

U.S. Travel and Tourism Satellite Account for 1999–2020

By Sarah Osborne

The travel and tourism industry—as measured by the real output of goods and services sold directly to visitors—decreased 48.0 percent in 2020 after increasing 1.0 percent in 2019, according to the most recent statistics from the Travel and Tourism Satellite Account (TTSA) of the U.S. Bureau of Economic Analysis (BEA).¹ By comparison, the broader economy, as measured by real gross domestic product (GDP), decreased 3.4 percent in 2020 after increasing 2.3 percent in 2019. Revised statistics on travel and tourism reflect the incorporation of the annual update of the Industry Economic Accounts, which was released on September 30, 2021.²

Highlights from the TTSA include the following:

- This is the largest contraction in real output since the TTSA began measuring these statistics in 1998.
- Travel and tourism's share of GDP fell from 2.92 percent in 2019 to a historic low of 1.71 percent in 2020. It remains larger than agriculture, mining, and utilities.
- The full economic effects of the COVID-19 pandemic cannot be quantified in the TTSA estimates for 2020 because the impacts are generally embedded in source data and cannot be separately identified.
- Real output decreased in each of 24 commodities in 2020. The largest contributors to the decrease included gasoline, domestic passenger air transportation services, food and beverage services, and traveler accommodations.
- Prices for tourism goods and services decreased 4.8 percent in 2020. The largest contributor to the decrease in 2020 was the price of traveler accommodations, followed by the price of domestic passenger air transportation services, and the price of gasoline.
- Price growth turned down from 1.4 percent in 2019 to –4.8 percent in 2020.
- The TTSA is available on the BEA website; see the box “Data Availability.”

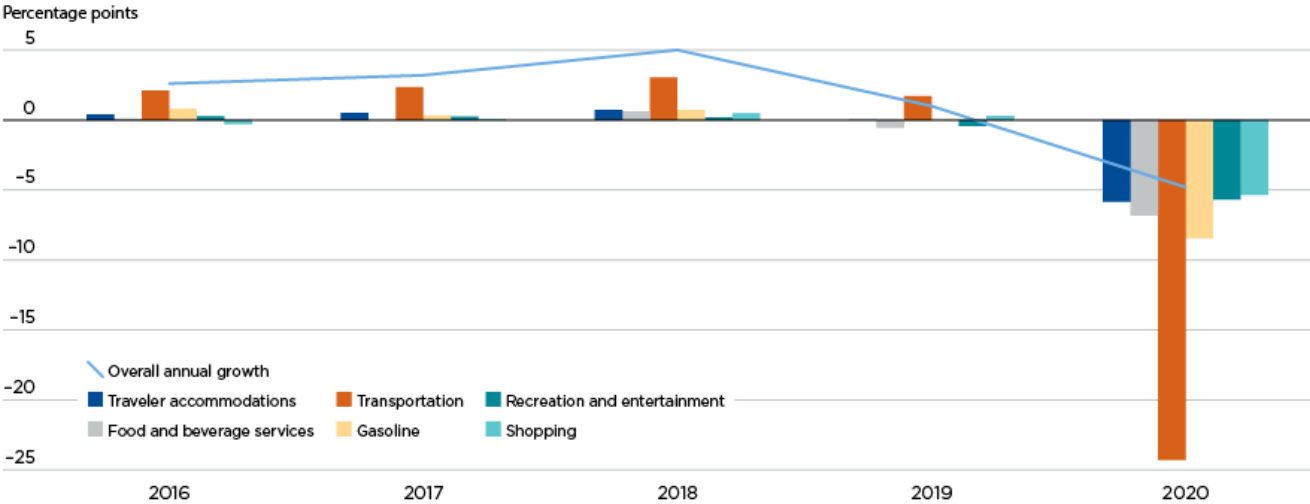

The remainder of this article includes a discussion of trends in travel and tourism output and prices, tourism value added, and employment.

Trends in Output and Prices

Real output

The leading contributors to the 48.0 percent contraction in real travel and tourism output were gasoline, which decreased 83.7 percent and contributed -8.44 percentage points to the real output decline; domestic passenger air transportation services, which decreased 46.6 percent and contributed -7.08 percentage points; food and beverage services, which decreased 49.7 percent and contributed -6.83 percentage points; and traveler accommodations, which decreased 30.0 percent and contributed -5.85 percentage points. (table A and chart 1).

Chart 1. Contributions to Annual Growth in Real Tourism Output in 2016-2020

U.S. Bureau of Economic Analysis

Table A. Annual Growth, Contributions to Growth, and Levels of Real Output by Tourism Commodity in 2016–2020

The downturn in real output was led by the downturn in domestic passenger air transportation services spending, which decreased 46.6 percent in 2020 after reaching 5.7 percent growth in 2019. Other large contributors to the downturn included gasoline, which decreased 83.7 percent in 2020 after decreasing 0.4 percent in 2019; traveler accommodations, which showed a 30.0 percent decrease in 2020 after remaining flat in 2019, and food and beverage services, which decreased 49.7 percent, a sharper decline than the 4.0 percent decline in 2019.

Prices

Travel and tourism prices decreased 4.8 percent in 2020, after 3 years of increasing prices. The price decrease was led by a 7.2 percent decrease in the price of traveler accommodations, contributing -1.67 percentage points to the overall tourism price decline. Other contributors were the prices of domestic passenger air transportation services, which fell 10.0 percent and contributed -1.58 percentage points, and the price of gasoline, which decreased 15.1 percent, and contributed -1.06 percentage points to the overall tourism price decline.

The decrease in overall tourism prices was partly offset by increases in the prices of food and beverage services; the prices of a few of the commodities within other transportation; and the prices of recreation and entertainment (table B and chart 2).

The downturn in the overall tourism price was led by the downturn in the price of traveler accommodations, a 7.2 percent decrease following a 2.9 percent increase in 2019, and the price of domestic passenger air transportation services, which decreased 10.0 percent after increasing 3.4 percent in 2019.

Total output

Total tourism-related nominal output fell to \$978.4 billion in 2020 from \$1.96 trillion in 2019. In 2020, total output consisted of \$564.8 billion in direct tourism output and \$413.6 billion in indirect tourism output. The 1.73 ratio of total output to direct output in 2020 means that every dollar of direct tourism output requires an additional 73 cents of indirect tourism output (chart 3).

Chart 3. Total Tourism-Related Output in 2016–2020

U.S. Bureau of Economic Analysis

Direct tourism output includes goods and services sold directly to visitors, such as passenger air travel. Indirect tourism output includes sales of all goods and services used to produce that direct output, such as jet fuel to fly the plane and catering services for longer flights.

Tourism Value Added and Employment

Value added

A sector's value added measures its contribution to gross domestic product. In 2019, the travel and tourism industry's share of GDP decreased to 1.7 percent from 2.9 percent (table C). While this indicates that travel and tourism industries are contracting disproportionately to non-travel and tourism industries, travel and tourism continued to account for a larger share of GDP than several industries, including utilities, mining, and agriculture.

Table C. Travel and Tourism as a Share of Gross Domestic Product in 2013–2020

Year	Billions of dollars		Percent
	Gross domestic product (GDP)	Tourism value added	Tourism value added as a share of GDP
2013	16,843	475	2.82
2014	17,551	489	2.79
2015	18,206	525	2.89
2016	18,695	540	2.89
2017	19,480	567	2.91
2018	20,527	602	2.93
2019	21,373	625	2.92
2020	20,894	357	1.71

Direct employment

Direct tourism employment refers to jobs that are directly related to visitor spending on goods and services. Airline pilots, hotel clerks, and travel agents are examples of such employees. Overall, direct employment decreased 36.0 percent in 2020, after decreasing 0.5 percent in 2019. The largest contributors to the decrease were food services and drinking places, which lost 822,000 jobs in 2020; traveler accommodations, which lost 482,000 jobs; gasoline, which lost 152,000 jobs; and participant sports and air transportation services, which lost 137,000 and 133,000 jobs respectively (chart 4 and table D).

Chart 4. Contributions to Annual Growth in Direct Tourism Employment in 2016-2020

Table D. Annual Growth, Contributions to Growth, and Levels of Direct Employment by Tourism Industry in 2016–2020

Total employment

Total tourism-related employment (the sum of direct and indirect jobs) decreased to 6.3 million jobs in 2020 from 9.5 million jobs in 2019. The 6.3 million jobs consisted of 3.9 million direct tourism jobs and 2.4 million indirect tourism jobs (chart 5). While direct tourism employment includes jobs that produce direct tourism output, such as airline pilots, indirect tourism employment is generated by the businesses that supply goods and services to the tourism sector, such as refinery workers producing jet fuel. The most recent data indicate that for every 100 jobs supported directly by the travel and tourism industry, an additional 61 indirect tourism jobs are also required.

Chart 5. Total Tourism-Related Employment in 2016-2020

U.S. Bureau of Economic Analysis

Data Availability

The complete set of detailed annual statistics for 1998 through 2020 are available on [BEA's website](#).

Key Terms

The following key terms are used to describe the Travel and Tourism Satellite Account:

- **Domestic tourism.** Travel-related expenditures by U.S. residents traveling within the United States. It comprises travel by resident households, business travel, and travel by government employees.
- **Inbound tourism.** Travel-related expenditures by nonresidents traveling within the United States and expenditures by nonresidents on international transportation purchased from U.S. providers. These expenditures exclude expenditures for travel to study in the United States and for medical reasons.¹
- **Tourism commodities.** Goods and services that are typically purchased by visitors, such as airline passenger transportation, hotel accommodations, and meals.²
- **Tourism employment.** Total tourism-related employment consists of direct tourism employment plus indirect tourism employment. Direct tourism employment comprises all jobs where the workers are engaged in the production of direct tourism output (for example, hotel staff and airline pilots), and indirect tourism employment comprises all jobs where the workers are engaged in the production of indirect tourism output (for example, workers producing hotel toiletries and delivering fuel to airlines).
- **Tourism output.** Total tourism-related output consists of direct tourism output and indirect tourism output. Direct tourism output comprises all domestically produced goods and services purchased by travelers (for example, traveler accommodations and passenger air transportation), and indirect tourism output comprises all output required to support the production of direct tourism output (for example, toiletries for hotel guests and fuel for airplanes).
- **Visitor.** A person who travels outside of his or her usual environment (more than 50–100 miles from the area of normal, everyday activities) for less than a year or who stays overnight in a hotel or motel.³ The visitor may travel for pleasure or business (private sector or government). Visitors exclude travelers who expect to be compensated at the location of their visit (such as migrant workers, persons traveling to new assignments, and diplomatic and military personnel traveling to and from their duty stations and their home countries).

-
1. In the travel and tourism satellite account, inbound and outbound visitors are not differentiated by type of visitor, because the data to prepare these estimates are not available.
 2. The classification of tourism commodities in the Travel and Tourism Satellite Account is based on a list of primary activities of visitors that was developed from recommendations by the World Tourism Organization, by the Organisation for Economic Co-operation and Development, and from various surveys of U.S. visitors.
 3. The distance criterion differs by source data. The Consumer Expenditures Survey (Bureau of Labor Statistics) uses 75 miles from home; surveys by the U.S. Travel Association and surveys by D.K. Shifflet and Associates, use 50 miles from home.

-
1. All measures of travel and tourism activity not identified as being in “real,” inflation-adjusted terms are current-dollar estimates.
 2. For more information see [“The 2021 Annual Update of the Industry Economic Accounts: Revised Statistics for 1999–2020 and the First Quarter of 2021,”](#) *Survey of Current Business* 101 (October 2021).

Acknowledgments

Paul V. Kern of the Expenditure and Income Division supervised the preparation of the estimates. Sarah Osborne prepared the estimates.

Staff members of the Expenditure and Income Division, the Industry Economics Division, the Balance of Payments Division, and the Regional Product Division contributed to the development of the estimates.

The National Travel and Tourism Office of the International Trade Administration provided funding for the preparation of the Travel and Tourism Satellite Account.
