WASHINGTON**

VOLUME 18

NUMBER 6

National Income produced in United States in 1937 totaled 69.8 billion dollars . .

Increase of 6.4 billion dollars recorded over 1936 brings total in 1937 to highest point since 1929

All industries participated in gain in 1937 . .

Employees compensation continued to increase proportionately

Per capita income of full-time employees \$1,316 in 1937

These and other facts on national income in 1937 are presented in a special article on p. 11

Business Indicators

D.O. 9402

Business Situation Summarized

THE volume of industrial production, according to the available weekly statistics, showed a further slight contraction in May, extending the moderate decline in output that has been in progress since mid-April. Trade activity also showed a further slackening in May and commodity prices continued to decline. Share prices moved moderately lower and bond quotations were generally unchanged.

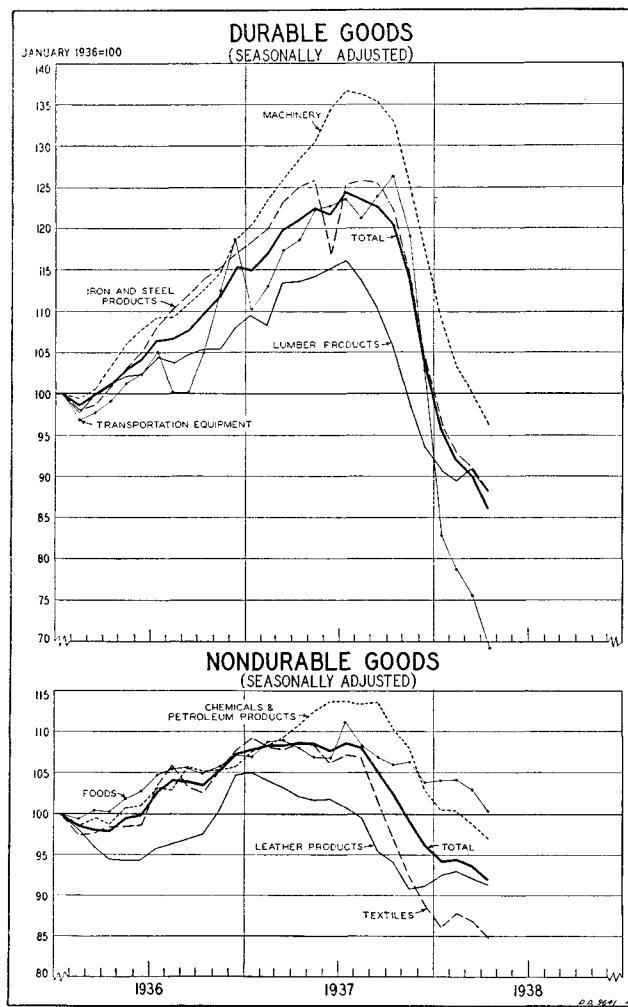

Steel-mill operations declined to about 30 percent of ingot capacity in May, a slightly more-than-seasonal contraction from April when the industry operated at 33 percent of capacity. Activity at steel mills has shown almost uninterrupted weekly reductions since early April and for the final week in May operations were scheduled at 29 percent of ingot capacity. Automobile production in May declined considerably more than seasonally. Assemblies, which had averaged about 58,000 units per week in April, were reduced to approximately 49,000 units weekly in May. At this level output was only about one-third of average weekly production in the corresponding period of 1937.

Bituminous coal production in May experienced a sizable contraseasonal contraction and averaged 30 percent below tonnage output in the comparable period in 1937. Crude oil output showed a moderate contraseasonal decline as production in the important Texas fields was curtailed. While refining operations were practically unchanged for April, stocks of gasoline were reduced by the seasonal increase in consumption. Electric power production was practically unchanged during the month. Some increase in purchases of unfinished cotton goods was reported by trade sources, although the sales were largely from goods in stock. Mill operations remained low and prices of print cloth held steady, the standard construction being quoted at about 4½ cents per yard.

The seasonally adjusted index of monthly income payments compiled by the Bureau of Foreign and Domestic Commerce declined 1.2 points in April to 79.3 (1929=100)—the reduction in the adjusted index from February to March was 0.3 point. At the April level payments were down 10 percent from the recovery high of 88.6 in August 1937. For the first 4 months of this year payments were 6.3 percent below those in the corresponding period of 1937. Compensation of employees according to the seasonally adjusted index declined 1.1 points during April to 80.1. Cash income from farm marketings (not including Government payments) decreased somewhat less than seasonally in April, according to the compilation of the Bureau of Agricultural Economics.

Factory pay rolls declined about 4 percent between mid-March and mid-April to 70.5 percent of the 1923-25

average and were down approximately one-third from April 1937. Factory employment during this same period declined more than seasonally as is reflected in the reduction of 2.4 points in the adjusted index shown in the accompanying table. Employment at automobile factories, steel mills, machinery industries, and railroad repair shops was sharply reduced while mod-

Changes in Factory Employment by Selected Industry Groups, 1936-38.

NOTE.—For purposes of comparing the trend of employment of the various groups of industries, the basic data have been recomputed with January 1936 data for each series taken as 100. Monthly data on employment for all industry groups are shown regularly in the Employment Section of the SURVEY with the average for the years 1923-25 equal 100. (Original data compiled by the U. S. Bureau of Labor Statistics and adjusted for seasonal variation by the Board of Governors of the Federal Reserve System.)

erate declines were shown in most other industries. Total nonagricultural employment recorded the first increase since last September, but the gain was only about one-fourth as large as is usual for this period.

As may be seen in the accompanying chart, the upward movement of employment during 1936 and early 1937 and the subsequent decline has varied widely from

industry to industry. Employment in the durable-goods industries reached a peak in July 1937 and since that time has dropped 31 percent. The largest percentage declines in employment from the peak months of 1937 occurred in the transportation group, of which the automobile industry is a leading component, and in railway repair shops. The smallest contractions were recorded in the lumber and stone, clay, and glass products industries.

Employment in the nondurable-goods industries reached a recovery peak in April 1937 and has declined 15.4 percent since that time. The largest percentage contraction in employment from the peak months in 1937 was shown in the rubber products and in the textile products groups, while employment in the food industries and paper products groups have declined less than 10 percent. (Data for all industry groups—only a limited number could be shown in the chart—are presented regularly in the Employment Section on pp. 27 and 28 of each issue of the SURVEY.)

Primary distribution, as indicated by the number of freight cars loaded, increased somewhat less than seasonally in May. Heavier loadings of livestock, forest products, and miscellaneous items accounted in large measure for the gain that was shown. Gross operating revenues of 89 class I railroads in April were 24.5 percent below those for April 1937—approximately this same margin of decline was shown in March 1938 from

the corresponding month last year. During the first quarter of 1938, class I railroads incurred a net deficit of \$106,249,866, as compared with a net income of \$15,390,726 in the first 3 months of 1937.

Distribution of commodities to consumers has experienced further contraction. The margin by which department sales in 1938 have fallen below sales for the comparable period last year has widened in the weeks since Easter. For the first half of May sales at department stores averaged about 15 percent below those in the corresponding period last year—in March and April sales averaged approximately 9 percent below those last year. Sales of both manufacturers and wholesalers also recorded a widening of the margin by which trade in 1938 was reduced from that in 1937.

The dollar volume of total construction contracts awarded in the first half of May declined 2 percent from April on a daily average basis, according to data supplied by the F. W. Dodge Corporation. Awards for residential building, however, advanced 15 percent from the daily average rate in April and at that level were 12 percent above awards in the corresponding period of 1937. Public works construction awards advanced more than 24 percent from April and were 38 percent above daily average awards for the first half of May last year. Daily average awards for nonresidential building declined 24 percent from April and were 23 percent below those in May 1937.

Commodity Prices

THE downward movement of commodity prices continued during April and May. Copper quotations were reduced 1 cent to 9 cents per pound for the Connecticut Valley delivery, and lead prices were cut $\frac{1}{2}$ cent to 4 cents at New York. Further weakness was noted in steel scrap quotations, the Iron Age composite for leading markets receding from over \$13 per ton in early April to \$11.25 per ton in the third week of May. Prices of both viscose and acetate rayon yarns were reduced to levels approximating the 1933 lows. Raw sugar sold at 2.65 cents per pound at New York, only slightly above the 1932 low.

Wheat prices, reflecting the prospect for large harvests, have declined substantially since the last of April. Quotations for the July delivery fell under 70 cents per bushel, a loss of 14 cents since the third week of April. The decline in wheat prices was largely responsible for the reduction in the wholesale price index of farm products compiled by the Bureau of Labor Statistics. This index fell from 71.7 (1926=100) in mid-March to 68.8 for the third week of May and at that point was 30 percent below the 1937 peak. Wholesale prices of foods advanced in the third week

of May after declining since March. This increase resulted largely from higher quotations for meat. In May, prices of foods at wholesale were 18 percent under the peak reached in September 1937.

Wholesale prices for all commodities other than farm products and foods have declined but 5 percent from the 1937 high. Many nonagricultural raw materials important to industry, especially nonferrous metals, have declined substantially, but many finished and semi-finished manufactured goods have experienced little price changes. Metals and metal products other than nonferrous metals have remained practically constant for 12 months. Building materials, according to the price index for this group of products, have declined only 6 percent from the 1937 high point. Textile products and hides and leather products, however, have shown larger price reductions.

Retail food prices at mid-April were slightly higher than in February and March, reflecting increases in prices of meats and fresh fruits and vegetables. The cost of living for wage earners has been practically unchanged since January, as slightly higher food costs have been offset by declines in other items.

Domestic Trade

TRADE activity showed a further slackening during the first part of May, according to early reports. Department store sales for the first 3 weeks of May averaged about 15 percent below those in the corresponding period last year—sales in March and April were down about 9 percent. Total retail sales for the first 4 months in 1938 averaged from 12 to 15 percent below the dollar volume in the comparable period last year, while income payments during this same period were 6.3 percent below those in the corresponding period in 1937. Sales of heavy durable goods continue to record the most severe contraction, purchases of new passenger automobiles being down about 44 percent from the dollar volume for the 4-month period of last year, while lumber and building materials, hardware, and furniture and household appliances recorded marked declines.

Consumer purchasing recorded about the same percentage decline both in urban and in rural areas but the changes varied greatly in different parts of the country. On a Nation-wide basis department store sales showed an average decrease of 8 percent for the 4-month period of 1938 as compared with 1937; 11 of the Federal Reserve districts experiencing declines which ranged from 1 percent for the Minneapolis district to 13 percent for the Chicago district, while sales in the Dallas district increased 2 percent.

April sales of more than 15,500 independent retail firms in 25 States reporting sales data to the Bureau

and representing all regions, excepting New England and the Middle Atlantic States, showed a decline of 13 percent from April 1937, and an increase of 6 percent over March of this year. These changes do not take into account the fact that the major part of Easter purchasing took place in April this year and in March in 1937. All States showed losses in April from a year ago and all with the exception of South Carolina and Texas recorded increases over March. The data reported indicate that consumer purchasing was less depressed in the Southwestern States during the past several months than in other regions of the country.

Wholesale sales as reported to the Bureau of Foreign and Domestic Commerce by a sample group of almost 1,900 firms were 5 percent lower in April than in March but were down 18.5 percent from April 1937. The margin by which wholesale sales this year have dropped below sales last year continued to widen—sales in February and March were 15 and 17 percent lower, respectively, than those in February and March of last year. Wholesalers' stocks at the end of April 1938 were 12 percent lower than in April 1937 and the cost value of stocks was 2.14 times sales for the month, whereas stocks in April 1937 were 1.94 times sales. Total dollar sales of approximately 1,050 reporting manufacturers in April were 29 percent below those of April 1937—March sales were down 23 percent from those of March 1937.

Employment

TOTAL nonagricultural employment recorded a gain of about 124,000 workers in April, the first increase since last September when employment reached the highest point since 1930. The gain, however, was considerably less than is usually experienced at this season so that the trend of employment, after allowance for seasonal influences, has continued downward. According to these data compiled by the Bureau of Labor Statistics, private industry and public agencies engaged in regular Government activities exclusive of W. P. A. and other Federal and State emergency projects have reduced their working forces by approximately 3,000,000 since last autumn.

The number at work in factories continued to decline in April and since very little change usually occurs at this time of year, the seasonally adjusted index shown in the table declined 3.0 percent to 79.2 (1923-25=100). This is the lowest point reached by the index since September 1934, when labor difficulties in textile mills resulted in a sharp drop in the number at work. Weekly pay rolls in factories were reduced about 3.8 percent over the month interval. The more pronounced decrease in pay rolls than in employment from March to April reflected further curtailment in plant operating time in many industries. A somewhat larger number of wage-rate reductions was reported than in other recent months. More than 40,000 factory workers in 36 industries, chiefly in cotton, brass, and shoe factories, were affected by such cuts. In comparison with a year

ago, factory employment has been reduced more than one-fifth and pay rolls about one-third.

Of the 89 manufacturing industries reporting, 71 had fewer employees in mid-April than in mid-March, and as in earlier months the durable-goods industries as a group reported ^aa larger decline in employment (3.2 percent) than the nondurable-goods industries (2.1 percent). For pay rolls, 69 industries reported declines but in contrast with employment, the reduction in the durable-goods industries was less pronounced than in the nondurable-goods line.

Among the 16 nonmanufacturing industries, marked seasonal gains in employment and pay rolls in April were reported for retail trade, building construction, quarrying, and dyeing and cleaning. Other industries in this classification showed only minor changes in April as compared with March, except for coal mining and metalliferous mining which reported marked declines in both employment and pay rolls.

The number of employees is now somewhat smaller than in the spring of 1937 in most nonmanufacturing lines, with the exception of retail stores selling general merchandise in which there was a delayed seasonal increase because of the late date of Easter this year, and in dyeing and cleaning establishments and insurance firms. With the exception of metal mining, quarrying, and construction, employment decreases from a year ago are much smaller than those for manufacturing.

Finance

INTEREST in the foreign exchange market during the month centered in the action on May 5 of the French Government in fixing the minimum rate for the franc at 179 to the pound sterling, equivalent to 2.79 cents or 35.8 francs to the dollar at the then existing dollar-pound cross-rate. Following this most recent devaluation, the withdrawals of French refugee money from England, the Scandinavian countries, Belgium, Switzerland, and Holland exerted depressing effects upon the currencies of those countries. The losses of gold and foreign exchange from Belgium were fairly substantial, and the Belgian National Bank raised its rediscount rate from 2 to 4 percent on May 10 in an effort to check the outflow of capital, which had been augmented by speculative selling of the belga. The large return flow of capital to France and the profits thereon aided in improving the position of the Treasury, which in turn was a factor that contributed to the steadiness of the franc at its new rate in the succeeding 2 weeks. On May 12, the Bank of France lowered its rediscount rate from 3 to 2½ percent. Call money was only one-half of 1 percent during the third week of the month against the 3-percent rate at the beginning of May. The abundance of funds as evidenced by this reduction was a factor in the Government's successful flotation of its defense loan issue.

Toward the end of the month fresh possibilities of armed conflict on the Continent caused an exodus of capital from London and other European centers to the dollar. The pound sterling was forced under \$4.95, its cheapest price in 2 months. Reported gold engagements in Europe for shipment to this country were small.

In this country, the Treasury's announced policy of retiring \$50,000,000 of its maturing bills each week and other Treasury activity was reflected in a decrease of \$145,000,-

000 in its deposits with the Federal Reserve bank during the 4-week period ending May 18. The retirement of these short-term securities contributed to an increase of \$32,000,000 in domestic nonmember bank deposits with the Federal Reserve banks and to increases of \$75,000,000 and \$70,000,000, respectively, in the deposits and excess reserves of member banks during the same period. As a consequence of the demand for short-term investments, the interest rate on 91-day Treasury bills fell continuously during this period, and this class of bills sold to yield the record low rate of 0.025 percent on May 23.

The decline of \$134,000,000 of loans to commerce, industry, and agriculture during the 4-week period ended May 18 added to the volume of banking funds seeking investment. This, together with the decrease in the available volume of short-term bills, was partly reflected in an increase of \$175,000,000 in the holdings by reporting member banks of fully guaranteed obligations of the United States Government as against an increase of \$12,000,000 in their holdings of direct obligations of the United States Government. The prices of both of these classes of Government securities were strong in the face of this demand and showed an average advance of almost 2 points during this period. The banks, however, decreased their holdings of other securities by \$140,000,000. Demand deposits of the reporting member banks were subject to two opposing influences. The decrease in loans tended to decrease demand deposits, while the retirement of bills by the Treasury and their replacement through the purchase by banks from nonbank holders of other obligations, tended to have the opposite effect. The net increase of \$118,000,000 in demand deposits resulted from the greater dollar volume of the latter operations.

Foreign Trade

EXPORT trade of the United States during April varied little from the relatively high level maintained in the preceding months of this year. The total value of exports, including reexports, was fractionally smaller than in March, but was about 2 percent above the value in April of last year. Merchandise exports were more than 100 million dollars larger in value than merchandise imports, continuing the series of heavy net export balances which has prevailed in recent months. The value of general imports in April declined 8 percent from March and was 44 percent lower than in April of last year.

The quantity of total exports in the first 4 months of this year was approximately 18 percent above that of the corresponding period of 1937 and was only about one-fourth below the record volume of the first 4 months of 1929. The percentage gain this year has been greatest in exports of agricultural products. Expansion in exports of leaf tobacco, meats, lard, and particularly in grains, noted in the latter part of 1937, continued in the first 4 months of 1938, and the value of agricultural exports increased from \$232,836,000 in the first 4 months of 1937 to \$299,256,000; exports of grains and their preparations were valued at \$11,687,000 and \$91,459,000 in the two periods, respectively.

Many of those finished manufactures and other non-agricultural products that had showed marked increases in 1937 have continued to be exported in large

value so far in 1938. Crude petroleum, motor fuel, motortrucks, and aircraft, as well as heavy iron and steel products, metal-working and other industrial machinery, agricultural implements, and cotton cloth have all been exported in considerably larger quantity and value in the first 4 months of 1938 than a year ago.

The percentage increase in exports of cotton cloth has been substantial. Sales of United States cloth in foreign countries reached a depression low in 1935 and increased only moderately in 1936 and during the early part of 1937. In October 1937, however, exports of cloth began to show marked expansion, and in the first 4 months of 1938, the trade amounted to 115,591,000 square yards as compared with 71,091,000 square yards in the first 4 months of 1937.

The value of our import trade in the period January-April 1938 was down 40 percent from the corresponding months last year when imports were running unusually high and at this level was the lowest for any comparable 4-month period since 1934. The largest percentage decrease has been shown in crude materials and farm products reflecting the slackened demand for raw materials on the part of our manufacturing industry and of the larger supply of domestic farm products now available. There has been a marked decline also in imports of manufactured articles, particularly in the so-called luxury items and more moderate decreases in imports of most of the leading tropical foodstuffs.

¹Adjusted for seasonal variations.²General imports through December 1933; imports for consumption thereafter.³Monthly average.

Construction and Real Estate

CONSTRUCTION contracts awarded during the first half of May declined 2 percent from the daily average rate in April but were 3 percent above awards in the corresponding period of 1937. Awards for residential building from May 1 to 15 advanced 15 percent from daily average awards in April and were 12.5 percent above those in the comparable period of last year. This was the first reporting period in 1938 in which residential awards exceeded those in the comparable period of 1937.

The dollar value of total construction contracts awarded in April registered a slight increase over the daily average volume of awards in March but were 18 percent below the total dollar volume for the same month of last year. Declines were shown in all major classes of construction which registered the usual seasonal gain from March to April. Residential construction awards were 31 percent below the total for April a year ago, and nonresidential construction was 16 percent lower.

For the first 4 months of 1938 total contracts awarded were 18 percent below the figure for the corresponding period of last year. Declines were registered in all the major regions of the F. W. Dodge classification except the Texas, Pittsburgh, and upstate New York areas. The Texas area reported a gain of 36 percent over last year; the Pittsburgh area showed an increase of 23

percent; while in the upstate New York area the increase was less than 3 percent. The largest relative decline in awards occurred in the Chicago and Cleveland districts, which were 42 and 37 percent, respectively, below last year.

Construction contracts awarded for larger buildings and heavy engineering works totaled \$848,000,000 in the first 4 months of 1938, an increase of 15 percent over awards in the comparable period of last year, according to the Engineering News-Record.

An analysis made by the Federal Home Loan Bank Board of the cost of building a standard six-room frame house in a selected group of cities revealed that the dollar increase in costs from January 1936 to August 1937 was due in large part to the rise in the cost of materials. Direct labor costs also increased during this period, but the labor involved in building the standard house costs approximately one-half as much as the materials. On a percentage basis, however, labor costs increased 14 percent during this period as compared with a 12-percent increase in the cost of materials. Since August 1937 the decrease in costs has been due almost entirely to declining material prices, as labor costs remained comparatively stable. Material costs have declined in every Federal home loan bank district, while labor costs have declined in only five districts.

National Income in 1937 Largest Since 1929

By Robert R. Nathan, Chief, National Income Section, Division of Economic Research

NATIONAL income produced in the United States in 1937 recorded a new high for the recovery period of 69.8 billion dollars, exceeding the level of any year since 1929. Available information on a monthly basis indicates a substantially higher level of income during the first three-quarters of 1937 than in the final quarter of the year. The seasonally adjusted index of monthly income payments, recently prepared by the Bureau of Foreign and Domestic Commerce, averaged 2 percent lower in the last 3 months of 1937 than during the first 9 months of the year. This index further reveals a decline of 6.3 percent in income payments in the first 4 months of 1938 over the same period a year ago.

The gain in 1937 in income produced of 6.4 billion dollars, or more than 10 percent, marked the fifth consecutive annual increase since the depression low of 40 billion dollars in 1932. Approximately three-fourths of the decline from 1929 to 1932 was recovered by 1937, bringing the total in the latter year to within 11 billion dollars of the 1929 peak of 81 billion dollars.

Prices increased in 1937 to a lesser extent than the dollar volume of income produced, indicating a substantial increase in real income over 1936. The indexes of wholesale prices and of cost of living published by the United States Bureau of Labor Statistics increased 7 and 3 percent, respectively, in 1937 as compared with the 10-percent increase in national income produced. While neither of these price indexes is sufficiently comprehensive to adequately translate changes in dollar income into changes in real income, they provide a rough basis for observing the effect of price changes on the dollar volume of income. Thus, while the national income produced, as measured in current dollars, was 14 percent lower in 1937 than in 1929, wholesale prices were down 9 percent and the cost of living was off 15 percent over the same period, indicating that the quantity of goods and services produced in 1937 approached closely that of 1929. However, in view of an increase in population during the last 8 years of approximately 8,000,000, per capita real income in 1937 continued substantially below 1929.

Trends for Various Industries.

As shown in table 1, increases in 1937 varied considerably among the major industries. The net value of production rose 21 percent in contract construction, 20 percent in mining, and 17 percent in manufacturing over 1936. Gains of only 4 to 6 percent were recorded in the agriculture, transportation, and public-utility groups. The portion of income produced attributed to government declined slightly in 1937 since the moderate increase in regular operations was not sufficiently large to offset the 24-percent decline in work-relief pay

rolls. Statistics on employers' contributions to social-security programs, which are discussed more fully in a subsequent section, are not currently available for the various industrial groups and are, therefore, shown in a lump sum. Because of this procedure, the estimates of income produced in industries participating in the social-security programs are slightly understated in both 1936 and 1937.

As a result of changes brought about by the Revenue Act of 1934 relating to the privilege of filing consolidated returns by corporations, the industrial classifications

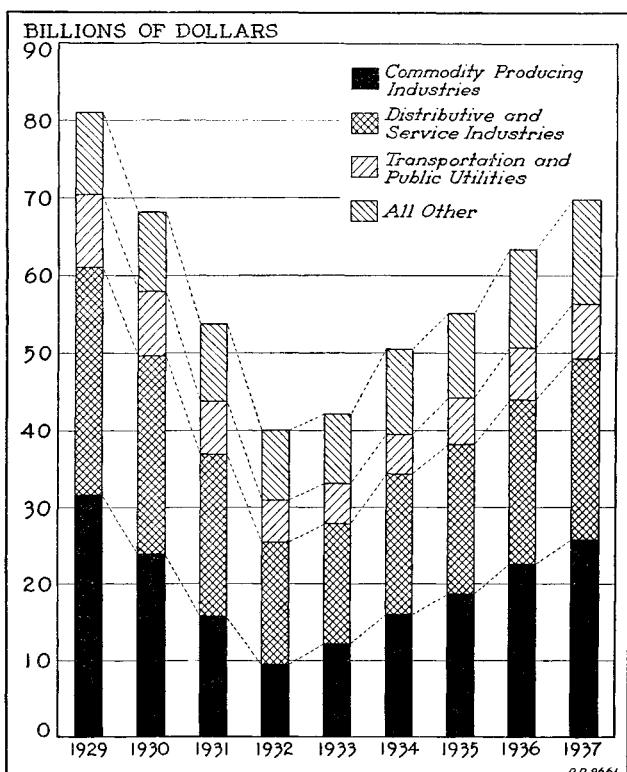

Figure 1.—Income Produced by Major Industrial Groups, 1929-37.

of various property income items and corporate savings in 1934 and thereafter are not exactly comparable with those for earlier years. This problem is discussed more fully later in this article. For total income produced, as contrasted with dividends, interest, and corporate savings separately, the differences in the 1934 estimates on the basis of the two industrial classifications are of small magnitude and permit comparisons in the trends of the various industries over the entire period covered by the estimates.

Although a 21-percent gain in income produced in the contract construction industry occurred from 1936 to 1937, the level in the latter year was less than half of that in 1929. In the transportation, finance, and miscellaneous groups, the net value of product in 1937 continued at less than three-fourths of the 1929 level.

The continued depressed condition of the railroads was the prime factor in the poor record for the transportation industry. All other industrial groups, with the exception of government, were from 10 to 20 percent below 1929 in 1937. Government's contribution, exclusive of work-relief activities, was nearly one-sixth higher in 1937 than in 1929. Including work relief, the rise was 44 percent. From the low year of the depression to 1937, income produced more than trebled in mining, nearly trebled in manufacturing, and more than doubled in agriculture and construction.

Business Savings.

Income produced represents the net value of all commodities produced and services rendered in the Nation during a given year. *Income paid out* represents payments made by producing units to individuals or aggregates of individuals for services rendered, and includes salaries, wages, dividends, interest, net rents and royalties, and entrepreneurial withdrawals. When income produced exceeds income paid out, the difference represents the portion of the net product retained by the business enterprise and is termed *positive business savings*. Conversely, when income paid out exceeds income produced, the difference, which is called *negative business savings*, represents a decrease in net worth as a result of the year's operations.¹

In 1929 the national income produced exceeded the national income paid out by 2.6 billion dollars. The greater decline in income produced than in income paid out in 1930 resulted in negative business savings of approximately 5 billion dollars in that year. Negative business savings continued to increase in the next 2 years and reached a high of 9 billion dollars in 1932. The magnitude of this item was greatly reduced in 1933. Since 1935 small positive business savings have been recorded. The appearance of positive business savings in 1935 and thereafter resulted entirely from the estimated large positive savings for agriculture. Available source material does not permit a very satisfactory determination of business savings in agriculture and the estimates of this item prepared for this study are admittedly subject to a substantial margin of error.

The savings estimates for corporations are determined on a much more satisfactory basis than are the estimates of savings of unincorporated business enterprises. Corporations recorded positive savings of 1.4

¹ For a comprehensive discussion of the concepts, scope, and limitations of the national income estimates as well as the sources and methods of estimation, the reader is referred to a volume entitled, "National Income in the United States 1929-35," published in 1936 by the Department of Commerce. A bulletin, "National Income 1929-36," published by the Department of Commerce in 1937 contains a brief review of the concepts and scope of the estimates. Copies of these publications may be obtained from the Superintendent of Documents, Washington, D. C., or from any District Office of the Bureau of Foreign and Domestic Commerce, for 25 cents and 10 cents per copy, respectively.

¹ The grand totals in this and the following tables are obtained by an addition of the totals for each industrial field. The income subtotals by industrial fields are primarily in thousands of dollars. The subtotals entered in tables 1 and 2 are in millions of dollars. These subtotals do not, therefore, add up exactly to the grand totals given.

² Estimates of dividends and interest, and corporate savings in the second column for 1934 and for subsequent years, are based on a different industrial classification than are the estimates in the first column of 1934 and earlier years. See later section in this article under "Changes in 1934 industrial classification."

billion in 1929 and negative savings have appeared in every subsequent year. Negative corporate savings reached a peak of 6.4 billion dollars in 1932, declining thereafter to less than 1 billion dollars in 1936. There was a slight increase in 1937 in negative corporate savings.

Labor Income Up 12 Percent in 1937.

Aggregate compensation of employees, including wages paid on work relief projects as well as accruals under the unemployment compensation and old age insurance plans of the social-security program, increased nearly 5 billion dollars, or 12 percent, in 1937 over 1936. Preliminary estimates indicate an increase of 17 percent in dividend payments for the year. Interest payments, which are the most inelastic type of disbursement, remained practically unchanged from the 1936 level. Entrepreneurial withdrawals were 9 percent higher in 1937 than in the previous year, while net rents and royalties increased by approximately one-sixth in 1937.

Total labor income was 9 percent lower in 1937 than in 1929 as compared with declines of 10 percent in interest payments, 15 percent in entrepreneurial withdrawals, 16 percent in dividends, and 24 percent in net rents and royalties. Dividends rose 127 percent from a very low level in 1933 to 1937, as compared with a gain of 58 percent in the compensation of employees, a 45-percent increase in entrepreneurial withdrawals, and an 83-percent rise in net rents and royalties.

Social Security Contributions.

Employers' contributions to the unemployment compensation and old age insurance plans under the Social Security program are included and shown sepa-

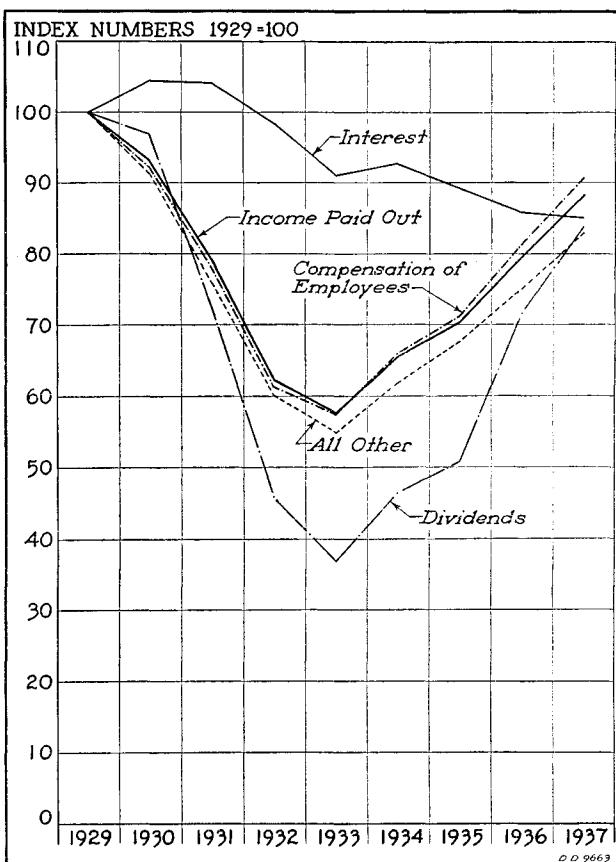

Figure 2.—Indexes of Income Paid Out by Type of Payment, 1929-37.

¹ Includes mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation.

² Includes pay rolls and maintenance of Civilian Conservation Corps enrollees and pay rolls of Civil Works Administration, Federal Emergency Relief Administration, and the Federal Works Program projects plus administrative pay rolls outside of Washington, D. C., for all except the Federal Works Program. Area office employees and their pay rolls under the Federal Works Program are included with the regular Federal Government employment and pay-roll figures.

³ Includes also net balance of international flow of property incomes.

ready accounted for in the figures on salaries and wages and are apportioned among their respective industries, but data are not available for properly allocating employers' payments. Contributions by both employers and employees do not flow immediately nor directly to employees but rather they accrue to the benefit of employees for actual payment at some later date. From the point of view of the employer they represent

unemployment compensation law. In 1936, employers contributed 292 million dollars, all of which was made in accordance with provisions of unemployment compensation laws. Total employers' payments jumped to 923 million dollars in 1937 as a result of the first year's operation of the Federal old age insurance program and the increase in the tax rate for unemployment compensation as well as the general increase in pay rolls. Of the 1937 contributions, slightly over two-thirds were accounted for by the assessments under the unemployment compensation plan and the balance under the Federal old age insurance plan.

Employees' Share of Income Paid Out Increased in 1937.

As shown in table 3, total payments and accruals to employees increased from 66.9 percent of total income paid out in 1936 to 67.4 percent in 1937. These ratios compare with 65.6 percent in 1929 and a low of 64.4 percent in 1932. Part of the increasing proportion in 1937 represented a growth in payments which accrued to workers under the social-security program but which were not actually received by workers. The decline in work-relief pay rolls effected an opposite tendency. If both work-relief wages and social-security contributions by employers were excluded from total employees' compensation and from total income paid out, the ratio of the former to the latter would show a rise from 65.4 percent in 1936 to 66 percent in 1937 as compared with the 1929 and 1932 proportions given above.

Dividends accounted for 6.8 percent of income paid out in 1936 and 7.2 percent in 1937 as compared with a peak for the period under study of 7.9 percent in 1930 and a low of 4.9 percent in 1933. Interest payments, the relative importance of which had increased from 6.6 percent in 1929 to 10.4 percent in 1933, declined steadily in proportion to total income payments after 1933 and in 1937 interest bore approximately the same relationship to the total as in 1929. Both entrepreneurial withdrawals and net rents and royalties showed only slight changes in relative importance from 1936 to 1937.

There are important qualifications connected with the above figures which should be noted. Although the items represent payments by producing units for services rendered, they do not represent in all cases immediate receipts by those contributing the services

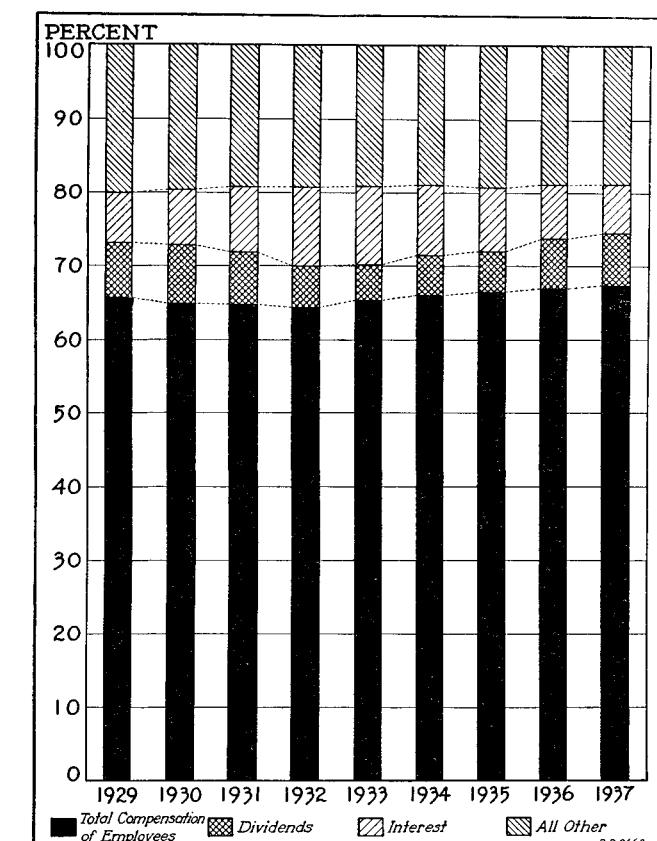

Figure 3.—Percentage Distribution of Income Paid Out, by Type of Payment, 1929-37.

a disbursement similar to regular salaries and wages. It is essential to the proper estimation of income produced by the method followed in these studies, that employers' contributions as well as employees' contributions be included in the estimates.

In 1934 and 1935, contributions to unemployment compensation were confined to payments made by Wisconsin employers in compliance with the Wisconsin

¹ Includes pay roll and maintenance of Civilian Conservation Corps enrollees and pay rolls of Civil Works Administration, Federal Emergency Relief Administration, and the Federal Works Program projects plus administrative pay rolls outside of Washington, D. C., for all except the Federal Works Program. Area office employees and their pay rolls under the Federal Works Program are included with the regular Government employment and pay-roll figures.

² Includes also net balance of international flow of property incomes.

Thus, the estimates of compensation of employees include both employers' and employees' contributions to social security programs, the latter included in the estimates of salaries and wages. Neither of these are received currently by workers but, rather, they accrue for the benefit of workers and might be viewed as a form of savings. In time, of course, payments under the social-security programs will be made in substantial sums, but for the period shown in the accompanying tables, benefits were paid only in Wisconsin during the last half of 1936 and during 1937 and were of small proportions.

As to dividends, interest, and perhaps rents, part of these payments by producing units do not flow directly and immediately to individuals, but are paid to "aggregates of individuals" such as life insurance companies, savings banks, building and loan associations, and other organizations for collective savings. Payments of dividends and interest to these institutions are included in the estimates rather than payments by such institutions to individuals. This procedure is adopted because of the difficulty of ascertaining the portion of actual disbursements by these institutions to individuals, which represents income as distinguished from the portion representing withdrawals of savings.

While corporate savings may not accrue to stockholders in the same manner that social security assessments accrue to employees, nevertheless they should be given some consideration in connection with dividends in evaluating and analyzing shares of income of different groups. Stockholders may not necessarily benefit directly and immediately in proportion with increases in positive business savings or decreases in negative busi-

ness savings and vice versa, but they are immediately concerned with the market prices of securities. Prices of shares do reflect to some extent the magnitude of business savings. Profits or losses realized from the sale of securities are not included in the income estimates. It is apparent from these qualifications that the comparison of income shares as shown in table 3 should not be interpreted as reflecting the relative changes in actual receipts of different groups of income recipients.

Per Capita Earnings \$1,316 in 1937.

For the purposes of determining trends in per capita incomes from one industry to another, estimates of the full-time-equivalent number of employees have been prepared along with the income estimates. Available data do not permit an equally satisfactory conversion of total employment figures to a full-time-equivalent basis for each industry. Nevertheless, the per capita income figures derived by dividing salaries and wages by the number of full-time-equivalent employees are indicative within broad limits of changes in average annual earnings of full-time employees.

Average full-time earnings of all workers as shown in table 4 increased from \$1,235 in 1936 to \$1,316 in 1937, bringing the level in 1937 to within 9.3 percent of that in 1929. In those industries in which salaried workers and salaries could be segregated from wage earners and wages, per capita wages rose 9 percent in 1937 over 1936. Per capita salaries were 6.3 percent lower in 1937 than in 1929 whereas per capita wages were down 9.6 percent for the same period.

¹ The estimates of the number employed are averages for the year and represent full-time-equivalent numbers for industries in which data permit such adjustments.

² Does not include employers and self-employed persons, such as farmers, merchants, independent professional practitioners, etc., nor work-relief employees and unpaid family farm labor.

³ Includes mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation.

It is interesting to note that while average annual earnings of full-time employees in 1937 were 9.3 percent below the 1929 average, the Bureau of Labor Statistics index of the cost of living was 15.3 percent lower in 1937 than in 1929. This cost of living index, as constructed, applies only to urban wage earning families and therefore is not entirely adequate as a measure of changes of living costs of all families. However, the above difference is certainly sufficient to suggest the conclusion that the real income per full-time employed worker in 1937 was above that of 1929. In this connection, however, it is important to consider the fact that a substantial number of persons were unemployed in 1937 and that they were dependent at least in part on the earnings of employed workers for their support.

Table 5 is presented for the purpose of indicating recent trends in the salaries and wages of employees in various industrial groups as well as subgroups. Salaries and wages are allocated industrially but other labor income items, consisting primarily of pensions and compensation for injuries to employees, are shown only for all industries combined. The marked variations in the magnitude of the declines subsequent to 1929 and of the recovery in recent years give evidence of the varying incidence of business fluctuations on different industries. Generally, the industries in which the declines had been most severe recorded the greatest recovery, with the marked exception of the construction and railroad industries.

Change in 1934 Industrial Classification.

It will be noted that in table 1 two columns are given for the year 1934. This is the result of a change brought about by the Revenue Act of 1934 which limited the privilege of filing consolidated returns to railroad corporations, whereas in prior years this privilege was allowed to all corporations. For 1934, a total of 27,376 returns were filed by corporations which had filed 7,101 consolidated returns for 1933. The returns of these corporations accounted for 5.2 percent of all returns in 1934 and 37.8 percent of the total tax paid by corporations for 1934.

This change had two marked effects on the comparability of the statistics for 1934 and subsequent years with those for 1933 and earlier years. In the first

place, many items increased in size because of the fact that "intercompany eliminations" occur in the consolidation of returns. However, for the items essential to the preparation of income estimates, receipts by corporations increased correspondingly with payments by corporations. Thus, dividends received by all corporations rose correspondingly with dividends paid by all corporations so that the estimates of dividends paid to individuals were not affected by the change. The same is substantially true of interest payments to individuals but, under the method of estimating this item, intercorporate interest receipts from long-term obligations do not exactly offset intercorporate payments of interest and some minor changes in the total interest item occurred on this account.

A more important effect of the change in the revenue act was the shift in the industrial classification of corporations. In classifying consolidated returns industrially, the corporation was assigned to an industry on the basis of the predominant industrial activity of the consolidated group. When separate returns were filed in 1934 for each subsidiary or affiliate, each was classified according to its own predominant industrial activity, which in many instances differed from the predominant industrial activity of the affiliated group of corporations of which it was a member. Special tabulations of the 1934 returns were prepared by the Bureau of Internal Revenue for the Department of Commerce showing the 1934 returns classified as they had been in 1933 on the consolidated basis. This permitted showing the 1934 unconsolidated returns classified industrially as they were in 1933 when consolidated. In the estimates of aggregate income produced or total income paid out, the two columns for 1934 do not reveal pronounced differences in the totals for each industrial group. However, for dividends, interest, and corporate savings considered separately there are marked differences in several industrial groups. Also for more detailed industrial subgroups than those shown in these summary tables, there were substantial differences not only in specific items but also for total income produced and paid out. Adjustments necessary to make the series comparable for each item in each industry will require some partly arbitrary procedure which may be attempted after further analysis.

¹ Includes salaries and wages, work-relief wages, compensation for injuries, pensions granted under formal private plans, and contributions of employers to Social Security. The industrial classification covers only salaries and wages.

² Does not include certain miscellaneous financial institutions which have been included in "Miscellaneous."

³ Does not include work-relief wages.

⁴ Includes religious, private educational, curative, legal, and engineering (consulting) activities.

⁵ Includes hotels, restaurants, laundries, cleaning and dyeing establishments, apartment houses, and office buildings, etc.

⁶ Includes motion-picture production and exhibition, radio broadcasting, and all other activities primarily providing entertainment.

⁷ Includes accounting firms, advertising agencies, trade associations, chambers of commerce, and other enterprises serving business establishments.

⁸ Includes various industries rendering services to automobiles, radios, elevators, watches, and other commodities.

¹ Export and import data on vegetable oils are from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. They differ substantially from those previously shown in the SURVEY and in the 1932 and 1936 SUPPLEMENTS, which included only a selected group of oils.

Import figures represent general imports, including those for reexport, through 1933, and imports for consumption subsequently. Paint oil imports include tung oil, linseed oil, and, beginning with 1928, perilla oil. Separate data on perilla oil imports for earlier years are not available, but the quantities of this oil imported in those years are believed to have been too small to seriously affect the comparability of the series.

The classification of "paint oils" is segregated because over 90 percent of the domestic factory consumption of these oils is in the paint, varnish, linoleum, and oilcloth industries. Although other vegetable oils, notably soybean oil, are used in paint manufacture, their other uses are more important. "All other vegetable oils" covers all types of edible and expressed vegetable oils, except the paint oils, but excludes vegetable tallow and wax, and essential or distilled oils. The major oils covered include coconut, cottonseed, peanut, olive, palm, palm-kernel, soybean, rapeseed, corn, and sunflower seed.

The series on imports formerly used was not reliable since it covered only a restricted group of oils regularly imported. In view of the interchangeability of these oils, it is necessary to include, as has now been done, oils which are only irregularly imported, but are competitive with those regularly imported.

The series on vegetable oil exports formerly shown covered only cottonseed, linseed, and corn oils. The series given here includes, in addition, coconut oil, soybean oil, cocoa butter, vegetable soap stock, cooking fats other than lard, and all other edible and inedible vegetable oils and fats. The data include a quantity of cooking fats which contain animal fats, but exclude vegetable oleomargarine, inasmuch as these items are not separable. Not all the items included are oils in a strict sense, but all have substantially related or competitive uses.

¹ Compiled by the *Federal Reserve Bank of Philadelphia*. Revision was occasioned mainly by the compilation of new seasonal factors (ratio-to-moving-average method), although some minor changes were made in the basic data beginning in 1934. These latter revisions as they affect the unadjusted indexes will be shown in the 1938 SUPPLEMENT. The data are obtained from an identical list of firms, and in addition to being adjusted for seasonal variations, allowance is made for the number of working days and for the changing date of Easter.

¹ Compiled by the *Board of Governors of the Federal Reserve System*. The revision was occasioned by the computation of new seasonal factors, with no changes in the basic data other than the indexes for December 1923 and April 1925, as published in the 1932 SUPPLEMENT, which should read 93 and 105, respectively. Reports are currently received from about 350 stores, and although the number reporting has decreased considerably since the index was first published in 1928, the representativeness of the sample is not seriously lessened. Stocks are taken as of the end of the month, and in addition to adjustment for seasonal variations (ratio-to-moving-average method) the indexes are also adjusted for the changing date of Easter.

¹ Compiled by the *Federal Reserve Bank of Dallas*. The revision was occasioned primarily by the inclusion of figures for additional firms to replace the figures of those firms that in recent years have discontinued business. In compiling the indexes, an identical sample is used. The reported sales are reduced to daily averages, and adjusted for seasonal variations by means of the ratio-to-moving-average method. Allowance is also made for the changing date of Easter.

• Data do not cover calendar weeks in all cases.

§ Computed normal=100.

† Daily average.

‡ Weekly average, 1928-30=100.

* New Series. See pp. 19 and 20 of the November 1937 Survey for bond yields. Starting with the October 1937 issue steel ingots are based on data compiled by the American Iron and Steel Institute instead of Dow Jones & Co., Inc., as previously.

† Index for week ended June 4 is 44.1.

○ For descriptions of these indexes, see p. 4 of the Weekly Supplement for Dec. 16, 1937. ▲ Effective January 1938 the number of commodities was increased from 784 to 813.

Monthly Business Statistics

The following table represents a continuation of the statistical series published in the 1936 Supplement to the Survey of Current Business. That volume contains monthly data for the years 1932 to 1935, inclusive, and monthly averages for earlier years back to 1913 insofar as available; it also provides a description of each series, and references to sources of monthly figures prior to 1932. The 1936 supplement may be secured from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 35 cents per copy.

A few series have been added or revised since the 1936 Supplement went to press. These are indicated by an asterisk (*) for the added series and by a dagger (†) for the revised series. A brief footnote accompanying each of these series provides a reference to the source where the descriptive note may be found.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for seasonal variation. Data subsequent to April will be found in the Weekly Supplement to the SURVEY.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1938		1937										1938

*Preliminary. * Revised.

* New series. For data on slaughtering and meat packing for period 1919-37, see table 42, p. 20, of the October 1937 issue. Data on income payments for period 1929-36 and a description of the series appeared on pp. 7-13 of the February 1938 Survey; revised figures for the full year 1937 appeared on p. 22 of the March 1938 issue. Latest available data on income payments appear in the Weekly Supplement to the Survey for the last Thursday in each month, i.e., figures for April 1938 were shown in the Weekly Supplement dated May 26, 1938.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1937											1938

Revised.

* New series. For bituminous coal, retail price index, data beginning 1929 appeared in table 44, p. 20 of the October 1937 Survey.

† Revised Series. Retail prices of anthracite for period 1929-37, see table 44, p. 20, of the October 1937 issue; retail food prices, for period 1923-36, see table 9, p. 20, of the February 1937 issue. World stocks of foodstuffs and raw materials revised for period 1920-37, see table 19, pp. 17 and 18, of the May 1937 issue; revisions shown on p. 23 of the November 1937 issue were occasioned by recomputation of seasonal adjustment factors for 1936 and 1937. Revisions not shown on p. 23 of the November 1937 issue will appear in a subsequent Survey.

§ Data for May 15, 1938: Total 92, chickens and eggs 98, cotton and cottonseed 71, dairy products 103, fruits 77, grains 79, meat animals 111, truck crops 99, miscellaneous 82.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1938	1937										1938

CONSTRUCTION AND REAL ESTATE

**CONSTRUCTION CONTRACTS
AWARDED**

Contract awards (E. N. ⁷ Revised. ¹ Discov.

* Revised. Discontinued by the reporting source.
* New series. For data on the value of contracts award-

Data for April, July, September, December 1937, and March 1938 are for 5 weeks; other months, 4 weeks.
Data classified as to ownership for period January 1932-June 1937 see table 29, p. 18 of the August 1937 Survey.

New series. For data on the value of contracts awarded classified as to ownership for period January 1932-June 1937, see table 29, p. 18 of the August 1937 Survey.

¹ Revised series. For data on purchasing power of the dollar, cost of living for period 1914-36, and retail food price, for period 1923-36, see tables 5 and 6, p. 19 of the September 1937 issue. For construction contracts awarded in 1936, by type of project, see table 28, p. 18, of the August 1937 issue; classifications changed beginning January 1937, but comparability of series is not seriously affected.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1938	1937										1938

\$Index as of May 1, 1938, is 236.8.

*Revised.

*New series. Data on number of grade crossing projects represent a breakdown of the total projects shown in the 1936 Supplement. For foreclosures indexes for metropolitan communities for 1932-35, see table 18, p. 20 of the April 1937 issue. The same reference also gives data on nonfarm real estate foreclosures for 1934-36; these figures, however, have been shifted to 1926=100 beginning with this issue. The Home Owners' Loan Corporation data are for loans closed through June 12, 1936, when lending operations ceased, and for loans outstanding thereafter. For loans outstanding beginning September 1933 will be shown in a subsequent issue.

^fRevised series. Engineering News Record of Construction Costs revised beginning January 1935. Data not shown on p. 25 of the May 19

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey

* Revised. † Preliminary. ‡ Deficit.

* Number of companies included varies.

† As reported by the Interstate Commerce Commission. Figures shown on p. 54 of the 1936 Supplement are in thousands of dollars instead of in millions as the box head indicates.

‡ Revised series. Revisions in the Standard Statistics index of corporation profits for 1935 and 1936 not shown on p. 34 of the May 1937 Survey will appear in a subsequent issue.

§ Total includes a small amount of guaranteed debentures of the Federal Housing Administrator.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1938		1937										1938

FOODSTUFFS AND TOBACCO—Continued

• Revised.

• Not available.

• Dec. 1 estimate.

*The quarterly report for gelatin is complete for the industry; the monthly data are for 7 companies, for which figures for the period 1930-36 were shown in table 8, p. 20 of the February 1937 issue. For new series on the production of manufactured tobacco for period 1934-37 see table 33, p. 20 of the August 1937 Survey.

^fRevised series. Series on stocks of tea in United Kingdom for 1913-36; see table 32, p. 20 of the August 1937 issue. Sugar meltings and stocks in the United States for the period 1920-37, see table 39, p. 17 of the October 1937 issue. For stocks of sugar in Cuba, revisions for period 1920-36 will appear in a subsequent issue.

[¶]Spanish ton, equivalent to 1.0141 English long tons; data shown in the 1936 Supplement and in subsequent monthly issues are on the basis of Spanish tons.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1937										1938

† Discontinued.

‡ Revised.

Beginning January 1937, the American Iron and Steel Institute computes the percent of capacity on a weekly average basis, with no allowance for Sundays or holidays; the figures shown here have been carried forward on the old basis (which relates daily average output to daily average capacity with allowance for Sundays, July 4, and Christmas) in order to keep the series comparable.

▲ As reported by 21 manufacturers; beginning Jan. 1937 data are available from the reports of the Bureau of the Census for 34 additional establishments.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.	1938	1937										1938

^a Revised.^b Preliminary.^c Data no longer available.

^d Revised series. Data on finished cotton cloth beginning 1934; see table 31, p. 19 of the August 1937 issue. Due to change in the number of firms reporting, data beginning 1938 are carried forward on the basis of identical mill reports. The identical mill report is available for production only, hence the stock figures cannot be carried forward. For rayon deliveries, 1923-27, and stocks, 1930-37, see table 43, p. 20 of the October 1937 issue. For total visible supply of silk for period July 1930-December 1936, see table 11, p. 20, of the February 1937 issue. Data on fur sales revised beginning January 1936; revisions not shown on p. 94 of the March 1938 Survey will appear in a subsequent issue.

^e Data for April, July, October, 1937, and January and April 1938 are for 5 weeks; other months, 4 weeks.

Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey.		1938		1937									1938

Revised.

^{Revised} ¹⁹³⁰⁻³⁷
Revised series. For revised data for period 1930-37 on new paid for "Ordinary Life Insurance Sales" in Canada, see table 37, p. 19, of the Sept. 1937 Survey. Construction index revised for 1937; index for January, 31.8; February, 40.2; March, 70.2. Electric locomotives revised to include mining and industrial. Revisions beginning with January 1921 will be shown in a subsequent issue.

U. S. DEPARTMENT OF COMMERCE
BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Announcing

CONSTRUCTION ACTIVITY IN THE UNITED STATES

1915-37

Domestic Commerce Series—No. 99

A STATISTICAL STUDY of the volume of construction activity, containing entirely new series of adjusted estimates, designed to provide a unified

measure of actual current volume and trends, with details by types of construction, over a greater period than any previous compilation.

93 Pages

57 Tables

9 Charts
