SUMMARY FOR MARCH.

The chief outstanding features of the March industrial figures are the marked increases in iron and steel activity, the big increase in construction, and the improvement in the automobile and accessory business. The first two of these are fundamental industries in which a sustained increase is bound to be of more than ordinary importance. Production in almost all lines is on a distinctly higher level than it was a few months ago. The security markets are reflecting confidence in the future.

Business men, including those in the agricultural districts, are more optimistic than at any time in the preceding 18 months.

In estimating the present situation, the unsettled world conditions must be taken into account. Reconstruction in Europe is far behind what it is in this country. Domestic conditions give every reason to expect a steady improvement in business, but with the present foreign situation there is little likelihood of any immediate boom movement.

BUSINESS INDICATORS.

The diagrams on the following page have been prepared to facilitate comparisons between a few of the more important business movements. The lines are plotted on what are known as ratio charts (logarithmic scale). These charts show the percentage increase and allow direct comparisons between the slope of one curve and that of any other curve regardless of what part of the diagram it is located in. That is, a 10 per cent increase in an item is given the same vertical movement whether its curve is near the bottom or near the top of the chart.

The difference between this and the ordinary form of a chart can be made clear by an example. If a certain item has an index number of 400 in one month

and it increases 10 per cent, its index number will be 440, and on an ordinary chart, the next month would be plotted 40 scale points higher than the preceding month. Another movement with an index number of, say, 50 also increases 10 per cent, making its index number 55. On the ordinary (arithmetic) scale this item would rise only 5 points, whereas the previous item rose 40 points, yet each showed the same percentage increase. The ratio charts avoid this difficulty and give to each of the two movements exactly the same vertical rise and hence the slopes of the two lines are directly comparable. The ratio charts compare percentage changes, while the arithmetic charts compare absolute changes.

BUSINESS INDICATORS.

BUSINESS INDICATORS.

The following table gives comparative index numbers for a selected list of important business movements. It is believed that this table will prove useful, because it separates out from the large mass of material a comparatively small number of items which are often regarded as indicative of business in general.

The table has been divided into two parts, the first containing those items for which index numbers can be calculated using 1913 as a base. The second part contains items for which comparable data back to 1913 are not available. This latter group of index numbers is calculated by letting the 1919 monthly average equal 100. Care should therefore be exercised in comparing the absolute value of the two sets of data. In either group, however, the upward or downward trend of the index numbers, compared to previous months, does reflect the present tendency in each item and will give a basis for business judgment.

¹ Monthly prices are for the first of the month following.

² Based on the total computed production reported by 5 associations. Includes southern pine, Douglas fir, western pine, North Carolina pine, and Michigan hardwoods. The total production of these associations in 1919 was equal to 11,190,000,000 board feet, compared with a total lumber production for the country of 34,552,000,000 board feet reported by the census.

COMPARISON OF PRESENT WHOLESALE PRICES WITH 1920 AND PRE-WAR.

(Relative prices 1913=100.)

WHOLESALE PRICE COMPARISONS.—MAXIMUM PRICE COMPARED TO PRICE IN RECENT MONTHS.

NOTE.—Prices to the producer on farm products are from *U. S. Department of Agriculture, Bureau of Markets and Crop Estimates*. All other prices are from *U. S. Department of Labor, Bureau of Labor Statistics*. As far as possible all quotations represent prices to the producer or at the mill. See diagram on opposite page.

COMPARISON OF WHOLESALE AND RETAIL FOOD PRICE INDEX NUMBERS.

WITH INDEX OF ALL COMMODITIES AT WHOLESALE.

(U. S. Department of Labor Index.)

BUSINESS CONDITIONS IN MARCH.

The following pages present a review by industries of the more important statistics shown in the detailed tables, with summaries of production, stocks, sales, and prices:

PRODUCTION.

Out of 50 commodities for which figures relative to 1919 are available for the month of March, production increased over February in 43 cases, decreased in 5 cases, while 2 commodities remained the same. This huge increase is partially real and partially due to the increase of about 10 per cent in working time over February. The substantial character of the March production is shown in comparison with a year ago, with 35 increases and only 13 decreases. The principal relative production increases in March over February occurred in the fuels, metals and building equipment groups.

Compared with the 1919 average, 26 commodities were produced in greater volume in March, 21 in less volume, and 3 at the same rate. In other words, March production stood at about the level of the year 1919, with fuels and building equipment showing the highest relative increases.

COMPARISON OF PRESENT PRODUCTION WITH PRE-WAR.

COMPARISON OF PRESENT PRODUCTION WITH PRE-WAR.

(Relative production 1913=100.)

COURSE OF PRODUCTION SINCE 1919.

[Hatched] MAXIMUM SINCE END OF 1919
 [Solid] LATEST MONTH FEB. OR MARCH 1922
 [Dotted] MINIMUM SINCE END OF 1919
 1 PRODUCTION OF LATEST MONTH SAME AS MAXIMUM SINCE 1919
 2 PRODUCTION OF LATEST MONTH SAME AS MINIMUM SINCE 1919
 3 MAXIMUM AND MINIMUM SINCE JULY 1, 1921
 4 PRODUCTION OF LATEST MONTH SAME AS MAXIMUM SINCE 1921

Only 14 out of 50 commodities were below the 1921 average in March, while 28 were below the 1920 average. The decrease from 1920 occurred chiefly in metals, clay products, and transportation vehicles. In comparison with the 1913 average, 21 commodities have increased and 10 have decreased, 5 of the decreases occurring among the metals.

¹ Since July 1, 1921.
² As represented by tax-paid withdrawals.
³ Relative to last 6 months of 1919.

March production established new high records since the end of 1919 in sugar, anthracite coal, crude petroleum, yellow pine and North Carolina pine lumber, oak flooring and enamel baths and lavatories. On the other hand, March made a new low record in ship construction at only 2 per cent of the 1919 average.

STOCKS.

Movement of commodity stocks during March showed little change from February. There were 14 decreases, 15 increases, and 2 without change. The food commodities had a smaller decrease than in February—7 decreases, 4 increases, and 2 unchanged, as against 9 decreases and 3 increases during February. Among the other commodities there were 12 increases and only 5 decreases—about the same as in February. Business concerns are apparently replenishing their stocks, confident that prices will not go much lower and that demand will increase beyond the hand-to-mouth basis prevailing for some time past. Corn and petroleum stocks again climbed to new high levels, while tin stocks more than doubled during the month.

Compared with a year ago, stocks in March still showed the same proportion as in February—10 increases as against 20 decreases, not including tobacco, which is reported only quarterly. The food group showed 4 increases and 9 decreases and other commodities 6 increases and 11 decreases. Outside of the food commodities, only 4 articles were below the 1919 average stocks, while coffee and flaxseed alone were below the 1913 average.

¹ Relative to stocks at end of 1919.

* Index number less than 1.

PRICES.

Prices to the farmer for crops and for live stock continued to rise, especially the latter. Wholesale prices rose slightly, due to the rise in the wholesale prices of crops and animal products. Clothing and metals declined slightly. The Federal Reserve Board index for foreign comparison rose on account of the rise in the price of exported goods, but Dun's and Bradstreet's indices declined.

Retail prices continued to decline in March, all groups showing the same trend, with a total decrease of 2 per cent in the cost of living. The retail prices of food and shelter declined the most.

Wholesale prices in England, France, and India rose slightly in March, ending the declines that had been practically continuous since the slight rise last September. In Canada and Japan prices continued to decline.

Taking the individual wholesale prices as reported in the table and diagram on pages 4 and 5, the marked rise in live stock to producers is evident, while among the crops there were two increases, one decrease, and two unchanged. The market price of farm products showed increases in all commodities except wheat and oats, which declined, and tobacco which remained unchanged. In the food group increases were also general. The clothing group, on the other hand, reflected declines in all branches, except cotton yarns and print cloth, which advanced, and woolen goods, which were unchanged; the chief declines were in hides and leather. An increase in coke was the only change in the fuel group, while metals were irregular in a narrow range. Declines in lumber featured the building group.

SALES.

The following table on sales of various commodities has been prepared to give a closer aspect of business needs—actual sales as against production, which may represent orders booked some months before. The sales statistics for commodities also give an indication of future production. The separate commodities covered in this table are few and in most cases relatively unimportant, as the sales can only be reported where trade associations supply the data; but the figures may be found to be of some interest. In addition to the orders of separate commodities booked by manufacturers (included in the first group in the table), the distributive movement of goods as a whole is shown through various channels to the consumer. There has also been shown the actual sales of services, such as transportation, communication, and advertising, in which sale and use run practically together, and also the sale of investment and speculative securities.

Some of the items, marked by an asterisk (*), are relatives based on values instead of quantities, and therefore generally dependent on fluctuations in the purchasing power of the dollar, i. e., the level of prices, as well as the fluctuations of sales of physical goods. Therefore, a decline during the past year does not necessarily represent a decline in the physical amount of sales. A rough corrected figure, eliminating the price variation, might be obtained by dividing each item in such series by the wholesale or retail price index number, whichever most nearly corresponds

with the class of business done. In a few items expressed in value no correction is necessary for comparison, because there has been little or no change in the price for the goods or services—for instance, postal, telegraph, and telephone receipts. Bond sales on the New York Stock Exchange are really not based on value, because sales of bonds are not reported in their value at the time of sale, but on their par value; therefore, bond sales represent physical quantities. On the other hand, new issues of municipal bonds, unless for refunding purposes, reflect the price level, as the work for which they are issued requires a larger bond issue when prices are high.

February sales increased in March for all the individual commodities reported except sanitary pottery, which remained the same as in February, and clay fire brick, which declined. Distribution movement increased considerably and the services so far reported for March also show the same trend. Securities sales also increased.

Compared with a year ago, all March sales for individual commodities increased at an enormous ratio, in most cases doubling the March, 1921, figures. Distribution sales at retail, however, showed a decline, due largely to the decrease in prices between the two dates; wholesale orders increased. March postal receipts and advertising services increased over a year ago. Sales of securities were also very much larger.

* Items based on value.

¹ Relative proportion of orders to total transactions.

² Relative to 1914.

TEXTILES.

Receipts of wool at Boston increased considerably in March, owing to the seasonal increase in receipts of foreign wool; domestic receipts declined. Total imports of wool also showed the increased foreign wool movement. Consumption of wool was 12 per cent greater than in February and the largest since January, 1920. Worsted machinery showed a decrease of about 15 per cent in activity from the previous month, but woollen machinery and carpet looms were about 5 per cent more active than in February. Prices of wool increased, yarns declined, and dress goods and suitings remained unchanged.

CONSUMPTION BY MILLS AND IMPORTS OF WOOL.

Cotton consumption in March was about the same as in January, and also about equal to the daily average for February. Stocks of cotton continued to decline in a seasonal movement. Imports increased slightly and exports finally recovered from their slump with a gain of 36 per cent over February, while exports of cotton cloth gained almost 50 per cent. Although a less number of spindles were active than in February, the total activity of spindles increased 9

EXPORTS AND CONSUMPTION OF COTTON.

per cent. Slight advances in price took place all along the line in cottons, except sheetings, which declined.

Knit underwear production continued to increase and shipments also gained. New orders declined and a reduction took place in the outstanding unfilled orders at the end of March.

Silk imports continued to decline, but consumption increased, resulting in another fall in stocks. The price of raw silk declined 8 per cent.

Imports of burlap and of unmanufactured fibers showed large increases over February.

METALS.

The iron and steel trade made a big forward movement in March, with increases of 25 and 36 per cent, respectively, in the production of pig iron and steel ingots. Sales of merchant pig iron doubled, and production, shipments, and unfilled orders of merchant iron made considerable gains. Stocks in merchant furnaces declined but steel plants increased their holdings of pig iron. Exports of iron and steel products were 55 per cent larger than in February, and imports also increased. Unfilled orders of the United States Steel Corporation made a positive increase after declining regularly since July, 1920. Foundry-iron production in Ohio continued to increase. Price changes in iron and steel were almost negligible except a drop of 10 cents per 100 pounds in structural steel beams.

PRODUCTION OF PIG IRON AND STEEL INGOTS, AND U. S. STEEL CORPORATION'S UNFILLED ORDERS.

Production and shipments of sheets increased 22 per cent each, while sales were 135 per cent larger than in February, and unfilled orders almost doubled. Unsold stocks declined. The steel barrel report for March showed good increases in production, shipments, and unfilled orders. Structural steel sales rose 77 per cent in March. Shipments of locomotives from factories declined slightly.

Copper production rose 65 per cent in March to the highest point since April, 1921, and exports increased 53 per cent, reaching a mark not surpassed since May, 1920. A slight decline took place in the price of electrolytic copper.

Zinc production rose 18 per cent, attaining the highest point since December, 1920, while stocks, continuing their decline, reached the lowest point since October, 1920. Receipts at St. Louis increased, but shipments from St. Louis continued to decline. A slight increase occurred in the price of zinc.

Imports of tin increased 70 per cent and resulted in an increase of 120 per cent in stocks during March. The price of tin declined slightly.

Lead receipts at St. Louis showed a marked increase in March, while shipments made a slight gain. No change occurred in the price of lead.

The following figures on the shipments of agricultural pumps are furnished by the National Association of Farm Equipment Manufacturers from data compiled by the Federal Reserve Bank of Chicago. The figures are based on reports from 15 firms, except for the item of "Total value," on which only 14 firms reported.

¹ Single cylinder double acting pumps, up to and including 6-inch stroke.
² Including complete units and pumps shipped separately.

FUEL AND POWER.

In anticipation of the coal strike, the production of coal and coke rose to the highest marks reached in over a year, anthracite showing a larger production than in any previous month since 1919. Electric-power production was about the same as in January and December but larger than in February. The amount of anthracite coal held by producers continued to decline, but was almost 150 per cent larger than a year ago. Exports of both anthracite and bituminous coal increased, while coke exports declined. Coal prices were virtually unchanged, both wholesale and retail, while coke was slightly higher.

Production and consumption of petroleum increased in March to new high records, imports were the highest on record with one exception, and stocks rose to the highest point since the war. Exports of gasoline rose to the highest point since January, 1921. The report of refined petroleum products for February showed a decline in production in each case but an increase in stocks of each product. Gasoline consumption declined in February.

PRODUCTION OF ANTHRACITE COAL.

PRODUCTION, CONSUMPTION, IMPORTS, AND STOCKS OF PETROLEUM.

AUTOMOBILES.

Production of passenger automobiles increased 40 per cent in March over the preceding month, while the output of trucks was 50 per cent greater. Truck production amounted to 19,422 machines. This is the largest output recorded in any of the nine months for which figures are available. The passenger car output amounted to 152,920 cars in March, which is by far the largest for any month since last August. Reports of shipments showed increases over February corresponding to the increase in production.

RUBBER.

Imports of rubber declined slightly in March, but consumption by tire manufacturers was the largest reported since the inauguration of these statistics in November, 1920, except for August, 1921. The price of rubber declined slightly.

Production of both pneumatic and solid tires for March was second only to August, 1921, while inner-tube production was exceeded by only three previous months. Shipments of all kinds of tires were large, but not as numerous as during the summer months of 1921. Stocks of inner tubes increased to the highest mark recorded, while pneumatic stocks were the largest since February, 1921. Stocks of solid tires decreased slightly.

The following table has been prepared from data compiled by the Rubber Association of America, showing rubber consumption for the year 1921 by half-year periods. Over half of the rubber consumed during the year went into pneumatic casings, with a total of 197,244,011 pounds, while automobile tubes accounted for 55,930,802 pounds and solid automobile tires used up 19,706,505 pounds. The chief consumption in other lines was in rubber boots and shoes, with 24,747,242 pounds, and in mechanical rubber goods, with 21,778,150 pounds.

CRUDE RUBBER SITUATION FOR 1921.

	First half-year.	Second half-year.	Total, 1921.
Stocks on hand beginning period.....	<i>Pounds.</i> *134,021,774	<i>Pounds.</i> 164,008,320	<i>Pounds.</i> *134,021,774
Imports.....	161,956,907	255,316,397	417,273,304
Total supply.....	*295,977,681	419,324,717	551,295,078
Stocks, end of period.....	164,008,320	212,284,800	212,284,800
Reported consumption:			
By manufacturers of tires and tire products.....	103,889,941	176,364,704	280,254,645
By manufacturers of other rubber products.....	28,079,420	37,255,994	65,335,414
Total.....	131,969,361	213,620,698	345,590,059

*Calculated by adding figures on reported consumption for first half-year to stocks on July 1 and deducting imports to get stocks on January 1. This same method applied to the second half-year made a discrepancy of only 6,600,000 pounds; the consumption calculated from import and stock figures amounting to 207,039,917 pounds, as against a reported consumption of 213,620,698 pounds.

HIDES AND LEATHER.

Imports of total hides and skins in March amounted to 30,344,000 pounds, compared with 35,390,000 pounds in February. However, imports were 50 per cent greater than at this time last year. Stocks of hides at the end of March amounted to 350,350,000 pounds and were the lowest for any months in the last year and a half for which reports are available. Decrease occurred in cattle hides and sheepskins. The price of heavy packer hides showed a sharp decline, compared with recent months. Calfskins showed only a slight drop in price.

STOCKS OF CATTLE HIDES (PACKER) AND PRODUCTION AND STOCKS OF LEATHER (SOLE AND BELTING).

Leather production for March, from trade sources, showed a marked increase in the output of oak and union harness leather. The total of 78,100 stuffed sides was the largest reported since the fall of 1920. There was a slight decline in the production of sole leather, but an increase in skivers.

Figures compiled by the Bureau of the Census show that stocks of leather at the end of March were the largest for any recent month, although sole and belting declined slightly. The production in March increased, reaching in the case of upper leather the highest point recorded in these monthly figures.

Exports of finished leather showed a marked increase in March. The total for upper leather amounted to 8,078,000 square feet and was the largest since May, 1920. Prices of sole leather remained unchanged in March, but chrome calf declined nearly 9 per cent.

The March production of boots and shoes totaled 29,686,011 pairs, compared to 24,900,185 pairs in February. The following table gives the total boot and shoe production by months since last November, when the Bureau of the Census undertook to compile them. The 1919 monthly average is also given for comparison.

BOOT AND SHOE PRODUCTION.

1919—Monthly average.....		1922.	
Pairs.		Pairs.	
1919 Monthly average	27,549,497	January	25,173,437
November	23,592,610	February	24,900,185
December	24,241,773	March	29,686,011

BUILDING OPERATIONS.

Building contracts awarded in the 27 northeastern states in March totaled \$293,673,000, compared to \$177,473,000 in February and \$164,092,000 in March of last year. The total floor space in all buildings awarded in March, exclusive of public works and public utilities, amounted to 51,957,000 square feet. This latter record has been exceeded only once within the last two years.

VOLUME OF BUILDING CONTRACTS AWARDED, BY CLASSES.

The chief increases occurred in residential building, with a total floor space of 30,348,000 square feet, or 84 per cent greater than March. Industrial buildings increased 72 per cent in floor space and 126 per cent in value, compared to February. Contracts awarded for public buildings, educational buildings, business buildings, social and recreational buildings, all increased in both floor space and in value, compared with the preceding month and the same month last year.

The accompanying diagram on the volume of contracts awarded shows the large increase in residential building and the decline in business and industrial building, compared to the early part of 1920.

BUILDING MATERIALS.

In general, the March production and shipments of all building materials were larger in volume than for recent months and much larger than a year ago. Southern pine production increased nearly 15 per cent over February. Western pine production increased 41 per cent. North Carolina pine output rose about 3 per cent and oak flooring increased 18 per cent. Douglas fir and Michigan hardwoods remained practically stationary. Prices of both Southern pine and Douglas fir declined at the important producing centers. Stocks, where reported, remained about stationary.

Production of clay fire brick increased 23 per cent in March and slightly exceeded the output of March last year. Shipments increased in about the same proportion, while stocks were nearly stationary. New orders received were slightly less than in February, but the total unfilled orders were larger.

Silica brick showed about the same conditions as clay fire brick, except that shipments made a smaller relative increase.

The March production of face brick increased 84 per cent over February and compares very favorably with the output in any month of last year. Shipments and unfilled orders both showed large increases, while stocks were slightly greater, compared either with February or with March of last year.

Cement production amounted to 6,685,000 barrels, or 56 per cent greater than in February. Shipments amounted to 7,002,000 barrels, and were more than double the corresponding movement in any of the three preceding months. Stocks showed a slight decrease in March but are still larger than for any month of 1921.

Shipments, stocks, and new orders for enamel sanitary ware all increased in March, compared with February. Actual shipments of baths and lavatories were from 60 to 140 per cent greater than a year ago. With the exception of sinks, stocks were considerably smaller than a year ago.

FATS AND OILS.

Exports of vegetable oils increased slightly in March, but were far below a year ago. Imports, however, were very heavy, the largest since April, 1920. Consumption of oleomargarine was larger than in February, but less than any other month since last July.

Stocks of cotton seed continued to decline sharply and were about one-third as large as a year ago. Production and stocks of cottonseed oil declined seasonally and were very much less than a year ago. The price of cottonseed oil advanced 14 per cent over February.

Flaxseed receipts increased. Stocks declined heavily and shipments of linseed oil rose slightly. Shipments of linseed oil cake declined 40 per cent from February.

CEREALS.

Receipts of wheat declined in March but shipments increased. The visible supply again made a seasonal decline, but was three times as large as a year ago. Exports were 30 per cent larger than in February but slightly smaller than in December and January and considerably less than a year ago. Production of wheat flour continued to rise slightly. The price of wheat declined slightly and flour was irregular.

Corn movement was very much less than the large movement in February but the visible supply continued to increase to a new high record. Exports also reached a new top mark. The price of corn advanced fractionally.

Large increases occurred in the export movement of oats and barley, while rye declined. Prices of oats were less than in February but increases were made in barley and rye.

Car loadings of all grain and grain products declined 20 per cent from February, but were larger than a year ago. Exports of grains increased 18 per cent and were larger than any month since last September.

MEATS.

Increases of good size were shown both over February, 1922, and March, 1921, in the March figures of receipts, shipments, and slaughter of cattle. Exports of beef products were over 40 per cent ahead of both the previous month and a year ago, while storage holdings continued to decline and were only half as large as in March, 1921. A decline in inspected slaughter occurred in February and consumption of beef was also less than January; both slaughter and consumption were greater than in February, 1921, however. Prices of cattle and beef advanced slightly.

Receipts and total shipments of hogs declined in March but stocker and feeder shipments were 19 per cent greater than in February. Slaughter declined slightly. Exports declined but storage holdings continued to increase. Inspected slaughter and consumption both declined in February; compared with a

year ago, slaughter was less but consumption considerably larger. Prices of hogs increased 4 per cent and pork rose 17 per cent in March.

INSPECTED SLAUGHTER, CONSUMPTION, AND COLD-STORAGE HOLDINGS OF BEEF PRODUCTS.

INSPECTED SLAUGHTER, CONSUMPTION, EXPORTS, AND COLD-STORAGE HOLDINGS OF PORK PRODUCTS.

OTHER FOODSTUFFS.

For lamb, receipts and total shipments increased slightly but stocker and feeder shipments made a decline of 15 per cent from February. Slaughter showed a slight increase and cold-storage holdings were about the same. Inspected slaughter for February was less than in January and also less than a year ago. Prices of ewes increased 16 per cent and lambs increased 3 per cent.

Exports of condensed milk increased 25 per cent over February, and receipts of all dairy products showed large increases, especially eggs. Cold-storage holdings of butter and cheese made a seasonal decline,

while eggs started their seasonal accumulation. Prices of butter and cheese declined slightly.

Imports of sugar continued to increase but the domestic cane-crop receipts almost came to an end. Meltings at refineries increased 29 per cent and still the stocks of raw sugar climbed 67 per cent over the end of February. Exports of refined sugar increased 80 per cent over February and made a new high record since the end of 1919. Prices of sugar rose slightly.

IMPORTS, MELTINGS, AND STOCKS OF RAW SUGAR.

Coffee imports declined 10 per cent in March. Stocks, both United States and world, also showed a decrease, as did receipts in Brazil. Clearances from Brazil increased, however. Tea imports increased after two months of marked declines.

TOBACCO.

All classes of manufactured tobacco gained in production of about 17 per cent over February, while exports of unmanufactured tobacco increased 29 per cent. Stocks increased 14 per cent over the previous quarter and were slightly smaller than a year ago. The price of tobacco continued to remain stable.

RELATIVE PRODUCTION OF CIGARS, CIGARETTES, AND MANUFACTURED TOBACCO.

(Average monthly production in 1913=100.)

WATER TRANSPORTATION.

Tonnage of vessels entering and clearing from United States ports in foreign trade increased 15 and 21 per cent, respectively, exceeding both January and February. The number of vessels under construction at last showed an increase, but the number of vessels completed declined to the lowest point since the war.

ENTRANCES AND CLEARANCES OF VESSELS IN U. S. FOREIGN TRADE, AND SHIPS UNDER CONSTRUCTION.

RAILROAD TRANSPORTATION.

Surplus of idle cars continued to be reduced in March, declining over 15 per cent during the month and standing at less than half the December figure. The chief decline was in coal cars on account of the demand for coal before the strike occurred. Shortage of cars reported decreased slightly. The number of bad order cars also showed a slight decrease after several months of increase. Car loadings continued to gain and were the largest since last October.

SHORTAGE, SURPLUS, BAD-ORDER, AND TOTAL LOADINGS OF FREIGHT CARS.

February reports showed a further increase in freight receipts, a decline in passenger receipts, and a slight gain in operating revenue. Operating expenses continued to decline to the lowest point since 1919, but net operating income was the lowest since May 1921, except for January.

LABOR.

Employment conditions were definitely better in March, with the largest total employed reported since February, 1921.

IMMIGRATION, EMIGRATION, AND IMMIGRATION QUOTA.

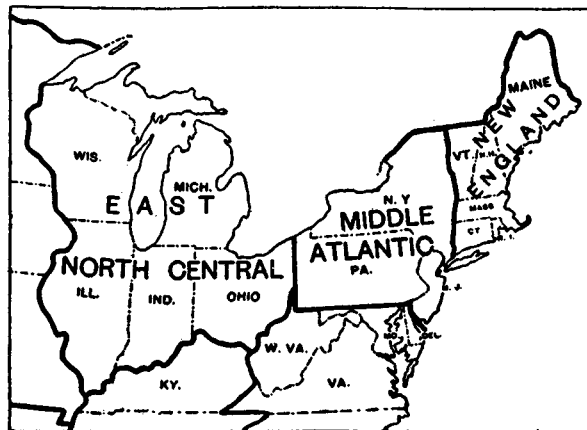

Wisconsin employment was the largest since February, 1921, while New York employment figures for March was not exceeded since December, 1920. Pay roll total increased more than the number employed as regards New York State, but declined in Wisconsin. Unemployment in Pennsylvania continued to diminish.

Immigration showed a further fall as the quotas for the fiscal year ending June 30 approach their limit. Emigration was also very much less than in February.

RELATIVE TREND OF EMPLOYMENT, BY DISTRICTS.

MAP SHOWING DISTRICTS IN EMPLOYMENT CHART.

DISTRIBUTION MOVEMENT.

Mail order sales increased 31 per cent over February and were the largest since the December holiday trade. Sales of chain stores increased 17½ per cent, most of the large stores showing about the same relative gain. The wholesale trade of the American Wholesale Corp. increased 23 per cent.

Magazine advertising, with an increase of 13 per cent, was the largest month since December, 1920. Newspaper advertising, with a 24 per cent gain during the month, was barely less than the Christmas advertising last fall.

SALES OF MAIL-ORDER HOUSES AND CHAIN STORES, AND POSTAL RECEIPTS.

PUBLIC FINANCE.

Further progress was made in March in the reduction of the interest bearing debt of the United States. A considerable reduction in Liberty and Victory Loan bonds occurred during the month, the largest in any month since June, 1920. Customs receipts continued to increase but total ordinary receipts for March, comprising chiefly the first quarter's income tax payments, were 40 per cent less than in March, 1921. Ordinary disbursements of the Government were considerably higher than in January or February but less than a year ago. A slight increase took place in the amount of money held outside the Treasury and the Federal reserve system.

BANKING AND FINANCE.

Debits to individual accounts and bank clearings increased from 22 to 23 per cent over February in New York City, while outside New York City the increase was slightly less. Discounts of the Federal reserve banks continued their steady decline, while notes decreased slightly and reserves increased a bit. The reserve ratio was fractionally higher than in February. Member banks of the Federal reserve showed slight declines in both loans and deposits. The call loan rate declined to 4.35 per cent and the commercial paper rate was slightly lower at 4.8 per cent. Savings deposits in the postal savings system declined slightly, as did those in the banks of the Chicago district, but the Philadelphia district showed an increase. New life insurance business in March showed an increase of 19 per cent in policies and 18 per cent in amount of insurance.

Business failures in March showed an increase in respect to the number of firms, but a decrease in liabilities. Dividend and interest payments were large

but slightly less than a year ago. Earnings of the United States Steel Corporation reflected a progressive increase. The issue of corporation bonds was the largest since January, and new incorporations increased 24 per cent over February. February revenue and income of both telephone and telegraph companies declined; telephone companies showed an increase from February, 1921, while the gross business of the telegraph companies was less, though net income increased. Credit reports showed increased orders and payments in March and decreased indebtedness.

FAILURES AND LIABILITIES, BY MONTHS.

Stock prices advanced about 3 per cent in March, while sales showed a tremendous increase. Bond prices advanced 1.6 per cent and sales increased in almost as large a proportion as stocks. The number of stockholders in large corporations continued to increase during the past quarter, the increase in foreign holders being quite regular in all companies. Brokers' holdings of United States Steel common stock increased with the advance in the price of the stock.

Gold receipts at the mint increased slightly in March. The Rand output for the first quarter was only one-third of the same period last year, on account of the strike. Imports of gold continued to increase, while exports were very small.

Production of silver increased in March but was still considerably less than a year ago. Imports exceeded exports in March, thus reversing the February condition. The price of silver declined slightly.

FOREIGN EXCHANGE.

Outside of slight declines in the Asiatic and Swiss exchanges and a continued slump in German marks, most foreign exchange rates rose during March. France, Italy, and Chile showed the greatest increases. In spite of this condition, the foreign exchange index of the Federal Reserve Board declined, on account of the relatively heavy weighting of the German exchange.

MONTHLY MINERAL PRODUCTION INDEX.

There are now available for the first time monthly figures which can give a current index of the mining production of the United States. All important minerals produced may be shown on a monthly basis, except natural gas, and these products—bituminous coal, anthracite coal, petroleum, iron ore, copper, lead, zinc, gold and silver—represented over 88 per cent of the total value of mineral products, according to the census of 1909, and 87 per cent in 1919.

In forming an index of mining productivity, official annual figures are obtainable on a prewar basis, while monthly figures for the past two years are used from whatever source compiled. The index is weighted arithmetically by adjusted average values for the years 1909–13, and these years are taken as 100 in calculating relative figures.

SOURCES OF MATERIAL.

The selection of the individual series was taken as near to the mine as was available, and production data on mining include the output of outlying territories as well as continental United States. Explanations of individual sources follow:

Petroleum.—These data are taken entirely from annual and monthly reports of the U. S. Geological Survey and represent crude petroleum marketed.

Coal, bituminous and anthracite.—These data are compiled by the U. S. Geological Survey and represent shipments from the mines.

Iron ore.—The yearly data are from the U. S. Geological Survey, representing production of iron ore. Monthly figures are shipments of iron ore through the Sault Ste. Marie Canal as reported by the War Department. These shipments average about 80 per cent of the total United States production and are extended to 100 per cent to agree with the actual production for the year. During the winter months there are no shipments on account of the closing of navigation, but production also ceases to a large extent at that time, and therefore the shipment figures are fairly close indicators of the production movement.

IMPORTS AND EXPORTS OF THE UNITED STATES.

Copper.—Annual figures through 1920 are from the U. S. Geological Survey, representing smelter production from domestic ore. Monthly figures for 1920 are compiled from data prepared by the Engineering and Mining Journal and prorated to agree with the annual figures. Monthly figures beginning with 1921 are from the American Bureau of Metal Statistics, which agree closely with preliminary official figures for the year 1921; the 1921 annual figure is taken from the American Bureau of Metal Statistics.

Lead.—Annual data are from the U. S. Geological Survey, representing the output of refined primary lead from domestic ores except antimonial lead. Monthly data beginning with January, 1921, are from the American Bureau of Metal Statistics and are prorated to the 1921 official figures and the same ratio used for 1922.

Zinc.—Annual data are from the U. S. Geological Survey, representing the output of primary zinc from domestic ores. Monthly figures are calculated by subtracting from the data of the American Zinc Institute on primary production, the zinc contents of imported ores and concentrates. The monthly figures do not exactly add to the yearly totals of the Geological Survey, but are not prorated, as that would throw out the comparison with the months of 1922. Geological Survey annual figures are taken in order to give true comparison with previous years.

Gold.—Annual production of gold is compiled by the Bureau of the Mint and the Geological Survey. Monthly figures are compiled by prorating receipts of unrefined gold by the Bureau of the Mint to cover total production. The Mint receipts represented about 40 per cent of the 1921 gold production.

Silver.—Annual production is compiled by the Bureau of the Mint and the Geological Survey. Monthly figures are from the American Bureau of Metal Statistics. They do not quite agree with the yearly total of the Geological Survey, but are not prorated. (See comments on zinc above.)

WEIGHTING FACTORS.

Choice of weights was made after obtaining the average values for the five-year period 1909–1913 as reported by the Geological Survey, making allowances for the lower values shown by the census of 1909 in respect to some metals—lead, zinc, and silver—on which the Bureau of the Census takes a mine value, whereas the Geological Survey gives a market value for the refined metal. No change was made from the Geological Survey values where these did not differ materially from the Census data in 1909. The values given, by sources, and the weights finally used are given below:

	Average monthly value, 1909–1913.	Value, 1909 (Geological Survey).	Value, 1909 (Census).	Final weighting.
	Millions of dollars.			
Bituminous coal.....	40	405	401	40
Anthracite coal.....	14	149	149	14
Petroleum.....	13	128	118	13
Iron ore.....	10	110	107	10
Copper.....	13	142	135	13
Lead.....	3	30	31	2
Zinc.....	3	25		2
Gold.....	8	100		8
Silver.....	3	28	110	2
Total.....	107	1,117	1,051	104
Total all minerals.....		1,887	1,191	

¹ Adding Alaska to total for United States.

Owing to data for lead, gold, and silver not being available monthly previous to 1921, there has also been calculated a separate index, leaving out these products, so that a true comparison may be made between the separate months of 1920 and the months of 1921 and 1922.

No allowance has been made for seasonal variation in production, as for three commodities only one year's data are available monthly. The index shows the actual physical output month by month.

COMPARISON WITH OTHER INDICES.

Other indices of mining production have been compiled on an annual basis, and while the present investigation was under way the Federal Reserve Board issued a monthly production index on mining based on the year 1919. The present index has been completed and published, because (1), it gives a combination of the annual and the monthly figures on a pre-war base; (2) it includes important mining products—gold and silver—previously not available on a monthly base; (3) it includes new sets of monthly figures on other commodities, such as iron ore, copper, lead and zinc, which reflect conditions as close to the mine as possible; and (4) it uses as weights the relative values of the minerals as close to the mine as possible.

The Department of Commerce index of mining production runs very close to the annual indices prepared respectively by Prof. Edmund E. Day (Harvard University Review of Economic Statistics, Preliminary Vol. II, No. 10) and by Prof. Walter W. Stewart

(American Economic Review, Vol. XI, No. 1). Except in the years 1914 and 1919, both of which were years of great change in industrial status, the extreme difference in any one year between the highest and the lowest of these three annual indices is about 2 per cent. In 1914 and 1919 the extreme difference is 6 per cent, with the Department of Commerce index midway between the other two in each case. The chief difference between the Department of Commerce index and Day's index is the use of iron ore in the Commerce index instead of pig iron and coke, while Stewart's index includes the same commodities as the Commerce index and, in addition, a few minor articles that are not available on a monthly basis—pyrites, quicksilver, salt and sulphur ore. The variations between the two are evidently largely in weighting.

The chief difference between the Department of Commerce index and the monthly index of the Federal Reserve Board (Federal Reserve Bulletin, Vol. 8, No. 3) is in the use of iron ore instead of pig iron and the addition of gold and silver. The use of iron ore makes the Department of Commerce's index considerably higher than the Federal Reserve Board's index in the summer, when iron ore is produced and shipped in large quantities, and much lower in the winter, when iron-ore traffic is suspended.

RESULTS.

A glance at the figures in the table and charts accompanying this article shows continued development of the mineral production of the United States before the war. The depression in iron ore and bituminous coal at the outbreak of the war caused the production curve to recede in 1914, but in 1915 it was above the 1913 level again, and it continued to advance to meet our war needs until the maximum was reached in 1918. The slump in demand for metals after the armistice caused a sharp decline in 1919 almost to the 1915 level, but the post-war boom, especially in petroleum and bituminous coal, led to another increase in the mineral output in 1920. The depression of 1921, starting immediately at the beginning of the year, brought production down below the pre-war average.

In comparing the monthly figures with normal, the exceptionally large seasonal variation in iron-ore production must be taken into account. That is largely responsible for the increase in June, 1921, while in October the increased output of coal in the face of a threatened railroad strike brought the production index to the highest point of the year. The seasonal decline in iron ore was the chief factor in the November decline, and the decline in coal production was responsible for the further recession in December, in spite of gains in most of the other metals.

The improvement in production in 1922 has been general in all the minerals. The gain in March, reaching the highest point since December, 1920, was partly due to special activity in the coal mines in anticipation

of the strike, and the April index will show a large drop as a result of the strike. Petroleum production reached a new high level in March, and copper showed a large increase over February.

ANNUAL MINERAL PRODUCTION.

MONTHLY MINERAL PRODUCTION.

INDEX NUMBERS OF MINERAL PRODUCTION.

Prepared by the Department of Commerce.

[Relative to average for 1909-13 taken as 100.]

TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures, designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

February, 1922.—This column gives the February figures corresponding to those for March shown in the next column—in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending December 31, 1921.

March, 1922.—In this column are given the figures covering the month of March, or, as in the case of stocks, etc., the situation on March 31 or April 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter ending March 31 or the condition on that date. Where this column is left blank, no figures for March were available at the time of going press (May 6).

Corresponding month, February or March, 1921.—The figures in this column present the situation exactly a year previous to those in the "March, 1922" column (that is, generally, March, 1921), but where no figures were available for March, 1922, the February, 1921, figures have been inserted in this column for comparison with the February, 1922, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1921.

Cumulative total through latest month.—These columns set forth, for those items that can properly be cumulated, the cumulative total for the first three months of the calendar years 1921 and 1922, respectively, except where the March, 1922, figures are lacking, in which case the cumulative total for two months in each year is given.

Percentage increase (+) or decrease (-) cumulative 1922 from 1921.—This column shows the per cent by which the cumulated total for the first three (two in some cases) months of 1922 is greater (+) or less (-) than the total for the corresponding period of 1921.

Base year or period.—For the purpose of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921, and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen.

Index numbers.—In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919, to equal 100. If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100. The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next.

Percentage increase (+) or decrease (-) March from February.—The last column shows the per cent increase or decrease of the figure for the last month compared with the preceding month.

NOTE.—Detailed tables covering all items are given in this number. Consult index at end of bulletin.	NUMERICAL DATA.					Per-centage increase (+) or decrease (-) cumulative 1922 from 1921.	BASE YEAR OR PERIOD.	INDEX NUMBERS.						Per-centage increase (+) or decrease (-) Mar. from Feb.

^a Beginning with January, 1922, figures are in square yards. For the present these are compared directly with linear yards in earlier months. Stated in square yard the total will probably average slightly less than in linear yards.

² Six months' average, July to December, inclusive.

³ Eleven months' average, February to December, inclusive.

⁴ Ten months' average, March to December, inclusive.

¹ Except visible supply of cotton from the *Commercial and Financial Chronicle* and sales of elastic webbing from the *Webbing Manufacturers' Exchange*. Other sources are as follows: Wool (consumption and quarterly stocks) and Cotton production from the *U. S. Department of Agriculture, Bureau of Markets and Crop Estimates*; Wool (imports), Cotton cloth, and Cotton (exports and imports), from the *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*; Cotton (consumed and on hand), from the *U. S. Department of Commerce, Bureau of the Census*.

² These figures are for fiscal years; those following are for calendar years.

³ Includes duck and other cloth, bleached, unbleached, and colored.

⁴ Figures for 1918, 1919, 1920, and 1921 compiled from monthly reports on consumption by mills; preceding years compiled from production and net imports.

⁵ Running bales counting round as half bales; linters are included.

⁶ 500-pound bales.

⁷ Figures listed for years 1913 through 1921 represent monthly averages of cotton consumed and on hand at end of month during crop years (beginning Aug. 1 of the preceding year and ending July 31 of the year to which the figure is credited). Figures are in running bales, counting round as half bales, and do not include linters.

⁸ These figures represent world visible supply of American cotton.

¹ Except imports of raw silk, unmanufactured fibers and burlap from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The figures for knit underwear are secured from the *Knit-Goods Manufacturers of America*; those relating to raw silk from the *Silk Association of America*. Receipts of wool at Boston are compiled by the *Boston Chamber of Commerce*.

² The preliminary report from the Bureau of the Census shows that, in 1919, the total production of knit underwear in the United States amounted to 26,517,000 dozens compared with 28,032,000 dozens in 1914. In terms of monthly averages, the 1919 output was at the rate of 2,209,000 dozens, which, by comparison, indicates that the normal production of the mills reporting above comprises about 40 per cent of the industry.

³ Consumption figures represent withdrawals from warehouses.

¹ Prices of cotton and wool to the producer on the 1st and 15th of each month, respectively, are weighted averages of prices received by producers throughout the United States for all grades of cotton and wool as compiled by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are averages of weekly quotations compiled by the U. S. Department of Labor, Bureau of Labor Statistics, except wool prices from compilation by U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

See footnotes on opposite page also.

¹ Iron ore movement from U. S. War Department, Engineer Corps; Exports and imports from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Wholesale prices from U. S. Department of Labor, Bureau of Labor Statistics, representing average of weekly prices. Figures for Pig-iron production (anthracite and coke, not including charcoal iron) furnished by the Iron Age; Steel-Ingot production, American Iron and Steel Institute; Unfilled orders, end of month, and earnings, U. S. Steel Corporation; Composite finished steel prices, Iron Age; Iron and steel prices, Iron Trade Review; Composite pig iron and steel, American Metal Market.

² No allowance made for seasonal variation in computing these index numbers. The figures represent about 85 per cent of the total iron ore production of the United States.

³ Yearly figures represent the monthly averages of total production of all companies as compiled annually by the American Iron and Steel Institute. The institute reports monthly production figures for 30 companies which, in 1920, produced 84.2 per cent of the total output of the country. In order to make the monthly figures comparable, they have been calculated to a 100 per cent production on the basis of the above percentage.

⁴ Based on pig iron and rolled products, as used by the Iron Trade Review. Beginning with January, 1922, figures on exports are not exactly comparable with the preceding figures inasmuch as the new export classification has made it possible to include several items for which formerly no quantities were reported.

FINISHED IRON AND STEEL.

¹ Sheets, blue, black, and galvanized, reported by the *National Association of Sheet and Tin Plate Manufacturers*; Merchant pig iron by *American Pig Iron Association*; Steel barrels and drums by the *Steel Barrel Manufacturers' Association*; Fabricated structural steel by the *Bridge Builders and Structural Society*; Ohio foundry iron by *Ohio State Foundrymen's Association*; Locomotive shipments are compiled by individual producers and represent practically the total output of the country.

² Figures represent almost all the independent sheet manufacturers.

³ The *Bridge Builders and Structural Society* state that reports in the earlier years were not as complete as during the last six or seven years. The total tonnages are probably 10 to 15 per cent less than they should be. These figures are believed to represent the total business in the United States.

⁴ Represents percentages of actual to normal melt of grey iron foundries in Ohio. Prior to September, reports represent the month beginning with the 15th day of the calendar month. September figures are for the period Sept. 15 to 30 only. Subsequent figures are for calendar months.

⁵ Relative to 11 months' average, February-December, 1921.

⁶ Relative to 6 months' average, July-December, 1921.

⁷ Relative to 10 months' average, March-December, 1921.

¹ Except shipments of crude petroleum from Mexico. Crude petroleum production, stocks, imports, and consumption, and completion of oil wells, from *U. S. Department of the Interior, Geological Survey*; Wholesale price of crude petroleum, average for the month, from *U. S. Department of Labor, Bureau of Labor Statistics*; Data on gasoline from *U. S. Department of the Interior, Bureau of Mines*.

² Figures for earlier years adjusted to represent approximate net stocks to conform with data for current months.

³ Mexican petroleum shipments from the three ports, Tampico, Port Lobos, and Tuxpam, form the best current measure of Mexican oil production. These figures are compiled from those published in the *Oil Trade Journal*. Current month is approximate from *Oil, Paint, and Drug Reporter*.

⁴ Yearly figures for "stocks at end of month" are averages of monthly figures.

⁵ "Exports of gasoline," as used by the Bureau of Mines, includes the items "gasoline" and "all other naphtha, etc.," as reported by the *U. S. Department of Commerce*, less exports to the Philippine Islands.

⁶ Represents production transported from field of production, does not include oil consumed at locality of production.

¹ Except printing activity, from *United Typothetae of America* and printing purchases and sales from *American Writing Paper Company*. Data for paper, except exports, are furnished by the *Federal Trade Commission*; exports from the *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*.

² Printing activity based on productive hours reported by plants in 52 cities in 30 states, each department being weighted for the combined index number.

³ Purchases of printing paper and sales of printed product by about 350 concerns, doing from 20 to 25 per cent of the total commercial printing business of the country. As the paper industry was in a great boom in 1919, index numbers based on that year are not regarded as true indices; therefore 1918 was taken as a base.

¹ Glass bottles, from *National Bottle Manufacturers Association*, based on reports of identical firms representing approximately 90 per cent of the capacity of the industry. Illuminating glassware from reports of identical firms by the *Illuminating Glassware Guild*, estimated to represent from 70 to 75 per cent of the capacity of the industry; and spectacle frames and mountings from the *Optical Manufacturers Association*, representing about 60 per cent of the industry. Data for wood pulp are from the *Federal Trade Commission*.

² Import figures converted from long to short tons to agree with production and stocks.

¹ Data furnished by the Rubber Association of America. The number of firms has increased from 36 in November, 1920, to a maximum of 64 in August, 1921. It is stated by the Rubber Association that this variation in the number of firms does not change the totals to any great degree, except for the omission of the Firestone Tire Company beginning in September, 1921.

¹ Except india-rubber imports from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, and wholesale prices, average weekly, from U. S. Department of Labor, Bureau of Labor Statistics.

² Compiled by the National Automobile Chamber of Commerce. Represents shipments from factories covering almost the entire automobile production of the United States.

³ Total of membership of the National Automobile Chamber of Commerce and chief outside manufacturers, representing practically complete passenger-car production and slightly less complete truck production. Annual figures represent complete production as compiled by National Automobile Chamber of Commerce.

¹ Based on figures compiled by the U. S. Department of Commerce, Bureau of the Census. The data embrace returns from packers, tanners, dealers, importers, and manufacturers. As given in the monthly reports by the Bureau of the Census, the returns for hides and skins are expressed in numbers of hides and skins. For the above summary these have been reduced to pounds on the basis of the average weights of each class. Similarly data on leather have been converted to pounds or square feet from reports in skins, sides, backs, butts, pounds, etc.

² From reports by the Tanners' Council; sole leather figures include estimates for firms outside the Tanners' Council, so as to represent the total for the country. Figures and skivers and harness do not include estimates of outside firms and are believed to represent 80 per cent of the total production.

³ Beginning December, 1919, these statistics cover amount of harness leather "stuffed" rather than that produced, but it is stated that the variation between these items is small.

⁴ Includes estimated production of firms outside Tanners' Council.

⁵ Data from the Leather Belting Exchange, and is estimated to represent from 65 to 75 per cent of the industry.

⁶ Includes skins with and without wool, but does not include weight of wool

HIDES AND LEATHER—TRADE AND PRICES.

¹ Data from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² Data from U. S. Department of Labor, Bureau of Labor Statistics, represent average monthly prices.³ Includes calf and kip, goat and kid, grain and finished splits.⁴ Represent five-year (1909-1913) monthly average imports for total hides and skins, total goatskins and total sheepskins. Calfskins and cattle hides based on four-year average, 1910-1913.⁵ See p. 14 for production of boots and shoes.

¹ Data compiled by the F. W. Dodge Co., covering small towns and rural districts as well as large cities. Prior to May, 1921, these figures covered 25 northeastern states and the District of Columbia. The states are those north and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee, and Virginia, together with portions of eastern Kansas and Nebraska. Beginning May, 1921, North Carolina and South Carolina were added to the list, but this addition is stated to have little effect upon the total.

² Estimates made by the F. W. Dodge Co.

¹ Data compiled by the F. W. Dodge Co., covering small towns and rural districts as well as large cities, except fire losses in the United States and Canada, included here for convenience, compiled by the *New York Journal of Commerce*. Prior to May, 1921, the building figures covered 25 northeastern states and the District of Columbia. The states are those north and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee and Virginia, together with portions of eastern Kansas and Nebraska. Beginning May, 1921, North Carolina and South Carolina were added to the list, but this addition is stated to have little effect upon the total.

² Grand total includes military and naval buildings and miscellaneous, in addition to the groups listed in this and the preceding table (p. 72).

¹ The figures given for production and stocks of yellow pine are computed from data furnished by the *Southern Pine Association*. The method of computing is first to find the per cent which the actual production of the mills reporting is to the normal production of these same mills. This per cent is then applied to the normal production of 192 mills. Assuming that the mills reporting are a good sample of the industry the resulting figure in each month is equivalent to the actual production of the 192 identical mills and hence shows the trend of the industry. The same procedure is followed in the case of stocks. The normal monthly production of the 192 mills is given as 484,065,392 feet and the normal stocks of the same mills as 1,262,450,326 feet. By normal production the *Southern Pine Association* means the average output for the first 4 months of 1916 and normal stocks during the 16 months ending with April, 1916.

² The *Western Pine Manufacturers' Association* has supplied figures showing the actual and normal production for the mills reporting in each of the periods shown. From these figures the per cent of normal production is obtained in each case, and this per cent is applied to the normal production of 54 identical mills. The normal monthly production of these 54 mills is given as 148,000,000 board feet and is estimated to represent 70 per cent of the output of the western pine territory.

³ Actual figures reported by about 20 mills each month to the *California White and Sugar Pine Association*; the number of mills varies from 13 to 26.

¹ The figures given in these columns were obtained by applying the percentage figures of actual production and shipments to normal production of reporting mills as supplied by the *West Coast Lumbermen's Association* to the actual production of 124 mills for May, 1920. The production in that month was 447,674,540 board feet.

² The *California Redwood Association* has furnished to the Bureau of the Census the figures on the actual production, shipments, and orders received by 7 identical mills for each month of 1918, 1919, and 1920. These 7 mills represent 40 per cent of the capacity of all listed mills for these years. For the first 4 months of 1921 reports were furnished from 10 mills representing 56½ per cent of the capacity of all listed mills. For the remaining months of 1921 reports are available from 11 mills representing 71 per cent of the total listed capacity. The actual average monthly production of the 7 reporting mills for 1918 was 14,984,000 feet. On the basis of 40 per cent capacity of the 1918 average monthly production of all mills is computed as 37,460,000 feet. Regarding this as normal production, there has been computed the probable production of the total redwood capacity based on the proportion which the capacity of the reporting mills bears to the total of all mills. The columns on shipments and orders received represent a similar relationship between the actual reported figures and the total capacity of all mills.

³ Actual figures reported by about 40 mills each month to the *Michigan Hardwood Manufacturing Association*; the number of mills varies from 36 to 58, but 48 is the highest number reporting in any month since the beginning of 1919.

¹ Except exports of lumber from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² Data computed from reports on actual production and shipments as furnished by the North Carolina Pine Association, Inc., for mills varying in number from 31 to 65. The computed figures given are obtained by first determining for a given month the per cent which the actual production is of the normal production of the identical mills reporting. This per cent is then applied to an arbitrary figure of 70,000,000 board feet which represents the approximate monthly average normal production of the mills which reported in 1919. A similar per cent of actual shipments to normal production is applied to the same figure to obtain the computed shipment figures. The resulting figures represent a computed production as of identical mills for each month. The figures are of the same order of magnitude as the actual reported production and shipments, but avoid the rather wide variations due to different mills reporting in different months.³ Compiled by the Northern Hemlock and Hardwood Manufacturers' Association, representing chiefly Wisconsin and upper Michigan mills. These figures represent actual reports from 60 to 75 mills each month. The hardwoods cut are mostly maple, birch, and beech.⁴ Data from reports of the Oak Flooring Manufacturer's Association, by 25 mills, said to represent about 90 per cent of the total oak flooring industry.

¹ Except wholesale prices, monthly averages, from U. S. Department of Labor, Bureau of Labor Statistics. The sources of the other data in this table are: Clay fire and silica brick from the Refractories Manufacturers' Association and face brick from the American Face Brick Association.

² Figures for 1921 are from reports of 68 identical mills with a monthly capacity of 78,645,942 bricks, which is estimated by the association to represent from 68 to 70 per cent of the total clay fire brick capacity of the United States. Figures for 1919, 1920, and 1922 are computed to this capacity, respectively, from reports from 53, 56, and 60 mills having a monthly capacity for the years in question of 71,572,186, 73,526,103, and 73,307,190 bricks.

³ Figures for 1921 are from reports of 15 identical mills with a monthly capacity of 27,305,500 bricks, which is estimated by the association to represent from 78 to 80 per cent of the total silica brick producing capacity of the United States. Figures for earlier years are computed to this capacity from reports of 12 identical mills with a monthly capacity of 25,448,833 bricks.

⁴ The figures on face brick include data from all firms reporting to the American Face Brick Association each month. The variation in the number of firms reporting does not materially affect the comparison, as it has been checked on a small number of identical firms.

⁵ Ten months' average.

¹ Data furnished by the *Enamelled Sanitary Ware Manufacturers' Association* and said to represent approximately 98 per cent of the total output in the United States. The Association explains that orders shipped are the best current index of the industry. Orders received are likely to pyramid during periods of great activity to be followed by cancellations if the demand drops off. Stocks always increase during the winter and spring months because more efficient work at the enameling ovens can be done in cold weather and manufacturers operate at maximum capacity as long as they can finance operations and find storage capacity for the products.

² Data furnished by *Sanitary Potters' Association* and include the following articles, with percentages of total orders in 1920: Siphon jets 6.5 per cent, washdowns 54 per cent, reverse traps 4.3 per cent, small tanks 27.7 per cent, large tanks 5.2 per cent, and lavatories (not reported prior to July, 1920) 2.3 per cent.

¹ Data on cement is from the U. S. Department of the Interior, Geological Survey; except prices, which are average of weekly prices reported by the U. S. Department of Labor, Bureau of Labor Statistics; data on abrasives compiled by the Abrasive Paper and Cloth Manufacturers' Exchange.

² Yearly figures represent stocks at end of year, not an average of monthly stocks, except for 1921.

³ Data compiled by the Abrasive Paper and Cloth Manufacturers' Exchange estimated to represent 90 per cent of the industry. The totals given include the sales of garnet, emery, flint, and artificial (silicon, carbide, and aluminum oxide) paper, cloth, and combinations. Figures are stated in equivalent reams, 9 by 11 inches in size. The data submitted show that in 1919 the total domestic sales were made up of the following approximate percentages: Garnet 39, emery 8, flint 32, and artificial 20 per cent.

¹ Except price of steel beams, from the U. S. Department of Labor, Bureau of Labor Statistics, representing average of weekly prices for the month and placed here for convenience.

² This index number, furnished through the courtesy of the *Aberthaw Construction Co.*, is designed to show the relative changes in the cost of constructing a standard concrete factory building. The company believes that the year 1914 gives a normal base and that July, 1920, represented the peak of building costs.

³ The construction cost index, computed by the *Engineering News-Record*, is based upon the costs of steel (structural shapes, Pittsburgh base), cement (f. o. b. Chicago, exclusive of bags), lumber (southern pine, New York base), and the rates paid common labor in the steel industry. The prices are weighted on the basis of the total production of steel, cement, and lumber, and the total supply of common labor.

⁴ Compiled by the *George A. Fuller Company*, reflecting wages and material costs in New York City, originally on a 1909 relative base and converted to a 1913 base. These costs are based on buildings actually constructed by this company, as follows: Hotel building, built in 1913-14, high-grade, containing 11,500,000 cubic feet; loft office building, built in 1909, containing 3,647,000 cubic feet; subdivided office building, built in 1909, containing 8,070,000 cubic feet.

⁵ Compiled by the *Engineering News-Record*, on the basis of contracts let as reported by this publication and its construction cost index number, based on 1913 costs.

⁶ Two-month average, May and October, 1919.

⁷ Reported by *The Container Club* and representing about 50 per cent of the paper box industry. Usually 16 firms report, with a minimum of 14 firms in part of 1919, and a maximum of 18 firms in March, 1922.

⁸ Average of last six months of year.

¹ Compiled from reports of the *National Wood Chemical Association* to which are added reports from the principal nonmember firms. Total reports for each month vary from firms with a capacity of 3,200 cords to 4,500 cords daily; all months are therefore prorated to a daily capacity of 4,500 cords, representing about 90 per cent of the industry, on the basis of capacity reporting each month.

² August, 1914.

³ Compiled from weekly wholesale quotations of 35 drugs and pharmaceutical chemicals by the *Oil, Paint, and Drug Reporter*.

⁴ Compiled from weekly wholesale quotations of 20 essential oils by the *Oil, Paint, and Drug Reporter*.

⁵ Compiled from weekly wholesale quotations of 40 crude botanical drugs by the *Oil, Paint, and Drug Reporter*.

⁶ The chemical price index from *Chemical and Metallurgical Engineering* includes quotations on 25 commodities selected on the basis of their importance as representing both qualitatively and quantitatively the principal branches of the chemical industry. These prices are weighted on the basis of total production plus total imports in the year 1919. The figures are averages of weekly prices.

⁷ Wholesale average monthly price of sulphuric acid from *United States Department of Labor, Bureau of Labor Statistics*.

¹ Except shipments of linseed oil and cake and meal from *Minneapolis Chamber of Commerce*. The sources of the other data are: Imports and exports of vegetable oils, from the *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*; Cottonseed and cottonseed oil data from the *U. S. Department of Commerce, Bureau of the Census*; and Oleomargarine production and consumption from the *U. S. Treasury Department, Bureau of Internal Revenue*.

² Includes cottonseed, corn, and linseed oils.

³ These figures are for fiscal years beginning July 1.

⁴ The following oils are included: Chinese nut, cocoa butter, coconut, cottonseed, olive (inedible), olive (edible), palm, palm kernel, peanut, rapeseed, soya bean. Where certain of these are reported in gallons, they have been converted into pounds, allowing 7½ pounds per gallon.

⁵ Colored and uncolored, as represented by tax-paid withdrawal.

CEREAL EXPORTS.

Table 49.—(A) INDEX NUMBERS AND (B) NUMERICAL DATA.

¹ Wheat flour production, consumption, and stocks reported by *U. S. Grain Corporation*, prior to July, 1920, later months from *Russell's Commercial News*; Visible supply of wheat and corn from *Bradstreet's*; Receipts and shipments of wheat and corn, compiled by *Chicago Board of Trade*, from the *Price Current-Grain Reporter*.

² Consumption calculated from production, stocks, imports, and exports. Stocks represent flour in all positions, calculated from actual reports bearing a known relation to total stocks.

³ Aggregate stocks in United States and Canada east of the Rocky Mountains, on nearest Saturday to end of the month.

⁴ At principal primary markets.

FARM PRODUCTS, WHOLESALE PRICES.

Table 51.—INDEX NUMBERS.

Based on data from Government sources.

[Base-year in bold-faced type; numerical data on opposite page.]

YEAR AND MONTH.	WHEAT FLOUR.		WHEAT.		RYE.	BAR-LEY.	OATS.	CORN.	COT-TON-SEED OIL.	CAT-TLE.	HOGS.	SHEEP.		TO-BACCO.
	Stand-ard pat-ents, Minne-apolis.	Winter straights, Kansas City.	No. 1, north-ern spring, Chi-cago.	No. 2, red winter, Chi-cago.	No. 2, cash, Chi-cago.	By sample, fair to good malting, Chicago.	Cash, Chi-cago.	Cash, con-tract grades No. 2, Chi-cago.	Sum-mer, yellow prime, New York.	Steers, good to choice, corn fed, Chicago.	Heavy, Chicago.	Ewes, Chicago.	Lambs, Chicago.	Burley, good leaf, dark red, Louis-ville.

¹ Exports reported by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; cold-storage holdings from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; production of beef and pork from animals slaughtered under Federal inspection reported by the U. S. Department of Agriculture, Bureau of Animal Industry. Apparent consumption has been computed from the inspected slaughter plus imports less exports and the change in storage holdings. Wholesale prices are average for the month from U. S. Department of Labor Bureau of Labor Statistics.

² Cold-storage holdings are distinctly seasonal. No allowance for this has been made in calculating index numbers. Figures represent storage holdings on the first day of each month.

³ Includes bacon, ham, shoulders, lard, neutral lard, and canned, fresh, and pickled pork.

⁴ Includes fresh, canned, pickled, and cured beef, and oleo oil and tallow.

⁵ Includes beef, frozen, cured, and in process of cure.

⁶ Includes pork, frozen, dry salt, and pickled, both cured and in process of cure, and lard.

⁷ Frozen lamb and mutton.

⁸ Total dressed weight slaughtered under Federal inspection, including veal with beef. The slaughter under Federal inspection, according to census figures in 1919, amounted to 68 per cent of the total number of animals slaughtered in the United States in the case of hogs and 82 per cent in the case of beef and 91 per cent for lamb.

⁹ Includes meat produced under Federal inspection only.

¹ Import and export statistics from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; all other data from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.

² Boston, New York, Philadelphia, Chicago, and San Francisco. Total of weekly figures with first and last weeks of month prorated.

³ Includes whole milk, part skim and full skim.

⁴ One case of eggs equals 30 dozen, or about 45 pounds net.

⁵ Production compiled by months but issued quarterly; figures not available at time of going to press.

⁶ Holdings on first day of month.

⁷ Average of weekly prices of creamery butter, 92 score, at Boston, New York, Philadelphia, Chicago, and San Francisco.

⁸ Average of weekly prices of American cheese, No. 1 fresh twins, at Boston, New York, Wisconsin, Chicago, and San Francisco.

CROP PRODUCTION.

¹ Receipts, shipments and stocks at mills from *Rice Millers' Association*, comprising movement of the whole rice crop except California rice. Shipments of rice through New Orleans compiled by *New Orleans Board of Trade*. Stocks of foreign rice in warehouses and imports and exports from *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*, data for rough rice being reduced to the equivalent clean rice at 162 pounds of rough to 100 pounds of clean.

² Rough rice barrels of 162 pounds are equivalent to clean rice pockets of 100 pounds each.

SUGAR.

¹ With the exception of receipts, stocks, and meltings reported by the *Statistical Sugar Trade Journal*. The sources of the other data are: Imports and exports, from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Wholesale and retail sugar prices, from U. S. Department of Labor, Bureau of Labor Statistics.

² Figures include reports from seven ports: Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and San Francisco. Meltings are calculated from weekly reports, the odd days being prorated. Stocks represent the amount of raw sugar in the hands of refiners on the dates nearest the end of the month as reported for each port.

* Index number less than 1.

¹ Data on coffee except imports received from the *New York Coffee and Sugar Exchange, Inc.*; Imports of coffee and tea from the *Department of Commerce, Bureau of Foreign and Domestic Commerce.*

² Represents total receipts at Rio and Santos.

³ Represents total clearances from Rio, Santos, and Victoria.

⁴ Represents total clearances from Rio, Santos, Victoria, and Bahia.

⁵ A bag of coffee averages 132 pounds.

⁶ Given as of the 1st day of the month.

TOBACCO.

¹ Stocks held by manufacturers and dealers reported by the U. S. Department of Commerce, Bureau of the Census; Production of manufactured tobacco and snuff, cigars and cigarettes by the U. S. Treasury Department, Bureau of Internal Revenue; Crop production by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates Exports of leaf tobacco by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

² Held by manufacturers and dealers on first day of each quarter. Yearly figures are quarterly averages.

³ Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.

⁴ The Internal Revenue reports the number of large cigars, i. e., those weighing over three pounds per thousand, and the number of small cigars weighing less than the above amount. Likewise they report the number of large and small cigarettes, the former weighing more than three pounds per thousand. Large cigars and small; cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.

⁵ Yearly figures on crop production represent the latest estimates as reported by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. The monthly figures for 1920 and 1921 are the current monthly estimates of total production.

¹ Panama Canal traffic reported by *The Panama Canal*; Tonnage entered and cleared in foreign trade, *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*; Vessels under construction and vessels completed, *U. S. Department of Commerce, Bureau of Navigation*; Sault Ste. Marie Canal traffic, *U. S. War Department, Engineer Corps*, New York State canal traffic from *New York State Superintendent of Public Works*.

² Represents tonnage of cargo carried by commercial vessels. Yearly figures refer to fiscal years ending June 30.

³ Figures for 1913 to 1921 represent monthly averages for eight months during which the canals are usually open.

⁴ Tonnage under construction refers to the gross tons of shipping, building or under contract to build for private owners. Does not include Government ships or ships building or contracted for by U. S. Shipping Board.

¹ Includes ocean-going, lake and river vessels built and officially numbered by the U. S. Department of Commerce, Bureau of Navigation. Includes vessels of the U. S. Shipping Board and private American owners, but not vessels built for foreign owners.

² Net ton represents 100 cubic feet internal carrying capacity after prescribed allowances for crew and engine space.

³ Gross ton represents in units of 100 cubic feet the entire cubical capacity of the vessel, including crew and engine space.

⁴ About two-thirds of this traffic is through the Erie Canal and one-third through the Champlain Canal. Figures for 1913 to 1921 represent monthly averages for seven months, during which the canals are usually open.

¹ Data from the American Railway Association.² At end of month, exclusive of Canadian roads. The Association reports the number of freight cars which are idle (surplus) and also the number of requests for cars which can not be filled (shortage). The difference between these two figures represents the net freight car situation for the country as a whole. The car shortages can not ordinarily be filled from the idle cars because of the uneven geographical distribution of the latter.³ Includes other classes than groups listed.⁴ Total includes coke shipments in addition to commodity groups listed.⁵ Index number less than 1.⁶ Number of railroad freight cars in need of repairs on first day of each month. Note that 1913 is the base year, having a monthly average of 150,909 cars in need of repairs.

RAILWAY OPERATIONS.

¹ Data on revenues and expenses, from the *Interstate Commerce Commission*, represent Class I roads, those having annual operating revenues in excess of \$1,000,000; data on ton-mile and passenger-mile operation are from the *Bureau of Railway Economics*; Pullman passenger traffic furnished by *The Pullman Co.*

² Net railway operating income includes net operating revenue (equal to the difference between total operating revenue and total operating expenses) from which there have been deducted railway tax accruals, uncollectible railway revenues, equipment and joint facility rents.

³ Fiscal year ending June 30, of year indicated.

⁴ These figures are from *Interstate Commerce Commission* reports.

⁵ Deficit.

¹ This table is submitted in response to a demand for publication of the figures of sales of individual stores, which have been compiled from published reports. These figures represent money values of sales. On account of the tremendous increase in *J. C. Penney Co.* sales, this store is not included in our total of 10-cent store sales given on page 105. The index numbers of sales of 156 department stores and of 13 grocery chains were compiled by the *Federal Reserve Board*. Data on American Wholesale Corp. placed here for convenience.

² Separate monthly figures not available.

¹ Index numbers calculated from data collected by the Federal Reserve Board in cooperation with the National Retail Dry Goods Association from about 300 department stores, showing percentage changes from month to month. The Federal Reserve Board states that the original material was in dollar amounts, except in districts 3, 4, 8, and 10, where only percentages were received, and the averages for the districts were computed by weighting according to the volume of business done during 1920. The percentage changes reported by the Federal Reserve Board have been converted into index numbers which show the same corresponding percentage increase or decrease.

DISTRIBUTION MOVEMENT.

¹ Except postal receipts in 51 selected cities reported by the U. S. Post Office Department. Mail-order and chain-store sales are reported directly by the companies or compiled from the *Commercial and Financial Chronicle*; magazine advertising as reported by *Printers' Ink*; newspaper advertising compiled by *New York Evening Post*.

² Includes Sears, Roebuck & Co. and Montgomery Ward & Co. (details for each store shown on page 111).

³ Includes F. W. Woolworth & Co., S. S. Kresge Co., McCrory, and S. H. Kress & Co. (details for each store shown on page 111).

⁴ These figures represent the number of lines of advertising carried by the leading magazines dated for the month noted.

⁵ Compiled from 22 identical cities: New York, Chicago, Philadelphia, Detroit, Cleveland, St. Louis, Boston, Baltimore, Los Angeles, Buffalo, San Francisco, Milwaukee, Washington, Cincinnati, New Orleans, Minneapolis, Indianapolis, Columbus, Louisville, St. Paul, Birmingham, and Houston. For the years 1916 to 1918, no reports were available for Boston, Louisville, Houston, and Columbus. The totals for those years were computed from the actual reports of the 18 other cities, allowing 13.85 per cent of the total to the four missing cities, the average ratio of those cities to the total in the subsequent years.

* Estimated figure.

¹ Data on New York state factories furnished by the *New York State Department of Labor*; Wisconsin factories by the *Wisconsin Industrial Commission*; Number on pay roll, U. S. factories, from *U. S. Department of Labor, Employment Service*; Unemployment in Pennsylvania, estimated as of the first of the month on the basis of reliable statistics, by the *Pennsylvania Department of Labor and Industry, Bureau of Employment*; Immigration and emigration statistics from *U. S. Department of Labor, Bureau of Immigration*.

² Figures represent reports from 1,648 firms in New York state employing more than one-third of the factory workers in the state.

³ Information is from 1,428 factories, usually employing over 500 workers each.

⁴ Includes total admitted, both immigrants and nonimmigrants.

⁵ Includes total departed, both emigrants and nonemigrants.

⁶ Average for preceding 3 months.

⁷ Nine months' average, March-December.

COST OF LIVING.

¹ Reports compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Prices represent averages for the month in 32 cities; food prices reported by 15 to 25 dealers in each city, fuel and light by 10 to 15 firms, including public utilities, in each city; other quotations secured directly from records. Rentals are based on 250 to 950 houses and apartments in each city and for each item of clothing, furniture and miscellaneous, four quotations are secured in each city (five in New York City).

¹ Compiled by the *National Industrial Conference Board*, and represent retail prices on the first day of the month, except food, which is the retail food index of the *U. S. Bureau of Labor Statistics* for the 15th of the preceding month. Beginning with March, 1922, all prices shown are as of the 15th of the month indicated. The index is weighted according to the estimated consumption of average wage earners before the war, on the following basis: Food 43.1 per cent, shelter 17.7 per cent, clothing 13.2 per cent, fuel and light 5.6 per cent, sundries 20.4 per cent.

PRICES.

¹ Wholesale prices and retail food prices from the U. S. Department of Labor, Bureau of Labor Statistics; farm prices from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.

² The wholesale price index number of the U. S. Department of Labor, Bureau of Labor Statistics, is based on quotations of 328 commodities. These commodities are arranged in 9 groups as given in the table. In computing this index, the price of each commodity is weighted by multiplying it by the estimated quantity of that article marketed in the census year 1909.

³ The retail food price index compiled by the Bureau of Labor Statistics represents the changes in the price of 22 articles of foods as reported by retail dealers in 51 of the larger cities as of the 15th of the month.

⁴ Farm prices of crops represent the relative average prices to farmers of the 10 leading crops on the first of each month. The live stock farm price index is computed as of the 15th of each month.

¹ First eight columns comprise data composing wholesale price index numbers of the *U. S. Department of Labor, Bureau of Labor Statistics*, as reclassified by the *Federal Reserve Board* into the groupings as shown. The weights are the same as those used by the *Bureau of Labor Statistics* and the total of all commodities is, therefore, the same. Data in the last three columns are original compilations of the *Federal Reserve Board* constructed for the purpose of international price comparisons; basic prices are obtained from trade journals and private firms and weighted according to the 1913 volume imported and exported, respectively, for "imported goods" and "exported goods." The total index number includes also goods produced, weighted by production in 1913, and goods consumed, weighted by consumption in 1913.

WORLD WHOLESALE PRICES.

¹ Dun's and Bradstreet's index numbers are calculated as of the first of each month, but really refer to prices in the preceding month. The index numbers have been calculated to a 1913 base from the actual figures published in these journals. Bradstreet's index number is the sum of the prices per pound of 106 commodities. Dun's index number covers about 300 commodities and is weighted on the basis of the amount "annually consumed by each inhabitant."

² Compiled by the London Economist; quotations on 44 commodities, mostly raw materials, unweighted.

³ Compiled by Bulletin de la Statistique Generale of the French Ministry of Labor and Social Welfare; quotations on 45 commodities, mostly raw materials, unweighted.

⁴ Compiled by Prof. Bachi; quotations on 38 commodities until 1920, thereafter 76 commodities.

⁵ Compiled by the Frankfurter Zeitung; quotations on 70 commodities, unweighted. Prices are for 1st of the month.

⁶ Compiled by the Canadian Department of Labor; quotations on 272 commodities, unweighted.

⁷ Compiled by the Bank of Japan; quotations on 56 commodities, unweighted.

⁸ Compiled by the Australian Commonwealth's Bureau of Census and Statistics; quotations on 92 commodities, weighted by consumption.

⁹ Compiled by the Indian Department of Statistics; quotations on 75 commodities.

¹ Compiled by the Association of Life Insurance Presidents. The data represent only new business that has been paid for, exclusive of revivals, increases, and dividend additions. The 40 companies whose new business is included in this table had in force 77.1 per cent of the total legal reserve life insurance outstanding in the United States as of Dec. 31, 1920.

¹ Figures for Debits to individual accounts, Condition of Federal Reserve Banks, and Condition of reporting member banks are from the *Federal Reserve Board*; Bank clearings from *Bradstreets*; New York State Savings banks deposits from *Savings Banks Association of the State of New York*; Savings deposits (in both commercial and savings banks) in the Third Federal Reserve district at end of month from *Federal Reserve Bank of Philadelphia*; Savings deposits (in both commercial and savings banks) in the Seventh Federal Reserve district at end of month from *Federal Reserve Bank of Chicago*; Postal savings from *U. S. Post Office Department*.

² Debits of banks in about 150 of the larger clearing-house centers, covering weekly totals, the first and last weeks of the month being prorated.

³ Condition as of last Wednesday of the month.

⁴ Includes reports from more than 800 banks in the leading cities in the United States on condition at last Wednesday of month.

⁵ Includes 130 cities.

⁶ Yearly figures from 1914 to 1920, inclusive, are averages of deposits on June 30 and December 31 of each year; 1913 figures are for December 31; 1921 is average of quarterly figures.

⁷ Approximate figure calculated from deposits and with drawsals.

INTEREST RATES, SECURITY PRICES, AND ISSUES.

¹ Compiled by the *Credit Clearing House* from reports to it by manufacturers and wholesalers on items of credit facts from their ledgers concerning merchants or jobbers to whom they sell. The numerical data given above show the percentage which the number of payment items reported bears to the total number of transactions reported. The commodities covered by these transactions are largely textiles. The year 1916 is taken as a base, as payments were abnormally high in 1919.

² California, Oregon, and Washington.

³ Arizona, New Mexico, Colorado, Utah, Nevada, Idaho, and Wyoming.

⁴ Montana, North and South Dakota, Minnesota, and Wisconsin.

⁵ Kansas, Nebraska, Iowa, Missouri, Illinois, Indiana, Kentucky, and Ohio.

⁶ Texas, Oklahoma, Arkansas, Louisiana, Mississippi, Alabama, Tennessee, Georgia, Florida, North and South Carolina.

⁷ States east of and including Pennsylvania, West Virginia, and Virginia.

¹ Compiled by the *Credit Clearing House* from reports to it by manufacturers and wholesalers on items of credit facts from their ledgers concerning merchants or jobbers to whom they sell. The numerical data given above show the percentage which the number of items reported relating to orders or to creation of indebtedness bears to the total number of transactions reported. As one transaction may cover both an order and an indebtedness or a payment, the sum of the percentages of orders, indebtedness, and payments will usually exceed 100 per cent. The commodities covered are largely textiles, and the individual orders are stated to average from \$250 to \$600, depending on trade conditions. The year 1916 is taken as a base, as it is believed to be more nearly normal than 1919, in which orders and payments were unusually large and indebtedness unusually small.

For boundaries of districts see page 17.

¹ Daily averages of noon rates for cable transfers reported to the Treasury daily by the *New York Federal Reserve Bank*. Average figures for the years 1914 to 1918, inclusive, where given, are weekly averages of commercial quotations from the *Annalist*.

² Parity established October, 1920. Prior to that, par value of the rupee was 32.44 cents.

³ The foreign exchange index number recently computed by the *Federal Reserve Board* is based upon the average rates of exchange for 18 countries. The index represents the weighted geometric average of cable transfer rates on these countries. The weights used are based on the total volume of imports and exports of merchandise, gold, and silver from and to each country for the preceding month. The countries used in computing the index are Belgium, Denmark, England, France, Germany, Italy, Netherlands, Norway, Spain, Sweden, Switzerland, Canada, Argentina, Brazil, Chile, China, India, and Japan.

⁴ Average value of the paper peso in 1913.

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, and represent imports of merchandise only. Up to and including May, 1921, import values represented "actual market value or wholesale price at the time of exportation to the United States, in the principal markets of the country from whence exported, including the value of all containers and coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." (Tariff act of 1913.) Beginning with June, 1921, the import values are either the actual foreign market value, as defined above, or "the export value, including any export tax imposed by the country of exportation," whichever is higher. (Emergency tariff act of May 27, 1921.)

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, and represent exports, including reexports, of merchandise only. Values are those at time of exportation in the ports of the United States whence exported, except reexports from bonded warehouses, which are expressed in their import value.

² Total for year 1917 is \$3,275. No figures for 1918.

FOREIGN TRADE OF THE UNITED KINGDOM.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² See p. 135 for exchange rates on French francs.³ One metric ton is equal to 10 quintals, or 1,000 kilograms, and is equivalent to 2,204.6 pounds avoirdupois.⁴ Includes parcel post shipments.⁵ Figures for months of 1921 are based on 1919 valuation, which will later be revised to a 1921 valuation.⁶ Monthly average of first five months of the year. Data not available by months on account of change to final 1920 valuation.

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce from official reports.² Average for first six months only.³ See p. 135 for exchange rates on these countries. The Danish crown is now worth from 16 to 18 cents compared to a par value of 26.3 cents.⁴ 1 metric ton equals 1,000 kilograms and is equivalent to 2,204.6 pounds avoirdupois. A cubic meter equals 1.358 cubic yards.⁵ Figures not available for separate months of 1921. These represent monthly averages for quarters, ending at these dates.⁶ Merchandise only, exclusive of coin and bullion: 1920 averages have been calculated on final revised annual figures and are somewhat higher than the unrevised monthly figures.

FOREIGN TRADE OF THE NETHERLANDS.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² The Spanish peseta at present exchange rates is worth about 15 cents.³ One quintal contains 100 kilograms and is equivalent to 220.46 pounds. One metric ton equals 10 quintals or 2,204.6 pounds. One hectoliter equals 26.4 gallons.⁴ Less than one.

¹ Compiled from reports of the respective governments by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² No actual figures available for 1921. Official estimate for first 6 months gives a monthly average import of 71,000,000 pesos, and exports of 84,000,000 pesos.³ Yearly figures represent the monthly averages for the Canadian fiscal year which ends March 31. Hence the 1921 average.⁴ Figures by months not available for 1920. Official estimate by Argentine Minister of Finance.⁵ Monthly average for quarter ended this month.⁶ Import values are official; export values are real.

FOREIGN TRADE OF THE AMERICAS.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² One Egyptian kantar is equal to 99.05 pounds.³ Includes ox, cow, sheep, goat, and seal.⁴ The monthly averages for 1920 are obtained from the yearly totals. In some cases they do not check exactly with the preliminary figures reported each month.⁵ Trade figures represent general imports (including specie and articles for South African Governments), and domestic exports (including raw gold).

¹ Compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce, from official sources. Figures for France include lignite (averaging 66,000 tons per month in 1913). Beginning 1919, Alsace-Lorraine (averaging 203,000 tons monthly in 1919, and 264,000 tons in 1920), is included with France instead of with Germany and beginning 1920, the Saar district (784,000 tons per-month) is similarly transferred. Upper Silesia, whose disorders were responsible for the curtailment of German production in May, 1921, is still included with Germany.

² Five weeks' period; other months cover four weeks.

³ One metric ton is equivalent to 2,204.6 pounds.

¹ Compiled by the *Department of Commerce, Bureau of Foreign and Domestic Commerce*, from official sources. Canadian figures furnished direct by *Dominion Department of Labour, Employment Service of Canada*. The figures, except in the case of British compulsory insurance, which relate to the operations of the government labor bureau, represent the percentage of trade-union members employed. They have been converted, by inverting, from the original figures showing percentage *unemployed*.

² Quarter ending this month

³ December.

⁴ Average of quarters, March, June, September, and December.

⁵ The report for December covers 6,075,755 organized workers of whom only 97,687 or 1.6 per cent were unemployed.
