from the NIPA real GDP growth rates released annually in July, partly because of the inclusion of nonmetropolitan areas in the national statistics. The growth rates also differ because of differences in the timing of production cycles and the availability of data in preparing national and regional statistics, which preclude the incorporation of the immediately preceding annual NIPA revisions into the advance statistics on GDP by metropolitan area.

Revisions in nondurable-goods manufacturing led to revisions in current-dollar GDP for Mount Vernon-Anacortes, WA; Lake Charles, LA; and Bellingham, WA. Revisions in durable-goods manufacturing led to revisions in current-dollar GDP for Waterloo-Cedar Falls, IA.

Real growth rates

The revisions to real GDP growth rates are measured as a percentage point difference from the previously

published growth rate. The mean absolute revision of growth rates for metropolitan areas (in which the composition of metropolitan areas did not change) was 1.0 percentage point for 2009–2011. The mean absolute revision of growth rates was less than 5 percentage points for all areas except Mount Vernon-Anacortes, WA (7.7 percent); Lake Charles, LA (7.5 percent); and Bellingham, WA (5.4 percent). Revisions to nondurable-goods manufacturing led to revisions to real GDP growth rates for all three metropolitan areas.

Data Availability

Summary statistics on gross domestic product (GDP) by metropolitan area in current dollars and in real chained (2005) dollars for 2001–2012 as well as quantity indexes are presented in tables 1–6 in this article. More detailed statistics for metropolitan areas and the U.S. metropolitan portion can be accessed interactively on BEA's Web site.

The following annual statistics are available at www.bea.gov:

- Advance statistics on current-dollar GDP by metropolitan area, real GDP by metropolitan area in chained (2005) dollars, and quantity indexes for 2012 for 24 sectors based on the North American Industry Classification System.
- Current-dollar and real GDP by metropolitan area and quantity indexes for 2001–2011 for 24 NAICS-based sectors and for 61 NAICS-based subsectors.
- Per capita real GDP by metropolitan area for 2001–2012.

For further information, e-mail gdpbymetro@bea.gov or call 202–606–5341.

Acknowledgments

The statistics on gross domestic product (GDP) by metropolitan area were prepared by the staff of the Regional Product Division under the direction of Charles Ian Mead, Chief, Clifford H. Woodruff III, Chief of the Regional Product Branch, and Sharon D. Panek, Chief of the GDP by State Services Section. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. Contributing staff members were Frank T. Baumgardner, Jacob R. Hinson, Yolanda B. Landford, and Ralph M. Rodriguez.

The staff would like to thank Zheng (Catherine) Wang, Chief of the GDP by State Goods Section, John E. Broda, LeRoynda Brooks, Lam X. Cao, Todd P. Siebeneck, Robert P. Tate, and Shane T. Taylor for their contributions in reviewing the statistics and their assistance with online publishing. The staff would also like to thank Mauricio Ortiz, Chief of the Regional Income Division, John A. Rusinko, Chief of the Compensation Branch, John D. Laffman, Callan S. Swenson, Melanie N. Vejdani, and Jonas D. Wilson for their support in producing the statistics.

1. Revision is a percentage of the previously published statistic.

Note. The 2013 OMB definition of metropolitan areas recognizes several new metropolitan areas and changed the composition of counties for several other metropolitan areas. The previously published U.S. metropolitan areas statistic was adjusted to reflect this new definition.

(NA) Not applicable. No previously published statistics are available.

BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the SURVEY OF CURRENT BUSINESS and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at www.bea.gov. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

National Data

A. Selected NIPA tables [A,Q]

1. Domestic product and income	D-2
2. Personal income and outlays	D-22
3. Government current receipts and expenditures ...	D-27
4. Foreign transactions.....	D-40
5. Saving and investment	D-44
6. Income and employment by industry	D-51
7. Supplemental tables.....	D-52

B. NIPA-related table

B.1 Personal income and its disposition [A, M]	D-56
--	------

C. Historical measures [A, Q]

C.1 GDP and other major NIPA aggregates.....	D-57

National Data

A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on September 26, 2013. These estimates include the third estimates for the second quarter of 2013.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at www.bea.gov.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to www.bea.gov and subscribe. The "Selected NIPA Tables" are available later that day.

Personal consumption expenditures excluding food and energy ¹	38	1.9	1.8	1.7	1.5	1.2
Market-based PCE ²	39	1.7	1.5	1.5	1.3	1.0
Market-based PCE excluding food and energy ²	40	1.9	1.7	1.5	1.4	1.1

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Table 1.4.6. Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers, Chained Dollars

[Billions of chained (2009) dollars]

	Line	2011	2012	Seasonally adjusted at annual rates					
				2012			2013		
				II	III	IV	I	II	
Gross domestic product	1	15,052.4	15,470.7	15,427.7	15,534.0	15,539.6	15,583.9	15,679.7	
Less: Exports of goods and services	2	1,890.5	1,957.4	1,959.8	1,961.6	1,967.0	1,960.5	1,998.4	
Plus: Imports of goods and services	3	2,336.4	2,388.2	2,395.1	2,398.0	2,379.1	2,382.7	2,422.9	
Equals: Gross domestic purchases	4	15,501.1	15,902.3	15,864.4	15,971.4	15,950.8	16,005.8	16,104.1	
Less: Change in private inventories	5	33.6	57.6	56.8	77.2	7.3	42.2	56.6	
Equals: Final sales to domestic purchasers	6	15,463.4	15,835.2	15,797.9	15,882.8	15,939.7	15,958.6	16,041.0	
Addendum:									
Final sales of domestic product	7	15,014.4	15,403.2	15,360.8	15,444.9	15,528.3	15,536.4	15,616.2	

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.
4. Excludes software "embedded," or bundled, in computers and other equipment.
5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

Residual	63	-20.6	-34.1	-30.1	-34.6	-45.1	-38.0	-41.2

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Uses gross domestic purchases price index as deflator.

2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.

3. This measure is called "real gross national income" in the System of National Accounts, 2008.

4. Uses net domestic purchases price index as deflator.

5. Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.

6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.

7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.

8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. In this table, the net measures are the corresponding gross measures excluding the depreciation of fixed assets as measured by the consumption of fixed capital.

2. Gross domestic purchases excluding change in private inventories.

3. The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis measures, see NIPA tables 1.8.3 and 1.8.6.

Disposable personal income, chained (2009) dollars.....	42	2.4	2.0	1.8	-0.6	9.0	-7.9	3.5	

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

Market-based PCE excluding food and energy ⁶	28	3.1	2.8	1.2	2.2	3.2	1.7	2.4

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas services.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Market-based PCE excluding food and energy ⁶	28	102.480	104.320	104.199	104.538	104.783	105.210	105.351

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Residual.....	27	-5.9	-7.5	-8.2	-6.5	-6.5	-9.2	-8.3	
Addenda:									
Private fixed investment in structures	28	749.3	846.0	829.9	849.8	887.4	869.0	901.6	
Private fixed investment in new structures	29	656.4	738.4	724.8	740.5	773.4	753.8	781.7	
Nonresidential structures ⁹	30	374.3	421.4	415.8	421.8	439.1	407.9	424.7	
Residential structures ¹⁰	31	282.0	316.8	308.8	318.5	334.1	345.8	356.8	
Private fixed investment in information processing equipment and software	32	557.7	581.6	576.1	575.5	595.3	598.9	600.9	

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.1.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Excludes software "embedded," or bundled, in computers and other equipment.

7. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

8. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

9. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

10. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Private inventories to final sales	27	2.57	2.59	2.57	2.57
Nonfarm inventories to final sales	28	2.30	2.33	2.31	2.29
Nonfarm inventories to final sales of goods and structures	29	4.23	4.26	4.21	4.19

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar inventory series are calculated to ensure that the chained (2009) dollar change in inventories for 2009 equals the current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal.

Addenda:									
Final sales of motor vehicles to domestic purchasers.....	43	429.9	481.1	475.3	486.1	492.0	498.0	504.1	
Private fixed investment in new autos and new light trucks	44	155.6	175.7	171.9	175.1	184.8	192.3	193.9	
Domestic output of new autos ²	45	83.6	111.3	108.6	114.8	113.9	117.1	114.2	
Sales of imported new autos ³	46	91.7	100.0	98.2	96.2	102.8	100.6	102.8	

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

NOTE. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

C. Historical Measures

This table presents historical time series for several estimates presented in the "Selected NIPA Tables" that are published in this issue. The time series are also presented in the NIPA tables on BEA's Web site, www.bea.gov.

Table C.1. GDP and Other Major NIPA Aggregates—Continues

[Quarterly estimates are seasonally adjusted at annual rates]

Year	Billions of chained (2009) dollars			Percent change from preceding period		Chain-type price indexes [2009=100]		Implicit price deflators [2009=100]		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product	Real gross domestic product	Real final sales of domestic product	Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price index		Implicit price deflators	
										Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product

D. Charts

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

p Preliminary

† Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary

r Revised

(*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

^p Preliminary^r Revised

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

^p Preliminary^r Revised

1. The statistics for each quarter are the values as of the last day of the quarter; the first quarter ends on March 31; the second quarter ends on June 30; the third quarter ends on September 30; and the fourth quarter ends on December 31 of the year.

2. U.S. official gold stock is valued at market price.

3. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

4. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

5. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. Changes in exchange rates do not affect this valuation.

6. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

THE UNITED STATES IN THE INTERNATIONAL ECONOMY: QUARTERLY SERIES¹

U.S. Bureau of Economic Analysis

Regional Data

I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at www.bea.gov. For information on state personal income, e-mail reis@bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail gdpbystate@bea.gov; write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

p Preliminary

1. Percent change was calculated from unrounded data.

2. Per capita personal income is total personal income divided by the total Census Bureau midyear population estimate. Estimates for 2010–2011 use state population estimates released in December 2011, while 2012 estimates reflect the December 2012 release.

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the April 2013 SURVEY OF CURRENT BUSINESS

Table I.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

p Preliminary

1. Percent change was calculated from unrounded data.

2. Per capita disposable personal income is total disposable personal income divided by the total Census Bureau midyear population estimate. Estimates for 2010–2011 use state population estimates released in December 2011, while 2012 estimates reflect the December 2012 release.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the April 2013 SURVEY OF CURRENT BUSINESS

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2012
 [Millions of dollars]

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

Table J.2. Gross Domestic Product by Metropolitan Area for Industries, 2012—Continues
 [Millions of dollars]

	Rank of total GDP by metropolitan area	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

A. Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2009—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2008–2009 uses prices for 2008 and 2009 as weights, and the annual percent change in the GDP price index uses quantities for 2008 and 2009 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2009) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2009 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2009 and if real output for this component increased by 10 percent in 2010, then the chained (2009) dollar value of this component in 2010 would be \$110 ($\100×1.10). The percent changes calculated from the chained (2009) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_0 is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t - 0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.

ITAs International transactions accounts

NIPAs National income and product accounts

B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. All of this information is available on BEA's Web site at www.bea.gov.

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

National income and product accounts (NIPAs). The chapters in *Concepts and Methods of the U.S. National Income and Product Accounts* document the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates. The chapters have been updated to reflect the 2012 annual NIPA revision.

- “Introductory Chapters 1–4: Concepts, Source Data, and Estimating Methods”
- “Chapter 5: Personal Consumption Expenditures”
- “Chapter 6: Private Fixed Investment”
- “Chapter 7: Change in Private Inventories”
- “Chapter 8: Net Exports of Goods and Services”
- “Chapter 9: Government Consumption Expenditures and Gross Investment”
- “Chapter 10: Compensation of Employees”
- “Chapter 13: Corporate Profits”

In addition, see *Measuring the Economy: A Primer on GDP and the National Income and Product Accounts* (2007).

The following SURVEY article describes the most recent comprehensive NIPA revision.

- “Initial Results of the 2013 Comprehensive Revision of the National Income and Product Accounts” (August 2013)
 - “Improved Estimates of the National Income and Product Accounts: Results of the 2013 Comprehensive Revision” (September 2013)
 - “Preview of the 2013 Comprehensive NIPA Revision”
 - “Changes in Definitions and Presentations” (March 2013)
 - “Statistical Changes” (May 2013)
- In addition, see the following articles.
- “Chained-Dollar Indexes: Issues, Tips on Their Use,

and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“Revisions to GDP, GDI, and Their Major Components” (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 2003–2012: Results of the 2013 Comprehensive NIPA Revision” (October 2013) reflect the changes that were incorporated as part this revision.

Satellite account. This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

- “Research and Development Satellite Account”
- For 1959–2002 (December 2006)
- For 1959–2004 (October 2007)
- For 1959–2007 (December 2010)

Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

“Preview of the 2013 Comprehensive Revision of the Industry Economic Accounts” describes the changes in definitions and in classifications and statistical changes as part of this upcoming comprehensive revision (June 2013).

Annual industry accounts. *Measuring the Nation's Economy: An Industry Perspective* (2011) provides an

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at www.bea.gov under “About BEA.”

overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

Benchmark input-output accounts. *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts"

- For 2005–2008 (June 2009)
- For 2004–2009 (November 2010)
- For 2007–2010 (June 2011)
- For 2003–2011 (June 2012)
- For 2009–2012 (June 2013)

International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

International transactions accounts and international investment position accounts. "A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts" (February 2010) introduces these accounts.

U.S. International Transactions Accounts: Concepts and Estimation Methods (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2013 SURVEY.

"Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report and Plans for Implementation" (May 2013) updates BEA's plans to introduce the new international statistical standards from recently updated manuals and its plans for changes for the 2013 and 2014 annual revisions.

"An Analysis of the Revisions to BEA's International Economic Accounts" (November 2012) examines the accuracy of the estimates by analyzing the size and pattern of revisions to the quarterly estimates.

Direct investment. Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey* (2013) and in *Foreign Direct Investment in the United States: Final Results From the 2007 Benchmark Survey* (2011).

Additional improvements are described in the following annual articles: "Direct Investment: Detailed Historical-Cost Positions and Related Financial and Income Flows" (September 2013), "Direct Investment Positions: Country and Industry Detail" (July 2013), "Operations of U.S. Multinational Companies" (November 2012), and "Operations of U.S. Affiliates of Foreign Companies" (August 2013).

International services. The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2013 SURVEY.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

Personal income. Estimates of personal income are prepared for states and for local areas.

State Personal Income and Employment (2012) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

"An Examination of Revisions to the Quarterly Estimates of State Personal Income" (August 2012) analyzes the pattern of revisions in the various stages of the estimation cycle.

Local Area Personal Income and Employment (2012) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

Gross domestic product. Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

Gross Domestic Product by State (2006) describes the sources and the methods that are used to prepare the estimates.

"Gross Domestic Product by State" (December 2010) presents the results of the most recent comprehensive revision.

"Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area" (November 2007) describes the potential uses of the estimates.
