Survey of Current Business

Table of Contents

July 2004

1. **Business Situation: Final Estimates for the First Quarter of 2004**

Real GDP increased 3.9 percent (at an annual rate) in the first quarter of 2004 after increasing 4.1 percent in the fourth quarter of 2003; most of the major components of GDP contributed to the first-quarter increase. The price index for gross domestic purchases increased 3.5 percent after increasing 1.3 percent; the pickup partly reflected an upturn in energy prices. Corporate profits increased \$20.9 billion (1.7 percent at a quarterly rate) after increasing \$81.4 billion.

5. **Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, First Quarter 2004**

The quarterly and monthly estimates have been updated. The estimates of inventories for manufacturing by stage of fabrication have also been updated.

8. **Comprehensive NIPA Revision: Newly Available Tables**

10. **U.S. Multinational Companies: Operations in 2002**

The worldwide value added in production by U.S. multinational companies decreased 0.4 percent in 2002, reflecting a decrease in production by U.S. parents that was offset by an increase in production by their majority-owned foreign affiliates. By industry, the decrease was accounted for by substantial decreases in production by U.S. parents in telecommunications services and in communication equipment manufacturing. By area, production decreased in the United States, Canada, Latin America and Other Western Hemisphere, and the Middle East, and it increased in Europe, Asia and Pacific, and Africa.

30. **The International Investment Position of the United States at Yearend 2003**

The net international investment position at current cost was -\$2,430.7 billion; in 2002, it was -\$2,233.0 billion. The -\$197.7 billion increase mainly resulted from large net foreign purchases of U.S. securities that increased the value of foreign-owned assets; the increase in the value of these assets was partly offset by a substantial increase in the value of U.S.-owned assets abroad, especially U.S.-held stocks, as a result of the appreciation of most foreign currencies against the U.S. dollar.

40. **Direct Investment Positions for 2003: Country and Industry Detail**

The historical-cost position of U.S. direct investment abroad (USDIA) increased significantly more than the position of foreign direct investment in the United States (FDIUS). The USDIA position increased 12 percent, slightly less than the 13-percent average annual growth in 1994-2002; the 12-percent growth mainly resulted from an increase in reinvested earnings and currency-translation adjustments. The FDIUS position increased 3 percent, substantially less than the 14-percent average annual growth in 1994-2002, reflecting the continued weakness in merger and acquisition activity. The 3-percent increase mainly resulted from equity capital inflows.

52. **Annual Revision of the U.S. International Accounts, 1989-2003**

Each year, estimates in the U.S. international transactions accounts and in the U.S. international investment position accounts are revised to incorporate statistical and methodological changes and updated, regularly available source data. This year, major changes include a new methodology to prepare the estimates of U.S. Government income payments, the incorporation of the U.S. Treasury Department's new annual surveys of securities liabilities for June 2003 and June 2004, and another definitional change in the measurement of insurance services.

65. **How BEA Aligns and Augments Source Data From the U.S. Treasury Department for Inclusion in the International Transactions Accounts**

The estimates of financial-account flows in the international transactions accounts are based on data from the Treasury Department that are adjusted. The adjustments to align and augment the data are presented in this report.

68. **U.S. International Transactions, First Quarter 2004**

The U.S. current-account deficit increased \$17.9 billion, to \$144.9 billion. The increase was mostly accounted for by an increase in the deficit on trade in goods, but a decrease in the surplus on income and an increase in net outflows for unilateral current transfers also contributed. In the financial account, net recorded financial inflows decreased \$10.4 billion, to \$158.3 billion; both outflows for U.S.-owned assets abroad and inflows for foreign-owned assets in the United States increased substantially, but outflows increased more than inflows.

116. **State Personal Income: First Quarter of 2004**

Personal income for the Nation grew 1.4 percent, the same as in the fourth quarter of 2003, and up from 1.2 percent in the third quarter. Personal income growth accelerated in 21 states and in the District of Columbia. Earnings in all industries except natural resources and mining grew. Decreases in farm earnings contributed to decreases in personal income in three states in the Plains region and in one state in the Rocky Mountain region.

D-1. **BEA Current and Historical Data**

Looking Ahead

Annual Revision of the NIPAs. The annual NIPA revision will be published in the August Survey. This issue will include an article that describes the effects of the revision on GDP and on other major NIPA estimates and the principal sources of the revision, and it will include an extensive set of NIPA tables.

Results of the 2002 Benchmark Survey of U.S. Affiliates of Foreign Companies. The preliminary results of the latest benchmark survey of foreign direct investment in the United States will also be published in the August Survey. These results update the annual data series on the operations of these U.S. affiliates, and they provide additional data that are only collected in benchmark surveys.

Travel and Tourism Satellite Accounts for 1998-2003. Updated estimates that are based on the estimates from the recent comprehensive revision of the annual industry accounts are scheduled to be published in an upcoming issue of the Survey.

Business Situation

Final Estimates for the First Quarter of 2004

ACCORDING to the “final” estimates of the national income and product accounts (NIPAs), real GDP increased 3.9 percent in the first quarter of 2004 (table 1 and chart 1).¹ The “preliminary” estimates released in May showed a 4.4-percent increase for the quarter. The downward revision to GDP mainly reflected revisions to imports and to consumer spending for services that were partly offset by a revision to exports (table 2).²

1. Quarterly estimates in the NIPAs are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and annualized. “Real” estimates are in chained (2000) dollars, and price indexes are chain-type measures.

2. In this article, “consumer spending” is shorthand for the NIPA series “personal consumption expenditures,” “inventory investment” is shorthand for “change in private inventories,” and “government spending” is shorthand for “government consumption expenditures and gross investment.”

This article was prepared by Daniel Larkins.

Table 1. Real Gross Domestic Product and Components
(Seasonally adjusted at annual rates)

	Change from preceding period (percent)				Contribution to percent change in real GDP (percentage points)				Share of current-dollar GDP (percent)
	2003		2004		2003		2004

Nondefense	-5.0	6.5	-3.7	-0.3	-0.12	0.15	-0.09	-0.01	2.3
State and local	-0.8	2.1	-0.5	-0.3	-0.10	0.25	-0.06	-0.03	11.5

NOTE: Percent changes are from NIPA table 1.1.1, and contributions to percent change are from NIPA table 1.1.2. Shares are from NIPA table 1.1.10.

- The first-quarter real GDP increase of 3.9 percent was similar to the 4.1-percent increase in the fourth quarter of 2003. (The average annual rate of growth of real GDP over the past 10 years was 3.3 percent.)
- Prices of goods and services purchased by U.S. residents increased 3.5 percent, 0.2 percentage point more than in the preliminary estimate. In the fourth quarter of 2003, prices had increased 1.3 percent. The step-up from the fourth quarter to the first partly reflected an upturn in energy prices.
- Real disposable personal income (DPI) increased 4.9 percent, unrevised from the preliminary estimate. In the fourth quarter, DPI had increased 1.2 percent.

Most major components of GDP contributed to the 3.9-percent first-quarter increase; the contributions of these components were partly offset by imports, which are subtracted in the calculation of GDP.

- Consumer spending increased 3.8 percent in the first quarter and contributed 2.64 percentage points to GDP growth, a little more than it had contributed to fourth-quarter growth. Purchases of services and of nondurable goods stepped up, but purchases of durable goods turned down.

Chart 1. Real Gross Domestic Product

- Exports increased 7.5 percent after increasing 20.5 percent and contributed 0.72 percentage point to GDP growth. Most of the slowdown was accounted for by exports of nonautomotive capital goods and of services.
- Investment in private inventories increased about as much in the first quarter as in the fourth and contributed 0.65 percentage point to GDP growth.

GDP price index.....	2.8	2.6	0.2			

NOTE: The final estimates for the first quarter of 2004 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Retail sales for March (revised) and bank services data for the quarter.

Nonresidential fixed investment: Construction put-in-place data for February and March (revised), manufacturers' shipments of machinery and equipment for March (revised), and exports and imports of machinery for March (revised).

Residential fixed investment: Construction put-in-place data for February and March (revised).

Change in private inventories: Manufacturing and trade inventories for March (revised) and stocks of coal and petroleum at electric utilities for February.

Exports and imports of goods and services: Exports and imports of goods and services for October 2003 through March 2004 (revised) reflecting (on a "best-change basis") the results of the annual revision of BEA's international transactions accounts.

Government consumption expenditures and gross investment: State and local construction put-in-place for February and March (revised).

Wages and salaries: Revised employment, average hourly earnings, and average weekly hours for March.

GDP prices: Export and import prices for January through March (revised), unit-value index for petroleum imports for March (revised), prices of single-family houses under construction for the quarter (revised), and bank services data for the quarter.

- Nonresidential fixed investment increased 5.3 percent, about half as much as in the fourth quarter, and it contributed 0.54 percentage point to GDP growth. Investment in equipment and software slowed, and investment in structures decreased more than in the fourth quarter.
- Government spending increased 3.0 percent after little change in the fourth quarter, and it also contributed 0.54 percentage point to GDP growth. The increase was more than accounted for by national defense spending; Federal nondefense spending and spending by state and local governments each decreased slightly.
- Residential investment increased 4.6 percent after increasing 7.9 percent and contributed 0.24 percentage point to GDP growth. The slowdown was more than accounted for by single-family construction.
- Imports increased 10.4 percent after increasing 16.4 percent and subtracted 1.43 percentage points from GDP growth. The biggest contributions to the slowdown were made by autos, by nonautomotive consumer goods, and by nonautomotive capital goods; petroleum imports turned up. The final estimates for the first quarter also show the following:
 - Real final sales of domestic product (GDP less the change in private inventories) increased 3.2 percent after increasing 3.4 percent.
 - Real gross domestic purchases increased 4.4 percent after increasing 4.3 percent.
 - Real gross national product (GNP) increased 3.4 percent after increasing 5.5 percent.³ The smaller first-quarter increase in GNP than in GDP reflected a slight decrease in income receipts from the rest of the world and a moderate increase in income payments to the rest of the world.
 - Motor vehicle output turned down. Excluding motor vehicles, real GDP increased 4.4 percent after increasing 4.2 percent.

3. GNP is a measure of the goods and services produced by labor and property supplied by U.S. residents regardless of where they are located; in contrast, GDP is a measure of the goods and services produced by labor and property in the United States, regardless of nationality. The two measures are related as follows: GNP equals GDP *plus* income receipts from the rest of the world *minus* income payments to the rest of the world.

Corporate Profits

Profits from current production increased \$20.9 billion (1.7 percent at a quarterly rate) in the first quarter of 2004 after increasing \$81.4 billion (7.2 percent) in the fourth quarter of 2003 (table 3).⁴ The slowdown was mostly accounted for by a downturn in profits from the rest of the world; profits of

4. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown as "corporate profits with inventory valuation and capital consumption adjustments" in NIPA tables 1.7.5, 1.10–1.12, 1.14–1.16, and 6.16D.

Percent changes in profits are shown at quarterly, not annual, rates.

CCAj Capital consumption adjustment

domestic industries increased almost as much as in the fourth quarter.⁵

The revised first-quarter estimate of profits from current production is \$6.5 billion higher than the preliminary estimate released a month ago. Profits from the rest of the world were revised up \$11.5 billion, and the upward revision more than offset a \$5.1 billion downward revision to profits of domestic industries. The upward revision to profits from the rest of the world was more than accounted for by receipts from foreign affiliates. The downward revision to profits of domestic industries was more than accounted for by financial corporations.

Taxes on corporate income increased slightly in the first quarter. After-tax profits from current production increased \$20.4 billion (2.1 percent).

The first-quarter decrease in rest-of-the-world profits reflected a larger increase in payments by domestic affiliates to foreign parents than in receipts from foreign affiliates of domestic parents.

Profits of domestic financial corporations increased \$19.6 billion (6.4 percent).

Profits of domestic nonfinancial corporations increased \$11.7 billion (1.7 percent), reflecting an increase in real output.⁶ Unit profits were unchanged in the first quarter, as an increase in unit prices was matched by an increase in unit costs.

Net cash flow from current production, a profits-related measure of internally generated funds available for investment, increased \$20.1 billion.⁷ The ratio of cash flow to nonresidential fixed investment, an indicator of the extent to which the current level of investment could be financed by internally generated funds, held at the record level of 110.2 that was set in the preceding quarter; the ratio has been above 100 for four consecutive quarters.

5. Profits from the rest of the world is the difference between (1) receipts by U.S. residents of earnings from foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations and (2) payments by U.S. affiliates of earnings to foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.

6. "Output" here is shorthand for "gross value added of nonfinancial corporate business" (see NIPA table 1.14).

7. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

Industry profits. The current-production measure of profits is not available at the detailed industry level, because estimates of the capital consumption adjustment (CCAdj) are not available at this level. (CCAdj is only available for total financial industries and for total nonfinancial industries). Consequently, industry profits are best measured by profits with inventory valuation adjustment (IVA).

In the first quarter, domestic industry profits with IVA decreased \$32.6 billion.

For domestic nonfinancial industries, profits with IVA decreased \$43.3 billion. About half of the decrease

was accounted for by manufacturing; manufacturers of “other durable” goods and of “other nondurable” goods posted the biggest decreases. Wholesale trade and the information industry also posted notable decreases (chart 2).

For domestic financial industries, profits with IVA increased \$10.7 billion. Almost half of the increase was accounted for by corporations (including bank holding companies) that manage companies and enterprises. Increases were also posted by corporations that handle security and commodity investments and insurance.

Chart 2. Corporate Profits with Inventory Valuation Adjustment: Change from 2003:IV to 2004:I

Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the First Quarter of 2004

This report presents quarterly estimates for the fourth quarter of 2003 and the first quarter of 2004 and monthly estimates for November and December of 2003 and January to April 2004.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates. Table 1B presents inventories, and table 2B presents sales. Table 3B presents the inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to changes in demand; these ratios supplement the quarterly current-

dollar and real estimates of ratios of inventories to final sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.7.5B and 5.7.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at <www.bea.gov>. Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying detail tables" and then on "List of Underlying Detail Tables."

^p Preliminary.

^r Revised.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

^p Preliminary.
^r Revised.

Note: Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2000) dollar sales are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

^p Preliminary.^r Revised.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Comprehensive Revision of the NIPAs Newly Available Tables

As part of the comprehensive revision of the national income and product accounts (NIPAs), this report presents newly available NIPA tables 7.20 and 2.9. The August issue of the SURVEY OF CURRENT BUSINESS will include an article that describes the 2004 annual NIPA revision and an extensive set of NIPA tables that will include table 1.13 (national income by sector and legal form). The October issue will include tables 3.15–3.19 (government

expenditures by function and reconciliation tables). Table 3.20 (Commodity Credit Corporation reconciliation table) will no longer be produced because of resource constraints.

The February 2004 issue included an article that described the comprehensive revision and an extensive set of NIPA tables. The March to June issues presented newly available tables.

Gap, IRS less BEA nonprofit institution gross consumption expenditures and current transfer payments	34	35.3	53.0

1. For 1996, includes an adjustment to account for some classes of tax-exempt institutions not included in the IRS statistics.

2. Primarily reflects adjustment for differences between IRS and BEA in sector definitions and in treatment of scholarships and fellowships.

3. Includes activities of nonprofit institutions serving business, unrelated sales, secondary sales, and sales to business, government, and the rest of the world.

4. Includes grants and allocations made by nonprofit institutions that indirectly support households through the support of other nonprofit institutions, plus their payments to affiliates.

5. Reflects partial coverage in the IRS statistics.

6. Consists of imputed interest received for depositor and insurance services, net insurance settlements, and capital consumption adjustment for rental income.

7. Estimates of income and outlays of nonprofit institutions serving households are provided in table 2.9.

8. Equals table 2.9, line 64.

9. IRS-reported capital consumption allowance less BEA-estimated consumption of fixed capital for structures and for equipment and software of nonprofit institutions serving households.

10. Consists primarily of services furnished without payment by financial intermediaries except life insurance carriers for depositor and insurance services, less expenditures for computer software investment.

11. Equals table 2.9, line 58.

12. Equals table 2.9, line 70.

1. Consists of nonmortgage interest paid by households.

2. Includes benefits paid to members, specific assistance to individuals, and grants and allocations.

3. Excludes unrelated sales, secondary sales, and sales to business, government, and the rest of the world; includes membership dues and fees.

4. Includes individual contributions and bequests from households.

5. Expenditures are net of unrelated sales, secondary sales, and sales to business, government, and the rest of the world.

6. Consists of excise taxes paid by nonprofit institutions serving households.

7. Consists of rental income of nonprofit institutions (line 48), income receipts on assets (line 49), transfer receipts from government (line 53), and transfer receipts from business (line 54).

8. Includes grants and allocations made by nonprofit institutions that indirectly support households through the support of other nonprofit institutions, plus their payments to affiliates.

NOTE: Estimates in this table exclude nonprofit institutions serving business and government.

U.S. Multinational Companies

Operations in 2002

By Raymond J. Mataloni Jr.

THE worldwide value added and employment of nonbank U.S. multinational companies (MNCs) decreased in 2002 for the second consecutive year, according to the preliminary results from the annual survey of U.S. direct investment abroad conducted by the Bureau of Economic Analysis (BEA).¹ The worldwide value added of MNCs—U.S. parent companies and their majority-owned foreign affiliates (“foreign affiliates”) combined—decreased 0.4 percent in 2002 (table 1). The decrease reflected partly offsetting changes for U.S. parents and for their foreign affiliates: The value added of parents decreased 1.9 percent, but that of their foreign affiliates increased 4.4 percent. Employment by MNCs decreased 1.1 percent, and most of the decrease was accounted for by U.S. parents, whose employment decreased 1.4 percent; employment by foreign affiliates edged down 0.1 percent. Capital spending by MNCs decreased 13.3 percent,

1. In the data on the operations of multinational companies, the term “value added” has replaced the term “gross product;” this change was made to conform with the changes that were initiated as part of the most recent comprehensive revision of the national income and product accounts. See Nicole Mayerhauser, Shelly Smith, and David F. Sullivan, “Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables,” *SURVEY OF CURRENT BUSINESS* 83 (August 2003): 20. The estimates of MNC value added are measures of gross value added rather than net value added because they are calculated without deduction for the consumption of fixed capital used in production.

Acknowledgments

The 2002 annual survey was conducted under the direction of Patricia C. Walker. James Y. Shin supervised the editing and processing of the reports. The following staff contributed to the processing and editing of the survey or to the related computer programming: Joan O. Adams, Christina D. Briseno, Beverly Brooks, James J. Crim, Stacy Demkowicz, Mark Goddard, David N. Hale, Carole J. Henry, Jeanne Hicks, Barbara K. Hubbard, Neeta Kapoor, Stephanie A. Lewis, Steve D. Lewis, Marcia S. Miller, Xia Ouyang, Amanda M. Petersen, Monique M. Pickett, Robert Ruiz, Myriam Rullan, Gary E. Sowers, Nancy F. Steffen, Felita A. Traynham, and Melissa West.

and the decrease was more than accounted for by U.S. parents, whose capital spending decreased 17.5 percent; capital spending by foreign affiliates increased 2.2 percent.

The weakness in MNC operations in 2002 primarily reflected large decreases in a small number of industries, and it was concentrated in the United States. The decreases in telecommunications services and in communication equipment manufacturing industries reflected poor business conditions in the U.S. telecommunications industry, which resulted in falling production, business divestitures, and some business failures for U.S. parents. U.S. MNCs in these two industries accounted for more than the total decrease in MNC value added; they accounted for two-thirds of the total decrease in employment and for more than half of the decrease in capital expenditures. In contrast, the operations of foreign affiliates in telecommunications services continued to grow in response to new market opportunities that partly resulted from deregulation of the industry in some host countries. MNC operations were also weak in the utilities industry, partly reflecting some large-scale business failures. In addition to the U.S. parent companies that were directly affected by these failures, other parent companies that provided services to these companies were indirectly affected.

By region, changes in MNC value added were mixed: MNC value added decreased in the United States, Canada, Latin America and Other Western Hemisphere, and the Middle East, and it increased in Europe, Asia and Pacific, and Africa (chart 1). In addition to the weaknesses in specific industries that occurred in the United States but not abroad, the mixed changes also reflected differences among the countries and regions in rates of economic growth.

The following are additional highlights of MNC operations in 2002:

- Worldwide value added, capital expenditures, and employment of U.S. MNCs remained concentrated in the United States, but the distributions of some measures of operations have changed. The U.S.-

parent share of worldwide MNC value added was about the same—75 percent—as in 1977; the parent share of capital expenditures was 75 percent, down from 79 percent; and the parent share of employment was 73 percent, down from 78 percent.

- U.S. MNCs continued to account for a large share of the U.S. trade in goods in 2002. U.S. exports of goods that involved U.S. parents or their foreign affiliates were \$399.7 billion, or 58 percent of total U.S. exports of goods. U.S. imports of goods that were associated with U.S. MNCs were \$427.6 billion, or 37 percent of total U.S. imports of goods.
 - High-wage countries continued to host the majority of all newly acquired or established foreign affiliates. The value added of new affiliates in high-wage countries accounted for 89 percent of the total value added of all new affiliates, up from 77 percent in 2001.
 - Among the foreign G-7 countries, the share of host-country gross domestic product (GDP) that was accounted for by the value added of foreign affiliates was 10 percent for Canada, 7 percent for the United Kingdom, 3 percent for France and Germany, 2 percent for Italy, and less than 1 percent for Japan. For most of these countries, the foreign-affiliate shares were up slightly from 1994.
- This article examines the following aspects of U.S.-MNC operations in 2002: Changes in the worldwide operations, changes in the U.S. operations, and changes in the foreign operations. Then it examines the trends in, and revisions to, the estimates of key measures of U.S.-MNC operations.

Worldwide Operations of U.S. MNCs

Three aspects of the worldwide operations of U.S. MNCs are examined here: The changes in value added, in employment, and in the associated U.S. trade in goods.

Changes in value added

The current-dollar value added of U.S. MNCs decreased 0.4 percent in 2002, to \$2,468.8 billion; the current-dollar value added of U.S. parents decreased 1.9 percent, to \$1,857.4 billion; and that of foreign affiliates increased 4.4 percent, to \$611.5 billion. The available evidence on changes in prices and in exchange rates suggests that in real terms, the value added of U.S. parents decreased and that of their affiliates increased. For U.S. parents, the current-dollar value added decreased despite a U.S. price inflation rate of 1.5 percent (as measured by the implicit price deflator for GDP of all U.S. businesses). For foreign affiliates, the increase in current-dollar value added exceeded the 2.5-percent average rate of inflation in the

MNCs Multinational companies

n.a. Not available.

MOFAs Majority-owned foreign affiliates

Chart 1. Percent Change in the Value Added of Nonbank U.S. Multinational Companies by Country, 2002

host countries of the affiliates.² In addition to changes in prices, the value added of foreign affiliates can be affected by exchange-rate changes, but the weighted ex-

change value of the dollar was essentially unchanged in 2002.³

2. The rate of inflation in the euro-area countries and in 15 other major host countries averaged 2.5 percent. (Together, these countries accounted for 84 percent of total value added by foreign affiliates in 2002.) The average inflation rate in these countries was derived as a weighted average (in terms of foreign-affiliate value added) using data on GDP implicit price deflators from the World Bank Group Web site.

3. The survey data that are used to compute the value-added estimates are based on the books of the foreign affiliates, which are generally in the local foreign currency, so the data must be translated to obtain U.S.-dollar values. In 2002, the average (weighted by foreign-affiliate value added) U.S.-dollar price of the currencies of the euro-area countries and of 15 other major host countries was essentially unchanged.

Key Terms

The following key terms are used to describe U.S. multinational companies (MNCs) and their operations. For a comprehensive discussion of the terms and the concepts used, see Raymond J. Mataloni Jr., "A Guide to BEA Statistics on U.S. Multinational Companies," *SURVEY OF CURRENT BUSINESS* 75 (March 1995): 38–55.

U.S. MNCs

U.S. multinational company (MNC). The U.S. parent and its foreign affiliates. (In this article, an MNC is usually defined as the U.S. parent and its majority-owned foreign affiliates.)

U.S. parent. A person, resident in the United States, that owns or controls 10 percent or more of the voting securities, or the equivalent, of a foreign business enterprise. "Person" is broadly defined to include any individual, branch, partnership, associated group, association, estate, trust, corporation, or other organization (whether or not organized under the laws of any state), or any government entity. If incorporated, the U.S. parent is the fully consolidated U.S. enterprise consisting of (1) the U.S. corporation whose voting securities are not owned more than 50 percent by another U.S. corporation and (2) proceeding down each ownership chain from that U.S. corporation, any U.S. corporation whose voting securities are more than 50 percent owned by the U.S. corporation above it. A U.S. parent comprises the domestic operations of a U.S. MNC, covering operations in the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, and all other U.S. areas.

U.S. direct investment abroad (USDIA). The ownership or control, directly or indirectly, by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated business enterprise.

Foreign affiliate. A foreign business enterprise in which there is U.S. direct investment, that is, in which a U.S. person owns or controls (directly or indirectly) 10 percent or more of the voting securities or the equivalent. Foreign affiliates comprise the foreign operations of a U.S. MNC over which the parent is presumed to have a degree of managerial influence.

This article focuses primarily on the operations of

majority-owned foreign affiliates; for these affiliates, the combined ownership of all U.S. parents exceeds 50 percent. In 2002, these affiliates accounted for 84 percent of the employment of all foreign affiliates of U.S. MNCs, up from 77 percent in 1989.

Measures of operations

Value added (formerly referred to as "gross product"). The portion of the goods and services sold or added to inventory or fixed investment by a firm that reflects the production of the firm itself. Value added is a preferable measure of production because it indicates the extent to which a firm's sales result from their own production rather than from production that originates elsewhere, whereas sales data do not distinguish between these two sources of production. Value added can be measured as gross output minus intermediate inputs; alternatively, it can be measured as the sum of the costs incurred (except for intermediate inputs) and the profits earned in production. The value-added estimates were prepared by summing the cost and profits data collected in the annual and benchmark surveys of USDIA. For the derivation of the current-dollar value-added estimates, see Raymond J. Mataloni Jr. and Lee Goldberg, "Gross Product of U.S. Multinational Companies, 1977–91," *SURVEY* 74 (February 1994): 57.

Capital expenditures. Expenditures made to acquire, to add to, or to improve property, plant, and equipment (PP&E). PP&E includes land, timber, mineral and like-rights owned; structures, machinery, equipment, special tools, and other depreciable property; construction in progress; and tangible and intangible exploration and development costs. It excludes the changes in PP&E that are due to changes in the entity—such as mergers, acquisitions, and divestitures—or that are due to changes in accounting methods. Capital expenditures are measured on a gross basis; sales and other dispositions of fixed assets are not netted against them.

Employment. The number of full-time and part-time employees on the payroll at yearend. If the employment of a parent or an affiliate was unusually high or low because of temporary factors (such as a strike) or large seasonal variations, the number that reflected normal operations or an average for the year was requested.

Changes in employment

Employment by U.S. MNCs decreased 1.1 percent in 2002 to 30.6 million workers. The employment of U.S. parents decreased 1.4 percent to 22.4 million; the decrease was concentrated in manufacturing and in information (primarily telecommunications), mainly reflecting divestitures and restructurings that were partly in response to the communications network overcapacity and declines in telecommunications calling rates. The employment of foreign affiliates edged down to 8.2 million; decreases were largest in “accommodation and food services” and in utilities.

U.S.-MNC-associated U.S. imports as a percentage of total	39	38	37	38	37
Intra-U.S.-MNC imports as a percentage of total	17	16	16	16	16

1. In nonbenchmark survey years like 2002, this number is calculated as total exports (imports) between U.S. parents and all of their foreign affiliates (as reported by U.S. parents) less exports (imports) between U.S. parents and MOFAs (as reported by MOFAs).

2. For U.S. parents that are, in turn, owned 10 percent or more by a foreign person, the foreign parent group (FPG) consists of (1) the foreign parent of the U.S. parent, (2) any foreign person, proceeding up the foreign-parent's ownership chain, that owns more than 50 percent of the person below it, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it. Trade between foreign-owned U.S. parents and their FPGs is not considered “intra-MNC” trade in this table because FPGs are excluded from BEA's definition of a U.S. MNC.

3. In nonbenchmark survey years, this number is calculated as total exports (imports) associated with “other” (that is, minority-owned and 50-percent-owned) foreign affiliates (as reported by affiliates) less the estimate of exports (imports) between U.S. parents and “other” foreign affiliates that are calculated as described in footnote 1. However, these estimates may be imprecise because of differences in the coverage of the data reported by U.S. parents and foreign affiliates. No estimate of exports is available for 2000 because the differences were especially large that year. This source of imprecision also affects the accuracy of the distinction between total intra-MNC trade and MNC trade with others.

MNC Multinational company
MOFA Majority-owned foreign affiliate
n.a. Not available.

U.S.-MNC-associated trade in goods

In 2002, U.S. exports of goods that involved U.S. parents or their majority-owned or minority-owned foreign affiliates—MNC-associated exports—decreased 4.6 percent, to \$399.7 billion after a 6.6-percent decrease in 2001 (table 2). These decreases coincided with similar decreases in goods exports by all U.S. businesses; as a result, the MNC share of total U.S. exports of goods was nearly unchanged, at 58 percent in 2002 and 57 percent in 2001.

The decrease in U.S.-MNC-associated exports of goods in 2002 reflected declines in both trade between U.S. parents and their foreign affiliates and U.S.-MNC trade with others.⁴ Exports by U.S. parents to their foreign affiliates decreased 7.2 percent, and U.S. exports between U.S. MNCs and others decreased 2.8 percent. By area, the decrease in intra-MNC exports was widespread, but the largest decreases were in Asia and Pacific and in Europe. By industry, the decrease in U.S. exports between U.S. MNCs and others was concentrated in audio and video equipment manufacturing and in transportation equipment manufacturing. In audio and video equipment, the decrease may have reflected a reduction in sales to foreign customers in the telecommunications industry. In transportation equipment, the decrease was partly accounted for by a reduction in shipments of automobile components to Canadian and Mexican affiliates that manufacture automobiles for the U.S. market in which unit sales decreased in 2002.

MNC-associated imports of goods decreased 2.2 percent, to \$427.6 billion after a 2.0-percent decrease in 2001. The decrease in 2002 coincided with an upturn in goods imports by all U.S. businesses, which increased 1.8 percent after decreasing 6.3 percent in

4. U.S.-MNC-associated U.S. trade in goods may be disaggregated into two broad categories: (1) Intra-MNC trade—trade between U.S. parents and their foreign affiliates, and (2) MNC trade with others—trade between U.S. parents and foreigners other than their foreign affiliates and trade between foreign affiliates and U.S. persons other than their U.S. parents. BEA's data on intra-MNC trade are distinct from a similar data series on related-party trade from the Census Bureau. Unlike BEA's data on intra-MNC trade, which are from surveys of MNC operations, the Census Bureau data are based on a checkoff question in customs declarations of exports and imports. For exports, the definition of “related party” in the customs declarations is based on an ownership share of at least 10 percent, which is consistent with the definition of direct investment used in BEA's surveys; however, for imports, the customs definition is based on a 6-percent ownership share. In addition, the data on related-party trade, unlike BEA's data, do not distinguish the trade between U.S. and foreign units of U.S. multinational companies from the trade between U.S. and foreign units of foreign multinational companies; however, they do provide extensive product detail that is unavailable in the BEA data. For additional information on BEA's data, see William J. Zeile, “Trade in Goods Within Multinational Companies: Survey-Based Data and Findings for the United States of America” (paper presented at the Organisation for Economic Co-Operation and Development Committee on Industry and Business Environment, Working Party on Statistics, Session on Globalisation, Paris, France, November 3–4, 2003); <www.bea.gov/bea/papers.htm>.

2001. Because the imports by U.S. MNCs decreased and the imports by all U.S. businesses increased, the MNC share of total U.S. imports of goods decreased from 38 percent in 2001 to 37 percent in 2002.

The 2.2-percent decrease in U.S.-MNC-associated imports of goods was more than accounted for by a 4.2-percent decrease in U.S.-MNC trade with others; imports shipped by foreign affiliates to their U.S. parents edged up 0.6 percent. The largest increase in intra-MNC imports was in Europe, and it mainly reflected increased shipments by Irish affiliates in pharmaceutical manufacturing. The decrease in U.S. imports between U.S. MNCs and others was concentrated in petroleum-related industries and in audio and video equipment manufacturing. The decrease in petroleum industries coincided with an overall decrease in U.S. imports of petroleum products, and the decrease in audio and video equipment mainly reflected weak producer demand in the telecommunications industry.

U.S. Parents' Operations

The changes in the value added of U.S. parents by industry in 2002 are examined here.

Changes in value added

The value added of U.S. parents decreased 1.9 percent in 2002, to \$1,857.4 billion, after decreasing 11.6 percent in 2001. These decreases are the first decreases since the annual series began with data for 1994. In 2002, the decreases that were related to reduced output from ongoing operations were somewhat larger than the decreases related to U.S. companies leaving the MNC universe by selling or liquidating their last foreign affiliate or, less commonly, by going out of business altogether (table 3).

By industry, the \$35.0 billion decrease in the value added of all U.S. parents was more than accounted for by decreases in information, in utilities, and in petro-

leum and coal products manufacturing (table 4).⁵ In information, the value added of U.S. parents decreased \$22.8 billion (or 9 percent); the decrease was concentrated in telecommunications and partly reflected the divestiture of business units by some U.S. parents and the reduced revenue that resulted from falling rates and usage in conventional long distance telephone service. In utilities, the value added of U.S. parents decreased \$21.2 billion (or 21 percent); the decrease partly reflected the large-scale business failures of some U.S. parent companies that also affected other parent companies that had provided services to the companies. Within manufacturing, petroleum and coal products decreased \$17.6 billion (or 19 percent); the decrease reflected a fall in global petroleum production, which partly reflected weak economic growth in some major consuming regions.

The decreases in the value added of U.S. parents in these industries were partly offset by increases in the value added of U.S. parents in "finance (except depository institutions) and insurance" and in "other industries" (mainly retail trade). The increase in finance and insurance was most pronounced in insurance and

5. The estimates in this article are classified by industry using BEA's International Survey Industry (ISI) classification system that is based on the 1997 North American Industry Classification System (NAICS). Beginning with the results of the 2004 benchmark survey of U.S. direct investment abroad, the estimates will be classified by an ISI system that is based on the 2002 NAICS.

1. Parents that established or acquired their first foreign affiliate in 2002.

2. Consists of changes in existing operations and changes resulting from parents acquiring, establishing, selling, or liquidating parts of their consolidated operations. BEA generally requires survey respondents to fully consolidate their U.S.-parent operations.

3. Parents that sold or liquidated their last foreign affiliate and those that went out of business in 2002.

4. Equals the change in the value added of parents not accounted for in lines 3-5, such as changes resulting from the addition to the survey universe of parents that were required to report in earlier years but did not.

mainly reflected a general rise in the sales of insurance in the United States.⁶ The increase in retail trade largely reflected the expansion of discount retail stores.

Operations of Foreign Affiliates

Three aspects of the operations of foreign affiliates are examined here: The changes in value added, the country and industry distributions of newly acquired or established affiliates, and the affiliates' shares of host country GDP.

Changes in value added

The value added of foreign affiliates increased 4.4 percent to \$611.5 billion in 2002 (table 5). This increase reflects additions to the survey universe of affiliates that were newly acquired or established in 2002 (line 3 of table 5), expansion in the ongoing operations of existing affiliates (line 6), and other increases that could not be categorized (line 8). These changes were partly offset by sales or liquidations of foreign affiliates (line 7).

By region, the value added of foreign affiliates in Europe, Asia and Pacific, and Africa increased (table 6). The value added of affiliates in the Middle East, Latin America and Other Western Hemisphere, and Canada decreased.

In Europe, the value added of affiliates increased \$25.6 billion, or 8.1 percent. The increase was concentrated in manufacturing, wholesale trade, and information. In manufacturing, the increase partly reflected the acquisition of new affiliates. In some countries, it also reflected increases in production by

6. Based on data from the Insurance Information Institute's Web site at <www.iii.org>, written premiums on property-casualty insurance in the United States increased 14 percent in 2002, up from 8 percent in 2001.

Table 5. Sources of Change in Value Added of Nonbank Majority-Owned Foreign Affiliates, 2001–2002

[Millions of dollars]

Line		Millions of dollars
1	2001 level	585,657
2	Total change	25,799
3	New foreign affiliates	5,058
4	Acquired by U.S. parents.....	4,031
5	Established by U.S. parents.....	1,027
6	Changes in existing operations ¹	12,335
7	Sales or liquidations of foreign affiliates	-4,870
8	Other changes ²	13,276
9	2002 level	611,456

1. Includes changes resulting from foreign affiliates acquiring, establishing, selling, or liquidating parts of their consolidated operations. BEA permits survey respondents to consolidate affiliate operations that are in the same country if the affiliates are also in the same industry or are integral parts of a single business operation.

2. Equals the change in the value added of foreign affiliates not accounted for in lines 3–7, such as changes resulting from the addition to the survey universe of affiliates that were exempt from reporting in earlier years and affiliates that were required to report in earlier years but did not. Line 8 will also capture any measurement error in the items on the other lines, because it is calculated as the difference between line 2 and the sum of lines 3, 6, and 7.

existing affiliates; for example, sales by British and French automobile manufacturing affiliates increased significantly. In information, the increase was concentrated in telecommunications and partly reflected the growing market for high-speed Internet services.

In Asia and Pacific, the value added of affiliates increased \$5.6 billion, or 5.1 percent. The increase was concentrated in “finance (except depository institutions) and insurance” and in manufacturing. In finance and insurance, the increase mainly reflected the acquisition of new affiliates in the insurance industry. In manufacturing, the increase mainly reflected the establishment of new affiliates to produce consumer electronics.

In Africa, the value added of affiliates increased \$0.8 billion, or 6.0 percent. The increase was concentrated in petroleum-related mining and manufacturing and in information. The increase in petroleum mainly reflected increased crude oil extraction in Saharan Africa. The increase in information mainly reflected rising demand for Internet-related services in South Africa.

In the Middle East, the value added of affiliates decreased \$1.5 billion, or 18.8 percent. The decrease was most pronounced for affiliates in Israel.

Table 6. Value Added of Nonbank Majority-Owned Foreign Affiliates by Major Area and Industry of Affiliate, 2001 and 2002

[Millions of dollars]

	2001	2002	Change	Percent change

Information	19,466	23,102	3,636	18.7
Finance (except depository institutions) and insurance	22,965	23,875	910	4.0
Professional, scientific, and technical services	31,499	30,962	-537	-1.7
Other industries	52,145	56,693	4,548	8.7

By major industry, the increases in value added were widespread, but they were particularly significant in manufacturing (primarily pharmaceuticals, transportation equipment, and computers) and in information (primarily telecommunications).

Newly acquired or established foreign affiliates

In 2002, U.S. MNCs acquired or established 242 new foreign affiliates, down from 403 in 2001 (table 7). The new affiliates had a combined value added of \$5.1 billion, down from \$5.8 billion in 2001. They employed 85,200 workers, down from 99,600.

By area, high-wage countries continued to be the most popular location for new affiliates in 2002.⁷ The value added of new affiliates in these countries accounted for 89 percent of the total value added of all

new affiliates, up from 77 percent in 2001. This tendency suggests that access to large and affluent markets continues to be a key consideration in decisions by U.S. companies to locate operations abroad.

By industry, manufacturing continued to be one of the most popular industries for new investments in 2002. New manufacturing affiliates accounted for 27 percent of all new affiliates, for 49 percent of their value added, and for 49 percent of their employment.

Affiliate share of host country GDP

Among the host countries listed in table 8, the share of host-country GDP accounted for by foreign affiliates in 2002 ranged from 19 percent in Ireland to less than 1 percent in Saudi Arabia.⁸ For most of the countries, these shares were little changed from those in 1994. For example, among the G-7 countries excluding the

7. High-wage foreign countries are defined as all the foreign members of the Organisation for Economic Co-operation and Development except the Czech Republic, Hungary, Mexico, Poland, the Slovak Republic, and the Republic of Korea. These exceptions and all other foreign countries are classified as low-wage countries.

8. Table 8 includes all of the countries shown in BEA's standard table format for data on U.S. direct investment abroad by country (table 10, for example) except for a few small Caribbean and Central American countries, several of which host some large holding companies of U.S. MNCs and are recognized as offshore financial centers.

D Suppressed to avoid disclosure of data of individual companies. Notes. The estimates in this table cover only newly acquired or established foreign affiliates. They exclude data for consolidated units of existing foreign affiliates that were acquired or established during the year.

The number of newly acquired or established affiliates for 2000–2002 are not strictly comparable with the number for new affiliates in the earlier annual surveys because of differences in the reporting thresholds. The

threshold for filing on the 2000–2002 surveys is total assets, sales, or net income of the foreign affiliate in excess of \$30 million. For the 1995–98 surveys, the threshold was \$20 million.

1. High-wage foreign countries are defined as all the foreign members of the Organisation for Economic Co-operation and Development except the Czech Republic, Hungary, Mexico, Poland, the Slovak Republic, and the Republic of Korea. These exceptions and all other countries are classified as low-wage countries.

United States, the foreign-affiliate share was 10 percent for Canada in 2002, up from 9 percent in 1994; it was 7 percent for the United Kingdom, up from 6 percent; it was 3 percent for France, up from 2 percent; it was 3 percent for Germany in both years; it was 2 percent for Italy in both years; and it was less than 1 percent for Japan in both years.

In contrast, in Ireland and Nigeria the changes in the foreign-affiliate share over the period were large. These changes were largely related to the increased production for export by existing affiliates in manufacturing and in oil and gas extraction. In Ireland, the foreign-affiliate share increased to 19 percent in 2002 from 12 percent in 1994; the increase partly reflected increased production of pharmaceuticals. In Nigeria, the foreign-affiliate share increased to 9 percent in 2002 from 4 percent in 1994; the increase partly reflected increased extraction of crude oil.

NOTES: The countries are sorted in descending order of their 2002 values. If two countries have the same 2002 value, they were sorted using unrounded values.

Gross domestic product data for host countries were obtained from the World Bank Group Web site.
GDP Gross domestic product

Trends in Key Measures of U.S.-MNC Operations

The measures of value added, capital expenditures, and employment have consistently shown that U.S.-MNC operations are concentrated in the United States, but the distributions of capital expenditures and employment have changed over time.⁹ For value added, U.S. parents accounted for the same share—75 percent—of the worldwide MNC total in 2002 as in 1977 (chart 2). For capital expenditures and employment,

9. For an earlier examination of these trends, see “A Note on Patterns of Production and Employment by U.S. Multinational Companies,” SURVEY 84 (March 2004): 52–56.

Chart 2. U.S.-Parent Share of Selected Measures of U.S.-MNC Operations, 1977–2002

the U.S.-parent share has decreased: The U.S.-parent share of capital expenditures decreased from 79 percent in 1977 to 75 percent in 2002, and the U.S.-parent share of employment decreased from 78 percent in 1977 to 73 percent in 2002. The decrease in the parent share of capital expenditures was concentrated in 2002, and it may reflect a short-term fluctuation rather than a trend that will be sustained. However, the decrease in the parent share of employment was sustained throughout 1987–2002.

Employment by foreign affiliates remains concentrated in high-wage countries, but in recent years, it has grown faster in low-wage countries (chart 3). In 1991–2002, their employment grew at an average annual rate of 6 percent in low-wage countries, and it grew at a rate of 3 percent in high-wage countries. The different growth rates reflected a variety of factors, such as cost considerations, the development of new markets, and the liberalization of policies toward foreign direct investment in a number of major developing countries.

In addition, an aspect of the production patterns for U.S. parents that has changed significantly is the degree to which U.S. parents rely on purchased goods and services rather than on their own production. During 1977–2002, purchases from outside suppliers as a percentage of total sales for U.S. parent companies in all industries except wholesale and retail trade increased from 63 percent to 69 percent (chart 4). Some of these outside purchases were obtained from domestic suppliers, and some were obtained from both affiliated

and unaffiliated foreign suppliers. The share of purchases that were imported directly from foreign suppliers has essentially been unchanged, at 9 percent in 1977 and in 2002.

Revisions

The estimates of MNC operations in 2002 presented here are preliminary. The estimates of employment, capital expenditures, and sales supercede the advance summary estimates that were released on April 16 (BEA news release 04–16). The revisions from the advance to the preliminary estimates were –0.1 percent to the level of employment by U.S. MNCs, –2.8 percent to capital expenditures, and –1.8 percent to sales.

The final estimates of MNC operations in 2001 are also presented here. The final estimates of employment, capital expenditures, and sales supercede the summary estimates in the April news release and the preliminary estimates that were published in the November 2003 SURVEY OF CURRENT BUSINESS.¹⁰ The revisions from the summary estimates to the final estimates were –0.5 percent to the level of employment by U.S. MNCs, –1.7 percent to capital expenditures, and –0.8 percent to sales. The revisions from the preliminary estimates to the final estimates were –2.2 percent to employment by U.S. MNCs, –0.8 percent to capital expenditures, and –0.7 percent to sales.

Data on U.S. Direct Investment Abroad

BEA collects two broad sets of data on U.S. direct investment abroad (USDIA): (1) Financial and operating data of U.S. multinational companies, and (2) international transactions and direct investment position data. This article presents the first set of data; the second set of data are generally published in the July and September issues of the *SURVEY OF CURRENT BUSINESS*.¹

Financial and operating data. The financial and operating data provide a picture of the overall activities of foreign affiliates and U.S. parent companies, using a variety of indicators of their financial structure and operations. The data on foreign affiliates cover the entire operations of the affiliate, irrespective of the percentage of U.S. ownership. These data cover items that are needed in analyzing the characteristics, performance, and economic impact of multinational companies, such as sales, value added, employment and compensation of employees, capital expenditures, exports and imports, and research and development expenditures. Separate

tabulations are available for all affiliates and for affiliates that are majority-owned by their U.S. parent(s).

International transactions and direct investment position data. The international transactions data cover a foreign affiliate's transactions with its U.S. parent(s), so these data focus on the U.S. parent's share, or interest, in its affiliate rather than on the affiliate's size or level of operations. These data are essential to the compilation of the U.S. international transactions accounts (ITAs), the international investment position, and the national income and product accounts. The major data items include capital flows (recorded in the ITAs financial account), which measure the funds that U.S. parents provide to their foreign affiliates, and income (recorded in the ITAs current account), which measures the return on those funds. The data also cover royalties and license fees and other service charges that parents receive from, or pay to, their affiliates. All of these items measure flows in a particular period, such as a quarter or a year.

Direct investment position data are stock data and are cumulative; they measure the total outstanding level of U.S. direct investment abroad at yearend. Estimates are provided both at historical cost and in terms of current-period prices. The historical-cost estimates are published by country and by industry.

1. The most recent articles are Maria Borga and Daniel R. Yorgason, "Direct Investment Positions for 2003: Country and Industry Detail" in this issue of the *SURVEY* and Jeffrey H. Lowe, "U.S. Direct Investment Abroad: Detail for Historical-Cost Position and Related Capital and Income Flows, 2002," *SURVEY* 83 (September 2003): 96-149.

Data Availability

This article presents the final estimates of the worldwide operations of U.S. multinational companies (MNCs) for 2001 and the preliminary estimates for 2002. The estimates are based on the 2001 and 2002 Annual Surveys of U.S. Direct Investment Abroad. More detailed estimates from the surveys will be posted on BEA's Web site later this year.

The final estimates of U.S.-MNC operations for 1977 and for 1982-2000 are available in publications or in files that can be downloaded at no charge from our Web site at <www.bea.gov>.

For more information on these products and how to obtain them, go to <www.bea.gov/bea/ai/iid-guide.htm>.

* Less than \$500,000 (+/-).

D Suppressed to avoid disclosure of data of individual companies.

1. Some parents and foreign affiliates primarily in finance and insurance include investment income in sales or gross

operating revenues. Most other parents and affiliates consider investment income an incidental revenue source and include it in their income statements in an "other income" category rather than in sales. BEA collects data on investment income to ensure that—where it is included in total sales—it is not misclassified as sales of services.

Table 9.2. Selected Data for Nonbank U.S. Parents by Industry of U.S. Parent, 2002

	Millions of dollars										Thousands of employees

The International Investment Position of the United States at Yearend 2003

By Patricia E. Abaroa

THE net international investment position of the United States was $-\$2,430.7$ billion (preliminary) at yearend 2003, compared with $-\$2,233.0$ billion (revised) at yearend 2002, with direct investment valued at current cost (table 1, chart 1). The change was the result of a larger rise in the value of foreign-owned assets in the United States than in the value of U.S.-owned assets abroad.

The $-\$197.7$ billion change from yearend to yearend mainly resulted from large net foreign purchases of U.S. securities, which increased the value of foreign-owned assets in the United States; this increase was partly offset by a substantial rise in the dollar value of U.S.-owned assets abroad, especially of U.S.-held stocks, as a result of appreciation of most foreign cur-

rencies against the U.S. dollar.

On an alternative valuation basis with direct investment valued at market value, the net international position of the United States was $-\$2,651.0$ billion (preliminary) at yearend 2003, compared with $-\$2,553.4$ billion (revised) at yearend 2002. This article features estimates valued at the current cost of direct investment; however, estimates valued at the market value of direct investment are mentioned when the two valuations of direct investment differ substantially. The differences between the two methods are limited to the valuation of direct investment. All financial flows and all asset and liability positions except direct investment are identical under both of these valuation measures.

With direct investment valued at current cost,

Current-Cost and Market-Value Methods of Valuing Direct Investment

Since 1991, in the series of annual articles on the international investment position of the United States, two measures of valuing direct investment positions—the current-cost method and the market-value method—have been discussed and presented as alternatives to the historical-cost valuation. The current-cost method values the U.S. and foreign parents' shares of their affiliates' investment in plant and equipment, using the current cost of capital equipment; in land, using general price indexes; and in inventories, using estimates of their replacement cost. The market-value method values the owners' equity share of direct investment, using indexes of stock market prices. (For additional information, see J. Steven Landefeld and Ann M. Lawson, "Valuation of the U.S. Net International Investment Position" *SURVEY OF CURRENT BUSINESS* 71 (May 1991): 40–49.)

In this article, BEA emphasizes the current-cost method, because the estimates prepared using the current-cost method are comparable with BEA's current-cost estimates of the net stock of U.S. fixed assets and consumer durable goods and with the Federal Reserve Board's estimates of domestic net worth (the sum of tangible assets located in the United States, including plant and equipment, inventories, and land). Furthermore, BEA's calculation of direct investment income includes a current-cost adjustment to depreciation; this adjustment

converts depreciation as reported on company financial statements to the preferred economic accounts measure, which is based on the current cost, rather than on the historical cost, of assets.

The estimates of direct investment in the international investment position continue to be presented on both current-cost and market-value bases in order to highlight that different methods of valuing direct investment may be appropriate for different circumstances and that depending on the valuation method used, the resulting estimates may differ substantially. Virtually all of the categories in the international investment position accounts except direct investment positions can be directly estimated with reference to readily observable market prices. For example, the value of positions in portfolio investment securities, gold, loans, currencies, and bank deposits can be directly estimated based on face values or market prices of recent transactions. In contrast, direct investment positions typically involve illiquid ownership interests in companies that may possess many unique attributes—such as customer base, management, and ownership of intangible assets—whose values in the current period are difficult to determine, because there is no widely accepted standard for revaluing company financial statements at historical cost into prices of the current period.

U.S.-owned assets abroad increased substantially, to \$7,202.7 billion at yearend 2003 from \$6,413.5 billion at yearend 2002 (table A).

- Net financial outflows increased the value of U.S. investments abroad \$283.4 billion in 2003 (table B), up from \$198.0 billion in 2002, but down from a record \$569.8 billion in 2000. U.S. investors shifted back to net purchases of foreign securities after having been net sellers for the first time in 2002, and outflows for U.S. direct investment abroad increased to the highest level since the record in 1999.

Table A. U.S. Net International Investment Position at Yearend

[Billions of dollars]

	2001	2002	2003

At market value.....	9,206.9	9,166.7	10,515.0

Chart 1. Net International Investment Position of the United States at Yearend, 1983–2003

Improvements to the Estimates

As is customary each July, the estimates of the U.S. international investment position incorporate newly available source data and methodological improvements that relate to the improvements incorporated in the annual revision of the U.S. international transactions accounts.

This year, the estimates of foreign portfolio holdings of U.S. securities for 2000–2002 were revised to incorporate results from the U.S. Treasury Department's annual surveys of securities liabilities for June 2002 and June 2003. In addition, the estimates of U.S. portfolio holdings of foreign securities for 1994–96 were revised to extend to these years the major methodological changes made in June 2003 at the time of incorporation of the U.S. Treasury Department's Benchmark Survey of U.S. Portfolio Investment Abroad as of December 31, 2001.

Classification and methodology changes have been made to the bank and nonbank accounts. Positions of securities brokers and dealers have been reclassified to the bank accounts from the nonbank accounts. Method-

ology changes have identified a source of double-counting in counterparty country source data that are used to prepare the estimates; the duplicate coverage has now been removed from the accounts. Both of these changes are reflected in the "other" changes column of table 1.

In addition to these improvements, all estimates have been revised as a result of the incorporation of newly available or revised quarterly and annual survey results and other data. Revisions attributable to updated source data are for 1994–2002. The net result of revisions from all sources is to raise the value of U.S.-owned assets abroad relative to the value of foreign-owned assets in the United States for recent years. The net international investment position at yearend 2002 was revised to -\$2,233.0 billion from -\$2,387.2 billion with direct investment at current cost and to -\$2,553.4 billion from -\$2,605.2 billion with direct investment at market value.

For additional information, see "Annual Revision of the U.S. International Accounts, 1989–2003" in this issue.

- Positive valuation adjustments increased the value of U.S. investments abroad \$505.7 billion (table B). Price appreciation increased the value of U.S. holdings of foreign stocks. Exchange-rate appreciation of foreign currencies increased the value of many U.S. investments abroad.

Table B. Changes in U.S.-Owned Assets Abroad, 2003

[Billions of dollars]

	At current cost	At market value
Total change	789.2	1,250.6
Financial outflows	283.4	283.4
Valuation adjustments	505.7	967.2
Price changes	355.7	676.7
Exchange-rate changes	327.5	468.7
Other valuation changes	-177.4	-178.1

With direct investment valued at current cost, foreign-owned assets in the United States increased substantially, to \$9,633.4 billion at yearend 2003 from \$8,646.6 billion at yearend 2002 (table A).

- Net financial inflows increased the value of foreign investments in the United States \$829.2 billion (table C), up from inflows of \$768.2 billion in 2002, and were the second largest on record after \$1,046.9 billion in 2000. Foreign official acquisitions of assets surged to the highest inflows on record, more than double the inflows in 2002. Net foreign purchases of U.S. Treasury securities by private foreigners also accelerated. In contrast, net foreign purchases of U.S. securities other than U.S. Treasury securities slowed for the third consecutive year.

Table C. Changes in Foreign-Owned Assets in the United States, 2003

[Billions of dollars]

	At current cost	At market value
Total change	986.8	1,348.2
Financial inflows	829.2	829.2
Valuation adjustments	157.6	519.1
Price changes	318.6	690.3
Exchange-rate changes	72.1	70.8
Other valuation changes	-233.0	-242.1

- Positive valuation adjustments increased the value of foreign-owned assets in the United States \$157.6 billion (table C). Price appreciation of U.S. stocks increased the value of foreign holdings of U.S. stocks.

This article presents the major changes in U.S.-owned assets abroad and in foreign-owned assets in the United States in 2003. Tables 1 and 2 at the end of this article present detailed estimates of the yearend positions. The amounts cited in the article may differ slightly from the amounts that may be calculated from the tables because of rounding.

Changes in U.S.-Owned Assets Abroad

Bank and nonbank claims

U.S. claims on foreigners reported by U.S. banks and securities brokers increased \$201.6 billion, to \$1,776.3 billion, in 2003 (table D); the increase was attributable to financial outflows of \$10.4 billion (the smallest outflows since 1994), exchange-rate appreciation of \$15.2 billion, and “other” changes of \$175.9 billion. The “other” changes reflected a change in the statistical reporting system that shifted some assets from U.S. claims reported by nonbanking concerns to U.S. claims reported by U.S. banks in 2003.

Table D. U.S. Claims Reported by U.S. Banks and U.S. Nonbanks at Yearend

[Billions of dollars]

	2001	2002	2003
Total bank-reported claims	1,414.1	1,574.7	1,776.3
Banks' claims for own accounts, denominated in dollars	1,055.1	1,185.4	1,303.9
On foreign banks	849.5	970.3	975.6
On foreign nonbanks, excluding foreign official institutions	156.2	162.9	273.0
On foreign official institutions	49.4	52.2	55.3
Banks' claims for customers' accounts, denominated in dollars	265.2	281.7	368.0
Banks' claims, denominated in foreign currencies	93.8	107.6	104.4
Total nonbank-reported claims	839.3	908.0	614.7

U.S. banks' own claims payable in dollars increased \$118.5 billion, to \$1,303.9 billion, down from an increase of \$130.3 billion in 2002. The increase was more than accounted for by “other” changes; financial outflows decreased to \$7.9 billion. Demand for bank credit was weak in 2003 as improved corporate cash flows and rising earnings led foreign borrowers to tap securities markets instead of banks for credit.

U.S. banks' domestic customers' claims denominated in dollars increased \$86.3 billion, to \$368.0 billion. Financial outflows declined somewhat, to \$14.1 billion, as demand for foreign commercial paper slowed; however, the decline was mitigated by a resurgence in deposits abroad. U.S. banks' claims denominated in foreign currencies decreased \$3.2 billion, to \$104.4 billion; the decrease was attributable to financial inflows and “other” changes. The decrease was partly offset by exchange-rate appreciation of foreign currencies.

Claims on unaffiliated foreigners reported by U.S. nonbanking concerns decreased \$293.4 billion, to \$614.7 billion (table D). Changes in the statistical reporting system and related changes in the methodology for calculating nonbank transactions and positions led to a substantial decline in the transactions and positions covered by the nonbank category, which are reflected in the estimate of “other” changes.

“Other” changes more than offset financial outflows and exchange-rate appreciation of foreign currencies.

Foreign securities

U.S. holdings of foreign securities increased \$627.5 billion, to \$2,474.4 billion, in 2003, after decreasing for 3 consecutive years. Net U.S. transactions shifted to net purchases of \$72.3 billion, reflecting a shift to net U.S. purchases of foreign stocks and a decrease in net U.S. sales of foreign bonds.

U.S. holdings of foreign stocks increased \$627.1 billion, to \$1,972.2 billion, in 2003. Stock price appreciation of \$324.9 billion, exchange-rate appreciation of \$201.8 billion, and net U.S. purchases of \$100.4 billion all contributed to the increase in U.S. holdings. Foreign stock prices (based on broad market indexes) appreciated 20 percent in local currency, reaching double-digit growth rates for the first time since 1999. In U.S. dollars, foreign stock prices appreciated 37 percent, outperforming U.S. stock prices, which appreciated 27 percent. Net U.S. purchases of foreign stocks rebounded in 2003 after low net U.S. purchases in 2002. Foreign stock transactions related to mergers and acquisitions remained small relative to these transactions in 1998–2001, despite the increase in stock prices. Exchange-rate appreciation added substantially to the value of most holdings.

- U.S. holdings of European stocks increased \$316.7 billion, to \$1,101.7 billion (table E). The increase was attributable to a 17-percent increase in European stock prices (in local currency), to a 20-percent exchange-rate appreciation of the euro against

the dollar, and to exchange-rate appreciation of other European currencies against the dollar. Net U.S. purchases of European stocks increased to \$25.6 billion.

- U.S. holdings of Japanese stocks increased \$92.3 billion, to \$233.7 billion, as a result of a 22-percent increase in Japanese stock prices (in local currency) and an 11-percent appreciation of the Japanese yen against the dollar. Net U.S. purchases of Japanese stocks increased strongly to \$37.5 billion, reflecting a pickup in Japanese economic growth.
- U.S. holdings of Canadian stocks increased \$27.6 billion, to \$97.3 billion, as a result of a 25-percent appreciation of Canadian stock prices (in local currency) and a 22-percent appreciation of the Canadian dollar against the U.S. dollar. In addition, transactions in Canadian stocks shifted to net U.S. purchases of \$2.6 billion from net U.S. sales.
- U.S. holdings of stocks of emerging market countries in Asia (excluding Japan, Hong Kong, and Singapore), Latin America, Africa, and Eastern Europe increased \$103.4 billion, to \$239.4 billion, as a result of a 42-percent price appreciation. Within this group, stock prices in emerging Asian countries appreciated 43 percent, and stock prices in emerging Latin American countries appreciated 55 percent.

U.S. holdings of foreign bonds increased \$0.4 billion, to \$502.1 billion, in 2003 (table F). Net U.S. sales slowed to \$28.1 billion, but were more than offset by exchange-rate appreciation of \$25.3 billion and by price appreciation of \$3.2 billion. U.S. investors were net sellers in foreign bonds for the third consecutive year. Global bond prices weakened in 2003 in contrast to the rally in global stock markets.

U.S. direct investment abroad

U.S. direct investment abroad at current cost increased \$229.0 billion, to \$2,069.0 billion, in 2003, as a result of an increase in net financial outflows, exchange-rate appreciation of foreign currencies, and price appreciation (table G). At market value, U.S. direct investment abroad increased \$690.5 billion, to \$2,730.3 billion, as a result of substantial price appreciation in owners' equity resulting from an increase in foreign stock prices, exchange-rate appreciation of foreign currencies, and net financial outflows (table H). Net outflows accelerated to \$173.8 billion, but they remained below record outflows of \$224.9 billion in 1999. The acceleration was mostly due to a strong increase in reinvested earnings to \$141.1 billion from \$94.5 billion, which was widespread across industries. Equity capital outflows were virtually unchanged at \$24.6 billion, as merger and acquisition activity was sluggish in comparison with the levels of 1998–2001. Intercompany debt outflows slowed to \$8.1 billion from \$15.8 billion, mostly in the manufacturing and holding company industries.

Table G. U.S. Direct Investment Abroad at Yearend

[Billions of dollars]

	2001	2002	2003
U.S. direct investment abroad:			
At current cost	1,686.6	1,840.0	2,069.0
At market value.....	2,314.9	2,039.8	2,730.3

Table H. U.S. Direct Investment Abroad, 2003

[Billions of dollars]

	At current cost	At market value
Total position at yearend	2,069.0	2,730.3
Total change	229.0	690.5
Financial outflows.....	173.8	173.8
Equity capital.....	24.6	24.6
Intercompany debt	8.1	8.1
Reinvested earnings	141.1	141.1
Price changes.....	9.5	330.5
Exchange-rate changes	58.8	200.0
Other valuation changes	-13.0	-13.7

U.S. official reserve assets and other U.S. Government assets

U.S. official reserve assets increased \$25.0 billion, to \$183.6 billion, in 2003, as a result of strong price appreciation in the market value of the U.S. gold stock and of exchange-rate appreciation of other reserve assets. U.S. gold reserves increased \$18.1 billion because of a 22-percent increase in the price of gold. U.S. official holdings of foreign currencies increased \$5.9 billion, reflecting exchange-rate appreciation of \$5.3 billion and financial outflows of \$0.6 billion. The U.S. reserve position in the International Monetary Fund increased \$0.6 billion as exchange-rate appreciation

more than offset financial inflows. U.S. official holdings of special drawing rights increased \$0.5 billion as exchange-rate appreciation more than offset financial inflows.

U.S. Government assets other than official reserve assets decreased \$0.5 billion, to \$84.8 billion, in 2003. Inflows for repayments of loans totaled \$8.0 billion, more than offsetting an increase in U.S. Government credits of \$7.4 billion. Both repayments and new credits accelerated in 2003.

Changes in Foreign-Owned Assets in the United States

Bank and nonbank liabilities

U.S. liabilities to private foreigners and international financial institutions reported by U.S. banks and securities brokers increased \$368.8 billion, to \$1,887.2 billion, in 2003 (table I). Most of the increase was due to "other" changes, reflecting a change in the statistical reporting system that shifted some liabilities from U.S. liabilities reported by nonbanking concerns to U.S. liabilities reported by U.S. banks in 2003. Financial inflows slowed to \$75.6 billion in 2003, reflecting weaker demand for bank loans, and exchange-rate appreciation totaled \$11.1 billion.

Table I. U.S. Liabilities Reported by U.S. Banks and U.S. Nonbanks at Yearend

[Billions of dollars]

	2001	2002	2003
Total bank-reported liabilities	1,306.4	1,518.4	1,887.2
Banks' liabilities for own accounts, denominated in dollars	1,097.3	1,269.4	1,503.7
To foreign banks	914.5	1,055.9	1,114.0
To foreign nonbanks, including international organizations	182.8	213.5	389.7
Banks' liabilities for customers' accounts, denominated in dollars	128.4	168.5	322.0
Banks' liabilities, denominated in foreign currencies	80.7	80.5	61.5
Total nonbank-reported liabilities	798.3	864.6	466.5

U.S. banks' own liabilities denominated in dollars increased \$234.3 billion, to \$1,503.7 billion. Financial inflows increased to \$118.9 billion, reflecting a strong increase in borrowings by U.S. securities brokers and dealers that more than offset a decrease in inflows to U.S.-owned banks in the United States and a shift to outflows by foreign-owned banks in the United States. U.S. banks' custody liabilities denominated in dollars increased \$153.5 billion, to \$322.0 billion. U.S. banks' foreign currency liabilities decreased \$19.0 billion, to \$61.5 billion, as a result of large financial outflows. The decrease was partly offset by exchange-rate appreciation of foreign currencies.

Liabilities to unaffiliated foreigners reported by U.S. nonbanking concerns decreased \$398.1 billion, to

\$466.5 billion (table I). Changes in the statistical reporting system and in the methodology for calculating nonbank transactions led to a substantial decline in the transactions covered by the nonbank category, which are reflected in the estimate of "other" changes. "Other" changes more than offset financial inflows and exchange-rate appreciation of foreign currencies.

U.S. Treasury securities

Foreign holdings of U.S. Treasury securities increased \$84.9 billion, to \$542.5 billion, in 2003. Strong net foreign purchases of \$113.4 billion more than offset price depreciation of \$11.6 billion. As of December 2003, Japan remained by far the largest holder of U.S. Treasury securities. (In table J, foreign private holdings and foreign official holdings are combined in order to avoid the disclosure of sensitive data on individual country holdings by foreign official agencies.)

Table J. Foreign Official and Private Holdings of U.S. Treasury Securities by Selected Countries at Yearend

[Billions of dollars]

	2001	2002	2003
Total holdings	1,063.1	1,254.1	1,499.2
Japan	330.1	385.3	542.2
China	89.7	124.3	168.1
Korea, Republic of	29.1	48.0	61.9
United Kingdom	28.6	67.0	58.3

Germany	42.9	38.0	43.8
Bermuda	11.6	12.6	39.3
Mexico	22.1	27.5	31.9

Other U.S. securities

Foreign holdings of U.S. securities other than U.S. Treasury securities, excluding official holdings, increased \$604.4 billion, to \$3,391.1 billion, in 2003. The increase was attributable to price appreciation of \$319.8 billion (largely in U.S. stocks), net foreign purchases of \$251.0 billion, and exchange-rate appreciation of \$48.4 billion in foreign-currency-denominated U.S. bonds.

Foreign holdings of U.S. corporate bonds and U.S. agency bonds increased \$252.6 billion, to \$1,853.0 billion, in 2003 (table K). The increase was attributable to strong net foreign purchases of corporate bonds, price appreciation, and exchange-rate appreciation of U.S. bonds denominated in foreign currencies. Net foreign purchases of corporate bonds were a record \$227.1 billion, as rising corporate profits and improved balance sheets made corporate bonds less risky and as low levels of inflation relative to inflation in other countries and persistently low yields on U.S. Treasury securities

Table K. Foreign Private Holdings of U.S. Corporate and Agency Bonds by Major Area and Country at Yearend

[Billions of dollars]

	2001	2002	2003
Total holdings	1,343.1	1,600.4	1,853.0
Europe	935.7	1,086.0	1,225.9

Other countries	68.2	94.9	120.2

led investors to seek higher returns in U.S. corporate bonds. In contrast, transactions in U.S. agency bonds shifted to net foreign sales of \$13.4 billion, reflecting substantial prepayments on mortgage-backed agency issues. As of December 2003, the United Kingdom remained the largest holder of U.S. corporate bonds and agency bonds at \$749.2 billion, or 40 percent of foreign holdings; the next largest holders were Other Western Hemisphere, at \$260.0 billion, and Japan, at \$169.3 billion.

Foreign holdings of U.S. stocks increased \$351.8 billion, to \$1,538.1 billion, in 2003, after 2 years of decline, as a result of substantial price appreciation and net foreign purchases (table L). Most of the increase was due to price appreciation, as both the Dow Jones Industrial Average Index and the S&P 500 Index gained more than 20 percent and as the NASDAQ Composite Index gained 50 percent. However, net foreign purchases of U.S. stocks decreased for the third consecutive year, to \$37.3 billion. As of December 2003, the United Kingdom remained the largest holder of U.S. stocks at \$269.3 billion, or 18 percent of foreign holdings, followed by Canada, at \$192.5 billion, and Japan, at \$136.4 billion.

Table L. Foreign Private Holdings of U.S. Corporate Stocks by Major Area and Country at Yearend

[Billions of dollars]

	2001	2002	2003
Total holdings	1,478.3	1,186.2	1,538.1
Europe	915.9	714.5	929.7

Other countries	92.3	87.0	115.4

U.S. currency

U.S. currency held by foreigners increased \$16.6 billion, to \$317.9 billion, in 2003. Currency shipments to foreigners slowed in 2003 as a result of weak dollar demand in the second and third quarters.

Foreign direct investment in the United States

Foreign direct investment in the United States at current cost increased \$48.8 billion, to \$1,554.0 billion, in 2003, as a result of net financial inflows, price appreciation, and exchange-rate appreciation of foreign currencies (table M).

Table M. Foreign Direct Investment in the United States at Yearend

[Billions of dollars]

	2001	2002	2003
Foreign direct investment in the United States:			
At current cost	1,513.5	1,505.2	1,554.0
At market value.....	2,560.3	2,025.3	2,435.5

At market value, foreign direct investment in the United States increased \$410.2 billion, to \$2,435.5 billion, as a result of net financial inflows and substantial price appreciation in owners' equity resulting from an increase in U.S. stock prices (table N). In 2003, net financial inflows decreased sharply to \$39.9 billion, the smallest inflows since 1992. Net equity capital inflows

declined for the third consecutive year, to \$62.2 billion. Intercompany debt outflows increased to \$34.4 billion. Reinvested earnings increased to \$12.0 billion from \$5.2 billion.

Reinvested earnings	12.0	12.0
Price changes.....	6.5	378.3
Exchange-rate changes	1.3
Other valuation changes	1.2	-7.9

Foreign official assets

Foreign official assets in the United States surged \$261.4 billion, to \$1,474.2 billion, in 2003. The increase was the largest on record, and financial inflows of \$248.6 billion were nearly double the previous record in 1996. Net foreign official purchases of U.S. Treasury securities were a record \$169.7 billion, and net financial inflows from foreign official agencies reported by U.S. banks were a record \$49.4 billion.

Tables 1 and 2 follow.

^p Preliminary.^r Revised.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, capital gains and losses of direct investment affiliates, and other statistical adjustments to the value of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in

international transactions financial flows.

5. Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

¹ Preliminary.² Revised.³ U.S. official gold stock is valued at market price.⁴ Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being serviced.⁵ Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.⁶ A break in series in 1994 reflects the reclassification of intercompany debt positions between parent companies and affiliates that are not depository institutions and that are primarily engaged in financial intermediation from the direct investment accounts to the nonbank investment accounts. Estimates for 1976 forward are linked to the 1977, 1982, 1989,

1994, and 1999 benchmark surveys of U.S. direct investment abroad.

⁷ Estimates include results of the 1994, 1997, and 2001 Benchmark Surveys of U.S. Ownership of Foreign Long-Term Securities conducted by the U.S. Department of the Treasury.⁸ A break in series in 1983 reflects the introduction of counterparty data from the United Kingdom and from the Bank for International Settlements (BIS) for several European countries, Caribbean banking centers, and Asian banking centers. Additional coverage for BIS data was introduced in 1986, 1989, 1993, and 1994. In 1994, intercompany debt positions between parent companies and affiliates that are not depository institutions and that are primarily engaged in financial intermediation are reclassified from the direct investment accounts to the nonbank investment accounts. A break in series in 2003 reflects the reclassification of assets reported by U.S. securities brokers from nonbank-reported assets to bank-reported assets, and a reduction in counterparty balances to eliminate double-counting.

of the United States at Yearend, 1976–2003

8. Estimates include results of 1978, 1984, 1989, 1994, and 2000 Benchmark Surveys of Foreign Portfolio Investment in the United States, and the results of the 2002 and 2003 Annual Surveys of Foreign Holdings of U.S. Securities, conducted by the U.S. Department of the Treasury.

9. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

10. Estimates for 1976 forward are linked to the 1980, 1987, 1992, and 1997 benchmark surveys of foreign direct investment in the United States.

11. A break in series in 1983 reflects the introduction of counterparty data from the United Kingdom. A break in series in 1994 reflects the reclassification of intercompany debt positions between parent companies and affiliates that are not depository institutions and that are primarily engaged in financial intermediation from the direct investment accounts to the nonbank investment accounts. A break in series in 1996 reflects the introduction of counterparty data from the Bank of International Settlements (BIS) for several European countries. A break in series in 2003 reflects the reclassification of liabilities reported by U.S. securities brokers from nonbank-reported liabilities to bank-reported liabilities, and a reduction in counterparty balances to eliminate double-counting.

12. A break in series in 2003 reflects the reclassification of liabilities reported by U.S. securities brokers from nonbank-reported liabilities to bank-reported liabilities.

Direct Investment Positions for 2003: Country and Industry Detail

By Maria Borga and Daniel R. Yorgason

IN 2003, the historical-cost position of U.S. direct investment abroad (USDIA) grew 12 percent, up from a 10-percent increase in 2002. The historical-cost position of foreign direct investment in the United States (FDIUS) increased 3 percent after the slight decrease of 0.3 percent in 2002 (table A and chart 1).

The 12-percent increase in the USDIA position in 2003 was slightly less than the average annual rate of growth in the position of 13 percent in 1994–2002. In 2003, the increase in the position resulted more from the reinvestment of earnings and currency-translation adjustments than from new equity or debt funding by U.S. parent companies (see the box “Key Terms”). Reinvested earnings increased because of the strong foreign-currency earnings of foreign affiliates, the depreciation of the U.S. dollar (which tends to raise the dollar value of the earnings), and an increased share of earnings that were reinvested. The earnings performance of foreign affiliates was consistent with the strengthening of corporate earnings worldwide in 2003. The distribution of the earnings of foreign affiliates—and their reinvestment—across areas and countries was largely consistent with the distribution of the

2002 USDIA position. By industry, the growth in reinvested earnings was particularly strong in wholesale trade, “finance (except depository institutions) and insurance,” and mining. The increase in the USDIA position was also attributable to net equity capital outflows, which were virtually unchanged from 2002; these flows were largely accounted for by capital contributions to existing foreign affiliates.

Chart 1. Direct Investment Positions on a Historical-Cost Basis, 1983–2003

Table A. USDIA and FDIUS Positions on a Historical-Cost Basis, 1982–2003

Yearend	Billions of dollars		Percent change from preceding year

* Preliminary.

† Revised.

1. The USDIA and FDIUS positions reflect a discontinuity between 1993 and 1994 because of the reclassification from direct investment to other investment accounts of intercompany debt between parent companies and affiliates that are nondepository financial intermediaries.

USDIA U.S. direct investment abroad

FDIUS Foreign direct investment in the United States

Key Terms

The key terms used in this article are described in this box. For a more detailed discussion of these terms and the methodologies used to prepare the estimates, see *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* (Washington, DC: U.S. Government Printing Office, June 2001) and *U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey* (Washington, DC: U.S. Government Printing Office, April 2004). These methodologies are also available on BEA's Web site at <www.bea.gov>.

Direct investment. Investment in which a resident of one country obtains a lasting interest in, and a degree of influence over the management of, a business enterprise in another country. In the United States, the criterion used to distinguish direct investment from other types of investment is ownership of at least 10 percent of the voting securities of an incorporated business enterprise or the equivalent interest in an unincorporated business enterprise.

U.S. direct investment abroad (USDIA). The ownership or control, directly or indirectly, by one U.S. resident of 10 percent or more of the voting securities of an incorporated foreign business enterprise or the equivalent interest in an unincorporated foreign business enterprise.

Foreign direct investment in the United States (FDIUS). The ownership or control, directly or indirectly, by one foreign resident of 10 percent or more of the voting securities of an incorporated U.S. business enterprise or the equivalent interest in an unincorporated U.S. business enterprise.

Foreign affiliate. A foreign business enterprise in which a single U.S. investor (a **U.S. parent**) owns at least 10 percent of the voting securities, or the equivalent.

U.S. affiliate. A U.S. business enterprise in which a single foreign investor (a **foreign parent**) owns at least 10 percent of the voting securities, or the equivalent.

Ultimate beneficial owner (UBO). For a U.S. affiliate, that person (in the broad legal sense, including a company), proceeding up the affiliate's ownership chain beginning with the foreign parent, that is not owned more than 50 percent by another person. The UBO ultimately owns or controls the affiliate and derives the benefits associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

Foreign parent group. Consists of (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the person below it, up to and including the UBO, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

Direct investment capital flows. Funds that parent companies provide to their affiliates net of funds that affiliates provide to their parents. For USDIA, capital flows also include the funds that U.S. direct investors pay to unaffiliated foreign parties when affiliates are acquired and the funds that U.S. investors receive from them when affiliates are sold. Similarly, FDIUS capital flows include the funds that foreign direct investors pay to unaffiliated U.S. residents when affiliates are acquired and the funds that foreign investors receive from them when affiliates are sold. FDIUS capital flows also include debt and equity transactions between U.S. affiliates and members of their foreign parent groups other than their foreign parents, described as follows.

Direct investment capital flows consist of equity capital, inter-

company debt, and reinvested earnings. **Equity capital flows** are the net of equity capital increases and decreases. Equity capital increases consist of payments by parents to third parties for the purchase of capital stock when they acquire an existing business, payments made to acquire additional ownership interests in their affiliates, and capital contributions to their affiliates. Equity capital decreases are the funds parents receive when they reduce their equity interest in their affiliates. **Intercompany debt flows** result from changes in net outstanding loans between parents (and for FDIUS, other members of the foreign parent groups) and their affiliates, including loans by parents to affiliates and loans by affiliates to parents. **Reinvested earnings** are the parents' claim on the current-period undistributed after-tax earnings of the affiliates.

Direct investment position. The value of direct investors' equity in, and net outstanding loans to, their affiliates. The position may be viewed as the direct investors' net financial claims on their affiliates, whether in the form of equity (including retained earnings) or debt.

BEA prepares estimates of the positions for USDIA and for FDIUS that are valued on three bases—historical cost, current cost, and market value. See the box “Alternative Measures of the Direct Investment Positions.”

Valuation adjustments to the historical-cost position. Adjustments that are made to account for the differences between changes in the historical-cost position, which are measured at book value, and direct investment capital flows, which are measured at transaction value. (Unlike the positions on a current-cost and market-value basis, the historical-cost position is not ordinarily adjusted to account for changes in the replacement cost of the tangible assets of affiliates or in the market value of parent companies' equity in affiliates.)

Valuation adjustments to the historical-cost position consist of currency-translation and “other” adjustments. **Currency-translation adjustments** are made to account for changes in the exchange rates that are used to translate affiliates' foreign-currency-denominated assets and liabilities into U.S. dollars. The precise effects of currency fluctuations on these adjustments depend on the value and currency composition of affiliates' assets and liabilities. If an affiliate's assets exceed its liabilities (depreciation) of the currency against the dollar will result in negative (positive) translation adjustments. In the less common, but not unusual, case of a net liability position in a foreign currency, depreciation (appreciation) of the currency will result in positive (negative) translation adjustments.

“**Other**” valuation adjustments are made to account for differences between the proceeds from the sale or liquidation of affiliates and their book values, for differences between the purchase prices of affiliates and their book values, for writeoffs resulting from uncompensated expropriations of affiliates, for changes in industry of affiliate or country of foreign parent, and for capital gains and losses (other than currency-translation adjustments). These capital gains and losses represent the revaluation of the assets of ongoing affiliates, such as the sale of assets (other than inventory) for an amount different from their book value. For individual industries, adjustments may be made to reflect changes in the industry of an affiliate. For USDIA, adjustments may be made for individual countries to reflect changes in the country of a foreign affiliate. Similarly, for FDIUS, adjustments may be made for individual countries to reflect changes in the country of the foreign parent.

Although the FDIUS position in 2003 turned up, the 3-percent increase was relatively weak by historical standards; for example, from 1994 to 2002, the FDIUS position grew at an average annual rate of 14 percent. Most of the increase in 2003 was attributable to equity capital inflows, but positive valuation adjustments and reinvested earnings also contributed. The slow growth in the position reflected the continued weakness in merger and acquisition activity after the strong activity in 1998–2001, but some industries still attracted foreign investors in 2003. Foreign banks and other financial firms continued to seek access to the large U.S.

banking and financial services markets, and foreign firms continued to invest in utilities, reflecting the regulatory reforms in the utilities industries that have continued to attract foreign investors. The earnings of U.S. affiliates increased in 2003, and this increase reflected a general increase in U.S. corporate profits and a more robust U.S. economy. The reinvestment of a portion of these earnings contributed to the increase in the position, but the share of earnings that were reinvested was quite low.¹ The growth in the position was dampened by intercompany debt outflows, as U.S. affiliates reduced their debt with their foreign parent groups for the second consecutive year; much of this debt had been incurred in earlier years to fund the acquisitions of businesses in the United States.

In this article, the details about the changes in the USDIA position by type of capital flow and by host country are discussed, and then, the changes in the FDIUS position by type of capital flow and by country of the foreign parent are discussed.

U.S. Direct Investment Abroad

The USDIA position valued at historical cost—the book value of U.S. direct investors' equity in, and net outstanding loans to, their foreign affiliates—was \$1,788.9 billion at yearend 2003 (table A and chart 1). As in previous years, the position was largest in the United Kingdom—at \$272.6 billion, or 15 percent of the total position (table 1.2 and chart 2). The position was also substantial in Canada, at \$192.4 billion (11

1. The low share of earnings that were reinvested in 2003 reflected payments of dividends substantially in excess of current-year earnings on the part of some U.S. affiliates.

Alternative Measures of the Direct Investment Positions

The detailed estimates of the positions of the U.S. direct investment abroad and of foreign direct investment in the United States by country and industry are prepared only on a historical-cost basis, so these estimates largely reflect the price levels of earlier periods. The estimates are also prepared on current-cost and market-value bases, but only at an aggregate level. The current-cost estimates value the U.S. and foreign parents' shares of their affiliates' investment in plant and equipment, using the current cost of capital equipment; in land, using general price indexes; and in inventories, using estimates of their replacement cost. The market-value estimates value the equity portion of direct investment, using indexes of stock market prices.

The historical-cost estimates are not ordinarily adjusted to reflect the changes in the current costs or the replacement costs of tangible assets or in the stock market valuations of firms. Over time, the current costs of tangible assets and the stock market valuations of firms tend to increase. As a result, the historical-cost estimates of the positions are less than the current-cost and market-value estimates of the positions. The current-cost and market-value estimates of the position are discussed in "The International Investment Position of the United States at Yearend 2003" in this issue.

Alternative Direct Investment Position Estimates, 2002 and 2003

[Millions of dollars]

Valuation method	Position at yearend 2002 [†]	Changes in 2003			Position at yearend 2003 [‡]
		Total	Capital flows	Valuation adjustments	
USDIA:					
Historical cost	1,601,414	187,497	151,884	35,613	1,788,911
Current cost	1,839,995	229,018	173,799	55,219	2,069,013

[†] Revised.

Chart 2. USDIA Position by Host Country in 2003

percent), and in the Netherlands, at \$178.9 billion (10 percent).

The USDIA position increased \$187.5 billion in 2003, or 12 percent, the largest dollar increase since the \$215.3 billion increase in 1999 (table B). Capital outflows were \$151.9 billion, or 32 percent higher than in 2002. By account, reinvested earnings, at \$119.2 billion, accounted for most—78 percent—of the outflows. Equity capital outflows accounted for 16 percent, and intercompany debt accounted for 5 percent. Valuation adjustments accounted for the rest of the increase in the position; these adjustments were a

positive \$35.6 billion, almost all of which were due to currency-translation adjustments.

Table B. Change in the USDIA Position by Account

[Billions of dollars]

	2002	2003
Total	141.1	187.5

Valuation adjustments	25.7	35.6
Currency translation	13.6	35.1
Other	12.1	0.6

Holding Companies in the Data on U.S. Direct Investment Abroad

For the past two decades, U.S. parent companies have been funneling an increasing share of their direct investments abroad through holding company affiliates.¹ In 2003, foreign affiliates classified as holding companies accounted for 33 percent of the U.S. direct investment position abroad; in 1982, they accounted for only 9 percent of the position (see the chart). The increased use of these affiliates is part of a broader trend in which U.S. parents own foreign affiliates that own other foreign affiliates.

Estimates of the USDIA position and of related flows for recent years do not reflect as closely the industries and the countries in which the production of goods and services by foreign affiliates occurs as estimates for earlier years, because the estimates are allocated to the countries and industries of the affiliates with which the U.S. parent companies have direct transactions and positions rather than to the countries and industries of the affiliates whose operations the parents ultimately own or control.²

The Bureau of Economic Analysis also prepares estimates of the operations of U.S. parent companies and their foreign affiliates.³ Because the estimates of the operations of these foreign affiliates are classified in the country where the affiliate's physical assets are located or where its primary activity is carried out and because they are classified in the industry that reflects the affiliate's primary activity, these estimates more accurately reflect the industries and countries in which the production of goods and services by foreign affiliates actually occurs. (However, as measures of overall operations, these estimates are not adjusted for the percentage of U.S. ownership.)

1. A holding company is a company whose primary activity is holding the securities or financial assets of other companies.

2. This convention for allocating these estimates by country and by industry follows international guidelines in the International Monetary Fund's *Balance of Payments Manual*, 5th edition, and in the Organisation for Economic Co-operation and Development's *Benchmark Definition of Foreign Direct Investment*, 3rd edition.

3. The operations estimates include items such as assets, sales, employment, value added, and net property, plant, and equipment.

Chart A. Holding Companies as a Percentage of the USDIA Position, 1982–2003

As a result of the use of holding-company affiliates, the industry patterns and the country patterns of the position estimates differ from those of the estimates of the operations of foreign affiliates.⁴ For example, in a comparison of the estimates of the USDIA position with the closely related estimates of the net property, plant, and equipment (PP&E) of foreign affiliates, the 21-percent share of the position accounted for by manufacturing differs sharply from the 41-percent share of PP&E accounted for by manufacturing. By country, the share of the direct investment position accounted for by the Netherlands was 10 percent, but its share of PP&E was only 3 percent.

For a further discussion of the effect of holding companies on the estimates of USDIA series, see the “Technical Note” in Maria Borga and Raymond J. Mataloni Jr., “Direct Investment Positions for 2000: Country and Industry Detail,” *SURVEY OF CURRENT BUSINESS* 81 (July 2001): 23–25.

4. The use of holding-company affiliates appears to be the primary factor for the differences in the patterns of investment by country or by industry between the position estimates and PP&E in the operations estimates, but other factors might also contribute.

The reinvested earnings, at \$119.2 billion, increased 59 percent. Earnings increased more than 25 percent, to \$159.6 billion, and the share of earnings that was reinvested jumped to 75 percent. The strong earnings reflected solid gains in corporate earnings worldwide. The continued depreciation of the U.S. dollar contributed to the increase in dollar-denominated earnings by increasing the dollar value of foreign-currency-denominated revenues and expenses, which tends to boost the dollar value of the earnings of foreign affiliates. The rise in the reinvestment share may reflect expectations of increasing demand that began in the last part of 2003. Reinvested earnings were highest in Europe, primarily reflecting the large existing position there. By industry, reinvested earnings were highest in holding companies (in “other industries,” in table 1.2), in “finance (except depository institutions) and insurance,” and in wholesale trade.

Equity capital outflows, at \$24.6 billion, were virtually unchanged from those in 2002. Increases in equity capital fell \$11.4 billion, to \$45.3 billion, and decreases in equity capital also fell \$11.4 billion, to \$20.7 billion. Equity capital increases reflected capital contributions to existing foreign affiliates of \$27.7 billion (or 61 percent of total increases), and equity flows for the direct acquisition or establishment of new foreign affiliates of \$17.6 billion (or 39 percent of the total). The equity capital increases were concentrated in Europe, particularly in the United Kingdom, where these increases were more than twice those of any other country. In the United Kingdom, the increases were largest in “finance (except depository institutions) and insurance,” but they were also substantial in several other industries. The next largest equity capital increases were in Latin America and Other Western Hemisphere, in Asia and Pacific, and in Canada; in these areas, the increases were relatively widespread over industries and countries. Decreases in equity capital were largest in Europe, Latin America and Other Western Hemisphere, and Canada.²

Net outflows of intercompany debt were \$8.1 billion in 2003, down from \$15.8 billion in 2002. The net outflows were more than accounted for by the outflows of intercompany debt to affiliates in Europe, at \$19.1 billion. Much of the lending to European affiliates was to affiliates in the United Kingdom, mainly to holding company affiliates.

Valuation adjustments were \$35.6 billion, account-

2. Decreases in equity capital result from liquidations and sales of affiliates or from returns of equity capital. Such transactions are reported as U.S. capital *inflows*.

ing for 19 percent of the change in the direct investment position. Most of the adjustment was due to currency-translation adjustments that resulted from the depreciation of the U.S. dollar against the euro, the Canadian dollar, the British pound, and several other currencies.³

Changes by area and by country

In 2003, the USDIA position grew in all the major geographic areas. In Africa and in the Middle East, the position grew 16 percent. The position grew 14 percent in Europe, 13 percent in Canada, 10 percent in Asia and Pacific, and 7 percent in Latin America and Other Western Hemisphere. The changes in position are shown by area and by country (for countries with changes of more than \$3 billion) in table C.

The increases in the USDIA positions in Africa and in the Middle East were widespread among the countries in these areas. Some of these countries—such as Equatorial Guinea, Algeria, and Qatar—are not normally noted as the recipients of large sums of direct investment from the United States. In both areas, the increases were mainly attributable to the reinvestment of earnings in mining (especially in oil and gas extraction).

In Europe, the increase in the USDIA position was mainly due to increases in the United Kingdom, Switzerland, the Netherlands, and Germany. In the United

3. The U.S. dollar weighted by the 2002 USDIA position was down 12 percent against host-country currencies from yearend 2002 to yearend 2003.

Table C. Change in the USDIA Position by Country of Foreign Affiliate, 2003
[Billions of dollars]

All countries	187.5
Canada	22.2
Europe	114.5
<i>Of which:</i>	
United Kingdom	33.4
Switzerland	15.0
Netherlands	14.7
Germany	12.8
Ireland	8.8
Luxembourg	7.4
Italy	5.5
France	4.9
Spain	4.5
Latin America and Other Western Hemisphere	19.5
<i>Of which:</i>	
Mexico	5.8
United Kingdom Islands, Caribbean	4.7
Bermuda	4.6
Africa	2.7
Middle East	2.3
Asia and Pacific	26.4
<i>Of which:</i>	
Japan	7.5
Australia	6.6
Singapore	5.1

Kingdom, Switzerland, and the Netherlands, much of the increase in position was accounted for by affiliates in holding companies, through intercompany debt flows in the United Kingdom and through reinvested earnings in Switzerland and the Netherlands. (Holding companies derive most of their earnings from affiliates in other industries and, often, affiliates in other countries; see the box “Holding Companies in the Data on U.S. Direct Investment Abroad.”) In the United Kingdom, the increase in the position was also attributable to net intercompany debt flows to affiliates in “finance (except depository institutions) and insurance,” and in Germany, it was mainly attributable to reinvested earnings and currency-translation adjustments of affiliates in wholesale trade.

In Canada, the reinvested earnings and currency-translation adjustments for affiliates in “finance (except depository institutions) and insurance” and petroleum refining were substantial. The reinvested earnings in mining were also substantial.

In Asia and Pacific, the USDIA positions in Japan, Australia, and Singapore all increased strongly. In Japan, the position was boosted by the reinvested earnings of affiliates in “finance (except depository institutions) and insurance” and in professional, scientific, and technical services. In Australia, acquisitions in beverages contributed to the increase. In Singapore, reinvested earnings of holding companies were largely responsible for the increase.

In Latin America and Other Western Hemisphere,

the largest increases in the USDIA position were in Mexico, the United Kingdom Islands (Caribbean), and Bermuda. In Mexico, most of the increase was accounted for by the reinvested earnings of affiliates in “finance (except depository institutions) and insurance” and by equity capital outflows for acquisitions of depository institutions. In the United Kingdom Islands (Caribbean), the position was lifted by the reinvested earnings of holding companies; in Bermuda it was lifted by the reinvested earnings of affiliates in “finance (except depository institutions) and insurance.”

Foreign Direct Investment in the United States

The FDIUS position valued at historical cost—the book value of foreign direct investors’ equity in, and net outstanding loans to, their U.S. affiliates—was \$1,378.0 billion at the end of 2003 (table A and chart 1). The largest FDIUS position remained that of the United Kingdom—at \$230.4 billion, or 17 percent of the total position. After the United Kingdom, the positions of several other countries are grouped closely together; consequently, relatively small changes in the values of the positions of these countries affected their rankings as sources of direct investment in the United States. The positions of Japan—at \$159.3 billion (12 percent)—and of Germany—at \$148.8 billion (11 percent)—moved up to second and third largest, respectively, while the positions of the Netherlands—at \$146.1 billion (11 percent)—and of France—at \$143.3 billion (10 percent)—fell to fourth and fifth largest, respectively (table 2.2 and chart 3).

In 2003, the FDIUS position increased \$38.0 billion, or 3 percent, after a slight decrease in 2002. The posi-

Acknowledgments

The estimates of the U.S. direct investment position abroad are based on data from BEA’s quarterly survey of transactions between U.S. parent companies and their foreign affiliates. The survey was conducted under the supervision of Mark W. New, who was assisted by Laura A. Downey, Javier J. Hodge, Marie K. Laddomada, Sherry Lee, Leila C. Morrison, John E. Terpening, and Dwayne Torney. Computer programming for data estimation and tabulation was provided by Marie Colosimo.

The estimates of the foreign direct investment position in the United States are based on data from BEA’s quarterly survey of transactions between U.S. affiliates of foreign companies and their foreign parents. The survey was conducted under the supervision of Gregory G. Fouch, who was assisted by Peter J. Fox, Michelle L. Granson, Barbara C. Huang, Y. Louise Ku-Graf, Susan M. LaPorte, and Beverly E. Palmer. Computer programming for data estimation and tabulation was provided by Karen E. Poffel, who was assisted by Paula D. Brown and Tracy K. Leigh.

Chart 3. FDIUS Position by Country of Foreign Parent in 2003

tion decreased in 2002 when a number of affiliates restructured their finances and wrote down the value of some of their investments in the wake of the mergers and acquisition boom of 1998–2001.⁴ Capital inflows decreased in 2003, falling to \$29.8 billion from \$62.9 billion in 2002 (table D). In 2003, equity capital inflows and reinvested earnings were partly offset by outflows of intercompany debt.

Table D. Change in the FDIUS Position by Account
[Billions of dollars]

	2002	2003
Total.....	-4.0	38.0
Capital inflows.....	62.9	29.8
Equity capital.....	88.4	62.2
Increases.....	107.9	74.1
Decreases.....	19.5	11.9

Valuation adjustments.....	-66.8	8.2
Currency translation.....	0.9	1.3
Other.....	-67.7	6.9

Equity capital inflows were \$62.2 billion, down from \$88.4 billion. Equity capital inflows have decreased each year since they reached the record level of \$259.6 billion in 2000. Equity capital increases of \$74.1 billion were partly offset by equity capital decreases of \$11.9 billion.⁵ Equity capital increases were down 31 percent, partly reflecting persistent weakness in worldwide merger and acquisition activity. In addition, equity capital increases in 2002 were boosted by a number of transactions in which debt owed to foreign parents was converted into equity capital;⁶ these transactions were not significant in 2003. The largest acquisitions in 2003 were in “finance (except depository institutions) and insurance,” depository institutions, utilities (in “other industries”), and transportation (in “other industries”).⁷ In addition to these capital flows to acquire new businesses, there were also several large equity capital contributions from foreign parents to their existing U.S. affiliates.

Reinvested earnings were \$1.9 billion in 2003, compared with -\$4.4 billion in 2002. The shift to positive reinvested earnings occurred despite payments of ex-

ceptionally large dividends by some U.S. affiliates. Earnings of U.S. affiliates rose strongly, to \$40.2 billion in 2003 from \$15.3 billion in 2002. The rise in earnings was fueled by the strengthening U.S. economy in 2003.

The inflows for equity capital and reinvested earnings were partly offset by intercompany debt *outflows* of \$34.4 billion, an increase of \$13.2 billion, from outflows of \$21.2 billion in 2002. In 2003, U.S. affiliates continued to repay loans to their foreign parents that had been used to fund the acquisitions of new businesses in 1998–2001.

The capital inflows were augmented by positive valuation adjustments to the FDIUS position of \$8.2 billion, a shift from -\$66.8 billion in 2002. In 2003, translation adjustments accounted for \$1.3 billion of the total valuation adjustments, reflecting the dollar’s depreciation against most major currencies in 2003.

Changes by area and by country

In 2003, the largest increases in the FDIUS position were of affiliates with parents in Europe, in Asia and Pacific, and in Canada (table E). In Europe, affiliates

4. Some of the write-offs were the result of the new Financial Accounting Standard 142; this new rule requires companies to write down the value of goodwill (the amount paid for a company in excess of the fair market values of the recognized assets acquired and the liabilities assumed) and certain other intangible assets when their value has permanently declined rather than spreading the write-downs over many years. In 2002, U.S. affiliates that had purchased technology and communications companies in the late 1990s were particularly affected by this new rule because they were required to take charges for the reduction in the value of goodwill from these acquisitions. The charges resulting from this new rule were included in the large, negative “other” valuation adjustment in 2002.

5. Equity capital increases result from acquisitions of U.S. businesses by foreigners and contributions of equity to existing U.S. affiliates. Equity capital decreases reflect selloffs of affiliates by, and returns of capital to, foreign direct investors, which are reported as U.S. capital *outflows*.

6. For details, see Maria Borgia, “Direct Investment Positions for 2002: Country and Industry Detail,” SURVEY OF CURRENT BUSINESS 83 (July 2003): 28.

7. According to preliminary data from BEA’s survey of new foreign direct investment, total outlays to acquire or establish U.S. businesses, including those financed by capital inflows from foreign parents, were \$60.3 billion in 2003. See Thomas W. Anderson, “Foreign Direct Investment in the United States: New Investment in 2003,” SURVEY 84 (June 2004): 59–66. These data cover only outlays for the acquisition or establishment of U.S. businesses by foreign direct investors, and they include financing other than that from the foreign parent, such as local borrowing by existing U.S. affiliates. In contrast, the changes in the FDIUS position reflect all transactions of both new and existing U.S. affiliates with their foreign parents or other members of their foreign parent groups and valuation adjustments, and they exclude financing not provided by the foreign parent group.

Despite these differences, the two types of data are related. Any outlays to acquire or establish U.S. businesses that are funded by foreign parent groups are part of capital inflows for FDIUS, a component of the change in the position. Data from the new investments survey indicate that foreign parent groups funded 87 percent of outlays to acquire or establish new U.S. affiliates in 2003.

with parents in the United Kingdom, Germany, and Luxembourg accounted for the largest dollar increases in the position, and affiliates with parents in the Netherlands and Switzerland accounted for the largest dollar decreases. The changes in position for Switzerland and Luxembourg were related to debt restructuring in foreign multinational companies. As part of the restructuring, intercompany debt obligations were shifted among the parents' foreign affiliates located in different countries. These shifts had no effect on the overall FDIUS position, but they resulted in offsetting changes in the positions of the countries involved. Excluding Europe, affiliates with parents in Canada and Japan accounted for the largest dollar increases in the position.

The increase in the position of the United Kingdom was mainly due to new acquisitions in depository insti-

tutions and "finance (except depository institutions) and insurance." The increase in the position of Germany was more than accounted for by an increase in "other industries" that was due to acquisitions in utilities and in transportation. The position of the Netherlands fell largely as a result of debt repayment by affiliates in manufacturing. The increase in Canada was centered in depository institutions, in utilities, and in printing; increases in utilities and printing were mainly due to new acquisitions. In Japan, the largest increases were in computers and electronics products manufacturing and in transportation equipment manufacturing; the increase in transportation equipment manufacturing was largely the result of reinvested earnings.

Note. Estimates for 2003 are preliminary.

Annual Revision of the U.S. International Accounts, 1989–2003

By Christopher L. Bach

As is customary each June, the estimates of U.S. international transactions and of the U.S. international investment position have been revised to incorporate definitional, statistical, methodological, and presentational revisions. This year, the Bureau of Economic Analysis (BEA) has continued to address gaps in coverage. In large part, the gaps have arisen because of the dynamic nature of the international financial markets. In addition, a further definitional change has been made to the estimates of insurance services beyond the changes introduced in June 2003. Estimates of international transactions are revised for 1989–2003, and estimates of the international investment position are revised for 1994–2002.

This year, the major revisions are as follows:

- U.S. Government income payments are revised for 1995–2003 to incorporate a new methodology for estimating interest payments on U.S. Treasury securities. Interest payments on U.S. agency issues are also revised for 1995–2003.
- Foreign transactions in U.S. stocks and bonds and related dividend and interest payments are revised for 2000–2003 to incorporate results of the U.S. Treasury Department’s annual surveys of securities liabilities for June 2002 and June 2003. Changes are also made to foreign holdings of U.S. stocks and bonds for 2000–2003.
- “Other” private service payments and “other” private service receipts are revised for 1992–2003 to incorporate a definitional change in the measurement of insurance services. The new measure adds an estimate of premium supplements (or income earned on technical reserves of insurance companies) to the previous estimates of insurance. Corresponding changes are also made to “other” private income payments and “other” private income receipts.
- U.S. transactions in foreign stocks and bonds and related dividend and interest receipts are revised for 1994–97 to extend to these years the major methodological changes made in June 2003 at the time of incorporation of the U.S. Treasury Department’s Benchmark Survey of U.S. Portfolio Investment

Abroad as of December 31, 2001. In addition, small revisions are made to U.S. holdings of foreign stocks and bonds for 1994–96.

- The measures of goods imports and exports now include seasonally adjusted petroleum import and export series for 1989–2003, which provide a more accurate measure of quarterly variation in total imports and total exports.
- The geographic groups in tables 2 and 11 of the standard quarterly presentation of the transactions accounts have been updated to reflect the expansion of the European Union in May 2004. In addition, table 11 includes a quarterly presentation of bilateral transactions with Mexico, beginning with estimates for the first quarter of 2004. Previously, estimates of transactions with Mexico were presented only annually in table 12.

The definitional change, new methodologies, and improved coverage and measurement in the accounts are discussed in the remainder of this article. In addition to these major changes, revisions to the transactions accounts result from the incorporation of regularly available data from BEA’s annual and quarterly surveys, from the U.S. Treasury Department’s and Federal Reserve System’s quarterly and monthly surveys, and from other U.S. Government agencies and private sources. These revisions affect the estimates for 2001–2003.

For 2003, as a result of all the changes, the current-account deficit is reduced \$11.2 billion, to \$530.7 billion (table 1). By account, \$0.6 billion is removed from goods exports and \$2.5 billion is removed from goods imports, resulting in a deficit that is \$1.9 billion lower than previously estimated. For services, \$2.4 billion is added to services exports and \$10.7 billion is added to services imports, resulting in a surplus that is \$8.2 billion lower than previously estimated. For income, \$18.8 billion is added to income receipts and \$2.2 billion is added to income payments, resulting in a surplus that is \$16.7 billion higher than previously estimated. For net current unilateral transfers, \$0.9 billion in inflows is added, resulting in a decrease to net outflows for transfers of the same amount. Net

1. Estimates were not previously published.

NOTE: Line numbers refer to table 1 of the article on the U.S. international investment position in this issue of the SURVEY.

U.S. Government income payments

BEA has recently reviewed its methodology for estimating U.S. Government income payments. As a result, BEA has adopted a new methodology for estimating interest payments on foreign holdings of U.S. Treasury bonds, notes, and bills. In addition, BEA has adopted a new methodology for estimating interest payments on agency bonds.

Interest payments on U.S. Treasury bonds and notes. BEA has adopted a new methodology for estimating interest payments on U.S. Treasury bonds and notes that combines data from the Treasury Department's Monthly Statement of the Public Debt (MSPD) with data from the Treasury Department's annual and benchmark surveys of foreign holdings of Treasury bonds and notes. Under the new method, BEA uses the MSPD data to estimate total interest paid to both domestic and foreign residents on all publicly held Treasury bonds and notes. Next, BEA uses the Treasury Department's benchmark and annual surveys of Treasury bonds and notes held by foreigners and the MSPD data to determine the percentage of Treasury bonds and notes outstanding that is held by foreign residents. Finally, BEA applies this percentage to the estimate of total interest paid to domestic and foreign residents (based on the MSPD data), in order to estimate interest paid to foreign residents.

The new method is better than the old for four reasons. First, it is based on a reliable estimate of the total interest paid on all outstanding bonds and notes. Second, the new method avoids reliance on multiplication of an average yield by a position. Both of these variables were estimated under the previous methodology, subject only to recalibration at the time of Treasury benchmark surveys every 5 years. Estimates in intervening periods were based on weighted average yields that reflected periodic research on the maturities of holdings, and on position estimates that relied on transactions data and price adjustments to advance benchmark positions. Third, the introduction of annual surveys of foreign holdings of U.S. securities by the Treasury Department in June 2002 and their tight link with the Treasury Department's benchmark surveys provide an opportunity to frequently recalibrate positions. The combination of current information on interest payments from the MSPD and current information on positions from the new annual and benchmark surveys significantly improves the quality of the new estimates. Fourth, the new method is consistent with the methodology used to estimate Treasury interest payments in the national income and product accounts, and its use strengthens the internal consistency between the domestic sector and the foreign sector in the accounts.

The MSPD provides details about all Treasury issues held by the public, including the face value of the amount outstanding and the coupon rate for each issue. BEA uses this issue-by-issue data to estimate, on an accrual basis, the amount of interest paid quarterly on all publicly held Treasury bonds and notes to both domestic and foreign residents. In order to determine the percentage of interest paid only to foreign residents, BEA compares the total value of Treasury bonds and notes held by both domestic and foreign residents from the MSPD to the total value of Treasury bonds and notes held by foreign residents that is based on benchmark surveys, annual liabilities surveys, and monthly transactions reports from the Treasury Department. BEA's estimated position based on the latter set of data is first converted to face value and then divided by the MSPD position, which is also at face value, in order to determine the percentage of bonds and notes held by foreigners. This percentage is then applied to total Treasury interest paid to domestic and foreign residents to determine the amount of interest paid only to foreign residents.

The introduction of this methodology results in upward revisions to interest paid on foreign holdings of Treasury bonds and notes in all years. The revisions increase interest payments by amounts between \$1.9 billion and \$8.0 billion in 1995–2001, and they rise to \$10.6 billion in 2002 and \$15.3 billion in 2003.

Interest payments on U.S. Treasury bills. Estimates of interest paid on foreign holdings of Treasury bills are prepared in much the same way as interest paid on Treasury bonds and notes. The MSPD provides the same type of data for bills as it does for bonds and notes. The foreign positions in Treasury bills are recorded at face value in the Treasury monthly surveys, so there is no need for conversion from market value to face value as with bonds and notes. BEA estimates total interest paid on bills to domestic and foreign residents from the MSPD, divides the Treasury monthly position estimates by the position estimates from the MSPD in order to determine the percentage of bills held by foreign residents, and then applies the percentage to total interest paid to domestic and foreign residents to determine the amount of interest paid only to foreign residents.

Like Treasury bonds and notes, the benefit of using the MSPD data to estimate payments on bills is that BEA can use actual interest paid to both domestic and foreign residents as a basis for its estimates of interest paid to foreigners. The new method also avoids reliance on multiplication of an estimated yield by an estimated position. In addition, the new method captures changes in maturity composition when bills are issued or redeemed. This method is preferable to the previous

method of using a weighted average yield, because there is no information on the annual and benchmark surveys about the maturity composition of foreign holdings for bills.

The introduction of this methodology results in upward revisions to interest paid on foreign holdings of Treasury bills in most years. The revisions are less than \$0.9 billion in each year for 1995–2003, except in 2000 when there was a small downward revision.

Interest payments on U.S. agency bonds. Estimates of interest paid on foreign holdings of agency bonds are revised to incorporate recent and more complete information about the composition of foreign holdings from the March 2000 Treasury benchmark survey and the June 2002 and June 2003 Treasury annual liabilities surveys.

To estimate agency bond interest payments, BEA multiplies the agency bond position by a yield. In the past, foreign holdings of agency bonds were mostly mortgage-backed securities, so the yield that BEA used was a mortgage-backed yield. In the three most recent surveys, however, BEA has noted that foreigners are holding more straight debt than mortgage-backed debt. In 2002, for example, 75 percent of foreign holdings of agency bonds were straight debt. In response to this change in market developments, BEA has introduced straight debt yields into the methodology for agency bond interest payments. The newly designed yield is now a weighted average of straight debt yields and mortgage-backed yields, with the weights derived from the survey results. The introduction of this methodology results in downward revisions to interest payments on foreign holdings of agency bonds in each year for 1995–2003 because the yield on straight debt securities is substantially lower than the yield on riskier mortgage-backed securities. These downward revisions are less than \$1.1 billion in each year for 1995–99, and are \$1.7 billion in 2000, \$4.4 billion in 2001, \$6.4 billion in 2002, and \$7.0 billion in 2003.

As a result of all of the above changes, U.S. Government income payments are revised up \$1.9 billion in 1995, \$1.7 billion in 1996, \$3.7 billion in 1997, \$5.8 billion in 1998, \$7.1 billion in 1999, \$2.8 billion in 2000, \$2.7 billion in 2001, \$4.6 billion in 2002, and \$8.6 billion in 2003. U.S. Government income payments were also revised as a result of the incorporation of the June 2002 and June 2003 liabilities surveys; these revisions are described in the next section.

Annual liabilities surveys of foreign residents' holdings of U.S. securities

BEA bases its estimates of transactions and positions of U.S. securities in the international transactions accounts and the international investment position ac-

counts primarily on two sets of source data—monthly transactions data and data from annual and benchmark liabilities surveys. The monthly transactions data, collected by the Treasury International Capital Reporting System, provide aggregate (or summary) data on foreign gross purchases and gross sales of U.S. securities with an original maturity of more than 1 year by type of security (that is, U.S. Treasury securities, U.S. agency bonds, corporate bonds, and stocks). These data are reported by banks, brokers, dealers, and other financial intermediaries and are used to provide timely information on financial flows that are published quarterly in the international transactions accounts. The annual and benchmark liabilities surveys of foreign portfolio investment in the United States, also conducted by the Department of the Treasury, provide a security-by-security enumeration of foreign holdings of U.S. securities and are reported by custodians, subcustodians, and issuers of securities.

In order to link the two sets of source data and to prepare annual position estimates, BEA extrapolates the most recent survey position estimate by adjusting it for net foreign purchases of U.S. securities, as reported in the transactions reporting system, and by adding BEA's estimates of valuation adjustments to the position. The latter adjustments arise from price changes, exchange-rate changes, and "other" statistical changes (primarily in coverage of the surveys). The process is repeated for each year.¹

In the past, survey data on foreign residents' holdings of U.S. securities were only available every 5 years in benchmark surveys. As noted earlier, beginning in June 2002, annual surveys of foreign residents' holdings of U.S. securities were initiated; another annual survey was conducted in June 2003. The annual sample survey results were expanded to universe estimates based on results from the benchmark survey of March 2000. The Department of the Treasury continues to conduct benchmark surveys periodically; the most recent benchmark survey was conducted in June 2004, and the data are now in the process of being collected.

BEA has received the results of the June 2002 Treasury Department liabilities survey. Overall, BEA's implied position for June 2002 exceeded the survey results for foreign holdings of U.S. securities by 1 percent, or \$35.8 billion. The survey results for foreign holdings of U.S. agency bonds and U.S. corporate bonds were less than the implied estimates, while the

1. BEA also makes several adjustments to the transactions data when gaps in coverage are known to exist and in order to convert the data to the conceptual requirements of the international accounts. These adjustments are described in "How BEA Aligns and Augments Source Data From the U.S. Treasury Department for Inclusion in the International Transactions Accounts" in this issue of the SURVEY OF CURRENT BUSINESS.

survey results for foreign holdings of U.S. Treasury bonds and notes and U.S. stocks were greater than the implied estimates.

BEA also has received the results of the June 2003 Treasury Department liabilities survey. Overall results were similar to those from the June 2002 survey: BEA's implied position for June 2003 exceeded the survey results for foreign holdings of U.S. securities by 1 percent, or \$61.3 billion. The survey results for foreign holdings of U.S. agency bonds and U.S. corporate bonds were less than the implied estimates, and the survey results for foreign holdings of U.S. Treasury bonds and notes and U.S. stocks were greater than the implied estimates. In addition, the 2003 survey results for U.S. corporate bonds and U.S. stocks differed substantially from the implied BEA estimates. Survey results for U.S. corporate bonds were below BEA's implied estimate, and survey results for U.S. stocks were higher than BEA's implied estimate. Due to the unusual (and largely offsetting) size of the differences between BEA's implied estimate and the June 2003 survey positions for U.S. corporate bonds and U.S. stocks, as well as the preliminary nature of the annual survey results, BEA has elected not to match its investment positions for these two categories to the June 2003 survey results and will await the results of the 2004 benchmark survey.

U.S. Treasury bonds and notes. BEA's implied estimate of Treasury bonds and notes held by private and official foreigners in June 2002 of \$871.2 billion was less than the survey result of \$908.1 billion by \$36.9 billion. In June 2003, BEA's implied estimate of \$1,095.7 billion was less than the survey result of \$1,124.2 billion by \$28.4 billion.

The June 2002 and June 2003 surveys and the March 2000 benchmark surveys indicated that BEA's implied estimate of holdings of Treasury securities by foreign official agencies was lower than the survey results and that BEA's implied estimate of private holdings was higher than the survey results. In March 2000, the effect of private holdings exceeding the survey results was larger than the effect of foreign official holdings being lower than the survey results, but the reverse was true for June 2002 and June 2003.

BEA had been making downward adjustments of \$6.0 billion each quarter to private flows of Treasury securities since the March 2000 benchmark survey to improve the estimates of private holdings of bonds and notes. In the July 2002 SURVEY OF CURRENT BUSINESS, BEA identified several reasons why BEA's implied estimates exceeded the benchmark results.² However, a review of

the results of the 2002 and 2003 liabilities surveys has indicated that BEA's adjustments to private flows of Treasury securities were too large. Therefore, BEA has reduced its downward adjustment to \$2.0 billion each quarter, beginning with the second quarter of 2000. This practice will be reevaluated when the results of the 2004 benchmark survey are available.

In addition to the adjustment to private flows of Treasury securities, BEA has introduced an adjustment each quarter to correct the underestimation of foreign official flows. The discrepancy between the implied positions and survey positions of foreign official holdings and flows of Treasury debt is at least partly attributable to the difficulty that Treasury International Capital reporters have in recognizing some transactions by foreign official agencies as official transactions, and instead, in mistakenly reporting these transactions as initiated by private entities. This is more likely to occur in situations where a foreign official agency uses a broker in a third country to purchase U.S. Treasury securities rather than purchasing securities directly from a U.S. securities broker or dealer. BEA has adjusted official flows up, beginning with the second quarter of 2000. This practice will be reevaluated when the results of the 2004 benchmark survey are available.

As a result of the above adjustments, private inflows of Treasury securities are revised up \$7.0 billion in 2000, down \$7.0 billion in 2001, down \$9.2 billion in 2002, and down \$22.9 billion in 2003. Foreign official inflows of Treasury securities are revised up \$5.0 billion in 2000, \$23.0 billion in 2001, \$25.2 billion in 2002, and \$38.9 billion in 2003.

U.S. agency bonds. BEA's implied estimate of agency bonds held by private and official foreigners in June 2002 of \$563.1 billion exceeded the survey result of \$492.4 billion by \$70.7 billion. In June 2003, BEA's implied estimate of \$641.3 billion exceeded the survey result of \$586.1 billion by \$55.2 billion.

In the March 2000 benchmark survey, BEA's implied position exceeded the agency bond position by 59 percent. BEA and Treasury investigated the reasons for the discrepancy and concluded that it was largely attributable to the refinancing of agency debt through prepayments and early redemptions that bypassed the transactions reporting system. In principle, this type of transaction should be recorded as gross sales by foreign residents, but the sales would not be reported if the transactions bypassed the securities brokers and dealers that report on the Treasury International Capital forms.

Since the March 2000 benchmark survey, BEA has adjusted private agency bond flows to account for these missed gross sales. BEA uses market data to

2. Christopher L. Bach, "Annual Revision of the U.S. International Accounts, 1993-2001," SURVEY 82 (July 2002): 37-40.

estimate the percentage of total outstanding agency debt that is liquidated, called, or redeemed each quarter. BEA then multiplies this percentage by total foreign holdings (official and private) of agency bonds in order to estimate the dollar amount of foreign holdings that are liquidated, called, or redeemed each quarter. This dollar amount is added to gross sales. Because using this procedure would have led to especially large adjustments in 2000–2003 when interest rates declined sharply, BEA judgmentally reduced the size of the adjustment.

After receiving the results of the June 2002 and June 2003 liabilities surveys, BEA reexamined its methodology and determined that it should be improved. Under the new methodology, BEA now calculates the adjustment by multiplying the percentage liquidated, called, or redeemed by private foreign holders (rather than by all foreign holders) of agency bonds and applies the full amount of the adjustment to gross sales to account for refinancing. In addition, all judgmental reductions have been eliminated from the estimates.

As a result of the above changes, private inflows of agency bonds are revised up \$4.6 billion in 2000, down \$2.4 billion in 2001, up \$6.1 billion in 2002, and up \$34.9 billion in 2003.

U.S. corporate bonds. BEA's implied estimate of corporate bonds held by private and official foreigners in June 2002 of \$1,163.9 billion exceeded the survey result of \$1,119.7 billion by \$44.2 billion. In June 2003, BEA's implied estimate of \$1,463.3 billion exceeded the survey result of \$1,236.2 billion by \$227.1 billion.

Possible reasons why BEA's implied estimate exceeded survey results include underreporting of early redemptions and maturing securities, underreporting of prepayments of asset-backed debt, and misidentification of domestic transactions as cross-border transactions (or vice versa). These reasons would likely result in underreporting of gross foreign sales relative to gross foreign purchases.

BEA had implemented a constant downward adjustment each quarter to private inflows of corporate bonds since the March 2000 benchmark survey to improve the accuracy of the estimates. However, a review of the results of the June 2002 liabilities survey indicates that BEA's adjustments to private flows of corporate bonds were too small and must be substantially increased. BEA has now implemented an adjustment that is proportional to quarterly gross transactions in U.S. bonds rather than continue with a constant adjustment. The rationale is that the size of the estimation disparities resulting from the reasons stated above can be expected to rise and fall in proportion to overall transactions.

This methodological improvement resulted in downward revisions to private inflows of corporate bonds of \$10.4 billion in 2001, \$14.6 billion in 2002, and \$22.2 billion in 2003. These revisions align BEA's transactions data more closely with positions in the June 2002 survey.

However, even with this methodological improvement, the disparity between BEA's estimate and the June 2003 survey results is still quite large. It is unclear whether errors may exist in the transactions data or in the June 2003 survey data. Because of the unusual size of the difference between BEA's estimate and the June 2003 survey position, as well as the preliminary nature of the annual survey results, BEA has elected not to match its investment position to the June 2003 survey results or to adjust financial flows beyond the revisions implied by the review of the 2002 survey and will await the results of the 2004 benchmark survey.

U.S. corporate stocks. In contrast to corporate bonds, BEA's implied estimate of corporate stocks held by private and official foreigners in June 2002 of \$1,353.3 billion was lower than the survey result of \$1,395.4 billion by \$42.1 billion. In June 2003, BEA's implied estimate of \$1,371.9 billion was lower than the survey result of \$1,564.4 billion by \$192.5 billion.

Errors in price estimates for stocks can have disproportionately large effects on stock positions, given that price changes often account for a large share of the total change in stock positions. BEA has attributed the entire difference between its implied estimate and the June 2002 survey results to the price change component in the investment position accounts, and it makes no adjustment to financial flows in the transactions accounts or in the investment position accounts.

In contrast, the large difference between BEA's implied estimate and the June 2003 survey results suggests that price adjustments alone could not be responsible for the disparity in position estimates in 2003. It is unclear whether the source of error causing the disparity is the transactions data or the survey data. Because of the unusual size of the difference, as well as the preliminary nature of the survey results, BEA has elected not to match its investment position to the 2003 survey results or to adjust financial flows and will await the results of the 2004 benchmark survey.

"Other" private income payments and U.S. Government income payments. Two of the income accounts, "other" private income payments and U.S. Government income payments, have also been revised, based on information from the June 2002 and June 2003 liabilities surveys.

For "other" private income payments, the downward revision to the corporate bond positions resulted

in downward revisions to associated interest payments, while the upward revision to the stock positions resulted in upward revisions to dividend payments. The downward revision to corporate bonds was larger than the upward revision to stocks. The net downward revisions to "other" private payments were \$0.1 billion in 2000, \$0.6 billion in 2001, \$1.5 billion in 2002, and \$2.0 billion in 2003. The revisions reflect the 2002 liabilities survey results, but not the 2003 results, for the same reasons as described above in the sections on revisions to flows and holdings of U.S. corporate bonds and stocks.

For U.S. Government income payments, revisions are attributable to the June 2002 and June 2003 liabilities surveys and to an improved methodology. The June 2002 and June 2003 liabilities surveys led to upward revisions to estimates of foreign holdings of Treasury securities, which caused BEA's estimates of Treasury interest payments to foreigners to be revised upward. The surveys also led to downward revisions to estimates of foreign holdings of agency bonds, which caused BEA's estimates of agency bond interest payments to be revised downward. However, most revisions to U.S. Government income payments were attributable to the improved methodology discussed earlier. The downward revisions to U.S. Government income payments attributable to the June 2002 and June 2003 surveys are \$1.3 billion in 2000, \$1.0 billion in 2001, \$2.4 billion in 2002, and \$2.9 billion in 2003.

Insurance premium supplements

New estimates of insurance premium supplements, the expected investment income on the technical reserves of insurance companies, are introduced for 1992–2003. Previously, the accounts did not cover these transactions. This addition completes the updating of measures of insurance transactions introduced into both the international and national accounts last year.³

Just as charges for the services associated with checking accounts would be imposed, or would be higher, if banks could not lend or invest the funds of their depositors, insurance premiums would be higher if insurance companies were unable to earn investment income on funds held in reserve against future claims. Insurance companies provide financial protection to policyholders through the pooling of risk, and they

provide financial intermediation services through the investment of reserves. In recognition of the financial intermediation services provided by insurance companies, the 1993 System of National Accounts (SNA) included income on technical reserves in its recommended measure of output for the insurance industry. The income is treated as accruing to the policyholders, who pay it back to the insurers as supplements to premiums to cover the full cost of insurance.

The investment income of insurance companies is not output in and of itself; it is used to impute the value of the implicit component of insurance services attributable to financial intermediation. As such, the premium supplements that policyholders pay to insurance companies are recorded as services transactions. Because the balance of payments employs a double-entry accounting system, the premium supplement transactions recorded in the services account must be offset elsewhere in the international transactions accounts. In this case, the income received by policyholders is recorded in the income accounts, and this income serves as the offsetting entry to premium supplements.

This definitional change in the measurement of insurance services, combined with changes to insurance introduced last year, more comprehensively and accurately measures insurance services. Insurance companies set premiums based on their expectations of investment income, losses, and operating costs in future periods. Investment income allows insurance companies to set premiums lower than they might otherwise be. The portion of premiums and investment income remaining after provision is made for normal losses serves as a proxy for output.

Prior to the changes to insurance introduced last year, insurance services were measured as premiums less actual losses paid or recovered. A major shortcoming of the premiums less actual claims measure is that losses can fluctuate from period to period in a way that bears little relation to the services provided. In order to deal with fluctuating loss settlements, rather than measure insurance services as premiums less actual losses, the new estimates introduced last year are measured as premiums less "normal" losses. Normal losses are equivalent to expected losses; they consist of losses that occur regularly and a share of catastrophic losses that occur at infrequent intervals. For regularly occurring losses, the average of past actual losses in relation to premiums is calculated based on a 6-year moving average of annual data. Catastrophic losses are added in equal increments to the estimate of regularly occurring losses over the 20 years following their occurrence to derive an estimate of normal losses. Data for the

3. See Christopher L. Bach, "Annual Revision of the U.S. International Accounts 1992–2002," *SURVEY* 83 (July 2003): 35–37 for a discussion of the change in the international accounts, and Baoline Chen and Dennis J. Fixler, "Measuring the Services of Property-Casualty Insurance in the NIPAs: Changes in Concepts and Methods," *SURVEY* 83 (October 2003) for a discussion of the change in the national income and product accounts.

current period are not included in the calculation of regularly occurring or catastrophic losses in order to achieve an expected concept of normal losses.

Similarly, expected investment income on the technical reserves of insurance companies is used as a measure of premium supplements. The use of expected, rather than actual, investment income to measure premium supplements is intended to capture the *ex ante* concept of premium supplements; it is this expectation that insurance companies use in setting premiums to cover their expected losses and other costs.

Estimates of premium supplements are calculated separately for primary insurance and for reinsurance.

Primary insurance. Estimates of premium supplements for primary insurance capture the financial intermediation services provided to policyholders by primary insurance companies. To derive these estimates, the investment income for each line of primary insurance is divided by total premiums for that line to determine the proportion of premium supplements to premiums. Aggregated across all lines and weighted by line of insurance, this provides a weighted ratio of premium supplements to premiums for the U.S. primary insurance industry. This weighted ratio is then applied to estimates of cross-border primary insurance premiums to derive cross-border premium supplements.

Data on investment income are from *Best's Aggregates and Averages: Property-Casualty* by A.M. Best Company. The net investment gain on funds attributable to primary insurance is defined as the product of the industry rate of return on invested funds and technical reserves by line of insurance. Using the same data and methodology employed in the estimates for the national accounts, data from A.M. Best for each line of primary insurance are used to construct a weighted ratio of the expected net investment gain to gross premiums for the domestic insurance industry.⁴ This weighted ratio is applied to premiums received from foreigners, which are obtained from BEA surveys of companies, in order to derive premium supplements receipts from foreigners. Because similar data on investment income are not available for payments, the ratio for receipts is also applied to premiums paid to foreigners in order to derive premium supplements payments to foreigners. Data on primary insurance premiums and primary insurance premium supplements are shown in table A.

Reinsurance. Estimates of premium supplements for reinsurance capture the financial intermediation services provided to insurance companies by reinsurers. Similar to the method used to derive premium supplements for primary insurance, estimates of pre-

Table A. Insurance Premium Supplements

Reinsurance	
Premiums	53.6
Premium supplements	6.8

mium supplements for reinsurance are derived by dividing the investment income for the reinsurance line of business by total reinsurance premiums to determine the ratio of premium supplements to premiums for the U.S. reinsurance industry. However, data on gross premiums for the U.S. reinsurance industry are not available; data are only reported for net premiums (that is, gross premiums received minus gross premiums paid). Therefore, it is necessary to rescale the ratio of expected net investment income to net premiums for the domestic reinsurance industry.

The ratio is rescaled by averaging the results of two approaches. The first approach recognizes that all lines of domestic insurance are reinsured to varying degrees. As such, the proportion of the expected net investment income to gross premiums for reinsurance may be similar to that of the entire primary insurance industry; thus, this approach uses a single weighted average ratio that covers all lines of insurance. The second approach recognizes that reinsurers may have different ratios of net investment gains to gross premiums than primary insurers. The different ratios may arise because reinsurers may hold more reserves than primary insurers or because they may hold them for a longer period of time. This approach divides the expected net investment gain for the domestic reinsurance industry by gross premiums for the domestic reinsurance industry.⁵ Because one approach is not clearly superior to the other, as a pragmatic consideration, they are averaged to derive the appropriate ratio.

The ratio that reflects the above average is applied to estimates of premium receipts for reinsurance, which are obtained from BEA surveys of companies, to derive premium supplements receipts from foreigners.

5. In calculating reinsurance services, gross premiums "earned" rather than gross premiums "written" should be used. (Gross premiums written reflect premiums for the full policy period, which are usually paid in advance, whereas gross premiums earned reflect premiums for only the expired portion of the policy period.) However, data on gross premiums earned are unavailable for the U.S. reinsurance industry, so gross premiums written are used instead in the calculation.

4. See Chen and Fixler, 10–26.

Because similar data on investment income are not available for payments, the same proportion is applied to estimates of premium payments in order to derive premium supplements payments to foreigners. Data on reinsurance premiums and reinsurance premium supplements are shown in table A.

Premium supplements receipts are \$1.6 billion in 2003 (table B). These new estimates of the expected investment income on the technical reserves of U.S. insurance companies are added to insurance services receipts, which are included in “other” private services exports (table 1, line 10). The imputed investment income payments accruing to foreign policyholders are the offset to premium supplements receipts and are included in “other” private income payments (table 1, line 32). (Line references are to table 1 of the article on U.S. international transactions in this issue).

Table B. Insurance Premium Supplements Receipts and Payments
[Billions of dollars]

	2003
Insurance premium supplements included in:	
Services receipts (table 1, part of line 10)	1.6
Income receipts (table 1, part of line 15)	7.1
Services payments (table 1, part of line 27)	7.1
Income payments (table 1, part of line 32)	1.6

Premium supplements payments are \$7.1 billion in 2003. These new estimates of the expected investment income on the technical reserves of foreign insurance companies are added to insurance services payments, which are included in “other” private services payments (table 1, line 27). The imputed investment income receipts accruing to U.S. policyholders are the offset to premium supplements payments and are included in “other” private income receipts (table 1, line 15).

The result is to raise services payments relative to services receipts, which reduces the services surplus. Income receipts are raised relative to income payments, which raises the surplus on income. These changes exactly offset each other so that the current account is unchanged. The offsetting entries are shown in table B.

U.S. holdings of foreign stocks and bonds

In June 2003, BEA revised its estimates of positions of foreign securities in the international investment position accounts for 1998–2001 to incorporate results from the December 2001 benchmark survey of U.S. portfolio investment conducted by the U.S. Treasury Department. A comparison of BEA’s estimates and the 2001 benchmark results showed that BEA’s estimates were less than the benchmark survey estimates of holdings of foreign securities by \$4.2 billion, or 0.2 percent.

This discrepancy between BEA’s estimates and Treasury benchmark results was a dramatic improvement from past discrepancies, which were as large as 20 percent for the 1997 benchmark survey. The narrowing of the discrepancy resulted largely from the incorporation of improved pricing methodologies for estimating valuation changes in foreign stock positions and foreign bond positions and improved coverage of transactions. The new pricing methodology better captured and applied trends in market prices to estimate valuation changes to positions for 1998–2001. BEA also updated its income methodologies for estimating related dividend receipts on foreign stocks and interest receipts on foreign bonds for 1998–2001. The new income methodologies more accurately estimate interest and dividend receipts based on the trends in market yields. BEA has now revised its estimates of foreign securities transactions, positions, and related interest and dividend receipts for 1994–97 to incorporate these improved pricing and income methodologies.

Stock transactions. BEA has made small revisions to estimates of foreign stock transactions for 1994–97 as a result of revisions to monthly transactions data and coverage adjustments.

Stock positions. Foreign stock positions are revised for 1994–96 as a result of improvements in foreign stock valuation adjustments. The improvements result from the extension to these years of the new measures of foreign stock price changes based on the weighted average price change methodology adopted in June 2003.

Last year, BEA developed two weighted average price indexes to apply to foreign stock positions: A weighted average price index for advanced countries and a weighted average price index for emerging market countries. The two weighted average price indexes combine results from the Treasury Department’s 1997 Benchmark Survey of U.S. Portfolio Investment with pricing data from Morgan Stanley Capital International (MSCI) indexes of stock prices. The weighted average price index for advanced countries was computed by weighting nine MSCI advanced country price indexes, using the distribution of foreign stock holdings for advanced countries on the 1997 benchmark survey. Similarly, the weighted average price change for emerging market countries was computed by weighting three MSCI emerging market regional price indexes, using the distribution of foreign stock holdings for emerging market regions on the 1997 benchmark survey.

As a result of the improved measures of foreign stock prices, foreign stock positions were revised down \$0.7 billion in 1994, up \$13.8 billion in 1995, and up \$3.2 billion in 1996.

Dividends. Estimates of dividend income receipts from U.S. holdings of foreign stocks are revised for 1994–97 as a result of improvements in foreign dividend yields. The improvements result from the extension to these years of the new measures of foreign dividend yields based on the weighted average yields methodology adopted in June 2003.

Similar to the estimation techniques used to develop stock price indexes, BEA developed two weighted average dividend yields: A weighted average dividend yield for advanced countries and a weighted average dividend yield for emerging market countries. The weights applied to the country and regional MSCI dividend yields were the same weights used to compute average weighted price changes for advanced and emerging market countries.

As a result of improved measures of dividend yields, dividend receipts were revised up \$0.9 billion in 1994, up \$0.1 billion in 1995, up \$0.1 billion in 1996, and down \$3.4 billion in 1997.

Bond transactions. BEA has made small revisions to estimates of foreign bond transactions for 1994–97 as a result of revisions to monthly transactions data and coverage adjustments.

Bond positions. Foreign bond positions are revised for 1994–96 as a result of incorporation of improved foreign bond valuation adjustments. The improvements result from the extension to these years of the new measures of foreign bond price changes based on the weighted average price change methodology adopted in June 2003.

BEA developed a weighted average bond price index to apply to quarterly bond positions by combining the results of the Treasury Department's 1997 Benchmark Survey of U.S. Portfolio Investment with pricing data from Merrill Lynch. The weighted average bond price index was based on the weighting of six Merrill Lynch bond price indexes by the distribution of foreign bond holdings by currency on the 1997 benchmark survey.

As a result of the improved methodology, bond positions are revised down \$10.8 billion in 1994, up \$20.5 billion in 1995, and up \$16.4 billion in 1996.

Bond interest. Estimates of bond interest income receipts are revised for 1994–97 as a result of an improved methodology for calculating yields. The improvements result from the extension to these years of new measures of foreign bond yields based on the weighted average yield methodology adopted in June 2003.

Similar to the estimation techniques applied to bond price changes, BEA developed a weighted average bond yield. The weighted average bond yield was computed using six Merrill Lynch bond indexes that repre-

sent yields on bond issues denominated in each major currency. The yields associated with each currency were then weighted by the distribution of foreign bond holdings by currency on the 1997 benchmark survey. The weights applied to the six Merrill Lynch bond yield indexes were the same weights used to compute a weighted average bond price index.

As a result of improved measures of bond yields, interest receipts were revised down \$2.0 billion in 1994, \$3.7 billion in 1995, \$2.0 billion in 1996, and \$2.8 billion in 1997.

Goods exports and imports

As a result of its annual review of the seasonal adjustment of goods exports and goods imports series, BEA, in cooperation with the Bureau of the Census, is now seasonally adjusting various petroleum imports and exports series. Previously, these series were not adjusted. However, these series now meet the two Bureau's criteria for adjustment for both monthly and quarterly data. The change begins in 1989. Adjustment of one export series and two import series will present a more accurate picture of seasonally adjusted total exports and total imports. Adjustment of these series will also reduce the small amount of residual seasonality that was present on both sides of the accounts and that arose from the nonadjustment of these series.

Presentation changes

The geographic groups in tables 2 and 11 of the standard quarterly presentation of the accounts have been updated to reflect the expansion of the European Union from 15 countries to 25 countries in May 2004

Acknowledgments

The revised estimates were prepared under the general direction of Paul Farello with the assistance of Renee Sauers. Patricia Abaroa prepared the new estimates of Government income payments. Elena Nguyen, Matthew Argersinger, Patricia Abaroa, and Christopher Gohrband prepared the revised estimates of U.S. securities transactions and related income payments based on the Treasury Department's new annual liabilities surveys for June 2002 and June 2003. Erin Nephew and Michael Mann prepared the new estimates of insurance premium supplements. Mary-Frances Styczynski prepared the new estimates of U.S. holdings of foreign securities and related income receipts. Paul Farello and Douglas Weinberg prepared the new geographic presentations that incorporate the expansion of countries in the European Union and the introduction of quarterly estimates for Mexico.

(see “U.S. International Transactions, First Quarter 2004” in this issue). Table 11, which contains the geographic presentation of the accounts by area and by selected major countries, now shows a total for all of Europe. Within Europe, estimates are presented for the European Union and the United Kingdom. The estimates previously shown for Western Europe, European Union (6), and for Eastern Europe end with estimates for the fourth quarter of 2003; estimates through this period will continue to be available on BEA’s Web site. Related changes will be made in table 2, which presents goods exports and goods imports in more detail than in table 11.

In addition, table 11 now includes a quarterly presentation of bilateral transactions with Mexico, beginning with estimates for the first quarter of 2004. Previously, estimates of transactions with Mexico were presented only annually in table 12.

A change has been made to tables 9a and 10a, which present estimates of bank claims and bank liabilities, respectively, in order to conform with industry classifications available in the U.S. Treasury Department’s

bank and nonbank statistical reporting system. Recent changes to the reporting system make it necessary to regroup the detail available for some banking transactions. For claims, sector breakdowns are now available for claims on foreign banks, on foreign nonbanks excluding foreign official institutions, and on foreign official institutions. For liabilities, sector breakdowns are now available for liabilities to foreign banks and liabilities to foreign nonbanks and international organizations. The new sector breakdowns also conform more closely with classifications available in Bank for International Settlements reports and in International Monetary Fund reports.

A small change has been made to the supplemental details on insurance transactions included in table 3, which presents estimates of private services transactions. Some details shown previously were related to the earlier methodology, but they are no longer relevant in the current methodology; these details are therefore dropped from the table. Detailed estimates of actual premiums paid and received and actual losses paid and recovered will continue to be shown.

How BEA Aligns and Augments Source Data From the U.S. Treasury Department for Inclusion in the International Transactions Accounts

Like most of the U.S. economic accounts produced by the Bureau of Economic Analysis (BEA), the estimates of financial-account flows in the international transactions accounts (ITAs) are based on source data collected by other Government agencies—in this case, by the Treasury International Capital (TIC) Reporting System of the U.S. Department of the Treasury. The presentation of the adjustments undertaken by BEA to align and to augment these data for inclusion in the financial account can help data users reconcile BEA's financial flow estimates with the TIC data that are available to the public on the Treasury Department's Web site and in the *Treasury Bulletin*.

The relationship between the estimates in the ITAs that are prepared by BEA and the data from the TIC reporting system are shown in tables 1–3. Table 1 presents the estimates of transactions in foreign long-term securities; in U.S. long-term securities, excluding U.S. Treasury securities; and in U.S. Treasury securities. Table 2 presents the estimates of claims on, and liabilities to, foreigners reported by U.S. nonbanking concerns, and table 3 presents the estimates of claims on, and liabilities to, foreigners reported by U.S. banks.

In tables 1–3, the numerous adjustments that BEA makes to the TIC source data to align the data with the balance-of-payments concepts and to close the gaps in coverage are identified. In addition, examples of both types of adjustments are presented below.

Aligning with balance-of-payments concepts. The TIC data for gross U.S. purchases of foreign stocks and bonds (line A1, table 1) include the commissions that are paid by the U.S. purchasers to foreign brokers. In the

ITAs, the payments of commissions to foreigners are treated as payments for financial services, not as purchases of securities, and these payments are included in the current account, not in the financial account. Therefore, BEA adjusts the TIC data for gross U.S. purchases by subtracting an estimate of the payments of brokerage commissions (line A3) from the data for gross purchases.

The TIC data for gross U.S. sales of foreign stocks and bonds (line A6) represent the proceeds from sales less commissions paid by U.S. sellers to foreign brokers. In the ITAs, the payments of commissions to foreign brokers are treated as payments for financial services, not as transactions in securities. Therefore, BEA adds an estimate of the payments of brokerage commissions (line A7) to the TIC sales data.

Closing gaps in coverage. The TIC data for gross U.S. purchases of foreign stocks and bonds do not fully cover some transactions, such as the acquisition of U.S. companies by foreigners who finance their purchases through exchanges of stock. These stock swap transactions may bypass the U.S. brokers and dealers who are the primary respondents to the TIC survey on securities transactions. When stock is exchanged, the U.S. persons who previously held securities in the acquired U.S. company receive shares in the acquiring foreign corporation, and the receipt of these shares should be recorded in the ITAs as the acquisition, or purchase, of foreign long-term securities.

In order to account for this gap in coverage in the TIC data, BEA adds an estimate of security swap transactions and other coverage adjustments (line A2) to the TIC data.

U.S. International Transactions, First Quarter 2004

By Renee M. Sauers

The estimates presented in this article reflect the annual revision of the international transactions accounts. For more information, see "Annual Revision of the U.S. International Accounts, 1989–2003" in this issue.

THE U.S. current-account deficit—the combined balances on trade in goods and services, income, and net unilateral current transfers—increased to \$144.9 billion in the first quarter of 2004 from \$127.0 billion (revised) in the fourth quarter of 2003 (table A, chart 1).¹ An increase in the deficit on goods accounted for more than half of the increase. In addition, the surplus on income decreased, and net outflows for unilateral current transfers increased.

In the financial account, net recorded financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—decreased to \$158.3 billion in the first quarter from \$168.7 billion in the fourth quarter. Both financial outflows for U.S.-owned assets abroad and financial inflows for foreign-owned assets in the

United States increased substantially, but outflows increased more than inflows.

The statistical discrepancy—errors and omissions in recorded transactions—was a negative \$13.1 billion in the first quarter, compared with a negative \$41.4 billion in the fourth quarter.

The following are highlights for the first quarter of 2004:

- A substantial increase in goods imports outpaced an increase in goods exports. The rise in both imports and exports partly reflected sharply higher prices for energy products and other industrial supplies and materials.
- Direct investment income payments increased, largely as a result of increased earnings in manufacturing.
- U.S. claims and liabilities reported by U.S. banks both increased by record amounts, partly because of large increases in resale and repurchase agreements.
- Net private foreign purchases of U.S. Treasury securities increased strongly.

1. Quarterly estimates of U.S. current- and financial-account components are seasonally adjusted when series demonstrate statistically significant patterns. The accompanying tables present both adjusted and unadjusted estimates.

^P Preliminary.

U.S. dollar in exchange markets

In the first quarter, the U.S. dollar depreciated 3 percent on a nominal, trade-weighted, quarterly average basis against a group of seven major currencies that are widely traded in international markets (table B, chart 2). However, from the beginning of the quarter to the end of the quarter, the dollar appreciated slightly against the group.

After depreciating substantially in the last 2 years, the dollar continued to trend lower against most major currencies early in the first quarter of 2004. However, the dollar was more volatile than in the recent past, and by the end of the quarter, it was marginally higher than at the beginning of the quarter. In the quarter, data releases indicated that U.S. economic conditions remained relatively strong.

In the past 2 years, the dollar depreciated most against the euro. In the first quarter of 2004, the de-

cline was halted, at least temporarily, and the dollar ended the quarter 2 percent higher against the euro than at the beginning of the quarter. Data releases indicated that euro-area economic growth remained weak, particularly compared with U.S. and Japanese growth.

There were sharp movements in value of the dollar against the yen, and the dollar ended the quarter moderately lower than at the beginning of the quarter. Data releases indicated that the Japanese economic recovery was stronger and broader than expected. The Bank of Japan continued to intervene in foreign exchange markets throughout the quarter, limiting the size of the yen's appreciation.

The dollar depreciated against the British pound, reaching an 11-year low against the pound in February. Favorable interest-rate differentials contributed to the pound's strength. In early February, the Bank of England raised interest rates 25 basis points to 4.0 percent.

Chart 1. U.S. Current-Account Balance and Its Components

Current Account

Goods and services

The deficit on goods and services increased to \$136.9 billion in the first quarter from \$125.5 billion in the fourth quarter. The increase was almost completely

Chart 2. Nominal Indexes of Foreign Currency Price of the U.S. Dollar

accounted for by a large increase in the deficit on goods. The surplus on services declined slightly.

Goods

The deficit on goods increased to \$150.8 billion in the first quarter from \$139.4 billion in the fourth quarter, as a sharp increase in imports outpaced an increase in exports (chart 3).

Exports. Goods exports increased \$7.1 billion, or 4 percent, to \$193.9 billion in the first quarter. Real exports and export prices both increased 2 percent

(table C).²

Nonagricultural industrial supplies and materials increased \$3.1 billion. Export prices of most nonagricultural industrial supplies and materials rose sharply in the first quarter (chart 4). The rise in prices was attributable to a pickup in U.S. industrial production, which increased demand for raw and intermediate ma-

2. Quantity (real) estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters. Real estimates are expressed as chained (2000) dollars. Price indexes (2000 = 100) are also calculated using a chain-type Fisher formula.

^P Preliminary.

1. Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.
NOTE: Percent changes in quarterly estimates are not annualized and are expressed at quarterly rates.

terials, and to heightened worldwide demand for petroleum. Energy products, mainly fuels and lubricants, increased \$0.9 billion. Metals and nonmetallic products, primarily iron and steel products and nonferrous metals, increased \$0.8 billion. Chemicals increased \$0.7 billion.

Capital goods increased \$2.5 billion, the third consecutive, sizable quarterly increase; strong increases in telecommunications equipment, in oil drilling, mining, and construction equipment, and in other types of industrial, agricultural, and service machinery more than offset small decreases in civilian aircraft, engines, and parts and in computers, peripherals, and parts. Consumer goods increased \$1.1 billion, almost entirely as a result of a surge in medical, dental, and pharmaceutical products.

In contrast, agricultural products decreased \$0.4 billion. Sharp declines in meat products and poultry and in soybeans more than accounted for the decrease. Many foreign governments banned imports of U.S. beef in late December, following the discovery of the first case of mad cow disease in the United States; the ban resulted in a 41-percent decrease in beef exports in the first quarter. The decrease in soybean exports, mainly to China, reversed a sizable increase in the fourth quarter.

Imports. Goods imports increased \$18.4 billion, or 6 percent, to \$344.7 billion in the first quarter. The increase was attributable to strong increases in both pe-

troleum and nonpetroleum products. Real imports and import prices both increased 3 percent (table C).

Petroleum and petroleum products increased \$7.0 billion because of a substantial rise in prices and an increase in volume. Petroleum prices jumped to \$30.91 per barrel in the first quarter from \$27.74 per barrel in the fourth quarter, and the average number of barrels imported daily increased to 14.39 million from 13.29 million. Tightened supply and increased worldwide demand contributed to the jump in prices in the first quarter. In February, OPEC members agreed to eliminate 1.5 million barrels a day of supply in excess of existing quotas and also to cut official production 4.1 percent beginning April 1st. These cuts followed a 3.5-percent cut in official production in November 2003.

Nonpetroleum industrial supplies and materials increased \$4.4 billion. Prices for most broad categories of industrial supplies and materials increased sharply in the first quarter (chart 4). In value, iron and steel

Chart 3. Percent Change in U.S. Trade in Goods

Chart 4. Percent Change in Export and Import Prices of Selected Industrial Supplies and Materials

products rose a record \$0.9 billion, or 23 percent, the largest percentage increase in nearly 23 years; the increase partly resulted from the lifting of U.S. tariffs on steel imports in December 2003. In the first quarter, steel imports from all the major areas increased. Natural gas increased \$0.9 billion, largely from Canada; nonferrous metals increased \$0.7 billion, mainly from Canada and Russia; and chemicals increased \$0.7 billion, mainly from Western Europe.

Consumer goods increased \$2.7 billion. Durable goods increased \$1.3 billion; household and kitchen appliances, mainly from Asia, more than accounted for the rise. Nondurable goods also increased \$1.3 billion, mostly from Asia and Western Europe.

Capital goods increased \$2.6 billion; a decrease in civilian aircraft was more than offset by strong increases in other categories of capital goods. Electric generating machinery, "oil drilling, mining, and construction machinery," and "other" industrial, agricultural, and service industry machinery all increased substantially. Technology products continued to increase after strong growth in the fourth quarter. The largest first-quarter increases were in computers, peripherals, and parts, mainly from China, in semiconductors, largely from Asia, and in scientific equipment, mainly from Ireland. In contrast, civilian aircraft, engines, and parts fell a record \$1.2 billion after increasing substantially in the fourth quarter.

Revisions to the Estimates

The estimates presented in this article reflect the annual revision of the international transactions accounts, which incorporates definitional, methodological, statistical, and presentational improvements and newly available source data. The estimates of goods for 1989–2003 have been revised, the estimates of services, income, and unilateral current transfers for 1992–2003 have been revised, the estimates of capital account transactions for 2000–2003 have been revised, and the estimates of financial flows for 1994–2003 have been revised. For more information, see "Annual Revision of the U.S. International Accounts, 1989–2003" in this issue.

For the fourth quarter of 2003, the current-account deficit was revised to \$127.0 billion from \$127.5 billion. The goods deficit was revised to \$139.4 billion from \$139.2 billion; the services surplus was revised to \$13.9 billion from \$16.3 billion; the income surplus was revised to \$16.2 billion from \$12.5 billion; and unilateral current transfers were revised to net outflows of \$17.6 billion from \$17.2 billion. Net recorded financial inflows were revised to \$168.7 billion from \$180.9 billion.

Automotive vehicles, engines, and parts increased \$1.1 billion. Most of the rise was accounted for by increases in passenger cars from Japan and in engines and other parts from Mexico.

Balances by area. The goods deficit with Canada increased \$4.8 billion, to a 3-year high, as imports increased much more than exports.³ The deficit with Mexico increased \$2.3 billion as a result of an increase in imports. The deficit with Japan increased \$1.6 billion, partly reflecting increased imports of capital goods. In contrast, the deficit with China decreased \$2.0 billion, mostly as a result of a decline in imports of home entertainment and recreational equipment.

Services

The surplus on services decreased to \$13.8 billion in the first quarter from \$13.9 billion in the fourth quarter. Service receipts increased \$1.5 billion, to \$82.9 billion, and service payments increased \$1.6 billion, to \$69.1 billion.

Travel receipts decreased \$0.1 billion, to \$18.0 billion, and travel payments increased \$0.1 billion to \$15.2 billion. These small changes followed strong increases in receipts and payments in the third and fourth quarters of 2003. In the first quarter, the number of foreign visitors to the United States and of U.S. residents traveling abroad both decreased; the majority of the decreases occurred in January, when several international flights were cancelled because of security concerns.

Passenger fare receipts increased \$0.1 billion, to \$4.4 billion, as an increase in average U.S. airfares offset a decrease in the number of foreign visitors to the United States. Passenger fare payments decreased \$0.2 billion, to \$5.3 billion, reflecting decreases in average foreign airfares and in the number of U.S. overseas travelers.

"Other" transportation receipts increased \$0.5 billion, to \$9.1 billion, and "other" transportation payments increased \$1.2 billion, to \$12.8 billion. Freight and port receipts and payments were higher, largely as a result of higher levels of goods exports and imports and increased fuel purchases by U.S. and foreign carriers.

3. Seasonally adjusted estimates of exports for areas and countries are derived by applying seasonal factors for total U.S. agricultural and nonagricultural exports to the unadjusted agricultural and nonagricultural exports for areas and countries and then summing the seasonally adjusted estimates. Seasonally adjusted estimates of imports for areas and countries are derived by applying seasonal factors for total U.S. petroleum and nonpetroleum imports to the unadjusted petroleum and nonpetroleum imports for areas and countries and then summing the seasonally adjusted estimates. (The seasonal factors are derived from the seasonal adjustment of U.S. exports and U.S. imports by five-digit end-use commodity categories.)

“Other” private services receipts increased \$0.7 billion, to \$35.1 billion, largely as a result of increases in financial services and in business, professional, and technical services. “Other” private service payments increased \$0.5 billion, to \$22.9 billion, mostly as a result of increases in insurance services and in affiliated services.

Income

The surplus on income decreased to \$12.7 billion in the first quarter from \$16.2 billion in the fourth quarter. A \$3.9 billion increase in income payments more than offset a \$0.4 billion increase in income receipts.

Receipts of income of U.S. direct investment abroad decreased \$0.3 billion, to \$56.5 billion. Earnings decreased slightly but remained strong as a result of the recent pickup in economic activity in some major countries and the appreciation of foreign currencies against the U.S. dollar. In the first quarter, an increase in the earnings of manufacturing affiliates was more than offset by decreases in the earnings of nonmanufacturing affiliates.

Payments of income on foreign direct investment in the United States increased \$2.8 billion, to \$21.0 billion. An increase in earnings, largely in manufacturing, more than offset a decrease in net interest payments. Earnings of foreign-owned companies have been strong in recent quarters, mirroring the strength of overall U.S. corporate profits and largely reflecting the continued strength of U.S. economic activity.

Receipts of “other” private income increased \$1.4 billion, to \$26.5 billion. The increase was more than accounted for by an increase in dividend receipts that resulted from a rise in average U.S. holdings of foreign stocks. Payments of “other” private income increased \$0.3 billion, to \$29.4 billion. The increase mainly resulted from a rise in interest payments on bank liabilities that was due to a rise in average amounts outstanding.

Receipts of income on U.S. Government assets decreased \$0.6 billion, to \$0.7 billion. Payments of income on U.S. Government liabilities increased \$0.8 billion, to \$19.2 billion. The increase was mainly attributable to an increase in average foreign holdings of U.S. Treasury securities.

Unilateral current transfers

Unilateral current transfers were net outflows of \$20.6 billion in the first quarter, up from net outflows of \$17.6 billion in the fourth quarter. The increase was attributable to U.S. Government grants. Grants that are often disbursed annually in the fourth quarter to Israel and Egypt under the debt waiver program and under

economic assistance programs were not disbursed until the first quarter.

Capital Account

Capital account transactions were net outflows of \$0.3 billion in the first quarter and were virtually unchanged from the fourth quarter.

Financial Account

Net recorded financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$158.3 billion in the first quarter, down from \$168.7 billion in the fourth quarter. Both financial outflows for U.S.-owned assets abroad and financial inflows for foreign-owned assets in the United States increased substantially, but outflows increased more than inflows.

U.S.-owned assets abroad

Net U.S.-owned assets abroad increased \$289.3 billion in the first quarter, following an increase of \$61.6 billion in the fourth quarter. U.S. claims on foreigners reported by U.S. banks surged in the first quarter after decreasing in the fourth quarter. In contrast, net U.S. purchases of foreign securities slowed.

U.S. official reserve assets. U.S. official reserve assets decreased \$0.6 billion in the first quarter, following a decrease of \$2.2 billion in the fourth quarter. The first-quarter decrease was more than accounted for by a decrease in the U.S. reserve position in the International Monetary Fund (IMF) that was associated with the net repayment of U.S. dollars to the IMF by Brazil and Turkey.

Claims reported by banks and by nonbanks. U.S. claims on foreigners reported by U.S. banks and securities brokers increased a record \$183.4 billion in the

Data Availability

The estimates that are presented in tables 1–12 of the U.S. international transactions accounts are available interactively on BEA's Web site at <www.bea.gov>. Users may view and download the most recent quarterly estimates (annual estimates for table 12) for an entire table, or they may select the period, frequency, and lines that they wish to view. The estimates are available in an HTML table, in an Excel file, or as comma-separated values.

The current and historical estimates in tables 1–12 are also available as compressed files on our Web site at <www.bea.gov/bea/uguide.htm#_1_22>.

first quarter, in contrast to a decrease of \$47.1 billion in the fourth quarter (chart 5).

Banks' own claims denominated in dollars surged \$179.8 billion in the first quarter, in contrast to a decline of \$38.4 billion in the fourth. In the first quarter, interbank claims increased sharply as foreign-owned banks in the United States lent substantial funds to their parent banks and other banks abroad. U.S.-owned banks also stepped up their lending to banks abroad, and securities brokers lent substantial funds through resale agreements. The surge in lending reflected increased foreign demand for bank credit, particularly in Europe and the Caribbean.

Banks' domestic customers' claims increased \$2.1 billion, in contrast to a decrease of \$4.8 billion in the fourth quarter. In the first quarter, an increase in for-

foreign commercial paper more than offset a decrease in dollar deposits and brokerage balances.

Claims reported by U.S. nonbanking concerns increased \$34.5 billion, following an increase of \$31.1 billion. The first-quarter increase was largely attributable to increased deposits in the United Kingdom.

Foreign securities. Net U.S. purchases of foreign securities were \$15.2 billion in the first quarter, down from \$25.8 billion in the fourth. The slowdown was attributable to a shift to net U.S. sales of foreign bonds from net U.S. purchases.

Net U.S. purchases of foreign stocks increased to \$22.5 billion from \$19.2 billion. Net U.S. purchases of Japanese stocks were strong for the third consecutive quarter. In the first quarter, Japanese real GDP growth was strong, and Japanese stock prices appreciated 11 percent in local currency, outperforming stock prices in U.S. and European markets. Transactions in European stocks shifted to net U.S. purchases of \$5.2 billion from net U.S. sales of \$10.3 billion.

Transactions in foreign bonds shifted to net U.S. sales of \$7.2 billion from net U.S. purchases of \$6.6 billion. The shift was largely attributable to a shift to net sales of Asian bonds except Japanese bonds. In addition, net U.S. sales of foreign bonds in Caribbean financial centers and in Latin America increased. In contrast, net U.S. purchases of foreign bonds in the United Kingdom increased strongly.

Direct investment. Net financial outflows for U.S. direct investment abroad were \$57.2 billion in the first quarter, up from \$53.7 billion in the fourth quarter. Decreases in reinvested earnings and in net equity capital outflows were more than offset by a shift in intercompany debt to net outflows from net inflows. Though lower, reinvested earnings remained strong as a result of robust earnings by foreign affiliates that partly resulted from the continued decline in the value of the U.S. dollar against foreign currencies. Net equity capital outflows fell slightly but were higher than in many recent quarters.

Foreign-owned assets in the United States

Net foreign-owned assets in the United States increased \$447.6 billion in the first quarter, following an increase of \$230.3 billion in the fourth. U.S. liabilities reported by banks surged, and net foreign purchases of U.S. Treasury securities increased substantially from the fourth quarter. In addition, acquisitions of foreign official assets in the United States and U.S. liabilities reported by nonbanks also accelerated. In contrast, net

Chart 5. Selected Financial Flows, 2002:II–2004:I

foreign purchases of U.S. securities other than U.S. Treasury securities slowed.

Foreign official assets. Foreign official assets in the United States increased \$125.2 billion in the first quarter, following an increase of \$83.7 billion in the fourth. Assets of Asian countries increased \$117.2 billion, mainly as a result of official interventions in the foreign exchange market.

Liabilities reported by banks and by nonbanks. U.S. liabilities reported by U.S. banks and securities brokers, excluding U.S. Treasury securities, increased a record \$141.3 billion in the first quarter, following an increase of \$35.8 billion in the fourth.

Banks' own liabilities denominated in dollars surged \$135.6 billion, following an increase of \$30.5 billion. In the first quarter, banks and securities brokers significantly increased their borrowing from foreign banks, primarily in Western Europe. In addition, securities brokers also substantially increased their borrowings from foreign nonbanks, mostly in Caribbean financial centers, through repurchase agreements.

Banks' customers' liabilities increased \$3.5 billion, following an increase of \$15.2 billion. Liabilities reported by U.S. nonbanking concerns increased \$36.2 billion, following an increase of \$4.1 billion.

U.S. Treasury securities. Net foreign purchases of U.S. Treasury securities were \$66.4 billion in the first quarter, up sharply from \$4.7 billion in the fourth (chart 6). The first-quarter net foreign purchases were the second highest on record. In the first quarter, the U.S. Treasury market rallied strongly. Net foreign purchases from Western Europe, primarily the United Kingdom, and from Caribbean financial centers were particularly strong.

Other U.S. securities. Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$62.3 billion, down from \$83.8 billion. Net foreign purchases of U.S. stocks and corporate bonds decreased, while net foreign purchases of U.S. federally sponsored agency bonds increased slightly.

Net foreign purchases of U.S. stocks declined to \$4.1 billion from \$22.8 billion. Expectations for continued U.S. economic growth that were tempered by concerns about potential future increases in U.S. inflation led to uneven movements in U.S. stock prices and dampened foreign purchases of U.S. stocks. Net purchases from Europe and Canada decreased, and net sales from Japan increased.

Net foreign purchases of U.S. corporate bonds slowed to \$51.3 billion from \$58.3 billion. A large de-

crease in net purchases from the United Kingdom was partly offset by increases in net purchases from other European countries and from Japan. Net foreign purchases of U.S. agency bonds increased to \$6.9 billion from \$2.7 billion.

U.S. currency flows. U.S. currency transactions shifted to net shipments to the United States of \$1.8 billion in the first quarter, following net shipments to foreign countries of \$7.5 billion in the fourth quarter.

Direct investment. Net financial inflows for foreign direct investment in the United States were \$18.0 billion in the first quarter, up from \$10.7 billion in the fourth quarter. The increase was more than accounted for by a shift in intercompany debt to net inflows from net outflows, which largely reflected a shift to net inflows from parent companies in Switzerland and the United Kingdom. Reinvested earnings also increased, while net equity capital inflows decreased.

Chart 6. Transactions in U.S. Securities, 2002:II-2004:I

Footnotes to U.S. International Transactions Tables 1–12

General notes for all tables: ^p Preliminary, ^r Revised, * Less than \$500,000 (+/-) ^D Suppressed to avoid disclosure of data of individual companies. Quarterly estimates are not annualized and are expressed at quarterly rates.

Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.

3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. At the present time, all U.S. Treasury-owned gold is held in the United States.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

Additional footnotes for historical data in July issues of the SURVEY:

14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.

15. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.

16. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2004 issues of the SURVEY.

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 SURVEY), except for 1974–81, when they represent transactions values, f.a.s. foreign port of exportation (see July issues of the SURVEY for historical data). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and

"revised statistical" monthly data supplied by the Census Bureau (see Technical Notes in the December 1985 SURVEY). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see technical Notes in the June 1980 SURVEY, in the June 1988 SURVEY, and in the June 1991 SURVEY). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975–80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.

2. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.

3. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 11, line 5 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 11, line 22 (direct defense expenditures).

4. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the SURVEY for historical data).

5. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair; and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974–81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the SURVEY for historical data).

6. For 1988–89, correction for the understatement of crude petroleum imports from Canada.

7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 11, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: *Industrial countries*: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; *Members of OPEC*: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (Excludes Ecuador beginning in January 1993 and Gabon beginning in January 1995.); *Other countries*: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."

8. Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.

9. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."

10. The "Euro area," which formed in January 1999, includes Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and from January 2001, Greece.

Table 3:

1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States and film and television tape rentals. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

Table 4:

1. Complete instrument detail is only available beginning with 2003.

2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

Table 5:

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.

2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are *not* included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.

4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.

5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

Table 6a:

1. For bank affiliates, includes only interest on permanent debt investment by their parent companies. Excludes interest between financial parent companies and nonbank financial affiliates.

2. For bank affiliates, includes only permanent debt investment by their parent companies. Excludes intercompany debt between financial parent companies and nonbank financial affiliates.

Table 7a:

1. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

2. Includes all redemptions and early retirements.

Table 8a:

1. Prior to 2003, securities brokers' claims on and liabilities to their foreign affiliates are included in the estimates. They are excluded beginning in 2003.

2. Estimates of commercial claims and liabilities with unaffiliated foreigners are not available.

3. Complete instrument detail is only available beginning with 2003.

4. Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parent groups), where both the U.S. and foreign firms are classified in a finance industry, but the firms are neither banks nor securities brokers.

5. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 9a:

1. Beginning with 2003, includes securities brokers' claims on their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.

4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.

6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.

7. Prior to 2003, includes only deposits.

8. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 10a:

1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

Table 11:

For footnotes 1–13, see table 1.

14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom, and beginning with the first quarter of 1995, Austria, Finland, and Sweden. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

15. Quarterly estimates for Mexico are available beginning with 2004.

16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.

17. Details are not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

Table 12:

For footnotes 1–13, see table 1.

14. Details not shown separately are included in line 69.

NOTE. Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. goods export statistics reflect country of reported destination; in many cases the goods may be transshipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of securities transactions reflects the country with which transactions occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

State Personal Income

First Quarter of 2004

By G. Andrew Bernat, Jr.

PERSONAL income for the Nation grew 1.4 percent in the first quarter of 2004, the same as in the fourth quarter of 2003, and up from 1.2 percent in the third quarter (table A). Personal income growth accelerated in 21 states and the District of Columbia. These states accounted for more than 57 percent of total personal income. For 7 of the 10 slowest growing states, the decline in farm earnings in the first quarter was the most important factor; four of these seven states are in the Plains region, and three are in the Rocky Mountain region (chart 1).

This article presents preliminary estimates of state personal income for the first quarter of 2004 and revised quarterly estimates for 2003. Detailed estimates

are presented in two tables at the end of the article.

The release of the quarterly estimates of state personal income that are presented in this article was accelerated by 4 weeks. This acceleration fulfilled a major goal in the strategic plan of the Bureau of Economic Analysis (BEA). The acceleration of the estimates was a result of efforts by the Bureau of Labor Statistics and state employment security agencies, in close collaboration with BEA, to speed up the delivery of wage and salary data from the state unemployment insurance programs. These accelerated estimates will provide analysts with more timely information that they can use to assess the growth in state economies and to project state Government revenues and budgets.

Chart 1. Personal Income: Percent Change in 2003:IV–2004:I

Personal income growth by component

Nationally, the faster growth in net earnings and in personal current transfer receipts offset the slower growth in property income (table B). Net earnings grew 1.5 percent in the first quarter, the fastest growth

since the third quarter of 2000. Net earnings increased in 46 states and the District of Columbia.

Transfer receipts grew 1.4 percent. Transfer receipts accelerated in 46 states and the District of Columbia in the first quarter. In contrast, in the fourth quarter of

^r Revised.

^p Preliminary.

1. Percent changes are expressed at quarterly rates.

Note. Estimates may not add to totals because of rounding.

2003, transfer receipts decelerated in every state and the District of Columbia. All transfer receipts except unemployment benefits increased 2.2 percent. In contrast, unemployment benefit payments, a small but volatile component of transfer receipts, decreased 18.0 percent after decreasing 5.2 percent in the fourth quarter of 2003; these payments decreased in all states except North Carolina.

Property income (dividends, interest, and rent) increased 0.8 percent in the first quarter after increasing 2.7 percent in the fourth quarter of 2003. Interest income receipts, which accounts for 60 percent of total property income, increased 0.1 percent. Rental income, the smallest of the three components of total property income, increased 2.6 percent, and dividends increased 1.8 percent.

Table B. Personal Income by Component by State and Region for 2003:IV–2004:I

	Percent change				Percent change in personal income	Contribution to percent change in personal income (percentage points)			Dollar change (millions)			
	Personal income	Net earnings ¹	Dividends, interest, and rent	Transfer receipts		Net earnings ¹	Dividends, interest, and rent	Transfer receipts	Personal income	Net earnings ¹	Dividends, interest, and rent	Transfer receipts

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.
 Note: Estimates may not add to totals because of rounding.

Earnings growth by industry

Nationally, earnings by industry grew 1.6 percent in the first quarter of 2004. Earnings in all industries except natural resources and mining grew (table C). Nationally, earnings in financial activities contributed 0.29 percentage point to earnings growth; earnings in financial activities was the largest contributor to earnings growth in 12 states (table D). Earnings in Govern-

ment contributed 0.25 percentage point and was the largest contributor to earnings growth in 19 states and the District of Columbia; military earnings grew 5.2 percent. Earnings in natural resources and mining, principally earnings in farming, decreased 6.0 percent in the first quarter after substantial growth throughout 2003. As a result, total earnings in South Dakota, North Dakota, Wyoming, and Nebraska decreased,

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.
2. Data are suppressed to avoid disclosure of confidential information.

states decreased after increasing more than 5.0 percent in the fourth quarter of 2003. Earnings in nondurable-goods manufacturing increased for the second quarter in a row.

Farm earnings and personal income growth

Even though farm earnings accounts for less than 1.0 percent of total earnings in the Nation, the growth in farm earnings can substantially affect the rankings of states by their quarterly growth in state personal income. For example, in the first quarter of 2004, 7 of the 10 states in which farm earnings accounted for the largest shares of total earnings were among the states with the slowest growth in personal income. States in which farm earnings account for relatively large shares of total earnings are frequently among the states with the fastest or slowest growth in personal income. For example, since the first quarter of 2000, farm earnings accounted for the largest shares of total earnings in 9 of the 16 states that were ranked in the top or bottom quintile in more than half of the 17 quarters (table E). Farm earnings substantially affects the growth in personal income for two reasons. First, the growth in farm earnings is more variable than the growth in earnings in other industries, because a large share of farm earnings is accounted for by farm proprietors' income and because the value of farm production—the sum of cash receipts and Government payments—is highly variable.

- Proprietors' income tends to be more variable than wage and salary income, so the growth in industries in which proprietors' income accounts for a large share of earnings tends to be more variable than the growth in industries in which wage and salary income accounts for a large share of earnings. Farm proprietors' income accounted for 54 percent of total farm earnings over the past five quarters. (The next largest share of proprietors' income was 39 percent for the financial activities industry.)
- The value of farm production reflects the variable levels of production and prices. The production levels are affected by growing conditions, such as a drought or a flood, and the prices of both crops and livestock are affected by global supply and demand and by Government policies in the United States and in other countries.
- Government payments vary substantially. For example, these payments are projected to decrease \$7 billion in 2004, and this decrease partly reflects the timing of the payments. Farmers received some payments for the 2002 crops and the 2004 crops in 2003, so the 2003 payments increased, and the 2004 payments decreased. The payments also vary, depending on the commodity, and the payments for

some commodities account for a larger share of farm earnings in some states than in others.

Second, the share of total earnings that is accounted for by farm earnings substantially affects personal income growth. In the states in which farm earnings account for a small share of total earnings, the growth rate of farm earnings has little effect on the growth rate of personal income. For example, in California, Texas, North Carolina, Georgia, and Florida, the share of farm earnings was 1.1 percent or less of total earnings though these states accounted for 39.6 percent of total farm earnings for the Nation in the first quarter of 2004. In contrast, in the states in which farm earnings account for a larger share of total earnings, the growth rate of farm earnings substantially affects the growth rate of personal income. For example, in North Dakota, South Dakota, Idaho, Arkansas, and Nebraska,

1. The District of Columbia is not included because it is not included in rankings of states.

the share of farm earnings in each state was 3.0 percent or more of total earnings though these states accounted for 13.9 percent of total farm earnings in the Nation.

Year-to-year trends in quarterly state personal income growth

It is useful to look at the change in state personal income in the current quarter relative to the same quarter a year ago because quarter-to-quarter changes are subject to large swings. Chart 2 shows the year-to-year growth rates of quarterly state personal income from the third quarter of 2000 through the first quarter of 2004.

The year-to-year growth in personal income in the states in the bottom quintile was higher than the growth in the states in the top quintile throughout 2003, in which the quintiles are based on personal income growth from the fourth quarter of 2003 to the first quarter of 2004. The drop in the growth of the states in the bottom quintile in the first quarter of 2004 was due to the substantial decreases in farm earnings in many of these states.

Chart 2. Change in Personal Income From the Same Quarter a Year Earlier, 2000:III–2004:1

Tables 1 and 2 follow.

Table 1. Personal Income by State and Region

^p Preliminary.^r Revised.

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

1. The estimates of earnings for 2002–2004 are based on the 2002 North American Industry Classification System (NAICS).

2. Personal contributions for social insurance are included in earnings by type and industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less

wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

BEA Current and Historical Data

National, International, and Regional Data

This section presents an extensive selection of economic statistics prepared by the Bureau of Economic Analysis (BEA) and a brief selection of collateral statistics prepared by other Government agencies and private organizations. Series that originate in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

BEA's economic statistics are available on BEA's Web site at <www.bea.gov>. The site contains data, articles, news releases, and other information from BEA's national, industry, international, and regional programs.

The tables present annual [A], quarterly [Q], and monthly [M] data

As a result of the annual revision of the international transactions accounts, sections F, G, and I are not included in this issue. See "Annual Revision of the U.S. International Accounts, 1989-2003" and "U.S. International Transactions, First Quarter 2004." See also "U.S. Multinational Companies: Operations in 2002," "The International Investment Position at Yearend 2003," and "Direct Investment Positions for 2003: Country and Industry Detail."

National Data

A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on June 25, 2004, and include the "final" estimates for the first quarter of 2004.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most of these tables, annual estimates are also shown.

The news release on gross domestic product is available within minutes of the time of release, and the "Selected NIPA Tables" are available later that day on BEA's Web site <www.bea.gov>.

The "Selected NIPA Tables" are also available on printouts or diskettes from BEA. To order, call the BEA Order Desk at 1-800-704-0415 (outside the United States, 202-606-9666).

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. For some components of final sales of computers, includes computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. For some components of final sales of computers, includes computer parts.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

**Table 1.3.1. Percent Change From Preceding Period in Real Gross
Value Added by Sector**

Addendum:								
Gross housing value added.....	12	835.3	841.2	837.3	828.2	835.0	864.2	873.5

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
2. Equals gross domestic business value added excluding gross farm value added.
3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
4. Equals compensation of general government employees plus general government consumption of fixed capital.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Consists of compensation of employees, proprietors' income with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAAdj), rental income of persons with CCAAdj, corporate profits with IVA and CCAAdj, net interest and miscellaneous payments, and consumption of fixed capital.

2. Consists of gross national factor income less consumption of fixed capital.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE: Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Effective December 10, 2003, the price index used to estimate chained-dollar gross value added of nonfinancial corporate business has been revised to reflect the 2000 reference year. Effective with the estimates scheduled for release in July 2004, the current-dollar value added will be deflated by a revised chain-type price index calculated using the gross value added chain-type price index for nonfinancial industries from the comprehensive revision to the GDP-by-industry accounts.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.
 5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

4. Foreign Transactions

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Private fixed investment in structures	25	711.5	734.5	715.0	722.3	746.0	754.9	756.3
Private fixed investment in equipment and software	26	854.3	901.8	862.8	879.8	916.3	948.5	969.7
Private fixed investment in new structures ⁷	27	650.2	665.7	653.8	655.0	669.9	683.9	685.4
Nonresidential structures	28	248.3	236.9	235.9	238.2	237.1	236.3	231.8
Residential structures	29	402.1	428.9	418.0	417.0	432.9	447.6	453.5

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross value added of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Implicit price deflators are as of the end of the quarter and are consistent with inventory stocks.
NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross value added of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal.

1. Consists of finance and insurance and bank and other holding companies.

2. Consists of credit intermediation and related activities; securities, commodity contracts, and other financial investments and related activities; insurance carriers and related activities; funds, trusts, and other financial vehicles; and bank and other holding companies.

3. Consists of wood products; nonmetallic mineral products; primary metals; other transportation equipment; furniture and related products; and miscellaneous manufacturing.

4. Consists of textile mills and textile product mills; apparel; leather and allied products; paper products; printing and related support activities; and plastics and rubber products.

5. Consists of agriculture, forestry, fishing, and hunting; mining; construction; real estate and rental and leasing; professional, scientific, and technical services; administrative and waste management services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; and other services, except government.

NOTE: Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

Addenda:								
Final sales of motor vehicles to domestic purchasers	43	475.3	486.8	457.2	472.5	512.7	504.7	482.3
Private fixed investment in new autos and new light trucks	44	148.2	145.3	141.2	138.0	145.5	156.6	144.7
Domestic output of new autos ²	45	108.6	100.4	97.7	102.5	101.8	99.7	96.1
Sales of imported new autos ³	46	84.7	81.7	81.2	81.3	83.1	81.4	80.5

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

B. Other NIPA and NIPA-Related Tables

Monthly Estimates

Table B.1 presents the most recent estimates of personal income and its components and the disposition of personal income. These estimates were released on June 28, 2004.

Annual Estimates

Table B.2 replaces table B.3 "Gross Domestic Product by Industry." The estimates in the new table B.2 were published in tables 1 and 6 in "Improved Annual Industry Accounts for 1998-2003" in the June 2004 SURVEY. The new tables B.3-B.11 will be published in an upcoming issue.

Table B.2. Current-Dollar and Real Value Added by Industry for 2001-2003

	Billions of dollars			Billions of chained (2000) dollars				Billions of dollars			Billions of chained (2000) dollars		
	2001	2002	2003	2001	2002	2003		2001	2002	2003	2001	2002	2003
Gross domestic product	10,100.8	10,480.8	10,987.9	9,866.6	10,083.0	10,398.0							
Private industries	8,841.1	9,154.1	9,597.9	8,664.2	8,859.1	9,129.3

1. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional and business educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

NOTE: Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

C. Historical Measures

This table is derived from the "GDP and Other Major NIPA Series" tables that were published in the February 2004 issue of the SURVEY OF CURRENT BUSINESS and from the "Selected NIPA Tables" that are published in this issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates

[Quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	Billions of chained (2000) dollars			Percent change from preceding period		Chain-type price indexes [2000=100]		Implicit price deflators [2000=100]		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product	Gross domestic product	Final sales of domestic product	Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price indexes		Implicit price deflators

1. Unemployment and GDP figures are revised regularly.

2. Figures for the Euro area and for the United Kingdom are in U.S. dollars per euro and per pound sterling, respectively. The rate for the United States is a weighted average of the nominal foreign exchange value of the U.S. dollar against the currencies of a Broad Index group of major U.S. trading partners from a base of January 1997=100. For other countries, figures are in currency units per U.S. dollar.

Sources: Exchange rates are from the Board of Governors of the Federal Reserve System. Indexes of stock market

prices are calculated from data taken from finance oriented web sites and are rebased to 2000=100 to facilitate comparisons. Other series are drawn from the web sites of the statistical agencies of the countries shown.

Note: In 2003, the countries in this table accounted for 62 percent of the value of U.S. imports of goods and 70 percent of the value of U.S. exports of goods. The Euro area consists of Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, and Spain.

Regional Data

J. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross state product are available on CD-ROM. For information on state personal income, e-mail reis.rem@d-bea.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 and table 3 in "Comprehensive Revision of State Personal Income: Preliminary Estimates for 2003 and Revised Estimates for 1969-2002" in the May 2004 issue of the SURVEY OF CURRENT BUSINESS.

Table J.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

Area name	Disposable Personal Income							Per capita disposable personal income ¹						Rank in U.S.
	[Millions of dollars]						Percent change ²	[Dollars]

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 4 and Table 5 in "Comprehensive Revision of State Personal Income: Preliminary Estimates for 2003 and Revised Estimates for 1969-2002" in the May 2004 issue of the SURVEY OF CURRENT BUSINESS.

NOTE: Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy. In addition, GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equip-

ment, except office equipment. Also, GSP and GDP have different revision schedules.

Source: This table reflects the GSP estimates for 2001 that were released on May 22, 2003. Detailed estimates are available on BEA's Web site at <www.bea.gov> under "State and local area data."

Additional Information About the NIPA Estimates

Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.¹

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001–2002 uses prices for 2001 and 2002 as weights, and the 2001–2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2000) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 (\$100 × 1.10). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[\left(\frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate; x_t is the level of activity in the later period; x_o is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, $t-0$).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

Appendix B

Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the SURVEY OF CURRENT BUSINESS, look under "Publications."

National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 SURVEY]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

Government Transactions (1988)

Personal Consumption Expenditures (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following SURVEY articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003)

Statistical Changes (September 2003)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2002).

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty Insurance in the NIPAs: Changes in Concepts and Methods" (October 2003)

"Reliability of GDP and Related NIPA Estimates" (January 2002) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the comprehensive NIPA revision.

Industry accounts

The industry accounts consist of the estimates of gross domestic product by industry, the input-output accounts, and two satellite accounts.

"Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts; this revision features the integration of the two sets of accounts.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-

Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov>; look under "About BEA."

Industry Accounts” (March 2004) provides the details about the upcoming comprehensive revision.

Gross product by industry. “Improved Estimates of Gross Product by Industry for 1947–98” (June 2000) describes the most recent comprehensive revision of these estimates.

“Gross Domestic Product by Industry for 1999–2001” (November 2002) describes the most recent annual revision of these estimates.

Input-output accounts. “Benchmark Input-Output Accounts for the U.S. Economy, 1997” (December 2002) presents the 1997 accounts and describes the improvements that were incorporated.

Satellite accounts. These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Transportation Satellite Accounts”

For 1992 (April 1998)

For 1996 (May 2000)

“U.S. Travel and Tourism Satellite Accounts”

For 1992 (July 1998)

For 1996 and 1997 (July 2000)

International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITAs). *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2004 SURVEY.

Direct investment. *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The “Methodology for U.S. Direct Investment Abroad,” which is also available in *U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results* (1998)

“A Guide to BEA Statistics on U.S. Multinational Companies,” which is also available in the March 1995 SURVEY

“A Guide to BEA Statistics on Foreign Direct Investment in the United States,” which is also available in the February 1990 SURVEY

In addition, the updated methodology for foreign direct investment in the United States is available in *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* (2001).

International services. *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

Regional accounts

The regional accounts include estimates of personal income and gross state product.

Personal income. Estimates of personal income are prepared for States and for local areas.

“Comprehensive Revision of State Personal Income for 1969–2003” (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

“The Reliability of the State Personal Income Estimates” (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

“Comprehensive Revision of Local Area Personal Income for 1969–2002” (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD-ROM *Regional Economic Information System, 1969–2002*.

Gross state product. “Comprehensive Revision of Gross State Product by Industry, 1977–94” (June 1997) summarizes the sources and the methods that are used to prepare the estimates. “Gross State Product by Industry, 1977–98” (October 2000) describes the most recent comprehensive revision of these estimates.

“Gross State Product by Industry, 1999–2001” (June 2003) presents the most recent annual revision of these estimates.
