# The Business Situation

By the Office of Business Economics

## National Income

BILLIONS OF DOLLARS

HALF-YEARLY TOTALS, SEASONALLY ADJUSTED, AT ANNUAL RATES

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-1

Business indicators continue to show strength. The flow of income to individuals is at a record rate and is supporting a steadily rising consumer demand. Retail sales data for September showed that consumers were still expanding their purchases. New orders placed with manufacturers of machinery and other types of producers' durable equipment in August were the largest since the 1951 defense buildup. Along with the expansion of private commercial and industrial construction in the July-September quarter, they reflect the rising trend of programmed business outlays for plant and equipment reported in the SURVEY last month. The recent spurt of commercial and industrial construction is significant because it has offset a slight decline of private residential building and small reductions in most types of public construction and thus served to hold the volume of total construction, seasonally adjusted, at a level rate.

Personal income remained at the seasonally-adjusted annual rate of \$305 billion in August, unchanged from July but \$3½ billion above June. The July total had received a sizable lift from the lump-sum disbursement of retroactive payments to Federal Government employees resulting from the recent pay raise legislation. Incomes other than Federal payrolls increased by \$1½ billion from July to August with gains widely distributed.

### Employment high

Civilian employment in September of 64.7 million, as reported by the Bureau of the Census, was the largest on record for the month. Largely seasonal changes, mainly reflecting the return to school of students temporarily employed in the vacation period, resulted in a reduction in both the labor force and total employment from August to September. Unemployment was the lowest since 1953. Employees on the payrolls of nonagricultural establishments, as reported by the Bureau of Labor Statistics, showed a more-than-seasonal increase in September with most major industry groups contributing to the rise.

Man-hour input in manufacturing increased not only from the employment expansion but also from the lengthening of the factory workweek by nearly one-half hour. Most industry groups worked more hours per week than in August but the increases from August and also from last September were largest in the durable-goods industries.

Factory average hourly earnings continued their steady rise, the September average for all manufacturing industries being \$1.90 as against \$1.81 a year earlier.

### Trade strong

September business rounded out a record-breaking third quarter for retail merchants. The summer and early fall gains brought seasonally-adjusted sales for the third quarter

up 2 percent from the second quarter and 10 percent above the corresponding period of a year ago.

Sales of automotive dealers, continuing their advances, rose 4 percent from the second to the third quarter on a seasonally-adjusted basis to raise their total more than a fourth above a year ago. Quarterly sales increases were more moderate for the remaining major groups.

In August, for the sixth successive month, buyers drew on the available consumer credit to help effectuate their purchase; the total of this type of credit outstanding rose \$¾ billion during the month. As usual, in recent months, nearly all of the August increase was in installment credit with automotive paper accounting for the bulk of it. Installment credit extensions and repayments continued to increase gradually relative to retail sales and personal income.

### *Inventories moderately higher*

With the substantial rise in consumption and fixed investment, business inventories have increased only moderately. The book value of total manufacturing and trade inventories, seasonally adjusted, aggregated \$79.6 billion at the

end of August, an increase of \$400 million during the month. Virtually all of the rise was in manufacturers' inventories as stocks of retailers and wholesalers were practically unchanged. A substantial part of the August increase in the value of stocks reflected higher replacement costs.

In the period August 1954 to August 1955, total manufacturing and trade sales increased 15 percent while the book value of inventories rose 3 percent. The change in the aggregate inventory-to-sales ratio was from 1.67 months in August 1954 to 1.50 months this year. Over this period the stocks-sales ratio declined from 1.87 to 1.61 months in manufacturing, from 1.30 to 1.21 months in wholesale trade, and from 1.58 to 1.49 months in retail trade. In comparison with August 1953, aggregate manufacturing and trade inventories at the end of this August were down 2 percent while total sales were up 11 percent.

About six-sevenths of the expansion in manufacturers' inventories since August 1954 occurred in goods-in-process as a necessary support to the rising rate of operations. Purchased materials showed no increase; and although finished goods stocks rose 1 percent over the year, the ratio of finished goods inventory to sales dropped from 0.71 months to 0.61 months.

## The Recent Expansion in Manufacturers' Orders

THE EXTENT of the upturn in business activity over the past year is highlighted by the large inflow of new orders placed with manufacturers. Ordering this August was almost one-third above that of August 1954 while sales were up one-sixth. For durable-goods producers the increases were one-half and one-fourth, respectively.

As can be seen in the chart, new orders received by durable-goods manufacturers have exceeded shipments since the fall of 1954 in contrast to the excess of sales which had persisted during the previous two years. New orders for those nondurable-goods industries which maintain order books for future delivery, after running slightly below shipments throughout 1953 and 1954, have been topping sales since the turn of this year.

As a result of the excess of orders over sales unfilled orders held by manufacturers have risen steadily in the past year. At the beginning of September backlogs were valued at \$52 billion, about 10 percent above the recent low a year earlier—though still one-third below September 1952 when defense orders were larger. The placing of military prime contracts, after declining sharply in 1953, has been stable since the spring of 1954. The 1954-55 upturn in backlogs has reflected entirely the effects of rising demand for civilian goods. By major industry groups, only the transportation equipment industry—where defense contracts loom the largest—has not had an increase in backlogs.

### *Backlog-sales ratios turn upward*

The ratio of durable-goods producers' unfilled orders to sales rose slightly from the second to third quarter of this year—the first rise in three years. The ratio is still somewhat lower than a year ago. Backlogs are currently equivalent to

3½ months of sales, as compared to 4 months in the third quarter of 1954 and a peak of 7 months in the third quarter of 1952. As can be seen in table 2, the transportation equipment industry accounts for most of the reduction from a year

**Table 1.—Manufacturers' New Orders, Sales, and Unfilled Orders**

ago. This mirrors not only the industry's experience with defense orders, but also the fact that passenger car sales which have risen to a record rate do not have a counterpart in unfilled orders. The backlogs-sales ratio for manufacturers of durable goods other than transportation equipment is the same as a year ago.

### *Capacity demand for primary metals*

Of particular note in the orders expansion has been the very striking rise in new business received by primary metal producers. Ordering generally picked up earlier and ex-

panded more rapidly among basic materials producers than in other durable-goods areas. By later summer the dollar total of new business for this industry was three-fourths larger than a year ago. Higher prices are significant in the dollar rise, but most of the increase in orders represented higher physical volume.

While aggregate new orders for iron and steel producers have advanced more than those reported by primary non-ferrous metal firms, an analysis of changes in new orders of individual companies from late summer of 1954 to 1955 indicates that for both iron and steel and nonferrous metals producers, more than half of the companies reporting to the Office of Business Economics had increases of 50 percent or more in orders. For the durable-goods industries as a whole, one-third of the reporting companies experienced increases of this magnitude.

In spite of the substantial additions to metal producing capacity in recent years, deliveries have not been able to keep pace with the recent inflow of orders. Backlogs in this industry turned up a few months earlier than for manufacturers generally. Unfilled orders of primary metals producers at the beginning of September were more than double their year ago value—a relative change substantially higher than in other major industries.

As early as the fourth quarter of last year, the average delivery time on contracts held by primary metal producers began to rise. By early fall of this year the ratio of unfilled orders to sales had reached 3 months against an average of 2 months a year ago. Unfilled orders which were about equal to inventories a year ago are currently about twice as large.

### Orders for machinery improve

The expansion in new business spread more slowly to the machinery industries and has resulted in only a moderate increase in unfilled orders for the group as a whole. Indications are, however, of substantial pickup in certain machinery areas in the more recent period—particularly in orders received by metalworking machinery manufacturers. Throughout the past year the advance in new business has been stronger in the nonelectrical than in the electrical machinery segment. To some extent these developments reflect businessmen's capital spending programs. Outlays for new plant and equipment as a whole have moved up sharply since the recent low in the first quarter of this year and are expected to reach a new high in the fourth quarter; capital improvements by the electric utilities, however, are rather stable at record rates.

For the machinery industries as a group the current value of new orders is about half again as large as a year ago. About a third of the group of companies reporting experienced increases of 50 percent or more in late summer orders over those a year ago; and half reported increases of 30 percent or more. One-fourth of the responding firms had received a smaller amount of orders this year than last.

### Orders for transportation equipment rise

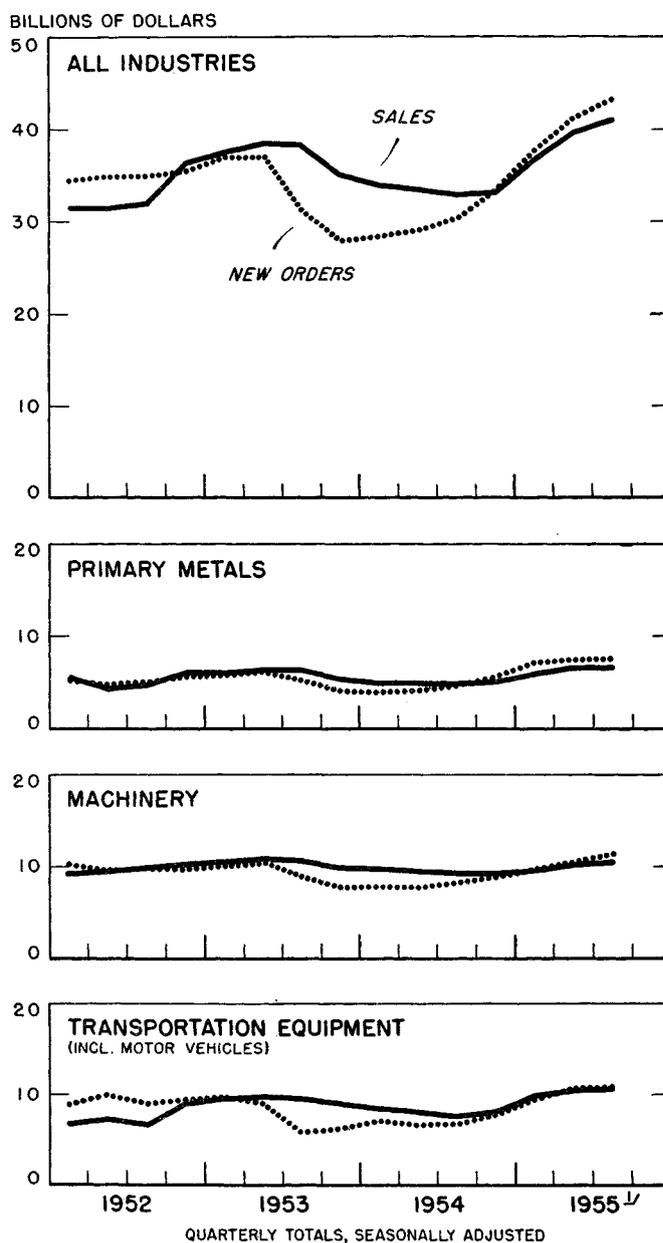

Aggregate orders placed with the transportation equipment industry rose appreciably during the past year, though the sizable increases in demand for civilian goods—such as motor vehicles and freight cars—have been tempered by relative stability in the volume of defense contracts. Deliveries by the industry, however, have more than kept pace with the inflow of new orders. As a result, this group has been the only segment of durable-goods manufacturing to show a recent decline in unfilled orders.

The major reason for the downtrend is that under the maturing defense program deliveries are being made in

increasing volume on orders placed several years before; as noted above, passenger cars are generally not carried on the producers' orders books. Ratios of unfilled orders to sales are continuing to decrease in the transportation equipment industry, having dropped to 5.2 from 7.9 months a year ago and a high of 13.5 in the third quarter of 1952.

## Durable Goods Manufacturers

- Record new orders have exceeded sales in 1955
- Orders for primary metals have set the pace

∩ Third quarter includes estimates for September

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-2

The recent expansion in new business for fabricated metals and "other major durable-goods" industries—which include lumber, stone, clay and glass—has been somewhat smaller than for durable-goods producers as a whole. However, orders for the former groups, which are primarily suppliers

2. September estimated.

Source: U. S. Department of Commerce, Office of Business Economics.

for the construction industry, did not show as sharp declines in the 1953-54 contraction as did durable-goods companies generally.

Ratios of backlogs to sales in the fabricated metals, lumber and stone, clay and glass groups have been rather stable in the last six months. For fabricated metals producers' unfilled orders are currently equivalent to 2.7 months of sales and for "other durable-goods" companies 1.6 months. These ratios are lower than in other major durable-goods sectors since production periods among building materials and fabricated metals producers are relatively shorter and a larger proportion of orders are for stock than is the case in the machinery or transportation equipment industries.

While the orders expansion has been largely a function of

the volatile durable-goods sectors, new business in nondurable-goods industries has also improved. The early fall aggregate—up 7 percent from a year ago—represented a near record for the four industries—textiles, leather, paper, and printing-publishing—customarily taking orders for future delivery, and a record total for other soft-goods industries, which generally fill orders upon receipt.

The improvement in orders received by the former group of soft-goods industries has been widespread, and three out of four of the reporting firms have received more new business in 1955 than in 1954. Unfilled orders in these industries have risen nearly a third over the past year and are at their best levels in 4 years. Further, the ratio of unfilled orders to deliveries has increased steadily over the past year.

## National Income and Corporate Profits

NATIONAL INCOME in the second quarter was up 3 percent from the first, continuing the advance which began in the fall of 1954. At a seasonally adjusted annual rate of \$321 billion, the total was \$9 billion above the first quarter. This gain compares with previous advances of \$4½ billion in the fourth quarter of last year and \$8 billion in the first quarter of 1955.

National income had declined \$10 billion from the peak second quarter of 1953 to early 1954. It was stable during the spring and summer of last year. The accelerating advance to mid-1955 has wiped out the previous decline, and carried the total to a new high 4 percent above the peak recorded 2 years earlier.

The pattern of industrial change over these years reflects the adjustment of the economy to the underlying change in the structure of demand. National security outlays, for hard goods in particular, declined after mid-1953 and the drop in hard goods production was accentuated by a swing in the business inventory account from accumulation to liquidation. Since last fall hard goods production has about recovered its previous peak and expansion has occurred throughout the economy as a result of a diversified rise in civilian purchases, which have provided the expansionary force in the current upswing.

The income effects of the transition were most marked in

manufacturing—especially of durables—and in the related mining and transportation industry divisions. The total of income originating outside these industries advanced consistently throughout the period (see chart). Its rise to 1954 stemmed from the continued strength of certain divisions—construction, finance, utilities and services—not much affected by the demand shift, and was accelerated as other industries which had held stable or dipped somewhat last year generally resumed their postwar expansion. These variations in industry experience are reflected in table 3, which shows the industrial sources of national income. The changes there indicated are summarized, for the broad groups mentioned, in the accompanying text table.

	Change in billions of dollars		Percentage change	
	from 1st half 1953 to 1st half 1954	from 1st half 1954 to 1st half 1955	from 1st half 1953 to 1st half 1954	from 1st half 1954 to 1st half 1955
Manufacturing.....	-9.1	9.2	-9.2	10.2
Mining and transportation.....	-1.7	1.1	-7.9	5.6
Construction; finance, insurance, real estate; communications and public utilities; services.....	3.6	4.3	4.5	5.2
Agriculture; trade; government; rest of the world.....	- .4	3.1	- .4	2.9
Total national income.....	-7.5	17.8	-2.5	6.0

The 3 industry divisions chiefly affected by last year's readjustment are predominantly corporate in form of business organization, and account for close to two-thirds of all the income arising in corporate business as a whole. The 1953-55 income swing, therefore, has been especially conspicuous in the record for corporations. Income originating in this segment of the economy declined considerably more from the first half of 1953 to the first half of 1954 than

did the national income total (\$9 billion, or 5 percent, for corporations as against \$7½ billion, or 2½ percent, for the total) and accounted for three-fourths of the subsequent \$18 billion overall rise to the first half of 1955. The changes in corporate profits were especially sharp, as the chart on page 6 suggests.

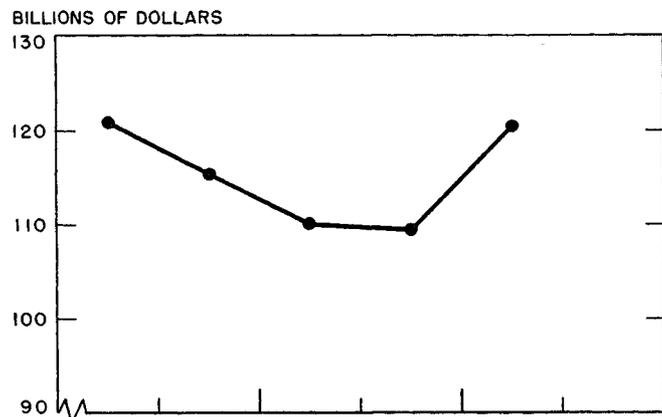

### Recovery in manufacturing

The rise in manufacturing income from a seasonally adjusted annual rate of \$90 billion in the second half of last year to almost \$100 billion in the first half of 1955 followed a rapid tapering-off in the rate of the previous contraction from the 1953 peak. The successive declines indicated by table 1 had amounted to \$5 billion from the first to the second half of 1953, nearly \$4 billion to early 1954, and a little over \$½ billion to the latter half of that year.

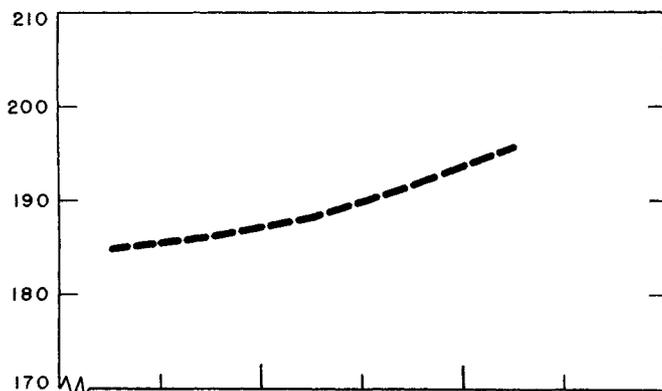

Substantial recovery in manufacturing income began in the fall of 1954, and was accelerated during the winter and spring. The rise to the second quarter of this year appears to have involved a recovery in income from durable goods manufacturing to about the 1953 peak, after an interim decline

### Industrial Sources of National Income

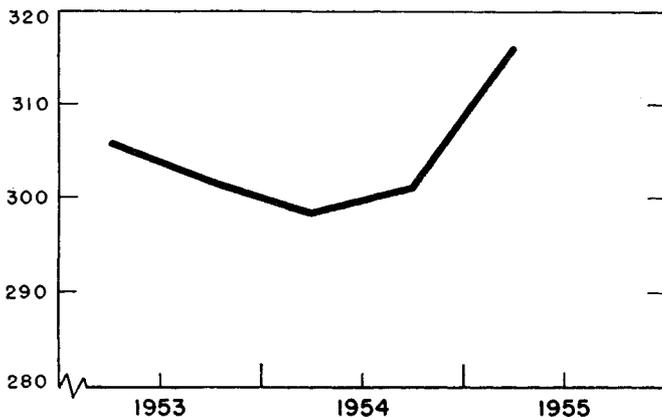

Recovery from 1954 lows in Manufacturing, Transportation, and Mining . . .

plus continued growth in Other Industries . . .

raised National Income to a new high in the first half of 1955

Source: U. S. Department of Commerce, Office of Business Economics.

of one-fifth, and an expansion of nondurables lines above their 1953 high after an intervening decline of less than one-tenth, allowing for seasonal variations.

The bulk of the improvement in the fourth quarter of last year occurred in durables. Expansion of payrolls and profits centered in the auto industry, extending to the related metals groups and, among the nondurables, to the rubber group. Movements within manufacturing were otherwise mixed, with limited declines in some of the heavy durables industries and minor advances in a number of nondurables lines. This pattern changed in the first quarter of 1955, as the recovery broadened and picked up speed. The acceleration was due partly to a step-up in the auto industry expansion and the indirect effects of this in metals and rubber. However, upturns in both electrical and nonelectric machinery also contributed to the first-quarter rise. Increases in income were recorded for several other durable-goods lines as well, and most nondurables groups reported a quickening of their expansion.

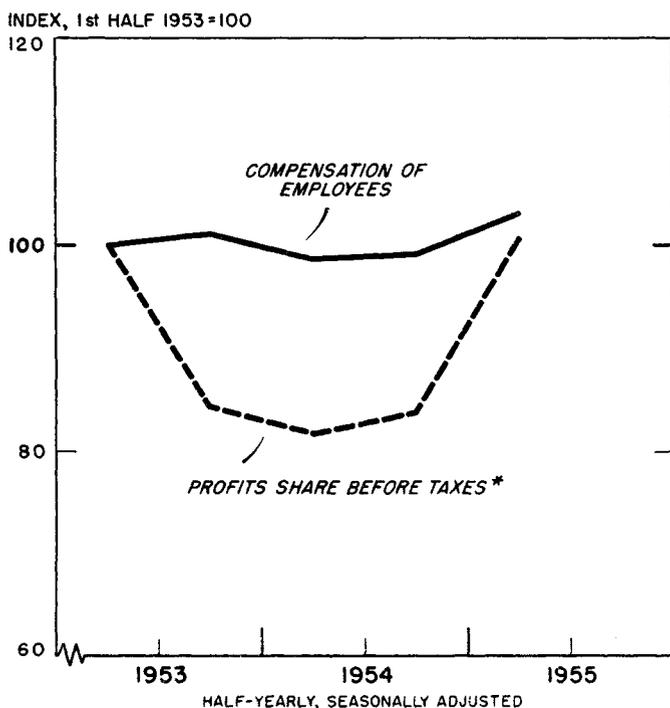

The industrial base of the advance continued to broaden in the second quarter. The rise in the auto group levelled off, and this special stimulus to further expansion in related industries largely ceased, but the growth of the all-manufac-

turing total of payrolls and profits continued vigorous as demand rose on a wide front. Machinery and primary and fabricated metals maintained or accelerated their rate of recovery. Substantial gains occurred also in a number of industries with highly diversified markets, such as chemicals, paper and printing, and the stone, clay and glass group.

### *Mining, transportation up from 1954*

The rise in mining income, seasonally adjusted, from the latter half of 1954 to the first half of 1955 was relatively as sharp as the advance in manufacturing—amounting to about one-tenth—and carried the total for this industry division up even with the previous peak reached a year and a half earlier. The 1954–55 improvement was closely associated with that in manufacturing, but also reflected other sources of demand strength. Much of it is traceable to the resurgence of activity in auto and other metal-using lines, and

### Major Types of Income Originating in Corporate Business

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-4

to the expansion of industrial fuel requirements accompanying the increase of manufacturing production in general. In addition, the industry continued to benefit from the rise in household consumers' demand for petroleum products, in particular, as the number of autos to be fueled and the number of separate dwellings to be heated increased, and also from the uptrend in demand for construction materials. The strength of the market under these circumstances has been exemplified by price and/or production advances from 1953 for crude oil, gas, copper and other nonferrous metals, and stone and earth minerals.

A major exception to this pattern of growth has existed

in the coal industries, where first-half output and prices, though up from 1954, generally averaged somewhat lower this year than in 1953. Iron ore production was likewise below the levels reached two years before. Changes in mining activity, particularly in coal and iron, are not fully reflected in total income from the mining industry division, it should be noted. Many of the mines affected are owned by manufacturing corporations, so that their profits are included in the totals for that division instead of in mining.

Income from rail and other transportation in the first half of this year was up about 5 percent from its 1954 low, after allowance for seasonal variation, and had recovered roundly half the previous drop from its early 1953 peak. The available quarterly data indicate an acceleration of the improvement during the first six months of 1955.

This recovery has stemmed largely from a rise in the volume of materials shipped for use in the expanding manufacturing industries and from heavier shipments of manufactured products this year than last. In addition, the transportation industries have benefited from the general uptrend in nonmanufacturing production and in consumer fuel requirements.

By comparison with early 1953, however, there seems to have been little if any increase in the volume of goods handled by rail and nonrail carriers taken together, and reported passenger traffic is generally somewhat lower. Stiffening competition and heavier fixed costs associated with capacity expansion and modernization have also been reflected in the course of income arising in transportation.

With respect to freight traffic volume, it should be noted that manufacturing activity in the first half was no higher than in the same period of 1953, and much of the net expansion in gross national product over this 2-year period was in fields such as service and construction which require transportation of materials but in general involve no shipments of output. Moreover, the special transportation requirements of the defense effort which contributed significantly to total activity in 1953 have since fallen off without finding a specific replacement in the pattern of demand. The latter development has affected passenger as well as freight business, though it has probably influenced total passenger volume less than has the increased use of private autos.

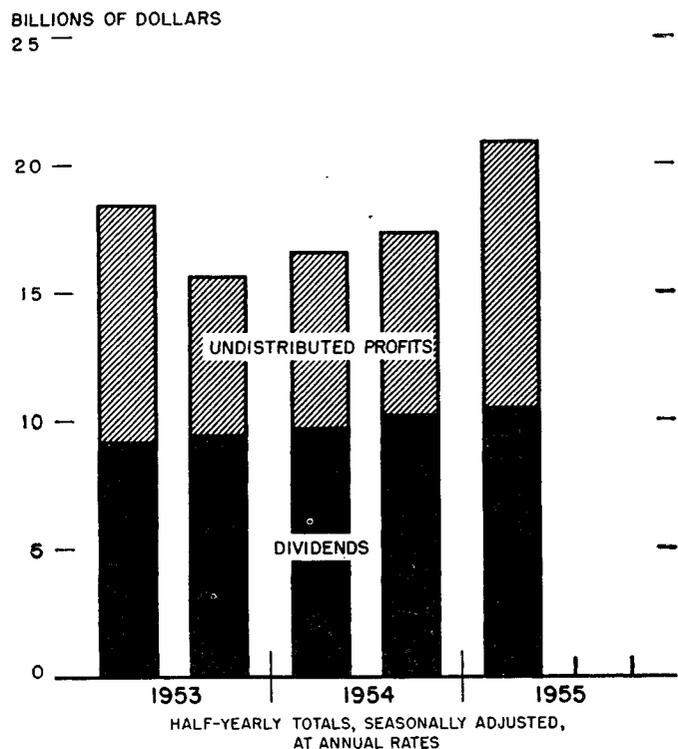

The increasing keenness of competition within the industry and the long-range planning to meet it have involved heavy outlays for modernization and expansion of facilities. Transportation industry expenditures for new plant and equipment from mid-1953 through the first half of this year are estimated at close to \$5 billion, representing a gross addition of the order of one-tenth to the gross book value of depreciable capital assets. The relative addition to carrying capacity, while no doubt much smaller since extensive replacement purchases are included, was nevertheless substantial, especially in the nonrail industries, and tended to increase the competitive pressure pending further traffic gains at the same time that depreciation and emergency amortization charges rose with the net new investment.

### *Expansion in other industries*

Most industrial divisions other than those discussed above either continued or resumed previous growth trends in the first half of 1955, having already exceeded their 1953 income peaks before the turn of the year. The only exception was agriculture, where a further downdrift in farm prices combined with general stability in costs led to some further contraction of income originating. Four major divisions—construction, communications and public utilities, finance, and service—had recorded no significant contraction on a

half-yearly basis at any point in the business readjustment and continued to advance this year. Income in wholesale and retail trade dipped in late 1953 and early 1954, but recovered before the end of last year and has since moved upward into new ground. Earnings from government employment and the net flow of income from foreign sources were likewise higher in early 1955 than 2 years before, interim declines having been wiped out before the end of last year.

## Disposition of After-Tax Profits

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-5

Income originating in contract construction rose further this year, responding to the advances in public, commercial and industrial construction activity and the moderate expansion of residential building. As in other years, the overall rise in construction activity has been only partly reflected in the income flow from contract construction, some of it having represented higher prices for materials and a considerable part having been for force account.

The communications and public utilities industries have maintained this year their postwar record of consistent expansion, reflecting the general growth of the economy. The finance, insurance, and real estate division likewise continued a broad uptrend which has stemmed from the same basic source in economic growth and the use of credit in its financing. In particular, the steady buildup in the number of occupied dwelling units has had a cumulative effect on the demand for communications and public utility services, on the volume of interest-bearing real estate credit and value of insurable realty, and on the net return attributable to equities in housing. Much of the new nonresidential construction has exerted a similar cumulative effect on finance and utility income, as have other forms of net new investment. The expansion in relatively new uses of electricity—e. g., in air conditioning equipment—has also been a factor in the prosperity of the power industry, and, indirectly, in the growth of consumer finance activity. Finally, recovery in

the industry divisions chiefly affected by the 1953-54 readjustment helped to increase demand both for industrial power and for business loans and other credit.

Income in trade last year reflected the comparative stability of consumer demand for nondurables, and much less dependence than in the case of manufacturing and transportation on national security purchases by government. The first-half improvement this year over 1954 was associated with the rise in consumer expenditures for autos and other durables, plus the general expansion in retail and especially wholesale sales with the broad uptrend of business activity.

Income originating in government, which is measured by employee compensation, turned up in the second half of last year and rose further in the first half of 1955. At the State and local level, the advance has accompanied staff expansion to meet the growing need for school and other public services, together with upward adjustment of pay scales as these and competing needs have pressed on the labor supply. Federal payrolls were also somewhat higher than in 1954, the effect of pay increases this year having offset the declines in employment which occurred both in the civil establishment and in the armed forces.

Of the remaining industries distinguished in table 3, the service group has shown a rather steady increase with the growth in consumer purchases and business demand, while the net balance of earnings from abroad has improved as profits from foreign investment have reflected business expansion in Europe, Latin America, and elsewhere.

## Type of income

Recent changes in the type distribution of national income (table 4) are largely explained by the varying industrial impact of the overall expansion and the associated variations between corporate and noncorporate experience.

For corporate business, around two-thirds of the advance from the first half of 1954 to the same period of this year represented the recovery of ground lost in the previous decline. With this recovery and net advance the early 1953 proportion of profits to corporate employee compensation was very nearly restored. The chart on page 6 shows the intervening changes in these two shares in terms of index numbers based on the first half of 1953 as 100. The index for profits dropped 18 points to the first half of 1954 and by the first half of 1955 had approximately cancelled this drop. The index for employee compensation dropped 1½ points and subsequently rose 4½ points.

The relative volatility of profits is reflected in table 4 by successive quarterly advances of 7 percent, 11½ percent, and 6½ percent since the low point in the third quarter of last year. The rise of total employee compensation from its first-quarter 1954 low has been much more gradual, though accelerating from quarter to quarter through the first half of this year.

It should be noted that these items in table 4 include the net inflow of earnings from the "rest of the world," and compensation of noncorporate business, government, and household employees, as well as the income flow from corporations discussed above. The swings shown for profits and employee compensation during this period, however, stem primarily from developments in the corporate area.

The difference indicated by the chart between the net advance in corporate employee compensation and that in profits from the first half of 1953 to the same period of 1955 is probably too small to have much if any significance, considering the limitations of the basic data and the difference between conditions in the 2 periods.

Reflecting largely the expansion of trade and service, the first-half earnings of business and professional proprietors

recorded a gain of close to 5 percent over the corresponding period of last year, and accounted on balance for about the same percentage of national income as two years before. Net rental income of persons has tended to stabilize in recent quarters as costs have risen but its net growth since early 1953 has been relatively a little greater than that of national income. Net income of farm proprietors has contributed a declining amount to national income during this period, and its contraction has been reflected in the totals for proprietors' and rental income.

Net interest continued to increase this year, mirroring the credit expansion which has accompanied the recovery and growth of the economy. Some of the specific factors involved have been discussed above in connection with the finance, insurance and real estate industry division.

### Quarterly profits

As the national income total advanced during the first half, corporate profits before taxes rose from \$41 billion in the first quarter to \$43 billion in the second, at seasonally adjusted annual rates. The second-quarter rate was up nearly one-third from the low point of 1954 and was above the 1953 peak. It has been exceeded previously only in the final quarters of 1950 and in early 1951, when rates of \$47-\$49 billion were recorded. Inventory gains stemming from the post-Korean price increases contributed amounts varying between \$7 billion and \$9 billion to these 1950-51 totals. This spring, by contrast, less than \$1 billion of profits at annual rates represented inventory gains, the remainder being a measure of earnings from current production. The profits share thus defined for national income purposes—exclusive of inventory gains or losses—attained a seasonally adjusted rate of \$42 billion in the second quarter. This compares with previous highs on the same basis of \$40½ billion 2 years earlier and \$41 billion in late 1951.

Corporate liability for Federal and State income taxes accruing in the second quarter is estimated at a \$21½ billion annual rate, \$5 billion more than in the lowest quarter of 1954 and within \$1½ billion of the 1953 peak. The increase reflected the expansion in taxable corporate profits, the estimates being based on an indicated effective tax rate substantially unchanged from 1954.

Profits after provision for income taxes thus advanced proportionately, to an annual rate of \$21½ billion also. While substantially short of the record \$27 billion reached in the final quarter of 1950 when Federal income tax rates were lower, after-tax profits in the second quarter of 1955 approximated the 1951 peak and were \$3 billion above the best quarter of 1953. The 2 latter comparisons, of course, are affected by the termination of the Federal excess profits tax at the end of 1953.

The uptrend in dividends continued in the second quarter. As the accompanying chart shows, seasonally adjusted dividend payments have reflected primarily the underlying growth trend in the economy rather than following the short-term swing in after-tax profits. Changes in the latter have therefore been transmitted to undistributed net income, which rose from an annual rate around \$7 billion in the successive quarters of last year to \$10 billion in the first and over \$10½ billion in the second quarter of 1955. These gains are particularly significant in view of the expanded capital requirements associated with the rise in business outlays for plant, equipment, and inventory goods this year.

### Industrial shifts in 1955 profits

Practically all industrial groups reported higher profits before taxes in the first half of this year than in the same period of 1954. The industry pattern of the advance has corresponded in general with that described above for the national income, the most marked gains occurring in those lines chiefly affected by the 1953-54 readjustment.

Corporate profits before taxes in the first half, unadjusted for seasonal variation, were up one-fourth from the same period of 1954. Most of this \$4½ billion advance was due to a rise of one-third, or nearly \$3 billion, in manufacturing. Transportation profits advanced more than 50 percent in the period, and earnings in other industrial groups, which in general had experienced smaller declines or moderate gains from early 1953 to 1954, were also higher than in the first half of last year.

Durable goods manufacturing, up 40 percent in before-tax profits, accounted for \$2 billion of the overall advance. Among the durables groups, the most striking relative in-

(Continued on page 23)

# Foreign Grants and Credits

## U. S. Government, Fiscal Year 1955

UNITED STATES Government foreign assistance under grant and credit programs totaled \$4.5 billion in fiscal year 1955, a decline of \$760 million from fiscal year 1954. Foreign assistance as measured here covers shipments of goods, services rendered, and cash payments to foreign countries.

The decrease was primarily the result of a 28 percent drop, from \$3½ billion to \$2½ billion, in transfers of military supplies and services. In fiscal year 1953 the total had been nearly \$4½ billion. Deliveries of military supplies and services during fiscal year 1955 comprised 55 percent of net United States Government foreign grants and credit transfers.

### Nonmilitary grants reverse trend

Net deliveries or payments on other grants increased to \$1.9 billion—23 percent over the preceding year, which had been at a postwar low. This reversed a 5-year downward trend. Financial assistance for Indochina—both directly and through France—caused the increase and comprised one-third of the annual total.

“Nonmilitary” grants and credits include all relief, development, and technical cooperation assistance and all cash transfers to foreign governments except the contributions to the multilateral-construction program of the North Atlantic Treaty Organization. The last are included in the “military” category along with military “hardware” and other end-items, and military training and other services. In particular, the “nonmilitary” grants reported include the cash payments to France and the three Indochinese states—Cambodia, Laos, and (South) Vietnam—for direct support of troops in Indochina, and to the United Kingdom for support of production of military equipment. Cash payments of over \$600 million for direct forces support were the most significant factor in the resurgence of “nonmilitary” aid in fiscal year 1955.

### Repayments exceed new loans

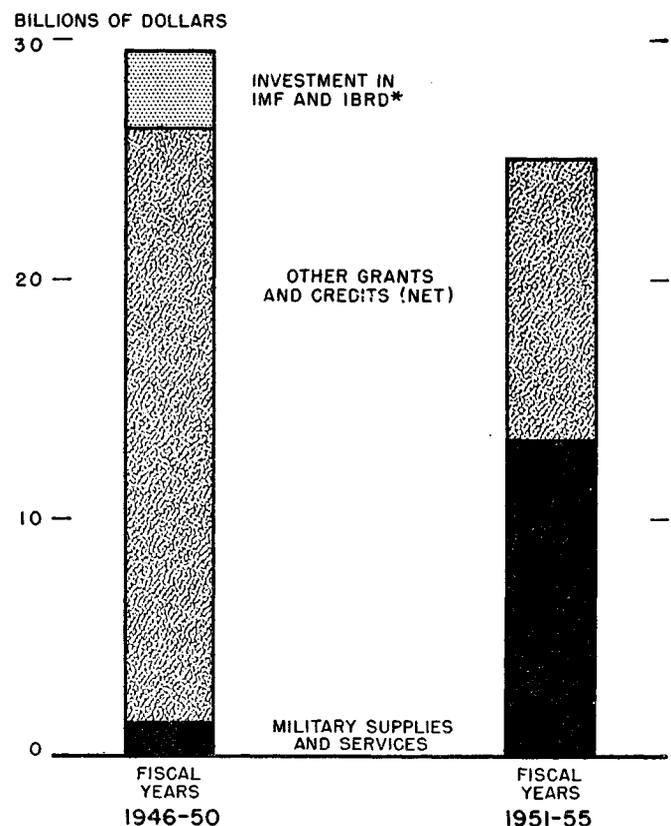

Credit collections exceeded new loan disbursements by \$17 million, continuing the pattern which developed after December 1953. New credit outflows, which included the \$100-million loan to the European Coal and Steel Community, were also supported by the congressional expression that mutual security assistance should be on credit terms to the greatest extent possible.

The Congress had stipulated in the Mutual Security Act of 1954 that a minimum of \$200 million of the \$2.8-billion program should be provided foreign countries on credit rather than grant terms. Disbursements of these mutual security loans began in the final quarter of the fiscal year.

NOTE.—MR. KERBER IS A MEMBER OF THE BALANCE OF PAYMENTS DIVISION, OFFICE OF BUSINESS ECONOMICS.

During the year new commitments for loans abroad, including this segment of the mutual security program, totaled \$866 million. Future utilization of these commitments is

### Postwar Foreign Aid

\* International Monetary Fund and The International Bank for Reconstruction and Development

55-55-6

likely to bring the outstanding indebtedness to the United States Government on World War II and postwar foreign credits to over \$12 billion. At the end of fiscal year 1955, the amount outstanding stood at almost \$11.8 billion, mostly extended in the early postwar period. One-fifth of all net United States Government postwar assistance was on credit terms.

Interest collected by the Government on its foreign credits is not included in the calculations of net credits. During the year, the interest totaled \$282 million, an average of 2.4 percent on the amount outstanding.

## Military grants dominate post-Korea aid

In the ten fiscal years since the end of World War II, the United States Government has given or lent—net of repayments, reverse grants, and returns—over \$51 billion to foreign countries. In addition, this Government has invested \$3.4 billion in the capital of the International Bank for Reconstruction and Development and the International Monetary Fund.

By comparison, during the 5-year World War II period the United States Government supplied its allies with \$41 billion in net assistance. These data are exclusive of the resources in manpower and material expended directly by the United States in both World War II and the Korean conflict.

The postwar decade was divided into equal periods by the invasion of South Korea which resulted in a marked emphasis on increased military grants from the United States. The chart shows the effects of these shifts on the composition of direct United States assistance although the total in the two 5-year periods was about the same.

## New authorizations smaller

For the fiscal year 1956, new foreign aid legislation by the first session of the Eighty-fourth Congress totaled \$2.7 billion. Including the pipeline of assistance on order and the carryover from prior authorizations, \$14 billion was potentially available at the beginning of fiscal year 1956 for transfer to foreign countries without further congressional

1. Does not include direct forces support, which is included in "other" grants.

2. Does not include amounts which may possibly be made available from foreign currencies obtained through sales agreements signed after June 30, 1955, under title I of the Agricultural Trade Development and Assistance Act (Public Law 480).

3. \$1.0 billion is committed to various countries; \$1.5 billion represents EIB uncommitted lending authority; and \$0.1 billion represents other pending loans under Public Law 480 agreements.

Source: U. S. Department of Commerce, Office of Business Economics.

action. This compares with the total of carryover plus new legislative authority at the beginning of fiscal year 1953—when annual utilizations were at a peak postwar rate of \$7 billion—of almost \$20 billion. The total amount available for foreign aid has decreased by approximately \$2 billion each successive year as new appropriations were smaller.

Except for \$3 million appropriated for operations in the Ryukyu Islands, the entire authorization for grants was included in the Mutual Security Appropriation Act.

## Increased loans

The potential availability includes the undisbursed lending authority of the Export-Import Bank, which amounts to \$2.2 billion. The Export-Import Bank authorization is in the nature of a revolving fund and is not restricted to obligation or disbursement in a particular period.

In extending the mutual security program this year, Congress did not stipulate a minimum portion to be repayable, but did include the expression that the assistance "shall emphasize loans rather than grants wherever possible." Half of the authorized utilization of the \$100-million President's Fund for Asian Economic Development must be on credit terms. New authority was enacted to lend funds or to sell military equipment on extended terms of payment through 10 years.

Separate legislation authorized sale of five merchant vessels on credit terms to the Philippines.

The amount shown in table 1 for newly added loan authority is an estimate based on this legislation. No consideration has been given to the additional loans which are likely to be extended under the conditions of sales agreements made after June 1955 as part of the doubled Agricultural Trade Development and Assistance Act program.

Congress also authorized participation in the International Finance Corporation. The Government subscription to this new international organization will amount to \$35 million.

## Short-term claims at record high

The actual disbursements or transfers on net grants and credits reported here do not include changes in foreign short-term assets of the United States Government. Large movements in these accounts—which consist mainly of collections of foreign currencies or receivables and their dispositions—can offset the changes in net grants and credits otherwise disbursed by the Government in aid to foreign countries. Such movements in fiscal year 1955 amounted to an increase of almost \$250 million in short-term claims outstanding.

An aggressive program undertaken by the Treasury Department in accordance with the provisions of the Supplemental Appropriation Act of 1953 liquidated \$150 million of general Government holdings of foreign currencies in the last 2 fiscal years. Nevertheless, short-term assets increased as the result of the Government's acceptance of \$400 million (net) in foreign currencies and receivables from the sale of agricultural products abroad (see table 3). At the end of June 1955 the total of all claims was valued at about \$600 million, the highest amount so far recorded.

The United States Government started to accept foreign currencies for the sale of agricultural commodities with the passage of the Mutual Security Act of 1953. Under the provisions of that act and the act of 1954 most of the proceeds of the sales are to be used to provide grants and credits to the country purchasing the farm products or to third countries. However, the amounts are not incorporated into the foreign aid data presented in this article until the foreign currencies are expended for grants or credits.

Through June 1955, over \$400-million worth of agricultural commodities (including, in some instances, the cost of ocean freight) were delivered for foreign currencies under the Mutual Security Acts. Out of the currencies collected \$68 million were disbursed for grants and loans, \$19 million to procure military supplies and services for transfer under the mutual security program, and \$3 million

For footnotes see opposite page.

for military construction in Spain. Another \$24 million was disbursed as a United States Government grant to Vietnam from francs advanced by the French Government pending receipt of the farm products.

Last year, Congress through the Agricultural Trade Development and Assistance Act established a 3-year program to expand the export of surplus agricultural commodities by another \$700 million against payment in foreign funds. Agreements for the sale of commodities (including ocean transportation) for \$361 million in such funds were signed through the end of the fiscal year. About \$150 million of the currencies to be realized under these agreements will be used for loans; much of the rest will be used for the payment of United States current expenses abroad.

Actual deliveries under this program started in February and amounted to \$73 million by the end of June. None of the currencies thus acquired were expended, although authorizations for long-term credits totaling \$66 million were signed in fiscal year 1955.

Meanwhile, the Commodity Credit Corporation has also made some sales for foreign currencies outside of these programs on the basis of assurances that other Government agencies would purchase—with dollars—these currencies to use in their routine operations. Sales of this nature were made to Spain (\$19 million) in fiscal year 1954, and to Brazil (\$7 million) and to Germany (\$4 million) last year. Over half of the Spanish pesetas were disposed of last year.

### *Substantial new sales foreseen*

The Mutual Security Act this year requires agricultural sales of \$300 million, and the Agricultural Trade Development and Assistance Act was amended this year to double its potential program by raising from \$700 million to \$1,500 million the limitation on the cost of commodities which the Commodity Credit Corporation may deliver without receiving dollars in exchange for its foreign currency proceeds. Actual export values under the latter program may be substantially below CCC cost; sales already negotiated totaling \$361 million represent a cost value of \$469 million. To the extent that the foreign currencies received can be sold by CCC for dollars to other Government agencies, other exports can again be financed.

The effect of these large sales programs will be to continue the outflow of United States Government short-term capital at a significant rate for some time.

### *Half billion to France*

Cash payments to France in fiscal year 1955 aggregated more than \$500 million. Most of these payments were made from the three-quarter billion dollars originally provided by Congress and through Presidential transfers to help defray French and Associated States costs of forces in Indochina in calendar year 1954. Disbursements of \$434 million last year followed initial payments of \$96 million in fiscal year 1954.

Other nonmilitary grants to France approximated \$80 million last year as contrasted with over \$200 million in fiscal year 1954. These other 1955 grants to France just offset the annual French repayments to the United States Government on postwar loans.

Following the cessation of active hostilities in Indochina the United States Government began to furnish aid to each of the three states—Cambodia, Laos, and (South) Vietnam—

individually rather than to the area or to the French for use in the region. Collectively, over \$216 million in nonmilitary assistance was given these countries last year. The first large payment of \$29 million was made in December 1954 to Vietnam to assist in resettlement of the many refugees from communist north Vietnam after the cease-fire negotiations.

Financial contributions of \$60 million more in dollars and \$32½ million in French francs were made by the United States Government to Vietnam, while over \$28 million was given to Laos and \$14 million to Cambodia. Much of these expenditures was for direct forces support.

### *Other Asia*

Deliveries of economic grant aid to Korea—the other Asiatic nation which has recently been a battle locale—also rose as rehabilitation assistance flowed in. Total transfers last year at \$207 million were one-third greater than in fiscal year 1954, when Korea had been the leading recipient of United States Government net foreign economic assistance. Korea also received major amounts of agricultural commodities for which it paid in the local currency. Quarterly deliveries to Taiwan (Formosa) were stable, at the same rate as the preceding year.

In South Asia, deliveries to India, contracted under appropriations for earlier periods, doubled after January 1955. Economic and technical assistance to Pakistan rose throughout the fiscal year 1955 but total grant transfers were considerably less than in the preceding 12 months, when \$69 million in wheat was given by the United States after a disastrous crop failure.

Disbursements of new loans to Japan by commercial agent banks of the Export-Import Bank were off to \$59 million by the year ended June 1955. No United States Government funds were actually expended, but the Government assumed the risk of defaults on these credits. These disbursements were more than offset by Japanese repayments of earlier loans drawn directly from the Export-Import Bank and from commercial agent banks.

### *Africa and the Middle East*

Disbursements of \$30 million during the spring from the new \$32-million mutual security loan to Iran contributed materially to the rise in net economic assistance to the Near Eastern region in fiscal year 1955. For the fiscal year assistance to Iran increased by \$18 million to \$86 million, ranking that country fifth among the world-wide recipients of United States Government "nonmilitary" aid.

Israel drew \$5 million of the \$20-million newly committed mutual security loan, but grant payments were off by half from the \$60-million annual rate during the preceding 2 years. Transfers to Greece continued a 3-year decline. Deliveries to Turkey on the other hand increased.

Grants to other countries in Africa and the Near East more than doubled to \$79 million. Large shipments of cheese and butter oil donated by the Government and distributed by American private voluntary relief organizations brought the annual total for Egypt to \$16 million. Assistance to Jordan increased to \$13 million and to Libya to \$10 million, while United States payments to the United Nations Relief and Works Agency for Palestine Refugees for use in the Arab states reached \$23½ million. Grants to Libya in the March 1955 quarter included the annual \$4-million payment stipulated in the exchange of notes on economic assistance of September 9, 1954.

1. Includes supplies, services, and contributions to the multilateral-construction program of the North Atlantic Treaty Organization.

2. Because of the inclusion of dependencies in the grouping "Western Europe," data shown for other groupings, particularly "Near East and Africa," are correspondingly understated.

3. Less than \$500,000.

4. Negative entry of less than \$500,000.

5. Includes aid furnished through international organizations.

NOTE.—For principles of valuation, sources, and methods see technical note in SURVEY, October 1954, p. 20. Data for fiscal year 1955 are preliminary and partially estimated. Source: U. S. Department of Commerce, Office of Business Economics.

## Aid to Europe

Excluding the considerable payments to France in connection with the defense of Indochina, annual United States Government net grants and credits to Western Europe were down one-third in the year ended June 1955. The decline affected every country but Spain and Yugoslavia. In the case of Italy, however, the reduction was to some extent offset by its increased imports of agricultural commodities in exchange for short-term liabilities to the United States (see table 3).

Wheat and butter were exported to Yugoslavia during the past year as relief to meet emergency needs including the aftermath of the Danube River flood last fall. These shipments more than compensated the decline in other grants to Yugoslavia. Yugoslavia was also able to purchase, without dollar outlay, \$74 million in wheat and cotton. About half

of the dinar proceeds of these sales to Yugoslavia will be used for economic assistance in fiscal year 1956; the remainder are to be used for United States military procurement and payment of other Government obligations.

Significant in the nonmilitary assistance given Spain in recent periods is the decrease in loan disbursements and the initiation of grants in the December 1953 quarter. Last year United States Government transfers to Spain rose to \$30 million. However, a large part of these transfers are made in exchange for local currencies which, under Article V (3b) of the economic aid agreement of September 1953, will be used to meet our cost of construction and maintenance of United States military facilities in Spain.

These transactions are in addition to sales of farm products from the United States valued at \$72 million during the last two fiscal years the proceeds from which will also be used largely for military purposes.

Direct forces support payments to the United Kingdom totaled \$107 million in fiscal year 1955. Of the total, \$85 million was expended from the appropriation to assist the United Kingdom in the manufacture of over 375 aircraft for use by RAF in defense of the NATO area. Other support payments of \$22 million were made with the sterling proceeds from the sale of farm products, compared with \$15 million in fiscal year 1954. As was the case in France, the decreasing amount of other economic grants to the United Kingdom (\$55 million, net) about equaled its annual repayments on postwar debts (\$56 million).

## Military aid to Europe off

The greatest part of the contraction in military deliveries has been to Western European countries. This continues the trend which followed the large build-up of NATO forces. Since fiscal year 1953 there has been a 50-percent decrease in annual transfers. This decline in shipments follows the decline in appropriations during recent years.

The June quarter 1955 increase in military grants to Europe shown in table 2 in part reflects the \$47-million payment of the United States to the multilateral-construction program designed to provide supporting facilities for NATO operations. Such payments for the entire fiscal year totaled \$83 million—down \$21 million from fiscal year 1954. Through June 1955, the United States has paid \$286 million from the \$780 million which the Congress had authorized as the United States share of a total \$2-billion program.

Over one-fourth of the military goods transferred abroad in fiscal year 1955 was purchased under the "offshore procurement" program, as contrasted with one-eighth in the preceding year. Actual deliveries from 1952 and 1953 offshore procurement contracts were valued at over \$600 million in fiscal year 1955, an increase of about 50 percent. Total deliveries under offshore procurement contracts since the beginning of the program approximated \$1¼ billion by the end of June 1955.

## Vessels loaned to Asia

The trend of military grant transfers in the Asia and Pacific area has also been downward, but the decline since the fiscal year 1953 peak is only 25 percent. However, last year's transfers are understated for the value of deliveries from United States Armed Forces stocks to the Japanese security forces under section 108 of the Mutual Security Act of 1954 is not available for inclusion in these statistics.

In the Asian area the value in fiscal year 1955 includes an estimate of \$83 million for transfer of naval vessels under Public Law 188, approved August 5, 1953. In 1954 and 1955 agreements were signed with the Republic of China, Japan, and Korea to transfer vessels under this authority.

# External Financing of Small- and Medium-Size Business

**B**USINESS firms differ greatly in their reliance on outside capital. Some concerns are inclined to avoid external financing, if at all possible, and to limit their capital programs to funds available from their own resources. Others seek outside funds for financing their operations.

The nature and extent of external financing also depends on the availability and sources of funds. Large and established businesses typically raise a sizable proportion of their capital needs in the organized security markets. The use of such sources by small business is extremely limited because of the cost of floating the relatively small amounts

suppliers, acquaintances, and relatives. New firms, generally with unproved earnings potentials, also rely primarily upon banks for their external funds. They are, however, more dependent than established firms upon acquaintances, relatives, and associates for their capital needs since local institutional lenders and suppliers may hesitate to supply even the temporary capital needs of untested enterprises.

## *OBE survey of financing*

These aspects of outside financing have long been recognized, but there has been a dearth of quantitative information of general scope. For this reason, the Office of Business Economics undertook a broad sample survey of small- and intermediate-size business financing.

Firms were asked to report their gross demand for outside funds in the 12-month period ending June 30, 1954. Information was sought on both equity and loan funds wanted. It was requested that firms report *gross* use of loan funds, i. e., total loans made during the period (counting each renewal separately) rather than amounts of loans outstanding at any point of time in the survey period, or net changes in liabilities over the period.

In addition, inquiry was made as to the sources of financing, duration of loans, repayment requirements, interest charges and other pertinent characteristics of the desired funds. Personal interviews were later conducted with a subsample of firms which did not obtain the financing desired in order more adequately to analyze the nature of their demands.

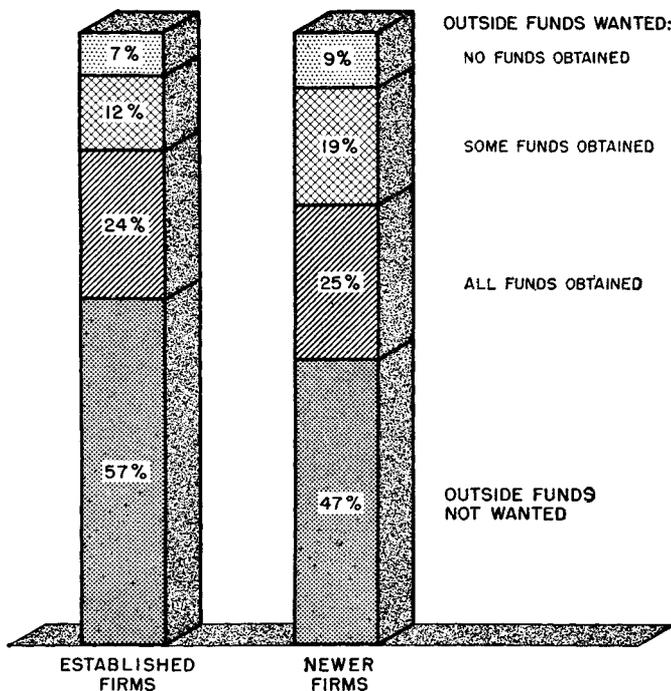

Within the industries covered—manufacturing, contract construction, wholesale trade and retail trade—the “universe” from which the surveyed firms were drawn consisted of single-unit firms with one or more paid employees which were in existence in early 1951 or which were newly formed in the 1951–53 period. In general, multi-unit (generally the largest) firms were explicitly excluded because sufficiently detailed information is available to permit rather intensive study of the financing of these firms. Apart from the multi-unit concerns, the principal group of firms omitted was firms with no paid workers. Sampling difficulties prevented coverage of these latter concerns.

While the very small—zero employee—firms were not surveyed, those which were covered are essentially small and intermediate size businesses. Ninety-five percent of the respondents employed less than 50 paid workers, and almost 90 percent employed less than 20 workers at the time of the survey. On the other hand, none of the very largest firms in the industries surveyed was included. Fifty firms, or 1 percent of the respondents, employed more than 250 employees and 17 firms had more than 500 employees.

The method of choosing the sample permitted a clear division of the study between the fairly well established and the more recently formed firms. A request was made for additional financial details on the latter firms’ experience with respect to their initial capital requirements; the response to these questions will be analyzed in a subsequent report.

## Outside Funds Wanted and Obtained

Percent Distribution of Established and Newer Firms in Survey  
(Twelve Months Ended June 30, 1954)

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

65-55-7

needed and because the concerns are typically local businesses not widely known to potential investors. Smaller firms obtain nearly all of their external financing from banks and other local institutions and to a lesser extent from

NOTE.—MR. McHUGH IS ACTING CHIEF AND MR. CIACCIO IS A MEMBER OF THE NATIONAL ECONOMICS DIVISION, OFFICE OF BUSINESS ECONOMICS.

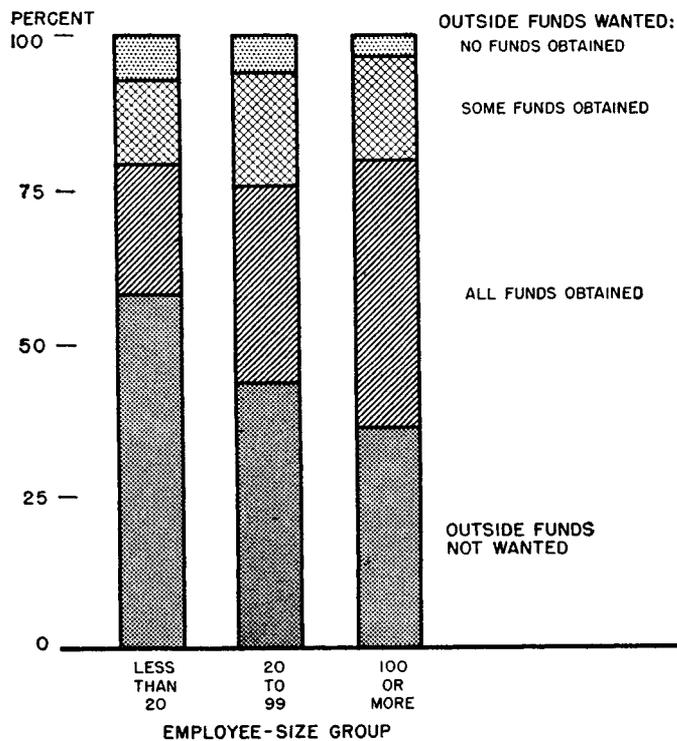

Questionnaires were sent to roughly 15,500 firms, one-half of which were older businesses reported to be in operation in the first quarter of 1951; the remainder were newer concerns starting business after March 1951. In view of the known relatively high turnover rates of smaller concerns in the business population it was expected that a sizable proportion of the firms on the original list would be out of business by the time of the survey in late 1954. On the basis of survey findings, it is estimated that roughly 9,000 of the firms were still in business during the survey period. Usable responses to the questionnaire were received from 5,000 of these operating concerns, an exceptionally good response rate for a mail survey of this type. A more detailed discussion of the structure of the sample of respondents is presented in the technical notes at the end of this review.

**Economic conditions in the survey period**

The survey results should be interpreted in the light of prevailing business conditions. In general, it would appear that the period reviewed—the 12 months ended June 30, 1954—was well suited for a study of financing under conditions of generally high but fairly competitive conditions.

**Outside Funds Wanted and Obtained**

Percent Distribution of Established Firms in Survey, Classified by Employee Size (Twelve Months Ended June 30, 1954)

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-8

While business was generally favorable, inventory liquidation was prevalent, and some uncertainty as to future trends was noted.

The overall trend of business was slightly downward in this period. From mid-1953 to mid-1954 gross national product declined 3 percent, but at that later date output was still

close to the all-time high. The following figures summarize the trends in the particular industries surveyed:

	Billion dollars		Percent change
	1953	1954	
<b>Sales</b>			
Manufacturers.....	25.7	23.6	-8
Wholesalers.....	9.9	9.5	-4
Retailers.....	14.6	14.7	1
<b>Construction activity</b>			
Value put in place.....	3.22	3.36	4

As may be seen, in the construction and retail groups, activity at the end of the survey period compared favorably with that of the start of the period. While the overall business decline centered in manufacturing, even within this industry there was considerable variation in trend. The downward movement of sales was largely confined to producers of durable goods, while for the nondurable goods groups sales were relatively stable throughout the survey period.

However, because of the stepped up degree of competition during the survey period, profit margins were reduced and, on a relative basis, apparently more so for the smaller size firms than for the larger firms. These competitive conditions may have tended to make lenders somewhat cautious in their lending policies to all businesses, and more particularly to smaller concerns. On the other hand, monetary authorities were pursuing policies aimed at easing the supply of loan funds available during this 12-month interval as a counteracting force to the downward drift in business.

**Findings of Survey**

More than half—56 percent—of all firms in the survey indicated no desire for outside financing during the survey period (table 1).<sup>1</sup> As may be seen from the chart on page 15, established firms more frequently reported no need for financing—57 percent of the concerns—than did more recently formed businesses, but 47 percent of the newer firms were also in this category. While the greater financial independence of established firms probably reflects a number of circumstances, it would appear that these concerns in large part tend to have better earnings records than the newer firms, and hence are probably better able to build up an equity cushion in their businesses. Most new firms experience low profits or even losses in the early years of operation and hence are more likely to require or desire outside financing aid.

The more pronounced tendency reported by older concerns to depend on internal financing occurs despite the fact that these concerns were typically larger than the newer concerns; as noted later, larger firms tended to resort more frequently than smaller firms to outside sources for their financing.

In connection with these comparisons of new and established firms it should be stated that the established firms make up by far the preponderant share of the business population at any given point of time. Thus, the consolidated data covering both newer and established concerns reflect this comparative weighting. The division is shown in order to examine the differences between newer and established firms.

The only significant industrial difference in the relative financial independence of firms appeared to be in retailing where 60 percent of the businesses felt no need for external

1. All estimates in this review of findings of the survey are adjusted, where necessary, for over- or under-sampling in the original list, response differences among industries and among firms of different size, and biases due to probable differences in characteristics between respondents and nonrespondent firms still in operation. Further reference to these adjustments is made in the technical notes at the end of this review.

financing. This compares with a 50 percent ratio of firms in other industries. There is no clear-cut explanation for this difference, although it is possible that the smaller size of retailers and their more typical tendency to rely on family financing may account for some of the difference.

**High proportion with requirements met**

About one-fourth of both the established and new firms not only wanted outside funds but obtained all that they desired. It may be noted that if account is also taken of those firms which reported a willingness to depend entirely on internal financing, roughly 80 percent of the older firms and 70 percent of the newer firms had the desired financing either from internal or external sources.

The greater proportion of newer concerns with unmet demands reflects those firms which obtained some but not all of the funds wanted. One in 5 of the newer concerns surveyed reported partially met demand, whereas the proportion was roughly 1 in 8 for the older firms. Roughly 1 firm in 15 obtained no outside financing although they reported a desire for such funds; there was no appreciable difference between the older and newer firms in this respect.

**Loan demand dominant**

Loan capital was clearly the predominant form of financing desired by the firms in the survey, accounting for 93 percent of total funds wanted (table 2). Of the funds actually obtained, 97 percent took the form of loans, with the remaining 3 percent being in equity form. Equity financing was, however, of considerably greater importance in the unfilled demand, accounting for one-sixth of reported unfilled requirements of all firms surveyed.

Although the equity share in total funds desired was not large for either established or newer firms, the newer group both sought and obtained a larger share of outside financing in this form.

It should be noted that the survey results do not adequately indicate the relative importance of equity funds in financing of the firms. Equity capital is relatively permanent with little or no turnover whereas loan funds may turn over many times in the course of the firm's operations, and hence are reflected more heavily in the gross demand figures on which table 2 is based.

**Outside funds obtained**

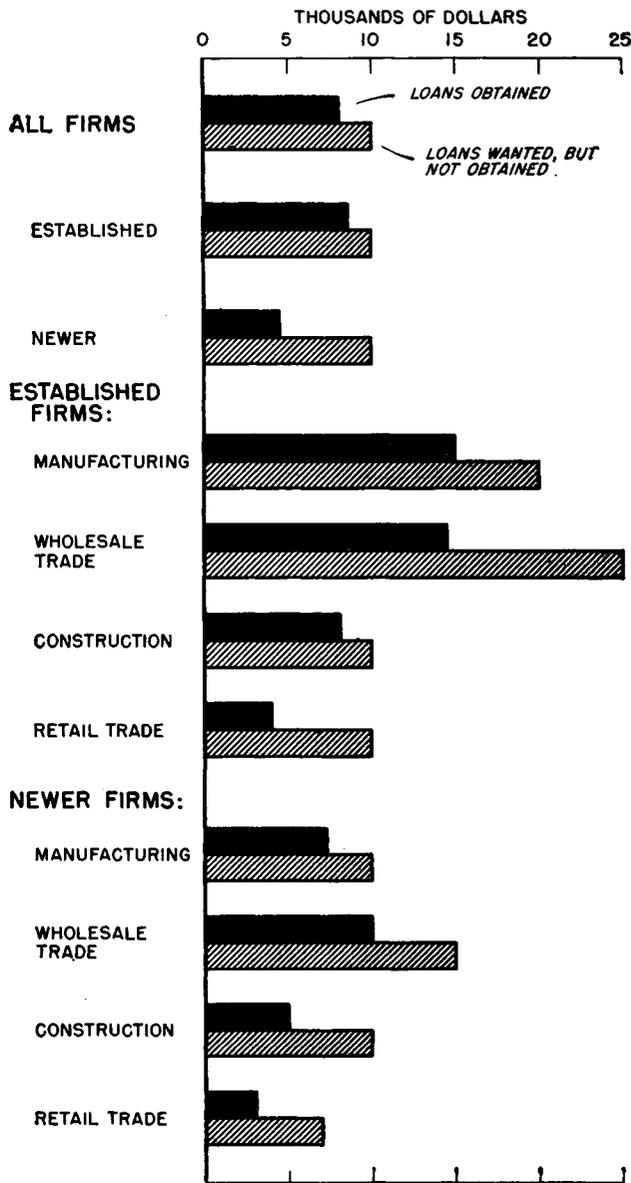

Of the aggregate outside funds reported in the survey as desired, almost three-fourths was obtained. The older firms appear to have obtained a slightly larger proportion of funds desired than the newer concerns. The share of loan demand obtained was approximately three-fourths for each of the groups. With respect to the much smaller aggregate of equity desired, less than one-third of the established firms' demand and almost one-half of the new firms' demand was actually obtained. In this latter connection, it may be noted that the newer firms tend to report a greater relative need for outside equity funds. It should be noted that the new firm respondents in the survey are those which had actually survived through their formative period. They would in all probability have been more successful in filling their equity needs than those which did not survive. It appears also that the greater share of equity demand filled by the new firms reflects in part the initial capital investment of firms entering business during the survey period.

No attempt will be made at this time to analyze in detail the significance of the unmet demand which, as indicated,

amounted to one-fourth of the total reported in the survey. Further examination will be required to evaluate the nature of the unfilled demand. Additional information on the financial situation of a sample of the survey firms has been obtained but as yet has not been fully analyzed. However, a few significant considerations should be borne in mind.

**Size of Loans Wanted**

Median Amounts Obtained, and Wanted but Not Obtained, by Firms in Survey (Twelve Months Ended June 30, 1954)

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

55-55-9

1. Undoubtedly a portion of the unfilled demand was of a nature which could not and perhaps should not be met under existing institutional arrangements. A number of firms indicated, for example, that while they wanted the money, they felt their then existing circumstances warranted a refusal by the lender.

2. In the survey instructions, firms were asked to report unfilled demand only if they had a specific financing program

in mind. Those firms which indicated they desired more funds than they received but which gave no further details on their desires were not included in the calculations of *dollar amounts demanded* on which the immediately preceding discussion was based. These firms are, however, included in the unmet category of demand in the analyses based on the *number of firms* in the survey.

3. A significant portion of the unmet demand was never brought to the attention of lenders, as some of the reporting firms felt that there was "no use in trying." Either from past experience or from "common knowledge" in local trade circles, the businessman decided that his request would get turned down, and hence made no effort to raise the funds.

### Size affects financing status

As indicated in the chart on page 16 and table 1 there is a striking relationship between size of firm and desire or need for external funds. The smaller concerns reported much more frequently than larger size firms that they did not want outside money. Whereas under 40 percent of the smallest size group shown in table 1 were interested in obtaining capital from outsiders, the proportion was over 60 percent for the largest size group covered by the survey. It should be noted, however, that in the field interviews some smaller concerns reported no desire for outside funds only because they felt they "wouldn't stand a chance anyway."

The larger concerns were much more successful than the smaller businesses in obtaining all the outside funds requested. One-half of the smallest size firms needing or wanting outside funds were fully satisfied with the amounts obtained, while over two-thirds of the largest size firms seeking outside financing obtained all the funds sought. It would appear that a major factor in the greater relative use of external financing by the larger concerns stemmed from the fact that these firms more typically have established satisfactory financial arrangements with their creditors, and find it convenient to use their lines of credit.

The proportion of firms reporting that none of their external demands was filled was largest for the smaller size groups. As may be seen in table 1, 7½ percent of the firms with less than 4 paid employees reported this condition, while the proportion was 3½ percent for the "100 and over" group. While the difference in these percentages is not great the clear pattern of decline in these proportions as the size of firm increases suggests that the smaller size firms were not so successful as the larger firms in filling their demand. It may be noted that those wanting money but receiving none

represented one-fifth of all firms wanting funds in the smaller size group, and one-tenth of the concerns reporting some desire for funds in the largest size group surveyed.

### Size of loans

The amount of borrowing wanted by the survey firms ranged from less than \$500 in a number of cases to several million dollars in a few cases at the upper extreme. The chart on page 17 and table 3 summarize salient features of the loan amounts desired by firms in the survey. Medians rather than arithmetic means are presented since the medians avoid the undue influence which the very large loans may exert on the arithmetic mean.

If the borrowing firms are arrayed by the size of amounts borrowed during the year, it is found that of the firms surveyed which borrowed during the year almost one-half borrowed sums in the range of \$1,000 to \$10,000. An additional 28 percent of the concerns borrowed in the \$10,000 to \$50,000 range, while one-sixth of those surveyed borrowed funds in excess of \$50,000.

A similar distribution of the sample according to unfilled loan demand shows that, among those unable to borrow all or part of the funds desired, a much smaller proportion of firms—about one-third—wanted loans in the \$1,000 to \$10,000 bracket and a much higher proportion—45 percent—in the \$10,000 to \$50,000 loan class. One-fifth of the firms desired but did not receive loan funds in excess of \$50,000.

The median amount of borrowed funds obtained during the year by borrowers among established concerns was \$8,600 and among newer firms, \$4,500. The difference reflects in part the generally larger requirements of the former group but also, in all probability, the greater confidence of lenders in the ability of the older firms to service the debt. The additional amounts wanted but not obtained were equal for the newer and older concerns, amounting to \$10,000.

The median size of loans wanted but not obtained exceeded that of loans actually obtained for both established and newer firms. This was because the purposes for which the additional amounts were desired tended to be quite different and distinct from the uses to which loans actually obtained were applied. For the most part, the unmet demand was for permanent capital either to fill out undercapitalized structures or for major expansions. Hence, the typical unfilled amount was generally of fairly sizable proportions relative to the existing scale of operations. On the other hand, most of the funds obtained were for working capital purposes, more in line with the size of the firms utilizing the funds.

### Manufacturing and wholesaling demands high

The average demand of manufacturers substantially exceeded the overall average reported by firms in the survey both for funds actually obtained and for additional amounts wanted. This was to be expected in the light of the generally larger scale of operations in this industry. The lowest

### Duration of Loans Wanted

55-55-10

average was in retailing where relatively small scale operations are typical. Wholesale trade firms also reported demand for fairly large amounts of outside funds—somewhat larger than might have been expected on the basis of the typical size of firm in the industry. This may be explained in terms of the relatively short-term maturities of loans used in this industry (table 4). The greater turnover of these loans tends to make for relatively high gross borrowing per firm over the period covered in the survey.

### Unfilled needs mostly long-term

The findings of the survey testify to the importance of both long- and short-term outside funds in the financing of small and medium size businesses (chart above and table 4). Over two-thirds of the loans actually obtained carried maturity schedules of less than one year. Notes of 90 days or less accounted for the largest share, about 50 percent of all loans made. At the other extreme, loans made for 3 years or longer accounted for less than 10 percent of the total.

As noted earlier, the concept of gross demand used in the survey is not appropriate, without adjustment, to indicate the relative importance of long-term funds in the financing of a given volume of capital requirements, since the turnover rate of loans with longer durations is considerably less than the rate on short-term funds. Loans of 3-month maturity, for example, must be placed or renewed 4 times a year to maintain the investment at any given level; a 1-year loan, on the other hand, can be used for the full year. Thus, in gross demand, for the example just cited, the short-term funds will have a weight 4 times as great as that of long-term funds. On the basis of the maturity schedules and repayment methods reported in the survey for loans obtained, adjustment for this fact indicates that the shorter (under 1 year) and longer term funds contributed about equally to the loan funds available to the firms studied at a given point of time.

For the most part, established firms featured, somewhat more prominently than new firms, loans with the shorter term maturities. Seventy percent of the loans of those concerns were for less than a year, compared with 63 percent for newer firms. Most of this difference reflected the greater relative importance of 90-day-or-less paper used by the older firms. The greater relative importance of short-term financing for established firms is indicative of the rather settled financing arrangements for these firms.

The newer firms obtained a significantly higher ratio of longer term loans—those with maturities of 1 year or more. This undoubtedly reflects the still formative stage of capitalization which characterized the financial structure of these firms, many of whom were still filling their basic permanent capital requirements.

Perhaps the most striking feature of the chart on page 19 and table 4 is the almost complete reversal of maturity schedules in the obtained and unobtained portions of capital demands. While short-term financing dominates the funds obtained by small business, the funds wanted but not ob-

tained were predominantly of an intermediate- or long-term nature. An almost negligible share of unfilled demand was reported to be of the short-term variety. This was so both for the new and for the established groups. The most notable exception was in the wholesaling sector where unfilled loans of less than one year represented about one-fifth of all loans reported as desired but not available.

The heavy emphasis on intermediate- and long-term financing in the unfilled demand may also be seen by noting that, whereas 30 percent of the loans actually obtained matured in 1 year or more, 90 percent of the additional loans desired were of that type.

It should be noted, however, that the disparity in maturities between funds obtained and funds not obtained is not so striking as these proportions would indicate, since in the unfilled category, short-term loans are essentially counted only once, whereas in the "loans obtained" category, renewals or replacements of these shorter term loans were also counted. Notwithstanding this lack of comparability in concept, it is clear that the major share of total demand which was not filled consisted of intermediate- and long-term funds.

In the "actual financing obtained" category, both established and new retailers obtained a significantly higher proportion of their loans in long-term form than was true of other industries surveyed. Forty percent of the number of loans of established retail firms were of 1 year or more maturity compared with 25 percent for other established firms. New retailers obtained 46 percent of their loans in intermediate- or long-term form whereas the comparable proportion was roughly one-third for all other new firms. Differences among the nonretail industries were not particularly striking. The greater proportion of longer term financing in the capital demand of retailers may be attributable to the fact that they tended to rely somewhat more heavily on nonbank sources for their financing.

### Bank financing dominant

Banks are by far the most important regular source of outside financing available to smaller sized business. Over three-fourths of all loans obtained by small- and medium-size businesses were negotiated through banking institutions. Bank loans to established firms accounted for 80 percent of all loans made to this group, and for nearly 70 percent of new firms' loans (table 5). Loans from individuals were more important for the newer group reflecting the greater dependence of such firms on personal rather than institutional sources in meeting permanent capital needs.

While similar "source" statistics on unfilled demand cannot be derived, it was evident from the replies that small business as a whole looks first to local banking institutions to meet their additional capital needs and typically turns to other sources, usually associates, relatives and suppliers, only after banks have rejected the loan request.

## Cost of borrowing

Firms reporting cost of borrowing indicated that prevailing charges in the survey period were typically at or below 6 percent. Loans specifying these rates accounted for 90 percent of the total number obtained. New firms reported paying the higher rates somewhat more frequently

Source: U. S. Department of Commerce, Office of Business Economics.

than established firms, but these newer concerns also obtained a significant number of loans bearing no interest charge, generally loans from friends or relatives. This was particularly true of new retail concerns. Practically all of the loans shown for the "less than 3 percent" category in table 6 were of this type. At the higher extreme shown in the table—10 percent interest and over—the newer firms had a significantly higher proportion of loans obtained.

## Unsecured loans predominate

Over three-fifths of all surveyed loans in the period studied were signature loans made without support of specified collateral. The proportion of such loans was higher for established firms (65 percent) than for the more recently formed concerns (54 percent).

When collateral was required, fixed capital of the business was most frequently pledged. Such collateral loans accounted for roughly one-fifth of all loans made, and well over one-half of all secured loans. The remaining collateral loans were divided about evenly between those with current business assets, mainly inventories and receivables, as security and those pledging nonbusiness assets of the proprietors.

While there was little industrial difference in the proportions of unsecured loans within the established and new firm groups, differences among industries were often quite sharp with respect to the type of collateral provided. Manufacturing, retail trade and construction firms pledged fixed business assets most frequently in their outside financing, with proportions ranging from 52 to 75 percent of all secured loans. Wholesalers, on the other hand, tended to greater use of current assets, undoubtedly a reflection of the greater relative importance of short-term financing in this industry. Nonbusiness—mainly personal—assets were used quite extensively in retailing and by newer manufacturers.

## Technical Notes

The list of firms surveyed was taken from the records of the Bureau of Old Age and Survivors Insurance of the Department of Health, Education, and Welfare. The original sample of "established" firms was derived from single-unit concerns with one or more employees which were in business in the first quarter of 1951. This was supplemented by a sample of new firms formed in the period from the first quarter of 1951 through the end of 1953, the latest date for which information on such firms was available.

### Coverage of sample

Four industries were covered in the survey—manufacturing, retail and wholesale trade, and construction.

Since firms with no paid employees were not required to report to BOASI, they were not represented on the original listings from which the sample was drawn. These firms were not canvassed because an adequate sample of these concerns could not readily be obtained.

There is some undercoverage of the group of firms which transferred ownership in the period after March 1951. Transfers of newer firms were explicitly excluded in drawing the new firm samples. Among the older firms, only those transfers which could be reached by mail were included in the respondents. Older firms which had changed hands after March 1951 and had moved and left no forwarding address were not represented in the survey findings.

The samples were drawn only from listings of "single-unit" concerns—firms which, in reporting to BOASI, file only one statement on their operations. Practically all larger (multi-unit) firms must, as a general rule, file separate statements on the operations of their various units.

No other size cut-off was employed. The largest concern among the respondents was a nonborrower employing 5,700 workers in October 1954. The largest borrower was an employer of approximately 3,000 employees. While the inclusion of even a few fairly sizable concerns may affect appreciably aggregate dollar data estimated from the sample of reporters, all but one (table 2) of the tables shown in the text are based on distributions of the numbers of firms or loans. These are not affected to any significant extent by the inclusion or exclusion of a small number of large firms. As indicated early in the text, all but 5 percent of the firms reporting in the survey employed less than 50 paid workers and only slightly more than 10 percent had over 19 paid employees.

As indicated in table A, the total number of firms in the original sample list was approximately 15,500, divided almost equally between established and new concerns. The files from which the established firm sample (the employers in business in early 1951) was chosen were arranged by size of firm within the four industry groups. In the case of "established" manufacturers, every 84th name was chosen. For other established firms, the sampling ratio was 1 in every 277 firms.

To obtain the new firm sample, every 35th firm was chosen from the files of firms indicating on their applications for BOASI identification numbers that they were starting business for the first time.

### Procedure in obtaining results

Questionnaires were mailed (in November 1954) to all firms on the sample lists. A followup letter and questionnaire was later sent to one-half of all the nonrespondents who were still potentially in business. Still later, Field Office personnel attempted to reach by phone or personal visit approximately 300 non-respondents to the "followup" request as a further check on "in-business" status.

On the basis of these contacts it is estimated that 6,500, or two-fifths, of the original list were out of business at the time of the survey or not within the scope of the study. This estimate checked closely with the studies of "mortality" patterns in the business population. The mortality rate was substantially higher for the new firms. Over half of these concerns were out of business compared with a ratio of one-third for the established concerns.

Reports were received from almost 5,000, or 55 percent, of the estimated number of firms in the sample which were still in business. The response from established firms was considerably higher than from the newer firms. For both groups, however, the percent responding was exceptionally high for a mail survey of this type. Three out of five of the older firms and almost half of the newer firms answered the questionnaire. There was some industrial difference in the response rate. Answers were received from over 70 percent of the established wholesale trade firms and almost 55 percent of the new wholesale firms still in business. Even the lowest response rate—38 percent for new construction firms—compares favorably with experience in similarly conducted surveys in the past.

### Representativeness of findings

Results obtained from a mail sample survey of the type described must be interpreted with care. One of the most troublesome problems arises from the possibility of "response bias," that is, the characteristics of the firms which report may differ significantly from those of the nonreporters. For example, it has already been noted that the older firms were apparently more ready than the newer to respond to the questionnaire. And in a survey of this sort, it is especially important to see that the findings are not distorted by more frequent response by the "dissatisfied" firms.

Table 7.—Distribution of Number of Loans Obtained by Type of Collateral Required

	[Percent]					
	All loans	Type of specific collateral required				
		None	Current assets	Equipment	Other fixed business assets	Personal and other
<b>All loans</b> .....	<b>100.0</b>	<b>64.1</b>	<b>8.3</b>	<b>10.1</b>	<b>10.1</b>	<b>7.4</b>
To established firms.....	100.0	65.3	8.0	9.5	9.9	7.3

Source: U. S. Department of Commerce, Office of Business Economics.

The representativeness of the respondents can, in large part, be checked by the use of "followup" contacts with nonrespondents. This was done in the present study and the more significant aspects of response bias were removed by appropriate weighting techniques. Since it appeared that the nonrespondents in our survey more closely resembled the reporters in the "followup" contact, the nonreporters

were assigned the characteristics of the later respondents wherever the possibility of "response bias" was apparent. These adjusted results are used in the text. The returns were also weighted, where needed, according to size, industry, and legal form by making use of independent estimates of the corresponding universes for the firms sampled. Also, in combining new and established firms, they were given their "universe" weights.

Table A.—Respondents and Non-respondents in Sample

Industry	Original list of firms		Respondents in business		
	Total number	Estimated operating status at time of survey	Number	Percent of total number in business	
		Out-of-business			In business
<b>Established firms</b>

Construction.....	874	300	574	310	54
Wholesale trade.....	651	200	451	322	71
Retail trade.....	3,466	1,175	2,291	1,369	60
<b>Total</b> .....	<b>7,982</b>	<b>2,575</b>	<b>5,407</b>	<b>3,329</b>	<b>62</b>
<b>Newer firms</b>					
Manufacturing.....	1,237	650	587	293	50
Construction.....	2,406	1,250	1,156	434	38
Wholesale trade.....	685	350	335	180	54
Retail trade.....	3,234	1,700	1,534	685	45
<b>Total</b> .....	<b>7,562</b>	<b>3,950</b>	<b>3,612</b>	<b>1,592</b>	<b>44</b>

Source: U. S. Department of Commerce, Office of Business Economics.

Thus, it is felt that the findings reported in this review are largely free of response bias and represent fairly adequately the financial characteristics of firms in the covered areas.

### Interpretation of answers received

Regardless of how carefully questions are framed, it is at times difficult to interpret the meaning of the response. In the present study, this type of difficulty arose in only two important respects.

First, firms were asked, even if they did not seek to raise capital funds, to report any serious consideration of such action. In an attempt to define what was meant by "serious consideration," it was suggested that consideration of a *definite amount for a specific purpose* would be considered sufficient evidence of a serious desire for funds.

Some firms indicated that they had such an unfilled demand, but still gave no details in the space provided. Since the amount of demand involved in such instances could not be adequately assessed, these firms were excluded from computations involving estimates of mean or median dollar amounts. They were, however, included as "unsatisfied" firms in computations involving the number of firms.

Secondly, field interviews revealed that a number of concerns may have reported as being satisfied with their present financial arrangements, although they had a specific unfilled demand in mind; these firms reported in such a manner because, from general or specific knowledge of supply conditions, they felt there was no use in trying "seriously" to obtain funds from known potential sources.

### Sampling variability

Findings of sample surveys cannot be precise because of sampling variability. Even with 100 percent response to a perfectly random sample, the findings revealed by any one sample may differ by chance from the results obtained in a "universe" canvass. For such a sample, the amount of variability in the findings may, however, be calculated fairly accurately. With respect to any given estimate, the possible "error" in the sample result depends for the most part on the number of firms used in calculating the estimate and the degree of dispersion in the answers of those firms. In this analysis, calculations were regarded as significant, if the probability was that, in 95 cases out of 100, the differences were not due to chance.

Significance checks were made for the sample data presented in the text, and the results of these tests were taken into account in the interpretation of the findings.

## National Income and Corporate Profits

(Continued from page 8)

creases were those reported for automobiles and parts and for metal manufacturing. Substantial gains occurred also in the stone, clay and glass group and in lumber.

After rough allowance for seasonal variation, the quarterly movements indicated by sample data reflect the progressive spreading out of the durable goods recovery since last fall. Apart from the auto industry—which sparked the improvement—the number of durables groups reporting significant gains became larger with each successive quarter.

In nondurables manufacturing, first-half profits were higher this year than last for all major groups, the total being up one-fifth or nearly \$1 billion. Marked gains were indicated for certain of the basic-material groups, notably textiles, leather, chemicals and rubber. The advances this year in other nondurables generally resembled the 1953-54 declines in being rather limited by comparison with those in most durable goods lines.

**Table 5.—Corporate Profits Before Tax, by Major Industries, Half-yearly, 1952-55**

[Billions of dollars, unadjusted for seasonal variation]

Source: U. S. Department of Commerce, Office of Business Economics.

In most manufacturing industries the drop in before-tax profits from the first half of 1953 to the same period of 1954 seems to have been less pronounced for the (generally large) corporations whose stocks are widely traded than for more closely held companies, most of which are smaller in size. Since the first half of last year there has been no clear contrast between the profits changes for large and for small concerns in the nondurables manufacturing groups.

Among the 12 durables groups, however, 8 show somewhat more expansion for the larger companies and in 2 there is no significant difference as to rate of advance. These data suggest that the publicly-held corporations as a group may have enjoyed some competitive advantage during the upswing in durables. On the other hand, such comparisons are apt also to reflect differences in experience among the various line-of-product subgroups within an industry.

Interindustry variations in experience are of major importance for the course of small- as compared to large-corporation profits in manufacturing as a whole. Thus the sharp advances from the first quarter of 1954 to the same period of 1955 in textiles, lumber, leather and other industries which include numerous small firms seem to have carried the total profits of small manufacturing corporations as a class up relatively faster than those of all manufacturing corporations combined.

### Other industries

The mining industry division recorded a one-fourth advance in profits through June of this year as compared to the same period of 1954, and approached a new high.

Although transportation industry profits were also up considerably over this period, they have not yet regained the levels recorded in 1951-53. The demand and cost factors apparently responsible have been discussed above. Special mention should also be made of the effect of emergency amortization allowances, which have been deducted in calculating the profits figures shown in table 5. The total of such allowances has expanded considerably with the rise in new facilities certified necessary for defense purposes. If depreciation were charged against these facilities at ordinary rates, a considerable part of the decline between 1953 and 1955 shown for earnings in the industry would be eliminated.

Profits in the communications and public utilities group continued their upward trend at a somewhat accelerated pace this year, as the demand for industrial power and the number of electrical home appliances in service rose. The "all other" group shown in table 5 also registered a substantial improvement in earnings, which was associated in particular with continued growth of profits from banking and other financial lines and further gains in wholesale and retail trading activity.

<sup>1</sup> Compiled by the Board of Governors of the Federal Reserve System. Data reflect change in number of reporting banks and centers. For turnover rates for 1943-53 for New York City see p. 23 of the September 1954 SURVEY; for subsequent data, see the monthly SURVEY beginning with the March 1955 issue.

<sup>2</sup> Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.

# Monthly BUSINESS STATISTICS

THE STATISTICS here are a continuation of the data published in BUSINESS STATISTICS, the 1955 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.00) contains monthly data for the years 1951 through 1954 and monthly averages for earlier years back to 1929 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1951. Series added or revised since publication of the 1955 Supplement are indicated by an asterisk (\*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. In most instances, the terms "unadjusted" and "adjusted" used to designate index numbers and dollar values refer to adjustment of monthly figures for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

Revised. Preliminary. §The term "business" here includes only manufacturing and trade. Business inventories as shown on p. S-1 cover data for all types of producers, both farm and nonfarm. Unadjusted data for manufacturing are shown on p. S-4; those for retail and wholesale trade on pp. S-9, S-10, and S-11.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

♀ Revised.  
 ♀ Includes textiles, leather, paper, and printing and publishing industries; unfilled orders for other nondurable-goods industries are zero.  
 † For these industries (food, beverages, tobacco, apparel, petroleum, chemicals, and rubber), sales are considered equal to new orders.  
 ♂ Data are from Dun and Bradstreet, Inc.  
 § Includes sweetpotatoes and dry edible beans.  
 ⊕ Ratio of prices received to prices paid (including interest, taxes, and wage rates).

♂ Revised. ♀ Advance estimate.

♀ Includes data not shown separately.

♂ Correction: 1951 monthly average for combined department-store and mail-order sales (old series) shown in the 1955 edition of BUSINESS STATISTICS should read \$927,000,000.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

† Revised. ‡ Preliminary. § Includes data not shown separately.

† Data for 1948-55 have been revised to reflect current seasonal patterns and to allow for changes in the samples used in computing the unadjusted indexes. Revisions beginning with 1946 for total United States appear on p. 24 of the October 1955 SURVEY; unpublished revisions for the districts are available upon request.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

† Revised.    ‡ Excludes data for one carrier.  
 § Beginning January 1955, data include local service operations of one carrier.  
 ¶ Data beginning 1st quarter 1955 cover large motor carriers having operating revenues of \$1,000,000 or above.  
 ⊙ Data for October 1954 and January, April, and July 1955 are for 5 weeks; other months, 4 weeks.    ⊕ Includes data not shown separately.    ‡ Revised data for July 1954, \$50,700,000.  
 ⊕ Data have been revised as follows (units as above): Fares—July 1954, 13.8; passengers carried—Jan.—Dec. 1953, 944; 889; 1,003; 975; 969; 922; 871; 829; 868; 941; 882; 944; Jan.—July 1954, 855; 806; 905; 876; 836; 805; 748; operating revenues—March 1953, 129.3; Sept. 1953, 118.4; Jan.—July 1954, 124.2; 118.9; 129.5; 128.3; 121.5; 119.0; 116.6.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

† Revised. ‡ Preliminary.  
 § Beginning 1955, data include greases (other than wool) and both crude and refined products (except that production figures exclude refined lard); refined products (not included prior to 1955) are no longer reported separately from crude. ¶ Beginning 1955, data are included with animal fats; see note 1. § Beginning 1955, data may include some refined fish oils (not formerly included); figures included for consumption and stocks of cod, cod-liver, and other liver oils are incomplete.  
 ⊕ States represented are: North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Arkansas, Louisiana, Texas, Oklahoma. According to quarterly reports from Virginia, consumption in that State is as follows (thous. short tons): 1955—January—March, 287; April—June, 349.  
 ♀ Includes data not shown separately.  
 ♂ A. P. A. (available phosphoric acid).  
 † Revisions for January—July 1954 (August 1953—July 1954 for cottonseed and products) will be shown later.  
 ‡ Includes stocks owned by the Commodity Credit Corporation.  
 § Revisions for 1954 (units as above):

<sup>1</sup> Revised. <sup>2</sup> Preliminary. <sup>3</sup> Revision for March 1954, 316,151 tons.

<sup>4</sup> For 1955, percent of capacity is calculated on annual capacity as of January 1, 1955, of 125,828,310 tons of steel; for 1954, data are based on capacity as of January 1, 1954 (124,330,410 tons).

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955							
	August	September	October	November	December	January	February	March	April	May	June	July	August

† Revised. § Preliminary. ¶ Represents 5 weeks' production. \* Quarterly total.

§ Radio production comprises home, portable battery, automobile, and clock models; television sets include combination models. Data for September and December 1954 and March, June, and September 1955 cover 5 weeks; other months, 4 weeks.

⊕ Data beginning August 1955 cover 20 companies; earlier data, 19 companies.

† Data for polyphase induction motors cover 33 companies for 3d quarter 1954 and 34 thereafter; for direct current motors and generators, 27 companies.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

† Revised. ‡ Preliminary.

† Revised (effective with the October 1955 SURVEY) to include bunker fuel.

‡ Includes nonmarketable catalyst coke. Such production for January-July 1955 is as follows (thous. short tons): 198; 186; 184; 141; 204; 209; 204.

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

⊙ Revised. ⊙ Preliminary.

\*New series. Prior to 1954, included with data for gasoline, kerosene, and distillate fuel oil; for January-July 1954 figures, see note "⊙" on p. S-35 of the September 1955 SURVEY and earlier issues.

⊙ Asphalt—5.5 bbl.=1 short ton; wax—1 bbl.=280 lb.

⊙ Effective with the October 1955 SURVEY, data as compiled by the Bureau of the Census have been substituted for those from the United States Pulp Producers Association.

\* Revisions for 1954 (units as above): Exports—lubricants, April, 1,456; motor fuel, June, 2,716; July, 2,329; wood pulp (all grades), March, 27.2; imports—wood pulp (all grades), May, 151.0

Unless otherwise stated, statistics through 1954 and descriptive notes are shown in the 1955 edition of BUSINESS STATISTICS	1954					1955

# Foreign Aid

by the  
United States  
Government

1940-1951

*Never before has the whole complex of foreign aid programs over the years been so conveniently set down in such short space.*

—New York Times.

**Available from**

The Superintendent of Documents, U. S. Government Printing Office,  
Washington 25, D. C., or the nearest Field Office of the Department  
of Commerce. 118 pages, illustrated. Price \$1.00 a copy.
