 SOI Statistics of Income

1. In these descriptions, "new" indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and "revised" indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.
2. Revisions reflect the annual revision of BEA's international transactions accounts (ITAs). For more information, see Eric Bryda, C. Omar Kebbeh, and Ted Peck, "Annual Update of the U.S. International Transactions Accounts," Survey 99 (July 2019).
3. The statistical discrepancy is gross domestic product (GDP) less gross domestic income (GDI); it is also the difference between gross national product (GNP) and gross national income (GNI), which is GDI plus net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GDP and GNP are estimated independently from the income-side measures of GDI and GNI.
