GDP and the Economy: Third Estimates for the Second Quarter of 2014

Real GDP increased 4.6 percent after decreasing 2.1 percent in the first quarter of 2014, mainly reflecting upturns in exports and in inventory investment and pickups in nonresidential investment and consumer spending.

Fixed Assets and Consumer Durable Goods for 2002–2013

These statistics on the net stock of equipment and software, on business and government structures, and on consumer durable goods have been updated to reflect the 2014 annual NIPA revision.

U.S. International Services: Trade in Services in 2013 and Services Supplied Through Affiliates in 2012

In 2013, the surplus on the trade in services was \$225.3 billion. In 2012, the services supplied to foreign markets by foreign affiliates of U.S. multinational enterprises exceeded the services supplied to U.S. markets by the U.S. affiliates of foreign multinational enterprises.

U.S. International Transactions: Second Quarter of 2014

The current-account deficit decreased \$3.6 billion to \$98.5 billion. In the financial account, net U.S. borrowing decreased \$73.6 billion to \$17.6 billion.

The U.S. Net International Investment Position at the End of the Second Quarter of 2014

The net international investment position was -\$5,445.1 billion at the end of the second quarter of 2014, compared with -\$5,511.7 billion at the end of the first quarter.

Comprehensive Revision of Gross Domestic Product by Metropolitan Area: Advance Statistics for 2013 and Revised Statistics for 2001–2012

Real GDP increased in 292 of the nation's 381 metropolitan areas in 2013. Real GDP for metropolitan areas in the United States increased 1.7 percent in 2013 after increasing 2.6 percent in 2012.

Prototype Quarterly Gross Domestic Product by State Statistics for 2005–2013

These new statistics provide a more complete picture of economic growth across states. In the fourth quarter of 2013, real GDP increased in all states except Mississippi and Minnesota.

Regional Quarterly Report

Personal income picked up in the second quarter of 2014. Growth accelerated in 36 states, ranging from 1.1 percent in New York and Alaska to 2.7 percent in North Dakota and Nebraska. Detailed annual statistics for 2013 are also discussed.

Schedule of BEA News Releases in 2015

Upcoming in the Survey...

Summary of NIPA Methodologies. Updated source data and methods used to prepare current-dollar and real gross domestic product and current-dollar gross domestic income.

Activities of U.S. Affiliates of Foreign Multinational Enterprises. A look at the value added, employment, goods exports and imports, and the R&D activity of these affiliates.

Director's Message

In this issue, we're pleased to provide our annual article on U.S. international services, which includes detailed annual statistics on trade in services *and* services delivered via affiliates of multi-national companies. This year's article features restructured tables on services exports and imports, which are now consistent with the tables released with the international transactions accounts in June. For the first time, the international services tables are available interactively on the Bureau of Economic Analysis (BEA) Web site.

Two other articles discuss international transactions and the international investment position for the second quarter of 2014.

Regarding regional data, we take a look at our most recent prototype quarterly GDP by state statistics for 2005–2013, which reflect more recent source data than were used for the initial experimental statistics released last year. Separate articles take a look at annual gross domestic product (GDP) by metropolitan area for 2001–2013 and state personal income for the second quarter of 2014.

As usual in October, we take a look at the third estimates of the GDP accounts for the second quarter. Statistics on fixed assets and consumer durable goods are also presented.

Brian C. Moyer
Director, Bureau of Economic Analysis

Taking Account...

Geographic adjustments to a key poverty measure

In 2011, the Census Bureau began issuing Supplemental Poverty Measure reports, following up on interagency recommendations to create an additional indicator of economic well-being. One major benefit of the supplemental measure is that it adjusts the official poverty threshold to account for geographic price-level differences.

In a recent paper, Trudi Renwick, of the Census Bureau, and Bettina Aten, Eric Figueira and Troy Martin, all of the Bureau of Economic Analysis (BEA), compared two types of geographic adjustments to the supplemental measure:

- One adjustment was based on America Community Service (ACS) data to adjust the housing portion of the poverty thresholds for differences in housing costs. This geographic cost index uses median outlays of renters for rent and utilities for two-bedroom housing units. It is referred to as the median rent index (MRI).
- The other adjustment was based on state and metropolitan regional price parities (RPPs) from BEA. There are two types of RPPs: an all-item index that includes a broad group of expenditure classes and another index that is focused on just food, clothing, and rents.

The differences between the MRI and the all-item RPP are

significant for most states. The use of the all-item RPP resulted in higher poverty rates for 15 states and lower rates for 26 states. When the item-specific RPPs were used, poverty estimates were higher in 20 states, lower in 22 states and not statistically different in 9 states.

In metropolitan areas, the all-item RPPs lowered the poverty rates when compared to the MRI rates, because differences in the combined price level of goods and services are generally not as large as differences in rents. However, when the RPPs are constrained to food, clothing, and rents, the poverty rates in metropolitan areas were greater than the MRI poverty rates.

Unlike the RPPs, the MRI carries an implicit assumption that there are no differences in the cost of goods and services other than housing in the Supplemental Poverty Measure threshold. So if the costs of other goods and services vary directly with the cost of housing, the MRI adjustments will be too mild.

On the other hand, if the costs of other goods and services vary inversely with housing costs, the MRI adjustments would be too strong.

In general, however, the differences between the poverty rates using the MRI and those using the all-item RPPs were mainly driven by the different implicit weights given to shelter costs.

The MRI poverty rates use the percent of the Supplemental

Poverty Measure threshold associated with shelter costs for each of three tenure types. This ranged for 2011 from 50.7 percent of the threshold for owners with a mortgage to 40.1 percent for owners without a mortgage. The share for renters was 49.7 percent. On the other hand, the national average share of shelter costs in the overall RPP index was 20.6 percent for all tenure types.

The item-specific RPP index also allows for a meaningful comparison to the MRI poverty rates. The item-specific RPP index uses the same weight for housing as the MRI and provides a mechanism to examine the importance of adjusting for the differences in the cost of food and clothing as well as housing costs without including expenditure categories that are not included in the Supplemental Poverty Measure thresholds. Comparing the differences between the item-specific RPP poverty rates and the MRI poverty rates, there were significant differences in 26 states and the District of Columbia.

There were only 3 states in which the MRI adjustments were stronger than the item-specific RPP adjustments.

BEA news release schedule for 2015 released

BEA has released its 2015 news release schedule. Users of electronic calendars may be able to use the BEA Online Calendar available on its Web site.

GDP and the Economy

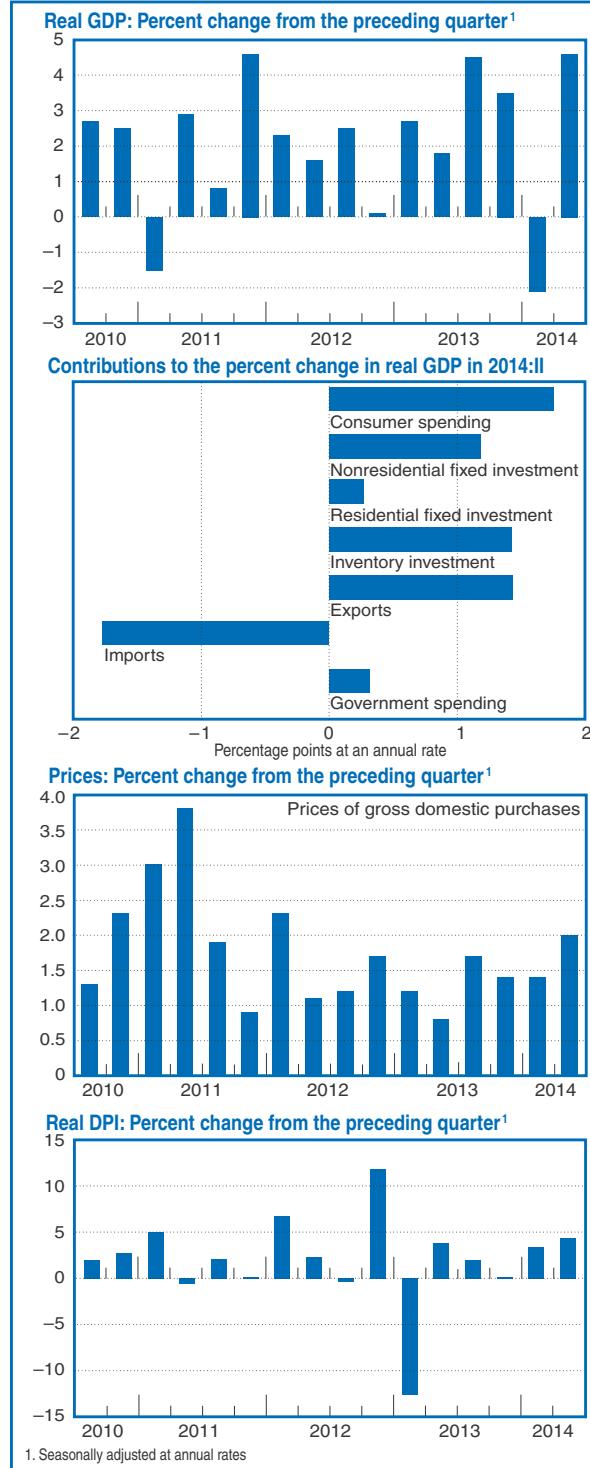

Third Estimates for the Second Quarter of 2014

REAL GROSS domestic product (GDP) increased 4.6 percent at an annual rate in the second quarter of 2014, according to the third estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).¹ In the first quarter, real GDP decreased 2.1 percent.

The third estimate of real GDP growth was revised up 0.4 percentage point from the second estimate. Increases in nonresidential fixed investment and in exports were larger than previously estimated (see table 2).

- The increase in real GDP in the second quarter primarily reflected positive contributions from consumer spending, exports, inventory investment, nonresidential fixed investment, state and local government spending, and residential fixed investment. Imports, which are a subtraction in the calculation of GDP, increased.²
- Prices of goods and services purchased by U.S. residents, as measured by the gross domestic purchases price index, increased 2.0 percent in the second quarter, 0.1 percentage point more than in the second estimate; in the first quarter, this index increased 1.4 percent. Both energy prices and food prices picked up in the second quarter. Excluding food and energy, prices increased 1.7 percent in the second quarter after increasing 1.3 percent in the first quarter.
- Real disposable personal income (DPI) increased 4.4 percent in the second quarter, 0.2 percentage point more than in the second estimate, after increasing 3.4 percent in the first quarter. Current-dollar DPI increased 6.8 percent after increasing 4.8 percent.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 5.4 percent in the second quarter; in the first quarter, the rate was 4.9 percent.
- Real gross domestic income increased 5.2 percent in the second quarter after decreasing 0.8 percent in the first quarter.
- Corporate profits from current production increased \$164.1 billion in the second quarter after decreasing \$201.7 billion in the first quarter (see table 3).

Chart 1. GDP, Prices, Disposable Personal Income (DPI)

1. "Real" estimates are in chained (2009) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see "The Revisions to GDP, GDI, and Their Major Components" in the August 2014 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

Lisa S. Mataloni prepared this article.

Real GDP Overview

Table 1. Real Gross Domestic Product (GDP) and Related Measures
 [Seasonally adjusted at annual rates]

| | Share of current-dollar GDP (percent) | Change from preceding period (percent) | | | | Contribution to percent change in real GDP (percentage points) | | | | |
|--|---------------------------------------|--|-------|-------|-------|--|-------|-------|-------|-------|
| | | 2014 | | 2013 | | 2014 | | 2013 | | |
| | | II | III | IV | I | II | III | IV | I | |
| | | 100.0 | 4.5 | 3.5 | -2.1 | 4.6 | 4.5 | 3.5 | -2.1 | 4.6 |

| Services | | 61.8 | 1.1 | 1.8 | 1.4 | 0.6 | 0.74 | 1.10 | 0.86 | 0.40 |
| Structures | | 7.7 | 8.3 | -0.4 | -3.8 | 11.7 | 0.60 | -0.03 | -0.29 | 0.85 |
| Motor vehicle output | | 2.9 | -10.6 | 18.5 | 3.3 | 21.3 | -0.31 | 0.47 | 0.09 | 0.55 |
| GDP excluding motor vehicle output | | 97.1 | 5.0 | 3.1 | -2.3 | 4.1 | 4.83 | 3.03 | -2.20 | 4.05 |
| Final sales of computers | | 0.4 | -4.0 | 6.2 | 17.8 | 14.6 | -0.02 | 0.03 | 0.07 | 0.06 |
| GDP excluding final sales of computers | | 99.6 | 4.6 | 3.5 | -2.2 | 4.6 | 4.53 | 3.47 | -2.17 | 4.54 |
| Research and development (R&D) | | 2.5 | -2.9 | -0.8 | 2.9 | 3.4 | -0.08 | -0.02 | 0.07 | 0.09 |
| GDP excluding R&D | | 97.5 | 4.7 | 3.6 | -2.2 | 4.6 | 4.59 | 3.52 | -2.18 | 4.51 |
| Gross domestic income (GDI) ² | | 1.9 | 1.8 | -0.8 | 5.2 | | | | | |

1. The estimates of GDP under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP.

NOTE. For GDP and its components, percent changes are from NIPA tables 1.1.1 and 1.2.1, contributions to percent change are from NIPA tables 1.1.2 and 1.2.2, and shares are from NIPA table 1.1.10, or they are calculated from table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

Real GDP growth turned up in the second quarter. The upturn primarily reflected upturns in exports and in inventory investment, pickups in nonresidential fixed investment and in consumer spending, and upturns in state and local government spending and in residential fixed investment that were partly offset by a pickup in imports.

The pickup in consumer spending reflected a pickup in spending for goods (primarily durable goods) that was partly offset by a slowdown in spending for services. In services, a downturn in spending for electricity and gas services was largely offset by an upturn in spending for health care services.

The pickup in nonresidential fixed investment primarily reflected an upturn in equipment (mainly in information processing equipment).

The upturn in residential fixed investment primarily reflected an upturn in "other" structures (specifically, brokers' commissions and other ownership transfer costs).

The largest contributors to the upturn in inventory investment were retail trade industries and mining, utilities, and construction industries.

The upturn in exports reflected upturns in both goods and services. The leading contributor to the upturn in goods was industrial supplies and materials (specifically, petroleum and petroleum products). For services, the largest contributor was "other" business services (mostly financial services).

The pickup in imports was mostly accounted for by a pickup in goods imports (mainly in automotive vehicles, engines, and parts and in consumer durable goods).

The upturn in state and local government spending was primarily accounted for by an upturn in gross investment (specifically in structures).

Real final sales of domestic product, real GDP less inventory investment, increased 3.2 percent after decreasing 1.0 percent.

Revisions to GDP

Table 2. Second and Third Estimates for the Second Quarter of 2014
 [Seasonally adjusted at annual rates]

| | Change from preceding quarter (percent) | | | Contribution to percent change in real GDP (percentage points) | | |

| Addenda: | | | | | | |
| Final sales of domestic product | 2.8 | 3.2 | 0.4 | 2.78 | 3.18 | 0.40 |
| Gross domestic income | -2.3 | 5.2 | 7.5 | | | |
| Gross domestic purchases price index | 1.9 | 2.0 | 0.1 | | | |
| GDP price index | 2.1 | 2.1 | 0.0 | | | |

1. The estimates of GDP under the contribution columns are also percent changes.

The third estimate of the second-quarter change in real GDP was 0.4 percentage point higher than the second estimate released last month. The upward revision primarily reflected upward revisions to nonresidential fixed investment and to exports. For 1978–2013, the average revision (without regard to sign) between the second estimate and the third estimate is 0.3 percentage point.

Consumer spending for services was revised up slightly. An upward revision to spending for health care services was mostly offset by downward revisions to spending for “other” services (primarily communication services) and to spending for recreation services. The revisions reflect the incorporation of newly available services data for the second quarter.

The upward revision to nonresidential fixed investment primarily reflected an upward revision to structures (specifically, manufacturing structures).

The upward revision to exports reflected upward revisions to exports of services (primarily travel services) and to exports of goods.

Source Data and Methodologies

For the details about the source data and the methodologies that are used for the estimates, see *Concepts and Methods of the U.S. National Income and Product Accounts* at www.bea.gov/methodologies/index.htm.

Source data for the third estimate. The third estimate of GDP for the second quarter of 2014 incorporated the following source data.

Consumer spending: Census Bureau retail sales data for June (revised) and quarterly services survey data for the second quarter (new), Energy Information Administration electricity and natural gas usage and unit value data for May (revised) and June (new), and Securities and Exchange Commission FOCUS report data for the second quarter (new).

Nonresidential fixed investment: Census Bureau construction spending data for May and June (revised) and quarterly services survey data for the second quarter (new).

Residential fixed investment: Census Bureau construction spending data for May and June (revised).

Inventory investment: Census Bureau manufacturers' and trade inventories for June (revised) and *Quarterly Financial Report* data for the second quarter (revised).

Exports and imports: Bureau of Economic Analysis international transactions accounts data for April through June (revised).

Government spending: Census Bureau construction spending data for May and June (revised).

Corporate Profits

| Receipts from the rest of the world..... | 671.4 | 13.3 | 14.7 | -8.9 | 2.7 | 2.0 | 2.2 | -1.3 | 0.4 | |
| Less: Payments to the rest of the world..... | 277.5 | -3.2 | 0.7 | 17.1 | 6.3 | -1.3 | 0.3 | 6.7 | 2.3 | |
| Less: Taxes on corporate income..... | 608.0 | 8.3 | 27.9 | 66.9 | 45.7 | 1.8 | 6.0 | 13.5 | 8.1 | |
| Equals: Profits after tax..... | 1,498.2 | 28.7 | -24.7 | -268.6 | 118.4 | 1.7 | -1.5 | -16.3 | 8.6 | |
| Net dividends | 902.3 | -187.0 | 80.6 | -89.5 | -0.5 | -17.0 | 8.8 | -9.0 | -0.1 | |
| Undistributed profits from current production | 595.9 | 215.8 | -105.5 | -178.9 | 118.8 | 39.5 | -13.8 | -27.3 | 24.9 | |
| Net cash flow | 2,052.9 | 228.0 | -92.3 | -163.0 | 133.4 | 11.7 | -4.2 | -7.8 | 6.9 | |

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.

Profits from current production increased \$164.1 billion, or 8.4 percent at a quarterly rate, in the second quarter after decreasing \$201.7 billion, or 9.4 percent, in the first quarter.

Profits of domestic financial corporations increased \$33.3 billion, or 7.9 percent, after decreasing \$86.2 billion, or 17.1 percent.

Profits of domestic nonfinancial corporations increased \$134.3 billion, or 11.9 percent, after decreasing \$89.6 billion, or 7.4 percent.

Profits from the rest of the world decreased \$3.6 billion, or 0.9 percent, after decreasing \$26.0 billion, or 6.1 percent. In the second quarter, receipts increased \$2.7 billion, and payments increased \$6.3 billion.

Taxes on corporate income increased \$45.7 billion, or 8.1 percent, in the second quarter after increasing \$66.9 billion, or 13.5 percent, in the first quarter.

Net dividends decreased \$0.5 billion, or 0.1 percent, after decreasing \$89.5 billion, or 9.0 percent.

Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including the

Census Bureau *Quarterly Financial Report*, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service (IRS) data when these data are available for two reasons: the IRS data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

 IVA Inventory valuation adjustment
 CCAdj Capital consumption adjustment

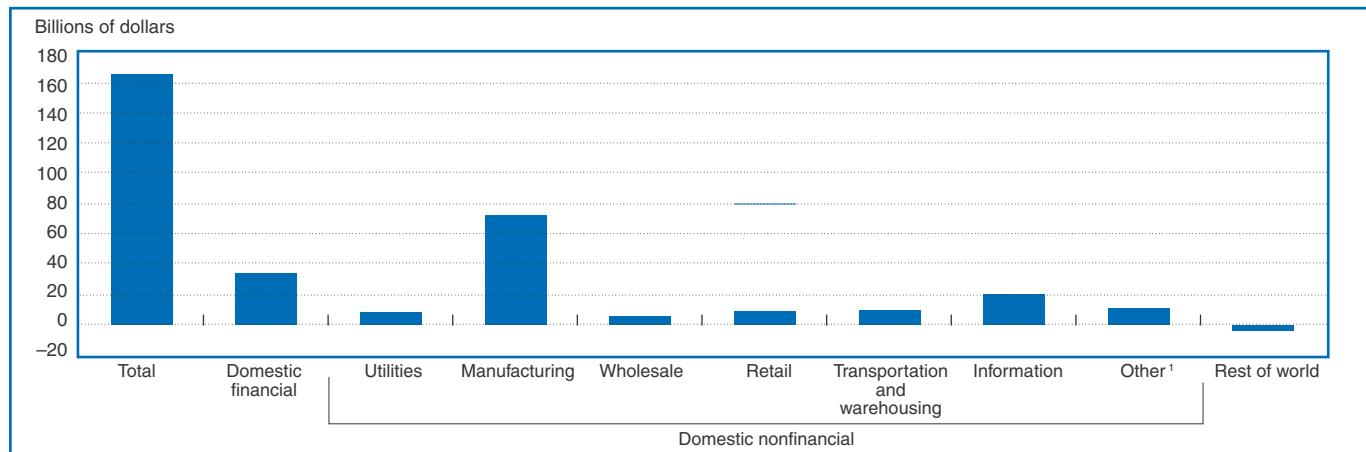

Profits with inventory valuation adjustment (IVA) increased \$164.8 billion, or 7.3 percent at a quarterly rate, in the second quarter after decreasing \$6.0 billion, or 0.3 percent, in the first quarter.

Profits of domestic industries increased \$168.4 billion, or 9.0 percent, after increasing \$20.0 billion, or 1.1 percent.

Profits of domestic financial industries increased \$33.7 billion, or 7.0 percent, after decreasing \$68.6 billion, or 12.5 percent.

Profits of domestic nonfinancial industries increased \$134.7 billion, or 9.7 percent, after increasing \$88.5 billion, or 6.8 percent. The increase was widespread across the industries; the largest contributors were manufacturing, information, and “other” nonfinancial.

1. "Other" nonfinancial corporations include the agriculture, mining, construction, and services industries.

NOTE. Based on seasonally adjusted estimates.

U.S. Bureau of Economic Analysis

Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of price changes on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAdj) for

each industry. However, estimates of the CCAdj are only available for two broad categories: total financial industries and total nonfinancial industries. For more information about BEA's methodology, see “[Corporate Profits](#)” in *Concepts and Methods of the U.S. National Income and Product Accounts* at www.bea.gov/methodologies/index.htm.

Fixed Assets and Consumer Durable Goods for 2002–2013

On September 17, 2014, the Bureau of Economic Analysis (BEA) released new statistics on fixed assets and consumer durable goods for 2013 and revised statistics for 2002–2012. These statistics reflect (1) the annual revision of the national income and product accounts (NIPAs), released on July 31, 2014, and (2) new benchmark estimates of private fixed investment by industry and by legal form of organization. BEA undertakes benchmark revisions of the fixed assets accounts (FAAs) roughly every 5 years to improve the accuracy and relevance of its estimates by incorporating the most complete and reliable source data available and by improving and updating the definitions and classifications of the FAA components.

The benchmarking of private fixed investment results in revisions for 2003 forward; for some components, revisions extend back to previous years.¹ When estimates for the reference year (2009) are revised, the levels of the related index numbers and the chained-dollar estimates for the entire historical period are revised, but revisions to percent changes before 2003 are mostly small.

Benchmarking private fixed investment

Revised estimates of FAA private fixed investment by industry and by legal form of organization reflect benchmarked levels of investment for 2007. For benchmark years in which the economic census occurs (such as 2002 and 2007), additional data on private fixed in-

vestment by industry and by legal form for specific asset types are available.² The FAA benchmarking process relies upon special tabulations and published data from the Census Bureau's 2007 and 2008 Annual Capital Expenditures Surveys (ACES), the 2007 and 2008 Information and Communication Technology (ICT) surveys, the 2007 Economic Census, Department of Agriculture statistics, Department of Labor statistics, Internal Revenue Service (IRS) tabulations of tax returns, BEA estimates for items not covered by these surveys, and other sources.

The FAA benchmark did not lead to revisions to total fixed investment or to fixed investment by asset type. The FAA benchmark instead resulted in revisions to total investment by industry, total investment by legal form of organization, and investment by industry and by legal form within each asset type. The FAA benchmarking process consists of five broad steps: (1) establish capital expenditures by industry for total equipment, total structures, and total intellectual

2. The current benchmarking process was initially developed to produce benchmarked estimates for 2002, following the discontinuation of the capital flow table. Estimates for private fixed investment by industry and by type of asset for 1997 were benchmarked to the 1997 capital flow table, which was produced as part of BEA's benchmark input-output accounts. The FAA benchmark process used for 1997 centered on converting the capital flow table from a "use basis" to an "ownership basis." The new benchmarking process relies heavily on survey-based capital expenditures, which are already reported on an "ownership basis." For more information on the 1997 capital flow table, see "Capital Flow" in ["Industry Economic Accounts"](#) on BEA's Web site.

1. The revisions to consumption of fixed capital by industry and legal form that result from the fixed asset accounts benchmark have been incorporated in the NIPAs on a best-level basis for 2011 forward.

Robert Kornfeld prepared this report. Robert Kornfeld and Marlyn Rodriguez supervised the preparation of the statistics on private fixed assets and consumer durable goods. Jennifer A. Bennett supervised the preparation of the statistics on government fixed assets. Mark A. Bailey, Michael T. Cusick, Michael D. Glenn, Christopher B. Mbu, and Nadia Sadée prepared the statistics.

Data Availability

The complete [fixed assets accounts](#) are available interactively by industry, by legal form of organization, and by asset type on BEA's Web site. Statistics on net stocks, depreciation (consumption of fixed capital), "other changes in volume of assets," and the average age of net stocks are available, beginning with the statistics for 1925; estimates of fixed investment are available, beginning with the statistics for 1901.

property products (including software) (2) develop detailed asset-type shares by industry, (3) balance the results to ensure consistency with FAAs and NIPA asset-type controls, (4) develop legal form of organization shares by industry, and (5) interpolate benchmark year revisions back to previous benchmark years and extrapolate to future years.

Capital expenditures by industry. The first step in benchmarking FAA fixed investment by industry is to develop benchmark year (2007) estimates of capital expenditures by industry for equipment, structures, and intellectual property products. Estimates are prepared for over 60 industries, defined by the 2007 North American Industry Classification System (NAICS). The building blocks for these estimates include industry-level capital expenditures produced by the Census Bureau from the ACES and ICT survey, the economic census, and BEA reconciliation adjustments. These unadjusted survey-based statistics underestimate (significantly in some cases) FAA and NIPA private fixed investment statistics prepared by BEA using alternative methods and sources.³ As a result, a number of adjustments have been developed and applied to the survey-based statistics to ensure consistency with existing FAA statistics. Adjustments are made for a variety of reasons, such as to include nonemployers and mixed-use (household and business) motor vehicles, to complete the coverage of all industries (for example, the farm industry and pension funds are not covered by ACES), and to include products not capitalized by survey respondents but included in the FAA statistics (for example, certain types of software and expensed petroleum exploration-related expenditures).

It is important to note that ACES and ICT survey are conducted at the company level, whereas FAA industry statistics reflect establishment-based industries. However, the ACES and ICT survey collect and reclassify expenditures to secondary industries in which the company has activities, so that the reported statistics are closer to an establishment basis. Farm, mining, construction, and manufacturing industries are based on establishment-level source data covered by the economic census. The other industries covered by ACES and ICT survey of sectors—such as transportation, information, finance, and other services—are not completely establishment based, but in most cases, they are acceptably close to an establishment basis. In some

cases, explicit adjustments are made to account for this difference.

Asset type by industry shares. The second step in the benchmarking process is to develop benchmark year estimates of shares of capital expenditures by detailed asset type and by industry (for over 90 different asset-type categories). In the year immediately following an economic census year (for example, 2003 and 2008), the Census Bureau conducts expanded data collection for ACES; in the expanded survey, ACES collects capital expenditures not only by industry but also by type of asset for each industry. Detailed asset-type shares are developed using special tabulations of the expanded ACES and the ICT survey, supplemented by other source data to resolve coverage issues. These shares are applied to the 2007 estimates of capital expenditures by industry developed in the first step, and these estimates serve as the basis for the prebalanced estimates of private fixed investment by asset type and by industry. Capital expenditures by asset type from the ACES and ICT survey do not always correspond in definition or in expenditure level with detailed NIPA estimates of private fixed investment. As a result, some significant adjustments are required to better align these two sets of estimates.

Balancing industries and asset types. The third step in the benchmarking process is to force the results from second step to match FAA published asset-type totals; that is, detailed estimates of private fixed investment by asset type and by industry are reconciled with published, unrevised, FAA all-industry private fixed investment by asset type. FAA private fixed investment by asset type is not subject to revision in this benchmarking process; instead, it is the asset-type mix and industry totals for FAA private fixed investment by industry that are benchmarked.

Legal form of organization shares. In the fourth step, the FAA benchmarking process updates the estimates of each industry's shares of investment by legal form—the proportion of fixed investment for an industry from corporations, proprietorships, partnerships, nonprofit institutions, and tax-exempt cooperatives. The revisions to legal form shares for the benchmark year 2007 reflect data from the 2007 Economic Census and Census of Agriculture, IRS tax return tabulations, County Business Patterns, and other data sources. Revisions to estimates of total investment for each legal form of organization (corporations, nonprofits, and so on) reflect both these revisions to legal form shares by industry and the revisions to asset type by industry shares.

Interpolate and extrapolate revisions. In the fifth step, revisions stemming from the 2007 benchmarking

3. FAA private fixed investment is derived from NIPA private fixed investment; however there are some conceptual differences between the two sets of estimates. Reconciliation tables are available on BEA's Web site showing the relationship between these two measures. For more information on the estimation of private fixed investment, see “[Private Fixed Investment](#)” in *NIPA Handbook: Concepts and Methods of the U.S. National Income and Product Accounts* on BEA's Web site.

process are, in most cases, incorporated incrementally back to the previous benchmark year, 2002, creating a gradual transition between benchmark years. Some revisions that reflect changes in definitions and classifications or other significant methodological improvements are incorporated for several years prior to 2002. Estimates are extrapolated forward from the 2007 benchmark levels, primarily using capital expenditures by industry reported in the ACES and in the Annual Survey of Manufacturers (ASM), as well as private fixed investment by asset type as reported in the NIPAs. For the extrapolated years, revised estimates of shares of investment by legal form of organization within industries are held constant.

Improvements and revisions

The benchmarked estimates of private fixed investment by industry and by legal form of organization also reflect the revised classification of industries from a 2002 NAICS basis to a 2007 NAICS basis. The most important reclassification moves real estate investment trusts (REITs) from “funds, trusts, and other financial vehicles” to “real estate”; this revision was implemented back to the 1950s. REITs remain in the financial sector. Two other classification changes resulting in minor revisions were implemented back to 1998: (1) “internet publishing and broadcasting” was reclassified from “publishing” to “information and data processing services” and (2) “internet service providers” was reclassified from “information and data processing services” to “broadcasting and telecommunications.” Other reclassifications of investment to different industries had less noticeable effects. The revisions to private fixed investment by industry and by legal form of organization reflect these classification changes, the statistical revisions from the benchmarking process,

and some improved methodologies.

Several notable and offsetting revisions to private nonresidential fixed investment by industry for 2007, reflecting the improved benchmark estimates. An upward revision to “real estate” (\$32.0 billion) and a partly offsetting downward revision to “funds, trusts and other financial vehicles” (\$25.6 billion) are mainly accounted for by the reclassification of investment for REITs and improved source data. A downward revision to “management of companies and enterprises” (\$12.5 billion) mainly reflects an improved methodology for the allocation of software and autos by industry was implemented for 1998 forward. An upward revision to investment for credit intermediation and related activities (\$11.4 billion) mainly reflects updated source data. Other revisions to private fixed investment by industry are typically much smaller.

Some notable and offsetting revisions to private nonresidential fixed investment by legal form of organization result from the improved benchmark estimates. A downward revision to sole proprietors (\$10.4 billion) and an upward revision to partnerships (\$23.4 billion) reflect revised source data. A downward revision to corporate financial (\$10.0 ICT survey billion) reflects revised source data and an improved methodology for allocating investment in software and autos for “management of companies and enterprises.” A downward revision to nonprofit institutions (\$17.2 billion) reflects revised source data and an improved method for allocating investment for REITs and establishments that remain classified as “funds, trusts, and other financial vehicles”; this change in methodology was implemented back to the 1960s. An upward revision to cooperatives (\$7.4 billion) reflects an improved allocation of investment for the electric power industry that was implemented back to 1992.

U.S. International Services

Trade in Services in 2013 and Services Supplied Through Affiliates in 2012

By Alexis N. Grimm and Charu S. Krishnan

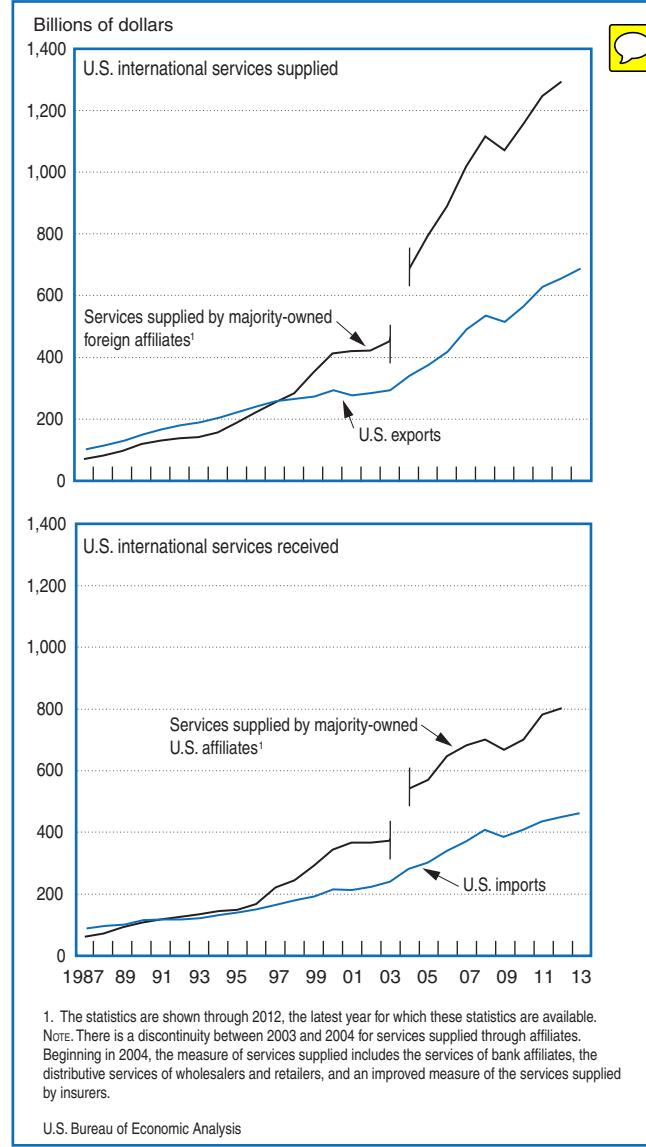

TO PROVIDE a broad perspective on services provided by and to the United States in international markets, this article presents information on services provided, both in the conventional sense—that is, trade in services—and on services supplied through the channel of direct investment by affiliates of multinational enterprises (MNEs).¹ Trade in services in this article refers to exports and imports that are included in the U.S. international transactions accounts (ITAs). Services supplied through affiliates refers to services supplied by majority-owned affiliates of MNEs through the channel of direct investment. It covers transactions between foreign affiliates of U.S. companies and foreign residents, both in the local economy and in other foreign markets, and transactions between U.S. affiliates of foreign companies and U.S. residents. Because of the importance of proximity to customers in the delivery of services, many MNEs serve foreign markets partly or wholly through their affiliates located in, or close to, the markets they serve. In 2012, as in previous years, the majority of services both delivered and obtained by the United States internationally was through affiliates (table A and chart 1).

In June 2014, the Bureau of Economic Analysis (BEA) introduced a new presentation of the ITAs as

part of a comprehensive restructuring of the international economic accounts to more closely align them with international statistical guidelines for compiling balance of payments statistics.² The presentation of

2. For a detailed description of the revisions to BEA's international trade in services statistics and table presentation, see Jeffrey R. Bogen, Mai-Chi Hoang, Kristy L. Howell, and Erin M. Whitaker "Comprehensive Restructuring and Annual Revision of the U.S. International Transactions Accounts" SURVEY OF CURRENT BUSINESS 94 (July 2014).

Chart 1. U.S. International Services Supplied and Received, 1987–2013

trade in services in this article has been modified from that of past years to align with the restructured ITAs, which now include nine broad categories of services rather than seven. As part of this alignment, this year's article includes statistics on services provided to, and received from, nonresidents by U.S. government agencies, both military and nonmilitary, as part of a new category "government goods and services n.i.e." (not included elsewhere). With this change, this article now provides detailed information on all trade in services, not just trade in private services. For more information on the definitions and methodology of the major trade in services categories, see *Part III* in *International Economic Accounts: Concepts and Methods*.

In 2013, U.S. exports of services were \$687.4 billion, and U.S. imports of services were \$462.1 billion, resulting in a services trade surplus of \$225.3 billion (chart 2).³ The United States retained its position as the world's leader in exports and imports of services.⁴ In 2012—the latest year for which statistics are available—services supplied to foreign markets through majority-owned foreign affiliates of U.S. multinational enterprises were \$1,293.0 billion. Services supplied to the United States through majority-owned U.S. affiliates of foreign multinationals were \$801.9 billion.

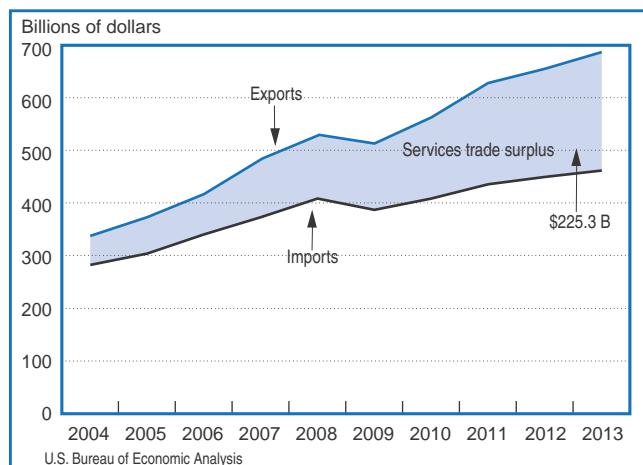

U.S. Trade in Services 2013

In 2013, the U.S. surplus on trade in services increased 10 percent, to \$225.3 billion, after increasing 6 percent in 2012. In contrast to the persistent U.S. deficit on trade in goods, which was \$701.7 billion in 2013, the United States has historically recorded a surplus on trade in services (chart 2). Growth in exports acceler-

3. The statistics in this article are consistent with the less detailed quarterly statistics published in table 3.1 of the international transactions accounts.

4. World Trade Organization (WTO) Press Release 721 (April 14, 2014); www.wto.org.

Chart 2. U.S. International Services Trade Surplus, 2004–2013

ated in 2013, while growth in imports continued to decelerate from the relatively high rate of 2011 (table A). This occurred as the real gross domestic product (GDP) of the United States and some of its major trading partners grew at a slower rate in 2013 than in 2012 (chart 3). In addition, the value of the U.S. dollar relative to the currencies of many of the major U.S. trading partners was largely unchanged in 2013 (chart 4).

Both exports and imports reached record levels. For exports, the largest increases were in travel (for all purposes including education), \$11.9 billion, and in financial services, \$7.5 billion (table B). For imports, the

Chart 3. Growth in Real GDP by Major Area

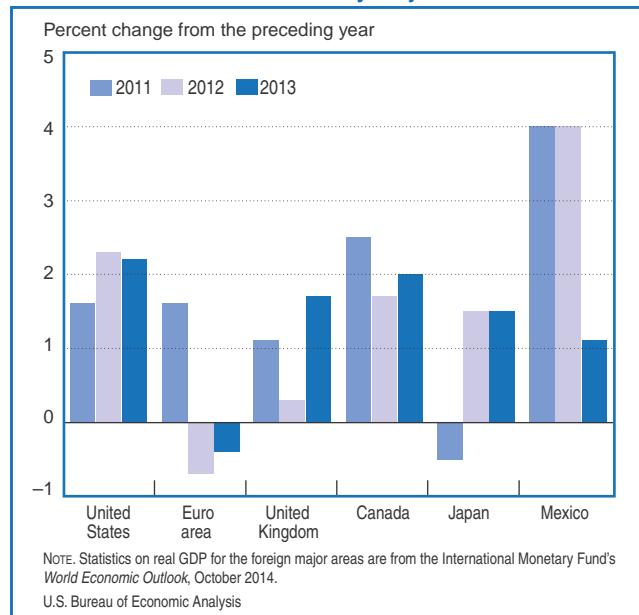

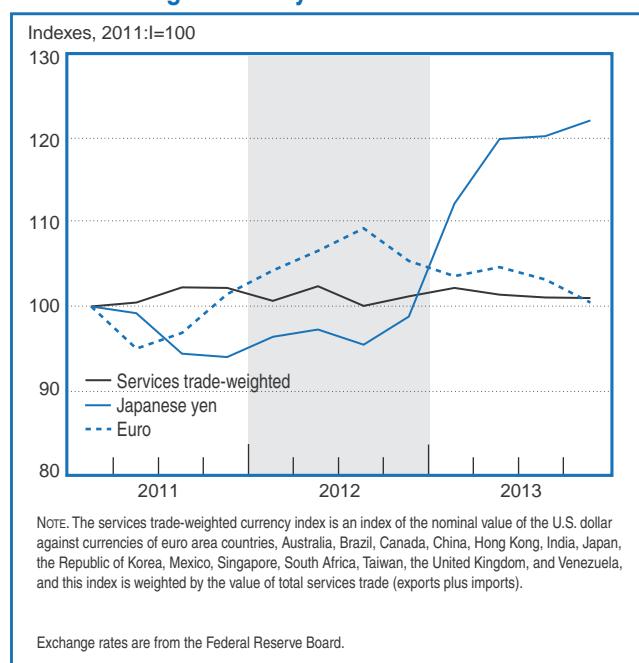

Chart 4. Foreign Currency Price of the U.S. Dollar

largest increases were in transport, \$5.7 billion, and in other business services, \$5.4 billion. Summary statistics on trade in services by category and the five largest countries in each category are presented on pages 6–15. For more detailed statistics, see tables 1–7.2 that accompany this article.

Growth in exports accelerated to 5 percent in 2013 from 4 percent in 2012 (table B). The pace of growth varied by type of service. For exports, all categories except insurance grew, and the largest percentage increases were in financial services, 10 percent, and maintenance and repair services, 8 percent. The growth in financial services reflected growth in financial management, financial advisory, and custody services. The growth in maintenance and repair services reflected growth in industrial-type maintenance services.

For imports, five of the nine categories grew, and the largest percentage increases were in financial services, 10 percent, and in transport, 7 percent. The growth in financial services reflected growth in financial management, financial advisory, and custody services and in credit card and other credit-related services. The growth in transport reflected growth in sea and air transport.

By area, Europe remained the largest market for U.S. services exports, followed by the Asia and Pacific region. By country, the top 10 markets for U.S. exports

in 2013 were nearly unchanged from those in 2012; Korea replaced Australia as the tenth largest market in 2013 (table C). Canada was the top market for exports in 2013; the top categories of exports were travel (for all purposes including education) and charges for the use of intellectual property n.i.e. The United Kingdom was the second largest market for exports in 2013; the top categories of exports were financial services and

n.i.e. Not included elsewhere

(D) Suppressed to avoid the disclosure of data of individual companies.

1. Ranked by dollar value of total exports or imports.

2. All travel purposes include (1) business travel, including expenditures by border, seasonal, and other short-term workers and (2) personal travel, including health-related and education-related travel.

other business services.

Europe remained the largest source of U.S. services imports, followed by the Asia and Pacific region. By country, the top 10 sources of U.S. imports in 2013 were nearly unchanged from those in 2012; Ireland replaced China as the tenth largest provider of services to the United States in 2013. The United Kingdom was the top provider of services to the United States; the top categories of imports were other business services and transport. Germany was the second-largest provider of services to the United States; the top categories of imports were transport and other business services.

Services trade includes trade between unaffiliated parties and trade within multinational enterprises. Trade within MNEs (affiliated trade) accounted for 27 percent of exports in 2013, down 1 percent from 2012. Affiliated trade accounted for 28 percent of imports in 2013, up 1 percent from 2012. For exports, growth in unaffiliated trade increased 2 percentage points in 2013, from 4 percent to 6 percent, and growth in affiliated trade decreased 2 percentage points, from 5 percent to 3 percent. For imports, growth in unaffiliated trade decreased 2 percentage points in 2013, from 3 percent to 1 percent, and growth in affiliated trade increased 1 percentage point, from 5 percent to 6 percent.

Services Supplied Through Affiliates in 2012

U.S. international services delivered via the channel of direct investment consist of (1) services supplied to local markets and other foreign markets by foreign affiliates of U.S. MNEs and (2) services supplied to the U.S. market by U.S. affiliates of foreign MNEs. In 2012, services supplied by U.S. MNEs to foreign markets through their affiliates increased to \$1,293.0 billion from \$1,247.0 billion in 2011. Services supplied by foreign MNEs to the United States through their U.S. affiliates increased to \$801.9 billion from \$781.6 billion. The difference between international services supplied through affiliates to foreign markets and to U.S. markets was \$491.1 billion in 2012, compared with \$462.4 billion in 2011. Selected summary statistics on services supplied by foreign affiliates of U.S. MNEs for certain countries and industries of the affiliate and on services supplied by U.S. affiliates of foreign MNEs for certain countries of ultimate beneficial owner (UBO) and industries of the affiliate are presented on pages 16–19.⁵

For more detailed statistics, see tables 8–10.2 that accompany this article.

Services supplied abroad through foreign affiliates of U.S. MNEs grew 4 percent in 2012 after growing 8 percent in 2011. The sharp decline in growth reflected weaker economic growth in many of the major markets served by affiliates as well as in emerging markets (chart 3). In Europe, the euro area slid into recession in 2012, and growth in the United Kingdom was less than half of 1 percent. Canada's real GDP growth also slowed but remained higher than that of Europe. Growth in emerging markets and developing economies, such as Mexico, slipped slightly. This weakened the expansion of services supplied by affiliates in markets that in 2011, had accounted for more than half of the growth. Japan's real GDP growth rebounded in 2012 after a contraction in 2011 that at least partly resulted from the March 2011 earthquake and tsunami.

The value of the dollar relative to the currencies of many of the U.S.'s largest trading partners was largely unchanged throughout 2012. However, in Japan, the dollar strengthened against the yen (chart 4).

Services supplied abroad through affiliates increased in all major regions, but the largest increases were for affiliates in the Asia and Pacific region, followed by affiliates in Europe and in South and Central America. In Asia and Pacific, all major industry categories grew; the largest increases were in professional, scientific, and technical services and in insurance. More than two-fifths of the growth in services supplied in Asia and Pacific was due to increases in services supplied by affiliates in China, where economic growth slipped but was still robust, and in Australia, one of the fastest growing advanced economies in 2012. Services supplied by affiliates in Europe grew 2 percent despite Europe's weak economic situation; about two-thirds of the growth was due to a sharp increase in growth in services supplied in Ireland, particularly in information services supplied to unaffiliated customers in other countries. Increases for European affiliates in information services and in retail trade more than offset large decreases in banking and finance and in wholesale trade. Despite weak economic growth in South and Central America, services supplied by affiliates grew 8 percent in 2012, led by increases in Mexico and in Chile; more than half of the increase was in finance and insurance and in professional, scientific, and technical services.

Services supplied by foreign affiliates of U.S. MNEs increased in most major industry categories, but approximately two-thirds of the total increase was in professional, scientific, and technical services, in information services, and in retail trade. In professional, scientific, and technical services, the largest increases were in architectural, engineering, and related

5. The UBO of a U.S. affiliate is that person, proceeding up the affiliate's ownership chain, beginning with and including the foreign parent, that is not owned by more than 50 percent by another person. Unlike the foreign parent, the UBO of an affiliate may be located in the United States. The UBO of each affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affiliate and therefore ultimately derives the benefits from ownership or control.

services and in computer systems design and related services. In information services, more than half of the increase was in “Internet service providers, web search portals, data processing services, Internet publishing and broadcasting, and other information services,” mainly in services supplied by affiliates that provide Internet search and social networking services and by affiliates in software publication services, particularly in Ireland. In retail trade, the inclusion of services supplied by newly acquired foreign affiliates accounted for more than half of the increase, and the largest increases were in general merchandise and miscellaneous store retailers.

U.S. MNEs not only supply services to foreign markets via the channel of direct investment through foreign affiliates (the focus of this article), but they also supply services to the U.S. market. Services supplied to foreign markets accounted for 92 percent, and services supplied to the U.S. market accounted for the remaining 8 percent of foreign affiliates’ \$1,405.7 billion in services supplied worldwide in 2012. Services supplied to foreign markets through the channel of direct investment include services provided by U.S. MNEs’ affiliates to both their local markets and other foreign markets. In 2012, transactions in the local market accounted for 72 percent of services supplied worldwide by affiliates, while transactions with parties in other foreign markets accounted for 20 percent.

In 2012, services supplied to the U.S. market by U.S. affiliates of foreign MNEs grew 3 percent, down from 11 percent in 2011, despite somewhat stronger U.S. economic growth (chart 3). Growth in services supplied through affiliates was unevenly distributed by region of UBO, and affiliates with UBOs in Europe and in Asia and Pacific together more than accounted for the growth. For affiliates with UBOs in Europe, more than half of the increase was in German-headquartered affiliates, particularly those in finance and insurance. Growth in services supplied by affiliates with UBOs in Europe increased in most major industries; the largest increases were in professional, scientific, and technical services, especially advertising and related services, and in wholesale trade. For affiliates with UBOs in Asia and Pacific, the increase was driven by growth in U.S. affiliates with UBOs in Japan, which accounted for more than 80 percent of the total increase in services supplied by affiliates with UBOs in Asia and Pacific. By industry, the largest increases in Asia and Pacific were in wholesale trade and in administration, support, and waste management, particularly in employment services. For affiliates of UBOs in all other major regions, services supplied grew weakly (South and Central America and Canada) or contracted (the Middle East,

the United States, Other Western Hemisphere, and Africa).

Services supplied by U.S. affiliates of foreign MNEs increased in seven of the eight major industry categories; the largest increases were in wholesale trade, in professional, scientific, and technical services, and in administration, support, and waste management. Higher sales of many types of goods led to increases in distributive services supplied by U.S. affiliates in wholesale trade that were spread across subindustries but that were concentrated in affiliates with UBOs in Asia and Pacific (particularly in Japan) and in Europe. Additions of affiliates to the BEA survey universe due to foreigners acquiring or establishing U.S. affiliates strongly contributed to the increases in professional, scientific, and technical services and in administration, support and waste management. In professional, scientific, and technical services, most of the increase was in advertising and related services, especially for affiliates with UBOs in France, and in computer systems design and related services, particularly for affiliates with UBOs in Germany. In administration, support, and waste management, the increase was mostly in employment services, and the largest increases were for affiliates with UBOs in Japan. Decreases in services supplied by affiliates in transportation and warehousing, particularly affiliates with UBOs in Canada, and in finance and insurance partly offset increases in other industries.

Foreign MNEs not only supply services to the U.S. market via the channel of direct investment through U.S. affiliates (the focus of this article), but also to other markets. However, U.S. market transactions typically account for the vast majority of their services supplied worldwide, as they did in 2012, when U.S. market transactions accounted for 91 percent of U.S. affiliates’ \$883.3 billion in services supplied worldwide. This large share reflects the dominant size of the U.S. market, compared with the sizes of other nearby markets.

Data Availability

Detailed statistics for U.S. international services accompany this article in tables 1–10.2. For the first time, trade in services statistics and statistics on services supplied internationally through majority-owned affiliates can be accessed through [BEA’s interactive tables](#). These tables cover additional years of data and supplemental detail not available in the tables that accompany this article.

U.S. Trade in Services—Maintenance and Repair Services

Table D. Maintenance and Repair Services n.i.e.
[Millions of dollars]

| | 2011 | 2012 | 2013 | Change 2012– 2013 |
|---|---------------|---------------|---------------|-------------------------|

| Germany | 292 | 325 | 413 | 88 |
| Other countries | 2,329 | 2,126 | 1,717 | -410 |

Exports of maintenance and repair services increased 8 percent, reflecting increased exports to Europe and to the Middle East.

Exports to countries other than the top five increased 8 percent, reflecting strong increases to European countries, such as Italy, Ireland, and France.

Imports of maintenance and repair services decreased 4 percent, reflecting decreased imports from Latin America and Other Western Hemisphere and from Asia and Pacific.

Imports from the United Kingdom increased 7 percent in 2013 after decreasing 4 percent in 2012.

U.S. Trade in Services—Transport

| Other countries..... | 50,766 | 53,018 | 56,723 | 3,705 |

Transport exports increased 4 percent. The growth was driven by a 6 percent increase in air services, which accounted for 75 percent of exports in transport in 2013 (chart 5).

Air passenger services increased 6 percent, reflecting an increase in the number of foreign visitors on U.S. airlines. Average airfares decreased.

Air port services increased 13 percent, reflecting a large increase in exports to Europe.

Exports to the United Kingdom increased 9 percent, reflecting increases in air port services and air passenger services and in other modes of transport.

Transport imports increased 7 percent, reflecting increases in sea services and in air services. Sea services accounted for 40 percent of transport imports, air services accounted for 55 percent in 2013 (chart 6).

Air passenger services increased 8 percent, reflecting increases in the number of U.S. travelers on foreign airlines and in average airfares.

Imports from countries other than the five largest markets increased 7 percent. The larger increases were in imports from Asian countries, such as Taiwan, China, and Hong Kong.

| France | 4,111 | 4,774 | 4,462 | -312 |
| Other countries..... | 57,250 | 64,843 | 68,357 | 3,514 |

Travel exports increased 7 percent as the number of foreign visitors to the United States increased while their average expenditures were nearly unchanged.

Education-related exports increased 10 percent as the number of foreign students in the United States increased more than 7 percent and average tuition increased 1 percent.

Travel exports to China increased 18 percent in 2013, reflecting a 24 percent increase in education-related travel and a 14 percent increase in other business travel and other personal travel.

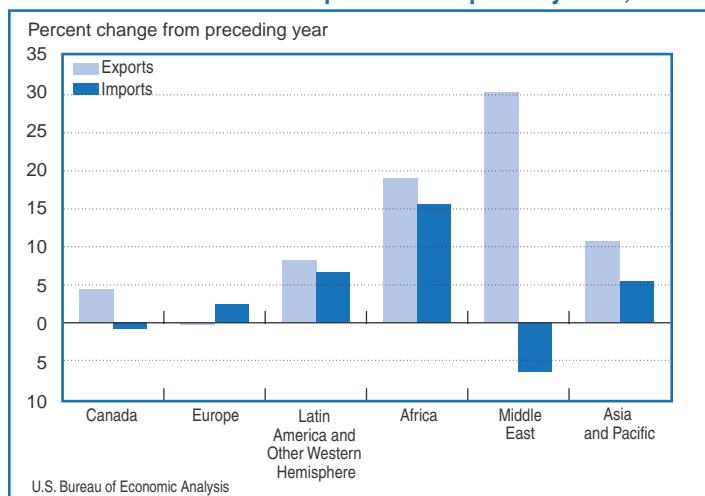

Travel exports to the United Kingdom decreased 3 percent, reflecting a decrease in average travel expenditures. The number of visitors from the United Kingdom increased.

Exports to countries other than the five largest markets increased 8 percent with strong increases in exports to countries in the Middle East (chart 7).

Travel imports increased 4 percent in 2013 after increasing 12 percent in 2012; the deceleration was due to slower growth in the number of U.S. travelers abroad and to slower growth in their average expenditures in 2013.

Imports from Mexico increased 13 percent. Mexico remained the largest market for U.S. travel abroad in 2013 resulting from increases in the number of U.S. travelers to Mexico and in their average expenditures.

Chart 7. Growth in Travel Exports and Imports by Area, 2013

U.S. Trade in Services—Insurance Services

| Other countries..... | 11,942 | 11,733 | 11,253 | -480 |

Exports of insurance decreased 3 percent in 2013, mainly because of a 5 percent decrease in reinsurance that was driven by a decrease in exports to Europe.

Exports to Canada decreased 4 percent because of decreases in both reinsurance and direct insurance. Despite the decrease, Canada remained the top market for U.S. insurance services overall as well as for direct insurance.

Exports to Japan decreased 13 percent, mainly because of a decrease in reinsurance. Reinsurance premium imports decreased 8 percent after increasing 24 percent in 2012. (Premiums typically increase sharply following major disasters, such as the March 2011 earthquake and tsunami.)

Imports of insurance services decreased 5 percent, mainly reflecting a decrease in reinsurance.

Imports of reinsurance services decreased despite an increase in reinsurance premium imports that reflected an increase after Superstorm Sandy in 2012. Although premiums increased, reinsurance services decreased because claims payable increased more than premiums. (For information on how insurance services are calculated see *Part III* in *International Economic Accounts: Concepts and Methods*.)

Insurance imports from Bermuda continued to decrease, falling 7 percent from imports in 2012.

Exports of financial services increased 10 percent in 2013 after decreasing 2 percent in 2012. The largest increase was in financial management services.

Exports of financial management services increased 16 percent. Overall rising equity markets contributed to the growth in assets under management. Several hedge funds posted large increases in exports of financial management services as a result of increases in performance fees collected.

Exports to countries other than the top five increased 12 percent, reflecting larger increases in exports to Germany and China.

Imports of financial services imports increased 10 percent in 2013 after decreasing 2 percent in 2012. The largest increases were in credit card and other credit-related services and in financial management services.

Imports of credit card and other credit-related services increased 16 percent. Imports of credit card services increased more than other credit-related services, reflecting stronger consumer confidence and increased consumer spending in 2013.

Imports from countries other than the top five increased 6 percent, reflecting larger increases in imports from Hong Kong and Australia.

1. Includes securities lending, electronic funds transfer, and other financial services.

U.S. Trade in Services—Charges for the Use of Intellectual Property

1. Other countries also includes "international organizations and unallocated." Imports reflecting charges for the use of intellectual property to international organizations are often substantial.

Chart 8. Charges for the Use of Intellectual Property, Exports by Type

Exports that reflect charges for the use of intellectual property increased 3 percent, mostly reflecting an increase in charges associated with computer software (chart 8).

Exports that reflect charges associated with the use of computer software increased 6 percent, mostly reflecting increased exports to Europe, particularly to Ireland.

Exports to Ireland increased 7 percent, maintaining the country's position as the top recipient of exports that reflect these charges.

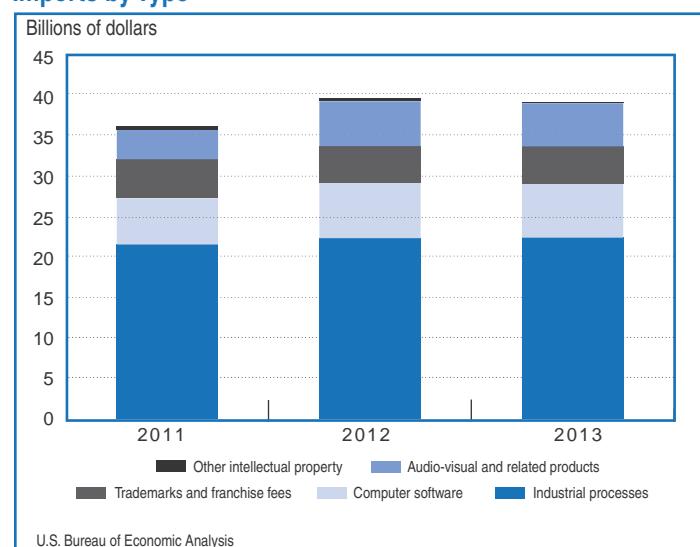

Exports to Japan decreased 9 percent in 2013, causing it to drop to the fourth-largest recipient of exports from the second-largest recipient.

Imports that reflect charges for the use of intellectual property decreased 1 percent. The largest decrease was in charges associated with other intellectual property and computer software (chart 9).

Unaffiliated imports decreased 6 percent, driven by decreases in imports that reflect charges for the use of industrial processes from Europe and of charges for the use of audio-visual and related products from international organizations. Audio-visual and related products dropped from a high level in 2012, which included charges for the rights to broadcast the London Summer Olympic Games.

Imports from Japan increased 28 percent, mainly reflecting an increase in charges associated with the use of industrial processes.

Chart 9. Charges for the Use of Intellectual Property, Imports by Type

U.S. Trade in Services—Telecommunications, Computer, and Information Services

Table J. Telecommunications, Computer, and Information Services
[Millions of dollars]

| | 2011 | 2012 | 2013 | Change 2012– 2013 |
|---|---------------|---------------|---------------|-------------------------|

| Telecommunications services | 7,039 | 7,182 | 7,298 | 116 |
| Computer services | 23,879 | 23,221 | 23,643 | 422 |
| Information services | 1,839 | 1,753 | 1,936 | 183 |
| Imports by country: | | | | |
| Total imports for the five largest countries | 20,798 | 20,556 | 20,374 | -183 |
| India | 9,698 | 10,116 | 10,367 | 251 |
| Canada | 5,475 | 5,284 | 4,696 | -588 |
| United Kingdom | 2,788 | 2,453 | 2,371 | -82 |
| China | 1,341 | 1,568 | 1,760 | 192 |
| Germany | 1,496 | 1,136 | 1,180 | 44 |
| Other countries | 11,958 | 11,600 | 12,504 | 904 |

Exports of telecommunications, computer, and information services increased 4 percent in 2013 after increasing 10 percent in 2012.

Exports of information services increased 10 percent. The largest increases were in exports to Ireland and the United Kingdom.

The United Kingdom remained the largest recipient of exports in 2013 despite decreasing 1 percent in 2013. This decrease was largely the result of a decrease in computer services.

Imports of telecommunications, computer, and information services increased 2 percent in 2013 after decreasing 2 percent in 2012.

Imports of computer services increased 2 percent. The largest increases were in imports from Europe and from Asia and Pacific.

Imports from Canada decreased 11 percent, mainly reflecting a decrease in computer services.

1. This category includes mining, trade-related services, sports and performing arts, training services, and other business services n.i.e. (not included elsewhere)

Imports of other business services increased 6 percent, mainly because of a 12 percent increase in research and development services.

The increase in research and development services was driven by an increase in imports from Europe; imports from Latin America and Other Western Hemisphere and the Middle East also increased strongly. Imports of research and development services accounted for 35 percent of total imports of other business services in 2013 (chart 11).

Imports of other business services from Ireland increased 31 percent, driven by a 32 percent increase in research and development services.

MNEs Multinational enterprises

In Europe, services supplied by affiliates increased modestly in 2012 (chart 12). However, as a result of significant increases in other regions, Europe's share of all services supplied to foreign persons dropped to less than half of the worldwide total. This is the lowest share for Europe since 1999, the first year for which BEA published statistics by region on services supplied by affiliates (chart 13).

In Ireland, services supplied by affiliates increased. Most of the increase was in information services. The increase was largest for affiliates that provide internet search and social networking services and for software publishers.

In Chile, services supplied increased in most major industries, and more than half of the increase was in professional, scientific, and technical services, especially architectural, engineering, and related services.

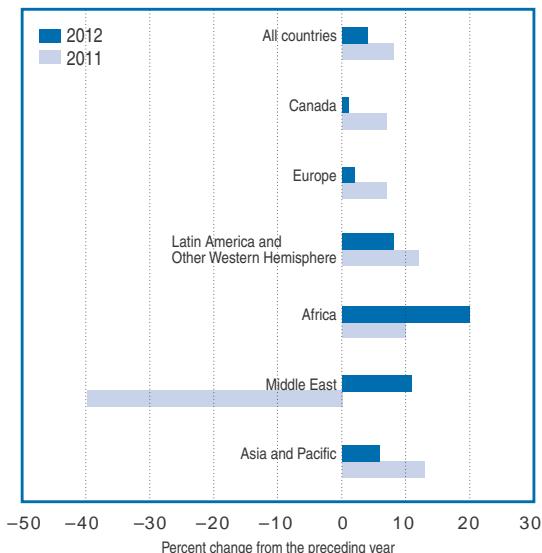

In Bermuda, services supplied increased, and most of the increase was attributable to existing affiliates in finance and insurance and in real estate and rental and leasing.

In South Africa, services supplied increased, and the increase was almost fully accounted for by acquisitions of affiliates in retail trade.

In China, services supplied increased and the increase was widespread across industries. The largest increases were in accommodation and food services and in wholesale trade.

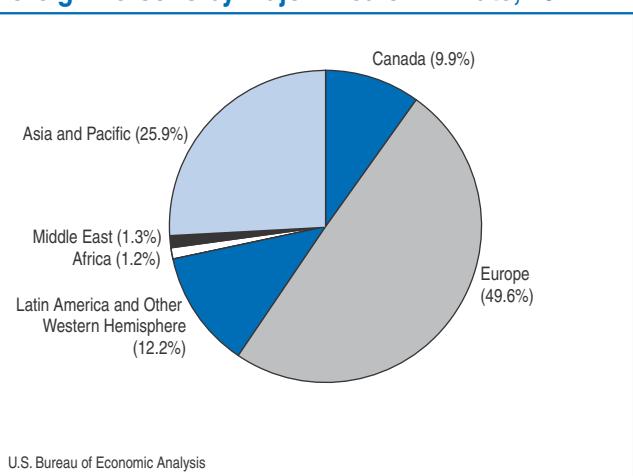

In India, services supplied increased, and the increase was largely due to an increase in professional, scientific, and technical services, especially in computer systems design and related services.

Chart 14. Growth in Services Supplied Through Affiliates to Foreign Persons by Major Industry of Affiliate, 2011 and 2012

U.S. Bureau of Economic Analysis

In transportation equipment manufacturing, services supplied decreased. More than half of the decrease was in Europe, where declining motor vehicle sales contributed to a drop in services supplied in secondary activities, particularly in wholesaling.

In retail trade, services supplied increased. More than half of the increase was due to the acquisition of new affiliates in several subindustries, especially in Europe.

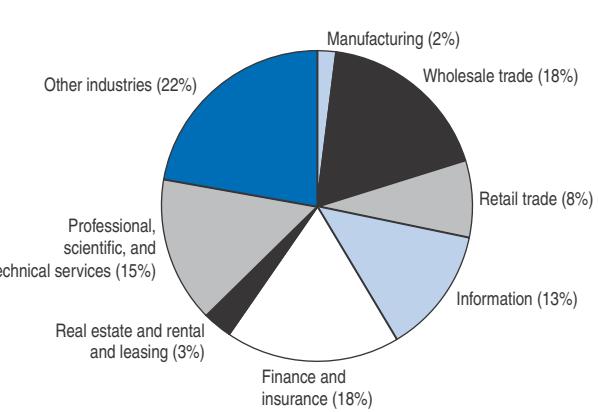

In finance and insurance, the increase in insurance services supplied exceeded the decrease in finance services. More than half of the increase in insurance was accounted for by an increase in premiums earned at existing affiliates in Japan, particularly affiliates in life insurance carriers. The decrease in finance were more than accounted for by a decrease in services supplied by affiliates in the United Kingdom, especially in banking and commodities trading.

In real estate and rental and leasing, services supplied increased. Nearly half of the increase was in intercompany sales of intellectual property licensing activities, which is included in “lessors of nonfinancial intangible assets.” This increase represented a strong reversal from negative growth in 2011 (chart 14).

In architectural, engineering, and related services, services supplied increased. The increase was mainly related to new projects in mining, power, and petrochemicals undertaken by affiliates in several countries, particularly Australia.

In mining, services supplied increased. The increase was due to growth in support activities for oil and gas operations supplied by new and existing affiliates.

MNEs Multinational enterprises

UBO Ultimate beneficial owner

D Suppressed to avoid the disclosure of the data of individual companies.

For Germany, services supplied increased, and nearly every major industry category contributed to the increase. The largest increase was for existing affiliates in finance and insurance.

For Spain, services supplied decreased, and the decrease was more than accounted for by a decrease in finance that was mostly due to the transfer of ownership from foreign MNEs to U.S. companies of some affiliates, resulting in a decrease in total services supplied by U.S. affiliates of foreign MNEs.

For the United Kingdom, services supplied increased, and the largest increases were in accommodation and food services (mainly in food services and drinking places) and in finance and insurance.

For Other Western Hemisphere, services supplied decreased, mostly because of the sales to U.S. companies of some mining affiliates that had secondary activities in wholesaling. Liquidations of some affiliates in finance also contributed to the decrease. This contraction, combined with slower growth for South and Central America, led to much slower growth for Latin America and Other Western Hemisphere in 2012 than in 2011 (chart 16).

For Saudi Arabia, services supplied decreased sharply. The decrease was more than accounted for by a decrease in services supplied in manufacturers' secondary activities, as a result of some manufacturing affiliates divesting their retail trade operations.

For Japan, services supplied increased, and the largest increases were in wholesale trade and in administration, support, and waste management, mainly as a result of acquisitions of U.S. affiliates in employment services.

Chart 18. Growth in Services Supplied Through Affiliates to U.S. Persons by Major Industry of Affiliate, 2011 and 2012

U.S. Bureau of Economic Analysis

In manufacturing, services supplied increased in affiliates' secondary activities, especially for affiliates in transportation equipment and machinery manufacturing.

In wholesale trade, services supplied increased, and the large increase was widespread across subindustries. The largest increase was in electrical goods merchant wholesalers, but services supplied by affiliates in other durable- and nondurable-goods wholesaling also grew substantially.

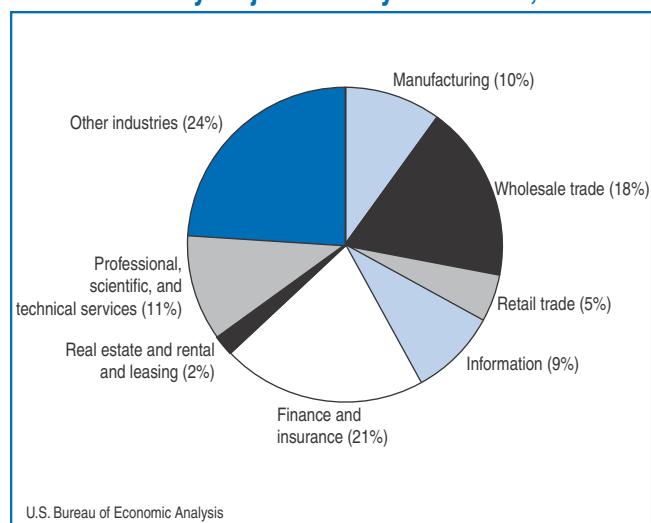

In information, growth in telecommunications services supplied more than offset a significant decrease in services supplied in software publishing. Growth was especially strong in wireless telecommunications.

Finance and insurance is the largest major industry category for services supplied to U.S. persons by affiliates with foreign UBOs (chart 19). Finance decreased more than insurance, and the decrease was more than accounted for by acquisitions of U.S. affiliates by U.S. companies and liquidations of affiliates in banking. Services supplied by affiliates in insurance decreased as a result of a decline in premiums, especially in life insurance.

In advertising and related services, services supplied increased, and more than three-quarters of the increase was in affiliates with UBOs in France.

In administration, support, and waste management, services supplied increased, and the increase was mostly due to an increase in employment services, especially for affiliates with UBOs in Japan.

Chart 19. Services Supplied Through Affiliates to U.S. Persons by Major Industry of Affiliate, 2012

Revisions

The revised statistics published in this article supersede those presented in the October 2013 Survey of Current Business.

Trade in services. The revised statistics on trade in services published in this article are consistent in both value and presentation with the less detailed statistics by type of service published in the July 2014 Survey, which included a substantial restructuring of the trade in services statistics.¹ This section uses the old presentation of services trade so that readers can compare this year's revisions to those presented in previous October SURVEY articles.

Exports and imports for 1999–2012 were revised. The revisions for 1999–2012 reflect revisions resulting from a new methodology to measure travel exports and imports as well as a revision to the number of U.S. travelers for travel imports and passenger fare imports.² Additionally, the revisions for 2011 and 2012 reflect newly available and revised source data for all types of services (table R).

Travel exports were revised upward for 1999 and for 2010–2012 and were revised downward for all other

1. For additional information, see Jeffrey R. Bogen, Mai-Chi Hoang, Kristy L. Howell, and Erin M. Whitaker “[Comprehensive Restructuring and Annual Revision of the U.S. International Transactions Accounts](#)” SURVEY OF CURRENT BUSINESS 94 (July 2014).

2. For additional information, see “Improving the International Services Statistics” on the next page.

years as a result of the new travel methodology. Travel imports were revised downward for 1999–2003 and were revised upward for all other years as a result of the new travel methodology and the revisions to the number of U.S. travelers. The downward revision to the number of U.S. travelers also resulted in downward revisions to passenger fare imports for 1999–2013.

For 2011 and 2012, total exports and imports were revised slightly upward. The largest revision was to exports for 2011, which was revised upward 0.9 percent. Imports were revised upward 0.1 percent for 2011. For 2012, exports were revised upward 0.1 percent, and imports were revised upward 0.5 percent. For exports, the main contributor to the upward revisions for 2011 was travel and for 2012, royalties and license fees. For imports, the main contributor to the upward revisions for 2011 and 2012 was travel.

Services supplied through affiliates. The statistics for services supplied through affiliates for 2012 are preliminary. The statistics for 2011 were revised to incorporate newly available and revised source data. For 2011, services supplied to foreign persons by U.S. multinational enterprises (MNEs) through their majority-owned foreign affiliates were revised downward 3.1 percent (\$40.0 billion). Services supplied to the United States by foreign MNEs through their majority-owned U.S. affiliates were revised upward 3.7 percent (\$27.6 billion).

Improving the International Services Statistics

The Bureau of Economic Analysis (BEA) continues to improve its statistics on international services. Some changes have now been implemented, and others are under way.¹

Improved methodology for travel, improved source data for travel and air passenger transport, and an expanded definition of travel

Beginning with statistics for 1999, BEA has implemented an improved methodology for estimating exports and imports of travel services. This methodology is the outcome of an extensive review of the methodology and data sources used to compile travel statistics for transactions with countries other than Canada and Mexico. During the review process, BEA considered several alternative approaches to estimating travel transactions, such as using a survey of credit, debit, and charge card issuers and a one-time survey of international travelers that measured travelers' propensities for using different payment methods. After a thorough evaluation of the alternatives, BEA chose to continue the previous general methodology of multiplying the number of travelers by an estimate of average travel expenditures. Key data sources have not changed; however, the use of the data has been refined, and new supplemental source data have been introduced. Average expenditures continue to be based on information from the Survey of International Air Travelers (SIAT) administered by the International Trade Administration of the U.S. Department of Commerce. Under the new methodology, the SIAT information is used to establish baseline estimates of average travel expenditures, which are supplemented with information from (1) the survey of credit, debit, and charge card issuers administered by BEA, (2) other sources of information on traveler expenditures, including studies commissioned by BEA, and (3) bilateral comparisons of BEA's source data and other countries' source data. The baseline estimates are adjusted to account for particular limitations often faced by expenditure surveys, including underreported spending.

BEA continues to use data on the number of travelers collected by the U.S. Department of Homeland Security (DHS) to estimate travel and air passenger transport (previously called "passenger fares"), but it has intro-

duced two significant improvements in the use of these data. First, BEA has fully incorporated the number of outbound U.S. travelers that the DHS began collecting under an improved electronic method in July 2010. The change in collection methods revealed that for some countries, the number of U.S. travelers estimated under the earlier collection method was significantly higher than the number of U.S. travelers reported under the new electronic collection method. To correct this overestimation and to avoid a break in series between July 2010 and the prior periods, BEA has revised downward the number of outbound travelers used in the statistics on imports of both travel and passenger fares back to January 1999. Second, BEA has developed an improved method for allocating outbound U.S. travelers to individual countries for its statistics on travel imports. This method is based on the relationships observed in the SIAT data between the U.S. traveler's initial country of disembarkation outside the United States and the ultimate country or countries of destination.

In addition to the methodological changes, the definition of travel has been broadened to include both health-related travel and education-related travel as well as expenditures on goods and services by border, seasonal, and other short-term workers, all of which were previously classified under other private services.² The expanded definition brings the U.S. trade in services statistics into closer alignment with international guidelines as outlined in the *Balance of Payments and International Investment Position Manual*, Sixth Edition (BPM6), and improves the comparability of BEA's travel statistics with those of other countries. To distinguish between the new definition and the previous definition, the category has been renamed "travel (for all purposes including education)."

In addition to the expanded definition of travel, BEA has introduced statistics on business travel and on personal travel. The distinction between business travel and personal travel is based on the main purpose of travel and not on the type of good or service consumed. Business travel includes (1) expenditures by border, seasonal, and other short-term workers and (2) other business travel. Personal travel covers travel for all nonbusiness purposes, including (1) health-related travel, (2) education-related travel, and (3) other personal travel. BEA

1. See the "Catalog of Major Revisions to the U.S. International Accounts, 1976–2008" on BEA's Web site. For changes implemented from 2009–2013, see the appendixes on improvements in each October SURVEY article in this series. See also Bogen, Hoang, Howell, and Whitaker "Comprehensive Restructuring and Annual Revision of the U.S. International Transactions Accounts."

2. The new methodology detailed earlier does not apply to health-related or education-related travel or to expenditures by border, seasonal, and other short-term workers.

Improving the International Services Statistics

uses information from the SIAT to separate what was defined as travel under the previous definition—that is, expenditures by those traveling for all purposes other than health, education, or short-term work—into other business travel and other personal travel.

Improvements to the benchmark survey of insurance transactions

BEA has made several changes to the 2013 Benchmark Survey of Insurance Transactions by U.S. Insurance Companies with Foreign Persons (BE-140). The 2013 benchmark survey, currently under way, asks companies to provide additional detail on large, infrequent insurance contracts. These contracts are defined as reinsurance contracts with premiums assumed or ceded that are \$1 billion or more than the size of the average regular contracts in the prior year. These transactions can result in significant variations in the insurance services statistics. The additional information on these transactions will allow BEA to better assess the components of these contracts.

Additionally, totals are collected for each type of insurance transaction for all companies, regardless of the size of their transactions. This is a change from the previous benchmark survey, where data by type of transaction was voluntary if the total for each type of transaction was \$2 million or less. The additional information on large, infrequent reinsurance transactions and the expanded mandatory collection of data by type of transaction will allow BEA to improve the measurement of insurance services in the international transactions accounts.

Identifying the types of transactions of intellectual property

As part of BEA's ongoing efforts to bring the international economic accounts into closer alignment with *BPM6* guidelines, BEA has begun the process of identifying the rights to use intellectual property, the rights to reproduce or distribute intellectual property, and the outright sales and purchases of intellectual property. Under *BPM6*, the classification of each type of transaction depends on the type of intellectual property. Transactions in rights to reproduce or distribute intellectual property and some transactions in rights to use intellectual property should be classified under charges for the use of intellectual property n.i.e. Transactions related to the outright purchase or sale of intellectual property and certain transactions related to its use should be reclassified to the respective services categories. For example, outright sales and purchases of outcomes of research and development, such as the outright sale or purchase of a patent or a copyright, should be recorded in research and development services, whereas transactions in the rights to use such outcomes should be recorded under charges for the use of intellectual property.

By providing statistics that distinguish between rights to use, rights to reproduce, and outright purchases or sales, BEA will improve the usefulness and bilateral comparability of BEA's intellectual property statistics. Moreover, the appropriate classification of these transactions will result in statistics that better conform to national economic accounts concepts, including gross domestic product and the net stock of fixed assets and consumer durable goods.

The 2011 Benchmark Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons (BE-120) asked companies to voluntarily distinguish their transactions in the various types of intellectual property. BEA plans to seek the approval of the Office of Management and Budget to make responses to this survey item mandatory so that BEA's statistics in trade in intellectual property will more closely conform to international guidelines.

Manufacturing services on physical inputs owned by others

BEA has not yet implemented the treatment of manufacturing services on physical inputs owned by others ("goods for processing") that is recommended by the *BPM6* international guidelines. Under BEA's current treatment, a change in ownership is imputed when goods enter or leave the United States. The value of those goods is included in goods exports and imports.

Under *BPM6*, goods that are sent abroad for processing without a change in ownership and that are returned to the United States after processing are to be excluded from statistics on trade in goods, and the processing fee charged by the foreign manufacturing service provider should be recorded as U.S. imports of services. Similarly, goods that enter the United States for processing without a change in ownership and that are returned to the country of ownership after processing are to be excluded from statistics on trade in goods, and the processing fee charged by the U.S. manufacturing service provider should be recorded as U.S. exports of services.

In addition, goods sent abroad for processing and

Improving the International Services Statistics

subsequently sold abroad are to be recorded as U.S. exports of goods when they are sold, and any inputs purchased abroad by the U.S. firm and processed abroad should be recorded as U.S. imports of goods; the processing fee should be recorded as U.S. imports of services. Similarly, goods entering the United States for processing and subsequently sold in the United States are to be recorded as U.S. imports of goods when they are sold, and any inputs purchased in the United States by the foreign firm and processed in the United States should be recorded as U.S. exports of goods; the processing fee should be recorded as U.S. exports of services.

Currently, detailed information on the processing fees received and paid by U.S. firms for manufacturing services and on the underlying goods transactions are not available in the U.S. statistical system or are not identifiable in any other source data. Despite these challenges, BEA continues to conduct research to determine feasible approaches for implementing this treatment. BEA plans to move forward on two fronts:

For imports of processing services, BEA is evaluating the addition of questions to BEA surveys that would ask U.S. companies to report their imports from nonresidents for processing services on goods that do not reenter the United States.

In May of 2014, BEA and its sister statistical agencies, the U.S. Census Bureau and the Bureau of Labor Statistics, agreed to carry out a multiyear project to examine the impact of globalization and contract manufacturing services on U.S. businesses and U.S. economic statistics.

Developing a personal, cultural, and recreational services (PCR) category

BEA's new presentation of the international transactions accounts does not separately include the BPM6 standard component "personal, cultural, and recreational (PCR) services" because the source data are not adequate for preparing quarterly statistics on this category. In the BPM6, PCR services are separated into two categories: audiovisual and related services and other PCR services. Many of the transactions that would fall under PCR services are included, but not identifiable, in the BEA categories of "other business services" and "charges for the use of intellectual property n.i.e."

BEA currently presents several PCR service transactions under other business services including the following:

- Fees to performers, athletes, directors, and producers involved with concerts, theatrical and musical productions, sporting events, and similar events
- Remotely provided telemedicine services
- Online nontravel education

BEA currently presents other transactions in PCR services, including licenses to use audio-visual and related products—such as books, movies, and sound recordings—under charges for the use of intellectual property n.i.e. because BEA lacks the source data needed to distinguish between the licenses to use, reproduce, or distribute audio-visual and related products.

BEA plans to enhance the collection of data on its Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons (BE-120/125) to identify service types associated with PCR services and to reclassify them to that category. In addition, BEA plans to explore methods for estimating other types of PCR services that cannot be collected through business surveys.

Plans to introduce financial intermediation services indirectly measured (FISIM)

Financial intermediation services indirectly measured (FISIM) captures the service fees implicitly received by financial intermediaries for their lending and deposit services through the margin between interest payable for loans and deposits and a reference rate that represents an interbank lending rate, such as the federal funds rate. BEA continues to evaluate methods for estimating FISIM exports and imports from data on U.S. bank lending to foreign residents and U.S. bank deposits from foreign residents as well as from data on U.S. loans from, and U.S. deposits with, banks abroad. The inclusion of FISIM estimates in the international transactions accounts will necessitate changes to the BEA estimation methodologies for income receipts and payments and for financial services exports and imports so that the implicit services are included in financial services and only pure interest is included in interest flows. BEA plans to introduce FISIM into the international accounts in a future annual revision.

Comparing U.S. Trade in Services With Services Supplied Through Affiliates

The statistics on U.S. trade in services and services supplied through affiliates represent services provided to, and received from, international markets. These statistics cover all four modes of the supply of services: (1) cross-border supply, (2) consumption abroad, (3) commercial presence, and (4) presence of natural persons.¹

U.S. trade in services covers services between residents and nonresidents delivered through three of these modes: cross-border supply, consumption abroad, and the presence of natural persons. These transactions are recorded as U.S. exports and U.S. imports in the international transactions accounts (ITAs), also called the balance of payments accounts. The trade statistics cover both affiliated and unaffiliated transactions between U.S. residents and foreign residents. Affiliated transactions consist of intrafirm trade within multinational enterprises—trade between U.S. parent companies and their foreign affiliates and trade between U.S. affiliates and their foreign parent groups. Unaffiliated transactions are with foreigners that neither own, nor are owned by, the U.S. party to the transaction.

Services supplied through affiliates includes the mode commercial presence. The statistics cover transactions between foreign affiliates of U.S. enterprises and foreign residents, both in the local economy and in other foreign markets, and transactions between U.S. affiliates of foreign enterprises and U.S. residents.² However, these transactions are not considered U.S. exports or U.S. imports in the ITAs because under the residency principle of balance-of-payments accounting, affiliates of multinational enterprises are considered residents of the countries where they are located rather than residents of the country of their owners. For affiliates in industries other than wholesale and retail trade, insurance, and banking, services supplied through affiliates are the sales of services reported by multinational enterprises. For wholesale and retail trade, insurance, and banking, specific adjustments are made to reported sales of services to better capture the value of services supplied.³ Sales of services

1. For additional information on the modes of supply for services, see [U.S. International Economic Accounts: Concepts and Methods](#) on Bureau of Economic Analysis' (BEA) Web site. The definitions of key terms used in the text can be found in the glossary to this document.

2. BEA's statistics on services supplied through affiliates cover a broader range of transactions than those included in the General Agreement on Trade in Services (GATS) definition of commercial presence for foreign affiliates of U.S. MNEs. The GATS definition includes services supplied by a foreign affiliate to its respective local economy, but does not include services supplied to other foreign economies.

3. For more detailed information about the computation of services supplied for affiliates in wholesale and retail trade, insurance, and banking, see "[Revisions and Improvements](#)" in Jennifer Koncz-Bruner and Anne Flatness, SURVEY OF CURRENT BUSINESS 89 (October 2009): 37.

are defined as sales of intangible outputs; therefore, they generally exclude the sales by establishments in manufacturing, mining (except support activities), agriculture, forestry, fishing, and hunting (except support activities), and construction, which typically produce and sell tangible goods. In cases where a sale consists of both tangible and intangible output that cannot be unbundled, sales are classified based on whichever accounts for the majority of the value. Although intangible outputs are typically associated with activities in certain industries, affiliates in any industry can be providers of services because the classification of an affiliate reflects the affiliate's primary industry of sales.⁴ Affiliates classified in industries that typically produce goods may have secondary activities in services industries; for example, an affiliate classified in manufacturing may have secondary services activities in wholesale trade or in maintenance and repair.

The statistics on trade in services and on services supplied through affiliates together present a more complete picture of services provided to, and received from, international markets. However, differences in coverage and classification make it difficult to precisely compare trade in services with services supplied through affiliates. An example of a difference in coverage is the inclusion of distributive services in services supplied through affiliates but not in the services trade statistics. The distributive services associated with importing and exporting goods is included, but not separately identifiable, in the value of trade in goods. The differences in classification arise because the statistics on trade in services are collected and published by type of service, but those on services supplied through affiliates are collected and published by the affiliate's primary industry. Despite the difficulties in comparing statistics on U.S. trade in services with statistics on services supplied through affiliates, the large difference in value between the two indicates that the services supplied through affiliates is the larger channel of delivery of services in international markets (chart 1 on page 1).

4. For example, computer-related services may be delivered via trade in services transactions through affiliates in several industries, including those classified in computer systems design and related services or in other industries that have secondary activities in computer services; by individuals who are employees of a nonresident employer (the wages of these individuals are recorded in compensation receipts in the international transactions accounts); or may be embedded in the value of goods. For more on the delivery of computer-related services in international markets, see the FAQ "[Where can I find information about computer services supplied to foreign markets by U.S. companies or individuals?](#)" on BEA's Web site.

Data Sources and Acknowledgments

Data Sources

The statistics in this article are primarily based on data collected from surveys conducted by the Bureau of Economic Analysis (BEA). Statistics for some services are based on data from a variety of other sources, including U.S. Customs and Border Protection, other federal surveys, private sources, and partner countries.

BEA conducts mandatory surveys of trade in services, some of which are targeted to specific services industries. For trade in services, data on many types of services are collected on the Quarterly Survey of Transactions in Selected Services and Intellectual Property with Foreign Persons (BE-125) and on the related benchmark survey (BE-120). All of BEA's surveys of international services

and a guide to reporting requirements for the surveys are available on BEA's Web site. For additional information on these surveys, on surveys from other sources, and on the trade in services statistics definitions and methodology, see *U.S. International Economic Accounts: Concepts and Methods*.

The data on services supplied through majority-owned affiliates are collected on BEA's surveys of the activities of multinational enterprises. For the methodologies for these surveys, see *Foreign Direct Investment in the United States: 2007 Benchmark Survey, Final Results* and *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey* on BEA's Web site.

Acknowledgments

The estimates of trade in services and services supplied through affiliates were prepared by the following staff members of the Balance of Payments Division and the Direct Investment Division.

Estimates of trade in services were prepared under the guidance of Michael Mann and Mark Xu. Travel (for all purposes including education) and passenger fares estimates (categorized under transport) were prepared by Laura Brokenbaugh, Edward Dozier, and Charu S. Krishnan. Transport estimates were prepared by Edward Dozier, Anne Flatness, Steven J. Muno, and Gregory Tenentes. Estimates for services other than travel and transport were prepared by Pamela Aiken, Suhail Ally, Felix Anderson, Stacey Ansell, Damon C. Battaglia, Jeffrey Bogen, Faith M. Brannam, Lori Chang, Jamela Des Vignes, Anne Flatness, Hope R. Jones, C. Omar Kebbeh, Eddie L. Key, Kiesha Middleton, Patricia Mosley, Steven J. Muno, Mark Samuel, Charu S. Krishnan, John Sondheimer, Gregory Tenentes, Rodney Thorn, and Clifton Tillman.

The processing of the survey data used to prepare the estimates of services supplied through majority-owned

affiliates was conducted by the following staff members of the Direct Investment Division under the guidance of Mark D. Goddard and Christopher J. Stein: Catherine Ama, George Bogachevsky, Gregory Brace, Kirsten Brew, Polly Cheung, Stephen Corsiglia, James Crim, Constance Deve, Laura Downey, Andre Garber, Brian Goddard, Kenneth Grier, Nazre Jamil, Julie Lampe, James Lashley, Qi Lee, Da-Chin Lin, Sonya Marsh, Kevin McCarthy, Demetria McCormick, Marcia Miller, Amanda Petersen, Amber Phelan, Robert Platner, Kevin Reagan, Makia Riley, Roberto Ruiz, Myriam Rullan, Aqeel Sahibzada, Nancy Steffen, John Starnes, Rick Sylvester, and Daniel Wakjira. Alexis N. Grimm did additional calculations to prepare the statistics on services supplied through affiliates.

The information in tables 1–7.2 was compiled by Anne Flatness and John Sondheimer and in tables 8–10.2 by Neeta B. Kapoor. Computer programming for data estimation and suppression and the generation of the tables was provided by Carole J. Henry, Neeta B. Kapoor, Fritz H. Mayhew, Dan Powell, Gary Sowers, and Greg Tenentes.

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

MOUSAs Majority-owned U.S. affiliates

1. For MOFAs, "country" is the country of the affiliate; for MOUSAs, it is the country of the affiliate's ultimate beneficial owner.

2. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

3. Reflects the country composition of the European Union for the period covered.

NOTE. In this table, services supplied through affiliates are generally defined to be economic outputs that are intangible.

Services supplied corresponds to sales in most service industries except for wholesale and retail trade, insurance, and banking, which are based on measures that better capture output in those industries. In cases where a sale consists of both tangible goods and intangible services that cannot be unbundled, sales are classified based on whichever accounts for the majority of value. Intangible outputs are typically associated with establishments in the following industry sectors based on the North American Industrial Classification System: utilities; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional, scientific, and technical services; management of nonbank companies and enterprises; administrative and support and waste management and remediation services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; other services (except public administration); and public administration. Additionally, the output of establishments that provide support activities for agriculture and forestry or mining is typically intangible.

0 Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOFAs in construction represent sales in secondary, nonconstruction industries. In 2011, sales of goods to foreign residents through MOFAs classified in construction were \$18.4 billion.

⁰ Transactions are possible but are zero for a given period.

¹ Transactions between zero and +/\$500,000.

D Suppressed to avoid disclosure of data of individual companies.

MNEs Multinational enterprises

MOFAs Majority-owned foreign affiliates

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOFAs in construction represent sales in secondary, nonconstruction industries. In 2012, sales of goods to foreign residents through MOFAs classified in construction were \$23.8 billion.

Table 10.1. Services Supplied to U.S. Persons by Foreign MNEs Through Their MOUSAs, Industry of Affiliate by Country of UBO, 2011

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. The sales of goods to U.S. residents by MOUSAs in construction were not computed here to avoid disclosure of data of individual companies. In 2011, the total amount of goods supplied worldwide by MOUSAs in construction was \$38.8 billion.

UBO Ultimate beneficial owner

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. In 2012, sales of goods to U.S. residents by MOUSAs in construction were \$3.75 billion. These sales of goods were estimated by subtracting exports of goods from the total amount of goods supplied.

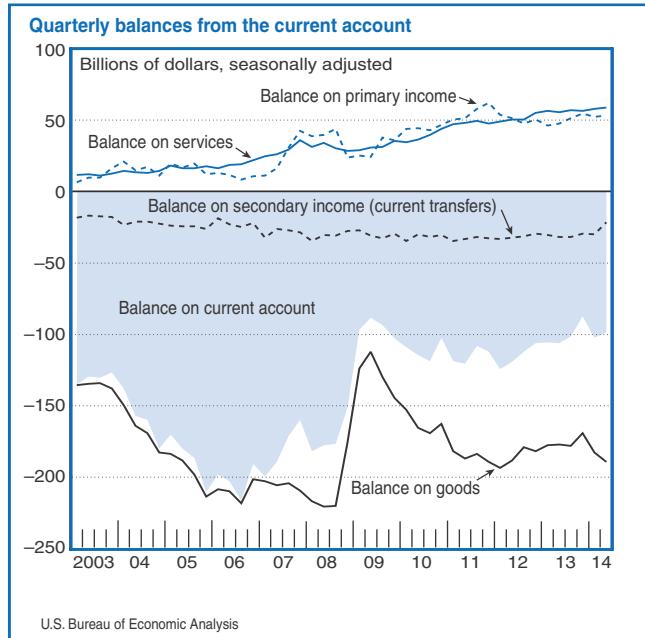

U.S. International Transactions

Second Quarter of 2014

THE U.S. CURRENT-ACCOUNT DEFICIT—a net measure of transactions between the United States and the rest of the world in goods, services, primary income (investment income and compensation), and secondary income (current transfers)—decreased to \$98.5 billion (preliminary) in the second quarter of 2014 from \$102.1 billion (revised) in the first quarter (see chart 1 and pages 3–6).¹ The deficit decreased to 2.3 percent of current-dollar gross domestic product (GDP) from 2.4 percent in the first quarter. The decrease in the current-account deficit was largely due to a decrease in the deficit on secondary income. In addition, the surpluses on services and primary income increased. These changes were partly offset by an increase in the deficit on goods.

1. Quarterly statistics are seasonally adjusted when series demonstrate statistically significant seasonal patterns; seasonally adjusted statistics are cited in this article when available.

Chart 1. U.S. Current-Account Balance and Its Components

Sarah P. Scott prepared this article.

Net U.S. borrowing measured by financial-account transactions was \$17.6 billion in the second quarter, down from \$91.2 billion in the first quarter. Both net U.S. acquisition of financial assets excluding financial derivatives and net U.S. incurrence of liabilities excluding financial derivatives were higher than in the first quarter, but the acquisition of financial assets excluding financial derivatives increased more. A shift to net borrowing in net transactions of financial derivatives other than reserves moderated the drop in net borrowing. The statistical discrepancy was \$80.9 billion in the second quarter, compared with \$11.0 billion in the first quarter.

Comprehensive Restructuring of the U.S. International Economic Accounts

With the June 2014 release of these statistics, the Bureau of Economic Analysis (BEA) introduced a new presentation of the international transactions accounts as part of the comprehensive restructuring of BEA's international economic accounts. This presentation enhances the quality and usefulness of the accounts for customers and brings the statistics into closer alignment with international guidelines. The September 2014 release, which this article analyzes, represents the second release using the new presentation.

For additional information, see “[Modernizing BEA's International Economic Accounts](#)” on BEA's Web site.

Data Availability and Methodology

Detailed statistics for U.S. international transactions in tables 1.1–9.1 accompany this article. The statistics and a description of the estimation methods used to compile them are available on BEA's Web site. For the statistics, see “[International Data](#).” For the methods, see [U.S. International Transactions Accounts: Concepts and Methods](#).

p Preliminary r Revised n.a. Not available (*) between zero and ± \$500,000

1. The statistical discrepancy is the difference between net acquisition of assets and net incurrence of liabilities in the financial account (including financial derivatives) less the difference between total credits and total debits recorded in the current and capital accounts.

2. Excludes capital-account transactions.

3. Change from prior period, not the sum of changes in components.

4. Sum of current- and capital-account balances. The second quarter of 2014 excludes capital account transactions.

5. Sum of net U.S. acquisition of financial assets and net transactions in financial derivatives less net U.S. incurrence of liabilities.

NOTE. The statistics are presented in table 1.2 on BEA's Web site.

Current-account highlights

- The deficit on goods increased to \$189.2 billion in the second quarter from \$182.3 billion in the first quarter (table A).
- The surplus on services increased to \$58.9 billion in the second quarter from \$57.8 billion in the first quarter.
- The surplus on primary income increased to \$53.1 billion in the second quarter from \$52.4 billion in the first quarter.
- The deficit on secondary income decreased to \$21.4 billion in the second quarter from \$30.0 billion in the first quarter.

Financial-account highlights

- Net U.S. acquisition of financial assets excluding financial derivatives was \$232.7 billion in the second quarter, up from \$143.3 billion in the first quarter (see chart 9 on page 7).
- Net U.S. incurrence of liabilities to foreigners excluding financial derivatives was \$247.4 billion in the second quarter, up from \$239.8 billion in the first quarter.
- Net borrowing in financial derivatives other than reserves was \$2.8 billion in the second quarter, a shift from net lending of \$5.3 billion in the first quarter.

Revisions

The preliminary statistics for U.S. international transactions for the first quarter of 2014 that were published in the July 2014 SURVEY OF CURRENT BUSINESS have been revised to incorporate new or revised source data.

p Preliminary r Revised

NOTE. The statistics are presented in table 2.1 on BEA's Web site.

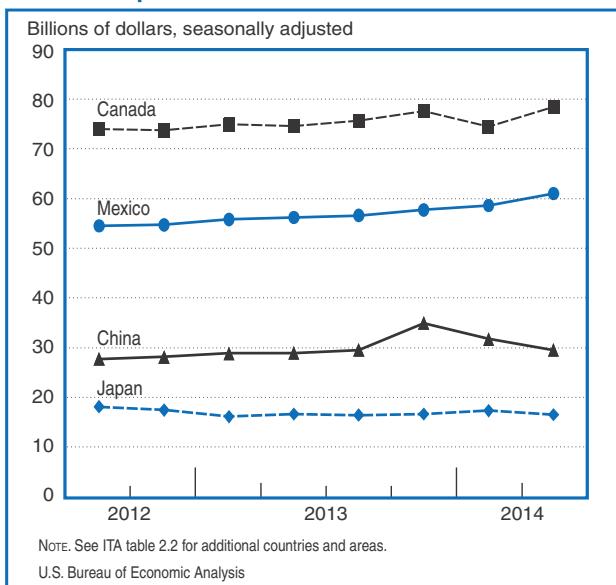

Chart 2. Growth in Goods Exports and Imports

In the second quarter, goods exports increased to \$408.8 billion from \$399.5 billion, a 2.3 percent increase (table B and chart 2). Exports increased in five of the six major general-merchandise end-use categories. The largest increases were in industrial supplies and materials; capital goods except automotive; and automotive vehicles, parts, and engines. Most of the increase in industrial supplies and materials reflected an increase in exports of petroleum and products, much of that in fuel oil. The increase in capital goods except automotive reflected an increase in civilian aircraft exports. The increase in automotive vehicles, parts, and engines was largely due to an increase in exports of passenger cars. Nonmonetary gold decreased.

In the second quarter, exports to Canada increased after decreasing a similar amount in the first quarter. Exports to China decreased for the second straight quarter (chart 3).

p Preliminary r Revised

NOTE. The statistics are presented in table 2.1 on BEA's Web site.

Chart 4. Imports of Goods from Selected Countries

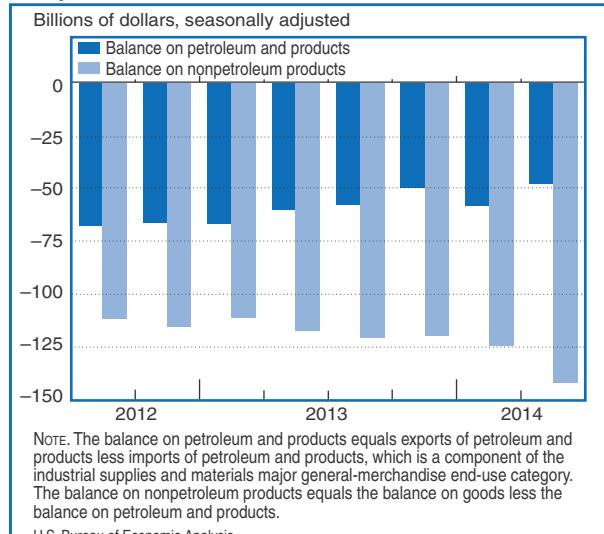

In the second quarter, goods imports increased to \$598.0 billion from \$581.9 billion, a 2.8 percent increase (table C and chart 2 on page 3). Imports increased in five of the six major general-merchandise end-use categories. The largest increases were in automotive vehicles, parts, and engines; capital goods except automotive; and consumer goods except food and automotive. The increase in automotive vehicles, parts, and engines was largely due to an increase in passenger car imports. Much of the increase in capital goods except automotive was due to increases in imports of other industrial machinery, equipment, tools, and instruments and in computers, accessories, peripherals, and parts. The increase in consumer goods except food and automotive largely reflected an increase in imports of durable goods, most of which was in cell phones.

Imports from Canada increased \$6.2 billion. Imports from both China and Mexico increased more than \$2.0 billion (chart 4).

The deficit on petroleum and products decreased to \$47.6 billion in the second quarter, as exports rose and imports fell. The deficit on nonpetroleum products increased to \$141.6 billion (chart 5).

NOTE. The statistics are presented in tables 3.1 on BEA's Web site. For additional information on services, see Alexis Grimm and Charu Krishnan, "U.S. International Services: Trade in Services in 2013 and Services Supplied Through Affiliates in 2012" in this issue of the SURVEY OF CURRENT BUSINESS.

Chart 6. Growth in Services Exports and Imports

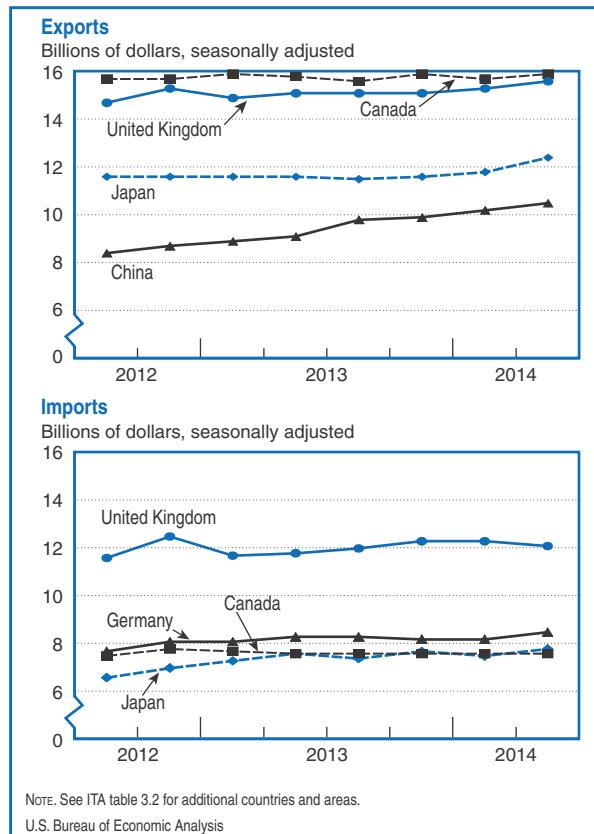

In the second quarter, services exports increased to \$177.4 billion from \$174.7 billion, a 1.6 percent increase (table D and chart 6). Eight of the nine major services categories increased. The largest increases were in travel (for all purposes including education)—much of that in other personal travel—and in transport, which includes freight and port services and air passenger transport.

Services imports increased to \$118.5 billion from \$116.8 billion, a 1.4 percent increase. Six of the nine major services categories increased. The largest increase was in travel (for all purposes including education).

Exports to Japan increased \$0.6 billion. Imports from both Japan and Germany increased \$0.3 billion (chart 7).

^p Preliminary ^r Revised

1. Secondary income receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

NOTE. The statistics are presented in tables 4.1 and 5.1 on BEA's Web site.

In the second quarter, income receipts from foreigners on U.S. holdings of financial assets abroad increased to \$200.0 billion from \$198.5 billion in the first quarter (table E and chart 8). The increase was more than accounted for by an increase in portfolio investment income receipts. Much of the increase in investment income receipts reflected was in dividends on equity, which reflected increased U.S. holdings of foreign equity shares. The increase in portfolio investment receipts was partly offset by a decrease in direct investment income receipts, particularly receipts from foreign affiliates of U.S. parents in wholesale trade and manufacturing.

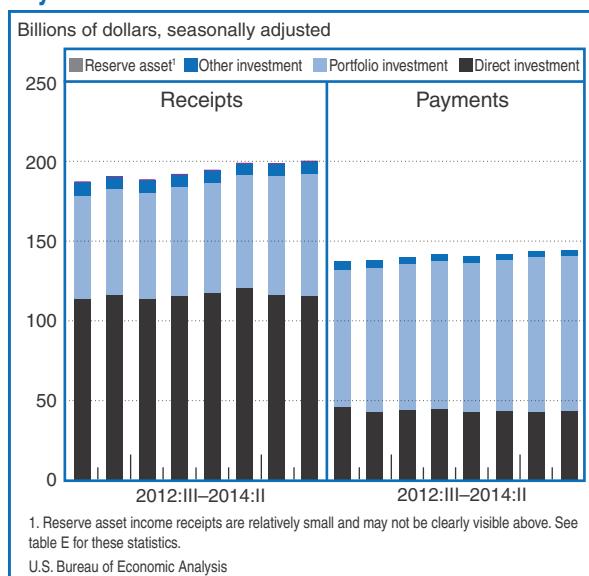

Receipts for compensation of U.S. residents paid by nonresidents remained at \$1.7 billion in the second quarter.

Income payments to foreigners on U.S. liabilities increased to \$144.6 billion from \$144.0 billion. The increase reflected increases in direct investment income payments and other investment income payments. The increase in direct investment income was mostly accounted for by income payments of U.S. affiliates to foreign parents in manufacturing and petroleum-related industries.

Payments for compensation of foreign residents paid by U.S. residents increased to \$4.0 billion from \$3.8 billion.

Secondary income receipts increased to \$39.9 billion from \$31.7 billion, reflecting an increase in fines and penalties paid to the U.S. government (a component of U.S. government transfers).

Secondary income payments decreased to \$61.3 billion from \$61.7 billion, reflecting a decrease in U.S. government grants.

p Preliminary r Revised (-) Net sales

NOTE. The statistics are presented in tables 1.2, 6.1, 7.1, and 8.1 on BEA's Web site.

Net acquisition of direct investment assets was \$89.2 billion in the second quarter, up from \$31.6 billion in the first quarter (table F and chart 10). The increase reflected higher net equity investment than in the first quarter. Transactions in (intercompany) debt instruments shifted to net acquisition.

Net U.S. acquisition of portfolio investment assets abroad (acquisitions in excess of sales) was \$184.9 billion in the second quarter, up from \$100.7 billion in the first quarter (chart 11 on page 8). Net U.S. purchases of foreign equity and investment fund shares increased to \$85.6 billion from \$81.3 billion. Net U.S. purchases of foreign debt securities increased to \$99.3 billion from \$19.4 billion, partly reflecting increases in net purchases of commercial paper and corporate bonds and notes.

Net U.S. sales of other investment assets abroad (sales in excess of acquisitions) were \$42.2 billion in the second quarter, a shift from net acquisitions of \$12.0 billion in the first quarter (chart 12 on page 8). The shift to net sales reflected a shift to net foreign repayment of loans (foreign repayments exceeding U.S.-resident provision of loans).

Transactions increased U.S. reserve assets by \$0.8 billion in the second quarter after decreasing these assets by \$1.0 billion in the first quarter. The shift reflected an increase in the U.S. reserve position in the International Monetary Fund (IMF) as it drew on U.S. credit through the [New Arrangements to Borrow](#). Drawing on U.S. credit exceeded net repayments of dollars by countries that had borrowed from the IMF in previous quarters, increasing the U.S. reserve position.

p Preliminary r Revised (-) Net repayment

NOTE. The statistics are presented in tables 1.2, 6.1, 7.1, and 8.1 on BEA's Web site.

Net incurrence of direct investment liabilities to foreigners was \$72.0 billion in the second quarter, a shift from net repayment of liabilities of \$121.7 billion in the first quarter (table G, and chart 10 on page 7). The shift to net incurrence primarily reflected a shift to net equity investment other than reinvestment of earnings from first-quarter disinvestment. In addition, transactions in (intercompany) debt instruments shifted to net incurrence from net repayment.

Net U.S. incurrence of portfolio investment liabilities to foreigners was \$74.8 billion in the second quarter, down from \$237.9 billion in the first quarter (chart 11). Net foreign purchases of U.S. equity and investment fund shares were \$0.7 billion, down from \$93.6 billion. Net foreign purchases of U.S. debt securities were \$74.1 billion, down from \$144.2 billion, reflecting a shift to net foreign sales of U.S. Treasury bills and certificates and lower net foreign purchases of U.S. Treasury bonds and notes.

Net U.S. incurrence of other investment liabilities to foreigners was \$100.7 billion in the second quarter, down from \$123.6 billion in the first quarter (chart 12). The second-quarter decrease resulted from combined decreases in transactions for loans, currency, and trade credit and advances that more than offset a shift to net increases in foreign resident deposit liabilities to foreign residents.

Chart 11. Transactions in Portfolio Investment Assets and Liabilities

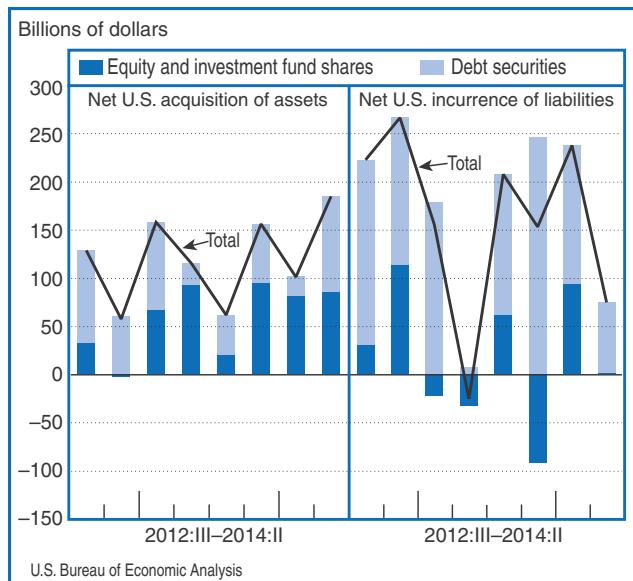

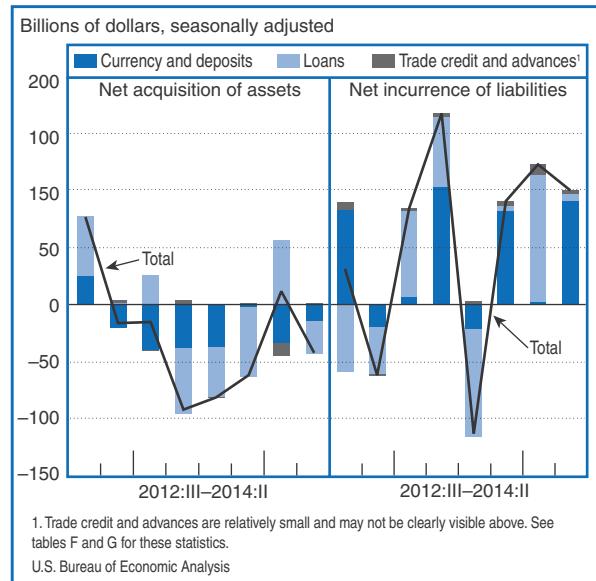

Chart 12. Transactions in Other Investment Assets and Liabilities

1. Trade credit and advances are relatively small and may not be clearly visible above. See tables F and G for these statistics.

U.S. International Transactions Tables

The following tables present statistics for the U.S. international transactions accounts that were released on September 17, 2014. Additional historical statistics for the tables can be viewed and downloaded from the international transactions [interactive database](#) on BEA's Web site.

To print selected tables, use the Print option on the drop down menu under File at the top, then choose Current Page or Pages (for example choose 2-3 or 30).

Table 1.1. U.S. International Transactions

[Millions of dollars]

Release Date: September 17, 2014 - Next Release Date: December 17, 2014

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are O, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

2. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.

3. The statistical discrepancy, which can be calculated as line 38 less line 37, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit.

4. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).

5. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.

Table 1.2. U.S. International Transactions, Expanded Detail

[Millions of dollars]

Release Date: September 17, 2014 - Next Release Date: December 17, 2014

Legend / Footnotes:

*O Transactions are possible but are zero for a given period.**(*) Transactions between zero and +/- \$500,000.**D Suppressed to avoid disclosure of individual companies.**n.a. Transactions are possible, but data are not available.**..... Not applicable, or for data periods 1960-1997, transactions that are O, not available, or not applicable.**Quarterly estimates are not annualized and are expressed at quarterly rates.**1. All travel purposes include 1) business travel, including expenditures by border, seasonal, and other short-term workers and 2) personal travel, including health-related and education-related travel.**2. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.**3. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.**4. The statistical discrepancy, which can be calculated as line 109 less line 108, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit.**5. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).**6. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.*

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are O, not available, or not applicable.

1. All travel purposes include 1) business travel, including expenditures by border, seasonal, and other short-term workers and 2) personal travel, including health-related and education-related travel.

2. Income on a directional basis is organized according to whether the income derives from outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Income on a directional basis for individual areas and countries is without current-cost adjustment. See table 4.2 for additional information on income on a directional basis without current-cost adjustment. In table 1.3, the adjustment to convert income from an asset/liability basis to a directional basis at the global level and the current-cost adjustment at the global level are included in "International organizations and unallocated."

3. Secondary income (current transfer) receipts and payments include U.S. government and private transfers, such as U.S. government grants and pensions, fines and penalties, withholding taxes, personal transfers (remittances), insurance-related transfers, and other current transfers.

4. Includes transactions for outward direct investment rather than net acquisition of direct investment assets. Also see footnote 5.

5. Financial transactions on a directional basis are organized according to whether the transactions relate to outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Financial transactions on a directional basis for individual areas and countries are without current-cost adjustment. See table 6.1 for additional information on financial transactions on a directional basis without current-cost adjustment. In table 1.3, the adjustment to convert financial transactions from an asset/liability basis to a directional basis at the global level and the current-cost adjustment at the global level are included in "International organizations and unallocated."

6. Includes transactions for inward direct investment rather than net incurrence of direct investment liabilities. See also footnote 5.

7. Transactions for financial derivatives are only available as a net value equal to transactions for assets less transactions for liabilities. A positive value represents net U.S. cash payments arising from derivatives contracts, and a negative value represents net U.S. cash receipts.

8. The statistical discrepancy, which can be calculated as line 109 less line 108, is the difference between total debits and total credits recorded in the current, capital, and financial accounts. In the current and capital accounts, credits and debits are labeled in the table. In the financial account, an acquisition of an asset or a repayment of a liability is a debit, and an incurrence of a liability or a disposal of an asset is a credit. For individual countries and areas, the statistical discrepancy partly results from discrepancies that arise when transactions with one country or area are settled through transactions with another country or area.

9. Current- and capital-account statistics in the international transactions accounts differ slightly from statistics in the National Income and Product Accounts (NIPAs) because of adjustments made to convert the international transactions statistics to national economic accounting concepts. A reconciliation between annual statistics in the two sets of accounts appears in NIPA [table 4.3B](#).

10. Net lending means that U.S. residents are net suppliers of funds to foreign residents, and net borrowing means the opposite. Net lending or net borrowing can be computed from current- and capital-account transactions or from financial-account transactions. The two amounts differ by the statistical discrepancy.

11. Estimates of financial derivatives for several countries and the OPEC area are not available separately. Estimates for Luxembourg are included in Other Euro area. Estimates for Argentina, Brazil, Mexico, and Venezuela are included in Other South and Central America. Estimates for China, Hong Kong, India, Korea, Singapore, and Taiwan are included in Other Asia and Pacific. Estimates for South Africa are included in Other Africa. In addition, estimates for the Middle East are combined with estimates for Asia and Pacific and included in Other Asia and Pacific. Estimates for OPEC area countries are included in the regional totals for Other South and Central America, Other Africa, and Other Asia and Pacific.

12. Includes, as part of international and unallocated, global totals for taxes withheld; current-cost adjustments associated with direct investment income and financial transactions; adjustments to convert direct investment income and financial transactions from an asset/liability basis to a directional basis; and net U.S. incurrence of liabilities to foreigners from currency transactions.

Legend / Footnotes:

*O Transactions are possible but are zero for a given period.**(*) Transactions between zero and +/- \$500,000.**D Suppressed to avoid disclosure of individual companies.**n.a. Transactions are possible, but data are not available.**..... Not applicable, or for data periods 1960-1997, transactions that are 0, not available, or not applicable.**Quarterly estimates are not annualized and are expressed at quarterly rates.*

1. The residual is calculated as the difference between the commodity-based seasonally adjusted total and the sum of the individual countries and the all other countries aggregate. The seasonally adjusted country and world area data will not sum to the commodity-based seasonally adjusted totals because the seasonally adjusted country and world area data and the commodity-based totals are derived from different aggregations of the export and import data and from different seasonal adjustment models. For additional information, see these [FAQs](#).

1. Addition of electric energy exports to Mexico; deduction of exposed motion picture film for sale or rental; net change in stock of U.S.-owned grains in storage in Canada; valuation of software exports at market value; addition for low-value (below reporting threshold) transactions for 1999-2009 to phase in a revised low-value methodology that was implemented by the U.S. Census Bureau beginning with statistics for 2010; and other coverage adjustments.

2. Addition of electric energy imports from Mexico; deduction of exposed motion picture film for sale or rental; deduction of the value of repairs of U.S. vessels abroad; addition for low-value (below reporting threshold) transactions for 1999-2009 to phase in a revised low-value methodology that was implemented by the U.S. Census Bureau beginning with statistics for 2010; and other coverage adjustments.

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

()* Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. The residual is calculated as the difference between the service type-based seasonally adjusted total and the sum of the individual countries and the all other countries aggregate. The seasonally adjusted country and world area data will not sum to the seasonally adjusted service type-based totals because the seasonally adjusted country and world area data and the service type-based totals are derived from different aggregations of the export and import data and from different seasonal adjustment models.

Legend / Footnotes:

O Transactions are possible but are zero for a given period.

(*) Transactions between zero and +/- \$500,000.

D Suppressed to avoid disclosure of individual companies.

n.a. Transactions are possible, but data are not available.

..... Not applicable, or for data periods 1960-1997, transactions that are O, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Income on an asset/liability basis is organized according to whether the income derives from an asset or a liability. Income receipts derive from U.S. parent and U.S. affiliate claims (assets), and income payments derive from U.S. affiliate and U.S. parent liabilities.

2. Income on a directional basis is organized according to whether the income derives from outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Income receipts derive from U.S. parent claims and liabilities, and income payments derive from U.S. affiliate claims and liabilities.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Primarily withholding taxes received and fines levied by U.S. government agencies.

2. Primarily insurance-related transfers; pensions and benefits received from Canada, Germany, and the United Kingdom; antitrust-related class-action lawsuits; and personal transfers received by U.S. residents.

3. Nonmilitary and military assistance provided to foreigners in the form of goods, services, or cash under programs enacted by the U.S. Congress.

4. Primarily U.S. government social security and retirement benefits paid to former U.S. residents who reside abroad and contributions to international organizations and commissions to meet the financial obligations of membership and to fund United Nations peacekeeping operations.

5. Personal transfers (sometimes called remittances) from U.S. resident immigrants to foreign residents.

6. Primarily insurance-related transfers; withholding taxes paid by U.S. companies; and charitable donations by U.S. entities.

Table 6.1. U.S. International Financial Transactions for Direct Investment
[Millions of dollars]

Release Date: September 17, 2014 - Next Release Date: December 17, 2014

Legend / Footnotes:

O Transactions are possible but are zero for a given period.*(*)* Transactions between zero and +/- \$500,000.*D* Suppressed to avoid disclosure of individual companies.*n.a.* Transactions are possible, but data are not available...... Not applicable, or for data periods 1960-1997, transactions that are *O*, not available, or not applicable.

Quarterly estimates are not annualized and are expressed at quarterly rates.

1. Financial transactions on an asset/liability basis are organized according to whether the transactions relate to an asset or a liability. Net U.S. acquisition of direct investment assets relates to U.S. parent and U.S. affiliate acquisition of claims (assets). Net U.S. incurrence of direct investment liabilities relates to U.S. affiliate and U.S. parent incurrence of liabilities.

2. Financial transactions on a directional basis are organized according to whether the transactions relate to outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). Transactions for outward investment relate to transactions for U.S. parent claims and liabilities. Transactions for inward investment relate to transactions for U.S. affiliate liabilities and claims.

The U.S. Net International Investment Position at the End of the Second Quarter of 2014

By Kyle L. Westmoreland

THE U.S. net international investment position at the end of the second quarter of 2014 was -\$5,445.1 billion (preliminary) as the value of U.S. liabilities exceeded the value of U.S. assets (chart 1).¹ The negative net international investment position represents a U.S. net liability to the rest of the world. At the end of the first quarter of 2014, the net position was -\$5,511.7 billion (revised).

Highlights

- The \$66.6 billion increase in the net position reflected a \$913.2 billion increase in the value of U.S. assets and an \$846.7 billion increase in the value of U.S. liabilities, mainly from increases in foreign and U.S. equity prices.²
- The \$66.6 billion increase in the net position also reflected net financial-account transactions of -\$9.5 billion and other changes in position—such as price changes, exchange-rate changes, and changes in

volume and valuation not included elsewhere (n.i.e.)—of \$76.1 billion.

- The U.S. net international investment position increased 1.2 percent in the second quarter, compared with a decrease of 2.4 percent in the first quarter and an average quarterly decrease of 7.4 percent from the first quarter of 2011 through the fourth quarter of 2013.
- The net position was equal to 2.7 percent of the value of all U.S. financial assets at the end of the second quarter, down from 2.8 percent at the end of the first quarter.³

U.S. assets. U.S. assets were \$24,933.3 billion at the end of the second quarter, compared with \$24,020.1 billion at the end of the first quarter (chart 2). The \$913.2 billion increase reflected an \$882.2 billion increase in the value of assets excluding financial derivatives and a \$31.1 billion increase in the value of

1. For comprehensive international investment position statistics, including annual statistics beginning with 1976 and quarterly statistics beginning with the fourth quarter of 2005, see the [detailed statistics on BEA's Web site](#).

2. For information on the valuation of U.S. assets and liabilities and a description of the estimation methods, see “[International Investment Position Accounts](#)” in *International Economic Accounts: Concepts and Methods*.

3. Board of Governors of the Federal Reserve System (FRS), “Table L.5 Total Liabilities and Its Relation to Total Financial Assets,” in *Financial Accounts of the United States, Second Quarter 2014*, Z.1. Statistical Release (Washington, DC: FRS, September 18, 2014): 11. According to the September release, at the end of the second quarter, the value of all U.S. financial assets was \$198,250.1 billion. The value of U.S. assets abroad was \$24,933.3 billion, or 12.6 percent of all U.S. assets, up from 12.3 percent at the end of the first quarter and down from the 14.1 percent series peak at the end of the first quarter of 2008.

Chart 1. U.S. Net International Investment Position, 2006:IV–2014:II

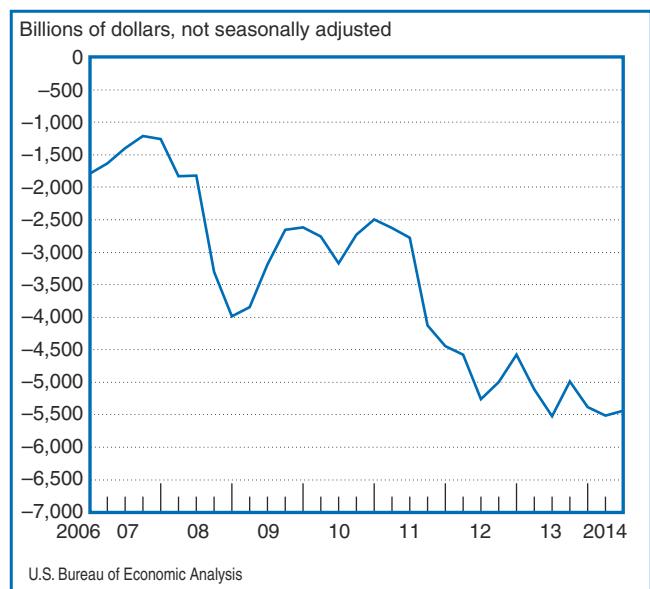

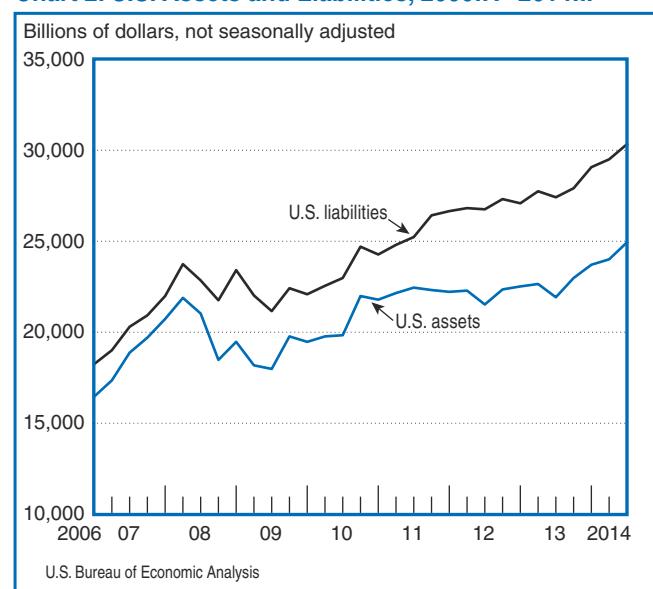

Chart 2. U.S. Assets and Liabilities, 2006:IV–2014:II

financial derivatives.⁴

U.S. assets excluding financial derivatives were \$22,247.8 billion at the end of the second quarter, compared with \$21,365.7 billion at the end of the first quarter. The \$882.2 billion increase reflected a \$241.7 billion increase resulting from financial transactions and a \$640.5 billion increase resulting from other changes in position (table A).⁵ Other changes in position were mostly attributable to an increase in foreign stock prices that raised the value of U.S. holdings of foreign equity in portfolio investment and direct investment at market value.

U.S. liabilities. U.S. liabilities were \$30,378.4 billion at the end of the second quarter, compared with \$29,531.7 billion at the end of the first quarter (chart 2). The \$846.7 billion increase reflected a \$781.0 billion increase in the value of liabilities excluding financial derivatives and a \$65.6 billion increase in the value of financial derivatives.

U.S. liabilities excluding financial derivatives were \$27,728.2 billion at the end of the second quarter, compared with \$26,947.2 billion at the end of the first quarter. The \$781.0 billion increase reflected a \$248.4 billion increase resulting from financial transactions and a \$532.7 billion increase resulting from other changes in position. Other changes in position were

4. A derivatives contract with a positive fair value represents the amount that a foreign resident would have to pay to a U.S. counterparty if the contract were terminated or settled. A contract with a negative fair value represents the amount that a U.S. resident would have to pay to a foreign counterparty if the contract were terminated or settled. The gross positive (negative) fair value is the sum of all contracts with positive (negative) fair values. Fair values differ from notional values, which are the underlying amounts used to calculate payments on contracts.

5. For statistics on financial transactions, see the financial account in table 1.2 of the U.S. international transactions accounts. The quarterly financial transactions discussed in this article are not seasonally adjusted. Detail on other changes in position such as price changes, exchange-rate changes, and changes in volume and valuation n.i.e. are available only for annual statistics.

mostly attributable to an increase in U.S. stock prices that raised the value of foreign holdings of U.S. equity in portfolio investment and direct investment at market value.

Market Value: The Featured Measure of Direct Investment Positions

Investment positions for direct investment are valued at current-period prices based on a revaluation of book values that are reported on BEA's direct investment surveys.¹ Direct investment at market value became BEA's featured measure of direct investment at current-period prices in the June 2014 comprehensive restructuring of the international economic accounts.² The market-value basis values owners' equity at current-period prices using indexes of stock market prices.³ Direct investment positions at market value are presented on an asset/liability basis according to whether the positions are assets or liabilities. Assets include U.S. parent and U.S. affiliate claims, and liabilities include U.S. affiliate and U.S. parent liabilities.

1. BEA publishes direct investment positions at historical cost with owners' equity at the book value reported on BEA's surveys; these statistics are available on [BEA's Web site](#). Historical-cost positions are on a directional basis, according to whether the positions are outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). The outward position includes U.S. parent claims less U.S. parent liabilities. The inward position includes U.S. affiliate liabilities less U.S. affiliate claims. Country and industry detail for direct investment positions are available only on a historical-cost basis.

2. BEA publishes direct investment at current cost as an alternative current-price measure ([table 2.1](#)). The current-cost basis values the U.S. and foreign parent shares of their affiliates' investment in (1) plant and equipment using the current cost of capital equipment, (2) land using general price indexes, and (3) inventories using estimates of their replacement cost.

3. For additional information on the market-value and current-cost methods, see "[Valuation of the U.S. Net International Investment Position](#)," SURVEY OF CURRENT BUSINESS 71 (May 1991): 40–49.

1. Financial transactions and other changes in financial derivatives positions are available only on a net basis, they are not separately available for gross positive fair values and gross negative fair values of financial derivatives.

Revisions

The U.S. net international investment position at the end of the first quarter of 2014 was revised to -\$5,511.7 billion from a previously published value of -\$5,539.3 billion. The \$27.7 billion upward revision to the net position reflected a \$418.6 billion upward revision to U.S. assets that exceeded a \$390.9 billion upward revision to U.S. liabilities.

U.S. assets at the end of the first quarter were revised to \$24,020.1 billion from \$23,601.5 billion, and U.S. liabilities were revised to \$29,531.7 billion from \$29,140.8 billion. These revisions reflect revised source data from the Treasury International Capital (TIC) reporting system and from BEA's quarterly surveys of direct investment.

Table 1 follows.

Table 1.3. Change in the Yearend U.S. Net International Investment Position

[Millions of dollars]

Release Date: September 25, 2014 - Next Release Date: December 30, 2014

Legend / Footnotes:

*O Transactions or other changes are possible but are zero for a given period.**(*) Transactions or other changes between zero and +/- \$500,000.**n.a. Not available**..... Not applicable**1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.**2. Includes changes due to year-to-year shifts in the composition of reporting panels and to the incorporation of more comprehensive survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial transactions, price changes, or exchange-rate changes.**3. Financial transactions and other changes in financial derivatives positions are available only on a net basis, which is shown on line 3; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives.**4. Data are not separately available for price changes, exchange-rate changes, and changes in volume and valuation not included elsewhere.*

Table 2.1. U.S. Direct Investment Positions at the End of the Period

[Millions of dollars] NOTE: End of quarter positions begin in the fourth quarter of 2005.

Release Date: September 25, 2014 - Next Release Date: December 30, 2014

n.a. Not available

..... Not applicable

1. Positions on an asset/liability basis are organized according to whether the positions are assets or liabilities. Assets include U.S. parent and U.S. affiliate claims, and liabilities include U.S. affiliate and U.S. parent liabilities.

2. Positions on a directional basis are organized according to whether the positions are for outward investment (U.S. direct investment abroad) or inward investment (foreign direct investment in the United States). The outward direct investment position includes U.S. parent claims less U.S. parent liabilities. The inward direct investment position includes U.S. affiliate liabilities less U.S. affiliate claims.

Comprehensive Revision of Gross Domestic Product by Metropolitan Area

Advance Statistics for 2013 and Revised Statistics for 2001–2012

By Sharon D. Panek, Jacob R. Hinson, and Frank T. Baumgardner

ECONOMIC GROWTH was widespread across 292 metropolitan areas in 2013; real GDP increased in 292 of the nation's 381 metropolitan areas (chart 1), according to the advance statistics from the Bureau of Economic Analysis (BEA). For the United States as a whole, real GDP by metropolitan area—the sum of current-dollar GDP for all metropolitan areas deflated by a national price measure—increased 1.7 percent in 2013 after increasing 2.6 percent in 2012 (table 1).

GDP by metropolitan area—the metropolitan area counterpart to GDP in the national income and product accounts (NIPAs)—is the most comprehensive measure of overall economic activity in a metropolitan area. In September, BEA released advance current-dollar and chained-dollar (real) statistics on GDP by metropolitan area for 2013. Additional highlights for 2013 include the following:

- Finance, insurance, real estate, rental, and leasing contributed to growth in many metropolitan areas, especially in the Rocky Mountain and Far West regions.
- Nondurable-goods manufacturing growth was widespread.
- Professional and business services was one of the leading contributors to growth in many metropolitan areas.
- Natural resources and mining was a major contributor to strong growth in several metropolitan areas located on the Utica, Marcellus, and Niobrara shale formations. These formations stretch across several states.
- Government detracted from growth in many metropolitan areas.

After providing an overview on the importance of metropolitan areas to the nation, this article will discuss the industries that drove national economic growth and the metropolitan areas where these industries are concentrated. It will then examine patterns in per capita real GDP by metropolitan area before concluding with a discussion of revisions to the statistics on GDP by metropolitan area.

Metropolitan Area Size

Metropolitan areas produced 90.3 percent of the nation's GDP in 2013. Collectively, GDP of the five largest metropolitan areas accounted for 23.2 percent of national GDP in 2013. Metropolitan areas are also the driving force behind GDP most states. Among the single-state metropolitan areas, Urban Honolulu, HI, accounted for the largest percentage of GDP by state in 2013 (77.0 percent).

The size of metropolitan areas varies significantly. Most metropolitan areas (277) have populations under 500,000. GDP for these small metropolitan areas ranges from \$31.6 billion (Anchorage, AK) to \$1.9 billion (Grants Pass, OR). GDP for large metropolitan areas, which includes areas with populations greater than 500,000, ranges from \$1.5 trillion (New York-Newark-Jersey City, NY-NJ-PA) to \$14.0 billion (Deltona-Daytona Beach-Ormond Beach, FL).

Data Availability

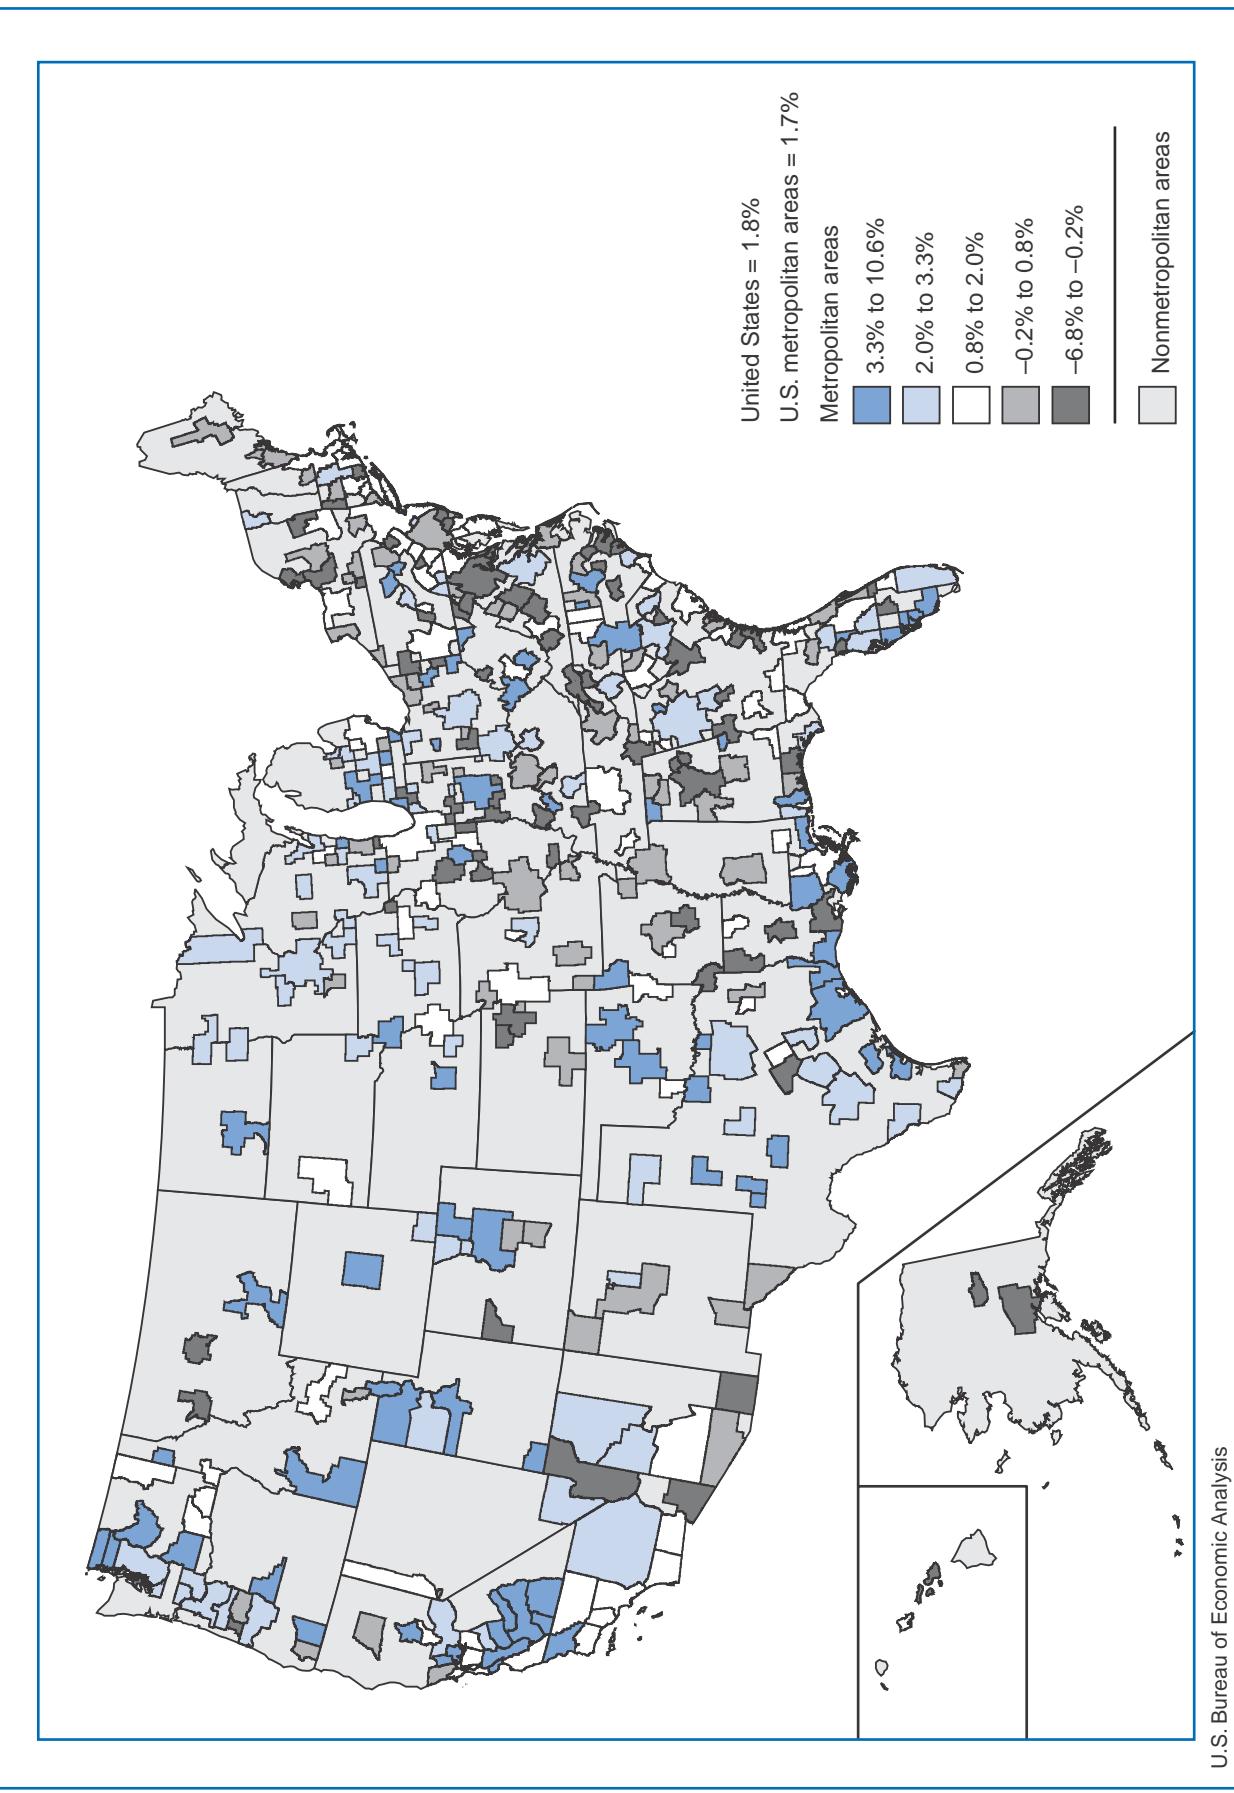

Summary statistics on gross domestic product (GDP) by metropolitan area in current dollars and in real chained (2009) dollars for 2001–2013 as well as quantity indexes are presented in tables 1–6 in this article. More detailed statistics for metropolitan areas and the U.S. metropolitan portion can be accessed interactively on [BEA's Web site](#).

The following annual statistics are available:

- Advance statistics on current-dollar GDP by metropolitan area, real GDP by metropolitan area in chained (2009) dollars, and quantity indexes for 2013 for 24 sectors based on the North American Industry Classification System (NAICS).
- Current-dollar and real GDP by metropolitan area and quantity indexes for 2001–2012 for 24 NAICS-based sectors and for 61 NAICS-based subsectors.
- Per capita real GDP by metropolitan area for 2001–2013

Chart 1. Percent Change in Real Gross Domestic Product by Metropolitan Area, 2013

Widespread growth in some industries often has a greater effect on growth in small metropolitan areas where a large portion of total economic activity is supported by a few key industries. Some industries, such as mining, are much more geographically concentrated and can cause rapid growth or decline in related areas.

Metropolitan Area Growth

In 2013, increases in total GDP for the nation's metropolitan areas were led by growth in finance, insurance, real estate, rental, and leasing; nondurable-goods manufacturing; and professional and business services (table 2). One or more of these three industries contributed to growth in 370 of the 381 metropolitan areas nationwide. In contrast, government detracted from growth in 2013.

Finance, insurance, real estate, rental, and leasing.

Finance, insurance, real estate, rental, and leasing contributed 0.36 percentage point to real GDP growth in metropolitan areas in 2013. The industry contributed to growth in 268 metropolitan areas in 2013. Growth in this industry accounted for more than half of real GDP growth in 61 metropolitan areas, and contributed more than 1 percentage point to growth in 55 metropolitan areas, most notably in the small metropolitan areas of Williamsport, PA (3.49 percentage points), State College, PA (3.02 percentage points), and Bloom-

ington, IL (2.87 percentage points).

Growth in this industry was spread across both large and small metropolitan areas. This industry was the leading contributor to growth in 68 of the 277 small metropolitan areas and in 39 of the 104 large metropolitan areas.

Nondurable-goods manufacturing. Nondurable-goods manufacturing contributed 0.32 percentage point to real GDP growth in metropolitan areas in 2013. The rebound in nondurable-goods manufacturing from a decline in 2012 was widespread across the nation's metropolitan areas in 2013. Growth in this industry contributed to real GDP growth in 273 metropolitan areas. This industry's contribution was particularly strong in metropolitan areas with a concentration in petroleum and coal products manufacturing (which includes refineries), most notably in the small metropolitan areas of Beaumont-Port Arthur, TX (8.71 percentage points), Lima, OH (8.51 percentage points), and Mount Vernon-Anacortes, WA (8.09 percentage points). Mount Vernon-Anacortes, WA, which grew 10.6 percent in 2013, was the nation's fastest growing metropolitan area primarily due to the large contribution from this industry.

Growth in this industry was even across both large and small metropolitan areas. This industry was the leading contributor to growth in 41 of the 277 small

Gross Domestic Product (GDP) by Metropolitan Area Statistics

Metropolitan (statistical) areas defined by the U.S. Office of Management and Budget are standardized county-based areas that have at least one urbanized area with a population of 50,000 or more and adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

GDP by metropolitan area is the most comprehensive measure of overall economic activity in a metropolitan area—it is the metropolitan area counterpart to the nation's GDP. The methodology developed for these statistics is relatively simple and allows for the production of timely statistics.

GDP by metropolitan area is derived as the sum of the value added originating in all of the industries in the metropolitan area. Real GDP by metropolitan area is an inflation-adjusted measure based on national prices for the goods and services produced within that area. The statistics on real GDP by metropolitan area and on quantity indexes with a reference year of 2009 were derived by applying national chain-type price indexes to the statistics on current-dollar GDP by metropolitan area for 61 industry subsectors based on the 2007 North

American Industry Classification System. Then, the chain-type price index formula that is used in the national accounts is used to calculate the statistics on total real GDP by metropolitan area and on real GDP by metropolitan area at more aggregated industry levels.

The statistics on GDP by metropolitan area are consistent with those on GDP by state released on June 11, 2014, which are based on the comprehensive revision of the national income and product accounts released in July 2013 and the national GDP by industry statistics released on January 23, 2014. The growth rate of real GDP in the nation's metropolitan areas usually differs from the real GDP growth rates in the national income and product accounts released annually in July, partly because of the inclusion of nonmetropolitan areas in the national statistics. The growth rates also differ because of differences in the timing of production cycles and the availability of data in preparing national and regional statistics, which preclude the incorporation of the immediately preceding annual NIPA revisions into the advance statistics on GDP by metropolitan area.

metropolitan areas and in 14 of the 104 large metropolitan areas.

Professional and business services. Professional and business services contributed 0.24 percentage point to real GDP growth in metropolitan areas in 2013. Professional and business services contributed to growth in 245 of the nation's 381 metropolitan areas in 2013, most notably in the small metropolitan areas of Fayetteville-Springdale-Rogers, AR-MO (3.33 percentage points) and Janesville-Beloit, WI (2.61 percentage points). This industry also contributed more than 1 percentage point to growth in 19 metropolitan areas.

Growth in this industry was balanced across both large and small metropolitan areas. This industry was the leading contributor to growth in 19 of the 277 small metropolitan areas and in 15 of the 104 large metropolitan areas.

Natural resources and mining. Although natural resources and mining was not a major contributor to growth for the nation, this industry contributed to strong growth in several small metropolitan areas. Mining in the Utica and Marcellus shale formations led to notable contributions to growth for natural resources and mining in Beckley, WV (11.49 percentage points), Wheeling, WV-OH (8.50 percentage points), and Charleston, WV (3.63 percentage points). Mining in the Niobrara shale formation contributed significantly to the 10.1 percent increase in total real GDP for Greeley, CO.¹

Contributions to growth from this industry were concentrated in small metropolitan areas. The industry was the leading contributor to growth in 63 of the 277 small metropolitan areas and in 11 of the 104 large metropolitan areas.

1. The location of these formations can be found on a map released by the Energy Information Administration on its [Web site](#).

Government. The government sector subtracted 0.12 percentage point from U.S. metropolitan area real GDP growth in 2013. This sector subtracted from growth in 292 metropolitan areas. The largest subtractions were in the small metropolitan areas of Hinesville, GA (4.12 percentage points), Jacksonville, NC (3.00 percentage points), and Warner Robins, GA (2.05 percentage points).

The slowdown in the government sector was widespread across both large and small metropolitan areas. This sector subtracted from growth in 211 of the 277 small metropolitan areas and in 81 of the 104 large metropolitan areas.

Per Capita Real GDP by Metropolitan Area

Per capita real GDP for the nation's metropolitan areas was \$52,093 in 2013, 6.1 percent higher than the national average (chart 2 and table 3).² The five metropolitan areas with the highest per capita real GDP in 2013 were Midland, TX; San Jose-Sunnyvale-Santa Clara, CA; Bridgeport-Stamford-Norwalk, CT; Casper, WY; and San Francisco-Oakland-Hayward, CA. Midland, TX, had the highest per capita real GDP in the nation at \$129,193, which was 163.0 percent higher than the national average; a strong concentration in the mining industry contributed greatly to per capita real GDP in this area.

The five metropolitan areas with the lowest per capita real GDP in 2013 were Lake Havasu City-Kingman, AZ; Sebring, FL; The Villages, FL; Brownsville-Harlingen, TX; and McAllen-Edinburg-Mission, TX. Lake Havasu City-Kingman, AZ, had the lowest per capita real GDP in the nation at \$17,336 which was 64.7 percent lower than the national average.

2. Per capita real GDP by metropolitan area was computed using Census Bureau midyear population estimates.

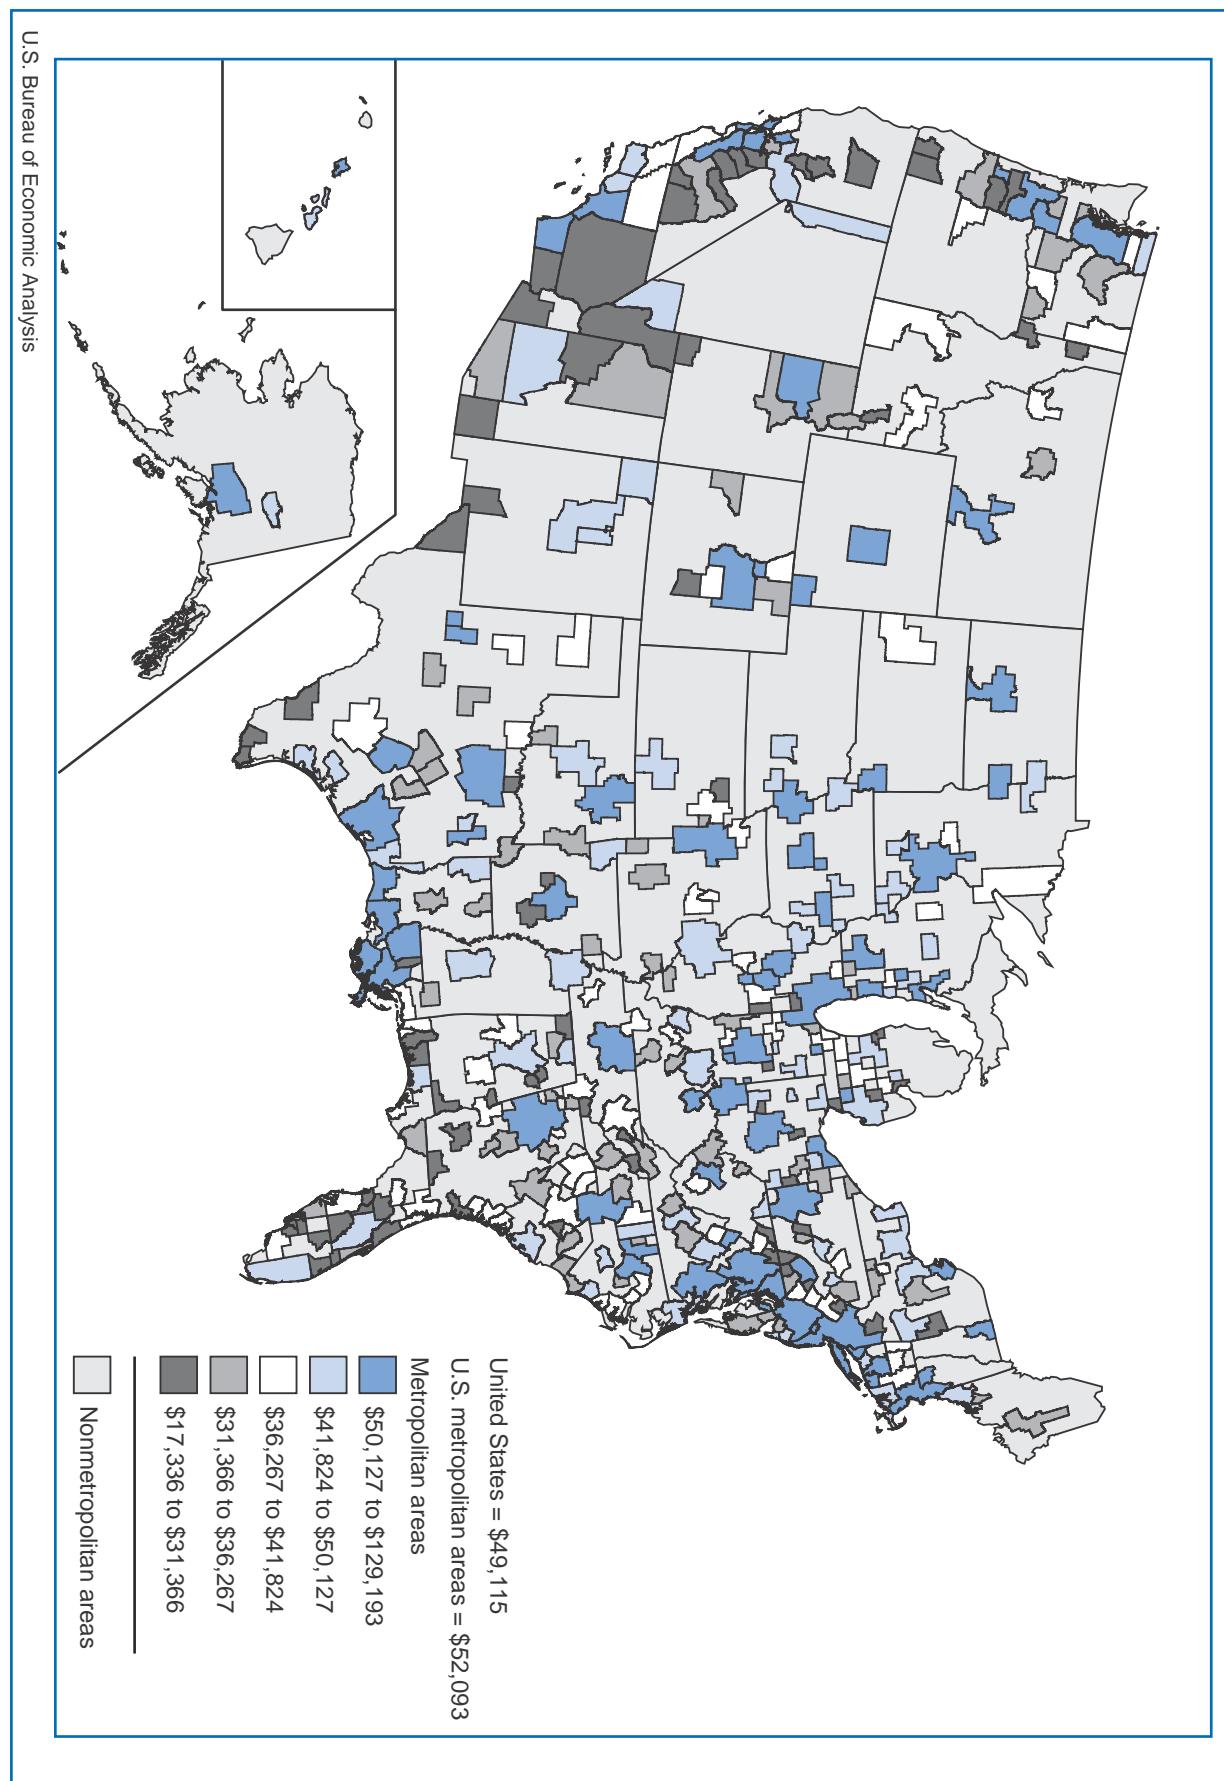

Advance Statistics on Gross Domestic Product (GDP) by Metropolitan Area for 2013

As with the previous releases of advance statistics, the 2013 advance statistics are based on source data that are incomplete or subject to further revision by the source agency. Revised statistics based on more complete data will be released in September 2015.

The advance statistics are prepared at the sector level of the North American Industry Classification System. The advance 2013 statistics use subsector-level industry detail for unpublished county wages for metropolitan areas from the Bureau of Labor Statistics Quarterly Census of Employment and Wages and the advance 2013 cur-

rent-dollar statistics on GDP by state, which were released on June 11, 2014. The annual percent change in county wages from 2012 to 2013 was calculated and then applied to the county GDP statistics underlying the statistics on GDP by metropolitan area for 2012. These extrapolated statistics for all sectors were scaled to the advance statistics on GDP by state for 2013 by allocating the difference between the two measures among the counties. The resulting county statistics were then summed to their related metropolitan areas to yield GDP by metropolitan area.

Chart 2. Per Capita Real Gross Domestic Product by Metropolitan Area, 2013

Revisions

The statistics on GDP by metropolitan area for 2001–2012 that were released in September 2013 have been revised. The revised statistics incorporate the comprehensive revisions from GDP by industry (January 23, 2014), GDP by state (June 11, 2014), and local area personal income (November 21, 2013). Comprehensive revisions differ from annual revisions in scope and in the number of years subject to revision. Comprehensive revisions occur approximately every 5 years and incorporate more detailed methodological and statistical changes than annual revisions. In addition to the revisions that reflect revisions to the underlying source data, the revisions reflect significant changes that were introduced as part of this comprehensive revision and include the following:

- Updated industry definitions consistent with the 2007 North American Industry Classification System
- The recognition of research and development expenditures as capital, the capitalization of entertainment, literary, and other artistic originals
- The use of an improved accrual accounting treatment of transactions for defined benefit pension plans

Current-dollar statistics. The revisions to the current-dollar GDP statistics, measured as a percentage of the previously published statistics, were modest for most metropolitan areas (table 4). The mean absolute revision (MAR) was 3.7 percent for 2008–2012. The MARs were less than 13 percent for all metropolitan areas except Midland, TX (27.0 percent), Norwich-New London, CT (17.7 percent), Little Rock-North Little Rock-Conway, AR (17.1 percent), and Watertown-Fort Drum, NY (14.7 percent). The revisions to Midland, TX were mainly due to revisions to mining; revisions both Norwich-New London, CT, and Water-

town-Fort Drum, NY, were mainly due to revisions in government. Revisions to Little Rock-North Little Rock-Conway, AR, were mainly due to revisions to information.

Real growth rates. The revisions to real GDP growth rates are measured as a percentage point difference from the previously published growth rate. The MAR of annual growth rates for metropolitan areas was 1.02 percentage points for 2008–2012. For 2008–2012, the MAR of annual growth rates was less than 5 percentage points for all metropolitan areas except Midland, TX (7.3 percent) and Casper, WY (5.9 percent) (table 5). Revisions to mining led to revisions in real GDP growth rates for both metropolitan areas.

Acknowledgments

The statistics on gross domestic product (GDP) by metropolitan area were prepared by the staff of the Regional Product Division under the direction of Charles Ian Mead, Chief, Clifford H. Woodruff III, Chief of the Regional Product Branch, and Sharon D. Panek, Chief of the GDP by State Services Section. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. Contributing staff members were Frank T. Baumgardner, Jacob R. Hinson, and Ralph M. Rodriguez.

The staff would like to thank John E. Broda, Robert P. Tate, and Shane T. Taylor of the GDP by State Goods Section for their contributions in reviewing the statistics. The staff would also like to thank Mauricio Ortiz, Chief of the Regional Income Division, John A. Rusinko, Chief of the Compensation Branch, Nicholas R. Empey, Chief of the Data and Administrative Systems Group, John D. Laffman, Callan S. Swenson, Melanie N. Vejdani, and Jonas D. Wilson for their support in producing the statistics and data tables.

Prototype Quarterly Gross Domestic Product by State Statistics for 2005–2013

By Lam Cao, Charles Ian Mead, Todd Siebeneck, and Catherine (Zheng) Wang

THE MOST RECENT recession and subsequent recovery highlighted the need for more timely and frequent statistics on regional economies for research and policy purposes. The Bureau of Economic Analysis (BEA) has published annual regional gross domestic product (GDP) statistics since 1985, and these statistics have become an important measure of state economies. However, there are also some shortcomings. Annual GDP by state statistics are not available until at least 6 months after the end of a calendar year and are of limited use in analyzing economic performance from quarter to quarter.

In keeping with its long-term goal of providing more timely and granular regional information, BEA issued its first release of prototype quarterly GDP by state statistics on August 20, 2014. These statistics, which cover 2005–2013, provide detailed information about 21 industry sectors. These current-dollar and real estimates complement BEA's annual GDP by state statistics and allow for a more timely and precise analysis of regional economic trends. For example, the new data can be used to identify key accelerations, decelerations, and turning points in economic growth at the state level and to shed light on evolving industrial infrastructures across states on a quarterly basis.

The new quarterly GDP by state statistics are scheduled to become official, regularly released BEA time series in the next calendar year. At that point, these statistics will be available just 5 to 6 months after the end of a quarter. In other words, the first-quarter statistics will become available a full 9 to 10 months before the related annual statistics become available—a major benefit for economists, researchers, policymakers and others.

This article presents BEA's most recent prototype quarterly GDP by state statistics for 2005–2013, which reflect more recent source data than those used for the initial experimental statistics released last year.¹

Selected Results

Growth in 2013

U.S. real GDP by state increased 2.8 percent in the fourth quarter of 2013 after rising 4.2 percent in the third quarter, 2.5 percent in the second quarter, and 1.1 percent in the first quarter. In the fourth quarter of 2013, real GDP increased in all states except Mississippi and Minnesota (chart 1). Through all four quarters of 2013, real GDP grew steadily in 24 states.

In the fourth quarter of 2013, the increase in real GDP was led by nondurable-goods manufacturing, by professional, scientific, and technical services, and by wholesale trade. Growth in these industries was widespread across many states. In addition, growth in the mining industry was also an important contributor to GDP growth in several states. The growth in these industries was partly offset by widespread declines in government and in construction.

Nondurable-goods manufacturing was the largest contributor to U.S. real GDP by state growth in the fourth quarter of 2013. This industry increased 18.6 percent in the fourth quarter after increasing 2.9 percent in the third quarter. It was the leading contributor to growth in 31 states in the fourth quarter. It contributed 5.12 percentage points to economic growth in Louisiana, 2.55 percentage points to growth in Indiana, 2.23 percentage points to growth in North Carolina, and 1.74 percentage points to growth in Texas. Through all four quarters of 2013, nondurable-goods manufacturing was consistently the leading contributor to growth in Louisiana, North Carolina, and Texas (tables 1 through 4).

Professional, scientific, and technical services was the second-largest contributor to growth in U.S. real GDP in both the third and fourth quarters of 2013. This industry increased 5.9 percent in the fourth quarter after increasing 8.3 percent in the third quarter. In the fourth quarter, it contributed to growth in 49 states and the District of Columbia and was the leading contributor to growth in the District of Columbia, Florida, Maryland, Massachusetts, and New York.

1. Lam Cao, Charles Ian Mead, Todd Siebeneck, and Catherine (Zheng) Wang "A First Look at Experimental Quarterly Gross Domestic Product by State," SURVEY OF CURRENT BUSINESS 92 (September 2013): 294–298.

Wholesale trade increased 6.9 percent in the fourth quarter of 2013, contributing 0.41 percentage point to growth. This industry contributed to growth in 48 states and the District of Columbia. In North Dakota, it contributed 1.19 percentage points to growth. In fact, it has contributed more than 1 percentage point to growth in this state since the second quarter of 2013.

While mining was not a leading contributor to real U.S. GDP by state in the fourth quarter, it contributed significantly to growth in some states. Mining contributed 8.62 percentage points to growth in North Dakota, 6.85 percentage points to growth in Wyoming, and 4.85 percentage points to growth in West Virginia. Since the second quarter of 2013, mining has been the largest contributor to growth in Colorado, North Dakota, West Virginia, and Wyoming, contributing more than 1.5 percentage points to growth in each.

The government sector declined 1.9 percent in the fourth quarter, the eighth straight quarterly decline. The government sector declined in 47 states and the District of Columbia and shaved 0.24 percentage point from U.S. GDP by state growth. The sector subtracted more than 0.41 percentage point from growth in Alaska, Arizona, the District of Columbia, New Hamp-

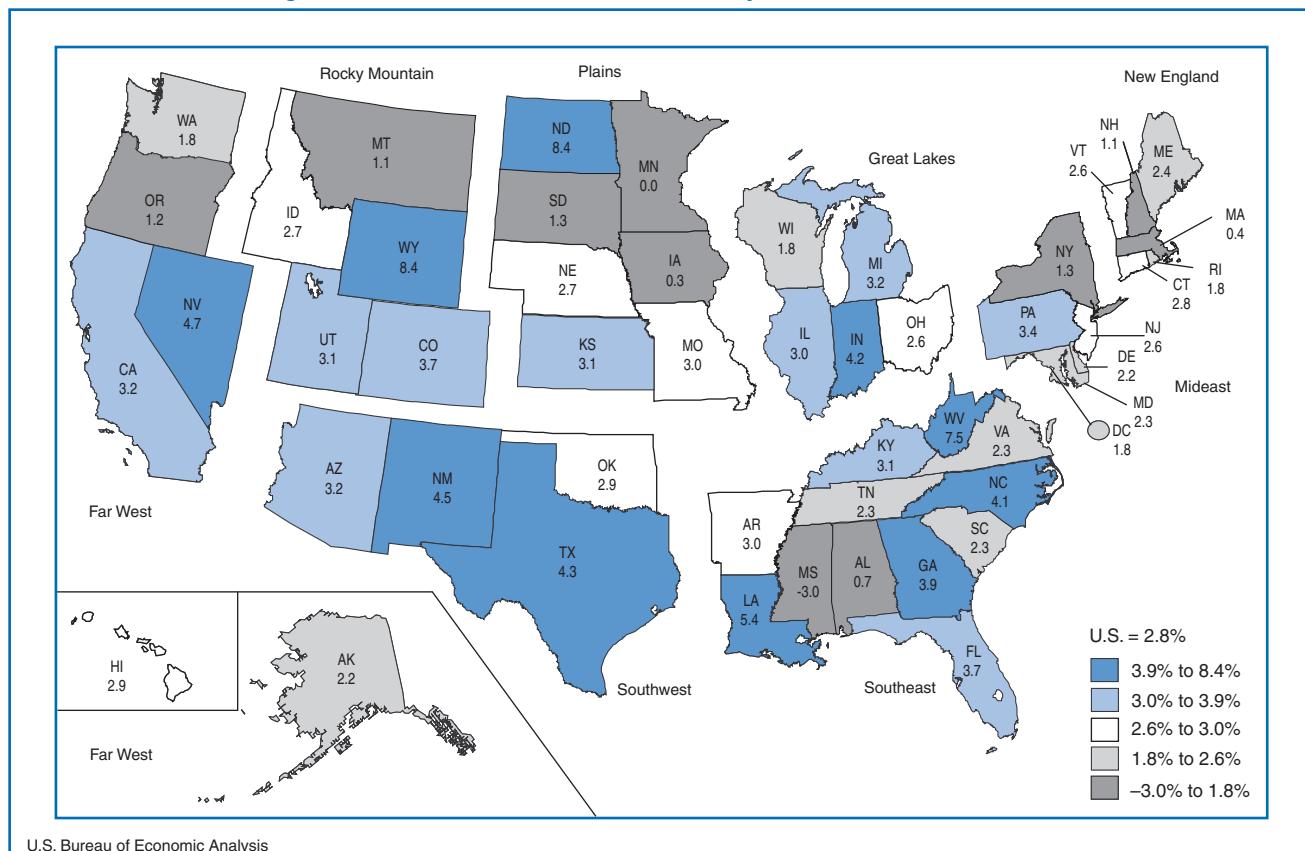

shire, and New York.

Construction slowed growth in 47 states and the District of Columbia in the fourth quarter of 2013. This industry declined 5.9 percent in the fourth quarter, after two consecutive quarters of growth. It subtracted 0.22 percentage point from national growth in the fourth quarter. This industry has slowed growth in Alabama, Indiana, and New Mexico in every quarter of 2013. Construction added to growth in all four quarters of 2013 in just one state, Mississippi.

Quarterly GDP by state, 2005–2013

The new quarterly statistics makes it possible to identify changes in economic activity in a more detailed manner than that allowed by the annual statistics. For example, the new prototype statistics show that economic activity in some states began to decline a quarter before the nation entered the last recession. In some cases, the statistical detail provided by the prototype quarterly GDP by state statistics are indeed masked by more traditional annual GDP by state statistics. In other cases, these new statistics can provide early signals of longer term trends in economic growth and industrial composition within states.

Chart 1. Percent Change in Real Gross Domestic Product by State, 2013:III-2013:IV

Masked details uncovered

Arizona, Florida and Michigan provide examples of how the prototype quarterly statistics on GDP by state can reveal trends that are masked by annual data (table A).

Table A. Annualized Growth Rates in Real Gross Domestic Product by State for Selected Areas, 2007
[Percent]

| Area | 2007 | First quarter | Second quarter | Third quarter | Fourth quarter |
|--------------------|------|---------------|----------------|---------------|----------------|
| United States..... | 1.5 | 0.4 | 2.4 | 2.2 | 1.1 |
| Arizona..... | 2.8 | -0.8 | 4.4 | 4.2 | -4.6 |
| Florida..... | 0.4 | -4.4 | 2.0 | 3.7 | -2.8 |
| Nevada..... | 1.9 | 3.4 | 0.8 | 2.3 | 4.4 |
| Indiana..... | 2.6 | 0.5 | 6.3 | 4.6 | 2.0 |
| Michigan..... | -1.5 | 2.7 | -1.4 | 0.5 | -8.3 |
| Ohio..... | -0.8 | 0.3 | -1.1 | 1.5 | -1.6 |

Arizona and Florida were both hit hard by declines in the housing industry. In Arizona, real GDP decreased 4.6 percent in the fourth quarter of 2007 after increasing 4.2 percent in the third quarter. In Florida, real GDP decreased 2.8 percent in the fourth quarter of 2007 after increasing 3.7 percent in the third quarter. In Michigan, which had been heavily affected by a decrease in manufacturing activity, real GDP decreased 8.3 percent in the fourth quarter after increasing 0.5 percent in the third quarter.

In all three states, the sharp declines in GDP in the fourth quarter of 2007 were not readily apparent in the annual statistics. For example, real GDP in Arizona increased 2.8 percent over the entire year, mainly because of growth in the second and third quarters of 2007. Real GDP in Florida increased by 0.4 percent as a result

of growth in the second and third quarters. Real GDP in Michigan decreased by 1.5 percent reflecting a significant decline in the fourth quarter.

The new quarterly statistics also show greater variability of economic activity across quarters that is not apparent in the annual statistics. For example, real GDP for Arizona grew 2.8 percent in 2007 and declined 2.9 percent in 2008. The quarterly data, however, makes clear that the general decline in real GDP actually began in the fourth quarter of 2007 and continued through the third quarter of 2009 (chart 2).

Michigan provides an example of how the severity of the recession in a particular state was greater than that suggested by the annual GDP by state statistics. The annual data show that real GDP declined nearly 5 percent in 2008 after decreasing 1.5 percent in 2007. Yet the quarterly data show that real GDP increased in the first and second quarters of 2008 before declining dramatically in the third and fourth quarters (chart 3). The annual statistic does not fully reveal the depth of the 12.3 percent decline in the fourth quarter of 2008.

Industry detail

The new quarterly statistics do not provide as much industry detail as provided by the annual statistics. Still, the 21 industry sectors included in the quarterly statistics can be used to gain insight into various trends.

Consider the North Dakota mining boom that began in 2008. This industry has grown dramatically as new technologies enabled more extraction of oil in the Bakken shale formation. The new prototype statistics

Chart 2. Percent Changes in Real GDP for Arizona

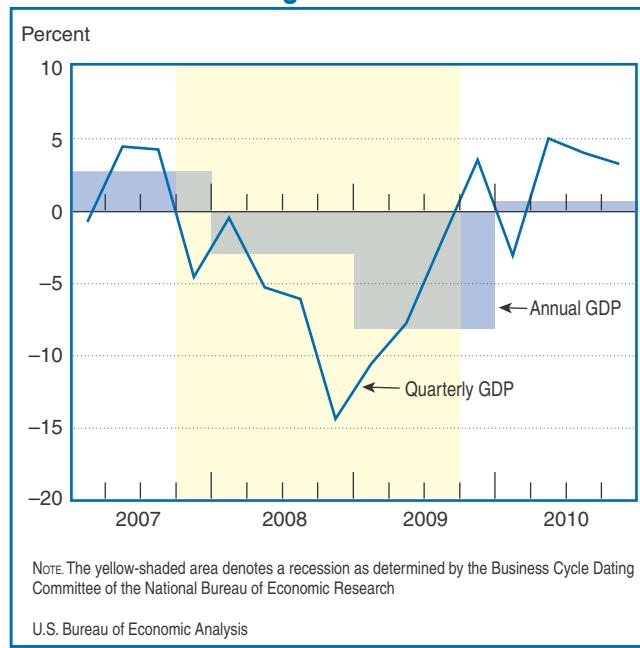

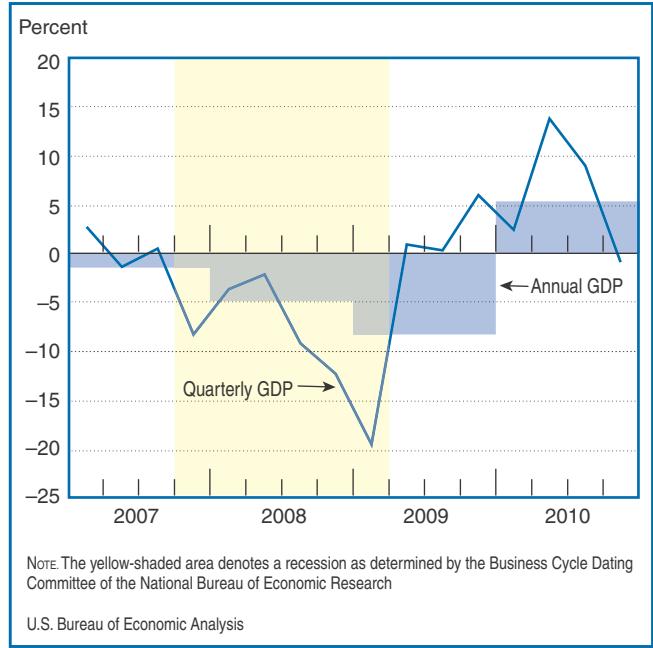

Chart 3. Percent Changes in Real GDP for Michigan

show that real GDP growth in the state began to accelerate in the second quarter of 2008 (chart 4). With the exception of a few quarters, mining has been the leading contributor to growth since that time. Mining's share of current-dollar GDP in North Dakota was 2.7 percent in 2005, increasing to 15.1 percent in 2013, surpassing real estate and rental and leasing and agriculture, forestry, fishing, and hunting, and becoming the state's largest industry (chart 5).

In addition, consider the effect of both the construction sector and the real estate and rental and leas-

ing sector in Nevada during the most recent housing bust. In particular, the prototype quarterly statistics show that construction drove the decline in the state's real GDP, beginning in the first quarter of 2008 (chart 6). In 2009, construction was the major detractor from growth in three of the four quarters. In fact, the decline in construction was so severe that mining, which was less than half of the size of the construction sector in 2007, surpassed this sector in terms of size in the fourth quarter of 2010 (chart 7). Real estate and rental and leasing peaked in the third quarter of 2007 and

Chart 4. Real GDP for North Dakota

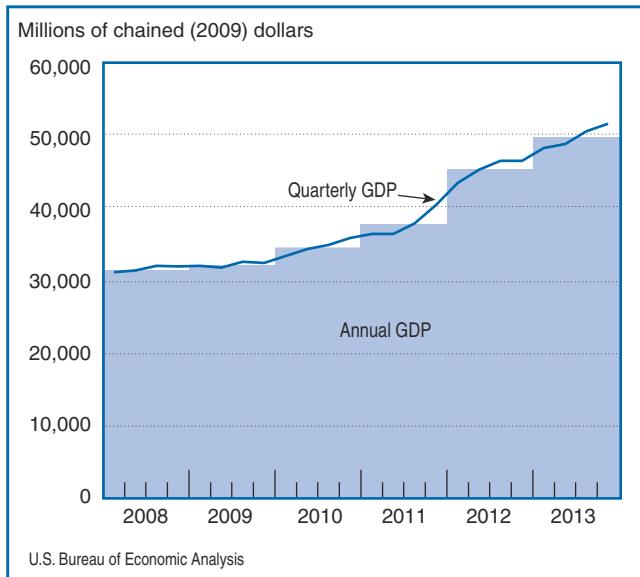

Chart 6. Real GDP for Nevada

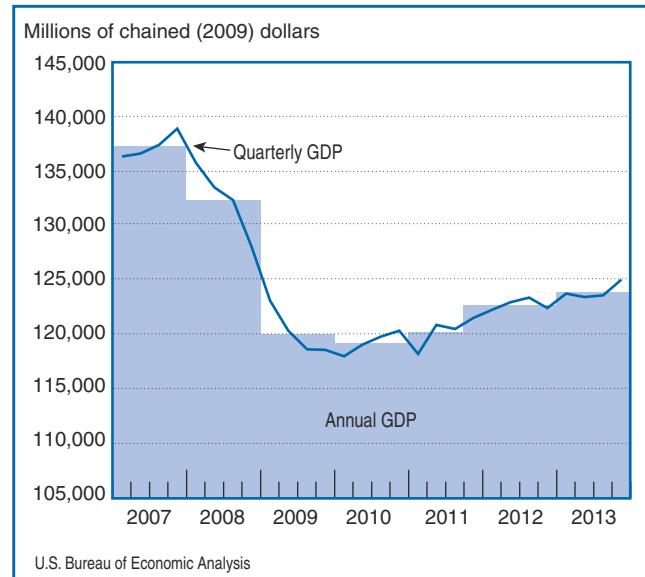

Chart 5. Real GDP for North Dakota for Mining, Real Estate and Rental and Leasing, and Agriculture, Forestry, Fishing, and Hunting

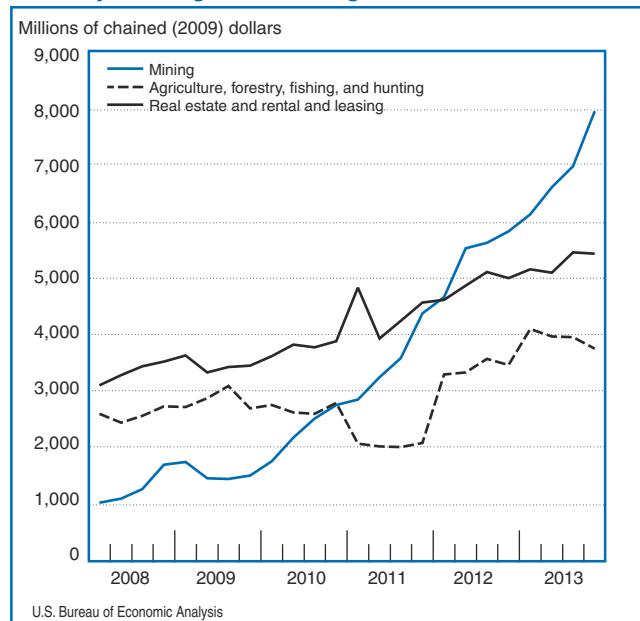

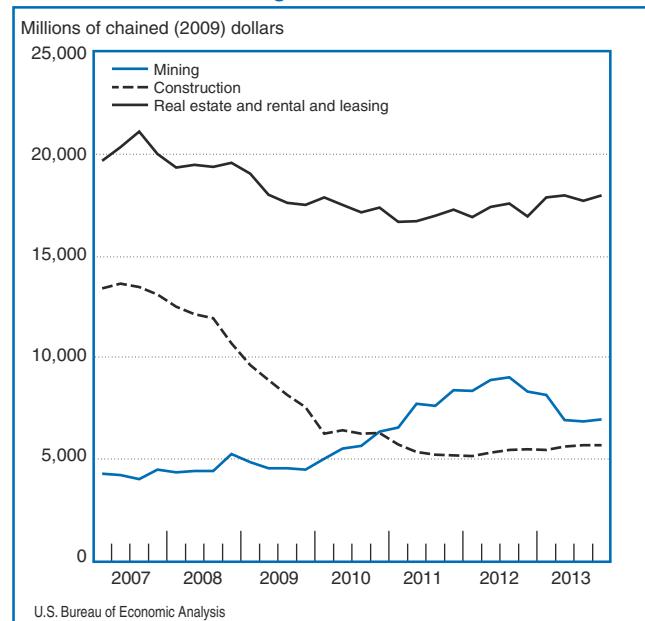

Chart 7. Real GDP for Nevada for Mining, Real Estate and Rental and Leasing, and Construction

steadily declined to a trough in the first quarter of 2011. Since then, this industry has trended slightly upward but has not reached its 2007 level. These statistics make clear that construction and real estate and rental and leasing in the state have far from recovered to previous levels.

Data and Methodology

The prototype quarterly GDP by state statistics are prepared in two steps. First, current-dollar statistics are prepared using annual information from BEA's GDP by state accounts and quarterly information from BEA's national industry and regional personal income accounts. Second, the current-dollar statistics are deflated with information on prices from the quarterly industry accounts to create real (chained-dollar) statistics.

Current-dollar GDP by state

Quarterly current-dollar GDP by state statistics are prepared using an iterative process of interpolating the annual GDP by state statistics and scaling to the national quarterly GDP by industry statistics. Initial quarterly GDP by state estimates for 21 industries are created using quarterly earnings by state and industry as a pattern series to interpolate the annual statistics.²

2. These 21 industries are at about the two-digit or sector level of the North American Industry Classification System and match the most detailed industries that are published for the advance annual statistics on GDP by state.

Data Availability

The prototype statistics on quarterly gross domestic product (GDP) by state described in this article are available on BEA's regional accounts Web site. Quarterly data on GDP by state in [current dollars](#) and in [real chained \(2009\) dollars](#) for 2005–2013 are available for each state and the District of Columbia.

To access these data, select the “Regional” tab at the top of the BEA home page at www.bea.gov, click on “Quarterly GDP by State” in [News Releases](#) section, and click one of the tables under the “Related Files” on the right side of the page.

The initial estimates of quarterly GDP by state are then scaled to national quarterly GDP by industry statistics. Scaling is done by subtracting the sum of the initial GDP by state estimates by industry from the national quarterly GDP by industry.

For each industry, the difference is allocated to each of the states based on the state's ratio of the initial GDP estimate divided by the sum-of-states GDP. This is done for 20 of the 21 industries because there is a direct match between the GDP by state and the national quarterly GDP by industry statistics. National quarterly GDP by industry statistics for the government sector are adjusted to account for small definitional differences between GDP by state and GDP by industry statistics.³

The iterative process of interpolating the annual GDP by state statistics and scaling to the national quarterly GDP by industry statistics is finalized by interpolating to the annual GDP by state statistics. Beginning in the second round, the previously scaled quarterly GDP by state estimates are used as the pattern series to interpolate annual GDP by state statistics in place of the quarterly earnings used in the first round.

3. GDP by state excludes federal military and civilian activity located overseas (because it cannot be attributed to a particular state) that is included in national GDP.

Acknowledgments

The prototype statistics on quarterly gross domestic product (GDP) by state were prepared by the Regional Product Division under the direction of Charles Ian Mead, Chief, and Clifford H. Woodruff III, Chief of the Regional Product Branch. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. Lam X. Cao, Todd P. Siebeneck, and Catherine (Zheng) Wang, Chief of the GDP by State Goods Section, created and reviewed the statistics. Thomas F. Howells of the Industry Applications Division provided insights into the methodology for national quarterly GDP by industry, and Jonas D. Wilson of the Data and Administrative Systems Group prepared the map and tables for this article.

Real (chained-dollar) GDP by state

Real (chained-dollar) statistics for the 21 industries are prepared by directly deflating the current-dollar statistics. For the three aggregate industries (all industry total, private industries, and manufacturing), real statistics are created by chaining the appropriate industries. This procedure is the same as that used in the creation of annual statistics on real GDP by state.

For the 21 nonaggregate industries, quarterly price indexes are individually created for all 50 states and the District of Columbia using national quarterly GDP by industry chain-type price indexes to interpolate the annual GDP by state implicit price deflators.⁴ Quarterly real dollar statistics are created by deflating current-dollar GDP by state.

For the three aggregate industries, quarterly statistics are derived using the same chain-type index formula that is used in the national income and product accounts and the annual GDP by state accounts.

4. Annual GDP by state implicit price deflators were created by dividing annual real (chained-dollar) statistics by the corresponding current-dollar statistics.

Next steps

As the new set of quarterly GDP by state statistics are being prepared for release late next year, BEA is seeking comments on the potential uses of the data, the methodology, and the enhancements to the data that would be most beneficial to users. Comments should be directed to staff at gdpbystate@bea.gov.

Depending partly on user feedback, BEA plans to introduce quarterly GDP by state statistics as an official statistical product of BEA that would be updated quarterly. Over the next year, planned areas of focus include incorporating new data from the quarterly industry accounts and conducting further analysis of extrapolation methods to produce additional quarters of data.

BEA's goal is to release quarterly GDP by state within 6 months after the end of the quarter in the next calendar year. A long-term consideration is the acceleration of the release of these statistics by at least a month.

(D) Data are suppressed to avoid disclosure of confidential information.

1. The U.S. values may differ from the National Income and Product Account (NIPA) values because of revisions to the

NIPA values as well as the GDP-by-state accounts excluding Federal military and civilian activity located overseas (because it cannot be attributed to a particular state).

(D) Data are suppressed to avoid disclosure of confidential information.

1. The U.S. values may differ from the National Income and Product Account (NIPA) values because of revisions to the

NIPA values as well as the GDP-by-state accounts excluding Federal military and civilian activity located overseas

(because it cannot be attributed to a particular state).

Table 3. Contributions to Percent Change in Real Gross Domestic Product (GDP) by State, 2013:I–2013:II—Continues
 [Seasonally adjusted at annual rates; percentage points]

| | Percent change in real GDP by state | Agriculture, forestry, fishing, and hunting | Mining | Utilities | Construction | Durable-goods manufacturing | Nondurable-goods manufacturing | Wholesale trade | Retail trade | Transportation and warehousing | Information | Finance and insurance |

(D) Data are suppressed to avoid disclosure of confidential information.

1. The U.S. values may differ from the National Income and Product Account (NIPA) values because of revisions to the

NIPA values as well as the GDP-by-state accounts excluding Federal military and civilian activity located overseas (because it cannot be attributed to a particular state).

Table 4. Contributions to Percent Change in Real Gross Domestic Product (GDP) by State, 2012:IV–2013:I—Continues

Second quarter of 2014

State personal income growth accelerated in California, Florida, and 34 smaller states in the second quarter of 2014 but slowed in New York, Texas and 8 other states.¹ Growth continued at the same pace in the second quarter as in the first quarter in two states (Colorado and Hawaii), and growth resumed in the second quarter in two states (Iowa and Nebraska) after falling in the first quarter. On average, growth accelerated to 1.5 percent from 1.2 percent in the first quarter (chart 1). Growth ranged from 2.7 percent in North Dakota and Nebraska to 1.1 percent in New York and Alaska.

Property income (dividends, interest, and rent), which grew 1.8 percent in the second quarter after growing 0.2 percent in the first quarter, accounted for most of the acceleration in second-quarter personal income growth. Net earnings grew 1.4 percent, and transfer receipts grew 1.6 percent in the second quarter, the same rates at which they grew in the first quarter.

1. State personal income, which is measured in current dollars, is the sum of net earnings by place of residence, property income, and personal current transfer receipts. Quarterly estimates in dollars are expressed at seasonally adjusted annual rates; quarter-to-quarter percent changes are not annualized.

Chart 1. Range of State Personal Income Quarterly Growth Rates

Quarterly State Personal Income

The inflation rate, as measured by the national price index for personal consumption expenditures, accelerated to 0.6 percent in the second quarter from 0.3 percent in the first quarter.

Earnings by industry

Overall, earnings grew \$149.0 billion (1.4 percent) in the second quarter, slightly less than the \$156.2 billion (1.5 percent) growth in the first quarter (table A). Earnings grew in 22 of the 24 industries for which BEA prepares

quarterly estimates with the largest nonfarm increases in health care (\$17.4 billion), professional services (\$17.1 billion), retail trade (\$13.7 billion), and durable goods manufacturing (\$12.8 billion).

Earnings in mining were up 5.5 percent in North Dakota, 2.4 percent in West Virginia, 1.9 percent in Texas and 1.5 percent in Alaska but fell 0.4 percent in Oklahoma. Despite the second-quarter decline in Oklahoma, mining earnings were up \$3.2 billion over the last three years, an increase larger than every other state's except Texas'. In West Virginia, mining earnings increased after trending downward since the third quarter of 2011 (chart 2). Mining in West Virginia is dominated by coal mining, in contrast to the other states in which oil and gas extraction and support activities for mining predominate (table B).

Table B. Composition of Mining Earnings, 2013

| | [Percent of total] | | | | |
|-------------------------------------|--------------------|--------|--------------|----------|-------|
| | United States | Alaska | North Dakota | Oklahoma | Texas |
| Oil and gas extraction | 62.0 | 37.8 | 15.0 | 77.4 | 75.5 |
| Mining (except oil and gas)..... | 13.7 | 14.4 | 7.0 | 1.1 | 1.3 |
| Support activities for mining | 24.3 | 47.9 | 78.1 | 21.5 | 23.2 |

Durable-goods manufacturing contributed the most to nonfarm earnings growth in 15 states, but in the state of Washington, durable-goods manufacturing earnings fell 2.9 percent. The decline followed a quarter in which bonuses were paid, providing an earnings lift. Even so, second-quarter earnings in Washington were above the year-ago level.

Chart 2. Mining Earnings for Alaska, Oklahoma, Texas, and West Virginia

Quarterly State Personal Income

Earnings fell 1.3 percent in the second quarter in Alaska's information industry, which is mostly telecommunications. In contrast, second-quarter information earnings grew 0.8 percent in California and 1.4 percent in the state of Washington, two of the three states with the largest information sectors. Washington's information industry is dominated by publishing industries, including software publishing, while almost half of California's information industry consists of motion pictures and other information services, which includes web search portals (table C).

Table C. Composition of Information Earnings, 2013
[Percent of total]

| | United States | Alaska | California | Washington |
|--|---------------|--------|------------|------------|
| Publishing industries, except Internet.... | 24.5 | 7.7 | 17.0 | 69.1 |
| Motion picture and sound recording industries | 9.7 | 2.3 | 22.3 | 1.2 |
| Broadcasting, except Internet..... | 20.7 | 11.1 | 16.5 | 4.6 |
| Telecommunications | 25.5 | 76.8 | 12.6 | 14.4 |
| Data processing, hosting, and related services | 8.8 | 0.8 | 4.9 | 3.0 |
| Other information services..... | 10.7 | 1.4 | 26.7 | 7.7 |

Finance, the largest industry in Connecticut, Delaware, and New York, fell in the second quarter in Connecticut and New York but continued to grow in Delaware (chart 3). The industry is dominated by securities and insurance in Connecticut and New York and by credit intermediation in Delaware (table D).² In both

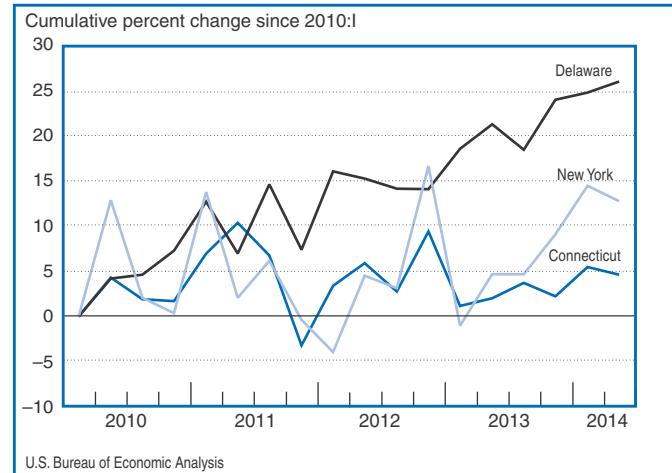

2. The credit intermediation industry includes, among other things, firms engaged in commercial banking and credit card issuing.

Connecticut and New York, the earnings decline followed a quarter in which bonuses were paid. Still, in both cases, second-quarter earnings were above year-ago levels.

Table D. Composition of Finance and Insurance Earnings, 2013
[Percent of total]

| | United States | Connecticut | Delaware | New York |
|--|---------------|-------------|----------|----------|
| Credit intermediation and related activities..... | 33.1 | 14.8 | 59.4 | 18.6 |
| Securities, commodity contracts, investments | 33.5 | 44.3 | 23.9 | 64.6 |
| Insurance carriers and related activities.. | 31.7 | 37.8 | 16.2 | 15.6 |
| Other..... | 1.6 | 3.0 | 0.4 | 1.3 |

Chart 3. Finance and Insurance Earnings for Connecticut, Delaware, and New York

Quarterly State Personal Income

For the second consecutive quarter, the earnings increase in Texas was larger than in every other state (table E). Earnings in Texas, which accounted for 8.9 percent of the nation's earnings, grew \$19.2 billion while earnings in California, which accounted for 13.2 percent of the nation, grew \$16.9 billion.

North Dakota, the fastest growing state in the second quarter (3.1 percent), had particularly large contributions to nonfarm earnings growth from its mining (including oil and gas extraction), construction, and transportation industries.

Table E. Growth of Personal Income and Earnings by State

| | Personal income | | Earnings by place of work | | | |

NOTE. Earnings by place of work.

Annual State Personal Income

As is customary in September, BEA released several sets of detailed annual statistics for the previous year: tax payments by level of government; transfer receipts by major program; a decomposition of property income into imputed and monetary components; detailed farm income and expenses; and wages, compensation, earnings, and employment for three-digit North American Industry Classification System (NAICS) industries. The new estimates are based on surveys and tabulations of administrative data. In some cases they replace previously reported averages of quarterly estimates of taxes, transfers, and farm proprietors' income that were based on extrapolations of past trends.

Dividends, interest, and rent

Dividends, interest, and rent (property income) grew 2.1 percent in 2013, compared with 9.3 percent in 2012 (table F). All of the increase in 2013 was accounted for by rental income of persons, which grew 11.8 percent, while personal dividend income fell 1.0 percent and personal interest income fell 0.1 percent. Monetary rent grew 4.6 percent, and imputed rent, which accounts for the net rental income of owner-occupied housing, grew 15.4 percent.

Table F. Growth of U.S. Dividends, Interest and Rent

| | Percent change | | Dollar change (millions of dollars) | |

| Monetary interest receipts..... | 2.8 | 1.2 | 11,664 | 4,907 |
| Rental income of persons ² | 9.8 | 11.8 | 47,675 | 62,856 |
| Imputed rent..... | 8.9 | 15.4 | 29,188 | 54,762 |
| Monetary rent..... | 11.7 | 4.6 | 18,487 | 8,094 |

1. Consists of imputed interest received from (1) finance and insurance companies and (2) employee pension plans.

2. Rental income of persons includes the capital consumption adjustment.

In North Dakota, imputed rent increased 128 percent from 2009 to 2013, and monetary rent, which also includes royalties from rights to natural resources such as oil and gas, increased more than 150 percent (chart 4). Over the same period, which coincides with the state's energy boom, North Dakota's population growth has been the fastest of all states. In fact, North Dakota's population growth has accelerated every year since 2009. In 2013, it grew 3.1 percent, several times larger than the national population growth rate (0.7 percent). North Dakota has also seen the largest increase in the regional price parity index for rents, which increased 17.1 percent from 2009 to 2012.¹

1. The North Dakota regional price parity for rents represents the average rent paid by consumers in North Dakota relative to the national average. Data for 2013 are not available.

Personal current transfer receipts

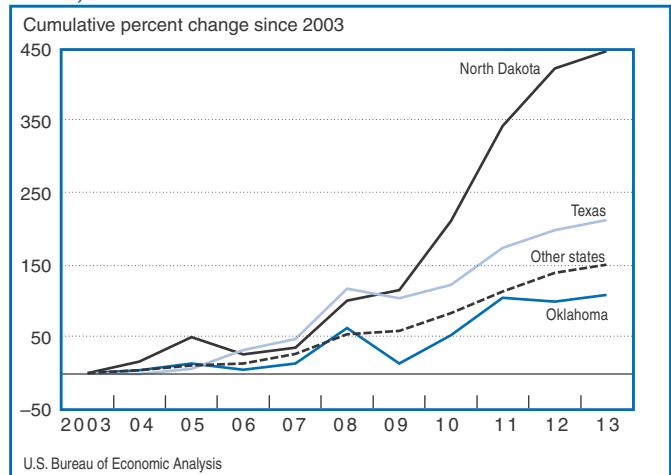

Personal current transfer receipts growth accelerated to 2.7 percent in 2013 from 1.9 percent in 2012 (table G). Income maintenance benefits, which increased 0.8 percent in 2013 after falling 4.5 percent in 2012, played a major role in the acceleration. Income maintenance benefits include assistance from programs such as Supplemental Security Income, Supplemental Nutrition Assistance, and the Earned Income Tax Credit. In contrast, the growth in retirement and disability insurance benefits slowed to 4.6 percent in 2013 from 6.6 percent in 2012. The slowdown reflected a smaller cost-of-living adjustment in 2013 (1.7 percent) than in 2012 (3.6 percent).

Table G. Growth of Personal Current Transfer Receipts

| | Percent change | | Dollar change (Millions of dollars) | |
|---|----------------|-------|--|---------|
| | 2012 | 2013 | 2012 | 2013 |
| Personal current transfer receipts..... | 1.9 | 2.7 | 42,802 | 63,811 |
| Receipts of individuals from governments..... | 2.2 | 2.8 | 49,026 | 64,090 |
| Retirement and disability insurance benefits..... | 6.6 | 4.6 | 48,989 | 36,596 |
| Medical benefits | 3.3 | 3.9 | 31,618 | 39,067 |
| Income maintenance benefits | -4.5 | 0.8 | -12,372 | 2,105 |
| Unemployment insurance compensation | -21.7 | -25.7 | -23,435 | -21,665 |
| Veterans benefits | 10.8 | 12.7 | 6,848 | 8,838 |
| Education and training assistance | -2.8 | -1.5 | -1,814 | -949 |
| Other transfer receipts of individuals from governments | -18.2 | 0.5 | -808 | 18 |
| Receipts of individuals from businesses | -25.1 | -1.7 | -8,897 | -448 |
| Receipts of nonprofit institutions | 7.4 | 0.4 | 2,673 | 169 |

Personal current transfer receipts declined 2.7 percent in 2013 in Alaska, the only state with a decline. A 19.0 percent decline in Medicaid benefits to the lowest level since 2009 accounted for the decline in total transfer receipts in Alaska. Personal current transfer receipts increased 6.3 percent in Maine, the fastest pace among the states. A 20.9 percent increase in Medicaid benefits accounted for most of the increase in Maine.

Chart 4. Monetary Rent for North Dakota, Oklahoma, Texas, and All Other States

Revisions to Annual State Personal Income

The Bureau of Economic Analysis (BEA) has revised its quarterly and annual state personal income statistics. Each September, BEA typically revises the preliminary estimates released in March in order to incorporate the results of the annual revision of the national income and product accounts (NIPAs), to incorporate state source data that are more complete and more detailed than those previously available (table H on page 8), and to update the seasonal factors used for the quarterly estimates.¹

In general, the estimates were revised from the first quarter of 2001 to the first quarter of 2014. The annual estimates of certain components of the finance and insurance industry—but not the annual totals—were revised from 1998 to 2000. In addition, the annual estimates of monetary and imputed interest receipts—but not annual totals of personal interest income—were revised from 1958 to 2000.

Some farm income and expense source data from the United States Department of Agriculture (USDA) and Medicaid benefits source data from the Center for Medicare and Medicaid Services, which are usually incorporated at this time, were not available.

The national estimate of personal income for 2013, which controls the state estimates, was revised up 0.5 percent (\$70.2 billion).² Property income was revised up 3.4 percent (\$87.0 billion) and more than accounted for the total revision to personal income. Nonfarm proprietors' income was also revised up 2.7 percent (\$32.8 billion).

The unweighted average revision to 2013 personal income in the 50 states and the District of Columbia was 0.3 percent (table I). The average absolute revision was 1.0 percent, and the dispersion of the revisions (or standard deviation) was 1.5 percent.

The largest upward revision in 2013 was for Wyoming (3.7 percent). Most of this revision (3.4 percentage points) was accounted for by a revision to property in-

1. See Stephanie H. McCulla, Alyssa E. Holdren, and Shelly Smith, “The 2014 Annual Revision of the National Income and Product Accounts,” SURVEY OF CURRENT BUSINESS 94 (August 2014).

2. The national components of personal income are estimated independently of the state components, oftentimes using data sources that are not available for states. To ensure that the sum of state estimates equal the national estimate, the state estimates are adjusted. In other words, the national estimate controls the sum of the state estimates.

(L) Less than 0.05 percent.

Note: The annual revisions are calculated from the March 2014 release.

Revisions to Annual State Personal Income

come due to the incorporation of new source data from the Internal Revenue Service (IRS) for dividends, interest, and rent reported on 2012 income tax returns (table J).

The largest downward revision in 2013 was for North Dakota (6.8 percent). Most of this revision (8.8 percentage points) was accounted for by a revision to farm pro-

prietors' income. The revision to farm proprietors' income was primarily due to the incorporation of 2013 state-level crop production data from USDA. The revisions to nonfarm proprietors' income in North and South Carolina and South Dakota were mostly in the credit intermediation industry and resulted from the incorporation of new source data from the IRS.

Table J. Contributions to the Revision of Personal Income by Component by State for 2013

| | Revision (percent) | Contributions to the revision (percentage points) | | | | | | | |

Personal Income in the NIPAs and State Personal Income

The level of personal income in the national income and product accounts (NIPAs) differs from the national total in the state personal income statistics because of differences in coverage and timing of the availability of source data.

The differences in coverage stem from different concepts of residence. For NIPA personal income, a U.S. resident has a center of economic interest in the country and resides, or expects to reside, in the country for a year or more. For state personal income, a resident is a participant in a U.S. regional economy, regardless of the individual's national citizenship or duration of residence.¹

In general, the NIPA measure of personal income is broader than state personal income. Some key coverage differences are:

- NIPA personal income includes the earnings of federal civilian and military personnel stationed abroad and the property income received by the federal retirement plans of these workers. The regional measure of personal income does not include this income.²
- NIPA personal income includes all income earned by U.S. citizens living abroad for less than a year. State personal income excludes the portion earned while an individual lives abroad.
- NIPA personal income includes the income of foreign nationals only if they live and work in the United States for a year or more. State personal income includes the income of resident foreign nationals working in the United States—including migrant workers—regardless of length or residency.

The annual estimates of personal income in the NIPAs also diverge from the national totals of state personal income because of differences in the timing of the availability of source data. For example, farm proprietors'

income in the NIPAs differs from state personal income, because the state estimates of farm proprietors' income incorporated revised U.S. Department of Agriculture data, which were not available until after the national estimate was released.

Both NIPA and state personal income include the income of U.S. residents employed by international organizations or by other countries while living in the United States and exclude the income of foreign nationals employed by their home governments. NIPA personal income also includes the income of foreign nationals working at international organizations in the United States.³ In addition, both measures exclude the income of private U.S. citizens living outside the country for a year or more.

3. For more information on the treatment of border workers in the residence adjustment, see [State Personal Income and Employment](#).

State and National Estimates of Personal Income

[Billions of dollars]

| | 2011 | 2012 | 2013 |
|---|-----------------|-----------------|-----------------|
| Personal income in the NIPAs | 13,202.0 | 13,887.7 | 14,166.9 |
| Plus adjustments for: | | | |
| Coverage differences | -15.9 | -14.9 | -14.1 |
| Federal workers abroad | -27.2 | -26.9 | -26.7 |
| Wages and salaries | -18.2 | -17.8 | -17.8 |
| Supplements to wages and salaries ¹ | -6.2 | -6.1 | -5.9 |
| Dividends, interest, and rent ² | -4.4 | -4.6 | -4.8 |
| Less: Contributions for government social insurance | -1.6 | -1.6 | -1.8 |
| Rest-of-the-world difference | 11.3 | 12.0 | 12.6 |
| Wages of private foreign nationals in U.S. | 12.4 | 13.1 | 13.8 |
| Wages of private U.S. residents abroad | -1.1 | -1.1 | -1.2 |
| Use of more current source data | 4.7 | 3.3 | 4.9 |
| Wages and salaries..... | 0.1 | 0.1 | 0.0 |
| Proprietors' income | 4.6 | 3.2 | 4.9 |
| Personal current transfer receipts | <0.1 | <0.1 | <0.1 |
| Statistical discrepancy ³ | -0.9 | -2.9 | -6.3 |
| Equals: State personal income | 13,189.9 | 13,873.2 | 14,151.4 |

1. Employer contributions for government social insurance and for employee pension and insurance funds for Federal workers stationed abroad.

2. Investment income received by Federal retirement plans that is attributed to Federal workers stationed abroad.

3. Includes revisions made in the NIPAs that are not yet reflected in state personal income concerning wages of border workers and foreign nationals working for international organizations.

Jeffrey L. Newman

Data Availability

The complete set of quarterly and annual state personal income and employment statistics for all states and the District of Columbia and for all years are available interactively on BEA's Web site.

In general, the estimates were revised for 2001 forward. In addition, the annual estimates of certain components of the finance and insurance industry—but not the annual totals—were revised for 1998–2000, and the annual estimates of monetary and imputed interest receipts—but not annual totals of personal interest income—were revised for 1958–2000.

The following annual estimates are available interactively on [BEA's Web site](#).

- Personal income, per capita personal income, and population for 1929–2013
- Disposable personal income and per capita disposable personal income for 1948–2013
- State income and employment summary, 1929–2013
- Personal income by major source and earnings by industry (North American Industry Classification System (NAICS) three digit) for 1998–2013, (Standard Industrial Classification System (SIC) two digit) for 1958–2001, and (SIC division level) for 1929–57
- Compensation of employees by industry (NAICS three digit) for 1998–2013 and (SIC two digit) for 1958–2001
- Wages and salaries by industry (NAICS three digit) for 1998–2013, (SIC two digit) for 1958–2001, and (SIC division level) for 1929–57
- Full-time and part-time employment by industry (NAICS three digit) for 1998–2013 and (SIC two digit) for 1969–2001
- Full-time and part-time wage and salary employment by industry (NAICS three digit) for 1998–2013 and (SIC two digit) for 1969–2001
- State economic profiles (a selection of personal income and employment data for each state) for 1958–2013
- Personal current transfer receipts by major program for 1948–2013
- State property income for 1958–2013
- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and

for measures of farm income) for 1969–2013

- Personal current tax receipts by level of government and by type for 1948–2013
- BEARFACTS, a computer generated narrative with analytical charts and graphs, that describes a state's personal income using current estimates, growth rates, and a breakdown of the sources of personal income

The following quarterly estimates are also available interactively at [www.bea.gov](#):

- Personal income for the first quarter of 1948 to the second quarter of 2014
- Quarterly income summary for the first quarter of 1948 to the second quarter of 2014
- Personal income by major source and earnings by major industry (NAICS two digit) for the first quarter of 1998 to the second quarter of 2014
- Personal income by major source and earnings by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001
- Compensation of employees by industry (NAICS two digit) for the first quarter of 1998 to the second quarter of 2014
- Compensation of employees by industry (SIC division level) for the first quarter of 1958 to the fourth quarter of 2001
- Wages and salaries by major industry (NAICS two digit) for the first quarter of 1998 to the second quarter of 2014
- Wages and salaries by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001
- Personal current transfer receipts for the first quarter of 1948 to the second quarter of 2014

The state personal income statistics are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA disseminate the statistics in their states. A list of the BEA user groups is available on [BEA's Web site](#).

For more information about the statistics, contact the Regional Income Division at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

Acknowledgments

The annual revision of state personal income was prepared by the Regional Income Division under the direction of Mauricio Ortiz, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a division-wide effort.

The estimates of nonfarm wages and salaries, supplements to wages and salaries, and personal current tax receipts were prepared by the Compensation Branch under the supervision of John A. Rusinko, Chief. Major responsibilities were assigned to Peter Battikha, Michael L. Berry, Elizabeth P. Cologer, John D. Laffman, David G. Lenze, Paul K. Medzerian, and Joseph L. Stauffer. Contributing staff members were Terence J. Fallon, Michael W. Jadoo, Russell C. Lusher, Nathaniel R. Milhous, Michael A. Reid, and Ross A. Stepp.

The quarterly estimates of state personal income and the annual estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional

Income Branch, under the supervision of Lisa C. Ninomiya, Chief. Major responsibilities were assigned to Brian J. Maisano, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Nacola A. Alexander, Suet M. Boudhraa, Andy K. Kim, Enrique B. Lopez, Toan A. Ly, W. Timothy McKeel, Linda M. Morey, and Troy P. Watson.

The estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income were prepared by the Farm Income and Employment Section under the supervision of James M. Zavrel, Assistant to the Division Chief. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin, Michelle A. Harder, and Brooke N. Pearson.

The public use tabulations and data files were assembled and the tables were prepared by the Data and Administrative Systems Group. Major responsibilities were assigned to Jeffrey L. Newman, Michael J. Paris, and Calian S. Swenson. Contributing staff members were Melanie Carrales, Monique B. Tyes, and Jonas D. Wilson.
