# the BUSINESS SITUATION

**R**EVISED estimates show that real GNP increased 8 percent at an annual rate in the second quarter, about  $\frac{1}{2}$  percentage points higher than in the preliminary (15-day) estimates (table 1). Upward revisions in all components of final sales except Government purchases more than offset a downward revision in the change in business inventories. GNP prices, as measured by the fixed-weighted and chain price indexes, increased almost 11 percent at an annual rate, as compared with slightly over 10 percent in the preliminary estimates. Revised prices of structures accounted for most of the upward revision.

**Corporate profits.**—Second-quarter corporate profits from current production—profits with inventory valuation and capital consumption adjustments—increased at an annual rate of \$27 billion, according to preliminary estimates. They had decreased \$15 $\frac{1}{2}$  billion in the first quarter. At \$159 $\frac{1}{2}$  billion, profits surpassed the previous peak recorded in the third quarter of 1977. Before-tax profits with inventory valuation adjustment increased \$28 billion (annual rate) after decreasing \$15 billion. The increase was mostly accounted for by domestic profits of nonfinancial corporations, which increased \$26 $\frac{1}{2}$  billion, following a decrease of \$17 billion. About one-quarter of the increase reflects a rebound from the impact of the severe weather, the coal mining strike, and coal and electric shortages experienced in the first quarter. Industries whose profits were most affected by these factors were coal mining, railroad transportation, petroleum and coal products, and primary metals manufacturing. Among other

industries, increases in profits were widespread.

Before-tax book profits increased \$29 $\frac{1}{2}$  billion (annual rate), following a decrease of \$6 billion in the first quarter. These profits exclude the two valuation adjustments. These adjust-

ments are made largely in order to value inventories and fixed capital used up in production at replacement cost, which is the valuation procedure underlying national income and product accounting, rather than at historical cost, which is the procedure generally underlying

1. Not at annual rates

**NOTE.**—For the second quarter of 1978, the following revised or additional major source data became available: For *personal consumption expenditures*, revised retail sales for May and June, and sales and inventories of used cars of franchised automobile dealers for May (revised) and June; for *nonresidential fixed investment*, manufacturer's shipments of equipment for May (revised) and June, construction put in place for May (revised) and June, and a partial tabulation of business expenditures for plant and equipment for the quarter; for *residential investment*, construction put in place for May (revised) and June; for *change in business inventories*, book values for manufacturing and trade for May (revised) and June; for *net exports of goods and services*, merchandise trade for May (revised) and June, and revised net investment income and other services receipts for the quarter; for *government purchases of goods and services*, Federal unified budget outlays for June, and State and local construction put in place for May (revised) and June; for *wages and salaries*, revised employment, average hourly earnings, and average weekly hours for May and June; for *net interest*, revised net interest received from abroad for the quarter; for *corporate profits*, domestic book profits for the quarter, and dividends from abroad and branch profits (net) for the quarter; for *GNP prices*, the Consumer Price Index for June, unit value indexes for exports and imports for June, residential housing and nonresidential buildings prices for the quarter.

business accounting. If, as in the second quarter, the historical cost of inventories used up falls short of their replacement cost, profits as measured by business exceed profits as measured in the NIPA's by an amount that is called inventory profits. Inventory profits increased \$1½ billion in the second quarter, to \$25 billion, following an increase of \$9 billion in the first quarter.

Corporate profits taxes, which are levied on profits including inventory profits, increased \$14 billion, following a decrease of \$4 billion in the first quarter.

#### Federal sector in the second quarter

The Federal Government deficit as measured in the national income and product accounts declined substantially in the second quarter—from over \$52 billion to \$25 billion (annual rates). Receipts increased over \$27 billion, and expenditures declined slightly.

About one-half of the increase in receipts occurred in corporate profits tax accruals, reflecting the large increase in book profits. Personal tax and nontax receipts and contributions for social insurance also increased, both due largely to higher wages and salaries.

The decline in expenditures was the net of a \$5 billion decrease (annual rate) in nondefense purchases and increases in other types of expenditures totaling

over \$4.5 billion. The decrease in non-defense purchases was accounted for by the price support operations of the Commodity Credit Corporation (CCC). In the NIPA's, commodities placed under loan agreements with the CCC are treated as Federal purchases; redemptions are treated as sales and are deducted from Federal purchases. On balance, farmers placed commodities under CCC loan agreements in the first quarter; in the second quarter, they redeemed commodities. Grants-in-aid to State and local governments increased \$2 billion, largely for local public works and public service jobs. Net interest paid increased \$1.7 billion, and national defense purchases increased \$0.7 billion. Transfer payments increased \$0.5 billion; a \$1.8 billion decrease in unemployment benefits was more than offset by increases in other transfer payments. Subsidies less the current surplus of government enterprises were unchanged; an increase in the CCC deficit was offset by a decrease in government payments to farmers and a decrease in the Postal Service deficit. The latter decrease reflected a postal rate increase that went into effect in late May.

#### Special reconciliation tables

The reconciliation of changes in compensation per hour and average hourly

earnings and of changes in the implicit price deflator for personal consumption expenditures (PCE) and the consumer price index (CPI) are shown in tables 2 and 3, respectively.

Compensation per hour of all persons in the nonfarm private economy increased 8.5 percent at an annual rate in the second quarter of 1978. Average hourly earnings of production and nonsupervisory workers increased 9.3 percent. The major contribution to the difference was the earnings of non-production workers in manufacturing.

The implicit price deflator increased 8.9 percent at an annual rate, compared

Service industries.....	.3	2.1
		.7
8. Equals: Average hourly earnings, production and nonsupervisory workers in the private nonfarm economy (percent change at annual rate)	9.2	9.3

<sup>p</sup> Preliminary.

1. BLS estimates of changes in hourly compensation in the nonfarm business sector for the two quarters are 12.0 and 8.1 percent.

1. These differences arise because component price indexes that are used in the BEA measures and in the CPI are seasonally adjusted at different levels of detail.

with 10.1 percent for the chain price index and 10.9 percent for the CPI for All Urban Consumers. The implicit price deflator increased less than the chain price index because the relative importance of spending for energy—electricity, gas, fuel oil, and coal—and for food purchased for off-premise consumption declined in the second quarter while that for new autos increased. The result of this shift was that energy and food prices, which have increased more than the average of PCE prices since 1972, received less weight in the implicit price deflator in the second quarter than in the first, while the price for new

autos, which has increased less than average, received more weight. Unlike the increase in the implicit price deflator, the increase in the chain price index does not reflect these shifts in the composition of PCE. The difference between the chain price index and the CPI was due to PCE components which are not comparable with CPI components and to differences in the level of detail at which the seasonal adjustments are made.

Table 4 updates the information about the weights underlying the PCE chain price index and the CPI by showing the relative importance of expenditure components in December 1977.

The weights for the CPI for All Urban Consumers are the relative expenditures for 1972-73, valued in prices of December 1977. For the chain price index, the relative expenditures are for December 1977, valued in prices of December 1977.

A detailed explanation of the reconciliation procedure was provided in the March 1978 issue of the SURVEY OF CURRENT BUSINESS. A reconciliation to the Urban Wage Earners and Clerical Workers CPI from the first quarter of 1975 to the first quarter of 1978 which incorporates the revisions to PCE that appear in the July 1978 SURVEY is available on request.

**Table 4.—Relative Importance of Expenditure Components in the PCE Chain Price Index and in the Consumer Price Index for All Urban Consumers: December 1977**

## Revised Manufacturing and Trade Inventories and Sales, 1974: IV-1978: II

Quarterly estimates of inventories, sales, and inventory-sales ratios for manufacturing and trade, in constant dollars, for 1974: IV-1978: II, are shown in tables 1-4. These estimates are consistent with the revised national income and product account estimates presented in the July 1978 SURVEY OF CURRENT BUSINESS, and incorporate the revised sales presented in the May 1978 SURVEY. The revised estimates for 1967-74 are available on request.

1. Includes stone, clay and glass products; instruments and related products; and other durable goods.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

NOTE.—Tables 1, 2, and 3: Manufacturing inventories are classified according to the type of product produced by the establishment holding inventories; constant-dollar inventories in

table 16 of the national income and product tables include, in addition to the industries shown here, nonmerchant wholesalers, other nonfarm industries, and farms. The industry classification is based on the 1972 Standard Industrial Classification.

Table 4: The weighted I-S ratios shown in this table were obtained by weighting detailed industry I-S ratios with 1972 sales. Additional industrial detail was used than is shown in table 2. For manufacturing, I-S ratios for 21 industries were weighted by sales; for merchant wholesalers, 20 categories of business; and for retail trade, 8.

Footnotes for tables 2 and 3.

1. Equals GNP in constant dollars measured as the sum of final products less GNP in constant dollars measured as the sum of gross product by industry. The quarterly estimates are obtained by interpolating the annual estimates with the statistical discrepancy deflated by the implicit price deflator for gross domestic business product.

NOTE.—Table 2: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other industries, nondurable.

Table 3: The industry classification within the business sector is on an establishment basis and is based on the 1972 Standard Industrial Classification.

<sup>r</sup> Revised.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories shown in this table is not the current-dollar change in business inventories (CBI) components of GNP. The former is the difference between two inventory stocks, each valued at end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates.

2. Quarterly totals at annual rates.

3. Equals ratio of nonfarm inventories to final sales of business. These sales include a small amount of final sales by farms.

NOTE.—Table 16: Inventories are classified as durable or nondurable as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other nonfarm industries, nondurable. The industry classification is based on the 1972 Standard Industrial Classification.

Table 17: The industry classification of compensation of employees, proprietors' income, and rental income is on an establishment basis; the industry classification of corporate profits and net interest is on a company basis. The industry classification of these items is based on the 1972 Standard Industrial Classification.

Table 23.—Implicit Price Deflators for the Relation of Gross National Product, Net National Product, and National Income (7.6)

Gross national product	133.76	141.61	138.27	140.86	142.63	144.56	147.10	150.90
Less: Capital consumption allowances with capital consumption adjustment	141.2	151.5	146.8	149.8	153.5	155.6	158.4	162.2
Equals: Net national product	132.9	140.6	137.3	139.9	141.5	143.4	145.9	149.7
Less: Indirect business tax and nontax liability plus business transfer payments less subsidies plus current surplus of government enterprises	126.9	130.9	130.1	131.8	131.9	129.8	132.9	134.8
Residual								
Equals: National income	134.0	142.3	138.8	141.4	143.2	145.6	148.1	152.1

<sup>r</sup> Revised.

1. Consists of final sales and change in business inventories of new autos produced in the United States.

2. Consists of personal consumption expenditures, producers' durable equipment, and government purchases.

NOTE.—Table 21: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other industries, nondurable.

Tables 22 and 24: The industry classification within the business sector is on an establishment basis and is based on the 1972 Standard Industrial Classification.

## U.S. Direct Investment Abroad in 1977

**M**AJOR developments related to U.S. direct investment abroad in 1977 were:

- The U.S. direct investment position increased 9 percent, to \$148.8 billion.
- Equity and intercompany account outflows rose 25 percent, to \$4.9 billion. Had it not been for two unusual developments—exceptionally large outflows from a U.S.

petroleum company in 1977 and large inflows reflecting liquidations in 1976 that were not repeated in 1977—there would have been a moderate decline in outflows.

- Reinvested earnings of incorporated affiliates declined 5 percent, to \$7.3 billion.
- Income—the return on the position—increased 4 percent, to \$19.9 billion; the rate of return on the position declined from 14.6 percent to 13.9 percent.

- Fees and royalties increased 7 percent, to \$3.8 billion.

### Direct Investment Position

The yearend 1977 direct investment position—the net book value of U.S. direct investors' equity in, and outstanding loans to, foreign affiliates—was \$148.8 billion (table 1 and chart 1).

NOTE.—Saletha Corbin, Edward Simons, Russell Tutt, and Jacqueline Williams assisted in the preparation of the data.

\*Less than \$500,000 ( $\pm$ ).

By industry, petroleum accounted for 21 percent, manufacturing 44 percent, and "other" industries 35 percent of the position. By area, developed countries accounted for 73 percent, developing countries 23 percent, and "international and unallocated" 5 percent.

Investment in incorporated affiliates was 87 percent of the position, and in unincorporated affiliates 13 percent. Investment in incorporated affiliates consists of cumulative equity and intercompany account outflows, reinvested earnings, and valuation adjustments. Investment in unincorporated affiliates is shown as a single account representing the parents' claim on the net assets of the affiliate; there are no separately reported intercompany account transactions with, or reinvested earnings of, these affiliates.

### 1977 Addition

The addition to the position was \$12.4 billion, about the same as in 1976. By component, equity and intercompany account outflows were \$4.9 billion, reinvested earnings \$7.3 billion, and valuation adjustments \$0.2 billion.

The share of the addition accounted for by developed countries declined

Certain changes have been made to the accounts of U.S. direct investment abroad, reflecting the revised presentation of direct investment-related items in the U.S. international transactions accounts in Part II of the June 1978 issue of the SURVEY OF CURRENT BUSINESS. In the revised presentation, reinvested earnings of incorporated foreign affiliates of U.S. direct investors are added to receipts of interest, dividends, and earnings of unincorporated affiliates, to present total receipts of income on U.S. direct investment abroad. Because these earnings are reinvested, an offsetting entry of equal magnitude and opposite sign was added to capital outflows for equity and intercompany accounts, to present total capital outflows on U.S. direct investment abroad. As a result, changes in terminology have been made: Adjusted earnings is now income; receipts of income is now interest, dividends, and earnings of unincorporated affiliates; and net capital outflows is equity and intercompany account outflows.

from 79 percent to 62 percent, mainly because of a \$1.4 billion decline in the addition for Canada (table 2). The share accounted for by developing countries increased from 21 percent to 39 percent, mainly because of a \$2.0 billion increase in the addition for Latin America, principally for Venezuela and Bermuda.

### Equity and intercompany account outflows

Equity and intercompany account outflows increased \$1.0 billion,<sup>1</sup> to

1. Equity and intercompany account outflows for 1976, at \$3.9 billion, were revised substantially downward from the \$4.6 billion figure published in the August 1977 issue of the SURVEY OF CURRENT BUSINESS. The downward revision is in petroleum and reflects correction of reporting errors affecting several countries. Outflows in manufacturing and "other" industries were revised upward slightly.

\$4.9 billion; \$3.2 billion was to unincorporated affiliates and \$1.7 billion to incorporated affiliates (table 3). Of the latter, \$1.3 billion was for capital stock and \$0.4 billion for intercompany account transactions.

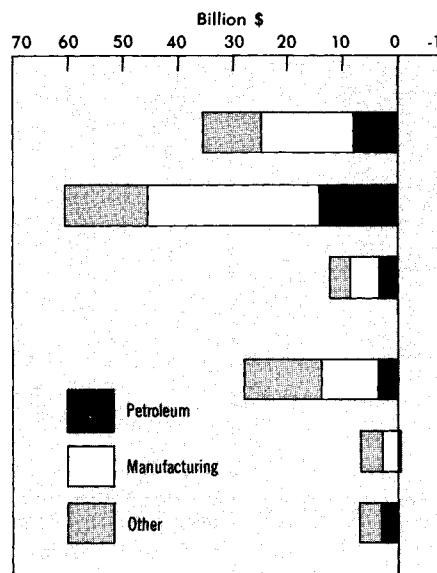

The increase in outflows was more than accounted for by two special developments. First, unusually large inflows from sales and liquidations in 1976 were not repeated in 1977. Also, a U.S. petroleum company financed an exceptionally large share of its affiliates' capital expenditures with U.S.-source funds rather than foreign-source funds. These funds were channeled into an unincorporated finance affiliate in Bermuda that, in turn, loaned the funds to other affiliates of the U.S. parent.

Had it not been for these special developments, there would have been

a moderate decline in 1977 outflows, reflecting several factors. Although foreign affiliates increased their capital expenditures in 1977, after a decline in 1976,<sup>2</sup> the rise in U.S. interest rates relative to those in several foreign countries was conducive to a shift from U.S. parent company financing to foreign source financing. (The shift from foreign-source funds to U.S.-source funds by the U.S. petroleum company mentioned above was an exception.) In addition, the slowdown in economic growth in most foreign industrial countries may have reduced affiliates' working capital requirements. In several countries, notably Canada and Indonesia, political developments

probably discouraged new investments. Finally, volatile exchange markets, particularly in the last half of the year, may have limited outflows because of direct investors' uncertainty.

The wide fluctuations in the value of the dollar against a number of foreign currencies may have had other, more direct, effects on outflows and on affiliates' earnings because of the adoption of Financial Accounting Standards Board Statement No. 8 (FASB 8). This Statement, effective for fiscal years beginning on or after January 1, 1976, pertains to the translation of foreign currency transactions and foreign currency financial statements into dollars. It specifies which exchange rate—current, historical, or an average rate for the period—is to be used in translating transactions, defined to include payables and receivables, and items on

financial statements. The gain or loss resulting from translation into dollars, or the settlement of an item at a rate different from that at which the item is recorded, must be included in current earnings.

If parent's payables to, or receivables from, affiliates are denominated in a foreign currency, a change in the exchange rate affects outflows because it affects intercompany account balances. Translation into dollars of foreign affiliate financial statements may also result in a gain or loss that U.S. parent companies, in reports to BEA, include in the earnings of the appropriate affiliate.

Outflows may be further affected if there is any restructuring of balance sheets, to minimize the effect of exchange rate fluctuations, resulting in changes in intercompany accounts be-

2. See "Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, 1977 and 1978," in the March 1978 SURVEY.

\*Less than \$500,000(±).

1. Includes outflows to purchase capital stock in affiliates from unaffiliated foreigners and inflows from the sale of such stock to unaffiliated foreigners. Although such flows are not actually "to" foreign affiliates, they are so classified because they change the U.S. direct investment position in these affiliates. When the country of the affiliate differs from that of

the buyer or seller of capital stock in the affiliate, the flows are classified according to the country of the affiliate.

2. Same as "equity investment" in table 3, page 34, in the August 1977 SURVEY OF CURRENT BUSINESS. Includes the net change in additional paid-in capital.

tween an affiliate and its U.S. parent. Given the wide 1977 fluctuations in the value of the dollar, it is likely that outflows were affected by both translation and restructuring; however it is not possible to quantify the effect.

*By area and industry.*—Equity and intercompany account outflows to developed countries declined \$0.3 billion, to \$2.5 billion. A shift from outflows to inflows from Canada more than accounted for the decline. They were the first net inflows from Canada in over 30 years. Several factors contributed to the shift, including the generally slow growth of the Canadian economy and the weakening of the Canadian dollar relative to the U.S. dollar. The shift also reflected increased anxiety of U.S. investors that resulted from national and provincial government policies affecting investment and from uncertainties related to the separatist movement in Quebec. Outflows to developing countries increased \$1.0

billion, to \$2.4 billion. The increase was centered in Latin America. There were inflows of \$0.1 billion from "international and unallocated," \$0.3 billion less than in 1976.

By industry, outflows to petroleum affiliates increased \$0.3 billion, to \$1.6 billion, resulting from increased outflows to developing countries and reduced inflows from "international and unallocated." The increase in developing countries reflected a shift from inflows to outflows to Latin America. In Latin America, the nationalization of a Venezuelan affiliate resulted in large inflows in 1976; these did not recur in 1977. Partly offsetting the increase was a decline in outflows to "other" developing countries. The decline was largely attributable to a shift from outflows to inflows from Indonesia, reflecting postponements in affiliates' exploration for oil during negotiations with the Indonesian government concerning taxes and increased

government control of producing assets. (In the first half of 1978, there were outflows, probably because taxes were subsequently lowered.) The reduction in inflows from "international and unallocated" was more than accounted for by a petroleum marketing affiliate.

Outflows to manufacturing affiliates declined for the third consecutive year, by \$0.2 billion, to \$0.9 billion—the lowest level since 1963. Increased outflows to developed countries were more than offset by reduced outflows to developing countries. The increase in developed countries was more than accounted for by an increase in outflows to the United Kingdom, reflecting an improved outlook for the British economy. The decline in developing countries was more than accounted for by a shift from outflows to inflows from Brazil, reflecting the slowdown in economic activity there, the effect of price controls, and regulations designed to discourage affiliate imports.

\*Less than \$500,000 ( $\pm$ ).

<sup>D</sup>Suppressed to avoid disclosure of data of individual companies.

Outflows to "other" industries increased \$0.8 billion, to \$2.4 billion. The increase was more than accounted for by the previously mentioned increase in outflows to a finance affiliate of a U.S. petroleum company in Bermuda. Because these outflows largely represented funds from the U.S. parent that were, in turn, loaned to other affiliates of the U.S. parent, most of the outflows to the finance affiliate represented funds invested elsewhere by affiliates in the petroleum industry.

*By status of affiliate.*—Table 4 shows equity and intercompany account outflows to new affiliates, to affiliates liquidated or sold, and to all other affiliates. For new affiliates, flows that financed the establishment or acquisition and all subsequent flows during the year are included; for affiliates liqui-

dated or sold, flows reflecting the proceeds of the sale or liquidation and all flows during the year up to the point of sale or liquidation are included. Certain changes in status of an affiliate may produce entries in more than one column of table 4.

Outflows to newly established or acquired affiliates increased \$0.1 billion, to \$0.8 billion. Inflows from affiliates that were liquidated or sold declined \$0.8 billion, to \$0.9 billion, primarily because fewer large sales and liquidations occurred than in 1976.

Most of the large outflows to newly established affiliates, and the large inflows from liquidated affiliates, in Europe in 1977 were accounted for by the reorganization of several affiliates. An unincorporated petroleum affiliate in the North Sea was incorporated; such

a reorganization is treated both as a liquidation (of the unincorporated affiliate) and as an establishment (of an incorporated affiliate). Also, several unincorporated banks in Germany were incorporated. This was shown as an establishment but not as a liquidation because, in this case, the affiliate had previously been included in a consolidated report with other unincorporated affiliates of the U.S. parent. These other affiliates were not reorganized and continued to be reported on a consolidated basis, except that the consolidation no longer included the reorganized affiliates.

*Transactions of incorporated affiliates, by transactor.*—Outflows to incorporated affiliates include those reflecting the U.S. parents' acquisition or sale of the affiliates' capital stock from or to foreigners other than the affiliate in

\*Less than \$500,000 ( $\pm$ ).

1. Data are classified by country of the foreign affiliate in which investment was made. Includes transactions in which a U.S. parent acquired or sold capital stock in one affiliate

from or to another affiliate. However, most of these transactions are with unaffiliated foreigners.

which the investment was made. In 1977, these transactions resulted in inflows of \$0.2 billion (table 5). In contrast, transactions by U.S. parents directly with their incorporated affiliates resulted in outflows of \$1.8 billion, \$1.5 billion of which was for capital stock.

Transactions of U.S. parents with unaffiliated foreigners consisted of inflows of \$0.6 billion from sales of capital stock, partly offset by outflows of \$0.5 billion for purchases of capital stock in affiliates. Over two-thirds of the sales of capital stock were sales of U.S. parents' entire ownership interest in affiliates. The majority of the purchases of stock was to acquire additional interest in existing affiliates.

### *Reinvested earnings*

Reinvested earnings of incorporated affiliates equal U.S. parents' shares in their affiliates' earnings less gross dividends. Reinvested earnings declined 5 percent, to \$7.3 billion, as earnings of incorporated affiliates increased less than gross dividends (table 6). For all areas combined, the reinvestment ratio—the fraction of earnings reinvested—declined from 0.54 to 0.50.

By area, reinvested earnings of affiliates in developed countries declined \$1.1 billion, those affiliates in developing countries increased \$1.0 billion, and there was a \$0.4 billion decline in reinvested earnings of affiliates in "international and unallocated."

By industry, reinvested earnings of petroleum affiliates increased \$0.3 billion,

to \$1.0 billion. The increase was centered in "other" developing countries, mainly Indonesia. In 1976, reinvested earnings of Indonesian affiliates were negative because a large dividend was postponed from 1975 to early 1976. In 1977, they were positive, as gross dividends declined.

In manufacturing, reinvested earnings declined \$0.7 billion, to \$3.5 billion. The decline was centered in developed countries. In Canada, reinvested earnings declined because earnings declined and gross dividends did not change; some of the dividends were paid out of 1976 earnings. In Europe, reinvested earnings declined because gross dividends increased more than earnings. German affiliates, particularly those engaged in the manufacture of automobiles, paid higher dividends. The in-

2. The term "capital stock" in this table means the same as "equity" in table 5, page 36, in the August 1977 SURVEY. Capital stock includes the net change in additional paid-in capital.

crease partly reflected a large increase in 1976 earnings; also, a change in the German tax law probably encouraged repatriation of earnings. Partly offsetting the decline in reinvested earnings in Germany was an increase in the United Kingdom, primarily due to increased earnings.

In "other" industries, reinvested earnings remained at \$2.8 billion. Both earnings and gross dividends increased.

## Income

Income, the return on the position, increased 4 percent, to \$19.9 billion (table 7). Income consists of the U.S. parents' share in earnings (net of foreign income taxes) of their foreign affiliates,<sup>3</sup> plus interest on intercompany accounts, less foreign withholding taxes (table 8). Alternatively, it is the sum of interest, dividends, and earnings of unincorporated affiliates (table 9) plus reinvested earnings of incorporated affiliates.

3. Tables showing such earnings are available on request from the Bureau of Economic Analysis (BE-50), U.S. Department of Commerce, Washington, D.C. 20230.

Increases in income of affiliates in developed and developing countries were partly offset by a decline in "international and unallocated." In developed countries, there was a dominant \$1.0 billion increase in the United Kingdom. The increase reflected increased petroleum production, the strengthening of the British pound against the dollar, and improvement of the British economy in the latter half of the year. In developing countries, the increase was largely attributable to affiliates in Mexico and Indonesia. Income of Mexican affiliates increased because of increased affiliate sales and because large translation losses that occurred in 1976 did not recur. The increase in Indonesia was centered in petroleum. In "international and unallocated," the decline was primarily due to a reduction in earnings of oil tanker affiliates.

By industry, income of petroleum affiliates increased 7 percent, to \$5.5 billion. Increases were registered in both developed and developing countries. In developed countries, increases in the United Kingdom and the Netherlands were partly offset by a decline in Germany and shift to losses in France. In the United Kingdom, earnings of unincorporated affiliates rose due to increased North Sea oil production and higher prices. In the Netherlands, the increase resulted from increased natural gas production and increased sales to other European countries. The decline in Germany and shift to losses

**Table 8.—Income and Related Items: Source and Relationship**

in France occurred because of high fixed costs and surplus capacity in refining, the major activity of petroleum affiliates in those countries.

In developing countries, a large increase in income of petroleum affiliates in Indonesia was partly offset by a decline in "other" Middle East. The increase in Indonesia was due to increased oil production, higher prices, and decreased exploration expenses. In "other" Middle East, production increased but income declined because of an Internal Revenue Service ruling that disallowed, as of January 1977, a method of calculating affiliate earnings based on posted prices, which are generally higher than market prices. The ruling requires the use of a price which approximates market price. Reports to, and adjustments by, BEA resulted in reduced earnings of unincorporated foreign affiliates and increased domestic earnings of U.S. parent companies.

Income of manufacturing affiliates increased 1 percent, to \$7.0 billion; income in both developed and developing countries increased. In developed countries, an increase in the United Kingdom was partly offset by declines in Canada and Germany. In the United Kingdom, increases were registered in all industries within manufacturing; the machinery (primarily computers) and transportation equipment industries accounted for most of the increase. In Canada, declines were widespread due to generally slow economic growth. Also, the use of FASB 8 to translate financial statements, coupled with the decline of the Canadian dollar against the U.S. dollar, resulted in translation losses by some Canadian manufacturing affiliates. The largest declines occurred in machinery and transportation

equipment. In Germany, the decline in income was centered in transportation equipment; increased sales did not result in increased income because of escalating costs and higher taxes.

In developing countries, Mexican manufacturing affiliates registered substantial increases in income. Large translation losses that occurred in 1976 were not repeated in 1977. Also, Mexican affiliates' sales were boosted by increased demand in the United States and other countries for Mexican-produced goods following the devaluation and subsequent floating of the Mexican peso in 1976.

Income of affiliates in "other" industries increased 6 percent, to \$7.0 billion. There were increases in both developed and developing countries. In developed countries, affiliates in the finance and insurance industry accounted for most of the increase. In developing countries, the increase was centered in trade, primarily in Mexico and Panama.

The rate of return on the position is the ratio of income to the average of the beginning- and end-of-year direct investment positions. The rate of return declined from 14.6 percent to 13.9 percent, as the position increased at about twice the rate of the increase in income—9.1 percent compared with less than 4.5 percent. By industry, the rate of return was 18.5 percent in petroleum, 11.6 percent in manufacturing, and 14.2 percent in "other" industries. All three industries registered declines in rates of return; the largest decline was in manufacturing, particularly in the transportation equipment industry in Canada and Germany.

It should be noted that the position includes short-term trade-related intercompany loans to incorporated affiliates

on which no interest is typically received, and thus for which no return is reflected in income; this lowers the rate of return. Also, in some instances—particularly in the petroleum industry—the accounts receivable of unincorporated affiliates are transferred to their U.S. parents for collection; this reduces the parents' position in the affiliates, but does not affect income. In such instances, the rate of return increases or, if the position becomes negative, is undefined.

### Fees and Royalties

Fees and royalties increased 7 percent, to \$3.8 billion (table 10). Fees and royalties consist of royalties and license fees for the sale or use of intangible property such as patents, industrial processes, trademarks and copyrights; service charges and rentals of tangible property, which include management fees and allocated expenses; and film and television tape rentals.

The increase was attributable primarily to royalties and license fees from computer manufacturing affiliates in the European Communities (9) and Japan. Small increases in service charges and rentals of tangible property were centered in the petroleum industry in Argentina. Small declines in film rentals from the Netherlands reflected a worldwide decline; affiliates in the Netherlands distribute films on a contract basis overseas because of favorable tax treaties between the Netherlands and other countries. Film rentals are collected from other countries and remitted to U.S. parents by these Netherlands affiliates.

## Foreign Direct Investment in the United States, 1977

**HIGHLIGHTS** of foreign direct investment in the United States in 1977 are:

- The foreign direct investment position rose \$3.3 billion, or 11 percent, to \$34.1 billion, following an 11-percent rise in 1976.
- Equity and intercompany account inflows declined \$0.9 billion, to \$1.8 billion. Reinvested earnings declined slightly, to \$1.6 billion. Valuation adjustments were negligible, following an unusually large negative adjustment in 1976.
- Income—the return on the position—declined 9 percent, to \$2.8 billion, following a 39-percent increase in 1976. The decline probably reflected the slowing of the U.S. economic recovery in general, and the impact of the depressed U.S. stock market on earnings of insurance affiliates in particular.

### Foreign Direct Investment Position

At yearend 1977, the foreign direct investment position was \$34.1 billion, compared to \$30.8 billion at yearend 1976 (table 1). The composition of the position did not change significantly from that for 1976 (table 2).

By area of foreign parent,<sup>1</sup> Europe accounted for 67 percent of the position, Canada for 18 percent, and Japan for 5 percent. The remaining 11 percent was mostly accounted for by Latin America; it consisted largely of investments by holding companies located in Panama

NOTE.—Woodley Timberlake assisted in preparing the estimates.

1. In this article, "foreign parent" means all members of the affiliated foreign group that consists of the foreign parent and foreign affiliates of the foreign parent.

Certain changes have been made to the accounts on foreign direct investment in the United States, reflecting the revised presentation of direct investment-related items in the U.S. international transactions accounts in Part II of the June 1978 issue of the SURVEY OF CURRENT BUSINESS. In the revised presentation, reinvested earnings of incorporated U.S. affiliates of foreign direct investors were added to payments of interest, dividends, and earnings of unincorporated affiliates, to present total payments of income on foreign direct investment in the United States. Because these earnings are reinvested, an offsetting entry of equal magnitude and opposite sign was added to capital inflows for equity and intercompany accounts, to present total capital inflows on foreign direct investment in the United States. As a result, changes in terminology have been made: Adjusted earnings is now income; payments of income is now interest, dividends, and earnings of unincorporated affiliates; and net capital inflows is equity and intercompany account inflows.

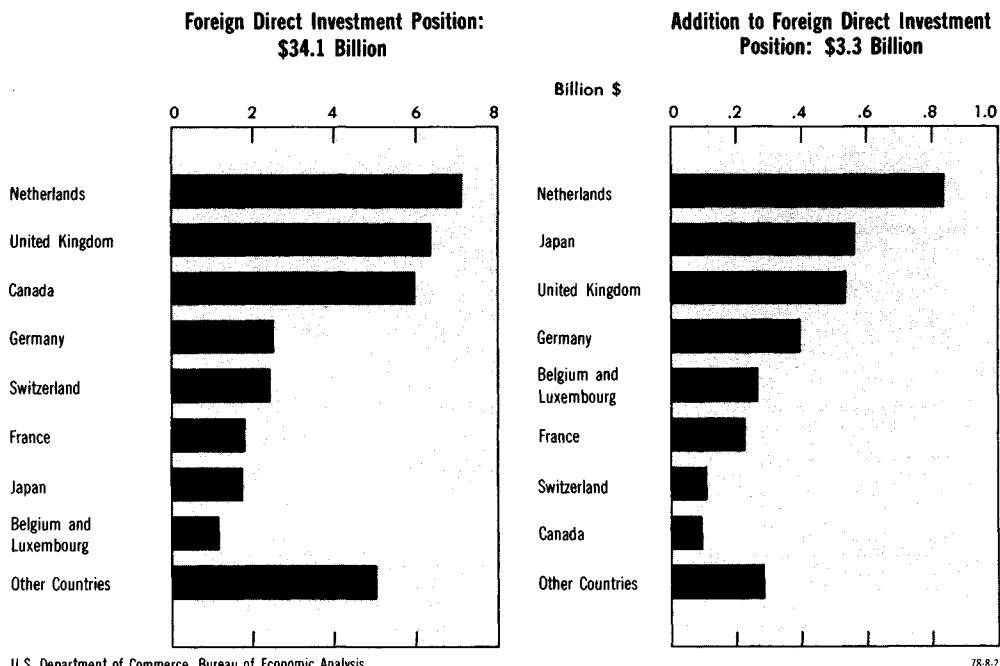

and "Other Western Hemisphere" countries.

The eight countries with the largest positions accounted for more than 85 percent of the total (chart 2). Three countries—the Netherlands, the United

Kingdom, and Canada—each accounted for about one-fifth. Foreign parents in member countries of the Organization of Petroleum Exporting Countries (OPEC) accounted for less

CHART 2

### Foreign Direct Investment in the United States, 1977

than 1 percent of the position, about the same as in 1976 (table 3).

By industry of affiliate, 40 percent of the position was in manufacturing, 21 percent in trade, 19 percent in petroleum, 7 percent in insurance, and 13 percent in "other". About one-half of the position in "other" was in finance.

About \$0.8 billion, or 2 percent, of the position was in real estate (table 14). However, this estimate may underestimate the value of all U.S. real estate owned by foreign direct investors for several reasons. When real estate is purchased for business purposes, it is classified by the industry group involved: Investments in farm and forest lands are classified in agriculture, forestry, and

fishing; mines and quarries in mining; and plant sites, office buildings, etc., in manufacturing, trade, insurance, or finance, as appropriate. Only investments in real estate by real estate operators, lessors, and developers are classified in the real estate industry. In addition, real estate is a highly leveraged industry; the ratio of mortgage loans to investors' initial payments on equity purchases is normally high. Because foreign equity investors often secure loans from U.S. sources,<sup>2</sup> and because the direct investment accounts

include only funds from foreign parents, the estimate for direct investment in real estate probably reflects only a small portion of the total asset value of real estate owned by foreign direct investors.

By type of affiliate and account, 94 percent of the position was in incorporated affiliates and 6 percent in unincorporated affiliates. Of the former, 78 percent was capital stock and retained earnings and 17 percent intercompany account balances, primarily short-term indebtedness to foreign parents.

## 1977 Addition

The addition to the position was \$3.3 billion. It consisted of equity and intercompany account inflows of \$1.8 billion,

\*Less than \$500,000 ( $\pm$ ). DSuppressed to avoid disclosure of data of individual companies.

reinvested earnings of incorporated affiliates of \$1.6 billion, and a small negative valuation adjustment.

The eight countries with the largest positions, which accounted for 85 percent of the position, accounted for 91 percent of the addition. However, the top three countries, which accounted for 57 percent of the position, accounted for only 44 percent of the addition; the smaller percentage primarily reflected a relatively small addition to the position for Canada, partly because of a sizable negative valuation adjustment.

The addition was larger in 1977 than in 1976, even though equity and intercompany account inflows declined 34 percent and reinvested earnings 5 percent. These declines were more than offset by a sharp reduction in negative valuation adjustments—from -\$1.2 billion to -\$38 million.

#### **Equity and intercompany account inflows**

Equity and intercompany account inflows were \$1.8 billion, down \$0.9 billion (table 5). Incorporated affiliates more than accounted for the inflows;

there were small outflows from unincorporated affiliates.

For incorporated affiliates, inflows for net purchases of capital stock were \$1.0 billion and inflows on intercompany

accounts \$0.8 billion. A large portion of the inflows to purchase capital stock went to existing affiliates, primarily to finance plant expansions; inflows to acquire U.S. companies or establish new affiliates were small. It should be noted, however, that inflows to purchase capital stock only cover transactions by foreign parents for their own accounts; transactions by U.S. affiliates for their own accounts—to acquire capital stock in other U.S. companies—are not covered because they are domestic rather than international transactions.

Compared with 1976, inflows to incorporated affiliates declined \$0.5 billion, to \$1.8 billion. Inflows for net purchases of capital stock declined \$0.2 billion, mainly because large inflows to several petroleum affiliates in 1976 were not repeated in 1977.

Inflows on intercompany accounts of incorporated affiliates declined \$0.3 billion; the decline was centered in trade and petroleum. In trade, it was attributable to affiliates of Japanese and German parents. In 1976, receivables of these affiliates due from their foreign parents declined substantially. (These receivables resulted from prepayments made in prior years for goods to be shipped later by their parents.)

1. Same as "equity" in table 4, page 29, in the October 1977 SURVEY. Capital stock includes additional paid-in capital.

In 1977, the receivables of the Japanese-owned affiliates (table 6) declined by a much smaller amount, while those of the German-owned affiliates increased slightly. (A decline in receivables is an inflow; an increase is an outflow.) In petroleum, a shift from inflows to outflows was largely accounted for by affiliates of United Kingdom parents. It partly reflected a sizable reduction in an affiliate's long-term debt to its foreign parent.

For unincorporated affiliates, there was a shift to small outflows from in-

flows of \$0.3 billion in 1976. The shift was primarily accounted for by insurance affiliates of Canadian and United Kingdom parents. Insurance affiliates, which typically hold sizable portfolios of market securities, had large unrealized capital gains in 1976, when the U.S. stock market improved substantially, but small unrealized capital losses in 1977, when the U.S. stock market weakened. For unincorporated affiliates, unrealized capital gains and losses affect equity and intercompany account inflows as well as earnings. (For incorpo-

rated affiliates, unrealized capital gains and losses are included in reinvested earnings; for unincorporated affiliates they are included in equity and intercompany account inflows, because reinvested earnings of unincorporated affiliates are not reported separately.)

#### Reinvested earnings

Reinvested earnings of incorporated affiliates equal foreign parents' shares in their affiliates' earnings less gross dividends. Reinvested earnings declined

slightly, to \$1.6 billion, despite a small increase in earnings (table 7). The reinvestment ratio—the fraction of affiliates' earnings reinvested by foreign parents—declined from 0.69 to 0.65.

Reinvested earnings of manufacturing affiliates declined 38 percent, to \$0.4 billion. The decline reflected both a decline in earnings and a large increase in dividend payments. As a result, the reinvestment ratio of manufacturing affiliates fell from 0.70 to 0.49. Reinvested earnings of insurance affiliates declined 61 percent, to less than \$0.1 billion, primarily due to a decline in earnings. The reinvestment ratio for these affiliates fell from 0.85 to 0.70.

In contrast, reinvested earnings of trade affiliates more than doubled, to

\$0.5 billion. Because dividends of these affiliates were nearly unchanged, the entire increase in reinvested earnings was accounted for by an increase in earnings; the reinvestment ratio of these affiliates rose from 0.66 to 0.81. There was a particularly large increase in earnings of trade affiliates of Japanese parents, reflecting increased sales of Japanese goods. These affiliates account for a dominant share of total U.S. merchandise imports from Japan<sup>3</sup> which

3. Their share was 85.8 percent in 1974. See U.S. Department of Commerce, *Foreign Direct Investment In the United States: Report of the Secretary of Commerce to the Congress in Compliance with the Foreign Investment Study Act of 1974 (Public Law 93-479)*, Volume 1, April 1976, table 5, p. 36.

rose from \$15.5 billion in 1976 to \$18.6 billion in 1977.

#### Valuation adjustments

Valuation adjustments were negligible, compared with an unusually large negative adjustment of \$1.2 billion for 1976. The negative adjustment for 1976 was largely related to the reclassification of a large investment to U.S. ownership from United Kingdom ownership.<sup>4</sup>

There were large offsetting adjustments for a few areas in 1977. Several Canadian parents of U.S. manufacturing affiliates transferred their ownership of U.S. affiliates to newly established holding companies in Europe. Because

1. Income divided by the average of the beginning- and end-of-year direct investment positions.

the country of residence of the foreign person holding the direct ownership interest in an affiliate is used to classify investments by country of foreign parent, negative adjustments were made to the position for Canada and positive adjustments of the same magnitude were made to the position for Europe.

### Income

Income, the return on the investment position, consists of foreign parents' shares in the earnings of their U.S. affiliates,<sup>5</sup> plus net interest payments by these affiliates to their parents, less U.S. withholding taxes on dividends and interest. Alternatively, it is equal to interest, dividends, and earnings of unincorporated affiliates plus reinvested

5. Tables showing such earnings are available on request from the Bureau of Economic Analysis (BE-50), U.S. Department of Commerce, Washington, D.C. 20230.

earnings of incorporated affiliates. (The derivation of, and relationship among, these income items are shown in table 8.)

Income declined 9 percent, to \$2.8 billion, following a 39-percent increase in 1976 (table 9). Declines in insurance, manufacturing, and "other" industries were partly offset by increases in trade and petroleum.

Income of insurance affiliates declined 82 percent and that of finance affiliates 29 percent (tables 19 and 20). Both declines reflected the effect of the depressed stock market on these affiliates' earnings. (Some finance affiliates, like insurance affiliates discussed previously, hold sizable portfolios of market securities.) Manufacturing affiliates' income declined moderately, probably reflecting the slowing of the U.S. economic recovery. In contrast, trade

affiliates' income increased 84 percent. The increase was largely accounted for by affiliates of Japanese parents, and primarily resulted from the increased sales of Japanese goods by these affiliates, as discussed above.

The rate of return on the position—income divided by the average of the beginning- and end-of-year positions—declined to 8.7 percent, from 10.6 percent in 1976. By industry, changes in rates of return primarily reflected changes in income; rates of return declined in insurance, manufacturing, and "other" industries and increased in trade and petroleum. The largest decline was in insurance, where the rate of return fell from 26.2 percent to 3.9 percent.

### Fees and Royalties

Fees and royalties consist of net payments by U.S. affiliates to their foreign parents for the sale or use of intangible property, such as patents, processes, trademarks, and copyrights; rentals for the use of tangible property; management fees and service charges; and film and television tape rentals. Net payments of fees and royalties were \$0.3 billion, and were primarily to Canadian and European parents (table 11). Net payments declined slightly in 1977, partly due to a decline in payments to Swiss parents by their chemical affiliates.

By RUSSELL B. SCHOLL

# The International Investment Position of the United States: Developments in 1977

FOLLOWING four consecutive years of substantial increases, the net international investment position of the United States declined \$10.7 billion in 1977 (table 1). There was a shift to net inflows of \$16.2 billion in recorded international transactions, as U.S. assets abroad increased \$34.7 billion, compared with a \$50.9 billion increase in foreign assets in the United States. Partly offsetting was a positive \$5.5 billion net valuation adjustment, mainly reflecting the price depreciation in foreign-held U.S. stocks.

At yearend 1977, the net international investment position of the United States was \$70.0 billion (chart 3). U.S. assets abroad were \$381.3 billion; the 10 percent increase over 1976 was concentrated in Western Europe and the Caribbean area. Foreign assets in the

The presentation of the U.S. international transactions accounts was revised in June 1978. Reinvested earnings of incorporated foreign affiliates of U.S. direct investors and of incorporated U.S. affiliates of foreign direct investors are now included in payments and receipts of income on direct investment. Offsetting entries—of equal magnitude and opposite sign—are made in the corresponding direct investment capital accounts. See the technical notes in Part II of the June 1978 SURVEY OF CURRENT BUSINESS, page 7, for further explanation.

United States were \$311.3 billion at yearend, up 17 percent; the increase was largely attributable to a substantial addition to foreign official holdings of dollars, particularly by several countries in Western Europe and by Japan.

## *Relationship of capital flows to the current account*

In terms of accounting entries, the net capital flow component of the U.S. international investment position is the

mirror image of the balance on current account in U.S. international transactions, plus the allocation of special drawing rights (SDR) by the International Monetary Fund (IMF), and an entry for the statistical discrepancy in the international accounts. However, because capital flows and current account transactions are simultaneously determined and interact through exchange rate changes and other factors, there is no simple cause and effect relationship between them.

In 1977, the complex interaction between the current account, capital account, and exchange rate developments was especially evident. There was a shift to a record U.S. current account deficit, largely because of the substantial increase in merchandise trade deficit. The latter mainly reflected stronger economic growth in the United States than in most leading countries and increased dependence on imported oil. Because, in an accounting sense, total payments and receipts must balance, large net capital inflows were required to offset the current account deficit. However, because of the increased supply of dollars relative to

18 Statistical discrepancy (unrecorded inflows (+))					

1. Data for 1973-76 are revised; data for 1977 are preliminary.

NOTE.—Statistical material for this article was prepared under the supervision of Nancy R. Keith, with contributions from Julius N. Freidlin and E. S. Kerber.

demand, private foreigners became less inclined to hold dollar-denominated assets at prevailing exchange rates and sought to increase the proportion of assets denominated in other currencies in their portfolios. As a result, inflows from both foreign banks and other private foreigners slowed markedly, adding to exchange market pressure on the dollar. This occurred in the face of rising U.S. interest rates and generally declining foreign rates. On the other hand, there were large official capital inflows from several major industrial countries, mainly reflecting their dollar purchases in exchange markets to moderate the appreciation of their currencies. Thus, the decline in the value of the dollar influenced and was influenced by capital flows into and out of the United States. Recorded net capital inflows of \$16.2 billion equaled the sum of the \$15.2 billion deficit of the current account and the \$1.0 billion adjustment for statistical discrepancy (unrecorded net outflows). No alloca-

tions of SDR have been made since 1972.

The increase in U.S. assets abroad was smaller in 1977 than in the preceding year. Lending abroad by U.S. banks declined, primarily reflecting reduced demand for balance of payments financing by several developing countries and increased domestic loan demand in the United States. New foreign bond issues in the U.S. market declined; Canadian new issues were less than half those in 1976.

The statistical discrepancy shifted from \$9.3 billion in unrecorded inflows in 1976 to \$1.0 billion in outflows. It appears that this large swing was related to exchange market disturbances during the year, mainly reflecting the decline in the value of the dollar. As in past periods of unsettled conditions in exchange markets, the statistical reporting system probably did not adequately cover the commercial and financial flows that occurred in response to shifting exchange rates.

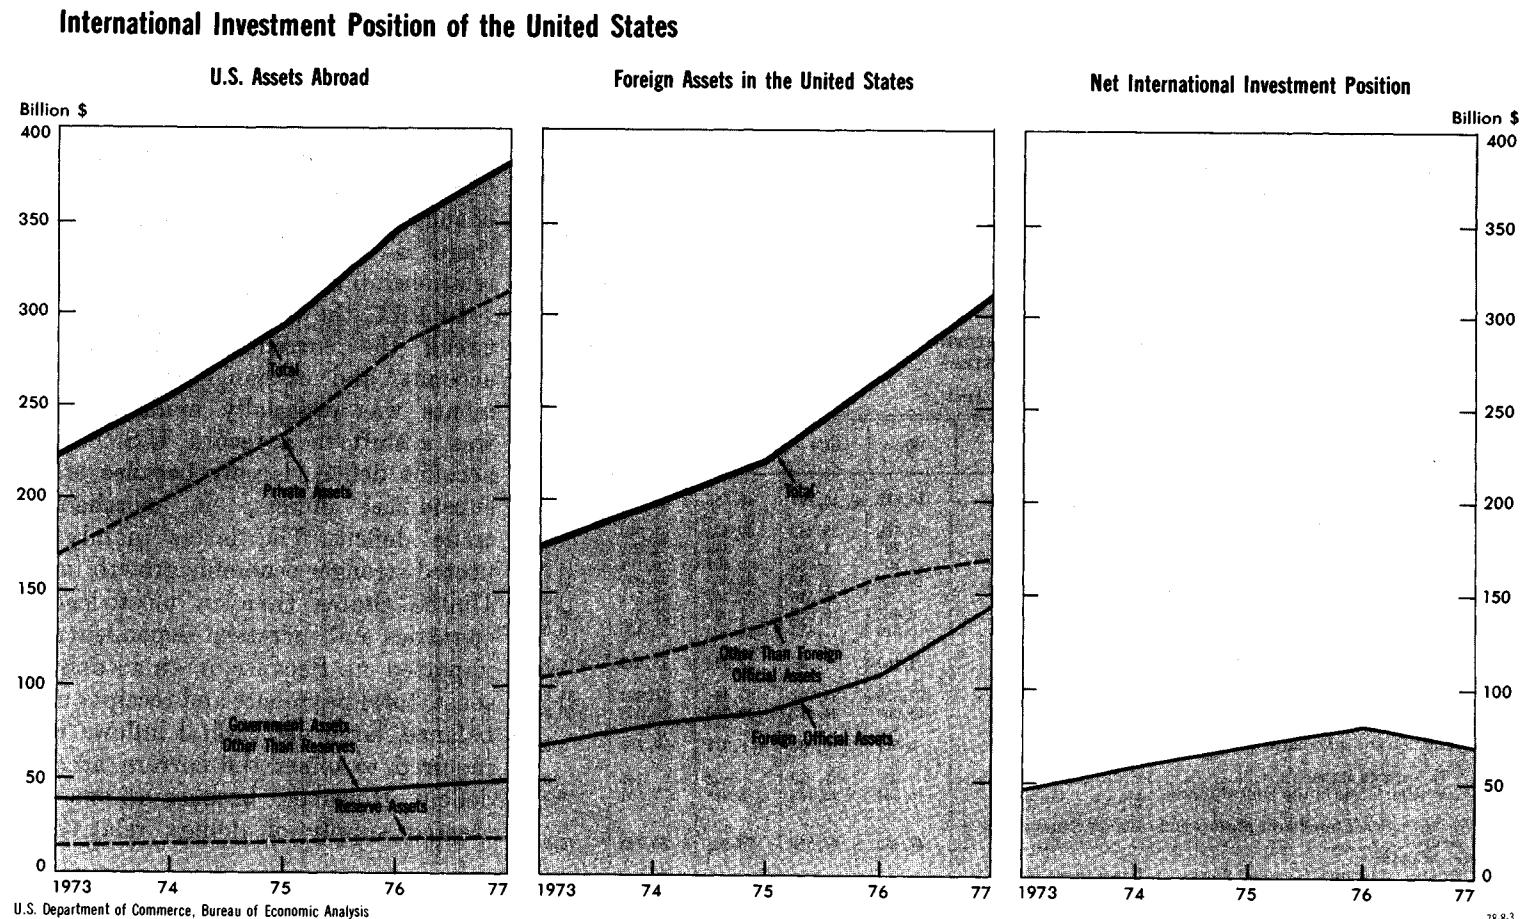

## Changes in U.S. Assets Abroad

U.S. assets abroad increased \$34.9 billion to \$381.3 billion in 1977 (table 2). The 10 percent increase was half that of 1976, as foreign demand for dollar funds moderated. The principal factor was the sharp slowdown in U.S. bank lending abroad. U.S. purchases of foreign securities were substantially less than in the previous year, reflecting reduced borrowing in the U.S. bond market by Canadian entities. Among other U.S. private assets abroad, direct investment and U.S. claims reported by nonbanking concerns increased at about the same rate as in 1976. There was a smaller increase in U.S. official reserve assets and other government assets, mainly reflecting a smaller increase in the U.S. reserve position in the International Monetary Fund (IMF).

### Bank claims

U.S. bank-reported claims on foreigners rose \$11.4 billion, compared with a

<sup>r</sup>Preliminary. <sup>s</sup>Revised. \*Less than \$500,000 ( $\pm$ ).

1. Reduction in official reserve assets from the public sales of gold from Government stocks held by the U.S. Treasury; these demonetizations were not included in changes in U.S. official reserve assets in balance of payments transactions.

2. In lines 5 and 6, represent changes in the dollar value of SDR (beginning July 1974, the IMF values SDR on the basis of a weighted average of exchange rates for currencies of 16 member countries); in lines 9, 11, 12, 16, and 17, represent changes in the dollar value of foreign currencies as indicated by exchange market movements.

\$21.4 billion rise in 1976. There was a marked slowdown in outflows to the Caribbean—mostly branches of U.S. banks—from \$11.3 billion to \$5.7 billion. Most of these outflows were rechanneled to the Eurodollar market. Excluding claims on Caribbean branches, increases in U.S. bank-reported claims were reduced from \$10.1 billion in 1976 to \$5.7 billion in 1977. Increased outflows to France, Argentina, and Taiwan were more than offset by reduced lending to Mexico and by a shift to net repayments from Brazil and Japan. The inflow from Japan mainly represented a reduction in Japanese bank liabilities to their U.S. agencies.

The slowdown in U.S. bank lending to foreigners reflected a combination of factors. Some U.S. banks were more cautious in lending abroad because of the narrower spread between interest rates at which banks borrowed and rates which they charged borrowers. Also, some revival of domestic loan demand in the United States, together with a rise in U.S. short-term interest rates, made it less attractive for U.S. banks to place funds abroad. In addition, there was reduced demand for loans from U.S. banks by several developing countries, reflecting improvements in their balance of payments positions. At \$92.6 billion at yearend 1977 (table 3), claims on foreigners accounted for about 10 percent of total loans and investments of U.S. commercial banks, the same proportion as a year earlier. Since 1973, when they were only 4 percent of total loans and investments, these claims have grown steadily.

#### **Foreign securities**

Foreign securities held by U.S. residents increased \$5.2 billion in 1977, to \$49.3 billion at yearend, following a record \$9.2 billion increase in 1976. U.S. residents' holdings of foreign bonds increased \$4.6 billion to \$39.2 billion, as \$6.9 billion in new foreign bond issues in the U.S. market were partly offset by \$1.3 billion in scheduled retirements, sales of \$0.6 billion of other outstanding bonds, and a market price depreciation of \$0.4 billion.

New bond placements by Canadians were \$2.4 billion, less than half the record \$5.4 billion placed in 1976. The decline was largely accounted for by reduced needs of some major Canadian borrowers and a narrowing of the spread between U.S. and Canadian long-term interest rates. Canadian provinces and their hydroelectric authorities borrowed only \$1.2 billion in the United States, compared with \$3.6 billion in 1976; Quebec issues dropped to \$0.2 billion from \$1.4 billion in 1976, reflecting the political situation in Quebec. Canadian corporate issues declined slightly to \$0.9 billion.

New issues by Western Europeans increased slightly to \$1.6 billion, mostly due to increased Scandinavian placements. Issues by international organizations remained unchanged at \$1.5 billion; Latin American issues increased fivefold to \$0.5 billion, as Mexico, Venezuela, and Brazil all borrowed in the United States. Part of the Mexican and Venezuelan issues were associated with petroleum development projects.

U.S. residents purchased \$0.4 billion of foreign stocks; price and exchange adjustments of \$0.3 billion increased the value of total holdings to \$10.1 billion by yearend. Net purchases of \$0.5 billion of Western European stocks consisted of \$0.3 billion from the United Kingdom and \$0.2 billion from the Netherlands, attracted by rising stock prices in these two countries. U.S. residents purchased \$0.2 billion of Canadian stocks, and reduced their holdings of Japanese stocks by \$0.3 billion.

#### ***U.S. direct investments abroad<sup>1</sup> and other private assets***

U.S. direct investments abroad increased 9 percent or \$12.4 billion, about the same amount as in 1976. Capital outflows were \$12.2 billion, up \$0.6 billion, consisting of a \$4.9 billion addition to equity and intercompany accounts and reinvested earnings of \$7.3 billion; there was a \$0.2 billion adjustment for valuation change. The moderate increase in capital outflows reflected two special developments: first, unusually large inflows from sales and

liquidations of foreign affiliates in 1976 did not recur in 1977. Second, there were exceptionally large outflows from a U.S. petroleum company. By yearend 1977, the book value of U.S. direct investments abroad was \$148.8 billion.

The increase in U.S. claims on unaffiliated foreigners reported by U.S. nonbanking concerns was virtually unchanged in 1977, at \$1.7 billion. There was a decline in capital outflows, reflecting some reduction in Eurodollar deposits by major U.S. corporations. The decline was offset by the change from a negative \$0.3 billion statistical discrepancy in 1976 to no discrepancy in 1977. At yearend 1977, claims reported by nonbanking concerns were \$21.8 billion, of which one-third was investment overseas in financial claims. The remainder primarily represented trade-related claims or longer-term investments, such as mortgages.

#### ***U.S. official reserve assets***

The increase in U.S. official reserve assets slowed to \$0.6 billion from the \$2.5 billion increase in 1976. Both U.S. SDR holdings and the U.S. reserve position in the IMF increased as a result of exchange rate changes; these assets are valued by the Fund on the basis of a basket of currencies which appreciated vis-a-vis the U.S. dollar in 1977. In addition, transactions increased U.S. SDR holdings \$0.1 billion and the U.S. reserve position with the IMF \$0.3 billion. The latter increase reflected U.S. lending of dollars to the Fund, which increased the U.S. reserve position, more than offsetting net repayments of dollars by other countries to the Fund, in contrast to large net drawings in 1976. U.S. foreign currency reserves declined \$0.3 billion; there were net repayments to the United States of dollar drawings on reciprocal currency (swap) arrangements, particularly by Mexico. U.S. holdings of gold increased \$0.1 billion, resulting from purchases of gold under the IMF gold restitution program. As a result of these changes, U.S. reserve assets rose to \$19.3 billion by the end of 1977.

#### ***Other U.S. Government assets***

U.S. Government assets other than reserve assets, at \$49.6 billion, increased

<sup>1</sup>. For details see article "U.S. Direct Investment Abroad in 1977", in this issue.

<sup>1</sup>Includes U.S. gold stock. <sup>2</sup>Less than \$500,000 ( $\pm$ ).

1. Data for 1973-76 are revised; data for 1977 are preliminary.

2. Total reserve assets include increases from changes in the par value of the dollar, as officially implemented; on May 8, 1972, the increase totaled \$1,016 million, consisting of \$828 million gold stock, \$155 million special drawing rights, and \$33 million reserve position in IMF; on October 18, 1973, the increase was \$1,436 million, consisting of \$1,165 million gold stock, \$217 million SDR, and \$54 million reserve position in IMF.

3. Beginning in July 1974, U.S. holdings of special drawing rights and the reserve position include changes in the SDR based on changes in a weighted average of exchange rates for currencies of 16 member countries of the IMF.

4. Also includes paid-in capital subscription to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of one year. Excludes World War I debts that are not being serviced.

5. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

6. For the most part, represents the estimated investment in shipping companies registered primarily in Panama and Liberia.

7. Details not shown separately are included in totals in lines 25 and 32.

8. Details not shown separately are included in line 24.

8 percent, or \$3.6 billion, compared with a \$4.2 billion increase in 1976. The smaller increase reflected a decline in Export-Import Bank net disbursements and in U.S. Government subscription payments to international financial institutions, excluding the IMF.

### **Changes in Foreign Assets in the United States**

Foreign assets in the United States increased \$45.6 billion to \$311.3 billion in 1977. Although the increase was about the same as in the preceding year, there was a significant change in its composition. In 1977, the increase consisted primarily of a build-up in foreign official agencies' holdings of dollars as the result of intervention purchases in exchange markets. Placements of funds in U.S. money market instruments by private foreigners and international organizations were sharply curtailed, reflecting a tendency to reduce the proportion of dollar assets in their portfolios. There was also a sizable reduction in the value of U.S. securities held by foreigners, reflecting reductions in market prices.

#### **Foreign official assets in the United States**

Assets held in the United States by foreign official agencies rose \$36.5 billion, compared with \$19.0 billion in 1976. At \$143.1 billion, these assets represented 46 percent of all U.S. liabilities to foreigners at the end of 1977. The sharp increase in official capital inflows was largely attributable to stepped-up intervention purchases of dollars in exchange markets by several major industrial countries.

Some countries—particularly the United Kingdom and Italy—used intervention purchases of dollars to rebuild reserves following sharp run-downs in 1976. Other countries, whose currencies were in strong demand—such as Germany, Switzerland, and Japan—intervened and acquired more dollar assets to limit the appreciation of their currencies against the dollar. Canada, in contrast, reduced its dollar holdings to help finance its current accounts

deficit. In all, industrial countries increased their assets in the United States \$28.9 billion in 1977, following an increase of only \$3.9 billion in 1976. Most of these dollars were invested in U.S. Treasury bills and bonds, thus financing a substantial part of the Treasury's borrowings. At the end of 1977, official assets of industrial countries in the United States were \$95.0 billion.

OPEC members increased their assets held in the United States \$6.0 billion, compared with the \$10.0 billion rise in 1976. Although OPEC's total investible surplus declined only slightly in 1977, the percentage invested in the United States dropped to 20 percent from 25 percent the year before. In part, the smaller 1977 increase represented some diversification into currencies other than the dollar. Much of the reduction in OPEC placements in the United States reflected smaller prepayments on purchases of U.S. military equipment and a reduction in their holdings of U.S. short-term Treasury obligations and bank deposits. Partly offsetting were larger purchases of Treasury bonds and continued investments in U.S. corporate and agency bonds. Net purchases of U.S. corporate stocks by OPEC members were a third less than in 1976; in addition, the value of their holdings was reduced by the decline in U.S. stock prices. Total OPEC holdings in the United States amounted to \$35.0 billion at the end of 1977.

Assets in the United States held by official agencies of nonpetroleum developing countries increased \$1.5 billion to \$13.0 billion, compared with a \$4.6 billion increase in 1976. These countries also reduced their prepayments on U.S. Government-arranged contracts and invested smaller amounts in U.S. short-term Treasury obligations and financial paper; on the other hand, they increased slightly their investments in long-term certificates of deposit, Treasury bonds and U.S. agency bonds. It appears that these countries also placed a larger portion of their reserve increases—arising from an improved payments position and increased borrowing—in other currencies in 1977.

#### **Other foreign assets**

There was a marked slowdown in the increase in foreign assets in the United States other than foreign official assets. The slowdown was most evident with respect to financial assets, in spite of the rise in U.S. interest rates relative to most rates abroad. Capital inflows declined to \$13.7 billion from \$18.9 billion in 1976; in addition, there was a \$4.7 billion decline in the value of foreign holdings of U.S. securities due to the decline in U.S. stock prices. As a result, assets of private foreigners and international organizations held in the United States rose only \$9.1 billion—compared with \$25.5 billion in 1976—and totaled \$168.2 billion at yearend 1977.

Foreign holdings of U.S. securities other than U.S. Treasury securities declined \$1.8 billion, following a rise of \$9.5 billion in 1976. The decline was more than accounted for by a large negative valuation adjustment, due to lower stock prices, which reduced the value of foreign holdings of U.S. stocks \$4.5 billion. Net foreign purchases of U.S. corporate stocks increased \$1.3 billion, \$0.4 billion more than in 1976, probably reflecting anticipation of more favorable stock prices, higher yields, and the relatively strong rise in U.S. economic activity. The United Kingdom, Germany, Netherlands and Switzerland, whose currencies appreciated significantly against the dollar, recorded higher purchases. Contributing to the increase in purchases from the United Kingdom was a reduced investment premium on conversions to dollars for investment abroad. At the end of 1977, foreign holdings of U.S. stocks were \$39.7 billion.

Net purchases of U.S. corporate and agency bonds, particularly by Western Europe and Japan, increased \$1.5 billion, raising the value of U.S. bond holdings by foreigners to \$13.4 billion. Stepped-up offshore bond placements by U.S. corporations, at attractive rates in the Euromarket, accounted for part of the increase; there were also larger net purchases of outstanding U.S. bonds by West European countries. The combined value of foreign-held U.S. stocks and bonds at yearend

1977 was \$53.1 billion, \$1.7 billion or 3 percent below the level a year earlier.

Foreign direct investment in the United States increased \$3.3 billion in 1977, slightly more than in the previous year.<sup>2</sup> At \$1.8 billion, equity and inter-company account inflows from foreign parents were down \$0.9 billion; reinvested earnings of \$1.6 billion were slightly lower. The slowdown in capital inflows occurred despite the relatively strong economic growth in the United States and the decline of the U.S. dollar against several leading currencies, which reduced the foreign currency price of these assets in the United States. At

end of 1977, the value of foreign direct investment in the United States was \$34.1 billion.

Foreign investments in U.S. Treasury bills and other U.S. money market instruments increased \$6.9 billion, compared with a \$13.5 billion increase in 1976. U.S. short-term liabilities to foreign commercial banks reported by U.S. banks increased less than in 1976, primarily reflecting reduced inflows from foreign branches to U.S. parent banks and from overseas head offices to foreign agency banks in the United States. International financial institutions significantly reduced their dollar assets in the United States, although their net borrowing in the U.S. bond market was only slightly lower; they

sold U.S. financial paper, U.S. Treasury bills and reduced their net purchases of Treasury bonds. Other foreigners reduced their placements of dollar deposits with U.S. banks, while increasing their net purchases of Treasury bonds. At the end of 1977, foreign holdings of U.S. Treasury securities and bank liabilities amounted to \$66.3 billion.

U.S. liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns increased \$0.3 billion to \$13.3 billion, mainly because of stepped-up short-term borrowing by U.S. corporations in the relatively lower cost European and Japanese markets; there was a partly offsetting decline in long-term liabilities.

2. For details, see article, "Foreign Direct Investment in the United States, 1977," in this issue.

# The Relationship Between Age and Rate of Return of Foreign Manufacturing Affiliates of U.S. Manufacturing Parent Companies

INFORMATION from the BEA 1966 benchmark survey of U.S. direct investment abroad shows that the rate of return of foreign affiliates of U.S. parent companies increases with age (chart 4). The purpose of this article is to investigate this relationship. The main conclusions are as follows:

- The relationship is "genuine," that is, it is not due to "mix" effects. It is genuine in the sense that rates of return tend to be higher for older than for younger affiliates regardless of the area in which the affiliate is located and of the industry of which it is part. If it were due to mix effects, it would reflect a situation in which there are areas or industries that are characterized by relatively low rates of return and a predominance of younger affiliates, and other areas or industries that are characterized by relatively high rates of return and a predominance of older affiliates.
- The relationship is not mainly due to the effect of secular inflation on accounting statements. Given the widespread accounting practice of valuing assets at acquisition cost, inflation could lead to understatement of the value of assets of older affiliates relative to those of younger affiliates, and hence raise the rates of return of the former relative to the latter.
- Setting aside inflation, the relationship is due to size as well as to age per se. The size effect may reflect production and marketing econo-

mies, oligopolistic power, and also the reinforcing tendencies that higher rates of return have on size because they facilitate access to financial resources. The age effect may reflect the cost of breaking into new markets, decreases in costs that are the result of the learning process, the progressive

weeding out of unprofitable affiliates, and the preemption of the most profitable investment opportunities by older affiliates.

Subsequent sections will deal in turn with "mix" effects, secular inflation, and the effects of size and age per se. A final section will examine some characteristics of affiliates with losses.

*Data and definitions.*—The data for this article are from the BEA 1966 benchmark survey of U.S. direct investment abroad, which is the most recent source of affiliate data classified by age. The income statement and balance sheet data used are shown in

tables 1 and 2, and are as recorded on the books of the affiliates. In the benchmark survey, ten age categories are available, with all affiliates of age ten or more in a single category. In the tables in this article, the ten age categories are condensed into four

(table 3). The data are discussed further in the Technical Note.

The age of an affiliate is defined as the number of years that the U.S. parent has owned the affiliate. Age defined in this way may differ from the number of years the affiliate has existed,

and is likely to differ from the age of affiliate assets.

The rate of return is defined as the ratio of net income before tax to total assets (net of depreciation). Net income is before foreign income tax because—in view of the fact that the treatment of losses and other tax provisions discriminate in favor of new foreign investments—before-tax income is a better measure of profitability for the purpose of this article.<sup>1</sup>

#### Mix Effects: Area and Industry Composition

As can be seen from chart 5, there is a tendency for the rate of return to increase with the age of the affiliate. Overall, the rate of return increases from 2.3 percent for the youngest affiliates (less than 4 years old) to 11.6 percent for the oldest (at least 10 years old.) This tendency is clearly evident for most of the areas and industries in the chart. The tendency is less evident for Canada, where the rate of return for younger affiliates is significantly higher than for other areas. The 1965 United States-Canadian automotive trade agreement encouraged the establishment of new automotive affiliates in Canada; because the operations of these affiliates were closely integrated with those of their parents, they probably did not experience the difficulties to which young affiliates are typically subject. More generally, U.S. parents are familiar with operating and marketing conditions in Canada, and hence their affiliates experience initial difficulties that are shorter in duration and less severe than those of affiliates in other countries. For transportation

equipment, the rate of return shows little variation with age. In addition to the effect of the United States-Canadian automotive trade agreement, the lack of variation reflects the fact that a relatively young European affiliate owned some old affiliates. The metals industry shows erratic variation because some age groups are dominated by a few affiliates with unusual income or balance sheet experience.

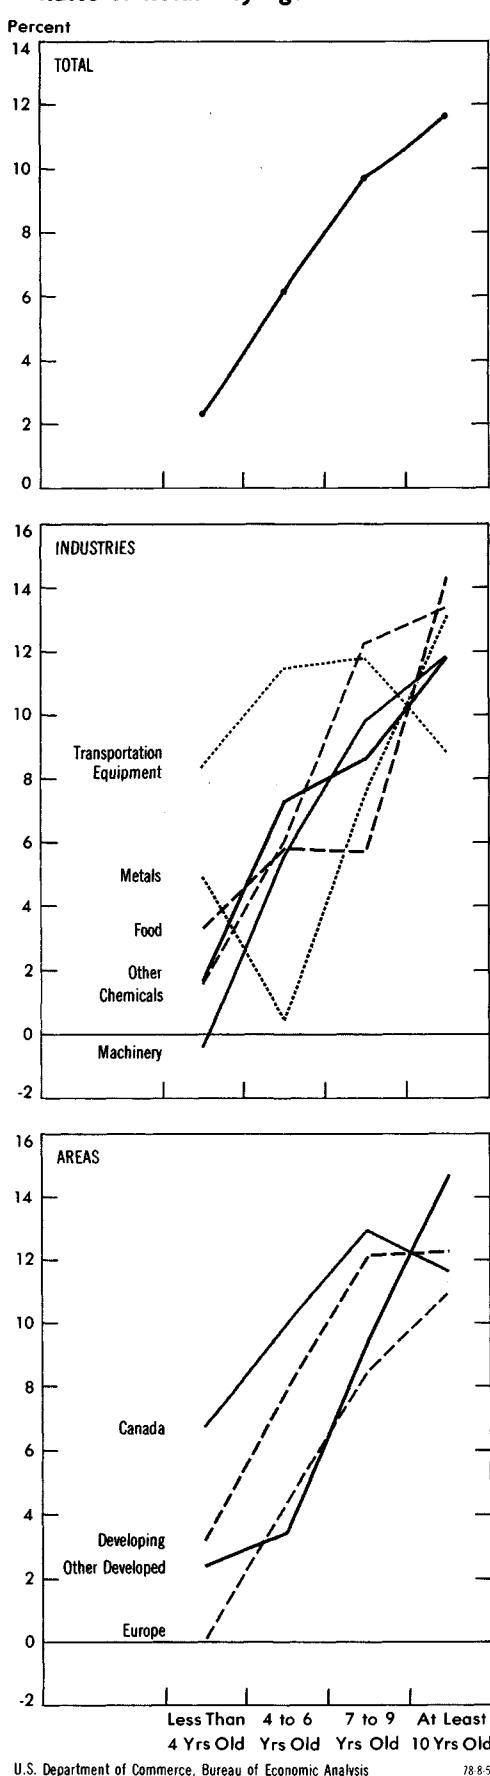

It would be useful to know whether the relationship between age and rate of return is "genuine" or due to "mix" effects. The former would reflect a situation in which rates of return tend to be higher for older than for younger affiliates regardless of the area in which the affiliate is located and of the industry of which it is part. The latter would reflect a situation in which there are areas or industries that are characterized by relatively low rates of return and a predominance of younger affiliates and other areas or industries that are characterized by relatively high rates of returns and a predominance of older affiliates. It is impossible to prove conclusively that the relationship is genuine; however chart 5 strongly suggests that it is. In the chart, only the area totals and the industry totals are shown, because the area-industry cells would probably be so "thin" that they would be difficult to interpret. The area totals and the industry totals show relationships so strong and pervasive that it would be difficult to make consistent entries in the area-industry cells that would not show similar relationships, i.e., would not show that the increase in the rate of return with age is genuine.

#### Secular Inflation

The next question that will be investigated is whether the observed rela-

1. The relationship between age and rate of return is not basically altered, however, by considering it on an after-tax basis; the after-tax rate of return increases from 0.1 percent for affiliates less than 4 years old to 6.6 percent for affiliates at least 10 years old.

#### Rates of Return by Age

U.S. Department of Commerce, Bureau of Economic Analysis

7885

tionship between the rate of return and age is due to the effect of secular inflation on accounting statements. In the presence of inflation, the widespread accounting practice of valuing fixed assets at acquisition cost tends to raise rates of return of older affiliates relative to those of younger affiliates in two ways. First, the fixed assets of older affiliates, which tend to have been acquired earlier, will in general be valued at lower prices. Second, their income will tend to be higher, because the depreciation charges deducted in arriving at it will reflect the lower prices at which the fixed assets were acquired.

#### Factoring of the rate of return

To assess the effect of secular inflation, the rate of return is factored into four component ratios, as follows:

$$\frac{NIBT}{A} = \frac{IBDT}{S} \times \frac{NIBT}{IBDT} \times \frac{S}{CA} \times \frac{CA}{A}$$

where *NIBT* is net (of depreciation) income before tax, *A* is assets net of depreciation, *IBDT* is income before depreciation and tax, *S* is sales, and *CA* is current assets.

Two of the component ratios—*NIBT/IBDT* and *CA/A*—are inflation

sensitive, because *NIBT* and *A* are affected by the accounting practices just referred to. The two other component ratios—*IBDT/S* and *S/CA*—are inflation insensitive. (This statement is subject to the minor qualification that some financial assets and inventories, like fixed assets, are valued at acquisition cost.)

Rates of return and the component ratios, as well as the products of the inflation-insensitive and of the inflation-sensitive ratios, are shown in table 4. As can be seen from the table, the rate of return for the oldest group is five times that for the youngest. The product of the inflation-sensitive ratios for the oldest group is one and one-half times that for the youngest, and the product of the inflation-insensitive ratios for the oldest group is three times that for the youngest. Most of the increase in the product of the inflation-sensitive ratios stems from *NIBT/IBDT*, and is traceable to an extremely low value for the youngest group in Europe, for which *NIBT* was close to zero; it appears that this low value was an aberration. Allowing for this aberration, these figures indicate that well under one-third of the observed increase in the rate of return with age is

due to the effects of inflation on accounting statements; most of the increase—well over two-thirds—is due to other factors.

#### Regression analysis of inflation-insensitive ratios

In what follows, regression analysis will be used to determine whether the observed increases with age in the inflation-insensitive ratios are statistically significant. As will be seen, the analysis suggests strongly that they are.

Equations that expressed the dependent variables as linear functions of age were used. Such a relationship is only an approximation of the actual relationship; rates of return and the component ratios do not increase indefinitely with age. However, because all affiliates at least 10 years old are in a single category, the relationship between rates of return and age within this category cannot be determined. The linear relationships fit the available data reasonably well.

The equations were fitted by the ordinary least squares method. To prevent the oldest age category, which contains the largest number of affiliates, from dominating the results, the regression variables were given weights inversely proportional to the number of affiliates in each age category.

Equations were estimated for each area, because there are systematic differences among areas in the rate of return with age. Separate equations were not estimated for each industry, because regressions by industry would have required that systematic area differences within industries be taken into account; in regressions by area, industry differences within areas generally could be neglected.

*IBDT/S* regressions.—The choice of an algebraic form for the estimated equations posed some problems. The form selected—one which fit the data reasonably well—was:

$$IBDT = a + b_1 S + b_2 TS$$

where *T* is age. An alternative form using the ratio *IBDT/S* as dependent variable did not fit the data, because

of the extremely large variations in the ratio for small affiliates.<sup>2</sup>

The *t*-ratios for the coefficients of the age variables are significant at the 1-percent level (table 5). Also, as would be expected, the coefficients are positive except for Canada. The result for Canada may reflect the close integration of the automotive equipment affiliates with their U.S. parents and, more generally, the familiarity of U.S. parents with operating and marketing conditions in Canada, as explained earlier.

*S/CA regressions.*—The estimated equation for the *S/CA* regressions is:

$$S = a + b_1 CA + b_2 T(CA)$$

In all except the developing areas, the coefficients of the age variable are significant at the 1-percent level, and are positive (table 6). In the developing areas, the age coefficient is significant at the 5-percent level, and is negative. This result may be spurious; the coefficients may not adequately reflect the separate contributions of the current assets and age variables.

### Age Effects: Size and Age Per Se

A relationship between age and rate of return apart from the effect of inflation on accounting statements having

2. The alternative form might seem more consistent with the aggregate ratios shown in chart 5 and table 4, but this is not the case; the aggregate ratios are equal to the sum of the numerators of the affiliates divided by the sum of the denominators, and cannot be expressed as sums or averages of ratios for individual affiliates.

Table 5.—Income Before Depreciation and Tax as a Function of Sales and Age

NOTE.—Figures in parentheses are *t*-ratios. The coefficients apply to sales in millions of dollars and age in years.

been established, an analysis of the factors underlying this relationship will be undertaken. There are two ways in which age may affect rates of return: through size and age per se. The size effect exists because it takes time to grow. Larger affiliates may attain production and marketing economies and oligopolistic power. Also, there may be reinforcing tendencies of higher rates of return on size: higher rates of return facilitate growth because they make it easier to obtain funds in capital markets, provide internal sources of funds, and make the affiliate a good investment for the parent company. The effect of age per se may reflect the outgrowing of start-up costs and costs of breaking into new markets, decreases in costs that are the result of the learning process, the progressive weeding out of unprofitable affiliates and the pre-emption of the most profitable investment opportunities—for instance, in natural resources—by older affiliates.

The data show that age and size are correlated. For instance, the oldest category of affiliates, which contains less than 50 percent of the number of affiliates, accounts for 74 percent of total assets, 78 percent of total sales, and 84 percent of total net income before tax. Accordingly, to investigate whether there are separate effects of size and age per se on the rate of return, regression analysis must be used. First, the relationships of the rate of return to size and age are investigated. Second, to make sure that the size and age effects are not mainly due to the effects of inflation on accounting statements, the relationship between these effects and the inflation-insensitive component ratios is investigated. The transportation equipment industry is omitted because of its peculiarities that have been noted.

*Rate of return regressions.*—The estimated equation is

$$NIBT = a + b_1 A + b_2 TA + b_3 A^2$$

(Similar to the situations with *IBDT/S* and *S/CA*, an alternative form using the rate of return, *R*, did not fit the data). The estimated equation is then divided by *A*:

$$R = \frac{NIBT}{A} = \frac{a}{A} + b_1 + b_2 T + b_3 A$$

From the standpoint of interpreting the results of the regression analysis, it is useful to differentiate the rate of return with respect to the size variable, *A*:

$$\frac{dR}{dA} = -\frac{a}{A^2} + b_3$$

For *R* to increase with *A*, *dR/dA* must be positive; that is, *b*<sub>3</sub> must be larger than *a/A*<sup>2</sup>. If *b*<sub>3</sub> is positive and *a* is negative, *dR/dA* is positive for all values of *A*. Conversely, if *b*<sub>3</sub> is negative and *a* is positive, *dR/dA* is always negative. If *b*<sub>3</sub> and *a* are both positive, *dR/dA* is positive if *A* exceeds  $\sqrt{a/b_3}$ , and if *b*<sub>3</sub> and *a* are both negative, *dR/dA* is positive if *A* is less than  $\sqrt{|a/b_3|}$ .

Table 7 summarizes the results of the regression analysis. Canada shows a significant size effect, and *R* increases with size; the age effect is insignificant, probably because of the general similarities between the U.S. and Canadian economies noted earlier. Europe shows significant size and age effects, and *R* increases with size and with age. Other developed areas show an insignificant size effect, a significant age effect, and *R* increases with age. Developing areas show a significant size effect, and *R* increases with size for small values of *A* but decreases with size for large values of *A*. The age effect is significant

and  $R$  increases with age. In summary, there are strong indications that rates of return increase separately with size and age per se.

*Inflation-insensitive ratio regressions.*—As will be recalled, the two inflation-insensitive component ratios are  $IBDT/S$  and  $S/CA$ . The equation estimated for the first ratio is

$$IBDT = a + b_1 S + b_2 TS + b_3 S^2.$$

As before,  $IBDT/S$  cannot be estimated in ratio form; instead, after the equation is estimated it is divided by  $S$  to give  $IBDT/S$ . The interpretation of the resulting equation is similar to that of the rate of return: the derivative of  $IBDT/S$  with respect to the size variable,  $S$ , is

$$\frac{d(IBDT/S)}{dS} = -\frac{a}{S^2} + b_3$$

and the conditions under which it assumes positive and negative values are similar to those stated in connection with the rate of return derivative. The results of the regressions are shown in table 8. Canada shows a significant size effect, and  $IBDT/S$  increases with size; the age effect is significant, but  $IBDT/S$  decreases with age. Europe and other developed areas show significant size and age effects;  $IBDT/S$  increases with size and with age. Developing areas show significant size and age effects.  $IBDT/S$  increases with size for small values of  $S$  but decreases with size for large values of  $S$ —the same kind of result as for  $A$ . Also,  $IBDT/S$  increases with age. In sum-

mary, these results extend those of the rate-of-return regression: They indicate strongly that there are separate increases with size and age per se apart from the effect of inflation on accounting statements.

The regressions for the second ratio,  $S/CA$ , indicate that there are probably some separate effects of size and age per se, but they are less clear-cut than for  $NIBT/A$  or  $IBDT/S$ .

## Characteristics of Affiliates With Losses

An analysis of affiliates with losses, undertaken to throw light on the weeding out of affiliates, suggests some interpretations of the behavior of these affiliates.

It is found that there is a sharp decline with age in the proportion of each age category accounted for by affiliates with losses (table 9). Of affiliates less than 4 years old, 46 percent show losses. They account for 37 percent of assets and 24 percent of sales. Of affiliates at least 10 years old, 11 percent show losses. They account for 6 percent of assets and 4 percent of sales.

A substantial part of the observed relationship of the rate of return with

Table 8.—Income Before Depreciation and Tax as a Function of Age, Sales, and Sales Squared

NOTE.—Figures in parentheses are t-ratios. The coefficients apply to sales in millions of dollars and age in years. Transportation equipment affiliates have been excluded.

age is traceable to these variations with age in the proportion of each category accounted for by affiliates with losses. If affiliates with losses are excluded, the rate of return increases from 9.8 percent for affiliates less than 4 years old to 12.6 percent for affiliates at least 10 years old. The relatively small increase with age in the rate of return of this group of affiliates might suggest that the increase in the overall rate of return reflects mainly the weeding out of unprofitable affiliates. However, the increase also reflects the conversion of

unprofitable affiliates to profitable ones, as well as the increasing profitability of affiliates.

One fact that is surprising is that some affiliates seem to sustain losses for long periods without being liquidated. This is suggested by the fact that cumulative retained earnings are negative for affiliates with losses in the older age categories. There are several reasons why U.S. parents might not liquidate affiliates with persistent losses: The affiliate may cover its variable cost; the cost of shutting down operations may be excessive because of laws and regulations of the host country; and intercompany transfer pricing, designed to shift profits in order to minimize taxes or for other reasons, may be practiced.

#### Technical Note

The data by age are for 4,507 foreign manufacturing affiliates of U.S. manufacturing parents from the 1966 benchmark survey of U.S. direct investment

**Table 10.—Reconciliation of Assets of Affiliates Used in Article with Assets of All Majority-owned Foreign Affiliates in Manufacturing, 1966**

Majority-owned manufacturing affiliates of: All U.S. parent companies	[Millions of dollars]
Nonmanufacturing parents	1,542
Manufacturing parents	40,074
Indirectly owned	6,143
Directly owned	33,931
Incompletely reported	405
Completely reported	33,526
Unincorporated	680
Incorporated (used in this article)	32,846

abroad.<sup>3</sup> Table 10 shows a reconciliation of the assets of these affiliates with the assets of all majority-owned foreign manufacturing affiliates in 1966.

Nonmanufacturing affiliates and affiliates of nonmanufacturing parents were excluded from the investigation in order to limit the scope of differences in industry composition as an explanatory factor in the relationship between age and rate of return.

Only affiliates that were both majority-owned and directly owned by their U.S. parents were included. A

<sup>3</sup> Data for all manufacturing affiliates covered by the benchmark survey were published in *U.S. Direct Investment Abroad, 1966, Final Data*, Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402; price \$5.15; catalog number C 56.109/4: IN 8/966.

majority-owned affiliate is one in which the U.S. parent owns at least 50 percent of the voting rights. A directly owned affiliate is one in which the U.S. parent itself, rather than another foreign affiliate of the U.S. parent, owns the voting rights. Indirectly owned and minority-owned affiliates were excluded, mainly because some types of data were not collected for such affiliates. In addition, parent company control of the operations of minority-owned affiliates is likely to be more limited than for majority-owned affiliates, so that age of affiliation is less likely to be an important factor in explaining the affiliate's rate of return.

Affiliates for which incomplete reports were received in the 1966 benchmark survey and affiliates which are unincorporated were also excluded. The latter were excluded because they accounted for only a small part of the data, and because the structure of their income statements and balance sheets differs markedly from that of incorporated affiliates.

# Revised National Income and Product Estimates, 1929-46

**T**HE constant-dollar estimates of purchases of government structures for 1929-46 have been revised. The revisions affect the constant-dollar estimates of government purchases, GNP and related measures, and associated implicit price deflators. The revised estimates, shown in the tables below, supersede those in *The National Income and Product Accounts of the United States, 1929-74: Statistical Tables*.

The estimates of constant-dollar government structures in table 5.5, which shows purchases of structures by type, were incorrect. They had been forced to agree with government structures as defined in table 1.6, which shows GNP by type of product and purchaser. The

error arose because government structures as defined in table 5.5 includes work relief construction, whereas it does not in table 1.6.

In developing this correction, BEA reviewed the 1976 benchmark procedure for obtaining the pre-1947 constant-dollar estimates of the government structures component of GNP. In the 1976 procedure, the 1947 estimates were extrapolated backward by using corresponding estimates made in the 1965 benchmark revision. The review showed that the procedure had not been applied in sufficient detail to take into account that (1) the prices of several types of structures change very differently from 1958 to 1972, the valuation years for

the respective 1965 and 1976 benchmark revisions, and (2) the quantities of several types of structures changed very differently during the war years. Therefore, for the revised estimates, a more detailed extrapolation was used.

The revisions are larger in table 5.5 than in the other tables, because they include the correction for work relief construction. In the other tables that have been revised, the revisions are large only for 1941-44. For those years, the new GNP estimates are larger than the previously published ones by the following amounts (1972 dollars): 1941: \$1.8 billion; 1942: \$5.7 billion; 1943: \$3.3 billion; and 1944: \$2.0 billion.

## ERRATA

Corrections are shown here for 1929-72 estimates published in *The National Income and Product Accounts of the United States, 1929-74: Statistical Tables* and for 1973 estimates published in the July 1976 SURVEY OF CURRENT BUSINESS. Additional corrections for 1973 estimates were published in the September 1976 SURVEY OF CURRENT BUSINESS.

# CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1975 edition of **BUSINESS STATISTICS**, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (available from the Superintendent of Documents for \$6.80) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1971 through 1974 (1964-74 for major quarterly series), annually, 1947-74; for selected series, monthly or quarterly, 1947-74 (where available). Series added or significantly revised after the 1975 **BUSINESS STATISTICS** went to press are indicated by an asterisk (\*) and a dagger (†), respectively. Unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1975 edition of **BUSINESS STATISTICS**; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 187-88. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of <b>BUSINESS STATISTICS</b>	1975	1976	1977	1975			1976				1977			1978

<sup>a</sup>Revised. <sup>b</sup>Preliminary. <sup>c</sup>Includes TV and sound equipment and repairs formerly in "health and recreation." <sup>d</sup>Residential. <sup>e</sup>Includes additional items not previously priced. <sup>f</sup>Includes bottled gas. <sup>g</sup>Computed by BEA. <sup>h</sup>Data revised back to 1965 to reflect new base weights; comparable data for earlier periods will be revised later. <sup>i</sup>Includes data for items not shown separately. <sup>j</sup>Ratio of prices received to prices paid (parity index). <sup>k</sup>Data through December 1977 are for urban wage earners and clerical

**workers; beginning January 1978,** there are two indexes, all urban wage earners and clerical workers, revised (CPI-W), and all urban consumers (CPI-U). These indexes reflect improved pricing methods, updated expenditure patterns, etc.; complete details are available from Bureau of Labor Statistics, Washington, D.C., 20212. △Beginning Jan. 1978, CPI-U. △Beginning Jan. 1978, CPI-W. △Beginning Jan. 1978, CPI-W, less food and commodities.

⑤ For actual producer prices of individual goods to users, incl. raw foods and fuels.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS

<sup>a</sup> Revised. <sup>b</sup> Preliminary. <sup>c</sup> Beginning Jan. 1973, does not include noncorporate bonds and notes formerly included. <sup>d</sup> Effective February 1976 SURVEY, data revised to reflect: Annual review of seasonal factors; regular benchmark adjustment; effect of changes in check collection procedures (Regulation J); and adjustments to include new figures from internationally oriented banking institutions. Monthly revisions back to 1970 are in the Feb. 1976 Federal Reserve Bulletin.

<sup>e</sup> At all commercial banks.

<sup>f</sup> Total SMSA's include some cities and counties not designated as SMSA's.

<sup>g</sup> Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakland, and Los Angeles-Long Beach. <sup>h</sup> Data revised back to 1973; no monthly revisions for 1973-75 are available.

<sup>i</sup> Includes data not shown separately.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1976	1977	1977								1978

<sup>a</sup> Revised. <sup>1</sup> Annual data; monthly revisions are not available. <sup>2</sup> Less than 50 tons.

\* See " \* " note.      \* For month shown.

<sup>♂</sup> Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.  
<sup>§</sup> All data (except annual production figures) reflect GSA remelted zinc and zinc purchased.

All data (except annual production figures) reflect GSA remelted zinc and zinc purchased or direct shipment. ○ Revised Dec. 31 stocks for 1970-73 (thous. tons): 124.2; 48.6; 30.1.

5.9. Producers' stocks elsewhere, end of July 1978, 34,357 tons.

\* New series effective with data for Jan. 1976. Source: Metals Week. MW Composite monthly price (Straits quality, delivered) is based on average of daily prices at two markets (Penang, Malaysia—settlement, and LME 3-month—High grade), and includes fixed charges plus dealer's and consumer's 70-day financing costs; no comparable earlier prices are available.  
 † Effective with the Apr. 1977 SURVEY, data are expressed in metric tons (to convert U.S. t.

long tons to metric tons, multiply by factor, 1.01605).

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS

# INDEX TO CURRENT BUSINESS STATISTICS, Pages S1-S40

## SECTIONS

### General:

Business indicators.....	1-7
Commodity prices.....	8, 9
Construction and real estate.....	10, 11
Domestic trade.....	11-13
Labor force, employment, and earnings.....	13-17
Finance.....	17-22
Foreign trade of the United States.....	22-24
Transportation and communication.....	24, 25

### Industry:

Chemicals and allied products.....	25, 26
Electric power and gas.....	26
Food and kindred products; tobacco.....	27-30
Leather and products.....	30
Lumber and products.....	31
Metallics and manufactures.....	31-34
Petroleum, coal, and products.....	34-36
Pulp, paper, and paper products.....	36, 37
Rubber and rubber products.....	37
Stone, clay, and glass products.....	38
Textile products.....	38-40
Transportation equipment.....	40

### INDIVIDUAL SERIES

Advertising.....	11, 16
Aerospace vehicles.....	40
Agricultural loans.....	17
Air carrier operations.....	24
Air conditioners (room).....	34
Aircraft and parts.....	7, 40
Alcohol, denatured and ethyl.....	26
Alcoholic beverages.....	11, 27
Aluminum.....	33
Apparel.....	1, 4, 8, 9, 11-16, 40
Asphalt.....	35, 36
Automobiles, etc.....	1, 4-6, 8, 9, 11, 12, 20, 23, 24, 40
Banking.....	17, 18
Barley.....	27
Battery shipments.....	34
Beef and veal.....	28
Beverages.....	9, 11, 22, 23, 27
Blast furnaces, steel mills.....	5-7
Bonds, issued, prices, sales, yields.....	20, 21
Brass and bronze.....	33
Brick.....	38
Building and construction materials.....	4, 6, 7, 11, 31, 38
Building costs.....	10, 11
Building permits.....	10
Business incorporations (new), failures.....	7
Business sales and inventories.....	5
Butter.....	27
Cattle and calves.....	28
Cement and concrete products.....	9, 11, 38
Cereal and bakery products.....	9
Chain-store sales, firms with 11 or more stores.....	13
Cheese.....	27
Chemicals.....	4, 6, 9, 14-16, 20, 23, 25, 26
Cigarettes and cigars.....	30
Clay products.....	9, 38
Coal.....	4, 9, 23, 34, 35
Cocoa.....	23, 29
Coffee.....	23, 29
Coke.....	35
Combustion, atmosphere, heating equipment.....	34
Communication.....	2, 20, 25
Confectionery, sales.....	29
Construction:	
Contracts.....	10
Costs.....	10, 11
Employment, unemployment, hours, earnings.....	13-16
Fixed investment, structures.....	1
Highways and roads.....	10, 11
Housing starts.....	10
Materials output indexes.....	11
New construction put in place.....	10
