# GDP and Other Major NIPA Series, 1929–2007:II

The historical series from the national income and product accounts (NIPAs) have been updated to present revised estimates from the 2007 annual revision and the "advance" estimates for the second quarter of 2007.

Table 1 presents current-dollar estimates of gross domestic product (GDP) and its components. Table 2A presents estimates of real GDP and its components in chained dollars, and table 2B presents estimates of real GDP and its components in chain-type quantity indexes. Table 3 presents price indexes. Table 4 presents national income and personal income.

The estimates are available on BEA's Web site at <www.bea.gov>.

NOTE. Chain-type estimates provide the best available method for comparing the level of a given series at two points in time. Chained-dollar estimates are obtained by multiplying the chain-type quantity index for an aggregate by its value in current dollars in the reference year (currently 2000) and dividing by 100. For an analysis of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and the chain-type quantity indexes are the same. Thus, chained-dollar estimates can be used to compute "real" (that is, inflation-adjusted) rates of growth. However, comparisons of two or more different chained-dollar series must be made with caution, because the prices used as weights in the chained-dollar calculations usually differ from the prices in the reference period, and the resulting chained-dollar values for detailed GDP components usually do not sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided in most chained-dollar tables by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed components in the table.

It is usually best to make comparisons of aggregate series in current dollars or to use BEA's estimates of contributions to percent change. Measures of the contributions of components to the percentage change in real GDP and to the percentage change in other major aggregates are provided in NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, 5.3.2, 5.4.2A, 5.4.2B, and 5.5.2. In general, the use of chained-dollar estimates to calculate component shares or component contributions may be misleading for periods away from the reference year; component shares of GDP are provided in table 1.1.10. In the November 2003 SURVEY, the article "Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" discussed the advantages of using chain-weighted indexes and the challenges of using chained dollars. To assist users in undertaking historical analysis, BEA provides supplemental tables that present estimates for selected timespans in chained 1937, 1952, 1972, and 1982 dollars (see tables 1.1.6A, 1.1.6B, 1.1.6C, and 1.1.6D).
