INTRODUCTION.

The third number of the "Survey" is issued with several changes in the form of the tables and with a number of additional items. In particular, information from a number of trade associations are included for the first time. It is believed that these associations will gradually recognize the advantage both to themselves and to business in general of having the significant trends of their industries made public in this manner.

Many of the tables have been rearranged in order to bring together closely related subjects. For example, the table on crop production has been broken up and the various items distributed in tables relating to textiles, cereals, tobacco, etc.

In the early numbers of the "Survey" the source from which the information came was shown in heavy type at the top of the table. This was done in order to make it clear that the information was compiled largely from already existing sources and did not represent new material collected by this Department. Now that this arrangement is well understood, the information as to the source of the data has been placed in footnotes, thus giving a better form to the tables.

The summary table has been rearranged with the hope that it will give a better bird's-eye picture of changing conditions. An alphabetical index has been added at the end of the bulletin which will materially assist in its usefulness.

Further experience shows that at present it is impossible to obtain data on the majority of items before the end of the following month.

The present number contains figures received up to November 1, 1921.

SUMMARY.

The following summary is designed to show the trend in important industrial and commercial movements. In the first three columns there is given, first, the year used as a base in computing the index numbers; second, the per cent increase or decrease of the latest available figure compared with the base year and, third, the comparison of the current month of 1921 with the corresponding month of last year. The last four columns give the per cent increase or decrease during each of the last four months. The column headings refer to the latest months for which, in the majority of items, data is available. However, in cases where movements are reported only quarterly, the first three columns compare the last three quarters. Where data are credited to October, 1921, as in the case of "farm crop prices" (p. 94), this figure is shown in the September column. Where the September or August figure is not available, these columns are left blank, and the yearly comparison is for the latest figure compared to the same month a year ago.

The details for each item can be ascertained by reference to the proper table in the body of the bulletin.

A few items in which the movement is shown in terms of percentage (not index numbers), such as active wool machinery, underwear production, etc., are not included in this summary.

| | Base year. | Per cent change from base year. | Sept., 1921, per cent change from Sept., 1920. | June, 1921, per cent change from May, 1921. | July, 1921, per cent change from June, 1921. | Aug., 1921, per cent change from July, 1921. | Sept., 1921, per cent change from Aug., 1921. | | Base year. | Per cent change from base year. | Sept., 1921, per cent change from Sept., 1920. | June, 1921, per cent change from May, 1921. | July, 1921, per cent change from June, 1921. | Aug., 1921, per cent change from July, 1921. | Sept., 1921, per cent change from Aug., 1921. |

WHOLESALE PRICE COMPARISONS.

WHOLESALE PRICE COMPARISONS.

MAXIMUM PRICE COMPARED TO PRICE IN AUGUST, 1921.

1913 average=100.

NOTE.—Prices to the producer on farm products are from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are from U. S. Department of Labor, Bureau of Labor Statistics. As far as possible all quotations represent prices to the producer or at the mill. See diagram on opposite page.

¹ The data shown in this table were obtained for the several commodities from the following sources: Wool (consumption and quarterly stocks) and Cotton production from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; Wool (imports), Raw silks, Cotton cloth, and Cotton (exports and imports), from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cotton (consumed and on hand), from the U. S. Department of Commerce, Bureau of the Census; and Cotton (visible supply), from the Commercial and Financial Chronicle.

² Silk stocks and consumption shown on pp. 14 and 15.

³ Includes duck and other cloth, bleached, unbleached, and colored.

⁴ Figures for 1918, 1919, 1920, and 1921 compiled from monthly reports on consumption by mills; preceding years compiled from production and net imports.

⁵ Running bales; linters are included.

⁶ 500-pound bales.

⁷ Figures listed for years 1913 through 1920 represent monthly averages of cotton consumed and on hand during crop years (beginning Aug. 1 of the preceding year and ending July 31 of the year to which the figure is credited). Figures are in running bales.

⁸ These figures represent world visible supply of American cotton; note that the information is from a non-Government source.

⁹ These figures are for fiscal years; those following are for calendar years.

¹ The figures for total knit underwear are secured from the *Knit-Goods Manufacturers of America*; and those relating to raw silk from the *Silk Association of America*. Data for finished cotton goods are supplied by the *National Association of Finishers of Cotton Fabrics* and are compiled from statistics furnished by 34 out of 58 members of the association. The association estimates that the figures given cover approximately the following percentages of the entire industry: White goods, 72 per cent; dyed goods, 62 per cent; printed goods, 30 per cent.

² The preliminary report from the Bureau of the Census shows that, in 1919, the total production of knit underwear in the United States amounted to 26,517,000 dozens, compared with 28,032,000 dozens in 1914. In terms of monthly averages, the 1919 output was at the rate of 2,209,000 which, by comparison, indicates that the normal production of the mills reporting above comprises about 40 per cent of the industry.

³ Imports of raw silk shown on p. 13. Consumption figures represent withdrawals from warehouses.

¹ Data secured from reports of the U. S. Department of Commerce, Bureau of the Census.² The "total" number of looms and spindles reported in the earlier years does not represent the totals for the country but only such as furnished reports. Assuming that these were a fair sample of all machines, they furnish a basis to calculate the proportion of active machinery each year. The 1913 figures were collected by the National Association of Wool Manufacturers.³ The monthly averages are for cotton crop years (beginning Aug. 1 and ending July 31). Figures opposite any one year represent the monthly average number of active cotton spindles for the period beginning Aug. 1 of preceding year.

CRUDE RUBBER SITUATION—FIRST HALF 1921.

The Rubber Association of America has compiled comprehensive statistics on the movement of crude rubber during the first half of 1921. The statistics represent the reports from 239 rubber manufacturers, 56 rubber importers and dealers, and 8 firms who do reclaiming only. In addition the questionnaires developed a total of 94 firms recently listed as rubber manufacturers who are either out of business or are jobbers only. This makes a total of nearly 500 firms covered by the inquiry.

The following tables summarize the more important figures on the rubber situation during the past six months. The import figures are from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; all other figures are from the Rubber Association:

| SUMMARY. | | Pounds. |
|--|--|-------------|
| Imports of crude rubber, first half of 1921..... | | 161,956,907 |
| Reclaimed rubber produced..... | | 33,527,306 |
| Crude rubber consumed: | | |
| By manufacturers of tires and tire sundries..... | | 103,889,941 |
| By manufacturers of other rubber products..... | | 28,079,941 |
| Total crude rubber consumed..... | | 131,979,361 |
| Stocks of crude rubber on July 31, 1921..... | | 163,008,320 |
| Afloat for United States ports on July 31, 1921..... | | 53,548,480 |
| Total supply July 31, 1921..... | | 216,556,800 |

The details of rubber consumption for the six months, together with the value of the shipments of manufactured products are as follows:

| TIRES AND TIRE SUNDRIES. | | Number of pounds of crude rubber used. | Sales value of shipments of manfd. rubber products. | OTHER RUBBER PRODUCTS. | | Number of pounds of crude rubber used. | Sales value of shipments of manfd. rubber products. |
|--|-------------|--|---|------------------------|--------------|--|---|
| Automobile and motor truck pneumatic casings. | 75,863,102 | \$186,898,873 | Mechanical rubber goods..... | 11,020,417 | \$34,475,894 | | |
| Automobile and motor truck pneumatic tubes. | 18,025,602 | 24,776,850 | Boots and shoes..... | 10,254,260 | 41,386,097 | | |
| Motorcycle tires (casings and tubes). | 154,548 | 585,876 | Insulated wire and insulating compounds..... | 771,178 | 4,453,754 | | |
| Bicycle tires (single tubes, casings, and tubes). | 480,994 | 1,512,955 | Druggist sundries, and medical and surgical rubber goods..... | 1,285,438 | 5,245,416 | | |
| All other pneumatic casings and tubes not elsewhere specified..... | 1,014,140 | 2,022,778 | Waterproof cloth, clothing, and rubber sheeting..... | 1,439,175 | 5,524,199 | | |
| Solid tires for motor vehicles..... | 6,395,213 | 9,919,532 | Hard rubber goods..... | 852,593 | 2,008,626 | | |
| All other solid tires..... | 120,884 | 459,475 | Miscellaneous, not included in above items..... | 2,456,359 | 6,741,283 | | |
| Tire sundries and repair materials..... | 1,845,488 | 5,306,236 | Total, other rubber products..... | 28,079,420 | 99,835,269 | | |
| Total, tires and tire sundries..... | 103,889,941 | 231,482,605 | Grand total, all products..... | 131,979,361 | 331,317,874 | | |

¹ Data on tires, tubes, and raw material consumed furnished by the *Rubber Association of America*. Motor accessory sales and credit condition are from the reports of the *Motor and Accessory Manufacturers' Association*.

² The data furnished by the Motor and Accessory Manufacturers Association are based on the purchase of parts, units, equipments, etc., by automobile passenger and truck makers from 300 parts and accessory manufacturers, including some tire manufacturers.

AUTOMOBILE PRODUCTION.

At the request of the U. S. Department of Commerce the National Automobile Chamber of Commerce has arranged to collect monthly information on the production of passenger cars and trucks from its members. The Bureau of the Census has undertaken to secure figures from certain independent manufacturers who are not members of the Chamber. The following figures give the totals of all reports and represent a practically complete statement of automobile production for the last three months of this year:

| MONTH. | PRODUCTION OF— | |
|----------------------|--------------------|---------|
| | Passenger cars. | Trucks. |
| July, 1921..... | 163,998 | 10,761 |
| August, 1921..... | 166,393 | 13,076 |
| September, 1921..... | 143,797 | 13,645 |

¹ The data on leather products, given in Tables 12 to 15, are based on the monthly census of hides, skins, and leather, as compiled by the U. S. Department of Commerce, Bureau of the Census. The figures embrace returns from between 4,500 and 5,000 establishments, including packers, tanners, dealers, importers, and manufacturers of shoes, gloves, and other leather goods. As given in the census reports, the returns on leather are shown in numbers of skins, sides, backs, butts, pounds, etc. For the present summary, these figures have been converted either to pounds or square feet on the basis of average weights and sizes.

¹ The computed figures for production and stocks furnished by the *Southern Pine Association* are based on the output and stocks of 192 identical mills. The method of computing is first to find the per cent which the actual production of the mills reporting is to the normal production of these same mills. This per cent is then applied to the normal production of the 192 mills. Assuming that the mills reporting are a good sample of the industry the resulting figure in each month is equivalent to the actual production of the 192 identical mills and hence shows the trend of the industry. The same procedure is followed in the case of stocks. The normal monthly production of the 192 mills is given as 484,053,392 feet and the normal stocks of the same mills as 1,262,450,326 feet. By normal production the *Southern Pine Association* means the average output for the first 4 months of 1916 and normal stocks refer to the average stocks during the 16 months ending with April, 1916.

² These figures, furnished by the *West Coast Lumbermen's Association*, include (1) the actual production of the mills reporting, (2) the actual shipment by these mills, and (3) the normal production of the identical mills reporting. The percentage figure for production which has been calculated is identical in meaning with the percentage figure computed by the *Southern Pine Association* but in the present instance this has not been applied to any constant production figure. The index numbers for Douglas fir production given on the opposite page are identical in meaning with those for yellow pine. Since no normal figures of shipments were given, these have been calculated to the basis of normal production of the same mills.

³ The *Oak Flooring Manufacturer's Association* states that these figures represent reports from 25 mills, and constitute about 90 per cent of the total oak flooring industry.

¹ Except data on cement reported by the U. S. Department of the Interior, Geological Survey, and placed here for convenience. The sources of the other data in this table are: Fire clay and silica brick from the Refractories Manufacturers Association and face brick from the American Face Brick Association.

² The Refractories Manufacturers Association estimates that the capacity reporting represents between 68 and 70 per cent of the total fire-clay brick producing capacity of the United States.

³ The association estimates that the capacity reporting represents from 78 to 80 per cent of the total silica brick producing capacity of the United States.

⁴ The figures on face brick include data from all firms reporting to the American Face Brick Association each month. The variation in the number of firms reporting renders the index comparison of doubtful value. It is expected that reports on a smaller number of identical firms for a series of months will be available for the next issue of the Survey.

⁵ Figures prior to 1921 are taken from the yearly reports of the U. S. Department of the Interior, Geological Survey. The compilation of monthly reports begins with January of this year.

⁶ Ten months' average.

This index number, furnished through the courtesy of the Aberthaw Construction Co., is designed to show the relative changes in the cost of constructing a standard concrete factory building. The company believes that the year 1914 gives a normal base and that July, 1920, represents the peak of building costs.

The Construction cost index, computed by the Engineering News Record, is based upon the costs of steel (structural shapes, Pittsburgh base), cement (f. o. b. Chicago, exclusive of bags), lumber (southern pine, New York base), and the rates paid common labor in the steel industry. The prices are weighted on the basis of the total production of steel, cement, and lumber, and the total supply of common labor.

¹ Figures for Pig iron production furnished by the *Iron Age*; Steel ingot production, *American Iron and Steel Institute*; Unfilled orders, *U. S. Steel Corporation*; Copper production, *Engineering and Mining Journal*; Stocks of tin, *New York Metal Exchange*; Production and stocks of zinc, *American Zinc Institute*; Iron and steel prices, *Iron Trade Review*; Composite pig iron and steel, *American Metal Market*.

² Yearly figures represent the monthly averages of total production of all companies as compiled annually by the American Iron and Steel Institute. The institute reports monthly production figures for 30 companies which, in 1920, produced 84.2 per cent of the total output of the country. In order to make the monthly figures comparable, they have been calculated to a 100 per cent production on the basis of the above percentage.

³ The 14 products included in this table are: Pig iron, billets, slabs, sheet bars, wire rods, steel bars, plates, structural shapes, black galvanized and blue annealed sheets, tin plate, wire nails, and black pipe.

⁴ The composite pig iron price compiled by the American Metal Market is the average price of 10 tons of iron distributed as follows: One ton each of Bessemer Valley; No. 2 foundry valley: No. 2 X foundry, Philadelphia and at Buffalo; No. 2 foundry Cleveland and at Chicago; two tons each of basic valley; and No. 2 Southern foundry, Cincinnati.

⁵ The composite steel price represents the average price 10 pounds of steel products as follows: 2½ pounds bars, 1½ pounds plates, 1½ pounds shapes, 1½ pounds pipe, 1½ pounds wire nails, 1 pound galvanized sheets, and ½ pound tin plate.

FABRICATED IRON AND STEEL.

¹ Sheet and tin plate reported by the *National Association of Sheet and Tin Plate Manufacturers*; bolts, nuts, and rivets by the *Bolt, Nut, and Rivet Institute*; bar iron by the *Eastern Bar Iron Institute*; steel barrels and drums by the *Steel Barrel Manufacturers' Association*; and fabricated structural steel by the *Bridge Builders and Structural Society*.

² Includes carriage bolts, large and small; machine bolts, large and small; lag screws; stove bolts; wire bolts; semifinished nuts and miscellaneous, reported by number of pieces.

³ Includes hot and cold pressed nuts; rivets, large and small; track bolts and miscellaneous, reported by weight.

⁴ These percentages compare the monthly totals reported with the actual reports of the same companies for the years 1918 and 1919.

⁵ The *Bridge Builders and Structural Society* state that reports in the earlier years were not as complete as during the last six or seven years. The total tonnages are probably 10 to 15 per cent less than they should be. The August, 1921, production is stated as equivalent to 33 per cent of the entire capacity of the country.

⁶ Represents reports from identical manufacturers for each period.

¹ Data from U. S. Department of the Interior, Geological Survey.² Data from U. S. Department of the Interior, Bureau of Mines.³ Figures for earlier years adjusted to represent approximate net stocks to conform with data for current months.⁴ Yearly figures for "stocks at end of month" are averages of monthly figures.⁵ "Exports of gasoline," as used by the Bureau of Mines, includes the items "gasoline" and "all other naphtha, etc.," as reported by the U. S. Department of Commerce, less exports to the Philippine Islands.

CHEMICALS.

¹ Data for Exports of grain are obtained from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; figures for Crop production furnished by U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.

² Yearly figures represent the final estimates of total production as reported by the Bureau of Markets and Crop Estimates. The monthly figures for 1920-21 give the current monthly estimates for each crop as reported by the same bureau.

³ Barley flour converted at 5.5 bushels to the barrel.

⁴ Corn meal converted at 4 bushels to the barrel.

⁵ Oatmeal converted at 5.21 bushels to 100 pounds.

⁶ Rye flour converted at 6 bushels to the barrel.

⁷ Wheat flour converted at 4.5 bushels to the barrel.

⁸ June figures for Total grains include Corn as estimated on July 1.

MOVEMENT OF CEREALS.

¹ Exports reported by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cold storage holdings from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; Production of beef and pork from animals slaughtered under Federal inspection reported by the U. S. Department of Agriculture, Bureau of Animal Industry. Recent figures published in the *Market Reporter*. Apparent consumption has been computed from the inspected slaughter less exports and the change in storage holdings.

² Cold-storage holdings are distinctly seasonal. No allowance for this has been made in calculating index numbers.

³ Includes bacon, ham, shoulders, lard, neutral lard, and canned, fresh, and pickled pork.

⁴ Includes fresh, canned, pickled, and cured beef, and oleo oil and tallow.

⁵ Includes beef, frozen, cured, and in process of cure.

⁶ Includes pork, frozen, dry salt, and pickled, both cured and in process of cure.

⁷ Frozen lamb and mutton.

¹ With the exception of sugar stocks and meltings reported by the *Statistical Sugar Trade Journal*. The sources of the other data are: Imports of raw sugar, imports and exports of vegetable oils, U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cottonseed and cottonseed oil data are from the U. S. Department of Commerce, Bureau of the Census. Wholesale and retail sugar prices are from the U. S. Department of Labor, Bureau of Labor Statistics; and Oleomargarine consumption from the U. S. Treasury Department, Bureau of Internal Revenue.

² Figures include reports from seven ports: Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and San Francisco. Meltings are calculated from weekly reports, the odd days being prorated. Stocks represent the amount of raw sugar in the hands of refiners on the dates nearest the end of the month as reported for each port.

³ At the end of month.

⁴ Includes cottonseed, corn, and linseed oils.

⁵ The following oils are included: Chinese nut, cocoa butter, coconut, cottonseed, olive (inedible), olive (edible), palm, palm kernel, peanut, rapeseed, soya bean. Where certain of these are reported in gallons, they have been converted into pounds, allowing 7½ pounds per gallon.

⁶ Colored and uncolored, as represented by tax-paid withdrawals.

⁷ These figures are for fiscal years.

¹ Import and export statistics from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; all other data from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.² Boston, New York, Philadelphia, Chicago, and San Francisco.³ Includes butter, cheese, and condensed and evaporated milk.⁴ One case of eggs equals 30 dozen, or about 45 pounds net.⁵ Production compiled by months but issued quarterly; figures not available at time of going to press.

SEASONAL MOVEMENT OF COLD-STORAGE HOLDINGS.

CASE EGGS.

CREAMERY BUTTER.

The movement of many of the commodities reported in this bulletin is distinctly seasonal. This is particularly true of cold-storage holdings and makes it difficult to obtain a true interpretation of their trends from index numbers alone. The above diagrams have been prepared to assist in comparing recent months with the average seasonal variation. The heavy solid line in each diagram represents the 5-year average, 1916 to 1920, for each month. The broken line represents the index numbers on the same base, for the months of 1920, and the light solid line does the same for 1921.

It will be noted that the movement of case eggs in 1921 showed a smaller amount than usual in storage during the first months of the year, but since March stocks have been larger than is normal for the corresponding months.

With regard to stocks of creamery butter the early months of 1921 showed only slight variations from normal, but since July, movement into storage has not been as heavy as in previous years with the result that on the first of September, the time of maximum stocks, the index number was only 164 compared with a normal for this time of the year of 214. On October 1, 1921, the index was 160, compared with a normal for that date of 203.

¹ Stocks held by manufacturers and dealers reported by the U. S. Department of Commerce, Bureau of the Census; Production of manufactured tobacco and snuff, cigars and cigarettes by the U. S. Treasury Department, Bureau of Internal Revenue; Crop production by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; Exports of leaf tobacco by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

² Reported quarterly. Yearly figures are quarterly averages.

³ Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.

⁴ The Internal Revenue reports the number of large cigars, i. e., those weighing over three pounds per thousand, and the number of small cigars weighing less than the above amount. Likewise they report the number of large and small cigarettes, the former weighing more than three pounds per thousand. Large cigars and small cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.

⁵ Yearly figures on crop production represent the final estimates as reported by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. The monthly figures for 1920 and 1921 are the current monthly estimates of total production.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² See p. 77 for exchange rates on French francs.³ One metric ton is equal to 10 quintals, or 1,000 kilograms, and is equivalent to 2,204.6 pounds avoirdupois.⁴ Monthly foreign trade figures are published only in cumulative form, and as the value rates used were changed in July, 1920, it is impossible to give separate figures for that month.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² See page 77 for exchange rates on Italian lire. The par value of the Spanish peseta is 19.3 cents, but at present exchange rates it is worth from 12 to 13 cents.³ One quintal contains 100 kilograms and is equivalent to 220.6 pounds. One metric ton equals 10 quintals or 2,206.4 pounds. One hectoliter equals 26.4 gallons.⁴ Figures for October, 1920, are not available. The figures given in these items are the totals for two months, October and November.

FOREIGN TRADE OF BELGIUM, DENMARK AND SWEDEN.

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, from official reports.² No data available on Belgian trade for the years 1914 to 1918.³ See p. 77 for exchange rates on these countries. The Danish crown is now worth from 16 to 18 cents compared to a par value of 26.8 cents.⁴ 1 metric ton equals 1,000 kilograms and is equivalent to 2,204.6 pounds avoirdupois.⁵ Figures not available for separate months of 1921. These represent monthly averages for the first and second quarters respectively.

¹ Compiled from reports of the respective governments by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² No actual figures available for 1921. Official estimate for first 6 months gives a monthly average import of 71,000,000 pesos, and exports of 84,000,000 pesos.³ These figures, in the case of Canada, represent the monthly averages for the Canadian fiscal year which ends March 31. Hence the 1921 average.⁴ Figures by months not available for 1920. Official estimate by Argentine Minister of Finance.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² One Egyptian kantar is equal to 99.05 pounds.³ Includes ox, cow, sheep, goat, and seal.⁴ The monthly averages figures for 1920 are obtained from the yearly totals. In some cases they do not check exactly with the preliminary figures reported each month.

¹ Daily averages of noon rates for cable transfers reported to the Treasury daily by the *New York Federal Reserve Bank*. Average figures for the years 1914 to 1918, inclusive, where given, are averages of commercial quotations and are not obtained from the Federal Reserve Board.² Parity established October, 1920. Prior to that, par value of the rupee was 32.44 cents.³ The foreign exchange index number recently computed by the *Federal Reserve Board* is based upon the average rates of exchange for 18 countries. The index represents the weighted geometric average of cable transfer rates on these countries. The weights used are based on the total volume of imports and exports of merchandise, gold, and silver from and to each country for the preceding month. The countries used in computing the index are Belgium, Denmark, England, France, Germany, Italy, Netherlands, Norway, Spain, Sweden, Switzerland, Canada, Argentina, Brazil, Chile, China, India, and Japan.⁴ Average value of the paper peso in 1913.⁵ Based on daily quotations.

¹ Panama Canal traffic reported by *The Panama Canal*; tonnage entered and cleared in foreign trade, U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; vessels under construction and vessels completed, U. S. Department of Commerce, Bureau of Navigation; Sault Ste. Marie Canal traffic, U. S. War Department, Engineer Corps.

² Yearly figures refer to fiscal years ending June 30.

³ Tonnage under construction refers to the gross tons of shipping, building or under contract to build for private owners. Does not include Government ships or ships building or contracted for by U. S. Shipping Board.

⁴ Includes ocean-going, lake and river vessels built and officially numbered by the U. S. Department of Commerce, Bureau of Navigation. Includes vessels of the U. S. Shipping Board and private American owners but not vessels built for foreign owners.

⁵ Figures for 1913 to 1920 represent monthly averages for eight months during which the canals are open.

¹ Data from the American Railway Association.² At end of month, exclusive of Canadian roads. The Association reports the number of freight cars which are idle (surplus) and also the number of requests for cars which can not be filled (shortage). The difference between these two figures represents the net freight car situation for the country as a whole. The car shortages can not ordinarily be filled from the idle cars because of the uneven geographical distribution of the latter.³ Includes other classes than groups listed.⁴ Total includes coke shipments in addition to commodity groups listed.⁵ Index number less than 1.

¹ Reports represent roads having annual operating revenues in excess of \$1,000,000.

² The information in this table is furnished by the *Interstate Commerce Commission*, except data on ton-miles and ton-mile receipts, from the *Bureau of Railway Economics*, which are placed here for convenience.

³ Net railway operating income includes net operating revenue (equal to the difference between total operating revenue and total operating expenses) from which there have been deducted railway tax accruals, uncollectible railway revenues, equipment and joint facility rents.

* These figures are from *Interstate Commerce Commission* reports.

† Deficit.

¹ Data on New York state factories furnished by the *New York State Industrial Commission*; Number on pay roll, U. S. factories, from *U. S. Department of Labor, Employment Service*; Immigration and emigration statistics from *U. S. Department of Labor, Bureau of Immigration*; Postal Savings from *U. S. Post Office Department*.

² Figures represent reports from 1,648 firms in New York state employing more than one-third of the factory workers in the state.

³ Data not available prior to January, 1921; this month used as base for index numbers. Information is from 1,428 factories.

⁴ Includes total admitted, both immigrants and nonimmigrants.

⁵ Includes total departed, both emigrants and nonemigrants.

⁶ Preliminary estimates only.

¹ These index numbers were prepared for purposes of international price comparison. The Federal Reserve Board has not calculated the index numbers for the years 1914 to 1918.

² Farm prices of crops represent the relative average prices to farmers of the 10 leading crops as of the first of each month. The live-stock farm price index is computed as of the 15th of the month.
